PART I.—JANUARY

The Gāhaḍavālas of Kanauj

From about V.S. 1125 (A.D. 1068) to about V.S. 1280
(A.D. 1223)

By SĀHITYĀCHĀRYA PT. BISHESHWAR NATH REU

COLONEL James Tod has stated in his *Annals of Rājasthāna* that in v.s. 526 (A.D. 470) Rāṭhōra Nayapāla acquired the kingdom of Kanauj after killing king Ajayapāla.¹ This assertion does not seem to be correct, for, though the Rāshtrakūṭas had had their sway over Kanauj ere this, yet about this particular period king Skandagupta or his son Kumāragupta of the Imperial Gupta dynasty ruled over Kanauj.² After this the Maukharīs occupied it,³ and their power was set aside, for some time, by the Baisas, who took possession of Kanauj.⁴ But after the death of Harsha the Maukharīs again made it their capital. About v.s. 798 (A.D. 741) king Lalitāditya (Muktāpīḍa) of Kāshmir had invaded Kanauj, then, too, it was the capital of Yashōvarman, the Maukhari ruler.⁵ Further it appears from the copper grant⁶ of v.s. 1084 (A.D. 1027) of Pratihāra king Trilōchanapāla and from the inscription⁷ of v.s. 1093

¹ *Annals and Antiquities of Rājasthān* (ed. by W. Crooke), p. 930.

² *Bhārata-kē-Prāchīna Rajavamsha*, pt. ii, pp. 285–97.

³ *Bhārata-kē-Prāchīna Rajavamsha*, pt. ii, p. 373.

⁴ *Bhārata-kē-Prāchīna Rajavamsha*, pt. ii, p. 338.

⁵ *Bhārata-kē-Prāchīna Rajavamsha*, pt. ii, p. 376.

⁶ *Indian Antiquary*, vol. xviii, p. 34.

⁷ *Asiatic Researches*, vol. ix, p. 432.

(A.D. 1036) of Yashahpāla that the Pratihāras ruled over Kanauj about that time.

Later, Rāshtrakūṭa¹ Chandradēva (whose descendants were afterwards known as Gāhaḍavālas owing to their sway over Gādhipur, i.e. Kanauj), having conquered Badāūn about v.s. 1111 (A.D. 1054), afterwards took possession of Kanauj. Thus the kingdom of Kanauj once more came into the possession of the Rāshtrakūṭas.²

About 60 copper grants and inscriptions of these Gāhaḍavālas have been found in which they are mentioned as "Sūrya vamshīs". But perhaps the mention of the Gāhaḍavāla dynasty is only found in three grants of v.s. 1161, 1162, and 1166 issued by Gōvindachandra while he was a prince regent as well as in the inscription of his queen Kumārādēvī. Further, there is no mention of the word Rāshtrakūṭa or Raṭṭa in them, but they belonged to a branch of the Rāshtrakūṭas as has been separately discussed elsewhere.³ The Gāhaḍavālas had their sway over Kāshī (Benares), Oudh, and, perhaps, over Indrasthāna (Delhi) too.⁴

1. YASHŌVIGRAHA

He is known to be a descendant of the Solar dynasty. This is the first name traceable of this family.

2. MAHĪCHANDRA

Also known as Mahiyala, Mahi-ala or Mahītala, was the son of Yashōvigraha.

¹ *Journal Royal Asiatic Society of Great Britain and Ireland*, January, 1930, pp. 115-19.

² The kingdom of Rāshtrakūṭa Dhruvarāja of the Deccan had extended in the north up to Ayōdhya between v.s. 842 and 850; later, in the time of Krishṇarāja II between v.s. 932 and 971, its frontier had reached near the bank of the Ganges. Further, between v.s. 997 and 1023, in Krishṇa III's time, it had extended even beyond the Ganges. Probably at this time a member of this dynasty or some survivor of the early Rāshtrakūṭa rulers of Kanauj might have received a "Jāgīr" here, in whose family king Chandra, the conqueror of Kanauj, was born.

³ *Journal Royal Asiatic Society of Great Britain and Ireland*, January, 1930, pp. 111-21.

⁴ V. A. Smith's *Early History of India*, p. 384.

3. CHANDRADĒVA

He was the son of Mahīchandra. Three copper grants, of v.s. 1148 (A.D. 1091), v.s. 1150¹ (A.D. 1093) and v.s. 1156 (A.D. 1100), of this king have been found at Chandrāvati.²

From the copper grants of his descendants it appears that he made Kanauj his capital, and put down the anarchy resulting from the deaths of Rājā Bhōja³ of the Parmāra dynasty of Mālwa and Karṇa⁴ of the Haihaya (Kalchuri) dynasty of Chēdi.

It is evident from his first grant that he gained strength about v.s. 1111 (A.D. 1054), and afterwards seized the kingdom of Kanauj⁵ from the Pratihāras.

This king had made several charitable gifts of gold weighing equal to his person. The districts of Kāshī, Kushika (Kanauj), northern Koshala (Oudh), and Indrasthāna (Delhi) were under his sway. He had also built a "Vaishṇava" temple of Ādikēshava at Kāshī.

A copper grant,⁶ of v.s. 1154 (A.D. 1097), of his son Madanapāla has been found, which contains a mention of the charity, given by Chandradēva. This shows that, though

¹ In the copper grant of v.s. 1150 there is a mention of Pratihāra Dēvapāla of Kanauj:—

“ श्रीदेवपालनृपतिस्त्रिजगत्प्रतीतः ”

An inscription of Dēvapāla dated v.s. 1005 (A.D. 948) has been found (*Epigraphia Indica*, vol. i, p. 177).

² *Epigraphia Indica*, vol. ix, p. 302; and vol. xiv, pp. 192-209.

³ याते श्रीभोजभूपे विबुधवरवधूनेत्रसीमातिथित्वं
श्रीकर्णे कीर्तिशेषं गतवति च नृपे क्षात्यये जायमाने ।
भर्तारं यं व(ध)रित्री त्रिदिवविभुनिभं प्रीतियोगादुपेता
चाता विश्वासपूर्वं समभवदिह स क्षापतिश्चन्द्रदेवः ॥

i.e. being oppressed by the anarchy prevailing after the deaths of Rājās Bhōja and Karṇa the earth sought refuge with Chandradēva.

King Bhōja mentioned here is supposed by some historians to be the Pratihāra Bhōja.

⁴ *Bhārat-kē-Prāchīna Rājavamsha*, vol. i, p. 50.

⁵ Some historians assign v.s. 1135 (A.D. 1078) to Chandradēva's conquest of Kanauj.

⁶ *Indian Antiquary*, vol. xviii, p. 11.

Chandra was alive up to that date, he had made over the reins of the Government to his son Madanapāla. The following are the titles attached to Chandra's name :—Paramabhattachāraka, Mahārājādhirāja, Paramēshvara, and Parama Māhēshvara. Chandraditya appears as a second name of this king.

He had two sons : Madanapāla and Vighrahapāla. From this Vighrahapāla probably the Badayun family took its origin.

4. MADANAPĀLA

He was the eldest son and successor of Chandradēva. Five copper grants of the time of Madanapāla have been found, the first being the aforesaid one of v.s. 1154¹ (A.D. 1097).

The second² of v.s. 1161 (A.D. 1104) is of his son (Mahārājakumāra) Gōvindachandra, in which there is a mention of the charitable grant of the village "Basāhi" together with the cess called "Turushkaḍaṇḍa". This shows that just as "Jazia" was levied upon the Hindus this "Turushkaḍaṇḍa" was levied by Madanapāla upon the Mohammedans. Further, this is the first grant in which the word Gāhaḍavāla is mentioned.

The third³ of v.s. 1162 (A.D. 1105) is also of the Mahārājaputra Gōvindachandra and mentions the name of the senior queen of Madanapāla and mother of Gōvindachandra as Rālhadevī.⁴

The fourth⁵ is of v.s. 1163 (in fact of 1164) (A.D. 1107). This is of king Madanapāla himself, in which his queen's name appears as Prithvīshrikā.

The fifth⁶ of v.s. 1166 (A.D. 1109) is also of Mahārājaputra Gōvindachandradēva.

¹ *Indian Antiquary*, vol. xviii, p. 11.

² *Indian Antiquary*, vol. xiv, p. 103.

³ *Epigraphia Indica*, vol. ii, p. 359.

⁴ She was also called Rālhadevī.

⁵ *Journal Royal Asiatic Society*, 1896, p. 787.

⁶ *Indian Antiquary*, vol. xviii, p. 15.

Madanadēva was the second name of the king. His titles were :—Parama Bhaṭṭāraka, Paramēshvara, Parama Māhēshvara, and Mahārājadhirāja. He had gained victories in many battles. From the aforesaid copper grants it appears that Madanapāla, too, had in his old age made over the Government to his son Gōvindachandra.

*The Silver Coins of Madanapāla*¹

On the obverse there is an image of a horseman along with some illegible letters. On the reverse there is an image of a bull with the legend "Mādhava Shri Sāmanta" along the border. The diameter of these coins is a bit smaller than half an inch and they are made of base silver.

*The Copper Coins of Madanapāla*²

On the obverse of these, too, there is a rude image of a horseman and the legend "Madanapāladēva". On the reverse, like the silver coins, there is an image of a bull and the legend "Mādhava Shri Sāmanta". They are a bit bigger than half an inch in diameter.

5. GÖVINDACHANDRA

He was the eldest son and successor of Madanapāla. 33 copper plates and 2 inscriptions of his reign have been discovered, of which the first, second, and third copper grants of v.s. 1161 (A.D. 1104), 1162 (A.D. 1105) and 1166 (A.D. 1109)³ respectively, have already been mentioned in his father's history. As till then he was regarded a prince his reign might have commenced from v.s. 1167 (A.D. 1110).

The fourth and the fifth copper plates⁴ are of v.s. 1171 (A.D. 1114). Of the fourth, only the first plate has been found, i.e. it is incomplete. The sixth⁵ is of v.s. 1172 (A.D. 1116).

¹ *Catalogue of the Coins in the Indian Museum, Calcutta*, vol. i, p. 260.

² *Catalogue of the Coins in the Indian Museum, Calcutta*, vol. i, p. 260, pl. xxvi, No. 17.

³ It shows that Gōvindachandra had defeated the "Gaura" and that the "Hammirs" (Mohammedans) were also awe-struck by his bravery.

⁴ *List of Northern (Indian) Inscriptions*, No. 692; and *Epigraphia Indica*, vol. iv, p. 102. This was issued from Benāres.

⁵ *Epigraphia Indica*, vol. iv, p. 104.

The seventh¹ of v.s. 1174 (A.D. 1117) was issued from Dēvasthāna and contains a mention of his army of elephants. The eighth² is also of v.s. 1174 (in fact of 1175) (A.D. 1119), and the ninth³ of v.s. 1175 (A.D. 1119). The tenth⁴ of v.s. 1176 (A.D. 1119) was issued from the village Khayarā on the Ganges and contains the name of his senior queen, Nayanakēlidēvī. The eleventh,⁵ the twelfth,⁶ and the thirteenth⁷ are of v.s. 1176 (A.D. 1119), 1177 (A.D. 1120), and 1178 (A.D. 1122) respectively.

The fourteenth⁸ plate of v.s. 1180 (A.D. 1123) contains along with the king's other titles, the decorations "Ashvapati", "Gajapati", "Narapati", "Rājatrāyādhipati", "Vividhavidyāvichāra-vāchaspati", etc. The fifteenth⁹ of v.s. 1181 (A.D. 1124) contains his mother's name, "Rālhanādēvī." The sixteenth¹⁰ of v.s. 1182 (A.D. 1125) was issued from the place "Madapratihāra" on the Ganges. The seventeenth¹¹ of v.s. 1182 (A.D. 1127) (originally of v.s. 1183) was issued from the village "Īshaparatishtāna" on the Ganges. The eighteenth plate¹² is of v.s. 1184 (A.D. 1127).

The nineteenth plate¹³ is of v.s. 1185 (A.D. 1129).

The twentieth plate¹⁴ is of v.s. 1186 (A.D. 1130).

The twenty-first plate¹⁵ is of v.s. 1188 (A.D. 1131).

¹⁴ *Lucknow Museum Report of 1914-15*, pp. 4-10.

¹⁵ *Indian Antiquary*, vol. xix, p. 249.

The twenty-second plate¹ is of v.s. 1189 (A.D. 1133).

The twenty-third plate² is of v.s. 1190 (A.D. 1133).

The twenty-fourth plate³ is of v.s. 1191 (A.D. 1134), of Mahārājaputra Vatsarājadēva of the "Singara" dynasty, who was a feudatory of king Gōvindachandra and was also called "Lōhadadēva".

The twenty-fifth⁴ and the twenty-sixth⁵ plates are of v.s. 1196 (A.D. 1139) and v.s. 1197 (A.D. 1141) respectively. The twenty-seventh⁶ of v.s. 1198 (A.D. 1141) speaks of a charitable grant made on the occasion of the first anniversary of his senior queen's demise.

The twenty-eighth⁷ plate of v.s. 1199 (A.D. 1143) contains a mention of the king's (Gōvindachandra's) son Mahārājaputra Rājyapālādēva.⁸ The twenty-ninth,⁹ thirtieth,¹⁰ and thirty-first¹¹ plates are of v.s. 1200 (A.D. 1144), v.s. 1201 (A.D. 1146), and v.s. 1202 (A.D. 1146) respectively. A stone pillar inscription¹² of v.s. 1207 (A.D. 1151) of his king has been found at Hāthiyadaha in which the name of his queen is mentioned as Gōsalladēvī.

The thirty-second¹³ copper grant of Gōvindachandra of v.s. 1208 (A.D. 1151) contains a mention of the charitable grant made by his senior queen, Gōsalladēvī, who is also described as enjoying all the honours of the state. The thirty-third plate¹⁴ is of v.s. 1211 (A.D. 1154).

STATEMENT OF THE GĀHADAVALAS OF KANAUJ

No.	Name.	Title.	Relation.	Known dates.	Contemporaries.
1	Yashōvīgraha	—	Born in Solar Dynasty.	—	—
2	Mahīchandra	—	Son of No. 1	—	—
3	Chandradēva	Mahārājādhirāja	Son of No. 2	v.s. 1148, 1150, 1156	Became king after the death of Paramāra Bhōja, and Haihaya Karna.
4	Madanapāla	do.	Son of No. 3	v.s. 1154, 1161, 1162, 1163, 1166	—
5	Gōvīndachandra	Vivīdhavidyā-Viehāravācha- spati, Mahārājādhirāja.	Son of No. 4	v.s. 1161, 1162, 1166, 1171, 1172, 1174, 1175, 1176, 1177, 1178, 1180 ?, 1181, 1182 (1183), 1184, 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1196, 1197, 1198, 1199, 1200, 1201, 1202, 1207, 1208, 1211.	—
6	Vijayachandra	Mahārājādhirāja	Son of No. 5	v.s. 1224, 1225	—
7	Jayachandra	do.	Son of No. 6	v.s. 1226, 1228, 1230, 1231, 1232, 1233, 1234 (1235), 1236, 1243, 1245.	Chandēla Madanavarmadēva, Chauhāna Prithvirāja, Shahābuddīn Ghōrī.
8	Harishechandra	do.	Son of No. 7	v.s. 1253	—

GENEALOGICAL TREE OF THE GĀHADAVALĀ FAMILY OF KANAUJ

An inscription ¹ of Gōvindachandra's queen, Kumāradēvi,² daughter of king Dēvarakshita of the Chhikkora dynasty of Pīṭhikā, was found at Sārṇāth, which shows that this queen had built a temple and had dedicated it to Dharma-chakra Jina.

Looking to the vast number of the copper grants of Gōvindachandra we understand that he was a powerful and generous ruler and most probably for some time he was the greatest king in northern India, and had retained his sway over Benares.³

He had sent out Suhala, as his delegate, to the great convocation called by Alankāra, the minister of king Jayasimha, of Kāshmir. This fact is stated in the "Shrikanṭha-charita Kāvya" of poet Mankha :—

अन्यः स सुहलस्तेन ततोऽवस्थित पण्डितः ।

दूतो गोविन्दचन्द्रस्य कान्यकुब्जस्य भूमिजः ॥ १०२ ॥

(श्रीकण्ठचरितम्, सर्ग २५)

i.e. he offered his respects to the great scholar Suhala, the delegate of the king Gōvindachandra of Kanauj.

This Gōvindachandra had also fought with the Mohammedan (Turk) invaders of India,⁴ and had conquered the provinces of Gaura and Chēdī. From the decoration "Vividhavidyā-

¹ *Epigraphia Indica*. vol. ix, pp. 319-28.

² This Kumāradēvi was a follower of Buddhism. In a manuscript copy of the book entitled "Ashtasārikā" preserved in the Nēpāl State Library it is thus stated :—

“श्रीमद्गोविन्दचन्द्रदेवप्रतापवशतः राज्ञी श्रीप्रवरमहा-
यानयायिन्याः परमोपासिका राज्ञी वसन्तदेवी देयधर्मो
ऽयम्”

This shows that Gōvindachandra's second queen Vasantadēvi, too, was a follower of the Mahāyāna branch of Buddhism. Some people hold Vasantadēvi to be another name of Kumāradēvi. In the "Rāmacharita", written by Sandhyākaranandī, king Maḥaṇa (Mathana) father of Kumāradēvi's mother is stated to be of the Rāshtrakūṭa dynasty.

³ Of the twenty-one copper grants, found near Benāres, fourteen belong to this king Gōvindachandra.

⁴ Perhaps these were the Turks that were then attempting advances from the Lahore side.

vichāravāchaspati" attached to his name we understand that, besides being a patron of learning, he himself was a good scholar.

Lakshmīdhara, his minister of peace and war, with his order, compiled the work entitled "Vyavahārakalpataru", a book on law.

Names of his three sons are found as below :—Vijaya-chandra, Rājyapāla, and Āsphōtachandra.

Mr. V. A. Smith holds the period of Gōvīndachandra's reign to be from A.D. 1104 to 1155 (v.s. 1161 to 1212).¹ But it is quite clear that his father was alive up to v.s. 1166 (A.D. 1109), hence up to that date he was only a prince regent.

Many gold and copper coins of Gōvīndachandra have been found. Though the metal of the gold coins is rather debased they are found in abundance. 800 of these were found at the village Nānpārā (Bahraich, Oudh) in v.s. 1944 (A.D. 1887) when the Bengal North-Western Railway was under construction.

The Gold Coins ² of Gōvīndachandra

On the obverse there are three lines of the legend. The first line reads "श्रीमन्नी", the second "विन्दचन्द्र", and the third "देव". There is also a trident in the third line, which is probably a mark of the mint. On the reverse there is a rude image of the goddess Lakshmi in the sitting posture. These are a bit larger in size than the current British Indian silver four anna piece.

The Copper Coins ³ of Gōvīndachandra

On the obverse there are two lines of writing. The first contains "श्रीमद्गो" and the second "विन्दचन्द्र". On the reverse there is a very rude image of the goddess Lakshmi in the sitting posture. These coins are rare and are about the size of the British Indian silver four anna piece.

³ *Catalogue of the Coins in the Indian Museum, Calcutta*, vol. i, p. 261.

6. VIJAYACHANDRA

He was the son and successor of Gōvindachandra and was also known as Malladēva.¹ The two copper grants and two inscriptions of this king have been found. The first copper plate² is of v.s. 1224 (A.D. 1168) in which the king's title is mentioned as Mahārājādhirāja, and that of his son Jayachchandrādēva, as Yuvarāja (prince regent). There is also a mention of Vijayachandra's victory³ over the Mohammedans. The second⁴ copper grant of v.s. 1225 (A.D. 1169) also contains a mention of the king as well as of his heir apparent in the same manner as the first.

The first inscription⁵ is of v.s. 1225 (A.D. 1169). It does not contain the name of his son. The second inscription,⁶ which is dated v.s. 1225 (A.D. 1169), belongs to the commander-in-chief, Pratāpadhavalā, and contains the mention of a forged copper grant of Vijayachandra.

This king was a follower of Vaishnavism, and had built many temples⁷ of Vishnu. His queen's name was Chandra-lēkhā. He had invested his son, Jayachchandra, with the powers of administration during his lifetime. His army consisted of a large number of elephants and horses. In the inscription of Jayachchandra this king is mentioned as a victor of the world. But in the inscription⁸ of v.s. 1220 of Chauhāna Vighararāja IV there is a mention of his (Vighararāja's) victory from which it follows that if Vijayachandra had conquered any country he might have done so before this date.

¹ *Rambhāmanjarī Nātikā*, p. 6.

² *Epigraphia Indica*, vol. iv, p. 118.

³ “भुवनदलनहेलाहर्म्यहम्मीरनारी-नयनजलदधाराधौतभूतो-
पतापः” This shows that he might have fought with Khusrō of Ghazni, who, at that time, had settled at Lahoré.

⁴ *Indian Antiquary*, vol. xv, p. 7.

⁵ *Archæological Survey of India*, vol. xi, p. 125.

⁶ *Journal American Oriental Society*, vol. vi, p. 548.

⁷ The ruins of these temples are still existent in Jaunpur.

⁸ *Bhārat-kē-Prāchīna Rājavamsha*, vol. i, p. 244.

In the "Prithvirāja Rāsō" Vijayachandra is named as Vijayapāla.

JAYACHCHANDRA

He was the son and successor of Vijayachandra. On the day of his birth his grandfather, Gōvindachandra, had gained a victory over Dashārṇa country, to commemorate which, the then born grand heir to the throne was named Jaitrachandra¹ (Jayantachandra, or Jayachchandra).

From the aforesaid copper grant of v.s. 1224 of king Vijayachandra it is evident that Jayachchandra had been invested with the ruling powers during his father's lifetime.

In the preface to the drama named "Rambhāmanjarī Nāṭikā",² by Nayachandra Sūri, it is thus stated :—

“ अभिनवरामावतारश्रीमन्मदनवर्ममेदिनीदयितसाम्राज्यलक्ष्मी -
करेणुकालानस्तस्मायमानबाहुदण्डस्य ”

i.e. whose (Jayachchandra's) mighty arm is like a pillar to tether the elephant of fortune of king Madanavarmadēva.

This shows that Jayachchandra probably had extended his sway over Kalinjar and defeated its king Madanavarmadēva³

¹ “ जाओ जम्मि दिणम्मि एस सुकिदी चन्दे जुए भीइणा
पत्तं तम्मि दससण्णेषु पवलं जं खप्पराणं बलं ।
जित्तं झत्ति पियामहेण पङ्गणा जैतंति नामं तओ
दिन्नं जस्स स अज्ज वैरिदलणो दिट्ठो जयंतप्पह ॥ ”

संस्कृतच्छाया—

श्रीभरतकुलप्रदीप श्रीजैत्रचन्द्रनरेश्वराय . . .

(रत्नामञ्जरी नाटिका, पृ. २३-२४)

² p. 4.

³ His last grant is of v.s. 1219 (A.D. 1163) and that of his successor Paramardidēva of v.s. 1223 (A.D. 1167). This shows that the victory mentioned above was gained by Jayachchandra while he was a prince regent.

of the Chandēla dynasty. Similarly, having defeated the Bhōrs, he had also annexed Khōr.

Fourteen copper grants and two inscriptions of his reign have been found.

The first ¹ copper plate is of v.s. 1226 (A.D. 1170) granted from the village Vaḍaviha. It contains an account of the Rājyābhishēka (Coronation) of the king, which was performed on Sunday, the 6th day of the bright half of Āshāḍha, v.s. 1226 (21st June, 1170 A.D.).

The second ² plate is of v.s. 1228 (A.D. 1172) issued from the Trivēṇi confluence (Allahabad). The third ³ is of v.s. 1230 (A.D. 1173) issued from Vārāṇasī (Benāres).

The fourth ⁴ is of v.s. 1231 (A.D. 1174) issued from Kāshī (Benāres). From the thirty-second line of this plate it appears that this copper grant was engraved later in v.s. 1235 (A.D. 1179). The fifth ⁵ plate is of v.s. 1232 (A.D. 1175) and contains the name of the king's son, Harishchandra, at whose "Jātākarma" ceremony the charity mentioned was granted from Benāres. From the thirty-first and thirty-second lines of this plate, too, we infer that the plate was actually prepared like the preceding one in v.s. 1235 (A.D. 1179).

The sixth copper plate ⁶ is of v.s. 1232 (A.D. 1175). The charity mentioned therein was granted on the occasion of the name giving ceremony of Harishchandra. The seventh,⁷ the eighth,⁸ and the ninth ⁹ plates are of v.s. 1233 (A.D. 1177), and the tenth ¹⁰ is of v.s. 1134 (A.D. 1177). The eleventh,¹¹

¹¹ *Indian Antiquary*, vol. xviii, p. 140.

the twelfth,¹ and the thirteenth² are all of v.s. 1236 (A.D. 1180). These three were issued from the village of Raṇḍavai situated on the Ganges. The fourteenth³ plate is of v.s. 1243 (A.D. 1187).

The first inscription⁴ of v.s. 1245 (A.D. 1189) of this king has been found at Meohaḍ (near Allahabad), and the second inscription⁵ at Buddha Gayā, which is a Buddhist inscription and contains a mention of this king. The fourth digit of the number indicating the year of this inscription being spoiled it reads 124— only.

This king was a very powerful monarch and had so immense an army that people called him by the nick-name “Dalapangula”.⁶

Poet Shri Harsha, the author of the famous poem “Naishadhīya Charita”, had also flourished in his court. The name of this poet's mother was Māmalladēvi, and that of his father Hira, as appears from the concluding stanzas of each of the chapters of the aforesaid poem running as follows:—

“अ्रीहर्ष कविराजराजमुकुटालङ्कारहीरः सुतं
अ्रीहीरः सुषुवे जितेन्द्रियचयं मामल्लदेवी च यम ।”

i.e. Hira begot Harsha in Māmalladēvi.

⁴ *Annual Report of the Archaeological Survey of India*, (A.D. 1921-2), pp. 120-1.

⁵ *Proceedings of the Bengal Asiatic Society* (1880), p. 77.

⁶ “अप्रतिमलप्रतापस्य श्रीमल्लदेवतनुजन्मनः सतीमल्लिका-
श्रीचन्द्रलेखाकुक्षिशुक्तिमुक्तामणैः गङ्गायमुनास्रोतस्त्रिनीचष्टिद्वय-
मन्तरेण रिपुमेदिनीदधितदत्तदैव्यसैन्यसागरवरं प्रचालयितुमल-
मत्वात् पङ्कुरिति प्राप्तगुरुविरुदस्य श्रीमज्जैवचन्द्रनरेश्वरस्य”

(रत्नामञ्जरी नाटिका, पृ. ६)

i.e., who has earned the title of “Pangu” (lame) being unable to mobilize his immense armies without the support of two sticks—Gangā and Yamunā. It is also evident from the above reference that the title of Jayachandra's father was Malladēva and the name of his mother was Chandralekhā.

In the conclusion of this "Naishadhīya Charita" it is thus stated:—

“ताम्बूलद्वयमासनं च लभते यः कान्यकुञ्जेश्वरात् ।”

i.e. in the court of the king of Kanauj Shri Harsha had the privilege of being seated on an "Āsana" and of being honoured with the offer of a betel (ताम्बूल) on attending and leaving the court.

Though there is no mention of Jayachandra in "Naishadhīya Charita", but from the "Prabandha Kōsha" compiled by Rājashēkhara Sūri, in v.s. 1405, we learn that this poet flourished in the court of this king.

This Shri Harsha had also written the book named Khandanakhandakhāḍya. It is thus stated in the end of the "Dvirūpakōsha":—

इत्थं श्रीकविराजराजमुकुटालङ्कारहीरार्पित-
श्रीहीरात्मभवेन नैषधमहाकाव्ये ज्वलत्कीर्तिना ।
श्रीद्वयप्रतिवादिमस्तकतटीविन्यस्तवामांघ्रिणा
श्रीहर्षेण हतौद्विरूपविलसत्कोशस्ततां श्रेयसे ॥

This shows that this book (Dvirūpakōsha) was also written by the same poet.

Jayachandra was the last powerful Hindu monarch of Kanauj. According to "Prithvirāja Rāsō" he had performed the great sacrifice called "Rājasūya Yagya", and the "Svayamvara" ceremony of his daughter Samyōgitā, which brought about the downfall of the Hindu Empire in India. In this "Svayamvara" as Prithvirāja, the Chauhāna king of Delhi, forcibly abducted and married the princess, enmity broke out between the two most powerful kings of India (Jayachandra and Prithvirāja). This internal discord afforded a golden opportunity to Shihābuddīn to invade India. But the story of the "Rāsō" is a mere fiction as firstly there is no mention of Rājasūya or the Svayamvara of Samyōgitā in the grants or the inscriptions of Jayachandra, secondly no trace of the abduction of Samyōgitā is found in the poems connected with Chauhāna Prithvirāja, and thirdly

Prithvirāja Rāsō records the death of Mahārāvala Samara Simha of Mēwār while helping Prithvirāja against Shihā-buddīn, but, in fact, he died 110 years after this event. We have fully discussed the subject elsewhere.¹

Shihābuddīn Ghōrī defeated Jayachandra in the battle of Chandāval² (Etawah dist.) in A.H. 590 (v.s. 1250 = A.D. 1194) and, in the plunder of Benāres, got so much wealth that 1,400 camels were employed for its transport to Ghazni.³

From this period Mohammedans acquired sovereignty in Northern India and, being dismayed by this defeat, Jayachandra drowned himself in the Ganges. But anyhow for some time Kanauj remained under the possession of Harishchandra, the son of Jayachandra.

The Mohammedan historians have mentioned Jayachandra as the king of Benāres,⁴ which probably was the seat of his Government at that time.

Jayachandra had built several forts, out of which one was built at Kanauj on the bank of the Ganges, another at Asaī, on the Jumna (in Etwah dist.), and a third at Kurrā (Kaḍā).⁵ At Etawah, on a mound, near the bank of the

¹ *Indian Antiquary*, vol. lix (Jan. 1930), pp. 6-9.

² *Tabqāt-Nāsiri*, p. 140.

³ *Kāmiluttavārīkh* (Elliot's translation), vol. ii, p. 251.

⁴ In the Persian chronicle, *Tājul-Ma-āsir*, written by Hasan Nizāmī, this event is thus described :—

After taking possession of Delhi next year Qutubuddīn Aibak invaded Kanauj. On the way Sultān Shahābuddīn also joined him. The invading army consisted of 50,000 horse. The Sultān had posted Qutbuddīn in the vanguard. Jayachandra met this army at Chandāval near Etawah. At the time of the battle king Jayachandra, seated on an elephant, guided his forces, but was eventually killed. The Sultān's army then plundered the treasure of the fort of Āsnī and, having proceeded further, similarly took Benāres. He also got 300 elephants in this plunder.

Maulānā Minhājuddīn in his *Tabqāt-i-Nāsiri* says that the two generals Qutbuddīn and Izzuddīn accompanied the Sultān (Shihābuddīn) and defeated king Jayachandra of Benāres near Chandāval in A.H. 590 (v.s. 1250).

⁵ This place is in the Allahabad district on the bank of the Ganges. It is alleged that the remains of Jayachandra's fort on one bank of the river and those of his brother Māṇikachandra's fort on the opposite bank are still existent. The peculiar burial ground of the place also tells the tale of a battle being fought there, in which the victorious Jayachandra had destroyed a very large number of his Muslim foes.

Jumna, there exist, to this day, some remains which are supposed by the local people to be the remains of Jayachchandra's fort.

It is stated in the "Prabandha Kōsha" that king Jayachchandra had conquered 700 "Yōjana" (5,600 miles) of land. His son's name was Mēghachandra. Jayachchandra's minister, Padmākara, on his return from Anahilpur, had brought with him a beautiful widow named Suhavādēvī. Being smitten with her love Jayachchandra kept her as his concubine and from her a son was born. When this illegitimate son came of age, his mother requested the king to declare him his heir apparent. But the king's minister, Vidyādhara, announced prince Mēghachandra to be the rightful heir. This offended Suhavādēvī. She sent her secret agent to the Sultān's court at Taxila (Punjab) and planned the invasion of Kanauj.¹ Though the minister Vidyādhara, having learnt of the conspiracy through his spies, had given timely information to the king, he did not give any credit to it. The minister, being thus aggrieved, plunged himself into the Ganges. Shortly afterwards the Sultan appeared with his armies on the scene. The king marched out to encounter him and a desperate battle was fought between the two. But it is still a mystery whether the king was killed on the battlefield or plunged himself into the Ganges.

HARISHCHANDRA

Harishchandra, son of Jayachchandra, was born on the 8th day of the dark half of Bhādrapada, v.s. 1232 (the 10th August, 1175), and after the death of Jayachchandra succeeded to the throne of Kanauj in v.s. 1250 (A.D. 1193) at the age of 18.

It is generally believed that on the death of Jayachchandra the Mohammedans had taken possession of Kanauj. But in the Mohammedan chronicles of the time such as *Tājul*

¹ Mērutunga, too, in his *Prabandhachintāmānī* discredits Suhavādēvī for calling the Mohmmedans. This book was written in v.s. 1362 (A.D. 1305).

Ma-āsir and *Tabqātenāsirī*, etc., it is stated that after the battle of Chandāval the Mohmmedan army went towards Prayāg and Benares. They speak of Jayachchandra as the Rājā of Benāres. This clearly shows that, though Kanauj had been devastated by the Mohammedans and its power had declined, still for some years the descendants of Jayachchandra had a hold over the country around it. It was Shamsuddīn Īltutmish who, for the first time, annihilated the Gāhaḍavāla kingdom after taking possession of Kanauj.

Though in the *Tabqātenāsirī* Kanauj has been included in the lists of the cities conquered by Qutbuddīn and Shamsuddīn¹ both, yet it is a point for consideration that when it was already conquered by Qutbuddīn, what led Shamsuddīn² to reconquer it?

Of the aforesaid two copper plates,³ of v.s. 1232, of king Jayachchandra, the first mentions that he granted the village of Vaḍēsar to his family priest on the occasion of the "Jāta-karma" ceremony of his son, prince Harishchandra. And the second refers to the grant of two villages given to a Brāhmaṇa named Hrishīkēsha on the occasion of Harishchandra's name giving ceremony, performed on the 13th day of the bright half of Bhādrapada, v.s. 1232 (the 31st August, 1175). At this time the prince was only 21 days old.

One copper grant and one inscription of the time of Harishchandra have been found.

The copper grant⁴ was issued on the 15th day of the

¹ *Tabqātenāsirī*, p. 179.

² In the time of this Īltutmish a Kshatriya hero named Bartū destroyed a number of Mohammedans in Oudh. (*Tabqātenāsirī* (English translation), pp. 628-9.)

³ The first of these two was found at the village of Kamauli in Benāres district (*Epigraphia Indica*, vol. iv, p. 127); and the second at the village of Sihvar (also in the same district) (*Indian Antiquary*, vol. xviii, p. 130).

⁴ *Epigraphia Indica*, vol. x, p. 95.

In this copper plate the Samvat is stated both in figures and words. The first digit of the figure appears to have been made by erasing some other figure. Mr. R. D. Banerji reads it as 1257 (*Journal Bengal Asiatic Society*, vol. vii, p. 762, No. 11). If this version be taken as correct then this grant should have been written three years after giving the village of Pamahī.

bright half of Pausha, v.s. 1253 (A.D. 1196) in which his titles (which are similar to those of his forefathers) are mentioned as follows :—Paramabhattāraka, Mahārājādhirāja, Paramēshvara, Parama Māhēshvara, Ashvapati, Gajapati, Narapati, Rājatrayādhipati, Vividhavidyāvichāravāchaspati, etc. This shows that though a large part of the kingdom had passed away from his possession yet he maintained his independence to some extent.

The inscription of this king, too, is of v.s. 1253, which was found at Bēlkhēdā. Though the king's name is not mentioned in this inscription but from the words “कान्यकुब्जविजयराज्ये” mentioned in it, Mr. R. D. Banerji and other scholars hold it to be of the time of Harishchandra.

As stated above, on the death of Jayachchandra, in the battle with Sultān Shihābuddīn, his son Harishchandra became the ruler of the country around Kanauj, while his relatives went towards Khōr¹ (Shamsābād)² (in the Farrukhābād dist.). But when the few districts that remained under

¹ From the history of Rāmpur we learn that when Shamsuddīn had invaded Khōr, Jajapāla acknowledged his supremacy and remained there, but his brother Prahasta * (Baradāisēna) fled to Mahuī (in the Farrukhābād dist.), while some of their relatives escaped to Nēpāl. After a time the descendants of Jajapāla leaving Khōr settled in Usēt (in the Badāūn dist.). Probably Lakhanapala,† too, at that time lived there in the capacity of a feudatory. Afterwards being chased by the Mohammedans there, they went towards Bilsad.‡ Later Rāma Rāi (Rāmasahāya), a descendant of Jajapāla, found the state of Rāmpur in the Etah district. The Rāo of Khimsēpur in the Farrukabad district also claims his descent from Jajapāla. Similarly the Chaudharis of Surjaī and Sarōdhā (Mainpuri dist.) are known as the descendants of Jajapāla.

It is said that Māṇikachandra was a brother of Jayachchandra. The rulers of Māndā and Bījāpur, states in the Mirzāpur district, as well as some other petty landholders of Ghāzīpur district, claim their descent from Gāḍana, the son of Māṇikachandra.

² In v.s. 1270 Shamsuddīn converted the name of Khōr as Shamsābād after his own name.

* In the *Pratāpghurha Nāmā*, published in A.D. 1849, this prince is mentioned as Harasū. Perhaps Harasū and Prahasta are corrupted forms of Harishchandra.

† *Epigraphia Indica*, vol. i, p. 64.

‡ At some places the time of this event is given as v.s. 1280.

the control of Harishchandra were also attacked by Sultān Shamsuddīn Īltutmish the sons of Harishchandra (Baradāīsēna)¹ took their abode first in Khoram then in Mahui.

But, some time after, the Mohammedans began their inraids in this district also, and Sihā,² the younger son of Bardāīsēna, was obliged, therefore, to migrate to Marwar.

It is already stated above that Harishchandra's sons had gone away towards Mahuvi. Here, after some time, his younger son, Sihā, had built a fort³; but later, when this region began to be overrun by the Mohammedans, Sihā with his elder brother⁴ Sētarāma was obliged to migrate westward with the intention of the pilgrimage to Dvārakā and reached Marwar.

¹ Possibly Baradāīsēna may be a younger brother of Harishchandra.

² In the history of Rāmpur Sihā is stated as the grandson of Prahasta, but in the history of Mārwar his grandfather's name is stated as Baradāīsēna. It is, therefore, probable that both these are surnames of Harishchandra. It is also possible that just as "Dalapangula" was a title of Jayachandra "Baradāīsēna" (Varadāyisainya) might be that of Harishchandra.

³ Its ruins are still existent on the bank of the Ganges and are locally known as "Sihā Rāo-kā-Khēḍā".

⁴ It is stated in *Ain-i-Akbari* that Sihā was the nephew of Jaychand, who lived at Shamsābād and was also killed in the battle fought with Shahābuddīn at Kanauj (vol. ii, p. 507).

In the *Annals and Antiquities of Rājasthāna* at one place Sihā is stated as the son of Jayachandra (vol. i, p. 105) while at other as the nephew (vol. ii, p. 930). But at the third place he and Sētarāma both are stated to be the grandsons of Jayachandra (vol. ii, p. 940).

In the inscription of Sihā dated v.s. 1330 he is stated as the son of Sētarāma.

But if we take Sētarāma to be the elder brother and adoptive father of Sihā, firstly the times assigned to Jayachandra and Sihā adjust themselves well, secondly the controversies arising by the mention of Sētarāma at one place as the brother and at others as the father of Sihā would also be squared up.

Asia Minor and the introduction of the worship of Kybele, Mā, and Mithra- into Rome

By O. G. VON WESENDONK

IN 205 B.C., while Hannibal was still standing on Italian soil, the Great Goddess from Pessinus in Phrygia, a town then situated in the land of the Celtic Galatians, was brought to Rome in the shape of a black stone. The Sibylline books are said to have advised this transplantation of Kybele¹ to the banks of the Tiber. These Sibylline books were copies of oracles given by the Sibyl of Cumæ in Campania, where she acted as priestess of Apollo. Now it has been shown that the Sibyl, who is mentioned by Herakleitos, is originally probably identical with the Sipylene, i.e. the Goddess from Mount Sipylus.² This is one of the designations of the Great Phrygian Goddess called in Rome *Mater deum Magna Idaea*, the Great Mother of the Gods from Mount Ida. The origin of the Sibyl is placed in Phrygia by Herakleides of Pontos,³ and Pausanias mentions Erythrai, near Smyrna, situated not far from the Sipylus range, as well as Marpeessos on Mount Ida as birthplaces of the Sibyl.⁴ The Sibyl of Cumæ therefore counselled the introduction into Rome of the worship of a goddess with whom she must have been connected since ancient times; Apollo himself comes from Asia Minor.

We need not dwell on the favourable results of the decision taken by the Roman Senate, which body Attalos of Pergamon assisted in their desire to obtain the sacred black stone. In 204, after the Great Goddess had been installed in Rome,

¹ For the relation of the name Kybele to Kybebe, Kubaba, see W. F. Albright, *Archiv f. Orientforschung*, v, 1929, 230; Bossert, *O.L.Z.*, 1931, 316 f., v. Blumenthal, l.c., 786.

² Buckler, *Journ. of Hellenic Studies*, xxxvii, 1917, 113; cf. Herakleitos, fr. 92. A huge rock-hewn representation of the Goddess is still to be seen on Mount Sipyles to the east of Magnesia, cf. Pausanias, iii, 22, 4.

³ Apud Clemens Alex. *stromata*, i, 108.

⁴ x, 12.

where her shrine was consecrated in 191 B.C., Scipio landed in Africa, and in 201 Carthage had to make peace with Rome.

During the wars with Mithradates of Pontos the Roman soldiers became acquainted with Mā of Komana, under which name two towns appear, one in Kataonia and one in Pontos, both celebrated for their sanctuaries of the Great Goddess. This deity had a warlike character and the Roman army identified her with Bellona. She appeared to Sulla in a dream, and Plutarch compares the Kappadokian goddess to Selene, Athene, or Enyo.¹ For the Persians Mā was Anāhita-, who besides other places had her sanctuary in Hypaipa in Lydia. She was considered as the Iranian counterpart of Artemis and Kybele. Even Isis was assimilated to her who unites in her essence Ištār and the Elamian Nana.²

Mā of Komana, the *νικηφόρος θεά*, had a temple in Rome which was destroyed in 48 B.C., but later on we find near the Circus Flaminius an official sanctuary of the Goddess, the Aedes Bellonæ Pulvinensis,³ as well as a private temple dedicated to her, the Aedes Bellonæ Rufiliæ.⁴

Like the Galli who had devoted themselves to the service of the Great Goddess of Pessinus, Mā of Komana had her own priests and priestesses, the *fanatici* or *bellonarii*. They came from Kappadokia and were not Roman citizens, just as such were not allowed to belong to the priesthood of the Great Mother. These *bellonarii* behaved much like modern dervishes. In Kastabala in Kilikia the priestesses of Artemis Perasia, another form of Mā, walked with bare feet over burning coals.⁵ In Rome the *bellonarii* carried double axes, the arm of the Hittite Tešub, and cut with these their own arms and legs. Latin poets have described orgiastic scenes

¹ Sulla, ix.

² Papyrus Oxyrhynchus 11, 1380; 104, 105 (Grenfell and Hunt) says that Isis is called: *ἐν Πέποις Ἀναίτην*, according to Fr. Cumont's emendation of *Δαρείτην*, and *ἐν Σούσις Ναίαν*.

³ C.I.L. vi, 2233.

⁴ C.I.L. vi, 2234.

⁵ Strabo, xii, 2, 7.

which were displayed in the streets of Rome when Mā had her festival day.¹

Anāhita- was, according to Yašt 5, a warlike goddess, the protectress of the Iranian nobility, and trophies were still deposited in her temples in the Sāsānian days. Sāsān, the grandfather of Ardašīr I, is said to have been king of Xīr in Fārs, and at the same time priest of the sanctuary of Anāhita- in Persepolis, Istaxr, where in A.D. 340 the heads of executed Christians were hung up.

Anāhita- is closely allied to Mithra-, and it can be accepted as a fact that the mystery religion bearing the name of this Iranian god was developed mainly in Asia Minor, after having undergone the influence of Babylonia.

The Romans came into contact with the worship of Mithra- in Kilikia and in Phrygia.² In Kilikia the army which fought against the pirates got acquainted with the mysteries celebrated in honour of Mithra- on Mount Olympus on the border of Pamphylia and Kilikia. Like Bellona-Mā-Anāhita- Mithra- must have appealed to the Roman military circles.

An inscription from Kappadokia belonging to the second or first century B.C. speaks of a Mage affected to the service of Mithra- who was associated with Mēn, Sabazios, and Attis. In Phrygia and Lydia Magian communities were established since the epoch of the Achæmenians like the "Megabyzoi" attached to the temple of Artemis in Ephesos. It is therefore most probable that Western Asia Minor as well as Kilikia really played an important part in transmitting to Rome the mysteries of Mithra-.

Now Egypt was already in the third century B.C. the seat of a Mithraion situated in the Fayyūm. At Garob a list of sheep and goats belonging to different shrines has been

¹ Tibullus i, 6, 43 ff.; Horace, Sat. ii, 3, 223; Martial xii, 57, 11; Juvenal, Sat. iv, 123 f.; vi, 511 ff.

² Plutarch, Pompeius, xxiv; Lactantius Placidus, Ad stat. Theb. iv, 71.

discovered among papyri from the case of a mummy. This list says¹ :—

<i>Μιθραιου</i>		10
<i>Θυηρις Χαιαπιος προβα(τα)</i>	<i>ιγ</i>	
<i>αρνες</i>	<i>ε</i>	
<i>Μιρασιστις Ορεννιος προβα(τα)</i>	<i>κ</i>	
<i>[Αβ]ιστις Αβιστιος προβατα</i>	<i>ε</i>	
<i>αρνον</i>	<i>α</i>	15
<i>Υ[. . . .] . . υτου προβα(τα)</i>	<i>γ</i>	
<i>αρνες</i>	<i>β</i>	
<i>Οπαις Γωβιος προβατα</i>	<i>ις</i>	
<i>αρνες</i>	<i>ς</i>	
<i>[Η]δυλος Μαρωνος προβα(τα)</i>	<i>ε</i>	20
<i>αρνες</i>	<i>α</i>	

Among the entries concerning an unknown sanctuary we find mentioned *Φα[ι]ης*² *Μιθροδατου*,³ and some of the names cited under the heading *Μιθραιου* could be of Iranian origin, although this is very uncertain. The shrine dedicated to Mithra- may therefore perhaps have belonged to some community of *Πέρσαι τῆς ἐπιγόνης*. The names reproduced above are in any case very different from those given under the headings of other shrines dedicated e.g. to Aphrodite or Hermes, where we find names of Greek or Egyptian stamp.

Another temple of Mithra- existed in Memphis, the former seat of the Achæmenian Governors and the headquarters of the Persian garrison in Egypt.⁴ We cannot fix the date of this shrine. The fact that no inscription in Egypt hints at Mithra- seems to point to the conclusion that this Iranian deity never became popular in Egypt, but that Mithra- was

¹ Cf. J. G. Smyly, *Greek Papyri from Gurob*, R. Irish Academy, Cunningham Memoirs No. xii, Dublin, 1921, xxii, 10 ff.

² Another *Φαιης Αρβηχιος* is to be found, loc. cit. xxiv, 10.

³ Loc. cit. xxii, 2.

⁴ Fr. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, i, 242; Cumont-Gehrich-Latte, *Die Mysterien des Mithra*, 3rd ed., 30.

only recognized by the Iranian elements settled in the country. In Alexandria the cult of Mithra- flourished in the Roman period ¹ and it is not astonishing to find that in this cosmopolitan center Mithra- was accepted. This god and the mysteries coupled with his name were connected in some manner with those of Sarapis and Isis, just as Mithra- entered into relations with the Eleusinian mysteries, without ever gaining ground among the Greeks proper. In Kenchreai, the Eastern port of Corinth, Apuleius met a high priest of Isis called Mithras ²; on the other hand, we find a noble Parthian of the Great king's "friends", τῶν πρώτων φίλων, as adorer of the gods worshipped at Delos and Samothrake.³ In Egypt, Bardesanes testifies to the presence of Iranian mages in the second century A.D.⁴

We therefore have now a tradition of five centuries showing the presence of Mithra- and Iranian priests on Egyptian soil, and we can safely assume that certain elements of Iranian religion came to Egypt as early as the sixth century when Kambyzes conquered the country. The Mithraion in the Fayyūm does not, however, necessarily also imply the presence of the mysteries attached to Mithra-. We know of such religious customs only in Alexandria and Memphis in Roman times.

In any case the Garob papyrus cited above does not say anything about a Mithraistic community outside of Egypt and more specially in Europe. It was therefore wrong to object ⁵ against the correct statement given by Fr. Cumont, the greatest living expert on Mithraism, that the mysteries of Mithra- were transplanted to Rome from Kilikia and

¹ Cf. Socrates, hist. eccl. iii, 2; v, 16; Sozomenus, v, 7; Damascius apud Suidam, s.v. Ἐπιφάνιος.

⁴ Apud Eusebium, praep. ev. vi, 10, 16, ed. Gaisford.

⁵ Cf. O.L.Z., 1931, 212.

Phrygia.¹ Mithra-, the god, whom Commodus, Diocletian and Iulian held in high esteem, came to Rome through the army like Mā of Komana, as well as through his connection with the Phrygian Great Mother, the first Eastern deity which was recognized in Rome.

¹ *Les religions orientales dans le paganisme romain*, 4th ed., 132. The papyrus from Garob is mentioned in Cumont-Gehrich-Latte, *Die Mysterien des Mithra*, 3rd ed., 229. H. Gressmann, *Die orientalischen Religionen im hellenistisch-römischen Zeitalter*, Berlin and Leipzig, 1930, p. 148 ff., speaks of the document from the Fayyūm and points correctly to the Kilikian pirates as the circle, from which Mithraism spread to Rome.

An Aramaic Inscription on a Piece of Black painted Ware from Nineveh

By R. CAMPBELL THOMPSON AND R. W. HAMILTON

WHILE excavating at the side of the foundations of the Temple of Ishtar in some Parthian houses on Kouyunjik in 1930-1, we found a quantity of black-painted pottery, to all appearances of an early date, of the same kind

$\begin{matrix} \oplus 2 \\ \vee 4 \end{matrix}$ i.e. $\gamma 4 \oplus 5 \gamma$ or $\gamma 4 \oplus 5 \gamma$
 $=$ בלטסר

as appeared in 1927 and 1929, when Mr. Hutchinson was in charge of the pottery. This painted ware, while reminiscent of the well-known ware from Susa and Babylonia, has a distinct type of its own, and we are still in doubt about its exact date, but it is presumably of the Third Millennium. Its presence in Parthian levels led us to assume that some Parthian archaeologist had collected it.

[*Note by R. Campbell Thompson.*—Mr. Hamilton (who is now abroad in Palestine), in whose charge was the arrangement and identification of all the pottery, while washing a piece of similar ware in a quantity from this level (W 8, i.e. superficies W, and 8 ft. below our datum level), drew my attention

Drawing of Piece of Black-painted Ware from Nineveh.

to an inscription on it containing apparently an old Greek θ . On further examination it proved to be Semitic, and for this I would suggest, with some reserve, as a possible rendering, the name *Balaṭsu*, a common Assyrian name which would have been current in the eighth-seventh centuries B.C. On my return home I showed it first to Mr. C. J. Gadd, who concurred with me, and subsequently to Dr. G. A. Cooke,

who agreed that it was obviously Aramaic, and was not unfavourable to the possibility of my reading.]

This being so, we have to explain the presence of this piece of black-painted ware, to superficial examination at all events, similar to that of the early ware of Mesopotamia, but containing an Aramaic inscription which, at the earliest, ought not to be older than the eighth century B.C., and may well be later.

The actual object on which the inscription is is a portion of an arc of baked clay tube with some kind of nozzle on the top, and Mr. Hamilton, who made the drawing, suggests that it may be a lamp. The painting on it gives the impression of being poorly done, in comparison with the firm and definite artistically-drawn work on the more ancient specimens. We are therefore drawn to suggest that some collector of ancient pottery, or robber of old tombs (whichever title appeals the more) of the Assyrian period, made a vessel in the fashion of the ancient material which he had collected, and inscribed his name thereon. It is hardly likely that there are many specimens of these anachronisms about (if anachronism it be), but it is worth while bringing it to the notice of excavators, especially those in north Iraq, now that the black-painted pottery is attracting so much attention.

An Assyrian Royal Inscription from a Series of Poems

By S. LANGDON

K. 4874 is the right half of a square tablet, originally about 5 inches wide and $4\frac{1}{2}$ inches long. Translation by Sayce,¹ but the text has not been published. Owing to its fragmentary condition, the document has value almost exclusively for Sumerian and Semitic philology. It must belong to a series, for part of the Sumerian catch-line is preserved. The only similar tablet, known to me, is the Assyrian copy of a Babylonian bilingual account of the return of the statue of Marduk from Elam to Babylon, K. 3444, with duplicate, K. 3317, published in IV Raw. 20, No. 1.² K. 4874 is not entirely bilingual. Of the 62 lines on this tablet, Obv. 11-12, 17, 22, 25-26-27, 36, have no Sumerian equivalents, unless it be supposed that these lines contained Sumerian translations on the left side of the tablet. Obverse 23 proves that it is a royal inscription and semi-historical.

35. du u ma-ḥa-zi-iš³
i-tir-bu
They and entered
into the (sacred) cities.
36. mar-tum mi-lik-ša iš-ni
As to the daughter, her good-
will was changed.

¹ This compound epithet probably denotes a noun in the singular, and not *šedu u lamassu*. See BL. 131, against Streck, *Assurb.* ii, 38, 70.

² Cf. *gú-sa-bi* = *naphar-šunu*, RA. 11, 145, 31. Cf. PBS. x, 249, 19; Ebeling, KAR. 58, R. 40. The Sumerian is unintelligible.

³ The force of the ending *iš* in this passage differs entirely from the adverbial *-iš*, *aš*, *uš*, of Accadian grammar. This adverbial *-iš* was explained by the writer, PSBA. 1909, 110-4, as a decayed form of the pronominal suffix *šu*. But in this passage *-iš* has the same sense as Sumerian postfixed *šu* > *eš*, *iš*, and the syntax can not be explained in any other way. *maḥaziš* is not an adverb, like *tilaniš*, or a preposition, like *ašriš*, *iduš*, but means *ana maḥazi*. It is possible, then, that the entire series is of Sumerian origin as Delitzsch stated.

37. *gīr-il-la-a-ni ši-in-sar-ri*
38. -ḥa (?) -ša-šù ti-bu-šù iḫ-tū-du ¹

 29

The image shows a fragment of an Assyrian royal inscription on a tablet, identified as K 4874 REV. The text is written in cuneiform script, arranged in horizontal lines. The fragment is broken on the left side, and the lines are numbered 5, 10, 15, 20, 25, and 29. The script is a mix of standard Assyrian cuneiform and some variant forms. The text is a series of poems, as indicated by the page number 39 in the header. The fragment contains several lines of text, with some lines being more complete than others due to the breakage. The text is written in a dark ink on a light-colored background.

13. [. *dingir ? ni-sur-]*ra a-ba-ši-in-šed-dé¹

14. [. ila ša] i-gu-gu li-ni-iḫ-šu-man-ni [*sic !*]²

Etruscan Affinities in a Ras Shamra Tablet

By A. H. SAYCE

AMONG the tablets found by the French excavators at Ras Shamra, south of Antioch, written in the alphabetic cuneiform script and published by M. Virolleaud (*Syria*, x, 1929), there is one (No. 4) which has been omitted by Père Dhorme in his brilliant article on the transliteration and translation of the texts in the *Revue Biblique*, xiv, 1 (Jan., 1931). The reason for the omission is that the language of the text is not Phœnician, but an unknown form of speech. The text itself is a fairly long one, and is divided into short paragraphs, the separate words being also divided from one another as in the Phœnician texts.

Each paragraph begins with the same three words: *a-s-r kh-s-r kh-s-l-s*, where the suffixes *-r* and *-l-s* must represent the nominative, while with three exceptions (l. 40, . . . *n*; l. 43, *p-d-d-m*; and l. 62, *p-d-r-y*) they all end with a word with the suffix *-k* (or *-n-n-k*). This last would therefore presumably be the 3rd person of a verb which the suffixes of the subject at the beginning of the sentence would indicate to be in the singular. Between the subject-nominative and the verb come one or more words with the suffix *-n*. Where there is more than one such word, the words following the first are conjoined to it by suffixed *-m*, in which we must therefore see the copulative conjunction.

There are two words only which can be identified as of Semitic origin. These are *a-l* and *k-m-r*. *A-l* occurs repeatedly in the Phœnician texts, and represents the Heb. *el* "god". *K-m-r* is a well-known Semitic word for "priest"; in the Old Testament *kēmārîm* is used only of idolatrous priests (e.g. Zeph., i, 4), but in Assyrian the word is found as early as the age of the Cappadocian tablets (2300 B.C.), where we read of *kumrim sa Sarra-matin* "the priest of the King of the World" and *kumrim sa Kubabat* "the priest of Kybêbê".

(Lewy, *Die Kulteptexte aus d. Sammlung Frida Hahn*, pp. 21, 48). But whereas in Semitic the order of the words would be *kumer el*, here it is the reverse, *a-l k-m-r-b*, *a-l-d k-m-r-b-n-d*, *a-l k-[m]-r-b*, and *a-l k-m-r-b-n^e* (ll. 6-8). *A-l-d* appears to correspond to *a-l-t* "goddess", which is found in the Phoenician texts. In l. 60 we have *kh-m-r-b-n*, where *kh* or *h* takes the place of the *k*. Can *b* and *b-n* be plural suffixes?

Excluding *-b* and *-b-n*, there is a striking similarity between these suffixes and those of Etruscan. The nominal suffix *-r* is not uncommon in Etruscan, where it denotes the plural (as in *clenar* "sons"), but is also a termination of the nominative singular as in *aisar*, *aesar* "god" (Suetonius, *Octav.*, ch. xcvi; cf. Hesychius, αἰσοί· θεοί, ὑπὸ Τυρρηνῶν). In the Magliano inscription we have *aiser-as in ecs eene* "of (?) the god this . . ." In the inscription on the Agram mummy the word is spelt *eiser*.

-L is the Etruscan patronymic; *-l-s* would be either the patronymic suffix with the *-s* of the nominative which is sometimes attached to it (as in *Truial-s*, "Trojan"), or *-l-isa* "wife of the son of". In any case, the three words with which each paragraph of the inscription begins would exactly correspond with what in Etruscan would be "the god Kh-s-r son of Kh-s", i.e. "the Kh(a)sian".

As for the suffix *-n*, Trombetti has pointed out that it is the older Etruscan suffix of the accusative (*La Lingua Etrusca*, p. 14), while *-m* is the suffixed copulative conjunction "and". *-Ke*, again, is the suffix of the 3rd person singular of the Etruscan perfect, a form particularly plentiful in the inscriptions, where *-ke* is sometimes preceded by *n*, as in *mani-n-ke* by the side of *mani*, which Trombetti translates "monuments". The last line of the Ras Shamra text (62) ends with the words *kh-d-s-n-[n]-k a^cr m-t-r-m p-d-r-y*. P-d-z-y is the name of a deity (No. 1. 15), and seems to be a Semitic form in *-y* since elsewhere the name is P-d-r who must have been a goddess according to 23.4. Dussaud

compares the name of Pethor, P-d-r-i in Egyptian. Besides -m the Etruscans had also the copulative -k and in our Ras Shamra text we find accordingly (l. 56) *A-s-r T-r-kh-n-s-k* "Asr (Assur ?) and Tarkhun" (cf. *T-r-kh-n* l. 55).

Such grammatical similarities cannot be accidental, and there must have been some relationship between Etruscan and the language of the Ras Shamra tablet. The copulative conjunction -m is of itself almost sufficient to prove it. The Egyptian inscriptions show that in the time of the nineteenth dynasty, the Tursha, who have been rightly identified with the classical Tyrsêni, belonged to the south-eastern part of Asia Minor, and that, as in the case of the Lukka (Lukki) or Lycians their settlement on the western coast was of a later date. The newly-revealed language would consequently be either Proto-Etruscan, not yet modified by contact with Lydian, or, as seems to me more probable, a sister-language of Old Etruscan.

A comparison of the words in our new texts with those of the Etruscan inscriptions is of little use at present. *A-n*, indeed, appears to be the demonstrative pronoun, like the Etruscan *in*, and the verb *a-r-s-n-n-k* could be compared with the Etruscan *arse* "avert" (Festus, p. 18), but until a bilingual is discovered all attempts at decipherment will necessarily be subjective guesswork. Meanwhile the parallelism of the Ras Shamra *as-r khs-r khas-l-s an at-n wr-n-m . . . tmr-nn-k* and an Etruscan *Kanna-s Larth Lartha-l-s in alpa-n (spela-n-um) tur-ke* is too close to be accidental.

The values I have assigned to the cuneiform characters are those given to them by Père Dhorme (*Revue Biblique*, xiv, 1, p. 33). They agree with those independently obtained by M. Virolleaud, and are based on the pioneering work of Professor Bauer. One or two of Père Dhorme's identifications are still questionable, but none of these is to be found in any of the words quoted above. Of course, it does not follow that the pronunciation of a letter was the same in the language of the new text as it would have been in Phœnician ;

‘, for example, the Phœnician *‘ain* and *ghain*, would doubtless have been pronounced differently, and there is a letter <— which seems peculiar to the new text. Moreover, there is at least one case in which the scribe has written a wrong letter (𐤙𐤙 *y* instead of 𐤕𐤕 *kh*), and the modern copyist who is unacquainted with the language cannot be expected to be always right in his reproduction of a mutilated passage.

By way of supplement, I will add a note on a word which Père Dhorme has found in his translation of the Phœnician texts. Among the imprecations in No. 2 (ll. 12, 21, and 29) we have: “Drive away Qtš, drive away Ddmy, drive away Khry, drive away Khaty, drive away Alsy, drive away Sbr”, and he is clearly right in identifying all these (with the exception of the second) with Qadesh, Horite, Hittite, Alasiya (Heb. Elishah), and Subaru. For the second he suggests Didyma, but the word is evidently the Assyrian *dadmu*, which Professor Meissner has recently discussed in his *Beiträge zum assyrischen Wörterbuch*, i, p. 35. The word signifies “an inhabited district” or “place” (*aldni*, *makhazu*, and *esrêtum* in a syllabary), the plural being used in the Assyrian texts in the sense of “civilized mankind”. It would correspond with the use of *goyyîm* in the Old Testament, and we may accordingly see in the term the Phœnician equivalent of the Hebrew “(Galilee of) the Gentiles”. The Dadmy will have been the descendants of the old neolithic population who were settled between the Amorites of Qadesh on the Orontes and the Horites of the south.

Another Indus Valley Seal

By S. LANGDON

THE button-shaped seal communicated in this paper was kindly shown to me by Professor A. B. Cook, of Cambridge, who purchased it from a London dealer. The object was seen by the Cambridge professor among a lot of "Assyrian cone seals, etc.", but the dealer had no recollection of its provenance. Babylonian press seals of the small cone-shaped variety are constantly appearing in the hands of dealers in antiquities, and seals of the Indus Valley type, actually found in Mesopotamia, have been acquired through dealers in Paris.¹ There is no evidence that any of the seals found in the hands of dealers have come from India, and the additional circumstance that the London dealer had it among Babylonian seals leads one to believe that this object was found in lower Mesopotamia. The photograph is made from a cast. There is the usual pierced boss on the reverse. The inscription reads:—

Reading right to left, the *first* sign seems to be intended for the ordinary sign |||, which does occur in some texts as the first sign. See No. 266 of my *Sign List*, *Mohenjo-daro and the Indus Civilization*, p. 451. The second sign is apparently a variant of No. 113, but I have never seen any variant like it. No. 113 does follow 266 on two seals. To No. 113 I assigned the value *ta*. The third sign is No. 154, with accent A ('). The fourth sign is the common fish sign, No. 175.

Sign 5 is the same as the first sign, but correctly made: No. 266 of my *Sign List*. The sixth and last sign is clearly intended for No. 182, the *homo* sign, a post-fixed *determinative*, indicating either a *nomen proprium* or a profession. For this

¹ See *Revue d'Assyriologie*, xxii, 99. Probably the one in the Ross Collection, Boston, U.S.A., was obtained in the same manner. See *Bulletin of the Museum of Fine Arts*, Boston, 1931, vol. xxvii, p. 28.

form of the *homo* sign as post-fixed determinative, see the seal excavated by the Oxford-Field Museum Expedition at Kish, *JRAS.* 1925, Pl. X, and my copy *Mohenjo-daro and the Indus Valley Civilization*, p. 425. The positions of signs 1 and 6 prove that the text must be read as copied.

When I first saw this seal I doubted its genuineness on account of the shape of the object below the bull's head, and the pose of the head showing two horns. However, my opinion on this matter is of little value, as I have not seen the vast number of seals excavated in India. My work has been confined entirely to the inscriptions. This seal is undoubtedly

Steatite button seal in possession of Professor A. B. Cook, D.Litt.,
Cambridge.

genuine and probably comes from Mesopotamia. It is clear that Sumerology must take into account the language, culture, and influence of this new element which is constantly appearing in various ancient Sumerian sites. See *JRAS.* 1931, 593-6. Following the evidence of the Kish seals of this kind, the approximate date is 2800 B.C. Professor Cook is to be congratulated on securing this valuable object, and it is to the credit of his great archæological acumen that he detected it after it had long remained open to all and that it was finally discovered by him.

The "Kitāb al-muntazam" of Ibn al-Jauzī

BY JOSEPH DE SOMOGYI, PH.D.

I. INTRODUCTION

IT is at a relatively late date that the writing of history begins in the Arabic literature. The Arabs of the earliest period of Islām seem to lack all historical sense, and their theologians proved entirely hostile to historical studies. The impetus towards such investigations was not given until the second half of the second century A.H., when, under the 'Abbāsides, the Arabs came into close touch with the Sāsānides, whose political ideas and civilization were accepted by the caliphs of Baghdād. Persian customs, Persian knowledge pervaded the empire and brought forth one of the most remarkable phenomena of history: the subjugation of the conqueror by the conquered, possessed of higher intellectual gifts.

It is owing to this Persian influence that the writing of history begins with the Arabs. The *kār-nāmes*, the biographical records of the several Sāsānian kings, soon became known in Baghdād, and the first attempt at a comprehensive history of Persia, the *Khudāy-nāme*—begun by order of Khusraw Anūshīrwān, the contemporary of the Roman emperor Justinian in the sixth century A.D., and continued by all the later Sāsānian monarchs¹—was translated into Arabic by 'Abdallāh ibn al-Muqaffa' (died in 146/727), under the title *Siyyar mulūk al-'ajam*. These works gave the Arabs the first impetus towards compiling their own historical traditions. And it is no less remarkable that a very considerable amount of this work was done by scholars of Persian extraction.² The greater part of the historical

¹ See F. Justi, *Geschichte des alten Persiens*, Berlin, 1879, p. 216.

² It was I. Goldziher, who, for the first time pointed out this fact in a Hungarian paper, "A történetírás az arab irodalomban" (The writing of history in the Arabic literature), Budapest, 1895, pp. 20-41.

traditions in the *Kitāb al-aghānī* is due to Arabicized Persians, and the greatest authority for the history of the *jāhiliyya*, Abū 'Ubayda, was also of Persian origin. When the writing of independent works on history begins, we meet Persian names again, like Muḥammad ibn Ishāq (died in 151/718), the author of the first biography of Muḥammad, Ḥamza al-Ḥafḥānī (lived at the beginning of the fourth century), who wrote his annals on the base of Persian sources, and Muḥammad ibn Jarīr at-Ṭabarī (died in 310/923), "the father of Arabic historiography." It is to his *Kitāb akhbār ar-rusul wal-mulūk* that all the later works on general history link on, in the form of abridgments and continuations. Thus it may justly be said that Arabic historiography is no national product of the Arabs, but a result of foreign, Persian influences. This is clearly shown by the fact, too, that, like the Pahlawī historical works, the Arab historians—with the possible exception of Ibn Khaldūn—do not deal with the development of political and social life, but with the lives of the rulers and dynasties. The history of any period whatever is hardly anything else than the biography of the ruler; his country and people are only considered inasmuch as he ruled over them and waged his wars with their aid.¹

This essentially Persian method has decidedly influenced Arabic historiography after at-Ṭabarī; his annals served as a pattern for all his successors who wrote upon general history. Among them, the name of Ibn al-Athīr (died in 630/1233), the author of the *Kitāb al-kāmil fī-ta'rikh*, is as well known as that of at-Ṭabarī, whose chronicle he

¹ This trend of all Arabic historiography has been excellently characterized by Dozy, in speaking of the Spanish-Arabic historians: "Ce qui les intéresse, ce n'est pas l'histoire du peuple, l'état de la société, le mouvement de la vie publique, la guerre des factions, la lutte des tribus, des races ennemies, les agitations et les développements du pouvoir et de la liberté, mais c'est l'histoire toute personnelle des princes. Leurs ouvrages sont des chroniques de cour, des registres de famille, où l'on trouve énumérés, avec un soin minutieux et puéril, les employés, les femmes, les enfants, les occupations journalières des rois." (*Histoire de l'Afrique et de l'Espagne par Ibn 'Adhārī*, etc., vol. i (Leyde, 1848, 51), Introduction, p. 19.)

abbreviated and continued up to his own time. But less known is the general history of a famous older contemporary of Ibn al-Athīr; this is the *Kitāb al-muntaẓam wa mulṭaḡaṭ al-muntaẓam* of Ibn al-Jauzī, a work that has never yet been edited or discussed as a whole. This work deserves our fullest attention, not only because there are relatively very few editions of Arabic works on general history, but also for the reason that it is the main work of one of the most celebrated encyclopædists of Arabic literature.

II. IBN AL-JAUZĪ¹

Jamāladdīn Abul-Faraj 'Abdarrahmān ibn abil-Ḥasan ibn 'Alī ibn Muḥammad ibn al-Jauzī² al-Qurashī at-Taymī al-Bakrī was descended from a family that derived its origin in its twentieth generation from the caliph Abū Bakr, the father-in-law of the prophet Muḥammad.³ His family was a member of the tribe of Taym, a branch of that of Quraysh; he, therefore, bore the appellations of al-Qurashī at-Taymī al-Bakrī. One of his forefathers, Ja'far, was called al-Jauzī either from al-Jauz, a well-known port and a fertile district between Ḥalab and al-Bīra on the upper Euphrates,⁴ or from "al-jauza" ("the nut"), which was a monetary unit of the dirhems current in Wāsiṭ at that time. He was born in Baghdād in 510/1116⁵ or, according to other authorities, in

¹ See *Ibn Khallikān*, ed. de Slane, vol. ii, pp. 96-8; F. Wüstenfeld, *Die Geschichtschreiber der Araber*, Nr. 287, pp. 102-3; C. Brockelmann, *Gesch. der arab. Lit.*, vol. i, pp. 499-502; *ibid.*, in the *Encyclopædia of Islam*, vol. ii, p. 372.

² Brockelmann, vol. i, p. 500, gives his name as al-Jauzī; Ibn al-Jauzī, as he is called in the MSS. of his work and in his Oriental biographies, is more complete and correct.

³ According to Ibn Khallikān (*ibid.*), his genealogy is traced up as follows: Abul-Faraj 'Abdarrahmān ibn abil-Ḥasan 'Alī ibn Muḥammad ibn 'Alī ibn 'Ubaydallāh ibn 'Abdallāh ibn Ḥummāda ibn Aḥmad ibn Muḥammad ibn Ja'far al-Jauzī ibn 'Abdallāh ibn al-Qāsim ibn an-Nadhr ibn al-Qāsim ibn Muḥammad ibn 'Abdallāh ibn 'Abdarrahmān ibn al-Qāsim ibn Muḥammad ibn abī Bakr aṣ-Ṣiddīq.

⁴ *Ibn Khallikān*, *ibid.*

⁵ *Ibn al-Athīr*, vol. xii, p. 112, l. 24.

508/1114-15, and died in Baghdād on the 12th of Ramaḍān, 597/June, 1200, at an age of 84 or 85 years. He himself informs us of his life in his work *Liftat al-kabid fī naṣīhat al-walad*,¹ in which he admonishes his son Abul-Qāsim to follow his example and to devote his life to the sciences. His father, a very rich man, favoured him with a very careful and expensive education, and on his death he left to his son a considerable fortune and two houses, in one of which he himself lived, and the other he hired out. After having spent his whole inherited fortune upon books, he sold both his houses in order to invest the money thus acquired in the same manner. Although he detested rambling about and endeavouring, like other preachers did, to gain the favours of the princes, yet he was never in distress.

At the age of 7 years he attended some lectures on the "Musnad" of Aḥmad ibn Ḥanbal, two years later he attended the lectures of his tutor Abul-Ḥasan 'Alī ibn 'Ubaydallāh ibn Naṣr az-Zāghūnī (died in Muḥarram 527, author of a chronicle) and in 554/1159 those of Ma'mar ibn 'Abdalwāḥid. From his masters the sagacious boy acquired a comprehensive knowledge of religion and science which, together with his eloquence, rendered him one of the most illustrious men of his time. Already at the age of 20 he was famous for his gift of eloquence, and later on he became such a popular and celebrated orator that even caliphs, princes, and wazīrs frequently attended his lectures, and sometimes as many as 100,000 people gathered round him. His place was not so much the pulpit of the mosques as religious gatherings held either in the street or at his home, mostly in Baghdād, but sometimes also in Madīna. His eloquence procured him so great a popularity that in the struggles between Sunnites and Shi'ites which were frequent at his time, both parties agreed to abide by his opinion.² At the end of his *Kitāb al-quṣṣās*

¹ See the catalogues of MSS. of Berlin, Nr. 3988 and of Cairo, vol. vii, p. 177.

² Ibn Khallikān, *ibid*.

wal-mudhakkirīn,¹ as well as in his work mentioned above, he refers to his success "in converting more than 100,000 people to piety" and "in renewing the confession of Islām from more than 20,000 people". His numerous edifying works are recommended for public reading by as-Subkī.²

Ibn al-Jauzī was educated in the *madhhab* of Aḥmad ibn Ḥanbal, which he followed fanatically. His ardent devotion to his *madhhab* led him to the strictest criticism of tradition. He even prepared an edition of the *Iḥyā'ulūm ad-dīn* of al-Ghazālī, purified of all the pretended "weak" traditions (*maudū'āt*)³; the latter he compiled in a separate work entitled *Kitāb al-maudū'āt*,⁴ in which he went so far in his purification of the traditions that a late successor of his, the equally celebrated encyclopædist 'Abdarrahmān ibn abī Bakr as-Suyūṭī (died in 911/1505), devoted a whole work entitled *An-nuqaṭ al-baḍī'āt*⁵ to proving the genuineness of many traditions rejected by Ibn al-Jauzī. In the same manner he criticized the *Kitāb fī faḍā'il Yazīd* of 'Abdalmugbīth ibn Zuhayr al-Ḥarrī.⁶ So fanatical a Ḥanbalite did he become, that he did not shrink from detracting from the reputation of scholars in general esteem for the simple reason that they did not belong to the *madhhab* of Aḥmad ibn Ḥanbal.⁷ This *madhhab* of his own he defended in his *Al-bāzī al-ashhab al-munqadd 'alā mukhālifī l-madhhab*.⁸ By his fanaticism he incurred the reproach of Ibn al-Athīr of being a biased Ḥanbalite.⁹

Ibn al-Jauzī was particularly keen about *isnāds*. In his *Jāmi' al-masānid wal-alqāb*¹ he recognizes only the authenticity of Aḥmad ibn Ḥanbal, al-Bukhārī, Muslim, and at-Tirmidhī, and disputes that of an-Nasā'ī and Ibn Māja, for the weakness of some *isnāds* quoted by them. Through his activity in ruthlessly purifying the *ḥadīths* he incurred a great number of refutations.²

Besides being celebrated for his eloquence, it is due to his literary activity that his name has become illustrious throughout the Muslim world. His productivity is simply unequalled even in Arabic literature; only as-Suyūṭī may be compared to him in this respect. He himself claimed to have written 1000 volumes by his own hand. Brockelmann in his *Geschichte der arabischen Litteratur*³ enumerates eighty-one works of his, but very probably a great number of his writings have been lost. All his works are mere compilations, as can only be expected from such a productive Arab scholar. They covered nearly all branches of human knowledge: philology, history, biography, the different branches of religious science (*ḥadīth*, *tafsīr*, *fiqh*, ethics, mysticism, homiletics, exhortations), medicine, geography, and encyclopædic writings. But it is for his historical works that he was especially famed, and the most important of these is his *Kitāb al-muntazam*.⁴

¹ See Goldziher, op. cit., vol. ii, p. 263; Brockelmann, vol. i, p. 503, Nr. 20.

² See *Ḥājī Khalfā*, vol. vi, pp. 263-4, Nr. 13, 435.

³ Vol. i, pp. 502-6.

⁴ His other works on history quoted by Brockelmann (vol. i, pp. 502-3) are: *Adh-dhahab al-masbūk fī siyar al-mulūk*, a history of the rulers of Islām; *Shudhūr al-'uqūd fī ta'rikh al-'uhūd*, the first volume of which treats of prophets and angels; *'Ajā'ib al-badā'i*, a collection of historical anecdotes; *Talqīh fuhūm ahl al-āthār fī mukhtaṣar as-siyar wal-akhbār*. His works on general biography are: *Ṣifat as-sāfīa*, extract from the *Ḥilyat al-anbiyā* of Abū Nu'aym; *Kitāb fī akhbār al-adhkiyā alladhīna quwwiyat fītanuhum wa tanagqada dhakā'uhum biqurwat jauharīyyat 'uqūlihīm*, a work on "those people whose minds were sharp"; *Kitāb al-hukamā wal-mughaffalīn*, a counterpart to the former; *Kitāb al-quṣṣā wal-mudhakkirīn*, see above.

III. THE MANUSCRIPTS OF THE "KITĀB AL-MUNTAZAM"

The most important work of Ibn al-Jauzī is his *Kitāb al-muntazam wa multagaṭ al-multazam fī akhbār al-mulūk wal-umam* ("The Book on Rightly ordered Things and the Collection of Necessary Things dealing with the History of the Kings and the Nations"), shortly quoted as *Kitāb al-muntazam*. It deals in chronological order with the history of the world "from the beginning of the world to the advent of the august Prophet and thence up to the caliphate of al-Mustaḍī",¹ i.e. till the year A.H. 574. It seems therefrom that Ibn al-Jauzī completed his work shortly before his death. The work originally consisted of sixteen volumes, but the copyists of later times divided it into parts. The work is known from a number of manuscripts preserved in several European and Oriental libraries, each of these manuscripts containing a portion or a fragment of the whole work. These manuscripts are as follows² :—

(a) *Pre-Islāmic Period*

- (1) Aya Sophia, Nr. 3092 : "Part I" till the end of the year A.H. 1. Pre-Islāmic and Biblical history, legends of saints.
- (2) Āshir Efendi, Nr. 715 : "Part I" : the same period.

(b) *Islāmic Period* (in chronological order)

- (3) A.H. 1-13, Āshir Efendi, Nr. 716 : it begins with the seventh year after the birth of the prophet.
- (4) A.H. 1-32, Fayḍallāh, Nr. 1534.
- (5) A.H. 2-36, Aya Sophia, Nr. 3093 : "Part II."
- (6) A.H. 7-13, Āshir Efendi, Nr. 718, written by the same hand as Nr. 716.

¹ See *Ḥājī Khalfā*, vol. vi, pp. 166-7.

- (8) A.H. 14-35, Damascus, Ḥabīb az-Zayyāt: *Ta'riḫ*, Nr. 62.
- (9) A.H. 32-95, Āshir Efendi, Nr. 717: "Part VI," being a different division from that of Aya Sophia.
- (10) A.H. 33-218, British Museum, Nr. 353, fol. 99-120: a fragmentary MS., containing the records of the years 33, 88, 96, 109, 111, 118, 127, 169-75, 176-81, 183-9, 207-10, 216-18.
- (11) A.H. 35-180, Köprülüzâde, Nr. 1173: "Part II," the MS. is dated in the year A.H. 649.
- (12) A.H. 37-100, Aya Sophia, Nr. 3094: "Part III."
- (13) A.H. 58-198, British Museum (Cureton-Rieu), Nr. 307.¹
- (14) A.H. 63-164, Gotha (Pertsch), Nr. 1553, a fragmentary and defective MS., the records of the following years A.H. being wanting: 65, 69-72, 79-81, 87, 102-5, 118-21, 125-47.
- (15) A.H. 96-136, Bodleian Library (Uri, Nr. 779), dated from the year A.H. 666.²
- (16) A.H. 101-97, Aya Sophia, Nr. 3095: "Part IV."
- (17) A.H. 170-200, Paris (Schefer), Nr. 5903.
- (18) A.H. 198-284, Köprülüzâde, Nr. 1175: "Part V."
- (19) A.H. 225-51, As'ad Efendi, Nr. 2085.
- (20) A.H. 228-89, Cairo (vol. v, p. 160, *Ta'riḫ*), Nr. 306.

¹ According to the Catalogue of the British Museum, p. 151, this MS. is the third volume of a certain *Ta'riḫ al-umam*, by Muḥammad ibn Mansūr but H. F. Amedroz has proved ("An unidentified MS. by Ibn al-Jauzi," *JRAS.*, vol. 1906, pp. 851-80, and vol. 1907, pp. 19-46) that this is part of the *Kitāb al-muntaẓam*. To his discussions G. Gabrieli adds (op. cit., pp. 1135-6) that the MS. coincides with the MS. of Aya Sophia, Nr. 3095, and is an abridged recension of it by the same author as copied the MS. of Cairo (Cat., vol. v, p. 145, see Brockelmann, vol. i, p. 502: Wüstenfeld, Nr. 287, p. 103) in abridging the *isnāds* and in omitting the less important biographical notices. This recension is according to Gabrieli, later than the common recension of the *Kitāb al-muntaẓam* and not earlier, as is asserted by Amedroz.

² Brockelmann (vol. i, p. 502) has erroneously quoted Bodl., pp. 102, 105, 106, as MSS. of the *Kitāb al-muntaẓam*; these are MSS. of the *Kitāb al-adhkiyā* by the same Ibn al-Jauzi.

(21) A.H. 228-89, British Museum (Rieu, Suppl.), Nr. 460, a copy of the MS. of Cairo.

(22) A.H. 257-334, Köprülüzâde, Nr. 1174: "Part III," dated in the year A.H. 714.

(23) A.H. 275-322, Paris (Schefer), Nr. 5909.

(24) A.H. 285-366, Fayḍallāh, Nr. 1535, the beginning is defective.

(25) A.H. 285-411, Aya Sophia, Nr. 3096: "Part VI"

(26) A.H. 297-441 (according to Wetzstein, *ZDMG.*, vol. v, 1851, p. 279, till A.H. 447), Berlin (Ahlwardt), Nr. 9436.

(27) A.H. 412-520, Aya Sophia, Nr. 3097: "Part VII."

(28) A.H. ?-567, Āshir Efendi, Nr. 716: "Part III," fragmentary MS.; the folios are bound falsely, some of them belonging to previous volumes, down to the records of the year A.H. 50.

(29) A.H. 521-74, Aya Sophia, Nr. 3098: "Part VIII."

Of these MSS. those of the Aya Sophia, Nrs. 3092-8, together with that of the Köprülüzâde, Nr. 1175, give us a complete copy of the *Kitāb al-muntaẓam*, divided into eight parts.

Besides that, there exist some MSS. of several compendiums of the *Kitāb al-muntaẓam*. These are :—

(a) *Pre-Islāmic Period*

(1) Paris (de Slane), Nr. 1550: a compendium by 'Alī ibn Majdaddīn ash-Shahrūdī (died in A.H. 873).

(2) Cairo, Ar., Ta'riḫ, Nr. 95: a compendium by Ibn al-Jauzī himself.

(3) Leyden (Dozy), Nr. 755 and Leyden (De Goeje), Nr. 833: a fragment of an anonymous compendium.

(4) Amsterdam-Leyden (de Jong), Nr. 102.

(b) *Islāmic Period*

(5) A.H. 1-569, Cairo Ar., Ta'riḫ, Nr. 95, dated from the year A.H. 789: a compendium also comprising the pre-Islāmic period, made by the same author.

(6) A.H. 1-578, Amsterdam-Leyden (de Jong), Nr. 102 : an anonymous compendium under the title : *Shudhūr al-'uqūd fī ta'rīkh al-'uhūd*, probably a work by the same Ibn al-Jauzī ; see *Hājī Khalfa*, vol. iv, p. 19, Nr. 7435.

(7) A.H. 13-574, Cairo Ar., Ta'rīkh, Nr. 94 : dated from the year A.H. 927 : a compendium entitled *Mukhtaṣar al-Muntaẓam wa multaṭaṭ al-multazam*, by 'Alā'addīn 'Alī ibn Majdaddīn ibn Mas'ūd ibn Maḥmūd ash-Shahrūdī al-Biṣṭāmī (see *Hājī Khalfa*, vol. vi, p. 166, Nr. 13, 111) in three volumes.

IV. THE CONTENTS AND THE CHARACTER OF THE "KITĀB AL-MUNTAẒAM"

Arabic and Oriental historiography in general consists of an enumeration of events arranged in chronological order. As we have seen above, the Arabic historical works are essentially annals of a mere compilatory character. The external form of their informations is the same as that of the religious traditions : the *ḥadīth*. The authenticity of any information has to be proved by eye-witnesses whose knowledge of an event reaches the historian through the chain of intermediary traditionists. Thus the *isnād* constitutes an integral part of the historical information. This method is characteristic for at-Ṭabarī and all the other works on general history as well.

Both the deficiencies of at-Ṭabarī's work ¹ and the necessity of its continuation induced the scholars of later times to write new works on general history. These works, despite their additional records and their peculiarities, may justly be styled as improved or abridged editions of at-Ṭabarī's annals. They have retained not only their subject-matter, but also imitated their style and their scheme.

This scheme, followed also by Ibn al-Athīr, was adopted by Ibn al-Jauzī as well. Like the work of at-Ṭabarī, his *Kitāb al-muntaẓam* is divided into chapters dealing with the

¹ See C. Brockelmann, *Das Verhältnis von Ibn al-Athīr's Kāmil fit-ta'rīkh zu Tabarī's Aḥbār ar-rusul wal-mulūk*, Strassburg, 1890, pp. 2-3.

events of the several years, and bearing the title: "Thumma dakhlat sanatun . . . wa min al-ḥawādithi fihā." There then follow the records of the events, each beginning with the words: "Wa fi ḥādhihi's-sanati." But unlike at-Ṭabarī, Ibn al-Jauzī divides his narrative of every year into two distinct parts, the first of which, bearing no special title, treats of events of the year, and the second of which, bearing the title "Dhikru man tuwuffiya fi ḥādhihi's-sanati min al-akābiri", gives the obituary notices of the distinguished people who died in the year in question. The proportion of these parts to one another is rather unequal, the first part being generally much shorter than the second, and in some cases only consisting of a few lines.¹

I. It is only in the first parts of his narratives of every year that Ibn al-Jauzī follows the scheme of at-Ṭabarī. He is, however, more careful of the chronology of the events than his predecessor in arranging them also according to months within every year. The order of the records is, therefore, sometimes different from that of at-Ṭabarī. In the subject-matter, however, his narrative, as a whole, follows that of his predecessor either in adopting it word for word, or—and more frequently—in abridging it either by omitting—should there be any—the parallel traditions of the same event related by at-Ṭabarī, or by simply quoting the first words of at-Ṭabarī's narrative.

A comparison of the works of at-Ṭabarī and Ibn al-Jauzī with one another may prove that Ibn al-Jauzī does not follow strict and consistent principles in abridging at-Ṭabarī's work. He not only shortens many traditions of at-Ṭabarī, but also omits many of them, frequently even those which record very important events.² In regard to political history,

¹ This method was also adopted by historians who lived later than Ibn al-Jauzī, for example in the *Ta'rikh al-islām* of adh-Dhahabī (died in 748/1348).

² One of the most conspicuous instances for this is the narrative of events of the year A.H. 251, which are recorded on 110 pages in at-Ṭabarī's work (vol. iii, pp. 1535–1645), and only on less than ten pages (*Br. M. Suppl.*,

Ibn al-Jauzī's work is, therefore, not so reliable a source as are aṭ-Ṭabarī's or Ibn al-Athīr's works.¹ From the *Kitāb al-muntazam* alone we could hardly obtain sufficient information concerning *all* the events of Muslim history. In this respect, for the period beginning with the year A.H. 302—where aṭ-Ṭabarī's work ends—Ibn al-Athīr's *Kāmil* is still indispensable.

Yet the *Kitāb al-muntazam* cannot be considered as a mere extract of aṭ-Ṭabarī's work, because in some particulars it also gives complementary traditions not mentioned in the annals of aṭ-Ṭabarī, and in other cases Ibn al-Jauzī's records are more detailed than those of aṭ-Ṭabarī. These cases are as follows :—

1. It may be seen from the "Appendix" that in the narratives of nearly all the years Ibn al-Jauzī records such traditions as are not mentioned in aṭ-Ṭabarī's work, and names the traditionist on the authority of whom he relates them. In the majority of cases, these are parallel traditions corroborating or detailing aṭ-Ṭabarī's narrative. But exclusive of these traditions there are more especially two chapters of Muslim history in the narratives of which Ibn al-Jauzī is more detailed than aṭ-Ṭabarī. The one is the history of the Qarmatians related under the year A.H. 278 and in the subsequent chapters.² In the narrative of the year A.H. 278 Ibn al-Jauzī gives a detailed description of the origin of the Qarmatians, and discusses their doctrines, in which particular his narrative is different from that of aṭ-Ṭabarī. The other chapter is the history of the Būyides

No. 460, fol. 124b-129). In particular the record of al-Mu'tazz being elected caliph by the Turks after the assassination of Boghā aṣ-Ṣaghīr and Waṣīf is very short, seventeen lines only in the *Kitāb al-muntazam*, whereas it comprises forty-eight pages (vol. iii, pp. 1535-83) in aṭ-Ṭabarī's work.

¹ Ibn al-Athīr's procedure of abridging and complementing aṭ-Ṭabarī's work is far more logical than that of Ibn al-Jauzī. See C. Brockelmann, *Das Verhältnis*, etc., pp. 17-25.

² See *Br. M. Suppl.*, No. 460, fol. 226b-233b.

from the year A.H. 322 onwards,¹ his narrative being more detailed than that of Ibn al-Athīr.

2. An interesting peculiarity of the *Kitāb al-muntazam* is its detailed biographical notices on the caliphs. Like at-Ṭabarī, Ibn al-Jauzī also devotes a separate chapter to every caliph amidst the events of the year in which he ascended the throne.² Ibn al-Jauzī's narrative, however, is not only different from that of at-Ṭabarī, but also more exact and more detailed. Thus he always gives the full name of the caliph in question, then his genealogy and appearance—details that are often neglected by at-Ṭabarī—then a short account of his life and his accession. These descriptions are usually followed by a chapter entitled "Dhikru ṭurafi sīratihi", relating some episodes from his life. These chapters on the caliphs give evidence of Ibn al-Jauzī's liking for biographical records, and in containing references to authors whose works are lost they give valuable data that are not to be found in the works of at-Ṭabarī and Ibn al-Athīr.

3. Ibn al-Jauzī is especially particular about depicting climatic conditions and strange natural phenomena which are only briefly mentioned by at-Ṭabarī. The inundations of the Tigris and the Euphrates, violent winds, heavy storms, earthquakes, the falling of meteors, the appearance of comets are always recorded in detail, even to the detriment of the political narrative. In the narratives of several years these are the only events that he deigns to mention.

4. As a man of Baghdād, he is particularly attentive to the local events of the 'Abbāside capital. This particularity manifests itself not only in his detailing the political events of Baghdād (and of Baṣra) by adding new information to the records received from at-Ṭabarī, but also in depicting such phenomena of daily life as are not mentioned in the works of his predecessors. He never forgets to mention the

¹ See Berlin (*Ahlwardt*), No. 9436, fol. 50, and subs.

² This also proves that the Muslim historical works deal with the history of the rulers in the first place.

construction of a new mosque in Baghdād or the renewal and rebuilding of its public buildings, details of prices, etc. His peculiar attention is given to the administration of Baghdād, Baṣra, and other cities of the empire. At the end of his narrative on political events he always enumerates the names of the leaders of the pilgrimage to Mekka, enlarging the narrative of aṭ-Ṭabarī with additional traditions and supplementing it with the list of the 'āmils, qāḍīs, and wālis deposed and newly appointed in the year in question, not only in Mesopotamia, but also in other important cities (as Mekka, Medina, Damascus, etc.). These traditions are sometimes fairly long and more detailed than those of aṭ-Ṭabarī and Ibn al-Athīr. The *Kitāb al-muntazam* is thus a reliable work of reference on the history of administration of Mesopotamia in general and of Baghdād in particular.

These details show Ibn al-Jauzī's fondness for describing striking phenomena and events of non-political concern. His especial interest in the "realia" is still more evident in some of his political records: thus, in his narrative of the year A.H. 75, he gives a very detailed description of the coins of 'Abdalmalik,¹ this ruler having been the first who, according to tradition, had coins minted in the Muslim empire.

II. The second part of Ibn al-Jauzī's narrative contains biographical notices of all the persons of consequence deceased in the year in question. These chapters of the *Kitāb al-muntazam* are far more elaborate than the records on political and local events, which seem to be of secondary importance only. In seeing and reading these biographical notices one can hardly get rid of the impression that Ibn al-Jauzī's primary object was to write a *biographical history* of the caliphate to which he appended—for the sake of completeness—some records on political and local history. We have seen that the biographical element is very noticeable even in this latter kind of records in the biographical notices

¹ See Gotha (Pertsch), No. 1553, fol. 15-17b, the description comprising six pages, whereas aṭ-Ṭabarī only has a short record of it (vol. i, pp. 939-40).

of the caliphs. And it is just these biographical notices enumerated in the narrative of every year that distinguish the *Kiṭāb al-muntazam* from at-Ṭabarī's and Ibn al-Athīr's works as well, both works only containing short and defective enumerations of the persons deceased and no detailed records, with the possible exception of the caliphs and some other persons who played an important part in political or military history.

Ibn al-Jauzī's necrologies include all sorts of prominent people : caliphs,¹ wazīrs, qāḍīs, other high officials, theologists, jurisconsults and pious men. The names of the deceased are put in alphabetical order, beginning with the *isms* and continuing with all the *kunyās* and *laqabs* ; then there follows the indication of the occupation of the deceased. The notices vary in length, in some cases they only consist of a few words : "and he died in this year," but most of them are extensive, sometimes comprising several pages—especially those of the most illustrious poets and scholars. In these longer records Ibn al-Jauzī first enumerates the persons who were the masters of the scholar in question, then the traditionists who recorded of him (" *wa ḥaddatha 'anhu . . .* "), and the writers who refer to him in his works (" *wa rawā 'anhu . . .* "). There then follows Ibn al-Jauzī's own record of the life of the person in question, containing some interesting episodes from his life and some citations of poems written by him or on him. He always gives the references from which he obtains his information, never omitting the whole chain of the *isnād* through which his authority—in nearly all cases Abū Maṣṣūr 'Abdarraḥmān ibn Muḥammad al-Qazzāz or Abul-Faḍl Muḥammad ibn Nāṣir al-Ḥāfiẓ as-Sallāmī—has come by his tradition. As there are no works left by these two famous traditionists, it is of paramount importance that Ibn al-Jauzī quotes them on nearly every page and in nearly every biographical notice of

¹ The caliphs are always included in these necrologies, even if their decease has been recorded among the political events ; in this case their names are only given.

some length. At the end of his notices he gives the exact date of the decease of the person in question. He commemorates even caliphs and other persons whose deaths he recorded in the political narrative of that year; in these cases, however, his notices are very short.

These biographical notices have very carefully been compiled by Ibn al-Jauzī, and it is in the first place for their sake that an edition of the *Kitāb al-muntaẓam* would be highly desirable. We have comparatively very few editions of Muslim biographical works. But even compared to these, like the *Kitāb al-aghānī* of Abul-Faraj al-Isfahānī or the *Kitāb al-ansāb*, by as-Samʿānī or the *Wafayāt al-aʿyān* by Ibn Khallikān, Ibn al-Jauzī's work is more complete in recording not only the more famous men, but nearly every man of some consequence, although, as a matter of course, his records are more reliable for Mesopotamia—and especially for Baghdād and Baṣra, concerning which cities his records are far more detailed than those of any other author known to us—than for the more remote parts of the empire. It is just for the biographical value of the *Kitāb al-muntaẓam* that Ibn al-Jauzī received praise from authors of later time, as e.g. from Sibṭ abū Shāma,¹ there being no such records in other prominent historical works.

V. THE AUTHORITIES OF THE "KITĀB AL-MUNTAẒAM"

The *Kitāb al-muntaẓam* gives evidence of the many-sided erudition of Ibn al-Jauzī. In writing such an extensive work, he had to consult many authorities. But, unlike aṭ-Ṭabarī and Ibn al-Athīr, Ibn al-Jauzī is not satisfied with giving the name of his authority; in addition, he gives the complete *isnād* of the traditionists through whom his direct authority received his information. His elaborate and long *isnāds*—being in the majority of the cases longer than the *matn*—are a peculiarity of Ibn al-Jauzī, the more so as at his time the

¹ See *Ḥājī Khalfa*, vol. iii (and not iv, as quoted by Brockelmann, vol. i, p. 503, note), p. 347, Nr. 5875.

quoting of *isnāds* in their whole length, as was customary at the time of at-Ṭabarī, had been abandoned.¹

Only Ibn al-Jauzī's main work of reference is an exception to this rule, that is at-Ṭabarī's work. Except in a few cases,² he does not refer to the *Ta'rīkh ar-rusul wal-mulūk*, since its general use by all the later Arab historians was a well-known fact. But as soon as his narrative differs from that of at-Ṭabarī, he never neglects to name the authority from whom he received an additional or a new tradition.

It may be seen from the *Kitāb al-muntaẓam* that Ibn al-Jauzī knew many prominent scholars of his city and read their works as well. The most remarkable of these Baghdād scholars was no doubt Abū Maṣṣūr 'Abdarrahmān ibn Muḥammad al-Qazzāz whom he may have well known personally and have read his books, none of which has been left to us. Excluding at-Ṭabarī, it is he from whom Ibn al-Jauzī received most of his information on events of both general, political, and local character, and more especially for his biographical notices. There is hardly any page in the *Kitāb al-muntaẓam* on which his name—quoted as either 'Abdarrahmān ibn Muḥammad or Abū Maṣṣūr al-Qazzāz—is not mentioned. The only reference to this scholar is to be found in the abstract entitled "Muntaqī al-'Ibar" of adh-Dhahabī's chronicle made by Abū Bakr ibn Aḥmad ibn Qāḍī Shuhba (died in A.H. 851),³ where he is said to have died in the year 535/1140-1, and to have been a disciple of al-Khaṭīb al-Baghdādī and an eminent traditionist.

Next to al-Qazzāz, the authority most frequently quoted by Ibn al-Jauzī is Abul-Faḍl Muḥammad ibn Nāṣir al-Ḥāfiẓ as-Sallāmī, often called Muḥaddith al-'Irāq, who according to adh-Dhahabī,⁴ died in 550/1155. His contemporary and Ibn

¹ See Brockelmann, *Das Verhältnis*, etc., p. 9.

² See *Br. M. Suppl.*, No. 460, fol. 98b, l. 14; fol. 177, l. 4.

³ *Br. M. Or.*, No. 3006, fol. 276, margin.

⁴ *Do.*, MS., fol. 287a; see also as-Sam'ānī: *Kitāb al-ansāb*, ed. D. S. Margoliouth, London-Leyden, 1912, fol. 320a.

al-Jauzī's third important authority was Abul-Qāsim Ismā'il ibn Aḥmad ibn as-Samarqandī, who according to adh-Dhahabī¹ died in 536/1141-2, and is said to have been, together with al-Qazzāz, a disciple of al-Khaṭīb al-Baghdādī, and equally an eminent traditionist.²

The master of these scholars, Abū Bakr Aḥmad ibn 'Alī ibn Thābit, commonly called al-Khaṭīb al-Baghdādī (died in 403/1071) is also referred to in several passages of the *Kitāb al-muntaẓam*. We may assume that Ibn al-Jauzī, in writing his obituary notices, made wide use of his *Ta'rīkh Baghdād*, a voluminous history of learned men,³ the more so as he readily accepted the ideas of al-Khaṭīb al-Baghdādī in ruthlessly purifying the *ḥadīths*.⁴

The other authorities quoted by Ibn al-Jauzī are as follows (the years in the narratives of which they are mentioned are put in brackets)⁵ :—

Ibrāhīm ibn Dīnār al-Faḥīl (A.H. 381).

Ibrāhīm an-Nakha'ī (A.H. 75). See *Fihrist*, vol. i, p. 183.

'Abdalmalik ibn Qurayb *al-Aṣma'ī*, died in 216/831 (A.H. 131).

al-A'rābī (A.H. 280).

Muḥammad ibn 'Alī *ibn Bābat* (A.H. 75).

Muḥammad ibn abī Ṭāhir *al-Bazzār* (A.H. 99, 151, 262, 279).

Abū Maṣṣūr *al-Bazzāz* (A.H. 158).

Abū Bakr Muḥammad ibn Yaḥyā *aṣ-Ṣūlī*, died in 335/946 (A.H. 132, 158, 256, 269, 286).

¹ Do., MS., fol. 277a.

² adh-Dhahabī in his *Ta'rīkh al-islām* also mentions these three men as masters of Ibn al-Jauzī, see *Br. M. Or.*, Nr. 52, fol. 119.

³ See *Br. M. Or.*, Nr. 303, fol. 116b, l. 24.

⁴ Especially in his *Al-kifāya fī ma'rifat uṣūl 'ilm ar-rivāya*, see Goldziher, *Muh. St.*, vol. ii, p. 183.

⁵ As I have not yet been able to inspect the MSS. of the Constantinople libraries, the above data refer only to the narratives contained in the MSS. of the European libraries (British Museum, Oxford, Gotha, Berlin). As reference-works, I have made use of Brockelmann, *Geschichte der arabischen Litteratur*, the *Fihrist* and Ḥāji Khalfa, ed. Flügel.

Abū 'Alī Muḥassin ibn 'Alī *at-Tanūkhī*, died in 384/994 (A.H. 391).

'Amr ibn Baḥr al-Laythī *al-Jāhiz*, died in 255/869 (A.H. 158).

Jabala ibn Muḥammad (A.H. 132).

Ibn Ḥājib (A.H. 370). He is probably Abul-Ḥusayn 'Abdal-'azīz ibn Ibrāhīm ibn Ḥājib an-Nu'mān, scribe at the time of Mu'izz addaula.

al-Hākīm ibn 'Abdallāh ibn Muḥammad, died in 405/1014 : "Ta'rikh Nisābūr" (A.H. 230).

Abul-Ḥasan al-Jarrāhī (A.H. 260).

al-Ḥasan ibn Ja'far 'Alī (A.H. 132).

Abul-Ḥasan ibn 'Alī al-Kaukabī (A.H. 382).

Abul-Ḥasan ibn 'Alī ibn al-Ma'ālī (A.H. 367, 422).

Abul-Ḥasan ibn 'Alī ibn Muḥammad ibn 'Abdalwāhid al-Hāshimī (A.H. 132, 279).

Abul-Ḥusayn ibn Muḥammad ibn 'Abdalwāhhāb ad-Dabbās (A.H. 93). See *Fihrist*, vol. i, p. 208.

Ibn Ḥalaf (A.H. 151).

Muḥammad ibn 'Abdalmalik *al-Ḥamdānī*, died in 521/1127 (A.H. 279, 381).

Khālīd ibn 'Aylān (A.H. 132).

'Alī ibn 'Umar *ad-Dāraqutnī*, died in 385/995 (A.H. 376).

Abū Bakr *ibn abī Dunyā*, died in 281/894 (A.H. 105).

Zāhir ibn Ṭāhir ibn Muḥammad, died in 533/1138 (A.H. 99, 230).

as-Sahḥāq (A.H. 158).

Sa'īd ibn 'Alī abū 'Abdallāh Muḥammad ibn Asad al-Kātib al-Qārī al-Bazzāz al-Baghdādī, died in 410/1019 (A.H. 408).

Abū Sa'īd al-Ḥimyarī (A.H. 132).

Shāhak (A.H. 86). See *Fihrist*, vol. ii, p. 168; Ibn Shāhak as-Sindī.

'*Abdallāh* ibn Ḥasan (A.H. 132).

'*Abdalwāhhāb* ibn al-Mubārak (A.H. 96, 99).

'*Abdalwāhhāb* ibn Muḥammad (A.H. 158).

'*Alī* ibn 'Ubaydallāh (A.H. 132). He is perhaps identical with 'Alī ibn 'Ubaydallāh ibn Bābawaih, author of a "Fihrist", see *Br. Mus. Suppl.*, Nr. 635.

'*Umar* ibn al-Ḥāfiẓ (A.H. 101).

Abū 'Amr ibn al-'Alā (A.H. 158), the philologist of Baṣra, died probably in 159/776.¹

Ibn abil-Fawāris (A.H. 376).

Abul-Ḥasan ibn 'Alī ibn Muḥammad *ibn Ḥabīb al-Māwardī* died in 450/1058 (A.H. 238, 240, 242).

al-Mubārak ibn 'Alī aṣ-Ṣayrafī (A.H. 100).

Mahfūẓ ibn Aḥmad (A.H. 86).

Muḥammad ibn 'Abdalbāqī abū Bakr al-Anṣārī, died in 535/1140 (A.H. 256, 271, 279, 322, 329, 334, 335). See *Br. Mus. Suppl.*, No. 622; he is mentioned by Ibn Nuqṭa as having received traditions from al-Ḥasan ibn 'Alī al-Jauharī.

Muḥammad ibn 'Abdalhaytham (A.H. 75).

al-Madā'inī Abul-Ḥasan 'Alī ibn Muḥammad, died about 840/225 (A.H. 91).

Ibn al-Mu'tazz (A.H. 286, 289).

Hibatallāh ibn al-Ḥasan al-Lālaqā'i, died in 418/1027 (A.H. 125).

Hibatallāh ibn 'Abdassalām al-Kātib (A.H. 422).

Hilāl ibn al-Muḥassin aṣ-Ṣābī, died in 448/1056 (A.H. 353, 413).

VI. A CONCORDANCE BETWEEN THE "KITĀB AL-MUNTAZAM" OF IBN AL-JAUZĪ AND THE "TA'RĪKH AR-RUSUL WAL-MULŪK" OF AṬ-ṬABARĪ

As an appendix to chapter iv, we give on the following pages a concordance between the *Kitāb al-muntazam* of Ibn al-Jauzī and the *Ta'rīkh ar-rusul wal-mulūk* of aṭ-Ṭabarī. This concordance contains those records in the narration of which Ibn al-Jauzī is more detailed than aṭ-Ṭabarī, together

¹ This date of his death seems more probable than 154/770, which is generally accepted. See Ibn Khallikān, ed. de Slane, vol. ii, p. 402.

with an indication of the additional authorities of the *Kitāb al-muntaẓam*. As a matter of course, our concordance only refers to those sections of Ibn al-Jauzī's work dealing with political and local events, the biographical notices being a speciality of the author's system. The MSS. examined are those of the libraries of the British Museum, Oxford, Gotha, and Berlin (see chapter ii for the MSS. of the *Kitāb al-muntaẓam*).

(1) *The MS. of Gotha (Pertsch), Nr. 1553*

A.H. 64 : fol. 1-5*b*. Pestilence in Baṣra. Tab., ii, 879-80. (Muḥammad ibn Nāṣir al-Ḥāfiẓ.)

A.H. 68 : fol. 11-13. Pilgrimage.

A.H. 75 : fol. 15-18*b*. A detailed description of the dīnārs and dirhams coined by order of 'Abdalmalik, who is said to have minted coins for the first time in Muslim history. ii, 939-40. (Muḥammad ibn 'Alī ibn Bābat, Muḥammad ibn 'Abdalhaytham, Ibrāhīm an-Nakha'ī.)

A.H. 77 : fol. 18*b*-24*b*. Summer-campaign of Walīd ibn 'Abdalmalik.¹

A.H. 78 : fol. 24*b*-25. Ḥajjāj's plans of construction. Birth of children to Ḥajjāj.

A.H. 85 : fol. 29-32*b*. Qutayba ibn Muslim appointed prefect of Khorāsān.

A.H. 86 : fol. 32*b*-39*b*. Caliphate of al-Walid : name, genealogy, accession, episodes from his life. ii, 1177-8. (Maḥfūẓ ibn Aḥmad, Shāhak.)

A.H. 91 : fol. 42*b*-44. Khālīd ibn 'Abdallāh al-Qusri appointed prefect of Mekka. ii, 1230-1. (Al-Qazzāz.) Pilgrimage of al-Walid. ii, 1232-34. (Al-Madā'inī.)

A.H. 93 : fol. 46*b*-51. Ḥubayb ibn 'Abdallāh scourged by order of 'Umar ibn 'Abdal'azīz. ii, 1255. (Abul-Ḥusayn ibn Muḥammad ibn 'Abdalwahhāb ad-Dabbās.)

A.H. 99 : fol. 61-64. Caliphate of 'Umar ibn 'Abdal'azīz : name, appearance, accession, episodes from his life.

¹ See Ibn al-Athīr, vol. iv, pp. 361-2.

Muḥammad ibn abī Ṭāhir al-Bazzār, 'Alī ibn abī 'Umar, 'Abdalwahhāb ibn al-Mubārak.)

A.H. 149 : fol. 77*b*–79*b*. Removal of al-Manṣūr ibn Ja'far ibn Sulaymān from the prefectship of Madīna. Pilgrimage (more detailed than iii, 354).

A.H. 151 : fol. 85–87*b*. Foundation of Ruṣāfa, the eastern part of Baghdād. iii, 364–7. (Al-Qazzāz, Ibn Ḥalaf.) New wālīs. (Muḥammad ibn abī Ṭāhir al-Bazzār.)

A.H. 154 : fol. 89*b*–94. Al-Manṣūr resolved upon constructing the town of Rāfiqa (now Raqqa) on the Euphrates. iii, 372, supplemented by a short description of the site of Rāfiqa.

A.H. 157 : fol. 96*b*–99*b*. Al-Manṣūr ordered the sites of the Baghdād *sūqs* to be changed. iii, 379. (Al-Qazzāz, supplemented by a description of the roads of Baghdād that were to be widened.)

A.H. 158 : fol. 99*b*–112*b*. Summer-campaign of Yazīd ibn Usayd as-Sullamī in Ṭalqān, Ṭabaristān, and Nihāwand. ('Amr ibn 'Alā.) Yaḥyā appointed prefect of Ādharbayjān. iii, 381–4. (Jāḥiẓ.) Al-Manṣūr put up at his castle of al-Khuld. iii, 384 (supplemented by a description of the site of al-Khuld by al-Qazzāz). Illness and death of al-Manṣūr. iii, 387–91. (al-Qazzāz.) Caliphate of al-Mahdī : name, genealogy, appearance. iii, 451. ('Abdalwahhāb ibn Muḥammad, as-Saḥḥāq, al-Qazzāz.) Description of the use of the red garment in the sacred pilgrimage. iii, 451–8. (Abū Bakr aṣ-Ṣūlī.) Episodes from the life of al-Mahdī. (Al-Qazzāz, Muḥammad ibn Nāṣir al-Ḥāfiẓ.)

A.H. 159 : fol. 112*b*–16*b*. Construction of a mosque in Ruṣāfa. iii, 460. (Al-Qazzāz.)

A.H. 160 : fol. 116*b*–22. Snow was, for the first time, brought to Mekka for the caliph. Al-Hādī married Lubāba, daughter of Ja'far al-Manṣūr.

A.H. 161 : fol. 122–24*b*. The caliph ordered the mosques of al-Ḥarām, Madīna, and Baṣra to be enlarged. Only the last is mentioned by Ṭab. iii, 486.

A.H. 164 : fol. 127b-130b. Construction of the town of 'Anābān (Aysābān ?).

(2) *The MS. of Oxford (Uri), Nr. 779*

A.H. 96 : fol. 1b-9. Caliphate of Sulaymān ibn 'Abdalmalik : name, accession, appearance. More detailed than Ṭab., ii, 1281-2. Episodes from his life. ('Abdalwahrāb ibn Mubārak, Muḥammad ibn Nāṣir al-Ḥāfiẓ.)

A.H. 99 : fol. 12b-27. Caliphate of 'Umar ibn 'Abdal'aziz. (Besides the authorities mentioned in the narrative of the same year in the MS. of Gotha, Hibatallāh ibn Aḥmad al-Ḥarīrī is quoted.) Maslama recalled from the campaign against the Romans. ii, 1436. (Zāhir ibn Ṭāhir.)

A.H. 100 : fol. 27-33. Campaigns of 'Umar ibn 'Abdal'aziz, Walid ibn al-Mu'ayyī and 'Amr ibn Qays al-Kindī. ii, 1349. (Al-Mubārak ibn 'Alī aṣ-Ṣayrafi.)

A.H. 101 : fol. 33-42. Caliphate of Yazid ibn 'Abdalmalik : name, accession. ii, 1372. ('Umar ibn al-Ḥāfiẓ.)

A.H. 105 : fol. 54-64b. Caliphate of Hishām ibn 'Abdalmalik : name, genealogy, accession. (Different narrative from Ṭab., ii, 1466-7.) Episodes from his life. (Muḥammad ibn Nāṣir al-Ḥāfiẓ, Abū Bakr ibn abī'd-Dunyā.)

A.H. 121 : fol. 120b-29b. Pilgrimage and new 'āmils. ii, 1698. (Muḥammad ibn Nāṣir al-Ḥāfiẓ.)

A.H. 125 : fol. 138-45. Caliphate of Walid ibn Yazid. ii, 1728-55. (Muḥammad ibn Nāṣir al-Ḥāfiẓ, Hibatallāh ibn al-Ḥasan.)

A.H. 126 : fol. 145-51b. Caliphate of Yazid ibn Walid, name, accession.

A.H. 127 : fol. 151b-56b. Caliphate of Marwān : name, accession.

A.H. 131 : fol. 168-72. Pestilence. (al-Aṣma'ī.)

A.H. 132 : fol. 172-92b. Caliphate of Abul-'Abbās as-Saffāh : his advent to the caliphate. iii, 23-7. (Aḥmad ibn Thābit, al-Qazzāz, Muḥammad ibn Nāṣir al-Ḥāfiẓ, Khālid ibn 'Aylān, Abū Bakr aṣ-Ṣūlī, Abdallāh ibn Ḥasan.)

Defeat of Marwān on the river Zāb. iii, 38-42. (Abul-Ḥasan, Jabala ibn Muḥammad, a poem by Abū Sayyid al-Ḥimyarī.)
 Defeat of the Umayyades. iii, 44-51. (al-Ḥasan ibn Ja'far 'Alī.)
 Revolt of the inhabitants of Jazīra against the 'Abbāsides. iii, 56-8. ('Alī ibn 'Ubaydallāh.)

(3) *The MS. of the British Museum, Nr. 460*

A.H. 230 : fol. 7-13b. Story of a woman of Khwārizm who after dreaming strange dreams, refrained from eating and drinking. (Zāhir ibn Ṭāhir, the "Ta'rīkh Nisābūr" of Ḥākim ibn 'Abdallāh.)

A.H. 232 : fol. 19b-25b. Caliphate of al-Mutawakkil : name, genealogy, appearance, episodes from his life. (Al-Qazzāz.)

A.H. 233 : fol. 25b-33b. Earthquake in Damascus, violent rain in Mawṣil.

A.H. 234 : fol. 33b-40b. Illness of al-Mutawakkil, convocation of the jurisconsults of the empire. (Al-Qazzāz.)
 Removal of 'Ubaydallāh ibn Aḥmad from the office of qādī. (Al-Qazzāz.)
 Abnā' appointed prefect of Mekka and Madīna. The construction of the mosque of Sāmarrā. Violent wind lasting for fifty days. Removal of Ishāq ibn Ibrāhīm from his office.

A.H. 235 : fol. 40b-47b. Incident in the Ghazal-mosque in Baghdād.

A.H. 236 : fol. 47b-52b. Battles of 'Alī ibn Yaḥyā al-Armanī against the Romans, capture of Āmuriyya. Expulsion of Christians from the dīwāns.

A.H. 237 : fol. 52b-56b. Ibn Aktham appointed as chief judge instead of Muḥammad ibn abī Dā'ud. iii, 1410-11. (Al-Qazzāz.) Those who confessed that the Qur'ān was created were set at liberty.¹ Celestial phenomenon in the Maghrib. Fire in 'Asqalān. Cold in Baṣra. The construction of the mosque of Sāmarrā finished.

A.H. 238 : fol. 56b-58b. Campaign of 'Alī ibn Yaḥyā al-

¹ See Ibn al-Athīr, vol. vii, p. 43.

Armanī. iii, 1419. (Ibn Ḥabīb.) Ibrāhīm ibn Muḥammad at-Tamīmī appointed prefect of Baṣra : more detailed than iii, 1420.

A.H. 240 : fol. 60*b*–65*b*. Instruction in Syriac and Hebrew rendered obligatory for Jewish and Christian children. Natural phenomena. (Ibn Ḥabīb.)

A.H. 241 : fol. 65*b*–71*b*. Fire in Sāmarrā.

A.H. 242 : fol. 71*b*–76*b*. Fire in Baghdād. (Ibn Ḥabīb.) Stroke of lightning in Bardān. (Ibn Ḥabīb.)

A.H. 245 : fol. 87–92*b*. Sinking of a dyke in the well of Mekka.¹

A.H. 247 : fol. 99–105*b*. Caliphate of al-Muntaṣir billāh : name, appearance, accession, episodes from his life. (Al-Qazzāz, Muḥammad ibn Nāṣir al-Ḥāfiẓ.)

A.H. 249 : fol. 115*b*–20*b*. Rain lasting for five days in Sāmarrā.

A.H. 251 : fol. 124*b*–30*b*. Caliphate of al-Mu'tazz : name, appearance, accession. Brief mention of the activity of the 'Alawīs.²

A.H. 253 : fol. 133*b*–38. Ibn abil-Anbas appointed qāḍī of Madīna. (Al-Qazzāz.) New qāḍī in Kūfa.

A.H. 255 : fol. 140–48*b*. Caliphate of al-Muhtadī : name, accession, episodes from his life. (Al-Qazzāz.)

A.H. 256 : fol. 148*b*–58*b*. Caliphate of al-Mu'tamid : name, genealogy, appearance, episodes from his life. (Muḥammad ibn Nāṣir al-Ḥāfiẓ, Abū Bakr aṣ-Ṣūlī, Abū Bakr ibn 'Abdalbāqī.)

A.H. 258 : fol. 164–71. Muḥammad ibn al-Muwallad's campaign against the Zanĵ. Pestilence in Baghdād : more detailed than iii, 1865. Execution of Sa'īd ibn Aḥmad : more detailed than iii, 1859.

A.H. 260 : fol. 172*b*–76. Enlargement of the Jāmi' al-Manṣūr.

¹ See Ibn al-Athīr, vol. vii, p. 56.

² See Ibn al-Athīr, vol. vii, p. 110.

A.H. 262 : fol. 180*b*-88. A tradition of Muḥammad ibn abī Ṭāhir al-Bazzār concerning a Baghdād woman.

A.H. 264 : fol. 188*b*-91. Abū 'Umar al-Qādī appointed prefect.

A.H. 269 : fol. 200-03*b*. Sa'id appointed Lord of the Two Wazīrates. iii, 2083. (Abū Bakr aṣ-Ṣūlī.)

A.H. 271 : fol. 210*b*-13. Ibn Abī's-Sāj defeated and made prisoner. iii, 2107. (Muḥammad ibn 'Abdalbāqī.)

A.H. 272 : fol. 213-15. Arrival of al-Mu'tamid at Baghdād.

A.H. 278 : fol. 226*b*-36. A detailed description of the origin of the Qarmatians in the neighbourhood of Kūfa ; explanation of their name ; their doctrine : more detailed than iii, 2124-30.

A.H. 279 : fol. 236-50. Caliphate of al-Mu'taḍid : name, appearance, genealogy : more detailed than iii, 2133. Episodes from his life. (Muḥammad ibn abī Ṭāhir al-Bazzār, al-Qazzāz, Muḥammad ibn 'Abdalbāqī, Abulḥasan Muḥammad ibn 'Abdalwāḥid al-Hāshimī, Muḥammad ibn 'Abdalmalik al-Ḥamdānī.)

A.H. 280 : fol. 250-52. Expedition against the Banū Shaybān in Mesopotamia. iii, 2139-40 (a poem by al-A'rābī). Earthquake in Dubīl : more detailed than iii, 2139. Enlargement of the Jāmi' al-Manṣūr. (Al-Qazzāz.) The construction of a palace in Baghdād ordered by the caliph. Aḥmad ibn 'Abdal'azīz put Rāfi' ibn Harthama to flight.

A.H. 281 : fol. 252-53*b*. Inundation in Rayy and Ṭabaristān.¹

A.H. 283 : fol. 260*b*-65*b*. The caliph ordered that the main part of heritages should be given to the next-of-kin : more detailed than iii, 2151. New qādis.

A.H. 285 : fol. 269-76*b*. Inundation of the Tigris. Episode in the camp of the caliph.

A.H. 286 : fol. 276*b*-82*b*. Capture of Āmid. iii, 2186-8. (Ibn al-Mu'tazz, Abū Bakr aṣ-Ṣūlī.) Expedition of Ismā'il

The Aramaic *Papyri* from Egypt : Notes on Obscure Passages

By G. R. DRIVER

THE following notes, which are the result of a fresh study of the Aramaic documents from Egypt in Cowley's admirable edition, are here published in the hope that they may do something towards resolving some of the difficulties which still await a solution in these important texts.

No. 5, ll. 4-7, 10, 20. The meaning of אִנַּר is uncertain, but the context suggests "wall"; for this is what one man is more likely to build against another man's door than a "portico", which is usually suggested. If so, the Aram. אִנַּר and the Acc. *igaru* "wall" are identical; and the Acc. fem.-plur. *igarāte*¹ will account for the fem. gender of the Aram. אִנַּר (e.g., in ll. 4-5). Consequently, in l. 6, עֲלֵי זֶד אִנַּר means "against" rather than "above that wall".

No. 9, l. 5. The use of בְּנָה as denoting "developed" in reference to land is illustrated by בְּנָה אֶת־הַדֶּרֶךְ "built on the hill",² i.e. developed it as building land.

No. 11, ll. 8-9. Cowley compares the Aram. עֲקָה with the Arab. ضَعَفَ "was double", but the equation $\text{ع} = \text{ק}$ is very rare and very doubtful *per metathesim*; is it not easier to compare the N. Hebr. עֲקָה "doubled (a cape)"³ and the Arab. عَقَفَ "bent" or "folded double",⁴ although these do not appear to be used in the literal sense?

No. 13, l. 18. Cowley's objection to כַּסְפִּי = "Caspian" on the ground that it should be in the emph. state is not fatal, as אֲרַמִּי "an Aramæan" and יְהוּדִי "a Jew" (*passim*)

¹ E.g. Ebeling, *KAJI*. 119, 5.

² 1 Kings, xvi, 24.

³ Levy, *Neuh. u. Chald. Wtb.*, iii, 686.

⁴ Lane, *Arab.-Engl. Dict.*, I, v, 2112.

show; it may mean simply "a" (not "the) Caspian".¹ The name suggests an origin in or near to Persia.

No. 15, ll. 25, 28. Can מן חם עד חוט mean "both broom and thread" as the humblest symbols of a woman's work in the house? If so, the root is חמם and is cognate with the Syr. ܡܡܥ and the Arab. خَمَّ "swept with a broom".

Thus the Aramaean Jew, like the Hebrew in מְחוט ועד שרוך נעל,² combines like objects of little worth to mean anything whatsoever; the Babylonian in *istu bie adi hurašim* "from straw to gold"³ uses opposites to express the same idea.

No. 15, l. 16. The Acc. *paqqu* "bowl"⁴ suggests the meaning of the Aram. ܦܩܩ.

No. 17, l. 7. The reading ܣܢܥܪܫ, which gives an unknown name, ought probably to be corrected to ܣܢܥܪܫ, since (il) *Sin-erīš* is a well-known Bab. name.⁵

No. 20, l. 5. The word כתן means rather "linen" than "cotton", as Cowley translates it; for this is the Acc. *kitinnu*, Syr. ܕܬܢܐ and Arab. كَتَانٌ "flax", "linen".⁶

The word "cotton", on the contrary, is the Arab. قُطْنٌ

"thin stuff" (cp. Syr. ܩܬܢܐ "thin"), which is so called as being thin in contrast with thick wool; and the Acc. *qatnu* or *qattanu* "fine", "thin" (of wool or hair)⁷ shows how old the root is. The Acc. adjectives *qattanu* "thin" and *kabbaru* "thick" are contrasted in vocabularies; and

¹ Cowley's objection would be equally valid if ܕܡܦܝ meant "silver-smith"; but in this case a noun of the form *kassāph* would be rather expected.

² Gen. xiv, 23.

³ Schorr, *U. Ab. Z.-Pr.*, 13, 13 (n.).

⁴ E.g. Ebeling, *BBK.* i, 18, 2.

⁵ Tallquist, *Neub. Namenb.*, 181.

⁶ Cp. Buhl. *Hebr. u. Aram. Hwb.*¹⁷, 368; Brockelmann, *Lex. Syr.*², 352.

⁷ Cp. Jensen in Schrader's *KB.*, VI, i, 456; cf. Clay, *BEUP.*, xiv, 157, 24, 40, when *nahlapatum qatantum* means a "thin robe".

this in its turn suggests that the Hebr. ¹ קָבִיר and ² מִקְבֵּר are not articles of "net-work"³ (as though derived from קִבְּרָה "sieve"!) but simply "thick stuff" and an "article made of thick stuff" respectively, *i.e.* some kind of "rug" or "blanket"; for such an article would certainly have been of more use at any rate in suffocating Benhadad than a netted cloth or "coverlet" (R.V., m.) of open work through which he could have breathed without much difficulty!

Further, may not the Hebr. שְׂמִיכָה, for which two manuscripts (Kenn. MSS. 89, 95) have סְמִיכָה,⁴ be another word of similar origin and come from the same root as the

Arab. سَمِيكٌ "thick"? It may also be added that one manuscript (Kenn. MS. 107) has בְּשִׁמְיָה וּבְשִׁמְיָה; here the Hebr. שְׂמִיטָה may perhaps be referred to the same root as the Arab. سَمِطٌ *vestis ex lana confecta*⁵; the Acc. *šimtu* (if it is right to suppose that *šimtu* is the proper form of the word⁶), which is said to denote some kind of woollen stuff,⁷ is probably connected with these words.

No. 21, l. 4. Surely כֵּן מִנִּי means "count as follows" rather than "count accordingly", as Cowley renders it, since כֵּן in such connections usually refers to what follows, and the reference here is not to the instruction just given but to the coming calculation; it is used of the past only in reference to what has actually happened, *e.g.* after עָבַד (cp. 30, 27; 31, 26; 71, 19).

No. 26, l. 13. May not כָּלֵא יְדֵיתָהּ חֲלִיפָתָהּ be translated "relays of them (*sc.* of the sailors or workmen) shall bring

¹ 1 Sam. xix, 13, 16.

² 2 Kings, viii, 15.

⁴ Jud. iv, 18.

⁵ Freytag, *Lex. Arab.-Lat.*, ii, 353.

⁶ Streck in *ZA.*, xviii, 171-2.

⁷ Muss-Arnolt, *Ass. Dict.*, 1073.

(them) altogether"? Cowley's rendering of חליפתהם . . . כלא by "the equivalent of it all" hardly suits the context, nor is such a meaning of חליפה attested. On the contrary, "relays" or "shifts" gives a possible sense which the Hebr. חליפה "relay"¹ supports. Here the masc. sing. ידיתה is construed correctly with the fem. plur. חליפתהם because it precedes it,² while ידוספון in l. 18 shows that a plur. subject, i.e. the sailors or shifts of them, is in fact necessary.

Ibid., l. 17. Surely הוספה is the infin. of the Haph. used as a noun meaning "addition" rather than the impt. of a verb with cohort ה- as Cowley (cp. Leander, *Ag.-Aram.* 38j) takes it, since this ending is very unlikely in an Aram. text. If so, "addition: sulphur . . . and arsenic . . ." simply means "*plus* sulphur . . . and arsenic . . ."

No. 37, l. 3. In view of Augapfel's obviously correct suggestion that the Bab. (*awēl*) *pitparasu*, which is the title of a neo-Bab. officer of unknown rank and functions, is the source of the Aram. פת(י)פרם,³ it is clear that קבל must here mean "went before" or "invoked" (cp. Syr. *ܩܒܠ* *invocavit*), as it does elsewhere in these documents.⁴ If this suggestion is accepted, it has one important consequence, viz. it is one of the proofs that the *papyri* are genuine; for, as they were first published in 1911 in Germany, it is inconceivable that a forger could have introduced into one of them a word of so peculiar a form as פת(י)פרם, if (*awēl*) *pitparasu* was totally unknown until it was found in a tablet first published in 1912, i.e. one year afterwards, in America.

Ibid., l. 10. The puzzling words דבש תקם חתילן חבלן משכי צל are surely all nouns. First, דבש can only be the well-known word for "honey". Second, תקם, which occurs again in a list of gifts (15, 16, where it cannot be a verb),⁵

¹ 1 Kings, v, 28; Job, x, 17.

² Cp. Gen. i, 14, where יהי מארת is an instance of the same construction which classical scholars call the *schema Pindaricum*.

³ In Bab. *Rechtsurk.* 54-5.

⁴ No. 8, l. 13.

⁵ Cp. Sachau, *Aram. Pap. u. Ostr.*, 79, 1 B (*Aussen*).

is still insoluble. Third, חרילין may be " (twisted) ropes " of some sort (Cowley) or perhaps " (plaited) baskets ", like the N. Hebr. חותל from the same root. Fourth, חבלן is probably " cords " of some kind (Cowley). Fifth, משכי צל is evidently the Acc. (*mašak*) *šallu*, which is supposed to be an apron of leather.¹ The line thus contains a list of miscellaneous objects, viz. " honey, . . . (?), cords (?), ropes, (and) aprons of leather ", delivered for some unknown purpose to the recipient of the letter.

Ibid., l. 14. In כלין להן the prep. introduces the direct, not the indirect, object; thus the clause means " we withheld them " and the fem. suffix represents the neut. gender, not " we withheld (it) from them ", since the antecedent, if personal, is unlikely to be female.

No. 38, l. 3. The meaning of אכנצרה is clearly not a " precious stone " (Cowley) but either " alum " which is used in dyeing, as suggested elsewhere, or a " dyed " or " stained " stone, and the combination of אכנ with צרה is confirmed by the fact that the Acc. *šarāpu* is used of stone.² For example, *šurruḫpu ša abni* " to dye, of stone " occurs in glossaries³ and *libittum širiptum zaribtum* " coloured burnt brick " means something like " bunt-glasierte (?) Backsteine ".⁴

The process of dyeing stones was well known in antiquity, and the elder Pliny speaks of it in a number of passages. e.g. he says that Arabian lapidaries improved the lustre of certain kinds of stones by boiling them in honey,⁵ that agates of one colour were stained a uniform vermilion by being boiled for one or two hours in oil and colouring matter,⁶ that *Indi et alias quidem gemmas crystallum tinguendo adulterare invenerunt, sed praecipue berullos*,⁷ and that the colours could be modified

¹ Muss-Arnolt, *op. cit.*, 874-5.

² The Acc. *šarāpu* " to dye " is common enough, but this sense hardly occurs in the other Sem. languages except in the place-name צרפת " dyeing town " (G. R. Driver in *JTS.*, xxv, 299-300).

³ Muss-Arnolt, *op. cit.*, 895.

⁴ Schorr, *op. cit.*, 107, 1 (n.).

⁵ Pliny, *Hist. Nat.*, xxxvii, 12 (74), 194-5.

⁶ *Ibid.*, 10 (54), 142.

⁷ *Ibid.*, 5 (20), 79.

by removing white or black or vermillion streaks so that it was difficult to distinguish true from false gems *quippe cum inventum sit ex veris generis alterius in aliud falsas traducere*, adding that certain writers described *quibus modis ex crystallo smaragdum tinguant aliasque tralucentes, sardonychem e sarda, item ceteras ex aliis; neque enim est ulla fraus vitae lucrosior*.¹ In modern times the onyx, carnelion, chalcedony, and similar stones, are the varieties mostly so treated.²

No. 39, l. 3. It may well be doubted (Leander, *op. cit.*, 180) whether כלכליה can be a reduplicated form of כל "all"; it is much more probably a proper name formed from כלכל (like כקבוק from כקבוק), in which case שלם כלכליה [כל נברך] זי עליכי שלם כלכליה, as the text may be restored, means "greeting (to) [all person]s who (are) with thee, greeting (to) Kalkolyah".

No. 40, l. 5. Clearly עליך לבני שריק means "my heart is torn (*Angl.* bleeds) on thy account", as the Syr. *ṣṣṣ laceravit* suggests.

No. 43, l. 2. Is not לרגלה ארמי "according to his detachment an A[ramæan]" the correct restoration of the text, as the reference must be to the girl's father, not to the girl herself? For nowhere else is a girl described as attached to a דגל. If so, the father was a Jew by birth serving with an Aramæan detachment.

No. 45, ll. 3-4. This use of חמין followed by the object stolen in the acc. case is supported by Babylonian texts, in which *ḥamāṣu* takes a similar construction: for example, *zūbātī iḥamazu-ma erīšiša ušēzūš* "the clothes they stole and sent her away in her nakedness (*i.e.* stripped naked)".⁴

¹ *Ibid.*, 12 (75), 197.

² Cp. Nöggerath in the *Neues Jahrbuch für Mineralogie usw.* 1847, 473-86 (for ancient methods), and Bauer-Spencer, *Precious Stones*, 87-8 and 522-4 (for modern methods).

³ 1 Kings, v, 11; 1 Chron. ii, 6.

⁴ Chiera, *Harvard*, i, 71, 35-6 (one of the tablets from Arrapha, where *z* is normally substituted for *ṣ*).

No. 57, l. 2. Does . . . כרבלין לחם mean "hats for the heat of the . . ." ? But, if so, what word for "day", "sun", "summer", "harvest", or the like, will suit the traces of the following signs ?

No. 71, l. 33. It is clear from l. 19 that תלך means "he has hanged thee"; if so, the perf. tense probably has a fut.-pf. or conditional plup. sense, viz. "he will" or "would have hanged thee".

No. 80, l. 9. If מריא is the right reading, it means "the officers" (cp. 47, 2), sc. of the חילא mentioned in ll. 4-6.

No. 81, l. 1. Probably כתבת is "I have written" in view of אנר in l. 14; possibly כתבת [על פם] אבירי ought to be restored.

Ibid., l. 5 *alg.* The Aram. בב must here be a banking term like the Bab. *bābu* "door", "gate" and then "account", "bank", since business was commonly conducted in the gate: for example, *bābu rabū* = "chief bank" and *irbu ša bābi* "excise" or "bank-rate".¹ Similarly the Bab. *bābtu*, a fem. abstract term formed from the masc. concrete noun, is a technical term of business,² although its precise force is still uncertain, and the later Aram. בבא "part"³ must be explained by reference to the same circle of ideas.

Ibid., l. 29. Obviously רכיסה as used of asses must be a semi-technical term like a "string of mules",⁴ as the Acc. *rakāsu* "to bind" suggests, except that the Aramaic, unlike the English term, probably denotes a definite number of asses; the Arab. رَكْسٌ "crowd" may perhaps also be compared.⁵

¹ Streck in *Babyl.* ii, 169-70, who compares the Hebr. שער "gate" and then "measure" (which are wrongly referred to different roots in the dictionaries), whence the Aram. שער *Pa.* "valued" is derived.

² Schorr, *op. cit.*, 80, 12 (n.).

³ Muss-Arnolt, *op. cit.*, 142.

⁴ Murray, *N.E.D.*, IX, i, 1139c.

⁵ Freytag, *op. cit.*, ii, 187.

Ibid., ll. 64, 81, 85, 86. A comparison of l. 64, where "one and a half dozen" are rated at $2\frac{1}{4}$ shekels, with l. 86, where "half a dozen" are rated at $\frac{3}{4}$ shekel, proves that פ is an abbreviation for פלג "half"; for this is the sole hypothesis on which the figures in these two passages tally. Further, in l. 86, פלג, since it is here rated "at 3 quarters (of a shekel)", i.e. at the same sum as 6 לנג (*v. infr.*), must stand for "half (a dozen)", *sc.* half a dozen of לנג. In other words, פלג, like other terms denoting fractions, takes its colour from the context¹; for it may refer not only to a כא of לנג (as here) but also to a ק of wheat (as in l. 3).

In l. 85 1 ka' (presumably of לנג) is rated "at 1 shekel 2 quarters (of a shekel)", i.e. at the same rate as 12 לנג (*v. infr.*); thus a כא seems to be a "dozen" of לנג.

In l. 64 and l. 81 כאפ means not " $\frac{1}{2}$ ka'" but "1 ka' (and) a half", as the figures in the following table prove:—

- 1 ka' at 1 shekel + 2 quarters (i.e. 6 quarters)²;
- $1\frac{1}{2}$ ka' at 2 shekels + 1 quarter (i.e. 9 quarters)³;
- 2 ka' at 3 shekels (i.e. 12 quarters).⁴

Thus the rate is 1 ka' at 6 quarter shekels. Further, if this is right, it is necessary to assume in l. 131 that כא ש בר [א] is a copyist's error for כא בש ר, which, indeed, is the formula found in l. 61 and l. 85.

Ibid., l. 70 *alq.* The meaning of מאפ now becomes clear from the following tables:—

- (a) 1 לנג is rated at *m.* 1 p.⁵
- 3 לנג are rated at 1 quarter of a shekel *m.* 1 p.⁶
- 5 „ „ 2 quarters „ „ *m.* 1 p.⁷
- 7 „ „ 3 „ „ „ *m.* 1 p.⁸
- 9 „ „ 4 „ „ „ *m.* 1 p.⁹

¹ *E.g.* רבע may refer to a כאח (in l. 2), an ארדב (in l. 36), a שקל (in ll. 61, 64, 85), or a 777 (in l. 124).

² Ll. 61, 85 (*v. infr.*).

⁴ L. 106.

⁶ Ll. 71, 97, 101, 107, 126.

⁸ L. 87.

³ L. 164.

⁵ Ll. 70, 79.

⁷ L. 96.

⁹ L. 94.

(b) 2 לָנָן are rated at 1 quarter of a shekel.¹

4	„	„	2 quarters	„	„	2
{ 6	„	„	3	„	„	3 }
{ 1 פֶּלֶן	is	„	3	„	„	4 }
8 לָנָן	are	„	4	„	„	5
1 כֶּחָ	is	„	6	„	„	6
2 כֶּחָךְ	are	„	12	„	„	7

From this it follows that מֶלֶךְ, meaning “a ב (plus) 1 פ” (*v. supr.*) is the same as a half of one quarter, *i.e.* one-eighth, of a shekel. Consequently, since פ stands for פֶּלֶן “half” and this word takes its colour from the context (*v. supr.*), the question is only to find the value of x when $x + \frac{1}{2}x = \frac{1}{8}$; and the answer is $\frac{1}{12}$. Therefore, מ denotes a coin of the value of one-twelfth of a shekel; and this, as Lidzbarski⁸ has already tentatively suggested on other grounds, can be nothing else than מַעֲרָה, which is known to have been the name of a fraction of the shekel in the third century A.D. If this is so, the value of the מַעֲרָה must have undergone a change; for the later shekel was of two standards, neither agreeing with this, *viz.* the “holy shekel” containing 20 מַעֲרָה and the “profane shekel” containing half that number. Such a change of value, however, is by no means unparalleled even within the same country and is all the more likely when the countries are different. Further, although these two scales do not agree, that in the Aramaic document fits perfectly into the Greek scale. For the Septuagint translate שֶׁקֶל as δίδραχμον,⁹ from which it follows that half a shekel was a δραχμή, the מַעֲרָה was an

¹ Ll. 78, 80, 84, 95, 102.

² Ll. 65, 75, 89, 92, 100, 102, 104, 117, 127.

³ Ll. 62, 68, 72, 74, 76, 88, 93, 103.

⁴ L. 86.

⁵ L. 113.

⁶ Ll. 61, 64, 85.

⁷ L. 106.

⁸ In *E.S.E.*, ii, 244-8.

⁹ Except some MSS. in Josh. vii, 21.

ὀβολός (*i.e.* $\frac{1}{12}$ δίδραχμον) and the רבע was δίχαλκον (*i.e.* $\frac{1}{4}$ ὀβολός). Again, in the Roman scale 1 סלע (sacred shekel) = 4 denars and 1 denar = 6 מעין, so that a סלע was worth 24 מעין.¹ Nor does the fact, which Lidzbarski has noticed, that five is the highest number of מ found in any text,² just as there are nowhere more than three ר (*e.g.* in ll. 62, 63, 68, 72, 74, 76, 86, 87, 88, 90, 93, 103, 132³), prove that the shekel was worth only six מעין; for this may be due purely to chance. In conclusion it may be remarked that here too רבע, like other terms denoting fractions, is not related to any specific coin, but refers to the unit which it immediately follows: *e.g.* ש"י מ"ר" means "1 shekel (and) 2 m. (and) 3 quarters" (of a *mā'āh*, not of a shekel).⁵

Finally, Cowley's suggestion that מ denotes "added" or "addition" is excluded by the fact that an indefinite sense is impossible when it is not preceded by another sum (*e.g.* in l. 70; *cp.* l. 79), since such a rendering implies that something is being added to the sum which follows.

Ibid., l. 110. If מלעתין are *objets d'art* or the like of some value, may בראמן פתחן mean "carved with two wild oxen", *i.e.* chased with figures of such animals? ⁶

Ibid., l. 126. The name ססרתם is obviously Σώσατος, a dialectical variety of Σώστρατος (*Sayce ap. Cowley*) formed by dissimilation.⁷ Other examples of this are Δημοσράτη (= Δημοστράτη) and Χαιρεσράτη (= Χαιρεστράτη).

No. 82, l. 6. Does not יתקדם ביה mean "let him be confronted by" or "present himself before Yāh"? For it is clearly a case of a lawsuit in which it is natural to find one

¹ Buxtorff-Fischer, *Lex. Rabb.*, 285, 746.

² Ungnad, *op. cit.*, 75 (1), ii, 11.

³ *Cp. ibid.*, i, 1, 12.

⁴ *Ibid.*, i, 1.

⁵ Similarly the Hebr. רבע may be a quarter of a שקל (1 Sam. ix, 8), of a דין (Exod. xxix, 40), or of a קב (2 Kings, vi, 25).

⁶ *Cp. Meissner, Bab. u. Ass.*, i, Abb. 145-6 (showing a vase and a goblet on which animals are chased).

⁷ Koehler, *C.I.G.*, II, iii, 3003, 2.

of the parties challenged to take an oath before God (cp. 7, 6 ff.). The preposition, however, is a difficulty, since the Hebr. **קדם ב**, like the Syr. **ܟܕܡܐ**, means "came before (a person) with (a thing)"¹; but the objection is perhaps not fatal, since the Hithpa' or Ethpe' respectively of the Hebr. and Syr. verbs do not seem to be found in the sense here assumed, which demands a preposition to introduce the indirect object.

'Aḥ. 18. Surely **רבא** is an adjective, not a verb (which is **רבר**), so that **וְנָן שְׁמָה בְּרִי רְבָא וְדָא יְחֻלָּה לִי** means "behold! Nadin (is) his name (i.e. one named Nadin is) my grown-up son, and let him succeed me".

Ibid., 22. Is Cowley's **מְלֵתָא יְרֻבָּא** possible in view of the grammatical irregularity which it entails?

Ibid., 53. The sentence **אֲסַרְחָאֲדָן מְלֵכָא רַחֲמֵן הוּ כַּמְנֵרַע** **עַל אַחֲרָן יִזְכְּרֵנִי** must be translated literally: "E. the king, he (הוּ) is merciful; assuredly more than any other will he remember me." For on the one hand **הוּ** resuming the subject in nominal clauses is normally put at the end of the clause, so that **הוּ . . . אֲסַרְחָאֲדָן** is a separate sentence; on the other hand, the Bab. *mindī* or *mindie*, and more often *mindie-ma*, always stands at the head of the clause, where it seems to mean "(it is) a known fact and (i.e. that) . . ." and so to be equivalent to an adverb meaning something like "assuredly". For example, it occurs often in the phrase *mindie* or *mindie-ma šarru bēliya* (for *bēli*) *iqabbi* "surely the king says".² This suggests that **כַּמְנֵרַע** is the Aram. equivalent of the Bab. phrase, from which perhaps it is actually borrowed, and thus means "according to known fact", i.e. "assuredly".

It may be added that on the translation of this passage which is here proposed, the force of the Aram. **עַל** comes close to that found in **מְתַנַּצָּה עַל-סְרַכְיָא וְג'** "distinguished above, i.e. more than the presidents, etc."³

¹ E.g. Deut. xxiii, 5 (M.T.), Is. xxi, 14 (M.T.), Mic. vi, 6 (M.T. and Pesh.), Ps. xcvi, 2 (M.T. and Pesh.), Neh. xiii, 2 (M.T.).

² Ylvisacker, *Z. bab. u. ass. Gramm.*, 64-5; cp. Böhl, *Spr. d. Am.-Br.* 73.

³ Dan. vi, 4.

Ibid., 60-1. Almost certainly כלא is an adverb, and must be taken with the verb, so that על עטתה . . . חיל [אתו]ר כלא must be translated "on his counsel . . . the army of [Assy]ria altogether relied"; for it is difficult to explain the ending נ otherwise than as adverbial (cp. Leander, *op. cit.*, 47b).

Ibid., 102. In Cowley's restoration of [בל]לא בימיד the first ב is superfluous before the second, as the Hebr. בלא יומי¹ (cp. Acc. *ina lā ūmišu*²) shows, except that the order of the words is changed. In front of לא ביומיד is simply a space which has no need to be filled with a letter.

Ibid., 113. The proverb חרב תדלח מין שפין בין רעין טבן means "a sword troubles calm waters (*Angl.* stirs up bad blood) between good friends"; for the *y* in רעין shows that it comes from the $\sqrt{\text{רעה}}$ "to be friendly", not from the $\sqrt{\text{רעע}}$ "to be bad", as Cowley takes it.

Ibid., 142. The Aram. עבר is here not the Hebr. עבר (Arab. عَبَرَ) "passed over" but the Hebr. עבר "was wrathful" (Arab. غَبَرَ "bore rancour"), whence the Hebr.

עם זי רם מנך אלתעבר³ "wrath" is derived.³ Thus עבריה means "do not become enraged, *i.e.* do not lose thy temper" or "do not bear rancour in a [quarrel] with one higher than thyself".

Ibid., 168. Can Cowley's [בית]רשען . . . תתהלל be right, in view of the false concord (cp. l. 157), which is generally permissible only when the noun precedes the verb (*e.g.* in l. 147, if Cowley's restoration is correct in view of the normal congruence in l. 146)?

¹ Job, xv, 32.

² Muss-Arnolt, *op. cit.*, 53-4.

³ Cp. Buhl, *op. cit.*, 560.

Ibid., 175. Surely סִתְרָ אֲרִזָּא means simply a "secret hiding-place"? If so, the Aram. אֲרִזָּא here is not the Hebr. אֲרִזָּ "cedar", as Cowley suggests, but the Syr. אֲרִזָּ or אֲרִזָּ "secret"; and the fact that this is borrowed from the Pers. راز¹ is no objection, since these texts exhibit other words of Persian origin.

Ibid., 184. Obviously בערבנא must mean "in [the] evening", if ססא here denotes "the moth" (cp. l. 186), since that is the time at which the moth comes out.

Ibid., 206. The meaning of בִּין שִׁאֲנִי בִּין אֵל can hardly be "[between flesh] and shoe let him not put a pebble into my foot", as Cowley translates it; for, apart from the difficulty of imagining who the subject can be,

the Aram. נַעַל (= Arab. نَعَلَ "shoed") must mean "put a shoe on a foot", like the cognate verb in the other Semitic languages, not "put (a thing) into a shoe on a foot". It must here be the Pa.' of נַעַל meaning "caused a sore" (= Arab. نَغَلَ, i "was ulcerated", iv "caused an ulcer"²),

so that the proverb may be translated "[between flesh] and shoe let not a pebble make a sore place in my foot".

Beh. 12. The two verbs אִנְפַּקְתָּ אִזְלִי must be read closely together and translated "I [started] to go"; for the impf. tense here expresses purpose asyndetically.

Ibid., 46. The facsimile seems to have לוֹעָרְק אֲרִשְׁדָּ, not לוֹעָרְק אֲרִשְׁדָּ, as given by Cowley.

Ibid., 63. The Aram. סָבַל "support", which Cowley leaves untranslated, corresponds with the Bab. *suddid* "tend",³ and so means "provide with food" or the like,

¹ Brockelmann, *Lex. Syr.*², 722.

² Freytag, *op. cit.*, iv, 308.

³ Muss-Arnolt, *op. cit.*, 747.

as the verb כבֿל does elsewhere,¹ while the noun כבֿל similarly denotes "support" or "maintenance"²; for Darius is urging each of his successors in their turn to care for the descendants of those who had distinguished themselves in his service.³ It is interesting to remark that the Acc. *abālu*, from which the Aram. כבֿל is derived, is similarly used in the I, iii theme: *e.g.* in a tablet which says that an adopted son *adi balṭuni ipallah[šu]nu ittanabalšunu* "as long as he lives shall respect them and maintain them (sc. his adoptive parents)".⁴

In conclusion, I may say that I hope presently to publish some notes dealing with a few of the problems with which the Egyptian *ostraka* and other Aramaic inscriptions abound.

¹ *E.g.* in 'Äh., 48, 72 (cp. 73), 204.

² *Ibid.*, 74 (cp. 205).

The Dragon Terrestrial and the Dragon Celestial

Part II. Ch'ên, the Dragon Celestial

By L. C. HOPKINS

THE formula "*Ch'ên* is of the Dragon kind", 辰屬龍, *ch'ên shu lung*, applies to one of the 十二屬, or Twelve Affinities, according to which each of the Cycle of Twelve Branches has an affinity to one of Twelve Animals. When this Cycle of Twelve Beasts was first known to the Chinese may be uncertain, but pure chance can hardly be responsible for the association in the list of *ch'ên* with 龍 *lung*, which must, at least, be the expression of a long tradition of affinity. That "*Ch'ên* is of the Dragon kind", then, is the text on which this paper is based, and the implications of which are further developed.

But it remains to be seen whether the argument advanced will win assent to the further proposition that the character 辰, in its most primitive form, does of itself go far to prove it.

Ch'ên 辰. Besides being the special name of the fifth of the Cycle of Twelve Branches, *ch'ên* is also in use as a term for the twelve horary periods of two hours each; and for an auspicious or inauspicious conjunction of celestial bodies; for a lucky star, or unlucky star, a definite time or moment; 三辰 *san ch'ên*, the three heavenly signs, are sun, moon, and certain stars.

But the true and astronomical meaning of the word *ch'ên*, as demonstrated by the late M. de Saussure, is "*repères sidéraux*", or sidereal marks, viz. stars of reference. And in this technical sense is to be found, as I now propose to show, the explanation of this very difficult and hitherto insoluble character. The *Shuo Wen*'s analysis appears rather as a despairing effort to explain a character of uncomprehended origin. "Composed," says Hsü Shên, "of 乙 *i*, of 匕 *hua*,

depicting piercing (象芒達), of 厂 *han*, for the phonetic, 辰 *ch'ên* being 房星 *fang hsing*, the House, (viz. the 4th of the 28 Constellations), for the season, 天時也 *t'ien shih yeh*, and of 二, the ancient form of 上 *shang*, above." Such an account of the composition is mere analytic pedantry, nor does it even so run any too smoothly.

More valuable is the explanation or definition in the same work of the *sense* of the character, 辰震也, that is, "辰 *ch'ên* is 震 *chên*," meaning, "the sense of 辰 *ch'ên* is a clap of thunder," or otherwise put, "*Ch'ên* is to startle or start." But though the two syllables in question, *ch'ên* and *chên*, as units of the spoken language, may be, as I think they are, merely different applications of the same concept, and therefore not really different *words*, this throws no light on the original form of the *character*. The two units, the word, and the character, must be traced along their own disparate lines, one being amenable to the laws of etymology, the other to those of etymography, or the origin and evolution of graphic forms.

FIGS. 1 TO 5 (Bronze).

FIGS. 6 TO 10 (Honan Bones and Miniatures).

In the above ten examples of 辰 *ch'ên*, it is remarkable how closely those from Bronze can be matched from the Honan Find. And among the features that correspond in the two series is the uppermost element, which is seen to consist of two horizontal lines, sometimes reduced to one. And as to this upper element there is a fresh view to be put forward.

The *Shuo Wen* under the character 帝 *ti* gives a group of

six characters, of which 辰 *ch'ên* and 龍 *lung* are the second and third, all of which, the author says, are composed with "the ancient form of 上 *shang*". And 二 is the ancient form of *shang*, according to the *Shuo Wen*, and its second radical.

But much water has flowed under the bridges since Hsü Shên pursued his researches, and many things of bronze, earthenware, and bone have been revealed of which he knew nothing, and neither knowledge nor conjecture can stand still. And, to take one case in point, it seems highly probable that in some, at any rate of the group of the six characters named by the *Shuo Wen*, the two horizontal upper lines shown in their archaic forms are conventional contractions of something earlier and more complex. And it seems probable that in the case of 辰 *ch'ên* the two upper lines of the archaic forms are contracted versions of the head, shown fully in Figs. 13 and 14 below. This view is supported by the evidence to be drawn from 天 *t'ien*, heaven,¹ 元 *yüan*, chief, head,² 正 *chêng*, true, right,³ in all of which are found early variants both with rounded heads and with two horizontal lines. And I may say other characters are under suspicion, and evidence may be produced in future leading to their conviction on the same charge. In Figs. 1 to 10 we see some of the long series of variations, enigmatic or misleading, of this singular sign, already observable in the archaic writing of the Shang dynasty during the second millennium B.C. What then can have been the origin and formal model of which these shapes are at once the evolution and the wreck? To answer that question we must seek guidance from above.

For the solution about to be propounded is an astronomical

¹ See *JRAS.* for October, 1917, Pl. I, Figs. 1 to 4, and pp. 774-5.

² See *JRAS.* for July, 1926, Pl. VI, Figs. 1 and 2, and pp. 464-5. And note in the archaic forms of 寇 *k'ou*, brigand, that though the left-hand element is usually written 元 *yüan*, instances exist where a round or roundish shape takes the place of the two lines. See the *Chün Ku Lu Chin Wên*, ninth and last vol., pp. 47-8, and the *Ku Chou P'ien*, citing the same examples, ch. 60, pp. 33-4.

³ See e.g., Jung Kêng's 金文編 *Chin Wên Pien*, 2, p. 11.

one, and curiously exemplifies the old Chinese tradition that "those who instructed the people in ancient times looked upon the Forms of Heaven, and studied the Structure of Earth".¹ And the clue that must be followed is to be found in the Chinese astronomical expression 大辰 *ta ch'ên*. This term, unfamiliar I imagine to many sinologues, occurs in the invaluable papers on ancient Chinese astronomy by the late M. L. de Saussure that had for a number of years appeared in the *T'oung Pao* and elsewhere. M. de Saussure usually renders 辰 *ch'ên* by the French words "repère sidéral", sidereal mark, sign, or indication, but in English the word "beacon" will not perhaps be inapt. What then is the import of this binomial term *ta ch'ên*, and to what did the early Chinese astronomers apply it? They gave this name to certain conspicuous and determinative stars or groups of stars, by whose movements, risings, and settings the recurring seasons of the year could be exactly ascertained. Thus the commentary of Kung Yang on the *Spring and Autumn Classic*, under the seventeenth year of Duke Chao, writes: 大辰者何大火也大火爲大辰伐爲大辰北極亦爲大辰, that is, "What is a *ta-ch'ên*? The star Antares (*ta huo*) is a *ta-ch'ên*; the Sword of Orion (*fa*) is a *ta-ch'ên*; the Polestar also is a *ta-ch'ên*."

Clearly, then, these *ta-ch'ên*, or Grand Beacons of the Skies, were, for me at any rate, a "new fact", because a newly acquired one, and the scent lay hot on the ground. Obviously it led towards the illustrations to the section of the *Erh Ya* dealing with the Heavenly Bodies, the 釋天 *Shih t'ien*, and there, under the sub-section Names of Stars 星名 *hsing ming*, I found, as I believe, the solution of the enigma so long and so persistently withheld.

In that section, against the caption, 大辰房心尾也, or "The Grand Beacon is the House, the Heart, and the

¹ *The Six Scripts*, p. 1, rendering 明民者觀於天文儀於地理.

Tail", viz. the fourth, fifth, and sixth of the twenty-eight Rest-houses or 宿 *hsiu*, we find the corresponding diagram, copied below on a smaller scale :—

The original diagram, insufficiently exact though it is, represents by the separate upper group of three (the asterism Antares) the 心 *hsin* "Heart", or fifth Rest-house, while the lower group of nine constitutes the sixth, named 尾 *wei*, the "Tail", by the Chinese, and forming, in our traditional Western system, the tail of the Scorpion. The fourth Rest-house, 房 *fang*, the "House", despite the caption, is not included in the *Erh Ya* figure.

Now it is the nine stars of this lower group, which in Chinese astronomy make up the tail of the Dragon (or in Western astronomy the tail of the "Scorpion", in the Signs of the Zodiac), and, furthermore, and particularly concerning us here, which are the original model for the archaic pictogram

illustrated above,  (see Fig. 1). The variants, archaic as

they are, compared with their modern successors, have certainly undergone considerable and disfiguring changes from their primitive prototype. And this prototypical pictogram itself was not a faithful copy of the original model seen shining in the sky. For that model was the sequence of nine stars (possibly at first surmounted by the three stars of Antares), conceived in early times as the tail of a dragon. The prototypical pictogram, on the other hand, was, as it were, this skeletal sequence clothed and amplified by the appropriate serpentine

body and limbs of the Dragon as the primitive Chinese artist imagined him. This view will seem more reasonable to the reader if I add here the sort of picture I believe the primitive pictogram to have been, , though I should explain at

once that this figure may not be actually identical with the archaic form of the character 辰 *ch'ên*, (it is in fact cited by Lo Chên-yü and Wang Hsiang as one of the variants of 龍 *lung* "Dragon", though, as already explained in a previous part of this paper,¹ I am not satisfied on that point). But whether identical or not with *ch'ên*, these figures must have been of the same general type, at any rate, as our hypothetical pictogram. They undoubtedly represent some mythical and flying creature, and when we remember that the Verdant Dragon (青龍 *ch'ing lung*) was Lord of the Eastern or Spring Palace, and that the Horn (角 *chio*), the Neck (亢 *k'ang*), the Heart (心 *hsin*), and the Tail (尾 *wei*), being the first, second, fifth, and sixth of the twenty-eight Rest-houses, were included in that same Palace, and are therefore the Horn, Neck, Heart, and Tail of this Verdant Dragon, it surely is hard to avoid the conclusion that the earliest form of 辰 was no other than a picture either of a complete Dragon or perhaps only of his Body and Tail. Here are the figures mentioned above as being equated by Lo Chên-yü and Wang Hsiang with 龍 *lung*, Dragon. To whom, since the above was written, I may now add the authority of Mr. T. Takata, author of the *Ku Chou P'ien*. Fig. 14 is from H. 729 in my own collection.

FIG. 11.

FIG. 12.

FIG. 13.

FIG. 14.

And lastly is subjoined a correct figure of the Star-group, known by us as the Tail of the Scorpion, and by the Chinese

¹ See *JRAS.*, October, 1931, p. 802.

as the "Tail" simply, but referring undoubtedly to the Dragon that presides over the Spring or Eastern quadrant of the Heavens. I am indebted to M. L. de Saussure for the reference to Schlegel's *Uranographie*, where the true alignment of the stars is shown,¹ and their individual identification with those of our Western system is completed. The general outline in this figure is more convincing than the ill-copied design in the *Erh Ya* illustrations.

The Significance of the archaic forms of 辰 ch'ên is, then, on this assumption, an amplified diagram of the two groups of stars known to the Chinese as the Heart and Tail of the Dragon, and to us as Antares and the Tail of the Scorpion.

This seems a more likely explanation than the inverse one, that the ancient Chinese having already an appropriate character figuring a Dragon, saw, as it were, its counterpart in the sky, and made the mundane picture the namesake of a stellar group.

And so, good-bye to Dragons and all that !

¹ See that work, pp. 153 and 138. I omit the Greek letters.

An Old Moorish Lute Tutor

By HENRY GEORGE FARMER

(Continued from April, 1931)

THE following are the texts of the four Maghribi MSS. the translations of which appeared in April, 1931. Further, a few mistakes crept into my last article. On page 354, line 14, the last letter under ح should obviously have been H and not J, whilst the doubtful word given in the footnote 2 ought to have been ملاستها. Finally, I regret that a line was omitted from verse 23, on page 364. The verse should read :—

“ And that is like the two *Rasds* and the [two] ‘*Irāq[s]*, and partly *Dhil* and ‘*Ushshāq* :

And similarly *Mazmūm* along with its two branches, and also the *Ramal* in its two kinds.”

١

[معرفة النغمات الثمان]

(Bibl. Nac., Madrid, CCCXXXIV-2)

[Fol. 14] اول ما يجب الاعتناء به معرفة النغمات

الثمان التي عليها مدار الغناء والالخان كلها وكيفية اخذها
على سبيل الترتيب من الاوتار الاربعة ان تعرف انها
متفاوتة في البعد فاقر بها نغمة البم وهو الوتر المسمى
بالدبل اليوم وتليها في البعد وتر المثلث وهو وتر المايه
من غير دس عليه بالنصر من يدك اليسرى ولا بالسبابه

وتليها نغمة ايضا مع الدس بالسبابة ثم تليها نغمته ايضا
 مع الدس بالبصر ثم نغمة المثنى¹ وهو الرمل ثم الزير
 وهو الحسين من غير دس ثم نغمته ايضا مع الدس بالسبابة
 ثم نغمته ايضا مع الدس بالبصر وبذلك تتم
 النغمات الثمان ولا يكاد يتخلل مراتب هذه النغمات نغمة
 اخرى ابعد ولا اقرب بل كل نغمة استخرجت من ساير
 الاوتار والاصوات او هي رافعة الى هذه² وبسط هذه
 بحروف ا ب ج د ان تجعل الالف للنغمة الاولى التي هي
 اقرب النغمات واخفضها³ [Fol. 14v.] وهي نغمة الدليل والباء
 التي تليها في الانخفاض وهي ارفع منها ييسير واخفض من
 التي فوقها ييسير وهي نغمة الماية من غير دس والجيم
 التي تليها وهي نغمة الماية ايضا مع الدس بالسبابة والدال
 التي تليها وهي نغمة الماية ايضا مع الدس بالبصر والهاء
 التي تليها وهي نغمة الرمل والواو التي تليها⁴ وهي نغمة
 الحسين من غير دس والزاي التي تليها وهي نغمة ايضا

¹ MS. has المثلث.

² A marginal addition.

³ MS. has اخفضها.

⁴ MS. has تليتها.

مع الدس بالسبابة والحاء التي تليها وهي نعمة ايضا مع
الدس بالبنصر وصورة ذلك وهيئة كما ترى ان شاء الله
هكذا

[Fol. 15] فالضرب والدس في ترتيب استخراج
النغمات على مواضع حروف ا ب ج د الموضوعة على الوتر
فالضرب بحيث الالف والباء والواو [وا] الهاء والدس بالسبابة
بحيث الزاي والجيم وبالبنصر بحيث الحاء والداال وترتيب
النغمات [وترتيب النغمات]¹ على ترتيب الحروف ينتقل
معها حيث انتقلت فالوتر الذي عليه حرف واحد فيه
اشارة الى انه انفرد [بالضرب]² عن الدس وبذلك تعلم
ان الدليل ليس فيه سوى نعمة واحدة هي اخفض

¹ A superfluous repetition by the copyist.

² A marginal addition.

النغمات ومثله الرمل في انفراده بنغمة واحدة يضرب على كليهما ولا يدس وفي كل من المائة والحسين ثلاث نغمات في الضرب¹ واحدة واثنان فيه مع الدس بالسبابة او بالنصر فاذا علمت مراتب هذا النغمات وصار استحضارها عندك ضروريا وجرت يدك فيها على الاوتار من غير توقف سهل عليك اخذ ما تريد من الوتر بحروف ا ب ج د الثمانية والعادة جارية بتقديم بحر الرمل في التعلم لقرب ماخذه وقلة مؤنته وهو البحر المركب من ستة اجزاء سباعية [Fol. 15v] وهي فاعلاتن ستة دخل الزحاف في عروضه وضربه متحول جزءهما السباعي الذي هو فاعلاتن الى الخماسي الذي هو فاعلن وبسط الكلام في ذلك [مخرج]² عن المقصود وترتيب حروف ا ب ج د في استخراجها من الاوتار كامل الوزن والنغمات هكذا
 ا ب ج د ج ا ب ج د ج ا ب ب ا ب ج د ج
 ج [؟] ا ب ج د ج ا ب ح د ب ا ا ه هذا هو البيت الاول بتمامه وفي البيت الثاني مخالفة ما في الاول والاخر

¹ There is an omission mark here, but there is nothing to correspond in the margin, and there does not appear to be a hiatus.

² Or فخرج. This appears to be deleted.

هكذا هـ و ا ب ج د ج ا ب ب ا ب ج د ج ا ب
 ج د ج ا ب ب فعروضه وضربه متفقان في الاخذ على
 هذا العمل فقس¹ وبمعرفة اخذ النغمات من الاوتار
 المذكورة ومعرفة مواضعها وملاستها يصير الانسان
 عارفا بتقويم العود من غير ان يحتاج الى ضابط في ذلك
 ولا قاعدة ولا باس بذكر قاعدة في ذلك يستعان بها على
 تقويمه قبل معرفة مواضع النغمات ومواضعها وذلك ان
 تقوم الماية اولا على طبقة معتدلة ثم تضع سبابتك على
 موضع البنصر منها وتضع البنصر حيث تقتضيه المرتبة
 [Fol. 16] بعد ذلك فيكون بعد الرمل فقومه عليه حتى
 يماثله ثم تضع سبابتك على الحسين بموضعها حالة العمل
 وتضع بعدها البنصر بموضعه فيكون بعد الدليل الا انه
 شيخ فقومه عليه حتى يلتئم شاب الحسين مع شيخ
 الدليل ولك ان تقدم تقويم الدليل على طبقة معتدلة
 وتضع سبابتك على موضعها منه فيكون بعد الماية فقومه
 عليه وسر على بقية العمل كما تقدم فبين الدليل والماية

[بعد طني وبين الماية والرمل]¹ والرمل والحسين² بعد
 بالاربع وبين الرمل والحسين بعد طني فنسبته من الرمل
 كنسبة الماية من الحسين واما ترتيب الوتر بحسب ترتيبها
 في محلها وترتيبها في الموضع فقد رمزوا لها بأربعة احرف
 وهي د ح م ر فالدال للدليل وهو المقدم والحاء للحسين
 وهو موال له والميم للماية وهو الثالث والراء للرمل وهو
 رابعها والنظر في هذه الحروف الى جهة ترتيبها في الموضع
 الاول عددها وكل حرف منها ماخون من اول الوتر
 المشار به [Fol. 16v.] . . . اشهى وعنه ايضا رعاه الله
 قال كل ما يدور على الالسة من انواع التلحين على
 اختلاف اجناسها فهو راجع الى خمسة اصول من الطبوع

The Eighteenth International Congress of Orientalists (Leyden, 1931) and some papers which were read there

The Eighteenth International Congress of Orientalists, 1931

By MRS. R. L. DEVONSHIRE

THE number of subjects now labelled as Oriental and the increasing development of knowledge concerning each of these subjects, make it materially impossible for an individual to derive more than a fraction of the advantages offered by a Congress such as that recently held at Leyden. There were no fewer than nine sections (in fact, there should have been ten, a special section for Islamic Art having been eliminated) and over 200 papers were read during the five days that the Congress lasted, some of the sections sitting nearly five hours a day. It was inevitable that keenly interested delegates should again and again have to choose between equally attractive papers, especially where the third section (Central and Near Asia) and the eighth (Islam) were concerned.

It is to be hoped that subsequent Congresses may occupy a longer period, papers being so arranged that amateurs need not stay the whole time while specialists may have a chance of hearing all that concerns their speciality.

The impossibility of doing so and the very Western, not to say Arctic, weather were the only drawbacks to perfect enjoyment of the ancient University town's hospitality; no one could have been more courteous, kinder, and at the same time more practical than the Dutch people, from the Royal Family down to the Customs' officials. The Bureau was run on smooth lines by a party of charming young ladies who, after giving newly arrived delegates every possible kind of information in a variety of languages, helped to entertain

them by acting as hostesses at the divers receptions given in their honour. In his delightful Presidential Address at the opening meeting, the venerable Professor Snouck Hurgronje, recalling the 1886 Congress, referred to the great advancement of feminism since those days, and remarked that not only did the 1931 Congress include women speakers, delegates, and associates, but that no male Bureau could have shown greater competence than Mejuffrouw Schippers' charming group of girls.

A great deal of trouble was taken by the authorities in order to give pleasure to the members of the Congress; evening receptions, tea-parties, excursions being organized for practically every afternoon and evening. With the crowded mornings' work in the different sections, life during the Congress was very strenuous and several attractive invitations had to be refused. Exhibitions of special interest had been arranged and, as usual, there was a choice of books for sale. The noteworthy absence of English editions was regrettable, as also the fact that several important works, eagerly awaited by students, had failed to appear in time for the Congress. The social gatherings that took place gave opportunities of meeting each other to the numerous prominent scholars who attended the Congress. Some absences were deplored, even resented, as in the case of Professors Herzfeld and Grégoire, whose lectures, on the programme, had attracted large, impatient, and then disappointed, audiences.

I attended the meetings of the Islamic section almost exclusively; these were held in the great auditorium of the University. Among many interesting papers were those of M. Massignon (Paris), "Les Contacts de la secte syrienne des Nuseiris, d'après la littérature shi'ite orthodoxe"; of Dr. F. H. Hamdānī (London), "History of the Ismā'īlī Da'wat and its Literature during the last phase of the Fātimid Empire"; of Signor M. A. Guidi (Rome), "Gli scritti di al Qāsim B. Ibrahīm e la loro importanza per la storia dell' Islamismo"; of Dr. Taha Hussein (Cairo), "La Rhétorique arabe dans son

rapport avec la rhétorique d'Aristote"; of Herr P. Kraus (Berlin), "Die Lehre vom 'Kumûn', ein Beitrag zum Problem Manichäer und Mu'taziliten." All these, as also that of Dr. Abel (Brussels), "La Guerre théologique en Asie Mineure dans ses rapports avec l'état des idées dans le monde islamique et dans le monde byzantin," given in the third section, were calculated to stimulate eager discussions, unfortunately rendered impossible by lack of time.

These highly intellectual subjects were agreeably varied by a few papers of artistic interest: Dr. Gottheil (New York), "An Illustrated Copy of the Korân"; M. G. Wiet (Cairo), "Panneaux de bois Bouyides du iv^e siècle"; M. G. Marçais (Algiers), "Une Lampe du xi^e siècle à la mosquée de Qairwân." The two last mentioned dealt with very important material, but M. Marçais' produced a more lasting impression on the audience owing to the excellent slides by which it was illustrated; no description can replace visual perception, and a few photographs circulated among the hearers only satisfy the two or three first rows.

The Egyptian Minister, H.E. Hâfêz Afî Pasha, gave some welcome explanations on the new Arabic capital letters adopted by the Egyptian Government; these were embodied in a handsomely produced pamphlet, a copy of which was given to every member of the Congress.

The progress of Egyptian Arabic as a living national language was eloquently described by Mahmûd Teymour Bey (Lausanne), himself a noted writer of modern fiction in Arabic: he spoke on "La Littérature arabe moderne". A similar theme concerning Persian was delightfully developed by M. B. Nikitine (Paris), "Le Roman historique dans la littérature persane moderne."

It is greatly to be hoped that many of the papers that one was obliged to miss will be published so that we may read those which we were not able to hear.

The Two Ends and the Middle Way

A Suggested Reconstruction

(An address to the India Section, XVIIIth Congress of Orientalists)

By C. A. F. RHYS DAVIDS

OF the five opportunities given me these thirty-nine years for such a talk on such an occasion as this, the present one may well be the last. I have on these occasions considered, in the Buddhist field, Women, the Will, Natural Causation, and the Man as Real. I would now say a few words on that which is, historically speaking, the most central subject of all—the subject which is, by general assent, within and without that religion, the New Word with which it was introduced, the first Mantra recorded as of the Founder of it, the so-called Benares ‘sermon’. For we may talk much about legends of him on the one hand, or about the many ways in which his teaching expanded at later periods, in so-called philosophy and in this and that word-value, obscuring the man-value, but the one thing of chief historical importance is and remains the Mantras he first uttered as teacher, and their significance in the religious history of the there and then. To this I would add, in the pertinent phrase of a recent synoptical narrative, “the meaning which these will have had in the mind of their original author.”

We “conscientious Indianists”, we there read,¹ have not, after nearly a century’s poring over texts, come to agreement about this matter. This is correct, albeit I would limit the interval by a few decades. Nor need we herein blame Indianists. Have we yet, after over two centuries of research, discovered just what electricity is? The excavation of our materials, in this far newer subject of the history of Buddhism, is not yet completed; much less can our sifting and comparison of these be more than just begun. *

¹ Marie Gallaud, *La Vie du Bouddha*, 1931.

This being so, we have at present to guard ourselves from taking the foreground in our field for the whole picture ; from taking, I mean, the repeated and the emphasized for the original. We shall, if we do not so heed, be as an anatomist, who sees the animal's whole history in its mature organs, and overlooks those atrophied 'rudimentary' organs pointing to an earlier history. We have been directed by one notable pioneer to see in "the simple statements of doctrines found in identical words, paragraphs, verses, recurring in all the books, the oldest".¹ By another we have a six-editioned work on Buddhism based in doctrinal structure solely on such a recurring statement.² But were those two pioneers here and now with us, would they not tell us : Emulate us in our will to the true, but do not rest content with the guesses we made at it ?

Which way lies improvement on these guesses ? Let us say, along two ways. One is in distrusting, as original, any of those refrains of numbered categories, schemata, formulas, on which they based conclusions. These all will have taken time to come to, and when they were come to, values will have changed, so that the emphasis in them will be other than that of the first day. Oldenberg saw in one of these the expression of a widespread aspiration to liberation : Erlösung. I would dare to let this go too. Not of these is the birth of a world-religion. Erlösung, it is true, was in the air, growing. But it was no fit gospel for the Many. It made appeal to a special kind of man and woman. It was a call to the bound, the weak, the woeful to come apart. The retreat was fundamentally spiritual, but its physical counterpart was, to speak bluntly, a way out for the shirker.

And in world-mandate, India had *already received* her call of release. The Upaniṣads tell not rarely, how that "clearly to know God as the self" is "release from all fetters", is "to be no more afraid". Had this been taught to the Many

¹ Rhys Davids, *Buddhist India* (1903).

² Hermann Oldenberg, *Buddha*.

from the first, Erlösung might have received a wholesome check. The child, had he but learnt it, was already in his father's arms. He would have trusted and feared not.

Nor are we at the birth if we see, as central, a teaching of *Mettā*, amity. The *ground* for this, as transcending common morality, was also there already. That "the Self was to each man supremely precious", involved, implied the seeing that Most Precious in the other man, calling in him for like warding and reverence. This only needed endorsement, stressing, in a new religion, and it is thus that we find it, in a saying ascribed to the Founder :—

Since to each man so precious is the Self,
See he to it, he harm no other man !¹

Let us then come, for the New Word, to the Mantra of the Ends and the Middle Way. Here is a presentation we do not, I believe, find in previous Indian records. Way, as *Marga*, not *Yāna* only, we do find :—

Scarce visible and old there lies a Way
That touches me, e'en me, was found by me,
Thereon the wise fare onward . . .²

but not as "middle way" or "way by the middle", nor as with the Ends-feature.

Rightly to estimate both, we need to consider them, not only in the first Mantra, but in all their contexts. We shall then better see them as a way of looking at Man in general, not under one aspect only. For, once a teacher had got the worth of his message in this striking shape, he would wish to apply it to the Man in many respects. And such is what we find. The Ends are various; the Man choosing is a constant; is the Way also always the same ?

I will refer to two other contexts beside the First Mantra. In this, the Ends are concerned with religion in choice of living. In another context, they are concerned with the

¹ *Samyutta-Nikāya*, i, 75.

² *Bṛhad. Up.*, 4, 4, 8.

further living, the destiny, of man. Namely, either the man as agent is identical with the man as experiencing the results of his actions, or he is (will be) a different person.¹ In yet another context, the Ends are concerned with the essential nature of man. Namely, Either everything (and *a fortiori* man) is (i.e. has static reality), or nothing (*a fortiori* man) is (i.e. is merely *kṣara*, *anitya*, transient).²

Here then is variety. In the form of words showing the Man as choosing a better way, we find no variety, or virtually none. There is in one the word *yebbhuyyena* : "for the most part" (man follows one end) : this may have dropped out in the others. But this sameness in wording the choice leads us to consider whether, in the solution of the Middle Way (not this way here, that way there), there may have ever been an identical decision symbolized as a way or road, or course (*magga* and *paṭipadā*) ? Actually we find two : one in the First Mantra, one in the other contexts. Was there originally one way in all ?

But first a general consideration. And this is : New Word though Ends and Middle Way may be, we might rather wonder, that they had *not* been introduced in Upaniṣadic or other teaching at about that time. For during the preceding century, India had had a tremendous contrast in "Ends", namely, in the teaching of Deity as conceived. Conceived first as external to, apart from the man, immeasurably so, although as personal, individual ; later, as not external, not apart, not personal, but as the innermost Inner of the man. Here indeed were two Ends to be decided about ! And it may only have been, that the latter End was yet too close to teacher and learner, for the great perspective to have been caught. Yet, as a mere surmise, may not the Śakyamuni, when he hesitated over his mandate to his fellows, have contemplated such two Ends and a Middle Way, with which his own probably lost Middle Way was identical ? This may

¹ *Samyutta*, ii, 75 f., etc.

² *Ibid.*, 76, etc.

be clearer presently. I would only remind you of this : None but he could have revealed (a) that he did hesitate, (b) about what he was hesitating. He probably told his one real equal, Śāriputta. A little Sutta in the Anguttara suggests this.¹ But what he is made to hesitate over, although it also is two ends, or at least a dual theme, is *not the subject of the First Mantra*. This dual theme was (a) a monastic gospel, (b) a gospel of causation. Neither really fitted for the Many. What, between any pairs of ends, became for him the way of decision ?

I would like here to refer to the vision of which he being alone will alone have told (assuming we have here a veritable telling, and a true record). The deva, in urging him to teach, says that without it, even they who would learn, were declining ("will decline," perish, *parihāyanti*). "*Bhavissanti*," he goes on, "*dharmassa aññātāro*." This clause has always been translated : "There will be they who will understand the teaching (or truth)." I suggest it could equally be translated : "Learners (of your dharma) will become," that is, will grow. The equation is often made between *bhū* and *vr̥dh*. I only refer to this because of the weakness of our own 'become'. Where the word 'become' was strong, as in the Vedic word, and had been greatly exploited by Brahman teaching, as appears from the Upaniṣads, it would possess a significance we may not see. That the future tense is the same for "will be" and "will become" does not make "will be" in this context right. And the close apposition of *bhavissanti* here with its opposite *parihāyanti* is suggestive. We should note too, that the verb *jñā* with the prefix *ā* (viz. *aññātāro*) has the force of *connaître*, *erkennen*, "coming-to-know," at least as much as of "to understand".

Any way we next read of the Founder considering his fellow men in their different stages of growth or becoming. And then comes the simile of the growing lotuses, the origin surely of that widespread symbol figuring as the seat of

¹ Vol. i (Tika-Nipāta), p. 133 ; cf. *Vinaya*, i, 5 ; *Samyutta*, i, 137.

the Buddha: the lotus-seat. From these inspirations: "decay-becoming," both spiritual and physical, he went forth to teach his Middle Way. He meets one Upaka, is questioned on his ardour, and probably rehearses it. (This is more likely than that he spoke the bombast put into his mouth.) It is noteworthy, that in one recension, the Majjhima-Nikāya, Upaka responds with the one word, *Huveyya*, a form it is said, of *Bhaveyya*. In the other, the Vinaya (here too he first responds to the mighty claim put forward, and when this is qualified), he responds with *Hupeyya*. This word has been translated 'It may be so', and 'Mebbe'. It were equally right to render it: 'One may become.' Or when, as we shall see, '*bhavya*' got discredited, an original comment of '*Bhavya!*' may have been altered to *Bhaveyya*. It may here be said: Scarcely! The persistence in survival of the dialectical form militates against the probability of such an alteration. Well, I would not press it as contributory evidence. Yet, given the will to erase a traditional *bhavya*, the changed readings: *huv-*, *hup-*, met with at revision-time in some repeaters' versions, might be welcomed as more effectively erasing than the less "provincial" form *bhaveyya*. If my suggested reconstruction be considered, we get a response, still of the briefest, but expressing not a semi-scepticism, as has been implied, but a repetition of the most central and significant word to which he will have been listening: either "Becoming!" (*bhavya*), or "He may become!" (*bhaveyya*).

That the Ends selected in the First Mantra were practical, not theoretical, is not without deep significance. We see a gospel where ultimate salvation depends on the man living his religion. But I am now more concerned with the relation of the Ends to the Middle Way. Usually they are called "extremes".¹ I think I did wrongly to follow this tradition. We have in fact no word coinciding with the elasticity of the Indian *anta*. It means at once terminus and nearness. Life

¹ In Pali, *koṭi*, *agga*.

is called *maraṇantika*; but when you open a conversation you may be *ekamantaṃ nisinno*: 'seated beside'. *Anta* is not something opposed and divergent; it is rather "what comes next". Applied to an aspect of life or belief, it then appears as partial, inadequate, *if solely adhered to*. We need not here suffer ourselves to be misled by the much monastic editing inflicted on the Mantra. We can see it has been reduced from the message to Everyman to a mandate from a monk to monks for monks:—"for him-who-has-left-the-world (*pabbajitena*)."¹ And this sectarian view has led to a wording which is excessive in condemnation, and to the Way emerging as the sectary's narrow pronouncement: *idaṃ saccaṃ, aññaṃ moghaṃ*. In my judgment the ends-and-way meant, for this teacher: That a man *wills* his *artha* (*summum bonum*) is well; that he *regulate* his will is also well; the middle way linking both is that he *combine the two*. Desire and rule are both needful.

The man has here to choose. Equally in those other contexts he has to judge, to decide, where it is a question of belief affecting his outlook. It may be said: But in each context the matter has already been decided for him, namely by a superman called *tathāgata*.

As to that, we must first remind ourselves, that to see, in the word *tathāgata*: 'one thus gone,' an epithet used for any wayfarer in 'the Way', and only much later reserved for the Founder, has been accepted by Indianists¹ for many years. I would only add, that we might, by the analogy of the parallel term *paṭipanna*, render it as thus *going*, rather than *gone*. Both this and the parallel epithet: *sugata*, well-farer, are found, in the Suttas, referring to disciples in general, as well as to Śākyamuni.²

In the next place, the whole point of the New Word is blunted if we see here a thing done, a choice made, and men

¹ Cf. especially E. Senart, *JRAS.*, 1898, p. 865, on R. Chalmers' "Tathāgata".

² Cf. *Ang.* i, 217; *Samy.* iv, 253.

bidden to follow as in a herd. Here is Everyman, confronted with matters wherein he has to choose. He cannot, save at the cost of his manhood, stand aloof; he may not go back; he must on. Now this was for India a new mandate, and one for which words were lacking. The word 'choose' was tied up with a proffered boon (*vara*); nor even then do we find the very rare word "choosing" used; only "take" (*gaṇhāti ādāya*).¹ In the Mantra we find only the weaker terms: 'not having gone up to' (*anupagamma*); 'not to be followed': *asevitabba*. And these obscure the real issue. The very lack of the fit word may betray the newness of a gospel. Had Jesus a word for brotherhood? Ancient Mantras call for vision to get past words.

I come to the Middle Way. In the two other contexts quoted, we have this described by a formula, that of the Paṭicca-samuppāda. To see the Founder of a world-religion answering a query in suchwise is unthinkable. Why then has it been inserted? A string of assigned causes and effects, it is said to account for ill (*dukkha*). Actually it is a procedure in *bhava*, becoming, *werden*, *devenir*. And in the middle, ill-fitted, is this key-term: *bhava*. If now we seek originals by discarding formulas, which are the work of "creatures of a Code", and by holding to the key-term, we get a direct and significant reply to both pairs of Ends. "Man is neither identical nor other; he is in a process of becoming." "Man neither is nor is not (as India understood then those terms); he is by nature becoming." A solution which it has needed both Hegel and science to give our age.

But why should *bhava* have been buried, obscured, softened in a formula?

Bhava had become a black-listed word through the growing vogue of monkdom. Man in India was potentially That, viz. Deity. To be That actually, he needed a very long process of becoming, involving lives, worlds. For the monk all this was *dukkha*. But these *opportunities of becoming* had

¹ The one exception I find is in Kauṣ. Up., 3, 1.

come to be called "becomings" (*bhavā*); both 'lives' and 'worlds'. And *bhava* is perhaps the worst-cursed word in the Pīṭakas. Hence we can well imagine that, on occasions of revision, it will have been held advisable to soften, to enformulate the term, where the word could hardly be eliminated.

But in places, by some lucky contingency, it has got left in, left in not only uncursed, but with a glint of its old splendour. In such passages we see that atrophied organ to which I have made allusion. Here are, for instance, a few of such 'left-ins':—

Bhabbo: 'bound-to-become': a term for the man 'with his face set toward' salvation, e.g. *Iti-vuttaka*, § 117, *Majjh.*, i, 104.

Bhavyarūpatā, 'suitableness for becoming': commended with other qualities in a man's teaching, in *Anguttara*, i, 189.

Bhava described as man likened to a seed planted in this and that world, needing for his growth the moisture of the will, lit. strong desire. Ānanda has asked his cousin: what is this that is called *bhava*, *bhava*? (The reply has been cleverly edited to throw discredit on *bhava*.)

Bhāveti, *bhāvanā*, the latter usually mistranslated as 'meditation'. The causative, evading the blackened form *bhava*, took over all the prestige of this term, and was especially applied to the Way: *maggam bhāveti*.

Bhavam nissāya: "(man survives) depending upon becoming"; this appears in the *Kathā-vatthu* debate (I, i), as a tenet of the teaching discredited at the Patna Council by the newer orthodoxy.

Bhavaśudhi. This, with the alternative form *bhāvaśudhi*, occurs in six inscriptions of Aśoka, and always in the same context, as being an ideal of all religious teachings, no matter of what sect. It has been translated by *pureté de l'âme* (Senart), and by 'purity of mind' (Hultzsch), the short-vowel rendering being ignored. I venture, mindful this is for me an untrodden field, to see, in both renderings, *both*

of which can mean 'becoming', just this meaning, and not 'soul' or 'mind' or 'state'. I cannot fit a compound where *bhāva*, as prefix, can mean 'state', or soul, or mind, into any literature round about Aśoka's time. As affix, yes; not as prefix; but I speak subject to correction. But Aśoka's injunctions are, in an overwhelming preponderance, concerned, not with 'state' (much less with psychology); but with 'growth', with advance, with *vaddhi*, *vuddhi*, which is often equated by *bhāveti*. I have counted eighty such references, and have elsewhere dealt with this.¹ And where he uses the verb *bhavati* it is nearly always with the significance of 'coming-to-be', although this has been much overlooked. I am not disputing the correctness in translators' rendering of the Upaniṣadic antithesis: *bhāva*, *abhāva*, by existence, non-existence,² nevertheless, it had been equally correct to put becoming, non-becoming. *Bhāva* can, in fact, hardly be exactly rendered by us, for whom these alternatives are so much more different in form. Our classical dictionary gives the meaning of *bhāva* as "Werden, Sein", but in our renderings we cannot well put both. But the fact that with Aśoka we get both forms, and the fact that he saw religious life essentially as growth, makes me cast my vote for *bhāva-śuddhi* as meaning 'salvation by, in, becoming'.

Finally as to the Middle Way in the First Mantra: I have come to the conclusion that, in view of (1) these 'left-ins', (2) the items in those two other contexts of *bhava*, (3) the preoccupation, just before the utterance of the Mantra, with 'decline' and 'becoming (?)', (4) with man-growth and with lotus-growth, it is reasonable to see, beneath the palimpsest of the orthodox eightfold formula, the one pregnant compound: *Bhava-Magga*. The way was symbol of the will-to-perfection, of living in growing towards perfection (which was, in India, so often called *śuddhi*, purification).

After all, that list of eight, now so tightly tied up to the

¹ *Sakya*, ch. xxiii.

² E.g. Śvet. Up.

Way, is, in the venerable Sangīti Sutta, not so tied ; it is set apart from any 'way' as the Eight Samattas. But, to soften Bhava in the First Mantra, there could be no foisting in of the Paṭicca-samuppāda. That was taught, worded, as leading to Ill. Here the concern was Artha, the summum bonum.

I leave here the problem with two suggestions : Think it over with Upaniṣads in your right hand, and in your left the Suttas 151, 152, of the Tika-Nipāta of the Anguttara. In the former, note the striking preoccupation with *bhū*, *bhav*-, even up to Divine creation, till a revulsion of opinion brought in the feared (physical) complement of decay. In the latter, note how all the other lists in the so-called Bodhipakkhiya-dhammā, beside that of the Way as eightfold, are in succession " 'tried-on' " as a *Middle Way*, suggesting a prolonged interim of indecision before the eight *sammā*'s or *sammatta*'s were finally decided upon.

Brahman India rejected *bhavya*, the biological concept of how to reconcile the tremendous apartness of Perfection with imperfect manhood. She decided one day to prefer the mechanical concept of Yoga, the joining, the splicing, the *effort*, as a bridge to the gap. And Yoga did good service.

Sakya also rejected *bhavya*, when its Founders brought it out from inner circles of culture to the Many. The Man was not to be conceived as 'becoming' by the long trail indispensable to developing into the perfection of 'That'. It came to be held that Arahantship could *replace* that long trail awaiting even the best. It is true that Sakya retained the causative *bhāv*- in full favour. But it was *ideas about* the Man that were to be made-become ; the Man himself, save by inconsistent magnifying of arahan and Buddha, was laid on the shelf.

Forty years ago I found in early Buddhism a gospel and discipline of will with no fit word for it. I did not see, that will without *werden*, becoming, is like a squirrel turning a cage-wheel. I did not see this great concept, so fit for Everyman :

to choose, to will "becoming" in his way through the worlds towards That Perfect One. Both Rhys Davids and Oldenberg perched for a moment on Becoming, and flitted away again. But either Becoming means, in the very Man, nothing, *or it means everything*. It means the very guarantee of ultimate salvation: *bhavaśuddhi*. And I believe it meant this for the Teacher of the Ends and the Middle Way.

The History of the Ismā'īlī Da'wat and its Literature during the last phase of the Fāṭimid Empire¹

By DR. HUSAIN F. AL-HAMDĀNĪ

I

THE Fāṭimid Khilāfat, which had sprung into existence as the result of the widespread Ismā'īlī propaganda at the end of the third century A.H., was at first consolidated on the soil of Northern Africa in the year 297 A.H. During the reign of al Mu'izz billāh, the centre of influence of the Fāṭimid Empire was transferred to Egypt, a change that was responsible for the foundation of Cairo. But the Fāṭimid conception of the state would not be contented merely with sovereignty over Egypt and the surrounding countries. The Fāṭimid movement strove to engulf the whole of the Islamic world and to unite the various small Islamic principalities in one 'Alid kingdom.

The principal factor in the expansion of the Fāṭimid doctrine in the Islamic countries was the Da'wat or Mission. Very little is yet known about the history and literature of this Da'wat, but in the vast arcana of the Ismā'īlī libraries secretly kept in the Yemen and India, there exists many a book which would enable the scholar to gain an insight not only into the religious and philosophical beliefs, but also into the political activities of these workers. The most important among the Dā'īs whose works are preserved were of Persian origin, although most of their writing was done in Arabic. An uninterrupted chain of illustrious men whose influence could be fully traced and the history of whose times and literature could be fairly well followed on the basis of their preserved writings, is carried down from the beginning of Fāṭimid

¹ This is the full text of a paper read before the 18th International Congress of Orientalists, Leiden, Holland, on Wednesday, 9th September, 1931.

history until its close. Pioneers like Muḥammad b. Aḥmad an-Nasafi,¹ Abū Ya'qūb as-Sijistānī,² and Abū Ḥatim ar-Rāzī³ flourished in the first half of the fourth century A.H., and Aḥmad Ḥamīd ud-dīn al-Kirmānī,⁴ Ḥujjat u'l-'Irāqain, the grand Dā'ī of the Fāṭimid al-Ḥākim bi-amr illah, in the East, continued to develop the doctrine of the former Ismā'īlī Dā'īs, and in fact gave a new form to this system of thought. And in the footsteps of al-Kirmānī, during the period with which I am dealing to-day, followed, as the consummator of this doctrine, al-Mu'aiyad fi 'd-dīn Abū Naṣr Hibatullah ash-Shirāzī.

The long reign of al-Mustanṣir billāh in the middle of the fifth century A.H. marked the zenith, and also the beginning of the decline of the Fāṭimid State. The political complications had assumed such colossal proportions that they could not be mastered by the then existing forces at work. Different Turkish generals tried to get the upper hand in the affairs of the state and to consolidate their own positions, but without much success. The Saljuqs and the Crusaders menaced the state, and the state itself was in the throes of a difficult economic crisis. In the short reign of al-Mustanṣir's son, al-Musta'li billāh, this confusion became worse confounded. The Da'wat, which until then had had the strong support of the Fāṭimid Government, was shattered into many pieces. Al-Musta'li became the Khalifa with the result that his brother Nizār and his followers seceded from the official Ismā'īlī sect. Ḥasan b. Ṣabbāh and his followers did not

¹ His activities are described by Nizāmu 'l-Mulk in *Siyāsat Nāmah*, chap. xlvii.

acknowledge al-Musta'li, but formed a separate branch of the Ismā'ili faith and made an attempt to remodel the Ismā'ili doctrine on the early revolutionary methods of the Qarmatians. The official Da'wat (الدعوة القديمة) as opposed to the Nizārid branch (الدعوة الجديدة), thus lost its former influence in Egypt and other countries. Only in the Yemen did it remain strong and faithful to the cause of al-Musta'li and his descendants. An attack which proved successful was made on the life of al-Āmir billāh by a band of Nizārid conspirators. Before he died, al-Āmir entrusted the state affairs to 'Abdu'l-Majīd and made the Dā'ī Ibn Madian, the Bāb of the Imam, and a council of Dā'īs trustees (mustauda') for his son, the minor Imam al-Ṭaiyib. The Dā'īs then took aṭ-Ṭaiyib into concealment (satar)¹ and nothing more was heard of him. Thus with the death of al-Āmir billāh the old school of the Ismā'ili thought disappeared from Egypt. The one land, however, where the Ismā'ilīs of the old school found refuge was the Yemen, for it was there that the Queen Saiyida Ḥurra Arwā the Ṣulaihid rejected the overtures of the Wazīr 'Abdu'l-Majīd and propagated the Da'wat on behalf of al-Āmir's son, the concealed Imam Ṭaiyib.

The Yemen was one of those Islāmic countries where the Ismā'ili doctrine had struck root. In the middle of the third century Ibn Ḥaushab Maṣṣūru 'l-Yaman had already introduced his teaching with successful results. While in Egypt the power of the Fātimids declined, in the Yemen the Ṣulaihids became the torch-bearers of the Ismā'ili doctrine

¹ The period during which the Imām of the day is concealed from the public eye is called the Period of Satar, and is opposed to the Period of Zuhūr (publicity). In the history of the Da'wat of the Sixth Nātiq, Muḥammad, there have been several periods of Zuhūr and Satar, e.g.:— (1) Period of Satar beginning with the concealment of Ismā'il b. Ja'far till the appearance of al-Mahdī billāh in Maghrib. (2) Period of Zuhūr: From al-Mahdī billāh till the concealment of aṭ-Ṭaiyib. (3) The ensuing Period of Satar commencing with the concealment of the Imam Ṭaiyib till the future appearance of an Imam from the descendant of aṭ-Ṭaiyib.

of the old school. After the death of Ibn Ḥaushab and subsequently with the fall of the Ismā'īlī state, the Ismā'īlī Da'wat in the Yemen did not disappear. During the last phase of the Fāṭimid Empire it was, however, revived with greater vigour than ever by the Dā'ī 'Alī b. Muḥammad aṣ-Ṣulaiḥī. In the chronicles of the Yemenite Dā'īs, correspondence of much historical importance, which passed between the Fāṭimids and the Ṣulaiḥids, is preserved. The facts set out in these letters give us an indication of the links connecting the different manifestations of the Fāṭimid movement as it existed in Egypt, in the Yemen, and in Persia.

II

The one man in whose life and work all the currents and events of the time with which we are dealing are particularly combined, and whose personality shed its influence on these countries, while weaving a net of Ismā'īlī propaganda, is al-Mu'aiyad fi'd-dīn Abū Naṣr Hibatullah b. Abī 'Imrān Mūsa b. Dā'ūd aṣh-Shirāzī, mentioned above. The Ismā'īlī Da'wat of the Yemen has preserved the autobiography of al-Mu'aiyad together with some of his works, which enable us not only to ascertain the hitherto unknown personality of this great figure in Islam, but also to get a glimpse into the history of the Fāṭimid Da'wat in Egypt, Persia, and the Yemen. He occupied the rank of the Bāb of the Imām al-Mustanṣir billāh—the highest rank in the Ismā'īlī Da'wat. In addition to being a capable general and a leader of men, he was an author of great literary power and a poet of no mean ability. He exercised considerable influence on the Da'wat literature. "Saiyidna 'l-Muaiyad was," according to Kitab Zahru 'l-Ma'āni,¹ the spiritual descendant of S. Ḥamid ud-dīn al-Kirmani, the Ḥujjat of the Imam al-Ḥākim. He was one of "the People of the House (ahli 'l-Bait) inasmuch as Salman was one, for al-Muaiyad occupied in the Da'wat a

¹ p. 188. This work, the text of which I intend to publish shortly, was written by the Yemenite Dā'ī Idrīs 'Imād u'd-dīn in 838 A.H. (A.D. 1434).

position similar to that of Salmān in his times". Al-Mu'aiyad himself refers to this position in the following lines:—

لو كنت عاصرت النبي محمداً ما كنت اقصر عن مدى سلمانه
ولقال انت من اهل بيتي معلناً قولاً يكشف عن وضوح بيانه

That the Imam held him in high respect is shown from the verses which al-Mustansir himself wrote following al-Mu'aiyad's rhyme:—

يا حجة مشهورة في الورى وطود علم اعجز المرتقى
شيعتنا قد عدموا رشدهم في الغرب يا صاح وفي المشرق
فانشر لهم ماشئت من علمنا وكن لهم كالوالد المشفق
ان كنت في دعوتنا آخراً فقد تجاوزت مدى السبق
مثلك لا يوجد فيمن مضى من سائر الناس ولا من بقى

As to the early life of al-Mu'aiyad, we have no record. We have, however, a story of his life and adventures from the year 429 A.H. (A.D. 1038) onwards, written by himself. This is called *Sīrat* (السيرة المؤيَّدة) and is a document of high literary and historical value. Besides being one of the few autobiographies in Islamic literature and written in the characteristically elegant style of al-Mu'aiyad, it paints for us in a very vivid way a political picture of the two important courts of Islām—the Buwaihid and the Fāṭimid. It gives us an insight into the revolutionary activities of an Ismā'īlī Dā'ī in overthrowing the 'Abbāsīd Empire. If I may be allowed to give an analogy from our own times, I might state that al-Mu'aiyad as the emissary of the Fāṭimid of Egypt was dreaded and kept under surveillance by the Buwaihid court officials very much like the way that the Communists are to-day treated in their efforts to establish a world-wide Soviet International.

At the age of 29 years al-Mu'aiyad found himself a leader of numerous Shī'as in Shīrāz and Dailam. The Buwaihid

government was alarmed at his rising influence over the people and wanted him to be deported, but he contrived to remain in Dailam and arrange a personal interview with the Buwaihid Abū Kālījār.¹ On account of his superior powers of ratiocination, his gift of expression and brilliant style, and above all of his forceful personality, he won the sympathies of Abu Kālījār. Eventually with the goodwill of the Prince he arranged nightly assemblies (majālis), which were devoted firstly to the exegesis of the *Qur'ān*, secondly to readings from the *Da'aimu 'l-Islām*, of the *Qādi 'n-Nu'mān*, the official treatise on Ismā'īlī Fiqh, and thirdly to discussion, winding up with prayers for the Imām of the time. Gradually al-Mu'aiyad was able to convert Abū Kālījār to the Ismā'īlī doctrine. The favour shown to al-Mu'aiyad by the Prince inevitably caused jealousies in the court. Despite many difficulties, however, al-Mu'aiyad strenuously pursued his mission in Ahwāz on behalf of the Fāṭimid Imām al-Mustanṣir billāh. It may here be remarked that the activities of al-Mu'aiyad and his relations to Abū Kālījār are also referred to in the *Farsnāma* of Ibnu 'l-Balkhī. There arose a conflict between Abū Kālījār and the 'Abbasid Khalifa of Baghdad, who wanted the arrest of the anti-'Abbasid revolutionary al-Mu'aiyad stationed in the Buwaihid state. On account of the pressure from Baghdad, and intrigues in his own court against al-Mu'aiyad, and because of the instability of his kingdom, Abū Kālījār withdrew his favours from al-Mu'aiyad. The Dā'i thereupon migrated secretly from Shīrāz to Ahwāz under great difficulties through insufficient transport and constant fear of being betrayed by spies. In the East, the Ismā'īlīs were ruthlessly persecuted, and in Transoxiana, in 436 A.H., they were massacred in large numbers, because

¹ In the MS. of the *Sīrat* the name is consistently given as Abū Kālīnjār. I have, however, adopted the other form in the light of the researches of Le Strange and Nicholson; see *Farsnāma* of Ibn u'l-Balkhī, Gibb series, London, 1921, p. xiii. See also *JRAS.* 1911, p. 672, a note by H. F. Amedroz.

they accepted the Imāmat of the Fāṭimid al-Mustansir. It is to such persecutions that al-Mu'ayyad refers in his Diwān on various occasions, as also in the following couplet:—

واني في ظلمة من ظلام تكفني ليس يحدوه فجر

At last he had to leave his birthplace and go to Mosul,¹ whence he proceeded to Egypt to present himself at the court of al-Mustansir.

Al-Mu'ayyad, however, found it difficult to get an audience with the Imam on account of the hostile attitude of some of the court officials. Abu Sa'id, the Jew minister, who was an obstacle in the way of al-Mu'ayyad, having been murdered by the Turcomans, al-Mu'ayyad was admitted to the court of the Fāṭimid Khalifa on the 29th of Sha'bān 439 A.H. (18th February, A.D. 1048). Al-Mu'ayyad then took an increasing interest in the active political life of Egypt. In

¹ See Ibn u'l-Balkhī, *Farsnāma*, ed. Le Strange and Nicholson (Gibb Series), p. 119:—

وبعد باکالیجار مذهب سبعیان ظاهر شده بود چنانک درین وقت آنرا مذهب باطنی گویند و مردی بود باطنی نام او ابو نصر بن عمران کی سری بود از اعیان سبعیان و در میان دیلم قبولی داشت همچنانک پیغمبری و این مرد باکالیجار را گمراه کرد و در مذهب سبعی آورد. پس قاضی عبد الله . . . از غیرت دین و سنت میخواست کی حیلتي سازد تا دفع آن ملعون بکند و از باکالیجار خلوتی خواست . . . چون با او بخلوت رسید گفت ترا معلومست کی کار ملک نازکی دارد و این ابو نصر بن عمران مستولی گشت و همه لشکر تو تبع او شدند اگر این مرد خواهد کی ملک از تو بگرداند بیک ساعت تواند کردن و همه لشکر تو متابعت او نمایند باکالیجار ازین معنی نیک اندیشناک شد . . . قاضی عبد الله را گفت پس تدبیر این کار چیست گفت کشتن او در سر یا از مملکت دور گردانیدن چنانک هیچ کس نداند باکالیجار صد سوار را از عجمیان خویش راست کرد و صد غلام ترک و معتدی را از آن قاضی و آن مرد داعی را درشت بر چهار پای نشانند و بردند تا از آب فرات عبره کردند و حجت برگرفتند کی اگر او را معاودتی باشد خون او مباح بود و آن مرد بصر رفت و غرض این شرح آنست تا طریقت و اعتقاد مردم آن ولایت معلوم نشود.

the *Sīrat* he criticizes in strong terms the political conditions prevailing in the Fāṭimid court under the ministry of Abu'l-Barakāt. It is a well-known fact that Abu'l-Ḥārith al-Basāsīrī, whose headquarters were near Mosul, led his campaign against the 'Abbāsids and succeeded in conquering Baghdād for a short time and reading in that town the official *Khutba* in the name of the Fāṭimid al-Mustanṣir billāh. The short time at my disposal does not allow me to go into details about the leading rôle played by al-Mu'ayyad as the intermediary between al-Basāsīrī and the Egyptian Government. The whole of the second part of his *Sīrat* contains the detailed account of al-Mu'ayyad's activities and his part in this political drama.

The fighting spirit of his temperament and the fervour of his religious conviction express themselves in his poems preserved in a *Dīwān*. This *Dīwān* consists of panegyrics on the Imams al-Mustanṣir and az-Zāhir, and deals partly with the problems of the Ismā'īlī doctrine. His poems, which were written around various happenings in a very lucid and simple style, throw light on the character and career of the poet, and are also of considerable historical value. His invective against the 'Abbāsids is notable for its dignity.

Another important work is his book *al-Majālis*,¹ containing about 800 "séances" in eight volumes which deals with different theological, exegetic, and philosophic subjects. The *Majālis* of al-Mu'ayyad also contain the correspondence of al-Mu'ayyad with the great poet-philosopher al-Ma'arri on the subject of vegetarianism. This correspondence was published for the first time in Europe from a MS. preserved

¹ The *Majālis* were edited and arranged according to the subject matter by the Yemenite Dā'ī Ḥatīm b. Ibrāhīm al-Ḥamīdī (d. 596 A.H.) in his book *Jamī' ul-Haqā'iq*. The Ismā'īlī Fāṭimid literature preserved by the Da'wat of the Yemen contains several works called *majālis* by different authors. such as those by al-Mu'ayyad, Badru 'l-Jamālī, Abu'l-Barakāt, and others. This tradition of "majālis" literature has been carried down in the later Ismā'īlī literature of the Yemen.

in Oxford by Professor D. S. Margoliouth.¹ On account of the lack of sources, it was not possible for Professor Margoliouth to ascertain the identity of Abu'l-'Alā's correspondent. The Ismā'īlī Da'wat of the Yemen has, however, fortunately preserved for us the works of this great author, and we are now able to discover the identity of the "chief missionary", Hibatullāh b. Mūsā, of the above-mentioned correspondence. In spite of his important position at the court and in the Da'wat, a halo of mystery surrounded the personality of al-Mu'aiyad, a fact to which he himself refers in his *Dīwān* :—

رضیت التستر لی مذهباً وما ابتغی عنه من معدل

I believe this self-imposed concealment accounts for the fact that neither al-Mu'aiyad nor Nāṣir-i-Khusrū, two great men of the Fātimid Empire, who happened to be in Cairo at the same time, mentioned each other in their works. Nevertheless, there seem to be some secret allusions in the *Dīwān* of Nāṣir-i-Khusrū referring to al-Mu'aiyad as his master.²

¹ *JRAS.* (1902), 289-90.

² My friend Herr Pines has drawn my attention to the following lines, which he thinks might refer to al-Mu'aiyad :—

یا قوت منم اینک و خورشید من آن کس
از رشک همی نام نگویش درین شعر
استاد و طبییست و مؤید ز خداوند
آباد بران شهر که وی باشد در بانس
کر نور وی این عالم تاری شود انور
گویم که چنین است کش افلاطون چاکر
بل حکم و علم مثالست مصور
آباد بر آن کشتی کو باشد لنگر
Dīwān-i-Qaṣā'id wa Muḡaṭṭa'āt Ḥakīm Nāṣir-i-Khusrū, ed. Tehran, 1304-7, p. 176.

چرا خاموش باشی ای سخندان
اگر بر مرکب حکمت سواری
کنون شادی که مانی مردمان را
که کرد از خاطر خواجه مؤید
کسی را کش بشاگردی نشاید
هر آنک او را بیند روز مجلس
شب من روز رخشان کرد خواجه
چرا در نظم ناری در و مرجان
چرا نائی سوی میدان مردان
کنون باید که فخر آری بر اقوان
در حکمت کشاده بر تو یزدان
بشاگردی نشاید اوستادان
به بیند عقل را سردر گریبان
بیرها نهی چون خورشید رخشان

Al-Mu'aiyad was in direct communication with the representatives of the Da'wat of the Yemen, particularly with the Dā'ī Lamak b. Mālik, the head of the Da'wat under the Ṣulaiḥids. The Dā'ī Lamak went to Egypt at the instance of the Dā'ī 'Alī b. Muḥammad as-Ṣulaiḥi, and during his sojourn in Egypt stayed with al-Mu'aiyad and constantly discussed religious problems with him. Al-Mu'aiyad is the spiritual father of the Da'wat of the Yemen, for after his death in Shawwāl 470 A.H. (A.D. 1078) at Cairo, at an age of more than 70 years, he left in his works a legacy for the Da'wat in the Yemen.

III

After the deaths of the Dā'ī Lamak and his son, the Dā'ī Yahya, the Queen Saiyida the Ṣulaiḥid appointed the Dā'ī Dhuaib b. Mūsa al-Wādi'ī to the rank of the Dā'ī 'l-Muṭṭlaq. He was the first Dā'ī to propagate the mission on behalf of the Imām Ṭaiyib. This branch of the Ismā'īlī movement was henceforth styled the Ṭaiyibi Da'wat (الدعوة الطيبية), whose headquarters now became established in the Yemen, as opposed to the Nizārid branch, otherwise known as the Assassins of Alamut.

The Yemenite Da'wat being shorn of its political power after the decline of the Ṣulaiḥids, had to struggle for its very existence. The history of this Da'wat shows that for centuries a gallant fight was carried on for the preservation and protection of the legacy of the earlier Ismā'īlī authors.

Among the notable personalities in the Yemen of this period was al-Khaṭṭāb b. al-Ḥasan b. Abi'l-Ḥafāz (killed in 533 A.H., A.D. 1138). He was step-brother to the Queen Saiyida, a great warrior and ruler. He was one of the great poets of the Yemen,¹ and his *Diwān* is preserved in the collection of the Da'wat books. We have also some rare

¹ *Leiden Catalogus Codicum Arabicorum*, ii, 1, 233. I am indebted to Dr. van Arendok for giving me the exact reference to its source, viz. Paris Bib. Nat. No. 3329 (ancien fonds 1414).

works of the Dā'ī Ibrāhīm al-Ḥusain al-Ḥāmidī and the Dā'ī Muḥammad b. Ṭāhir preserved by the Yemenite Da'wat.

Another great representative of the Da'wat who flourished in this period and who formulated a method of study of the literature of the former Dā'īs was the Dā'ī 'Alī b. Muḥammad b. al-Walīd (died 612 A.H., A.D. 1215), author of many works, among them being his *Dīwān* and *Kitāb Dāmighu 'l-Bāṭil*, the refutation of Ghazālī's al-Mustaḥsirī.¹

I will not continue to enumerate many names of books and their authors preserved in the libraries of the Ismā'īlīs. I will just mention the final outstanding representative of this Da'wat in the ninth century A.H., the Dā'ī 'Imādu 'ddīn Idrīs, who wrote a detailed history of the Da'wat from its inception to his own times, and who gave in his *Kitāb Zahru 'l-Ma'ānī* the last great compendium of the Ismā'īlī doctrine.

On the whole, the Ismā'īlī literature in the Yemen differs much from the old Ismā'īlī literature in the Fātimid times. It has lost its widespread political and revolutionary character and its principal task has become the preservation of the intellectual and religious treasures of the old Da'wat, a duty and a privilege which to-day assists in cementing the bonds of union between the small communities of the Ismā'īlīs of the Yemen and of India, and which ensures a permanent monument to all those who fought and struggled for the continued existence of their religious independence.

¹ Edited by I. Goldziher, *Streitschrift des Ghazālī gegen die Batinijja-sekte*.

MISCELLANEOUS COMMUNICATIONS

AN-NÁBITA

This sect is mentioned with the Ráfiḍa, Ibáḍiya, and Ḥashwiya by al-Jāḥiẓ. The *Kitāb al Intiṣār*, besides naming them with the Ráfiḍa, Murji'a, and Mujabbira, gives some details about them.

Most of them agreed with the Mu'tazila in revering the Companions, though this was not true of some who lived in Syria. They recognized the legitimacy of Mu'áwiya and the Umayyads, but this did not interfere with the great respect they felt for 'Alí.

Their theology was mixed. They held that God could not do injustice nor send good men (inhabitants of heaven) to hell, and that the question whether He could do what He had said He would not do was an absurdity. They held that God knows with an eternal knowledge.

On the other hand, they were like the Ráfiḍa in having anthropomorphic ideas about God, and in being determinists. They differed from the Mu'tazila in their ideas on *irjā'* and the Koran. They also criticized the doctrines of Ja'far b. Mubashshir.

So it would appear that Zamakhshari was wrong in saying that the Nábita were Ḥashwiya. They were hardly a sect or school; their ideas were not eclectic but undigested; they were searching for a theology and had not found out that they were trying to hold incompatible views.¹

This suggests a correction in the *Fihrist*. In the title of the third section of the fifth discourse (p. 179) are the words: *الجبرة وباية الحشوية* "the Mujabbira and the wonder of the Ḥashwiya". The author does not usually put criticism in his chapter headings, the singular "wonder" is strange, so it is natural to read Nábita, a change of dots only.

¹ *Eleventh Oriental Congress*, pt. iii, p. 99.

PDSQYRD

In a text describing the last days of Manichean belief in Turfan Pārsik (South-western Dialect), M. 482 verso (F. W. K. Müller, *ABAW.*, 1904, p. 16; Salemann, *Manich. Stud.*, p. 27) immediately preceding the destruction of all animal life and vegetation, the following passage occurs:—

'yg zmyg 'vd 'sm'n yvr pdsqyrd zm' . . .

The fragment is unhappily broken at the beginning and end of most lines. I would suggest to read here:—

aiγ zamīγ uδ asmān < paδ b > ēvar paδiškerd zamā < nd >, and to translate: "Then earth and heaven will be shaken into ten thousand pieces."

To justify this I would connect *pdsqyrd* with the root *kart-*, *skart-*, "to cut." The form *kart-* is abundantly attested: Av. *karət-*, *AIW.*, 452-4 (cf. *paiti ava.kərəθyāt*, V. 4, 50), *karata-* "knife"; Sogd. "krk "sword", *SCE.*, 224, *ptkrnt-*, 'nkr'nt- "to cut in pieces"; Pahl. *frakart* "section, chapter", *kartak* "section, division, kind", *ēkartak* "in one piece". The form with *s-* is less common, but occurs in Afg. *skaštal* "to cut out", NPers. *niškurda*, *nišgarda*, *nišgirda* "a cobbler's knife", and probably here in *pdsqyrd* "section, piece".

My supplement in *zamā<nd>* seems to be demanded by the need of a verb to this clause: *zam-* may be a collateral form to the verb *zamb-*. We have many cases of the alternation of *mb* and *m* (where sometimes *mb* and sometimes *m* is original), as in the Pahl. *nambēt* "is moist" beside *nam* and *namb* "moist", cf. *naft* "moistened", see Hübschmann, *Pers. Stud.*, 256, Horn, *GIP.*, i, 2, 59. It is less easy to define the meaning of *zamb-*. In Pahl. we have:—

čēgōn kōf i harburz zamb i zamīk aβzanišn

"like Mount Alburz which checks the shaking of the earth" (*Dastur Hoshang Memorial Volume*, p. 201). Av. *zamb-* "crush", *AIW.*, 1666, Sarikoli *vizambam* "I crush", cf. Sanskr. *-jambhaka-* "crushing", *jambhayati* "crush"; in

the North-western Turfan dialect *zmbg kryd* is "macht Kampf" according to Lentz, *Die Stellung Jesu*, p. 44; in the *Mahrnāmay*, l. 295, we have 'č rf čy vs *zmbg*; and *zmb'gr'n* is "warriors". Another meaning is represented by Oss. *zāmbin* "to yawn", Bal. *zamb* "mouthful, bit", Sanskr. *jambha*- "tooth, jaw" (see Morgenstierne, *Acta Orientalia*, i, p. 280). A kind of game called *zamb* is mentioned in the Pahl. tale of Husrau ut Rētak (ed. Unvala, 16). It would, therefore, be possible to translate here either "shake" or "crush". Salemann was surely right in doubting an emendation of *pdšqyrd* to **fršqyrd* on the ground that the usual spelling is *fršygyrd*- **frašēgerd*-. Jackson, *JAOS.*, 1930, p. 193, inclined to favour this alteration.

H. W. BAILEY.

FONDATION DE GOEJE

1. Le bureau de la fondation n'a pas subi de changements depuis le mois de novembre 1930 et se compose donc de MM. C. Snouck Hurgronje (président), M. Th. Houtsma, Tj. de Boer, J. J. Salverda de Grave et C. van Vollenhoven (secrétaire-trésorier). Conformément aux statuts, M. de Boer, à cause de son départ d'Amsterdam, a donné sa démission comme membre du bureau.

2. Le bureau espère pouvoir faire paraître sous peu, comme no. 9 des éditions de la fondation: *Das Konstantinopler Fragment des Kitāb iḥtilāf al-fuqahā des aṭ-Ṭabarī*, herausgegeben, etc. von Prof. Dr. Joseph Schacht.

3. Le bureau examine encore avec MM. D. van der Meulen et H. von Wissmann un projet de publication des résultats de leur voyage récent à travers Ḥaḍramaut.

4. Des huit publications de la fondation il reste un certain nombre d'exemplaires, qui sont mis en vente au profit de la fondation, chez l'éditeur E. J. Brill, aux prix marqués: 1, Reproduction photographique du manuscrit de Leyde de la *Ḥamāsah* de al-Buḥturī (1909), fl. 96; 2, *Kitāb al-Fākhir* de

al-Mufaḍḍal, éd. C. A. Storey (1915), fl. 6 ; 3, *Streitschrift des Gazālî gegen die Bâtînijja-Sekte*, par I. Goldziher (1916), fl. 4, 50 ; 4, Bar Hebraeus's *Book of the Dove*, éd. A. J. Wensinck (1919), fl. 4, 50 ; 5, *De Opkomst van het Zaidietische Imamaat in Yemen*, par C. van Arendonk (1919), fl. 6 ; 6, *Die Richtungen der Islamischen Koranauslegung*, par I. Goldziher (1920), fl. 10 ; 7, *Die Epitome der Metaphysik des Averroes*, übersetzt und mit einer Einleitung und Erläuterungen versehen, par S. van den Bergh (1924), fl. 7, 50 ; 8, *Les " Livres des Chevaux "*, par G. Levi Della Vida (1928), fl. 5.

November, 1931.

NOTICES OF BOOKS

GAEKWAD'S ORIENTAL SERIES. No. XLV. Bhāvaprakāśana of Śāradātanaya. Edited with an introduction and indices by Yadugiri Yatiraja Swami of Melkot and K. S. Rāmaswāmī Śāstri Śiromani. No. XLVI. Rāmacarita of Abhinanda. Critically edited with an introduction by K. S. Rāmaswāmī Śāstri Śiromani. No. XLVIII. Nāṭyadarpaṇa of Rāmacandra and Guṇacandra with their own commentary. Edited with an introduction . . . and indices by Gajanan Kushaba Shrigondekar . . . and Lalchandra Bhagawandas Gandhi. Vol. I. $\times 9\frac{3}{4} 6\frac{1}{2}$, pp. (1) 77 + i + xxi + 409, (2) xxxii + 467, (3) 23 + 230. Baroda: Oriental Institute, 1929-30.

These three works are of distinct importance and interest as specimens of the medieval Indian theory and practice of *ars poetica*. Śāradātanaya, son of Bhaṭṭa Gōpāla, gives us in ten *adhikāras* of verse a meritorious treatise on the rules of poetic composition and dramaturgy; and the latter subject is also the theme of the *Nāṭya-darpaṇa*, a work by two disciples of the great Hēmacandra, which was first brought to notice by Professor Sylvain Lévi in his paper *Deux nouveaux traités de dramaturgie indienne* (*Journ. As.*, 1923, p. 193 ff.), where he derived from it a telling argument against the Bhāsa-legend. To Abhinanda, son of Śātānanda (to be distinguished from the author of the *Laghu-yōga-vāsiṣṭha*), we owe the *Rāma-carita*, a poem narrating the story of the Rāmāyaṇa in thirty-six cantos. To this are added two supplements by different authors: the first of these is ascribed, apparently falsely, to Abhinanda himself, and the second is the composition of a poet named Bhīma, son of Dēvapāla. The editors have fulfilled their task ably, and merit congratulation on their valuable contribution to this really live and useful series.

INDEX TO THE TSO CHUAN. Compiled by EVERARD D. H. FRASER, K.C.M.G. Revised and prepared for the press by JAMES HALDANE STEWART LOCKHART, K.C.M.G., LL.D. (Hongkong). $10\frac{1}{2} \times 7\frac{1}{2}$, pp. x + 430. Oxford University Press. London: Humphrey Milford. 1930. £2 5s.

It is much to be regretted that Sir Everard Fraser should not have lived to see the publication of this outcome of many years of his laborious leisure hours. Presumably the financial obstacle was the cause, for Sir James Stewart Lockhart in his Preface says that the work had been completed for many years before Fraser died. That it has now at long last been given to the sinologic world is due to the goodwill and efforts of well-wishers in several quarters. And it has appeared in a format befitting the importance of the subject, and with a typographic excellence difficult to reach with a text made up of numerals in two sizes, of English words, and of many Chinese characters, all of these sometimes in one line of text, but meritoriously achieved by the printers of the Commercial Press, Ltd., of Shanghai.

What then is this *Tso Chuan*, or "Chronicle of Tso", which James Legge's enormous industry and learning succeeded in translating, but could not enrich by an Index, as he had done with his previous volumes of the Chinese Classics? In the shortest possible description, it is, in Professor Herbert Giles' words, "the famous commentary upon the *Spring and Autumn Annals*" of Confucius. But it is much more than that. It is a narrative of events in the China of that time during some 260 years from 722 to 462 B.C. A narrative that though in the main concerned with the deeds and misdeeds of the Rulers of the various feudal States, often a record of the ambition, lusts, treachery, and murder of those in high places, yet incidentally is also a moving picture in curious detail and strange variety, of the social scene in humbler life. Well might Legge write, "The events and the characters of the time pass as in reality and life before us. In

no ancient history of any country have we such a vivid picture of any lengthened period of its annals as we have from Tso." And again, "It is, in my opinion, the most precious literary treasure which has come down to posterity from the Chow dynasty." It would not be too much to add that the *Tso Chuan* brings before the reader the early ages of China in richer measure than all the other Chinese Classics put together.

Such was the historical treasure that Fraser's eager and acute mind examined, judged, and saw that it was good. And having worked upon it for so many years, it is regrettable and a little surprising that he added no comments, nor criticism, nor even a page or two of Preface of his own. True, Legge's careful and lengthy Prolegomena exist, but there was room for the views of a fresher, less rigid, and more modern mind than Legge's upon the material, and they would have been welcomed by all those whom he has laid under a load of obligation already.

And this leads me to the only serious criticism of Fraser's work that I can make, but indeed it is not a criticism, but a note of some regret and disappointment, in which, however, others perhaps may not share. A few sentences will explain. The *Tso Chuan* being a lengthy record of more than two and a half centuries, having also a wide scope, by one who was a full, if not profuse, writer, could not fail to be a storehouse of first-rate literary phraseology. Among educated Chinese it has long been known to provide the *locus classicus* for numberless correct expressions and phrases. On the other hand, the Western reader must often wish, on meeting some unfamiliar combination, that he could learn if it occurred in the *Tso Chuan*, and what meaning it had there. It is hardly too much to say that a complete glossary of this work, with the sense, or the various senses, expressed in English, French, or German, would by itself be an adequate Dictionary for most literary and historical Chinese works.

Such a complete glossary Fraser did not compile. Probably he never aimed at doing so, but contented himself with the

collection of the very valuable, albeit partial, glossary that will be found dispersed among the 3,547 characters entered in his Index. Chance has enabled me to form an approximate estimate of the mostly two-word phrases omitted from the Index. Of such phrases in the first three pages printed by Legge, under Duke Yin there were 45 marked by me many years ago. Of these 15 are not in the Index, e.g. on p. 175, *shê wei*, to act as Regent, and on p. 133, *shu shih*, to lead an army, two of the earliest of these expressions to occur in the *Tso Chuan*.

But why grieve over these might-have-beens? Better to acknowledge thankfully the great and enduring service to sinology rendered by Sir Everard Fraser in his lifetime, and by Sir James Stewart Lockhart, and others who together after the author's death have made accessible the result of his scholarly and laborious toil.

There is a small error on p. 91, where in the seventh line from the foot of column 1, "7th sign of Zodiac" should be 8th, and two lines below, the first character, *wei* "tail", should be that for *fang* "the House".

L. C. HOPKINS.

BURTON: ARABIAN NIGHTS ADVENTURER. By FAIRFAX DOWNEY. 8 × 5½, pp. xii + 300, pls. 8. New York, London: Charles Scribner's Sons. 1931. 8vo. Price 10s. 6d. net.

There is nothing in this volume that will come new or prove of fresh interest to the English reader, still less to the Oriental scholar. That a really good Burton biography is needed is a recognized fact, chiefly when we remember the personal viewpoints that have prompted all the previous ones. Mr. Downey has written his book for an American public, and the publishers have clothed it in a dust-jacket that does not enhance its selling value—as far as England is concerned—the discovery

of Lake Tanganyika would hardly suggest to us a chapter-heading such as "The rending of the veil of Isis", nor would the account of Sir Richard's marriage prompt the heading "A Harem is begun and ended!" However, Mr. Downey has proportioned the work correctly, which is a relief after the "scrap-book" atrocity of Lady Burton. In a book of 300 pages we do not reach Trieste till p. 257, thus ample space is devoted to each of the major explorations, as well as to the lesser activities in Burton's amazingly full life.

231.

N. M. P.

LE TEMPLE D'ANGKOR VAT (= *Mémoires Archéologiques publiés par l'École Française d'Extrême-Orient*, Tome II). Deuxième partie. La Sculpture Ornementale du Temple. $14\frac{1}{2} \times 11$. 2 parts: (1) pp. 19, 68 plates, 2 plans; (2) pp. 3, 68 plates. Paris: G. Van Oest. 1930.

The preceding portion of this great work was noticed on pp. 178-9 of our *Journal* for 1930. It dealt with the architecture, while the section now before me is devoted to the sculpture of the temple. The letterpress consists mainly of a critical introduction by M. Victor Goloubew, who draws attention to some of the salient points. He observes that our estimate of the art of Angkor must be modified by the recently proposed change in dating, which puts after Angkor Vat a number of monuments that had formerly been considered of earlier date. He also reminds us that the great temple originally contained woodwork, of which hardly anything remains, a fact which has some bearing on the relative absence of decoration inside as compared with the splendid exterior. The plates, however, are the main thing; they are large and beautifully produced, entirely worthy in fact of the fine monument which they illustrate.

C. O. BLAGDEN.

PRĀNĀTJITRA EEN JAVAANSCH E LIEFDE UIT HET JAVAANSCH
 VERTAALD. Door C. C. BERG met medewerking van
 M. PROWIROATMODJO. $7\frac{3}{4} \times 5$, pp. 360, 10 plates.
 Santpoort : Uitgeverij C. A. Mees. 1930.

The Javanese original of this translation is a poem of uncertain date. It deals with events that occurred in and shortly after 1627, but the translation is based on a text dated as recently as 1847, of which it is conjectured that the original belongs to the early part of the eighteenth or the close of the seventeenth century. Its plot is a romantic love tale which has been compared to the story of Tristram and Yseult, though the two have little enough in common. The Javanese one represents a conflict between youthful love and the brutal lust of an elderly tyrant, culminating in the murder of the hero and the suicide of his mistress. There are many things in it that accord but ill with European taste and it is a long-winded tale. But besides the tragic interest of its plot it contains much that will appeal to students of Oriental life and manners. The translator, with the assistance of the Javanese collaborator, has supplied a copious array of notes in illustration of matters that required explanation. The volume is well produced and the photographic plates are good.

C. O. BLAGDEN.

DIE KUNST DES ERZÄHLENS BEI DEN DAYAKEN. Eine sprachwissenschaftliche, literaturkundliche und völkerpsychologische Untersuchung auf vergleichender Grundlage mit einem Vorwort. (By R. BRANDSTETTER.)
 $8\frac{3}{4} \times 6$, pp. 21. (No place of publication, publisher's name, or date.)

The only indication as to the date of this little work is given at the end of the preface, in the words "Im Sommer 1930", and it was received at that time by our Society. The preface will interest many who for years past have followed Dr. Brandstetter's work in the numerous monographs

which he has issued on Indonesian subjects during the last forty years. The present one follows in the main his usual lines and deals on a comparative basis with the Dayak terms connected with their unwritten narrative literature, in poetry and prose. The discussion of the terms involves also their meaning and psychological import, as well as the style and construction, manner of presentation, subject matter, etc., of the Dayak narratives, all such points being considered in their turn. As usual, Dr. Brandstetter displays intimate knowledge and sound method in his treatment of the various aspects of his theme.

C. O. BLAGDEN.

FEESTBUNDEL UITGEGEVEN DOOR HET KONINKLIJK BATAVIAASCH GENOOTSCHAP VAN KUNSTEN EN WETENSCHAPPEN BIJ GELEGENHEID VAN ZIJN 150 JARIG BESTAAN, 1778-1928. Deel II. $10\frac{1}{2} \times 7$, pp. ii + 437, 31 plates (including 7 maps), 1 folding map, 3 folding tables. Weltevreden: G. Kolff & Co., 1929.

Though some time has elapsed since the first volume of this publication was noticed in the July (1930) Part of our *Journal*, it is not too late to say a few words about the second one. Its contents, numbering twenty-six articles, are equally varied and interesting; three are in German, two in French, and one in English, the rest being in Dutch. The first and much the longest, occupying nearly a quarter of the whole volume, is a detailed investigation by Heer C. C. F. M. Le Roux of the voyage of the *Victoria* (the only ship of Magellan's fleet that completed the circumnavigation of the globe) through the Timor group of islands. This is based on Pigafetta's Italian account and Albo's Spanish diary, the relevant parts of which works are reproduced textually and in a Dutch translation and give rise to the discussion of a number of matters relating to the itinerary of the ship and the topography and ethnography of this part of the world. Appended

thereto is Pigafetta's vocabulary of about 426 words headed "Vocabuli de questi populi mori" (indicating that the words were gathered from Muslims) which is almost entirely an Italian-Malay word-list, and the oldest Malay vocabulary in any European language. About twenty other words occurring scattered in Pigafetta's text are added in a separate list. Both lists include a few non-Malay words and contain a considerable number of errors and obscurities, most of which have been cleared up and rectified by Heer Le Roux. Some further explanations and emendations are, however, still required, and as they will necessarily be rather full of detail it will be more convenient to devote a separate note to them. In addition to its linguistic matter, which can only appeal to a limited number of specialists, there is much in this article which will interest anybody who can read Dutch.

The remaining articles also deal for the most part with the Dutch East Indies, mainly under such heads as language, literature, history, topography, administration, sociology, art, folklore and mythology. Among those which to some extent concern Indianists may be mentioned M. Sylvain Lévi's learned discussion on the peculiar combination of letters *ysa* and its phonetic value and use, Heer Alfred Maas's full account of the astrological calendar of the Balinese with astronomical identifications, M. H. Parmentier's suggestions as to the probable original plan of Barabudur, Professor J. Ph. Vogel's discovery of the representation of the Vidhura-jātaka on its reliefs, Dr. R. O. Winstedt's summary of a new and strange Malay prose recension of the Rāmāyaṇa, and Herr K. Wulff's translation of nineteen strophes from the Old Javanese version of the same epic. Professor Ph. S. van Ronkel revives the memory of Thomas Hyde, an English Orientalist of the seventeenth century, who among other Eastern languages studied Malay and produced in it in 1677 a version of the Gospels and Acts, based on a Dutch and Malay original of 1651. Professor A. W. Nieuwenhuis propounds the view that the patriarchal system was originally a social

system, while the matriarchal one was genealogical. Father W. Schmidt discusses the Javanese Panji legend in connection with his scheme of Austronesian mythology, and Heer J. H. W. Middendorp seeks to explain certain folk-tales on euhemeristic principles. In his case there would seem to be more justification than is usually to be found for this mode of interpretation, for two of the tales were thus explained to him by the natives themselves, who definitely linked them up with comparatively recent events still well remembered.

Most of the other articles are of more strictly local interest and it would perhaps be superfluous to enumerate them here, though they all contain matter that is both readable and valuable. In short, this volume and its companion worthily commemorate the 150th anniversary of the oldest of the Asiatic Societies.

210.

C. O. BLAGDEN.

DE BRITSCH-INDIËRS IN SURINAME. Door Rev. RUDOLF KARSTEN. 10 × 6½, pp. xv + 129. 's-Gravenhage : Martinus Nijhoff. 1930. Glds. 2.60.

This work falls into two distinct parts. The first, of fifty-two pages, consists mainly of a history of the immigration and settlement (from 1873) of British Indians in Dutch Guiana, their economic and cultural significance, castes, religions and sects, the status of their women, their mode of life, habitations, clothing and ornaments, festivals, marriage, birth and names, death and burial, their societies, and the work of missionaries among them. This part thus contains a good deal of general information, which is conveyed in a very readable way.

The second part is a grammar of Hindi, with many examples, followed by a brief section on epistolary style, a number of short, everyday sentences and some stories with translations, and finally a Dutch-Hindi vocabulary. I am assured that this part is a good piece of work. The whole is preceded by two prefaces, by Mr. F. G. Schalkwijk and Professor J. Ph.

Vogel respectively, which point out the importance of the book to Dutch readers interested in this South American colony of theirs and particularly in this section of its population, which is a considerable factor in it and now apparently numbers over 33,000 souls.

C. O. BLAGDEN.

LEGAL AND ECONOMIC DOCUMENTS FROM ASHJĀLY. By HENRY FREDERICK LUTZ. University of California Publications. Berkeley, California. 1931. 2 dollars 25 cents.

Herein are published one hundred and ten clay contract-tablets, dating from the beginning of the Second Millennium B.C., found at Ashjāly in the Nahrawān region in Mesopotamia. In the majority of the translations, which follow the normal forms of such tablets, similar to those in Meissner's *Beitr. z. Altbab. Privatrecht*, Mr. Lutz's renderings are satisfactory, but he is not careful enough in his appreciation of the forms of words to be convincing in the more difficult passages. For instance, in No. 1, *ûm šimatuša itarraši mTulištānim ana Nutubtum mārta* cannot mean "When she dies T. will restore her to N., the daughter". *Itarraši* does not in any case mean "give back" (from *tāru*), but must surely be from *tarû*, dependent after *ûm*, "the day when her fate carries her off." For *ûm*, meaning "the day when", cf. Meissner, op. cit., No. 97, 6; for *tarû*, cf. Delitzsch, *Handwörterb.*, s.v. Then the latter half of the sentence will be "T. (will be) to Nutubtum (as) a daughter", with which cf. Meissner, loc. cit., l. 5, *Ahupiam ahušu* "A. will be (is) his brother", in an adoption-text, without verb or pronoun. The whole text is, it is true, difficult to explain, but it is essential to be accurate in details if the right translation is to be found. Again, in No. 7, l. 11, *ana haliktim izaz* can hardly mean "for loss he will stand good"; surely *izaz* is not for *izzaz*, but comes from *zāzu* "to share" (cf. Meissner, No. 96, l. 19), i.e. he

shall share the loss. In No. 30, a note on certain beams, "*bi-i-[ni]*" "tamarisk" is not satisfactory, as Mr. Lutz realizes: "*ispa-ku-ut-tum* cannot mean "thistle-wood" ("for roofing the stable"!)—whatever "thistle-wood" might mean. Thistle is *pukuttu*, not *pakuttu* (cf. C.T. xviii, 4; vii-viii, 1). The texts are legibly written, and although I have called attention to certain blemishes, the book is full of interest to those working on provincial contracts.

290.

R. C. T.

ISLAMISME ET SOCIALISME. Par MOUHSINE BARAZI, Docteur en Droit. 10 × 6½, pp. 99. Paris: Geuthner, 1929. Fcs. 25.

The author of this pamphlet endeavours to show that Islamic jurisprudence is averse to Socialism, which is defined as "the economic doctrines which principally with the view of establishing and maintaining a certain practical equality between the individuals would suppress property more or less completely and socialize economy". The phrase "more or less completely" renders this definition somewhat vague; for every government which imposes taxation suppresses private property to a certain extent; the individual is deprived of the control of a portion of his possessions. The definition given in the *New English Dictionary* is decidedly clearer: "A theory or policy of social organization which aims at or advocates the ownership and control of the means of production, capital, land, property, etc., by the community as a whole, and their administration or distribution in the interests of all." Dr. Barazi has no difficulty in proving that the Qur'an and the Tradition both recognize the institution of private property; and that the systems based on these foundations have no sympathy with either the rigid communism of Plato's Republic or the modified communism of his Laws. His legal training has enabled him to produce a very helpful study of the attitude adopted by the Islamic

jurists towards the principles involved in Socialism, and the modifications of the private control of property which their systems admit. Though the authorities whom he cites are not invariably weighty, his conclusions seem generally to be sound.

If, as the second definition cited indicates, Socialism involves both ownership and control by the community as a whole, Islamic practice, and to some extent theory, would be far more adverse to the latter than to the former. Different monarchs took different views of their duties in the disposal of the "wealth of the Muslims", i.e. the proceeds of taxation; their right to dispose of it was rarely questioned. Anything like republican government was till recent times so rare in Islamic communities that the cases of it might be said to be negligible; and control by the community is scarcely compatible with autocratic government. Hence history as well as jurisprudence is in accord with Dr. Barazi's thesis.

D. S. M.

THE NEW TURKISH : AN ELEMENTARY GRAMMAR, VOCABULARY
AND PHRASE BOOK OF THE TURKISH LANGUAGE IN THE
NEW LATIN CHARACTERS. By A. C. MOULE, M.A.
Printed by permission at the Government Printing Office,
Nicosia, Cyprus. 1930. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. 65.

This is a very useful and timely publication, since the older grammars either employ the Arabic alphabet or a form of transliteration which differs considerably from that which the Turkish Government has officially introduced. The grammar of what used to be called Ottoman Turkish is exceedingly simple and free from exceptions, whence Mr. Moule has been able to deal with it in a pamphlet of 64 pages; not a few of which are devoted to vocabulary and phrases. The change in the script seems to have been accompanied by no morphological alterations. It is not wholly advantageous, for whereas in the old script the Arabic words which Turkish

borrowed so freely could be identified at a glance, in the new they by no means readily reveal themselves. Further, the value given to some of the Latin characters, while puzzling to foreigners, will render the acquisition of European languages difficult to Turks. Still it must be admitted that the Arabic alphabet is so little suited to the Turkish language that the benefits flowing from the change are greater than the disadvantages which result.

206.

D. S. M.

THE ANNUAL OF THE AMERICAN SCHOOLS OF ORIENTAL RESEARCH: vol. x for 1928-9. $10\frac{1}{4} \times 7\frac{1}{4}$, pp. xi + 94, figs. 2. New Haven: Yale University Press and Milford, London, 1930.

Two articles of unequal length and importance make up the present volume of the Annual: "New Kirkuk Documents relating to family Laws," by E. A. Speiser, and "A Comparative List of the Signs in the so-called Indo-Sumerian Seals", by G. A. Barton. The first is a study of over seventy pages, devoted to forty of the cuneiform texts found at the site of the ancient city of Nuzi, and recently published by Professor Chiera in the Harvard Semitic Series, vol. v. It is regrettable that material difficulties stood in the way of publishing the larger work of which this is a fragment, but it was probably wiser to postpone the more ambitious scheme until the relevant material is more fully available; the time for a comprehensive book upon the inhabitants, names, life, laws, and customs of the Arrapha district is not yet. Meanwhile the author has advanced several steps nearer to that end; his introduction includes useful discussions of legal conceptions and terms, and his translations give little ground for comment. It is, indeed, a happy fortune that the study of this new branch of the Babylonian civilization is not hindered by so many of the formidable philological difficulties which are found in other directions.

Of Professor Barton's sign-list of the Harappa and Mohenjo-Daro writing it is impossible to speak so highly. It is evident that the author has not had before him anything like the whole of the material, and indeed it appears that he has simply worked with the examples pictured in the *Illustrated London News*. The result is that, whereas nearly 400 signs altogether can be collected from the seals, Professor Barton's list counts less than 150 and a few "numerals"—of the numeral character of which there is perhaps more doubt than the author evidently feels. For the rest, he has endeavoured to classify the signs according to the objects assumed to be depicted, and has sought to put side by side in tabular form some similar characters in the Sumerian, proto-Elamite, Hittite, Egyptian, Cretan, Cypriote, and Chinese scripts. The result is simply to show, first, how remarkably few of the "Harappa" signs can be thus identified (even counting variants and accepting the identifications, some of them very dubious, only about sixty can be mustered against over eighty "miscellaneous" in a very incomplete list), and, second, that it is possible to find scattered analogies to any early signary among a number of others, but this is very far from indicating a particular relationship in any one direction.

136.

C. J. G.

DIE AUSGRABUNGEN VON SAMARRA: Band v, DIE VORGESCHICHTLICHEN TÖPFEREIEN VON SAMARRA. By ERNST HERZFELD. $12\frac{1}{4} \times 9$, pp. vii + 110, 47 pls, 240 illustrations. Berlin: Dietrich Reimer (Ernst Vohsen), 1930.

The fifth volume of the *Excavations of Samarra* departs entirely from the preceding, which were concerned with the relics of the Arab capital of the ninth Christian century, and goes back about four millennia to describe the only objects found on this site which belong to the pre-Islamic period. By some strange chance there occurred in two places, and directly under the deposit of the Islamic city, a very ancient

stratum about $1\frac{1}{2}$ metres deep, which contained a confused cluster of graves, marked by the presence of a painted pottery very evidently different from, and much earlier than, the Arab wares. The excavator was puzzled by this discovery for two reasons, both because painted pottery of any kind had hardly then (1911) been observed at all in Western Asia, and because these sherds, while having every appearance of a very early date (which was also suggested by the few other objects which accompanied them), lay directly under the ninth-century houses. In the long interval which has elapsed since this pottery was found much has happened to affect the study of it; the material itself has been scattered, most being now in the British Museum, the rest in Berlin, while, on the other hand, a good deal has been learned of the astonishing abundance and universality of early painted wares in Mesopotamia, Persia, and far beyond. Thus the pottery of Samarra can now be studied as one of a large family, to which indeed it exhibits very notable likenesses. The task of Professor Herzfeld in this volume has therefore been double: to publish the material, which he does very handsomely on forty-seven plates, of which six are in colour, and to describe the material, shapes, decoration, and accompaniments of the pottery, comparing them with the related finds from other sites. To this part of his task the author devotes an introduction divided into ten chapters, according to the principal shapes which the vessels assume. His general conclusion is that which the wealth of comparative material now available indicates, that the Samarra pottery belongs to a copper age, when stone was still in use for common purposes. The latest results of excavation in Babylonia seem to show that this period was even more remote than the author is inclined to assume; the round date of 3000 B.C. which he gives may actually be too late, but opinion as to this must depend on the place which Samarra takes in the obviously long history of this family of decorated wares. Professor Herzfeld shows reason to believe that its connections are

somewhat more with the Persian than with the Mesopotamian varieties. Like all its other congeners the Samarra pottery has a well-marked local character, and it should henceforth be readily identified by archæologists of the Near East, to all of whom the study of this excellent volume is recommended.

133.

C. J. G.

THE LIFE AND TIMES OF SULTĀN MAḤMŪD OF GHAZNA. By MUHAMMAD NĀZIM, M.A., PH.D. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xv + 271, map. Cambridge: Cambridge University Press, 1931.

The small kingdom of Ghazna founded by Alptigin in A.D. 963, was considerably enlarged by Subuktigin, the fifth Sultān (977-97), but it was the latter's son, Abū'l Qāsim Maḥmūd, who in the course of his long reign of thirty-two years (998-1030) converted it into an empire extending from the Panjāb in the east to the hills overlooking the Tigris valley in the west, and from the confines of Bulḡārā in the north to Makrān in the south. Maḥmūd has hitherto been chiefly known to us from his incessant inroads (some seventeen in all) into north-western India between the years 1000 and 1027, in the course of which fabulous quantities of treasure and plunder are said to have been carried off to Ghazna. These Indian raids, however, formed but part of his extraordinary activities. No connected account of the history of his times had previously been written in English, and we welcome this survey of his remarkable career. Dr. Nāzim has utilized all the known sources for the history of the period, and has, in addition, collected relevant material from a number of unpublished manuscripts. As an example of the value of the information to be gleaned from hitherto unsuspected sources, may be cited the use that has been made of a *qaṣīda* found in a collection of poems by Farrukhī preserved in the India Office library. Farrukhī was one of the court poets of Maḥmūd, and he accompanied the Sultān

on his famous expedition to Somnāth. The route followed by Maḥmūd from Multān to Kāthiāwār had previously been a subject of speculation; but the mention by Farrukhī in his *qaṣīda* of Ludrava (? Ludarva), Chikūdar (? Chikodar), Nahrwāla, Mundher, and Dewalwāra has enabled Dr. Nāzim to suggest, with every probability, the route actually taken across the Thar to the extremity of the Aravallis and thence through Pātan, Mundher, and Delvāda.

The work is arranged in three parts. The first contains a very full list of authorities, and a brief sketch of the Muhammadan states of the period. The second part, dealing with Maḥmūd's wars—and practically his whole life was occupied in fighting—is arranged on a geographical basis under: (1) Central Asia, (2) Īrān, Sīstān, and adjoining lands, and (3) India. In the third part is given an account of Maḥmūd's administrative system, so far as this is revealed by the historical records available, and of his character and work. The author makes an effort to acquit Maḥmūd of the charges of fanaticism and intolerance so generally levelled against him, but we doubt whether his conclusions in this respect will meet with any wide acceptance. In the appendices will be found useful notes on the Farīghūnids, Sāmānids, Ma'mūnids, Saffārids, Buwaihids, and the Hindūshāhiya dynasty of Waihand (modern Und), as well as a very full chronology of the times of Maḥmūd and his predecessors.

References have been quoted with commendable care and fulness; an adequate index has been provided, and the sketch map enables the reader to follow approximately the Sultān in his ceaseless campaigns. Dr. Nāzim has made a solid contribution to our knowledge of an important period of Eastern history, and the volume should be studied by all students interested in the history of India and the countries lying to the west thereof.

HISTORY OF DHARMAŚĀSTRA. By P. V. KANE. Government Oriental Series, Class B, No. 6, vol. i, 9½ × 6, pp. xlviii + 760 + 15. Poona : Bhandarkar Research Institute, 1930.

This is, indeed, a *πόντος ἀπείριτος* of learning, such as makes one realize how appropriate is the title *Vidya Sāgara* both to the immensity of Sanskrit literature and to the capacious memory of a scholar who can survey it. The bare list of works on Dharmaśāstra covers 170 double-column pages ; in the narrative portion the author's views are as weighty as his modesty and courtesy are disarming, though he is not above leavening the subject with a little playful fun at the expense of learned confrères with whom he disagrees ; see, e.g. p. 59. This first volume is only a history of the literature : we are led to hope for a history of the ideas contained in that literature. Lawyers will be at one with Sanskrit scholars in wishing the learned author restoration to health to perfect his great scheme ; for if he has strength to prove himself master of his own erudition and not to let it master him, the second volume should be of the highest value.

When we ask what is the value of the present volume to practical lawyers, the answer is bound to be somewhat disappointing. The lawyer craves for certainty, for a fixed scale of values as between the authority of different writers. He will find here only diversity ; and if he learns that conclusive authority is often but a will-'o-the-wisp, that discovery may be good for his soul, but will hardly help him in the administration of justice. That he can no longer speak of the "written text of the law"¹ with the old complacent assurance will drive him to place greater reliance on "established usage"¹ and on the decisions of the courts. In spite of the practically unanimous opposition of the scholars, he will accept such decisions as e.g. *Bhagwan Singh*

¹ The famous dictum of the Privy Council in the Ramnad case (1868) 12 M.I.A. 397 is identical with a verse of Nārada (p. 203, note 365), a *rshi* of whom at that date British lawyers had probably never heard.

v. *Bhagwan Singh* 26 I.A. 153 (as, if we are not much mistaken, Dr. Kane himself does), simply on Lord Hobhouse's own ground of *stare decisis*. On this footing they are not beyond the reach of legislative amendment to which Hindu opinion increasingly turns.

Nevertheless, apart from practice, it would be but a poor lawyer who did not find interest in the present volume; and the copious citations from original sources will be useful to many for whom access to the texts is difficult. Dr. Kane is inclined to assign the *Manusmṛti* in approximately its present form to a somewhat earlier date than recent European scholars have suggested, and to hold that its previous history was one of a single composition rather than of a floating mass of verse tradition; and he produces very interesting evidence in support of his view, in particular the evidence from Indo-Chinese sources (pp. 156-7, cf. note by present reviewer, *J. Comp. Leg.*, 1925, pp. 172-3). The remarks on the relation between the *Āpastamba* sūtra and the *Purva mīmāṃsā* (p. 41); those on the position of *Vasiṣṭha* in the development of the law of marriage and adoption (p. 59); the curious contrast between the developed dialectical jurisprudence of *Nārada* in some directions and his reactionary views in others (pp. 202-3) are among the many matters which challenge thought. It is interesting to learn that the view of the inheritance of collaterals which has found favour with the Privy Council (*Buddha v. Lattu*, 421 A. 208, 37 A. 604) and recently, in spite of the *Smṛti Chandrika*, with the Madras High Court (*Soobramaniam v. Nalaraja* 53 M 61) was held by Nanda Pandit (p. 427). That usually crabbed authority also approved of the inheritance of sisters, and in general his views on this topic appear to have been surprisingly liberal (*ibid.*).

On the famous question of the "likeness of a son" it goes without saying that Dr. Kane is at one with the unanimous verdict of Jolly, Mandlik, and Sarkar. He summarizes the present legal position with commendable brevity, noting

inter alia that the Bombay High Court, contrary to its usual practice, has allowed the authority of the Vyavahāra mayūkha to be overridden on this point by Nanda Pandit, though at the same time it limits the latter's authority. Saunaka, the *rshi*, on whom Nanda Pandit built, is not considered important enough for separate treatment, though he is referred to here (p. 429) and also on p. 143: Sakala, that Mrs. Harris of Śāstric literature, is passed over in silence. Similarly, the ridiculous idea that the Dattaka Chandrika is the work of Devanna Bhaṭṭa Dr. Kane does not even condescend to mention. He observes that "Dattaka Chandrika" is among the authorities cited in the Dattaka Mimamsa, but of the book which Sutherland translated under that name he gives no account in the narrative, though he indexes it in his lists of authors and works, mentioning both Kubera and Raghmani as alleged authors. It is noteworthy that Dr. Kane gives more space (pp. 447-9) to the *Dattaka dīdhiti* of Anantadeva than to any other work on adoption, probably feeling that it has not received from the Courts the attention it deserves. That work *inter alia* expressly permits the adoption of a daughter.

Another topic will have to be dealt with in Dr. Kane's second volume on which we await his views with the greatest interest; namely the history of the law relating to women, a matter of importance in these feminist days. The evidence is more than ordinarily contradictory. Thus Parāśara, whose recommendation of *Satī* is not hedged as are those of some other writers, is yet the only *rshi* to permit divorce (see xxxv, CWN., clxi) though Kauṭilya also does so (p. 96). Remarriage is allowed by Vasistha (p. 58), Kauṭilya (p. 96), Nārada (p. 202), though forbidden by Manu. Paithīnisi (p. 122) and Āngiras (p. 222) both speak of women's wealth in a way which suggests that it may often have been considerable. Haradatta, commenting on Gautama (p. 349), treats *prājā-patya* as legally binding monogamy. Prajāpati (p. 230) even enjoins a sonless widow to offer the *śraddha* to her husband. These texts and many others in the same strain,

though they do not invalidate the views of Hindu law which have so far prevailed in our courts, will at any rate be useful to reformers as an answer to the conservative fear of innovation.

One may hope also that Dr. Kane may find room in his new volume for the light which Hindu religious usage at the present day throws on the interpretation of the *Śāstras*. Thus, in Bengal a husband on marriage promises to leave his wife the free control of her own earnings ; and in Maharastra cross-cousin marriage (commonly supposed to be forbidden by the *Mitākṣara* but permitted at least by *Haradatta*, (pp. 349-50) on very interesting grounds), is regarded as the most auspicious of all forms of marriage, even among Brahmins, and a blessing is invoked on other marriages that they may be like unto it.

The indexing of a work of this nature must have been more than ordinarily difficult, and it seems ungracious to suggest that the index might be improved. But citations of law reports should have been indexed, and we have found discussions of important topics which are untraceable in the English index ; this, however, does not detract from our welcome to a work which no serious student of Hindu law, and certainly no candidate for a doctorate in that subject, can afford to neglect.

S. VESEY FITZGERALD.

TAJI BILÄ ZOHRA : EINE OSTTÜRKISCHE VARIANTE DER SAGE VON TAHIR UND ZOHRA. By G. RAQUETTE (Lunds Universitets Årsskrift, N.F. Avd. i, Bd. 26, Nr. 6). 10 × 6½, pp. 128. Lund : Gleerup ; Leipzig ; Harrassowitz.

The tragical story of Tahir and Zuhra is a favourite one in Persia and Turkey, and Dr. Raquette in his introduction has discussed at some length its distribution and varieties. The present recension of it is one in the dialect of Chinese Turkestan

contained in a MS. acquired by the author in that area in 1904. The story itself is crude, and not well told, the main body of the text being prose with some passages of verse, particularly in the dialogue, so its interest is rather linguistic than literary. The MS. is modern, but Dr. Raquette gives some reasons for believing that it may be a copy of a rather older original. Fundamentally, however, the dialect is a modern one, and presumably what now passes for high-class literary language in Chinese Turkestan. It presents a number of points of interest, particularly in vocabulary, and it is most unfortunate that Dr. Raquette was unable to carry out his intention of including a list of words in his publication, particularly since the derivation of some is by no means clear. There seems to be a fair admixture of Perso-Arabic and a few Chinese loan-words.

It is unfortunate that Dr. Raquette should not have marked clearly in the transliteration and translation where each (say) fifth line of the original text begins, since the absence of these cross-references makes it unnecessarily difficult to find a particular passage in the original, but there is little else to criticize in this interesting work.

G. L. M. CLAUSON.

VOLKSDICHTUNG UND VOLKSBRÄUCHE DER TSCHEREMISSEN.

By YRJÖ WICHMANN. (*Mémoires de la Société Finno-Ougrienne* lix.) 10 × 6½, pp. xvi + 480. Helsingfors: Société Finno-Ougrienne, 1931.

This book lies rather outside the usual range of our Society's activities. It contains the text and translation of a number of specimens of various dialects of the Cheremiss language, collected by the author and Mr. G. Karmazin some twenty-five years ago. The texts are very miscellaneous in character, and include maxims on husbandry, short accounts of marriage and funeral ceremonies, etc., proverbs, riddles, stories, songs, and magical texts, the whole accompanied by some remarks

on the customs and beliefs of the Cheremiss. The texts are recorded in the elaborate phonetic notation of the Finno-Ugrian Society.

G. L. M. CLAUSON.

SUVARNAPRABHĀSA (DAS GOLDGLANZ SŪTRA) AUS DEM UIGURISCHEN INS DEUTSCHE ÜBERSETZT. By DR. W. RADLOFF, with an introduction by S. MALOV. Pts. i-iii (Bibliotheca Buddhica xxvii). $9\frac{1}{2} \times 6\frac{1}{4}$, pp. ii + 256. Leningrad : Russian Academy of Sciences, 1930.

This is a German translation of the first part of the Uighur text published as vol. xvii of the Bibliotheca Buddhica; and was made in the years 1912-15, when Dr. Radloff was publishing the original. It is, therefore, as Malov points out in his introduction, already out of date in certain respects since it was made before the discovery of Kashgari's *Dīvān* and the publication of a number of Müller's and other scholars' works on Buddhist Turkish. Admittedly it contains a number of mistakes, some due to lack of knowledge, and some to Radloff's old and ever-present enemy, carelessness. Some are quite inexplicable. For instance, the colophon to the First Book is dated *yigr(i)mi altınç yıl* "the twenty-sixth year" of K'ang-hsi; the colophon to the Third Book is dated *altı otuz yıl*, equally "the twenty-sixth year", but translated by Radloff "thirty-sixth", in spite of the old and well-remembered controversy about the dates in the Orkhon Inscriptions, in which this mistake of Radloff's was corrected by Bang and Marquart.

But, as Malov points out, such silly mistakes should not blind us to the real value of Radloff's work. The text is an exceptionally difficult one, and this pioneering translation will do much to elucidate it, and help towards the compilation of a definitive dictionary of Buddhist Turkish.

G. L. M. CLAUSON.

THE QUARTERLY OF THE DEPARTMENT OF ANTIQUITIES IN PALESTINE. vol. i, No. i. 11 × 6, pp. 52, pls. 32. Jerusalem, published for the Government of Palestine : London : Humphrey Milford, Oxford University Press, 1931.

A very hearty welcome will be given by all who are interested in the antiquities of the nearer east to this first number of a new publication designed to record the work, discoveries, and acquisitions of the Palestine Department of Antiquities and of the Palestine Archæological Museum, the foundation of which is recorded in these pages. Indeed, one of the articles describes the contents of a number of ancient graves found upon the actual site of the new Museum, a happy augury which establishes a more intimate connexion between the building and its purpose than could be claimed by any museum built in a less favoured land. The contents of this number are interesting and varied, including matters of architecture, numismatics, epigraphy, and literature, from Phœnician times until the Middle Ages, and both the articles and the copious illustrations are of a high standard, which promises to remain well worthy of the generosity of Mr. Rockefeller, to whom, among many other benefits, archæology owes this new periodical.

C. J. G.

LARSA, D'APRÈS LES TEXTES CUNÉIFORMES. By CHARLES-F.

JEAN. 10 × 6½, pp. xx + 290, 1 map. Paris : Geuthner, 1931. Fcs. 100.

The city of Larsa has two defects from the standpoint of one who might wish to celebrate its ancient fame by a local history : first, it has not been excavated, though its site has long been known, and second, it was a city of one period, which M. Jean defines in his title, following one system of chronology, as 2187-1901 B.C. Under a long line of kings, who gradually increased its prosperity, it developed into the

sovereign state of Babylonia with the two last members of the dynasty, and its material condition was hardly affected at all by the victory of Hammurabi, who incorporated the city without disturbance in his new realm of Babylon. Under his son the city continued to count in history, but was soon absorbed in the obscurity of the Kassite domination, and thereafter until the end of Babylonian times finds no more than a few incidental mentions. M. Jean has not sought, therefore, to write the history of Larsa, but has confined himself to a close study of the one flourishing period, for which material is abundant, though unfortunately of limited scope. There is a very scanty harvest of *faits politiques et sociaux*, but a mass of details that can be derived from the legal and commercial documents, to which M. Jean has lately made a notable addition by publishing two volumes of these "contracts" in the Louvre. Such documents can, of course, afford only a restricted view of the whole life of the period, and the author cannot be held responsible if the character of his material makes unusually dry reading. M. Jean has produced a very careful study of the Larsa "contracts", embracing the material conditions of life, society, religion (upon which a good deal more might have been said by going a little farther afield), justice, and personal names. He adds a similar inquiry for the period after the Babylonian conquest, but, as was to be expected, there is no material change to be observed. The second part of the book is devoted to translating the "contracts" lately published by the author, and ends with excursuses, a very useful vocabulary, lists of names, and index. The whole is a mine of detailed facts which will be of great service to all students of old-Babylonian business documents, and the author deserves the thanks of readers for his patience in fulfilling a task which may have seemed rather thankless in the performance.

BILDERATLAS ZUR KULTURGESCHICHTE INDIENS IN DER GROSSMOGHUL-ZEIT. Von DR. HERMANN GOETZ. 12 $\frac{1}{4}$ \times 9, pp. viii + 79, pls. 48, mit 135 Abbildungen. Berlin : Dietrich Reimer ; Ernst Vohser, 1930.

Dr. Goetz has made almost his own the study of Mughal costume as revealed in paintings, and in the present work he has widened his scope so as to embrace the whole of "die materielle Kultur des Alltags, ihre Wurzeln, Schichten, Wandlungen und Beziehungen zu anderen Völkern," basing his studies mainly on the testimony of contemporary miniature paintings. He has set out his conclusions under the main headings of dress, dress materials, accessories, furniture, vessels, tents, architecture, and gardens. Many of the objects described are illustrated in the reproductions, and there are copious references to illustrations in other published works. All the illustrations reproduced are fully described and explained, and the author has added learned essays on the significance and characteristics of Mughal civilization as a whole.

The book must have entailed an enormous amount of painstaking study and tabulation, and though one cannot check an irreverent wonder as to whether it was worth while to go into quite so much detail as Dr. Goetz has attempted, he is probably right in regarding Mughal painting as the best of all sources of the *Kulturgeschichte* of the period ; and the unique complexity of its origins is brought out in an impressive manner in the text and illustrations. The *Bilderatlas* is a remarkable achievement, though it must be admitted that it is not an easy book to use, as it is written in an extremely concentrated style, while the author's habit of constant reference to other works for explanations and illustrations of out-of-the-way details increases one's difficulties.

THE MAGYARS IN THE NINTH CENTURY. By C. A. MACARTNEY.
8½ × 5½, pp. iv + 241, 1 map. Cambridge: Cambridge
University Press, 1930. 15s.

This book is a decidedly interesting attempt to find the origin of the Hungarian state and the geographical position of the Hungarian people in a very dark age.

It treats some of the constantly repeated statements of historians, native and foreign, with such vigour that a traditionally minded or trained reader would naturally object to such iconoclasm, as indeed one reviewer has done. This is the less surprising, as the nature of the case makes the task of its presentation difficult, and an English reader accustomed to handling similar themes often needs to re-read a large passage to grasp its position in the scheme.

The sheer interest of the book has led me to read it through twice, besides occasional re-readings of the kind named.

Frankly, I think that the case is proved.

Stated briefly, his thesis is that the following are certainties. That the Magyars are a Finno-Ugrian race, near akin to Vogul and Ostyak, and that therefore their home was the eastern slopes of the Ural mountains. (It will be noticed that this is rather a linguistic than an ethnographical note, and brings one in sight of the problem of the Ural-Altaic languages.) Further that they began as nomadic hunters and fishers, who used metals and rode horses when necessary. They lived in tents.

Further, at a time unknown they moved south and came in contact with Alanic and other Caucasian elements.

The above three points and the next one are restatements of what Mr. Macartney calls certainties. They all owe much to the work of Hungarian philologists and historians of the calibre of Melich and Gombocz, though they would probably dislike some of the deductions from their findings. What follows is partly due to this source, partly to the main result of the book. This fourth certainty is that, some time before the division of the Bulgars the Hungarians came in close

contact with and were probably dominated by a Bulgar race, under whose influence they became a semi-sedentary, pastoral, and agricultural nation, about the fifth to the seventh century A.D.

Methodically the book is based on a careful and clever analysis of a portion of Constantine Porphyrogennetos's *De Administrando Imperio*, and of some oriental writers. The data and some further deductions are very courageously set out in a series of excursuses at the end. It is to be hoped that I have made clear my admiration for both method and results, for I am now going to add some notes on details in the order of their occurrence in the book.

It seems better to adhere to the recognized transcription of Perso-Arabian names, even if a more scientific use of diacritics is rejected in favour of generally recognized aspects of names. Also I dislike the Russian river being called Cuban, with the result that the adjective suggests American sugar.

p. 5, n. 1: Hammer-Purgstall did not always find the best text for his material, and at times was very careless, so that deductions about the transmission are hardly safe here.

p. 5, n. 2: Tumansky's report is in the Zapiski Vostochnago Otdelenija Imperatorskago Arkheologicheskago Obschestva, and is in the British Museum.

p. 6, l. 2: Something has gone wrong with the name here.

p. 19, par. 2: There is an interesting parallel to this route in the directions given by Alexis Mikhailovich to his ambassador to India.

p. 31: Some parts of Abulfeda's geography exist in other versions, for instance one in Romaic and a German compilation.

p. 39: It does not seem reasonable to treat the type of double kingship here noted as purely Turkish when the South Seas, Japan, even the history of the Western Empire show parallels of various kinds.

p. 43, n. 1: The best-known encyclopædia, Pallas, gives Nandorfehérvár with the Belgrade interpretation, while Nandor is the recognized Hungarian form for Ferdinand.

What is distinctly awkward is that the form Landorfejérvár is also vouched for.

p. 57, n. 3, and text above : In view of the unreliability of Klaproth and the celebrity of the Mirdite Albanians of European Albania, with which the country of the Alans is too often confused, it is well to suspend judgment here.

pp. 68-9 : The Polish Gazeteer has a long article on Perekop and its ditch, while there are, as one might expect, other Pierekops with ditches too. In verifying this and trying for Karakh = Kerch, I found forms like Karacz, Karak in the same book, but also a river Dupa that flows into the Dniester near the Sereth. This seems a better correction of Duba than Kuban. There is another Duba, a tributary of the Czeeczwa, which rises in the commune of Duba. There is a second use as a variant of Duna, presumably the Danube.

p. 76 : The mysterious "Wenia" is interestingly like the modern Finnish for Russia, Venälä. As Agareni is always used for (1) Saracens, i.e. Arabs or (2) for Moslem tribes acting under the Caliphs, e.g. the Turks in speaking of Montenegro, I do not see the use for the argument of the extract from the Sankt Gall chronicle.

pp. 83-4 suggests that it would be possible to sort out afresh by stichometry the original elements of the D.A.I. On the general question there is useful Jugoslav material.

pp. 86 and 93 : Livadia, etc. Unfortunately the Theban place is given in Strabo as Lebedeia, between Helicon and Chaeronea. The Cave-Oracle of Trophonius might be consistent with streams, as at Wookey, but hardly with marsh. The Crimean place owes its name to imitation by philhellenes—or perhaps Greeks.

p. 105 : The word Brodniki is interesting as Brodyag is the usual term for the people, usually escaped prisoners, who wandered in the woodlands of Siberia.

p. 111 : Surely the story of Askol and Dir's dialogue and of the answer about the three brothers who built Kiev is very mythical and typical of mythological founders, even in Greek

times. The number three is parallel to the story of Lech and Czech and the third brother in the Czech and Polish legend. The hero, Kii, is horribly like the instrument of chastisement in medieval Russia, while Choriw seems to be related to the alleged heathen deity, Hors, who seems akin to our own Horsa.

pp. 115-16: Is Gylas a native title of office or is it a result of the Byzantine grant of patrician rank, and does it stand related to the imperial family-name Julius as, e.g. the modern Gyula does?

The above shows the abundant interest of the book, which could be reviewed quite profitably by someone with quite different qualifications.

230.

L. C. WHARTON.

CHĀNDOGYAMANTRABHĀṢYA. A pre-Sāyaṇa Commentary by GUṆA VIṢṆU, edited by DURGA MOHAN BHATTACHARYYA, M.A. Sanskrit Sahitya Parishad Series No. 19. 8 × 5, pp. 5 + 111 + 11 + 288. Calcutta: Sanskrit Sahitya Parishad, 1930.

The commentary of Guṇaviṣṇu is well known in India as explaining the mantras used in the rituals of the Sāmavedins. The book under review represents a revised and, we must say, much improved edition of Guṇaviṣṇu (first ed. by Parameshwar Jha), with full text, introduction, list of mantras and "viniyogas" (applications of mantras), and appendixes. It deserves attention and credit because we here find some explanations of Vedic passages which are older than and referred to by Sāyaṇa. The commentary opens with a eulogy (in polished ślokas) of this pioneer of Vedic interpretation.

Pandit D. Bhattacharyya has indeed produced a useful edition which may be recommended as a text book on account of its compactness and handy arrangement. The illustrious pandit Gangānātha Jha, of Allahabad, has contributed a foreword to the book.

225.

W. STEDE.

BIBLIOGRAPHIE VÉDIQUE. By L. RENOU. $10\frac{1}{2} \times 7$, pp. v + 339 Paris : Adrien Maisonneuve, 1931. Fcs. 100.

The review of this comprehensive work can be short and restrict itself to praise and admiration. It would be unfair to criticize it adversely, for the one doing so would thereby betray his lack of understanding of the colossal task involved in this *Bibliographie Védique*. Its author is already favourably known to us as the author of the *Grammaire Sanscrite*, also recently published.

The Vedic Bibliography is as exhaustive as possible. It contains about 6,500 references arranged in a very handy manner in 201 sections, resulting from the methodical analysis of the subject matter. The references comprise texts, editions, grammars, translations, and all the exegetical and critical literature connected with the texts, their language, meaning, and history. As regards the latter (the literature on the texts) the author supplies a short analysis as well as respective reviews of each book.

The whole work is divided into two main parts: (1) Texts of, and commentaries on Vedas, Brāhmaṇas, Sūtras, and Upanishads; (2) Studies on the texts, i.e. historical, religious, philosophical, linguistic. The material of the bibliography is drawn from all quarters of the scientific world, so that it may be used with equal advantage in Germany, France, and the English-speaking countries. An index of authors as well as of Sanskrit words facilitates the finding of titles, if one should not be able to refer them readily to the main sections.

The book will not only prove an invaluable guide to any study of any branch of Vedic lore, but will incidentally form a very useful help to the classification of the relevant material in catalogues and on library shelves.

LES MAÎTRES DE LA PHILOLOGIE VÉDIQUE. Par LOUIS RENOU. 10 × 6½, pp. 74. Paris: Paul Geuthner, 1928. Fr. 25.

Taking as his text the chief contribution made by Vedic scholars from Colebrooke to Oldenberg, Professor Renou has, in this brilliant little treatise, surveyed the main lines followed by Vedic investigation during the last 125 years. No subject, of equal cultural, philological, and linguistic interest, has perhaps been attacked from such diverse points of view; and it would not be surprising if some were to make a slightly different estimate of the value of the contributions to its study; nevertheless, R. has on the whole held the scales equal, while exposing with insight the trend of the leading ideas of Vedic scholars. Any who are studying the Veda, as a cultural or a linguistic document, may with profit read and reflect upon this book.

P. 23.

R. L. TURNER.

THE VEDIC CHANT STUDIED IN ITS TEXTUAL AND MELODIC FORM. By J. M. VAN DER HOOGT. 10½ × 7½, pp. 123. WAGENINGEN (Holland): Veenman & Sons, 1929.

The Sāma-Veda has been chiefly studied for the variant readings it provides for the R̥g-Veda, from which most of its textual material is drawn. But as Dr. van der Hoogt says, it is "the most ancient source from which to draw our knowledge of Veda Music". In this volume he has studied it from that point of view, and has brought together the relevant passages from the commentators.

The main part of the book is concerned with the textual form and especially the *stobha* or alterations of the fundamental text for purposes of chanting (chapter i), and the Melodic Form (chapter ii). Chapter iv contains a useful bibliography of SV. with special reference to the aspects here studied.

To the linguist one observation will be of special interest. On pp. 38 ff. the author examines the relationship between the

spoken accent and the melodic movement. The number of examples examined is not, as he recognizes, sufficient to admit the formulation of a definite rule, but his conclusion is most interesting: "The supposition that there is in principle a connection between word-accent and melodic movement becomes an undoubted fact by studying the *stobhas* which consist of phrases. These *stobha*-phrases always sing the highest tones to the syllables which also in the spoken language have the highest pitch." This agrees exactly with what I showed many years ago (*Classical Review*, xxix, p. 195), was a principle governing, at least some, ancient Greek singing.

P. 23. R. L. TURNER.

THE LANGUAGE OF THE ASHKUN KAFIRS. By G. MORGENSTIERNE. Extract from *Norsk Tidsskrift for Sprogvidenskap*, Bind ii, 1929. pp. 192-289.

Within this generation the discovery of ancient documents in two hitherto unknown Indo-European languages, Tocharian and Hittite, has added greatly to our knowledge of common Indo-European and, as they come to be studied more thoroughly, especially the Hittite, will add much more. Neither, as far as we know, have any descendants spoken to-day. Somewhat earlier than either of these discoveries, some knowledge was gained of another previously unknown Indo-European language, the so-called Kafiri group of dialects of the Hindu Kush. The need for obtaining fuller knowledge of these is all the more pressing as they are in process of disappearance. In all probability the Kafiri dialects, as was recognized by Sir George Grierson,¹ form a separate group (with Iranian and Indo-Aryan as the other two) of the Aryan branch of Indo-European. This fact, added to the absence of any ancient documents, renders their importance less capital

¹ Sir George Grierson also includes the Dardic dialects with these, but in the opinion of the present writer they are essentially Indo-Aryan languages, and should be separated from Kafiri, although they have greatly influenced the latter.

for the study of Indo-European in general. On the other hand their study as an independent group of Indo-Iranian may throw light on the history of that branch.

Hitherto the best known has been Bashgali or Kati, chiefly from Colonel J. Davidson's *Notes on the Bashgali (Kafir) Language*, published in 1902, and Professor Sten Konow's admirable analysis of this material in his *Bashgali Dictionary* (1913).

One of the most fortunate results of Professor G. Morgenstierne's linguistic mission to Afghanistan was a wide extension of knowledge of Kafiri, not only of Kati but also of others of which the meagreness of our information is attested in the pages of *LSI.*, viii, 2. Of the one now under survey, Ashkun, Sir George Grierson wrote in that volume (1919): "We know nothing whatever about this dialect." But the material which Professor Morgenstierne was able on his return to place at his disposal, enabled him to fill this gap by including a short description of Ashkun in *LSI.*, i, 1 (1927).

Now in the 100 pages before us, Professor Morgenstierne gives us the full results of his inquiry. He had only two Ashkun speakers to work with, one for two weeks in Kabul, another from a different locality for two hours in Peshawar. Only a linguist with Professor Morgenstierne's exceptional capacity for eliciting and interpreting information from his subjects could have produced so much and so valuable knowledge in so short a time.

In discussing the linguistic position of Kafiri, the author rejecting Sköld's theory that it forms an altogether independent branch of IE., inclines to the view that it definitely belongs to the Indo-Iranian branch, but that it is in some respects independent of specific developments of both Iranian and Indian. This conclusion is supported chiefly by its retention of affricates derived from IE. \hat{k} ($>$ Ir. s , Skt. \acute{s}); for it appears that in principle IE. $\hat{k} >$ Kaf. \acute{c} (ts). This has some bearing on the general condition of IE., for since it presupposes a primitive Indo-Iranian stop or affricate, the change of

IE. *k̂* into an *s* or *sh* sound becomes a separate, though parallel, development in the various *satem*-languages.

A careful description of Ashkun sounds is followed by an excellent sketch of the grammar, an invaluable collection of texts with interlinear word-for-word translation (14 pages), and a vocabulary containing nearly 1,000 words. In the vocabulary, the author has not only given etymological notes of great interest, but has presented the cognate forms from the other Kafiri and Dardic dialects, drawn for the most part from his own collections. And since it is important to know not only similarities in vocabulary between languages, but also the differences, he has quoted also the divergent words in Kafiri and Dardic.

Since his return from Afghanistan, Professor Morgenstierne has made a long stay in Chitral. We look eagerly for the results of that inquiry. On both occasions Professor Morgenstierne has travelled under the auspices of "Institutet for sammenlignende Kulturforskning".

R. L. TURNER.

DASTUR KAIKOBAD MAHYAR'S PETITION AND LAUDATORY
POEM. By J. J. MODI. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xxiii + 221.
Bombay : The Fort Printing Press, 1930.

Sir Jivanji Modi is well known to students of the Mughal period as the author of *The Parsees at the Court of Akbar*, in which work he throws considerable light upon the influence of Zoroastrianism in shaping the religious views of Akbar. The problem which interests Dr. Modi is the identity of the Zoroastrians at Akbar's court, and, in reply to Karkaria's contention that Akbar was influenced by Persian Zoroastrians under Ardeshir, he contends that the Zoroastrians, with whom Akbar came into contact, were Parsees from Naosari in Gujerat, whose leader was one Dastur Meherji Rana. In addition to Parsee manuscripts, he is able to cite the evidence of Badaoni in support of his views. Nevertheless, in the

Dabistan reference is also made to the presence of a Persian mission. According to Modi, traditional songs refer to the fact that Dastur Meherji Rana invested Akbar with the *sudreh* and *kusti*, the sacred shirt and thread-girdle which are external symbols of Zoroastrianism.

The volume under consideration contains three papers :—

(1) A petition in Persian verse addressed to Jahangir by Dastur Kaikobad, the son of Dastur Meherji Rana.

(2) A laudatory poem, addressed to Prince Khurram, afterwards Shah Jahan, by the same person.

(3) An account, in Gujarati, of the division of the 300 bighas of land referred to in the petition and poem.

Historically, the petition is the most important of these three documents. Not only does it contain important references to Mughal administration under Jahangir, but it is also a valuable source for the history of the Parsee community in general. The value of the book is enhanced by the scholarly annotations of the learned author.

227.

C. COLLIN DAVIES.

THE TRAVELS OF CAPTAIN ROBERT COVERTE. Edited, with an introduction and notes, by BOIES PENROSE. $8\frac{1}{2} \times 6\frac{1}{4}$, pp. 115, 1 map. Philadelphia : privately printed, 1931.

Coverte's narrative has not been reprinted since 1631, and the present handsome reproduction is therefore welcome. It is true that a much better account of the voyage of the *Ascension* to India in 1608 and of its shipwreck on arrival, is to be found in the *Journal of John Jourdain* (Hakluyt Society, 1905); but Coverte's account of his subsequent journey to Agra, and thence overland through Kandahar, Ispahan, and Baghdad to Aleppo, and so home, provides much interesting matter, though many of his place-names have been distorted beyond recognition by him or by his printer. One amusing incident of his stay at Agra is the presentation he made to Jahangir of a small gold whistle, whereupon the

novelty-loving emperor "whistled therewith almost an hour".

The volume lacks an index, but it is provided with a short introduction, two bibliographies, and about a dozen pages of notes. These might have been increased with advantage. The editor seems to have been afraid to tackle Indian names and titles, and he has left uncorrected several of the author's erroneous statements. A facsimile of the title-page of the first edition and a quaint map add to the attractions of the book.

224.

W. F.

LAUT- UND FORMENLEHRE DES AGYPTISCH-ARAMAISCHEN.

VON P. LEANDER. (Göteborgs Högskolas Årsskrift xxxiv. 1928 : 4). 9 $\frac{3}{4}$ \times 7, pp. i + 135. Göteborg : Elanders Boktryckeri Aktiebdag, 1928.

In this little work of 128 pages, Dr. Leander, the collaborator with Dr. Bauer in the well-known *Historische Grammatik der Hebräischen Sprache des Alten Testaments* (1922), and *Grammatik des Biblisch-Aramäischen* (1927), sets out the grammar of the cognate Aramaic dialect spoken by the Jews in Egypt in the fifth century B.C. The compiler uses the terminology with which the two last-mentioned books have made the reader familiar, e.g. he speaks of the *Nominal*, *Voll-Aorist*, and *Kurz-Aorist*, without explaining them; for he naturally and reasonably assumes acquaintance with the theory which underlies these terms. Otherwise, the book follows the usual course of grammars, even to the complete neglect of syntax which is so characteristic of German grammarians.

The collection of examples is on the one hand almost, if not quite, complete; three of the few omissions which I have remarked are the unusual יתשים (for ישתים) in P. 27²¹ and A.⁸⁰ (§ 20b; cp. § 39e), רחמת as a fem. abs. state in ית in P. 9⁷ (§ 10k; cp. § 58a), and ממנין as the pass. ptp. of the Pa'el in P. 27⁹ (§ 65o; cp. § 10o). On the other hand, it errs on the side of excessive fulness when the

author's zeal so far outruns his discretion as to admit such restorations as סגדלת (§ 25*d*) קרית and שנתה (§ 40*f*) as genuine examples of grammatical forms; and even more striking is the citation of יתקטל as the sole example of Ithpe' (§ 27*b*), since it is nothing but a conjecture which the editor has supplied in accordance with the sense! For, even though these words are correctly restored, they are not legitimate instances of the verbal inflections which they are cited to illustrate!

In a few cases the author's explanation of forms may be doubted. For example, it is hardly possible that ארמיה can be feminine in P. 14³ (§ 44*g*), even though so far as the form goes such an explanation is possible; for, if so, a woman would be described as belonging to a military detachment. It is evidently masculine, referring to the woman's father, in which case למבטחיה ברת מחסיה בר ידיה ארמיה זי סון לרנל וריית means "to M. the daughter of M. the son of Y., (who is) the Aramæan of Syene of the detachment of W". The use of the emphatic instead of the usual absolute state is justified by the analogous case of הרדנורי בבליה "H. the Babylonian" in P. 6¹⁹.

The author's philological suggestions are often by no means convincing and in fact, are the weakest part of the book. Thus, שקל for תקל is not due to the influence of the Bab. *šīqlu*, since it may then be asked why תבר is not שבר, to which the Acc. *šabāru* points. May it not rather be that the *papyri* exhibit a transitional stage of the Aram. language, in which the change from ש to ת is not yet complete? For the fluctuations between ז and ד (e.g. in דרב = דרב, דכי = דכי, etc.) suggest something of the sort, as the author to a certain extent admits (§ 2*i*). The endeavour to revive the old derivation of מחר from אחר יום (§ 6*g*) is not only in itself improbable but is practically excluded by the fact that *ūmu* or יום, as the case may be, would *ex hypothesi* be superfluous in the Can. *ūmi mahari*¹ as well as by the common phrase מחר או יום

¹ Sellin, *Ta'annek: Nachlese*, 36-7, 5, 14.

אָהַר (e.g. P. 5^{6, 8}); moreover, on this view the א in the Hebr. מִזְרֵה is inexplicable, since this word cannot be explained as a new formation in view of the archaic ending. The Acc. *māḥāru* "to receive" and "to confront" (whence *tamḥāru* "battle") shows that the Aram. מִזְרֵה denotes what is "confronting" a person, i.e. the immediate future or morrow; and the Arab. قَبِل I "received" and X "encountered" (cp. Acc. *qablu* "battle"), from which مستقبل "future" is derived, shows the same semantic development. The objection that the Acc. *māḥrū* "former" indicates that the $\sqrt{m\dot{h}r}$ must refer to past time is invalid; for the $\sqrt{q\dot{b}l}$ may refer either to future or past time, as the prep. قَبْل "formerly" shows; and the fact that the Acc. *ullū* "remote" is used not only of remotely past but also of remotely future time (cp. Hebr. עֵלֶם; s. § 47d) affords another illustration of the same usage. It is therefore safe to assume that the Acc. *māḥrū* and the Aram.-Hebr. מִזְרֵה are connected, although the $\sqrt{m\dot{h}r}$ bears a different connotation in the different languages. Again, the suggestion that the Bab. *šurinnu*, which denotes some kind of divine emblem such as a "standard" (?), is identical with the Aram. אֲשֵׁרָא (§ 84w''') is futile; it is simply to explain *ignotum per ignotum*, and in any case what little is known of the Bab. word is sufficient to show that any connection with the Aram. word is in the highest degree unlikely. Lastly, the suggestion that the Bab. *ramku* "libatory (?) priest" and the Aram.-Hebr. כֹּמֶר "idol-priest" are cognate *per metathesim* is also improbable; for, while the former appears to be a purely Mesopotamian word, the "Capp." *kumrum*¹ suggests that the latter must be referred to an independent origin.

Editorial slips are commendably few. Two such which I have noticed are the inconsistency in the Pers. *nōpāt* (§ 49g) beside *naupati* (§ 50f), due to deriving the same fact from two

¹ E.g., Smith, *CTCT.*, IV, 19a, 13, where *DUMU kumrim* means "the son of an (idol-)priest", i.e. a member of the priestly guild.

distinct authorities, and the misprint in מן and מןן (§ 60a) for מן and מןן respectively.

In conclusion, Dr. Leander's grammar may be recommended as a useful compilation, which may safely be put into the hands of the student beside the other two books, in which he has been a collaborator; but it may be hoped that, when the time comes for another edition, a complete account of the syntax of this interesting dialect may follow the full treatment of the morphology and accidence contained in the present volume.

P. 24.

G. R. D.

ENCYCLOPÆDIA MUNDARICA. By Rev. JOHN HOFFMANN, S.J., in collaboration with Rev. ARTHUR V. EMELÉN, S.J., assisted by the Jesuit missionaries mentioned in the Preface. Volumes i to iv (letters A to D). pp. v + 1271. Patna: Bihar and Orissa: Superintendent Government Printing. 1930. (Price Rs. 6, or 12s., per volume to subscribers to the whole work, which will consist of about 15 volumes.)

These four volumes with their 1271 doubled-columned pages are only the first instalment of what is going to be a great work.

The *Encyclopædia Mundarica* is expected to extend to fifteen volumes, and there is already no doubt that it will fully deserve its title, which the author in his preface describes as "pretentious". Its form is dictated by linguistic considerations. It presents what, it may be hoped, is a very comprehensive, if not an exhaustive, vocabulary of the Mundāri language; but under the various key-words it furnishes a description of every aspect of the life of the people who speak that language. The combination of the two objects in one work was not the choice of the author, but was imposed on him by necessity.

There are probably few persons, apart from Father Hoffmann and his collaborators, who are in a position to

criticize in detail either the linguistic or the ethnographic material provided, but it is obvious to anyone that it is the fruit of an immense and intimate knowledge of the people and the language, derived from first-hand experience, and an infinity of patient and skilful research.

Muṇḍāri is one of the principal members of the so-called Muṇḍa, or Kolarian, family of languages which are spoken by non-Aryan peoples in parts of Bihar and Orissa. Muṇḍāri itself is spoken by the inhabitants of the Ranchi plateau of Chota Nagpur. These Muṇḍa languages are the representatives in India of the larger association of Austro-Asiatic languages (W. Schmidt) which includes Khasi, Nicobarese, the Mon-Khmer group and other forms of speech current in south-eastern Asia. With the Muṇḍa languages Przyluski would also connect a group of languages spoken in the Himalayas which were earlier classified by Sten Konow in the L.S.I. as Tibeto-Burman.

In recent years efforts have been made to discover in Muṇḍa and Dravidian the sources of apparently non-Aryan words existing in Sanskrit.

From several points of view therefore the Muṇḍa languages are interesting and important, and any addition to available knowledge of them so considerable as the present work, is to be warmly welcomed. Hitherto the only Muṇḍa language at all adequately studied has been Santālī.

Muṇḍāri is in the state described as "agglutinating". The language consists of neutral root forms which by the addition, principally, of affixes are made to serve the purpose of the "parts of speech" of the Indo-European languages. The effect of certain verbal "voices" is produced by infixes.

Where the use is "verbal", the subject, and direct and indirect objects, when pronominal, as well as the voice, mood, and tense elements, are worked together with the root into a single combination, pronounced as one word, which as may be imagined becomes very complicated and often far from perspicuous.

Hoffmann tells us that it is often impossible to translate a Muṇḍāri sentence in the absence of the context, or indeed unless the physical circumstances in which it was spoken are present to the eye.

He condemns the language also for its lack of general and abstract terms—a deficiency shared by other languages belonging to comparatively primitive cultures—and for its multiplication of specific names for concrete articles. There are, he says, at any rate eleven words for “basket”. But there is something to be said on the other side. The development and use of specific terms is the work of the expert, to whom they are necessary, and the substitution for them of general terms with qualifying adjectives is due as much to the lack of knowledge and indifference of the ignorant as it is to the systematizing mind of the intellectual. What engineer, architect, or doctor, however addicted to abstract and systematic thought, could carry on without his multitude of technical terms? With the doctor even such descriptive terms as “blue pill”, “grey powder” and “black draught” denote quite specific products. One may call a spade a spade, but not a qualified shovel, and it would probably cause the Mundas much waste of time and not a few misunderstandings if they had only one word for “basket”.

An interesting feature of the language is its love of jingle or repetitive words of which it possesses an imposing array. These do not aim only at reproducing or suggesting sounds, but “seem to be imitative”, says Hoffman, “of all kinds of impressions produced through the senses of sight, taste, smell and touch . . . It seems as if these Aborigines had kept alive a wider sense or instinct of imitating all kinds of feelings by rhythmic sounds, which we have lost.” As examples one may cite :—

canāka manāka, “a jingle meant to denote the appetising appearance and smell of something fried in oil or clarified butter.”

cungur mungur, “restlessness of children”.

cakud cakud, "the shaking of the loads on a carrier's pole or of a man on a walking or trotting horse."

Other points of interest to philologists are the phonetic phenomenon of "checked sounds", the existence of inclusive and exclusive dual and plural forms of the personal pronoun, and the wholehearted way in which the language naturalizes such foreign words as it adopts, making them perform the same tricks as the Muṇḍārī root.

Many glimpses of peculiar or interesting experiences obviously common in the lives of the Mundas can be gained from a mere glance at the vocabulary :—

ala means "to parch lightly over the fire", "to dry thoroughly by exposure to the sun," and we get the idiomatic sentence: "Have you laid this child in the blazing sun in order to shrivel it up entirely?" "This is used," says the author, "as a reproach to careless mothers leaving their babies too much exposed to the burning sun." It may be observed in this country that some mothers consider it meritorious during heat waves to strip their small children almost naked and then drive them out into the blazing sun.

baēa baēa, "great slowness in action." As an adjective we have it in the sentence: "Slow women reach the night in the preparation of the food; they never work in the fields," and with the suffix *-ko* "used for any kinds of small insects which creep, or might creep slowly on people's bodies". The "might creep" is very delicate.

cāḍ (of women), "the habit of shouting shrilly and angrily." It is only fair to add that there is a parallel word for men, *kāḍ*.

cakab cakab, expresses generally the notion of "the crunching sound peculiar to eating pigs", but *radtaken tagoḍ c. c.* means "to break a number of bones with a snap of the teeth". Dentists must be at a discount.

caṅkiṇ (*caṅki* is "climbing, mounting"; *-o* is the sign of the passive voice), "to get a tiger or leopard on one's back, to be jumped on by a tiger."

cala means "to frighten or startle someone by throwing on

him some repulsive insect or animal", and one finds the sentence: "Do no frighten each other by throwing caterpillars, that makes children dream of them and get frightened in their sleep."

cali, "the creamy skin which forms on boiled milk." Surely there ought to be such a word in every language.

carmatūa, "hilarity consequent on moderate drink."

cōrdundur (1) "the habit of angrily denying faults which one has really committed"; (2) adj. "(one) who has this habit".

The meanings of the words and their use in all their functions are explained with thoroughness and precision and illustrated by many obviously authentic examples, which are frequently, but not always, translated. And let no novice lightly think that he will easily analyse the grammatical forms and translate them for himself. For that a knowledge of the grammar is necessary, and the means to such knowledge has already been provided by Father Hoffmann in his detailed *Mundari Grammar*, Bengal Secretariat Press, Calcutta, 1903, of which in the present work he only makes casual mention in the preface.

An endeavour has been made by various collaborators to indicate the words which are non-Munḍa, or which occur in non-Munḍa languages, by quoting foreign words for comparison. Thus, many Sanskrit, Hindi, Sadāni, Urdu (Persian and Arabic), Marathi, Oraon, Tamil, and Singalese words are cited.

Of the large number of Sadāni (L.S.I. Nagpuria) forms quoted it may be assumed that many are recorded for the first time. Otherwise it is probable that philologists will find this feature of the work somewhat unreliable and sometimes fanciful. Correlations are frequently made, it would seem, merely on the ground of similarity of form, or merely on that of similarity of meaning, and do not carry conviction. A couple of examples from the first few pages will illustrate what is meant:—

a (Sk. *astra* "arrow", root *as*) 1 subst. "bow."

āb (Sk. *ap*, P. and U. *āb* "water") trs. "to wash someone's face".

See also the entries under *adbūd*, *aga*, *agam*, *ajurā*, and *alaē*.

More thrilling, however, are comparisons made with European languages. A list of forty-seven of these provided by the Rev. Van den Bossche is given by Father Hoffmann, with some reserve, in the preface. Some of them reappear in the text where others may hopefully be looked for. The following are a few examples, the words in the first column being Muṇḍārī :—

<i>adal</i> , "honour acquired by expenses made for the purpose."	German <i>Adel</i> , "nobility, the noblemen."
---	--

<i>adīy</i> , "that part of the house in which the spirits of the ancestors remain and are worshipped."	Latin <i>ædes</i> , "house, sanctuary, temple." [And why not Hades?]
---	--

<i>asi</i> , "to ask."	English <i>ask</i> .
------------------------	----------------------

<i>asul</i> , "to nourish."	Greek <i>al</i> .
-----------------------------	-------------------

<i>buru</i> , "mountain, forest."	German <i>Berg</i> , "mountain," <i>Burg</i> , "castle on a mountain," <i>bergen</i> , "to hide" (in mountains or forests).
-----------------------------------	---

<i>ira</i> , "anger."	Latin <i>ira</i> , "anger."
-----------------------	-----------------------------

<i>lutur</i> , "ear."	German, Flemish, English <i>Ohr</i> , <i>oor</i> , <i>ear</i> , "ear."
-----------------------	---

<i>sab</i> , "to catch."	Greek <i>lab</i> (Latin <i>capere</i> , note of A. V. E.).
--------------------------	---

In the text may be found :—

aīub (German *Abend*, "evening," "west" in *Abendland*)
1. subst. "evening, west".

asadi (Latin *satis*; Dutch *zat* (etc.); H. a *privativum* and *swād*, "relish;" etc.) 1. subst. "the bodily feeling of repugnance, surfeit, satiety" etc.

Whatever comment one may feel inclined to make on such efforts in comparative philology it remains that the principle of trying to distinguish words which are not, or may not be, of Muṇḍāri origin, or which may not be peculiar to Muṇḍāri, is sound, and in this work has resulted in revealing a considerable community of vocabulary between Muṇḍāri and Sadāni and to a less degree Oraon.

Diverting our attention now from the purely linguistic to the ethnographic we find that there is scarcely a page on which some fact concerning the habits, beliefs, and physical surrounding of the Mundas is not to be found ; while lengthy disquisitions on matters of major interest are of frequent occurrence. In these four volumes we start severely with a grammatical article of ten pages on the prefix *a* and the various *a* and *ḡ* affixes. Then we have an article of similar length on *angir*, "lechery, adultery." Others follow on edible plants (*aṛa*) containing a list of 209 plants classified according to use and duly identified and equipped with their scientific names (the work of Father Van Emelen) ; labour recruitment (*arākaṭi*) ; the Asurs ; the Blacksmith caste ; various divinities (*Boṅga*) ; mortgages ; ancestral lands ; memorial stones ; forest goblins ; the revolts of the Mundas ; the Birhors ; supernatural spirits ; offerings of human blood ; magical transformations ; augury and omens ; servants ; soothsayers ; witchfinders, etc. ; songs ; music. These are only mentioned because of their length which varies from about 9 to 38 pages ; but many of the shorter notices dealing with an infinity of subjects are equally interesting. There are to be 50 plates containing drawings of musical instruments, and utensils and implements of every description. To judge from the specimens issued with the prospectus these will be admirable in clearness and detail.

A plea may here be entered for the eventual provision of a full verbal index to the English meanings of the Muṇḍāri words combined with a subject index to the ethnographic material which lies scattered about on almost every page.

Also for a higher standard of paper and printing in future volumes.

The attitude of the author towards the Mundas, their beliefs and practices, is kindly, broad-minded, and tolerant. It is evident that he liked the people and that they liked him and gave him their confidence. Without this, much of his information could never have been obtained. In what he regards as their original character and culture he sees much to respect. He finds that they were originally monotheists who possessed a "filial confidence in the goodness of their heavenly Father" and that the belief in witchcraft and omens is an unfortunate "innovation".

Their practice of monogamy pleases him for various reasons, and "In the rules or laws (of marriage)", he says, "the Mundas have preserved a social creation of prehistoric times, full of moral beauty and evincing in their essential features and their minute details a deep social wisdom."

It has, of course, become a commonplace that primitive societies are often extremely peaceful and moral in their behaviour until they are subjected to the temptations and corrupted by the vices characteristic of the "higher" civilizations. There are various ways of accounting for this. Father Hoffmann's explanation is perhaps seen in his tentative answer to another problem: "This implicit faith of all aborigines in the authority of their remote ancestry in matters of religious belief and ritual practices, supposes a firm conviction that those ancestors knew a great deal more than the present generation does; would not the belief under review (sc. the inherent impurity of man *vis à vis* the Creator, i.e. original sin) be a remnant of what Revelation and Christianity teach about the original fall?"

The forces which have mainly contributed to the disintegration of the Munda social structure and the material and moral impoverishment of the people are referred to in a number of articles. They principally originate in the penetration of the country by undesirable types of their Indo-Aryan

neighbours : the oppressive alien landowners brought into, and established in the country in the beginning of the nineteenth century by the Hinduized rajahs of Chota Nagpur ; the lower ranks of the police and village officials ; the emissaries of the agents recruiting labour for the tea gardens ; and finally, the money lender.

For long the British officials were too few and had too little local knowledge to exercise any effective check on the injustices and rapacity of their own subordinates, let alone those of other people.

It was the Mundas' misfortune that they had a language which probably no overburdened official could learn during his term of duty in the country, and that the statement of their rights, claims, and customary law was always subject to misrepresentation by prejudiced interpreters.

This would seem briefly to summarize what Father Hoffmann has to say regarding the circumstances of the Mundas up to the end of the nineteenth century. Talking of the recruitment of labour for the tea gardens and the remedial legislation which was gradually introduced, he says : " It is absurd to say, as is so often done, especially in India, that this (sc. the commercial exploitation of aboriginal peoples) is restricted to English colonies . . . "

" It has ' civilized off ' more than one tribe and race of aborigines in various parts of the world. But it is equally true that the Indian Aryans are the last people in the world who have a right to throw stones at their white brethren for this. Their general treatment of the subjected aboriginal races has always been most shocking, both for its relentless persecutions and for its cruel contempt. The wrongs inflicted on the Mundas by modern commercialism are as nothing compared to those inflicted through so many centuries by Aryan Indians.

" But for the readiness of a number of kind-hearted English officers to redress grievances of the aborigines when they were pointed out to them (sc. by the missionaries) the Mundas

would already now be reduced to a handful of mere helots under the whip of that class of Hindus who were brought into Chota Nagpur by Hinduized rajahs or came in the wake of effective British occupation.

"It is but fair to add that nearly all the malpractices complained of have now ceased in the territories under direct British administration."

How, one is tempted to ask, is the remnant of this attractive people likely to fare in a "self-governing" India? It is for others to supply the answer.

Whatever the future may hold for the Mundas, they owe at any rate, in the curious company of philologists and anthropologists, a great debt of gratitude to Father Hoffmann and his collaborators for this monument to their vanishing culture, vast in its proportions, minute in its detail, and imbued with a spirit of love and appreciation.

Nor is it only to the authors that tribute is due. Without the enlightened generosity of the Government of Bihar and Orissa this work would probably never have seen the light of day, and for that generosity it would appear that we have to thank the then Lieutenant Governor, Sir E. A. Gait, to whom the *Encyclopædia Mundarica* is appropriately dedicated.

218.

D. L. R. LORIMER.

LE PREMIER VOYAGE DE "L'AMPHITRITE" EN CHINE.

L'Origine des relations de la France avec la Chine, 1698-1700. Par PAUL PELLIOU. 11 x 9, pp. 79. Paris : Paul Geuthner. 1930.

Professor Pelliot takes as his text the *Relation du premier voyage des François à la Chine fait en 1698, 1699 et 1700 sur le vaisseau "L'Amphitrite"* by François Froger, edited by E. A. Voretzsch, and published at Leipzig in 1926; but it would be the greatest mistake to imagine that what he has written is just a magnified review of Voretzsch's book.

Far from it ! It is in fact a most important contribution to the story of the beginning of the relations of France with China, and it contains incidentally the detailed account of one sad incident in the troubled history of European trade at Canton which will interest English readers no less than French. Professor Pelliot devotes his attention principally to bibliography and biography ; and he does so with that profound learning, sound judgment, detail, and sensitive feeling for exact scholarship which surprise and delight the reader afresh as each new work comes from the press. He himself possesses one or two unpublished MSS. which are good contemporary authorities for the voyage, he has found and seen others, and seems to be on the track of yet more ; but it is when he comes to biography that the fun begins. Every member of the crew lives again for us. And what a crew it was ! And how full of humorous and dangerous situations the voyage ! The project was started, it seems, by the Jesuit Bouvet who wanted first a free passage for the party of scientific men and artists whom he was taking to Peking, and secondly the appearance of some sort of embassy sent to China from the king of France. It was taken up by a merchant adventurer, Jean Jourdan, who thought that China would be a good market for an excessive consignment of mirrors of which he had somehow become possessed. " Figure jusqu'ici assez énigmatique que celle de Jean Jourdan. Pendant une vingtaine d'années, il fondera une série de compagnies, passera sans se décourager d'une affaire à l'autre, sollicitera, intriguera, se plaindra, sera engagé dans une multitude d'instances dont il ne verra pas même la fin, tentera de Lorient, en 1710, et comme toujours avec l'appui de Pontchartrain, de faire établir des chambres d'assurances maritimes dans les principaux ports du royaume, et ceux qui se sont occupés du personnage ont su de lui si peu de chose qu'ils n'ont pas même pu fixer la vraie forme de son nom." But we know his full name now. He formed a company to trade with China, and obtained the *Amphitrite* from the king

on the express condition—and here at once we foresee the comic dilemma in which Bouvet was placed when at last they reached Canton—that she should not figure as a king's ship in China. On board, when she sailed from La Rochelle on 6th March, 1698, there were the party of nine or more Jesuits with the Italian painter G. Gherardini, there were three representatives of the company, there were two representatives of the French East India Company to see that no poaching was done on the way, there were eight "miroitiers" in case the mirrors were broken or damaged on the long voyage through the tropics, there were a few miscellaneous persons, and there were the crew proper, chosen for any reason except competence, experience, or the captain's good pleasure. There was the captain himself, de la Roque, who had been forced by Pontchartrain upon the unwilling promoters of the voyage: "Mr. de la roque estoit un homme de 50 ans bien fait de sa personne que les officiers surnommoient le beau tres galand avec les dames, auoit eu souuent des affaires dhonneur dont il sestoit tiré a son aduantage, auoit esté blessé dangereusement au col a la uigoureuse attaque du fort et de lisle de tabago lorsque le mareschal destrees la prit sur les holandois l'an [1678] mais ces bonnes qualités estoient trauerseés par beaucoup damour propre un esprit inquiet et malin uiolent et emporté lauarice et par la hauteur dont il traitoit ceux qui seruoint sous ses ordres et difficileux pour ceux qui le commandoint, dailleurs les frequens passages de la ligne equinoxiale et les chaleurs des tropiques acheuerent debranler son cerueau deias en desordre . . ." But this was written by Lagrange, and Lagrange had been put on board by the king, and the captain had greeted him with "Vous n'aurez pas d'agrément avec moi; prenez vos mesures là-dessus". But we must not name them all. And as if an ill-assorted party of French naval officers and seamen, merchants and artisans, artists and missionaries cooped up together for an eight-months voyage were not sure enough of trouble they must needs

take with them two Irishmen as well! And yet by some miracle the *Amphitrite* performed her voyage without bloodshed and with considerable financial success.

Enough has been said to show that this book is not only full of detailed information of the greatest scientific value, but contains also much lively description of character and humorous accounts of the quaint difficulties in which all found themselves embroiled on their arrival at Canton.

A. C. M.

KARNATAK HISTORICAL REVIEW, vol. i, No. 1. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. 50, pls. 2. Dharwar: The Karnatak Historical Society. March, 1931. (To notice the new Historical venture.)

The national consciousness of the Kanarese-speaking peoples has been a persistent factor in the history of southern India almost from its dawn. Officially the term "Karnatak" is now restricted to the southern portion of the Bombay Presidency, the cradle-land of Kanarese culture. But this is a mere convention; geographically the Kanarese country includes parts of H.E.H. the Nizam's Dominions, of Bellary District in the Madras Presidency and most of the State of Mysore. In the seventh century A.D., under Chalukyan leadership, the Kanarese nation overran Peninsular India from Gujerat to Conjeeveram, and planted a capital between the deltas of the Kistna and the Gôdâvari. The Hoysalas nobly sustained the Chalukyan tradition, and bequeathed to posterity some of the most beautiful architecture the world has ever seen. It was Hoysala statesmanship that gave birth to the Empire of Vijayanagar, to unite Dravidian India and stem the tide of Islam for nearly three centuries. When that barrier broke, the Kanarese rallied round the illustrious dynasty that still rules Mysore, while the Muslims swerved south-eastwards to the Tamil Plains, and, in unwitting homage to the glorious past, named their new conquests "Carnatic".

For the study of this great national tradition, the Karnatak Historical Association was founded in 1914. In 1930 the Association, re-named the Karnatak Historical Research Society, decided to issue a journal. In this first number Mr. Govinda Pai discusses the date of the famous Jain colossus at Sravana Belgola; Father Heras identifies the puzzling "Tripurvata" of early Kadamba inscriptions with Halebid, where in later times the Hoysalas established their capital; Dr. R. Shamasastri examines the authorship of the Kanarese works *Ajita-Purāna* and *Gadāyuddha* and infers that they were written by different persons; Mr. Bengeri summarizes a survey of the inscriptions of Hāveri in Dharwar District carried out by a committee of the Society; Mr. Sharma contributes a study of the status of Jainism under the Kadambas; Mr. Karmarkar describes the administrative system of the Chalukyas, and Mr. Alur concludes with a short note on the inscribed and sculptured "hero-stones" to be found in almost every village in the Kanarese country.

It would be difficult to improve on this choice of material, its relevance and the modesty, sanity, and conciseness of its presentation. The Kanarese are quick enough to take what they fancy from the cultures of other nations, but they are not going to be submerged. This modest little journal is, in effect, a healthy protest against the ostracism of Dravidian studies in academical curricula. The venture deserves success.

F. J. R.

CORPUS OF DATED PALESTINIAN POTTERY. By J. GARROW DUNCAN. Including Pottery of Gerar and Beth-Pelet, dated and arranged by Sir Flinders Petrie and Beads of Beth-Pelet dated and arranged by J. L. STARKEY. pp. 21, pl. 144. London: British School of Archæology in Egypt. 1930. £1 10s.

This work is devoted to the reproduction of line drawings of Palestinian pottery, arranged in types which range from the

saucer to the bottle. The brief introduction contains a discussion of the evidence for dating, a description of the characteristic wares of the different periods, and a short note on method by Sir Flinders Petrie. It is intended only as a manual for the use of workers in the field, and should admirably serve that purpose. Workers in other archæological fields will also frequently turn to it for comparative purposes, and they will not without cause complain of an insufficiency of information. The curious resemblances that are to be found between the "Philistine" ware and the painted pottery which has been obtained from Nihawand, the common occurrence of the "pedestal bowls" which are certainly not braziers over a very large area in the Near East at a much earlier date than they occur in Palestine—these and such questions are matters on which something might have been said. The volume is, however, a monument of hard and dreary work, and the authors are entitled to the gratitude of all scholars who use the book.

75.

SIDNEY SMITH.

'OMAR KHAYYÁM. The Persian Text with Paraphrase, and the First and Fourth Editions of Fitzgerald's Translation. By Brigadier-General E. H. RODWELL, C.B., I.A.(Ret.). 10 × 6½, pp. xii + 95. London: Kegan Paul, Trench, Trubner & Co., Ltd. 1931. Price 15s.

Admirers of Fitzgerald must have often wished for a book which would give the original Persian text from which the English quatrains were derived. General Rodwell's book shows this in a very clear and attractive manner, and it may be commended to all lovers of Fitzgerald. It is beautifully printed. There are four or five misprints in the Persian text, and one in the reprint of Fitzgerald's Introduction—besides the change from capitals to small letters in many words. This is, however, perhaps a small matter.

General Rodwell says he is also concerned "with the

actual genuineness of the verses ascribed to 'Omar Khayyám'. But he does not give us any real help in this matter. A long list of MSS. and texts is given, but it is difficult to see why the particular text printed is adopted or should be preferred. To the general reader the notes in the Appendix at the end of the book are of little interest; to the critical scholar they are rather unsatisfactory, as they do not give the original Persian and do not explain why one version should be accepted rather than another. And a good many criticisms of particular points in the notes could be made. Nevertheless it is only fair to recognize that the author has been successful in his main object, and has given us a pleasing and useful book.

232.

C. N. S.

RELATIONS OF GOLCONDA IN THE EARLY SEVENTEENTH CENTURY. Edited by W. H. MORELAND, C.S.I., C.I.E. $9\frac{1}{2} \times 5\frac{1}{2}$, pp. li + 109 + xlviii, maps 2. The Hakluyt Society Series II, vol. lxvi. London: Bedford Press. 1931.

This volume contains three accounts of the Mahomedan kingdom of Golconda, as it appeared to one English and to two Dutch merchants in the early portion of the seventeenth century. The account of the Englishman, William Methwold, was written for Samuel Purchas and published by him in his *Pilgrimage*. The Dutch accounts have been translated by the Editor and appear for the first time in English: one of them, indeed, has not been previously published. While they do not add greatly to our historical knowledge of Golconda and the east coast of India, they furnish a wealth of information regarding the social and commercial conditions of the country. It is hardly necessary to say that the work of editing has been performed by Mr. Moreland in a manner that is beyond praise. He has identified with practical certainty the author of the Dutch relation which has remained

anonymous. The names of men and places mentioned in the three Relations have been traced with much skill, and it is practically impossible to cavil at any of Mr. Moreland's conclusions or inferences. His special knowledge of the commercial and industrial conditions of the Mogul period has invested his remarks on trade and on currency weights and measures with peculiar authority.

Such accounts have a special value of their own as a contemporaneous picture of the period, especially at the present day when there is a tendency among some writers to dwell on the glories of Indian kingdoms without too much attention to their defects. There can be no dispute as to the fairness and honesty of these accounts. That of Methwold was indeed written for publication, but it was the work of one of the best of the servants of the English Company of the period. The relations of the two Dutchmen were merely official reports for the information of their superiors at home. The three accounts confirm and amplify each other to a remarkable extent, and are entirely free from any sensationalism. The picture which they combine to give of the country shows a people miserably poor with great wealth at the Court, and a Revenue system under which Governors and farmers could only obtain the sum required by the Court by force and extortion, with a personal liability of disgrace and chastisement if they failed. Corruption and bribery were everywhere prevalent, while slavery and suttee were not uncommon. The accounts of widow-burning are, indeed, among the best to be found anywhere, and it is to the credit of the Moslem Government of Golconda that it seems to have done more in attempting to check the practice than the Mogul rulers of the period. The book as a whole gives a valuable account of a comparatively little-known part of India in the early days of European commercial enterprise.

STUDIES IN INDIAN HISTORY. By SURENDRANATH SEN.
8½ × 5½, pp. viii + 266. Calcutta: University of
Calcutta. 1930.

Dr. Sen has continued his examination of Maratha history in this valuable volume. Most of the papers which compose it have appeared elsewhere, but it is convenient to have them in this revised form, while of the new papers the translation of the instructions of the Marquis of Alorna, Viceroy of Goa, to his successor is especially valuable. Dr. Sen's gleanings from the Portuguese records at Goa and in Portugal are of much interest. He does not disguise the hurried and incomplete nature of his researches into these records, but he has at least indicated the amount of material yet unsifted which may yield valuable results to other inquirers. The claim of the Portuguese to maintain their title to be rulers of the Asian seas up to the end of the eighteenth century has a pathetic interest in view of their impotence against their Maratha neighbours, to say nothing of their infinitely more powerful European competitors. It is also interesting to have the Portuguese account of their abortive joint expedition with the English of Bombay against Angria. It is clear that the Portuguese were so afraid of the Maratha power that the English complaint of half-heartedness amounting to treachery was not unreasonable. It is possible to differ on some points from Dr. Sen's views and statements. The fact that Tipu Sultan protected and assisted a Hindu *Mattha* or monastery is curious and interesting, but it does not prove Tipu to have been otherwise than a fanatical and bloodthirsty tyrant, or that he was better than his father, Haidar Ali. The evidence is much too strong to the contrary. Dr. Sen objects to the Angrias and other Marathas being regarded as pirates, and suggests that they were no worse than the European powers which seized such ships as did not carry their passes. The difference clearly was that the Angrias were as often as not acting independently of, if not in actual opposition to, their nominal rulers; that their vessels were not ships commissioned

to make captures, but a collection of small craft ; and finally, in their treatment of their unfortunate captives. In the same way, Dr. Sen claims that one Appaji Pandit who commanded ships belonging to Damaji Gaekwar was an Admiral and not a pirate. It does not appear from Baroda history that Damaji, though he had a large army, ever possessed a regular fleet, and in any case he was on friendly terms with the English when his ships were annoying their trade. We think, therefore, that Appaji might fairly be regarded as a pirate, though his death showed him to be a gallant fighter. Dr. Sen has argued to the same effect in his "Military System of the Marathas" but without being to our mind convincing. Dr. Sen rightly identifies the "Chauthia Raja" who levied *Chauth* from the northern territories of the Portuguese with the Raja of Ramnagar, but he might have stated that the latter is identical with the Raja of Dharampur, the present title of the State. Similarly, when stating that the Bhonsla was the Sardesai of Kudal, he might have said that he was better known as the Khem Sawant of Sawantwádi, also the present-day title of this ancient State. Dr. Sen's statement may cause confusion as in the time of the Bijapur kings there was a Desai of Kudal who was a Brahman, not a Maratha. Dr. Sen states that the Portuguese Viceroy from 1744 to 1750, the Marquis of Alorna, occupies a very high place in the history of the *novas conquistas*, or the newly conquered portion of the territory of Goa. The term is, however, properly applied to the territory which was seized by the Portuguese at the end of the eighteenth century during the quarrels between Kolhapur and Sawantwádi, and which was not finally annexed by Portugal till 1803, long after Alorna's day. These small differences of fact and opinion do not, however, seriously affect the value of the book. We hope that Dr. Sen will continue his researches into Maratha history, and that the University of Calcutta will continue to publish the results.

JUDAH HALEVI'S KITAB AL KHAZARI. Translated from the Arabic. New Revised Edition. By H. HIRSCHFELD. $8\frac{1}{2} \times 5\frac{1}{4}$, pp. 293. London: M. L. Cailingold. 1931. Price 7s. 6d.

By the end of the eleventh century the metaphysical speculations of the Mutakalimin and Muhtazila almost tended to confuse the mind of the pious. Ghazali turned away from all these speculations and opened a new way of approaching the great problems of life. The Jews who lived under Arab influence followed suit. After Saadyah had written his great work on faith and principles, Jehuda Halevi, the greatest Jewish poet of the Middle Ages, following the example set by Al Ghazali, composed a book in which he endeavoured to develop on a similar basis the philosophy of the Jewish religion. The background is the history of the conversion of the Chazars to Judaism, and the book is cast in the form of dialogues, at that time so popular among the Arabic writers. But Jehuda Halevi does not follow entirely their example. His questions are not of a merely abstract character. On the contrary, they are thoroughly practical. Here it is the king who wishes to understand the fundamental principles of Judaism before he accepts them. The representatives of the two rival religions had approached him already and presented him with their views. The Arab when asked by the king whether he was to chose Christianity or Judaism, answers in favour of Judaism, and the Christian, asked whether he should choose Islam, also replies in the same manner. In this book we have, then, a complete exposition of the fundamental principles of Judaism.

Jehuda Halevi based his religious theory on the historical fact of the revelation. It was witnessed by the whole people, it was not a revelation vouchsafed to a single man, it was not bound up with the belief in an individual, but it was a message given to the Jews selected for that purpose to carry it to the world. It was a message of the unity of God and the brotherhood of men. In five chapters Jehuda Halevi slowly

develops the various principles of Judaism, discusses in detail the value of the ceremonies and religious practices, touches upon the grammar and other teachings of the Bible, with great dignity and acumen points out the weaknesses of Christianity and Islam, he refutes the claim of the Karaites of being the true interpreters of the Bible in Jewish tradition, and thus presents the reader with the whole system of the Jewish faith in such a manner as to cause the king to declare himself thoroughly satisfied and to accept Judaism. Hence the name of the book *Kitab al Khazari*.

There is throughout a passionate longing for Palestine and the hope of a messianic redemption. The book was originally written in Arabic, soon translated into Hebrew, and then into many other languages. The first edition of the Arabic original is due to Dr. Hirschfeld. He also translated the book into German many years ago and then into English, and now he has reprinted that English edition in a revised form. It was no easy task to render it into fluent English, but Dr. Hirschfeld has entirely succeeded. In addition to the text, a very illuminating introduction has been given by Dr. Hirschfeld, who has added a sketch about the Chazars and the translation of the letter sent by the king Bulan to Hasdai aben Chiprut, the great patron of learning at the court of the Sultans Abdulrahman and Hakim in Cordova; also a map of the ancient kingdom of the Chazars is added as well as a biography of Jehuda Halevi. The book is very handsomely printed and cheap for the price. It is a valuable contribution to the history of Jewish philosophy in the Middle Ages of which Jehuda Halevi is one of the most prominent representatives.

M. G.

SOCIETY FOR PROMOTING THE STUDY OF RELIGION : JOURNAL
OF TRANSACTIONS. Vol. 1, No. 1, January, 1931.
pp. 40. London : Luzac & Co. Price 2s.

Under the auspices of the Society for Promoting the Study of Religion a number of public lectures have been given. These

are now published under the title of the *Journal of Transactions*. These lectures are all written in a more or less popular form. Dr. Barnett gives a succinct survey of Vedic religion; Sir Loftus Hare deals with the teachings of the Upanishads; and Mrs. Rhys Davids with the early teaching of Buddha. Sir Loftus Hare draws his conclusions from the teaching of the Upanishads, Mrs. Rhys Davids from the Pitakas. The only question one would like to ask is: What is the exact date of the Upanishads? Opinions differ very widely. Much depends upon the time when these have been written down in the form in which they are now. Mrs. Rhys Davids has subjected the Pitakas elsewhere to a profound critical investigation, and her lecture gives here some of the results at which she has arrived. Her lecture, therefore, rests on the results attained by her. The two latter deal with the great problem of the position of man according to these religious systems and metaphysical speculations, and his final destiny in the world. To Professor Langdon we are indebted for a very lucid exposition of the Babylonian teaching concerning man, his status in the world, his relation to the powers which rule the world, and the conception of life after death.

Each of these lectures may claim a special merit of its own, and they will give to the reader a sufficiently comprehensive view of the subjects treated therein by experts.

M. G.

LES RELIGIONS ORIENTALES DANS LE PAGANISM ROMAIN.

By FRANZ CUMONT. 4th Edition. $9\frac{1}{4} \times 7$, pp. xvi + 339, pls. 16, figs. 13. Paris: Paul Geuthner. 1929. Fcs. 80.

The notice about the German edition published on p. 712 of the 1931 *Journal* could apply to the French original edition. The contents are practically identical, except for some additional notes to the German edition; but the difference is most marked in the style of the publication. The French volume is sumptuously printed and the plates are of

exceptional beauty. It is all done on a grand scale, whilst the German edition is more sober in its aspect and very compact. It is, therefore, much more easy to handle.

The student has now access to two editions, both of equal value, and in whichever language the book has appeared it is an important contribution to the history of the introduction of the Oriental cults into Rome. As already remarked in the above-mentioned notice, Professor Cumont's work rests on profound and scholarly investigations on a subject of which he has made himself special master, still, some of the calculations cannot be regarded as final. The new discoveries in the near East bring to light unexpected connections between the civilizations and the various cults prevailing among the nations of the Mediterranean basin. These are bound to modify some of the conclusions. The Hittite monuments being now deciphered in a more satisfactory manner are sure to yield unexpected results as to the form which these religious cults have taken among the nations of Asia Minor, and as to the time and means of penetration among the various nations. Nor can the chronological sequence such as has been presented here be admitted as giving us a true picture of the order in which these various systems have entered Rome. They often overlap. Still, the work of Professor Cumont will always remain a source of invaluable information and a starting point of comparative studies on the influence which the various cults of the East have exercised upon one another and upon the Roman Empire.

199.

M. G.

PETRA ET LA NABATÈNE. L'Arabie Pétrée et les Arabes Du Nord dans leurs Rapports avec La Syrie et la Palestine jusqu'à L'Islam. By A. KAMMERER. Vol. i: Texte. 10 × 6½, pp. xiii + 630, 7 pls., 4 maps, 74 figs. Vol. ii: Atlas, 152 pls. Paris: Paul Geuthner, 1930. Fcs. 300.

This history of Petra and the State of Nabatene has fortunately been compiled by a geographer, the author of an

important study on the Red Sea and its surrounding countries, lately issued under the auspices of King Fuad. For Petra arose as a caravan city, dependent upon the frankincense and spice traffic from South Arabia, and only a geographer can hope to cope adequately with the history and topography of fluctuating trade routes that finally called into being a desert emporium with a theatre capable of seating 3,000 persons. The maps alone are invaluable, and the geographical chapters by far the most important.

This is the first consecutive history of Petra, compiled from a vast periodical literature, mostly in French and German, with which the reviewer, as a member of Lord Melchett's expedition,¹ sent out in 1929 to make preliminary excavations at Petra, has had to cope, in default of M. Kammerer's eagerly awaited book. It attempts to summarize all previous knowledge and, as a compendium of what is to be gathered about Petra from literary sources, will remain an indispensable work of reference. Readable, strictly speaking, it is not, neither is his use of the few ancient sources that survive infallible.

Diodorus Siculus (whose graphic account of the two Greek attacks on Petra in 312 B.C., ordered by Antigonos, was derived from the historian Hieronymus of Cardia, himself on the headquarters staff of that general), also describes an expedition sent to the Dead Sea, led by this same Hieronymus, to corner the asphalt which Egypt required for embalming. He was defeated in a battle on the lake by the local Arabs, who drew great profit from the bitumen industry. Yet M. Kammerer denies the existence of asphalt in the Dead Sea in any quantity, or that it was worked commercially. Archæological evidence corroborates Hieronymus, for bitumen is frequently found in middle-bronze age sites in Palestine and

¹ A preliminary account of this expedition was published in the *Geographical Journal* of November, 1930; and Papers were read at the Meeting of the British Association in 1930 and the Oriental Congress at Leyden in 1931.

in Hellenistic buildings at Jerash, and is far more likely to have come from the Dead Sea than from Mesopotamia. The author also denies that the Nabatæans had any maritime activities, flatly contradicting Artemidorus, who described their piracy on the Red Sea in rafts against vessels on their way from Egypt.

What must be added to his tale, as M. Kammerer frequently reiterates, is the interpretation of the excavator. Yet, in default of actual objects, now at last revealed in a stratification that yields dates for the duration and occupation of the city, the common-sense of the author has frequently forestalled the conclusions of the archæologist. Petra has been for far too long the spiritual home of the theorist, who conceived it as a necropolis and religious centre, without houses; seeing cult places in every rock chamber on which the symbol of the local god was carved, as well as blood channels in quarry cuttings and in the numerous catchment areas for rain water, every drop of which obviously needed to be stored.

The caves, which the author and all writers on Petra think of as primitive shelters, were superimposed streets of houses, as elaborately made as the well-known tomb facades. In most cases their built-up stone fronts have fallen down, leaving gaping but colossal "liwans", some as much as 30 feet high, squared out of the rock, with traces of painting and encrusted decoration, once parallel with the productions of Pompeii and the recently excavated Ptolemaic houses at Hermopolis in Egypt. There are house-quarters enough to accommodate a city population, as well as summer retreats, in the sunless clefts of the rock, to which the rich merchant, Greek, Syrian, Jew, or Nabatæan, migrated in the great heat.

The Petra of Provincia Arabia, Trajan's annexation, was mostly built of stone, now tossed into heaps by earthquakes, and what survives is that part of the Petra of the Nabatæan dynasty that was carved out of the rock. The finds in the rubbish dumps and the contents of the unrifled tombs, with one exception, date before the annexation of A.D. 106, and

prove that a walled town existed in the fourth century B.C. M. Kammerer's suggestions on points such as the identification of the tombs of the kings and the analogy of the tomb complexes (described in the one surviving Nabataean tomb inscription from Petra of any length) with Moslem religious tomb foundations, are stimulating and new. The immense labour of such a book, unlightened by more than a fleeting contact with the marvels of the place, compels admiration and thanks.

272.

AGNES CONWAY.

LES ORIGINES DE L'ASTRONOMIE CHINOISE. By LEOPOLD DE SAUSSURE. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. x + 594. Paris: Maisonneuve Frères, 1930.

Gaubil and Biot, despite their mistakes, did laudable pioneer work in the study of the history of Chinese Astronomy. Schlegel in his erudite tome, *Uranographie Chinoise*, notwithstanding the impossible inferences he drew, left us in his debt for a vast amount of useful information. Leopold de Saussure, in his numerous articles, at times somewhat polemical, applied his unique gifts to a further elucidation of the subject. M. Gabriel Ferrand and the publishers have now conferred on us the favour of collecting de Saussure's treatises into one volume. Until nearly the close of his life, the author, like Gaubil, Biot, and Schlegel, took the view that it was Chinese astronomers who first plotted the sky into twenty-eight asterisms or constellations, and that the rest of Asia adopted their systems from China. The main object of Schlegel's work was to prove that the Chinese had formed their system 18,000 years ago. Leopold de Saussure, while repudiating this extravagant claim, was a vigorous protagonist of the theory that the Chinese had formed their system 4,000 years ago, but as M. Ferrand, in his introduction, says: "de Saussure a varié d'opinion dans ses recherches sur l'astronomie Chinoise. Il était tout d'abord

incliné à croire que le système astronomique iranien avait été emprunté à la Chine, mais de nouvelles études l'ont amené à adopter l'opinion inverse, ainsi qu'il l'indique lui-même dans une lettre adressée au docteur Legendre, publiée par celui-ci dans *La Nature* (15 Mai 1926, supplément, p. 157) ”.

It must by no means be inferred from this admission that his work was in vain. Far from this, he has carried us much further forward than his predecessors, and—notwithstanding his strictures on Chalmers, who more correctly surmised that the Chinese system was essentially of foreign importation—he has thrown a light on Chinese astronomy which makes this book of value to every student who is careful to remember that, whatever their later contributions, the Chinese were not the original plotters of the constellations, whatever race that may have been.

There is much in the book that has already been justifiably criticized on historical grounds, not least at the scholarly hands of M. Henri Maspero, but to the judicial student of historical astronomy these pages will convey information which cannot be obtained in such form elsewhere. It is therefore a pleasure to welcome the issue of the present volume, not least in memory of a scholar who combined the unusual gift of a knowledge of astronomy with a knowledge of China and its language.

W. E. SOOTHILL.

DAS LEHRBUCH DER SIEBEN KORANLESUNGEN. Von ABU 'AMR 'UTMAN IBN SAI'D AD-DANI. Herausgegeben von OTTO PRETZL. Bibliotheca Islamica, Band ii. 10 × 7, pp. 228. Istanbul: Deutsche Morgenländische Gesellschaft, in Kommission bei F. A. Brockhaus, 1930.

The early Muslim accounts of the manner in which the utterances of Muḥammad were put together after his death to form the Qur'ān as we now have it bear upon them all the marks of probability. They indicate that in Islam itself

there is recognition of the fact that defective human memory and a defective system of writing left room for occasional doubt about the correct reading of a word in the sacred text, and so explain the need of a work like the present one. Not that the variations set down ever make a more substantial change in the significance of any passage than the Masoretic notes do in the Old Testament. All that the present work claims to do is to make it easy for the pious to know how the seven classic "readers" pointed or vocalized certain consonantal outlines of which the punctuation or vocalization was in doubt. The actual *lectiones variae*, which illustrate within what limits Islam recognizes the possibility of textual criticism, are preceded by short chapters dealing with the principles adopted by the "readers" on certain questions of orthography and pronunciation. These sections have their interest for the Arabic grammarian. A chapter, further, is devoted to brief biographies of the "readers", of whom only two, as the author points out, were Arabs; the rest being *mawālī*. It is worthy of note, in passing, that all of them, as we can gather from Ibn Khallikān, did their work after the close of the first century of the Hijra, and presumably after the invention of *i'rāb*.

The editor's introduction to the work is in Arabic, perhaps to encourage Oriental interest, although a European tongue might more usefully have been employed. In the first section the value of the various traditional readings for Qur'anic exegesis and interpretation is asserted. The second section gives a life of the author, Abu 'Amr, who was born at Cordova in 371/981-2, and after the normal journeyings undertaken for the purpose of study with noted teachers settled at Dania, where he died in 444/1053.

The work is well printed, and the text has been corrected with care.

LE CORAN (Lecture par Excellence). Traduit par AHMED LAIMECHE et B. BEN DAOUD. Paris, n.d.

The attitude of the translators towards their work is indicated by the meaning they give to *Qur'ān* in the title and by their quotation, on the cover of the book, of Deuteronomy xviii, 18. On the whole, the translation is fairly made, though without distinction and at times interpretative rather than literal, so that it would in places be hard to justify. Instances noted are :—

Sūra ii, 186 . . . ne vous livrez pas aux exactions (Dieu n'aime pas) les exacteurs for لا تعتدوا . . . المعتدين.

Sūra x, 2 . . . Annonce aux croyants qui font de bonnes œuvres qu'auprès de leur seigneur leurs œuvres sont agréées for

بَشِّرَ الَّذِينَ آمَنُوا أَنَّ لَهُمْ قَدَمَ صِדْقٍ عِنْدَ رَبِّهِمْ

Sūra x, 5 . . . C'est lui qui fit le soleil pour répandre la clarté for (ذات ضياء Bayḍāwī) جعل الشمس ضياءً.

Sūra x, 39 . . . C'est une imposture for افتراء and *Sūra*

xviii, 4 . . . en toute fidélité for حُنفاء.

The work lacks both introduction and index, but there is a *Table des Sourates suivant l'ordre chronologique de la révélation*. The authority for it is not stated.

R. LEVY.

AN ELEMENTARY MARATHI GRAMMAR FOR ENGLISH BEGINNERS. By C. N. SEDDON, M.A. 7½ × 5, pp. vi + 62. London, Bombay, Calcutta, Madras: Oxford University Press, 1931. 3s.

This little book promises to be of much use to those seeking an introduction to the Marāṭhi language. In a short preface, the author explains that his object is to meet the difficulties

which most commonly puzzle English students who have no knowledge of Oriental languages. For such, he has wisely avoided the transliteration of ر as *r*, and adopted the more obvious *ri*.

Mr. Seddon deals simply and effectively with the different parts of speech, the genders, declensions, and conjugations. He also gives an adequate explanation of the difficult impersonal form of expression so commonly used in Marāthi. It takes some little time for the beginner to learn to represent "the man beats the dog" by the equivalent "by the man to the dog it was beaten".

We are not sure that Mr. Seddon's introductory statement, that Konkani is little more than a Marāthi dialect, would meet with general acceptance. On p. 1 an unfortunate oversight has allowed the misprint $\text{झ} = jh$ or dhz to stand, when obviously dzh is intended. The work should prove popular and useful.

R. E. E.

USĀMAH'S MEMOIRS ENTITLED KITĀB AL-I'TIBĀR BY USĀMAH IBN-MUNQIDH. Arabic text edited from the unique manuscript in the Escorial Library, Spain, by PHILIP K. HITTI. Princeton Oriental texts, volume i. $9 \times 5\frac{3}{4}$, xiv + 240 pp. Princeton: Princeton University Press, 1930.

The *editio princeps* of Usāmah's Autobiography was published by Derenbourg as long ago as 1885, and a French translation by the same scholar—which is the basis of the German and English versions by G. Schumann (1905) and G. R. Potter (1929)—appeared ten years later. It was high time that Derenbourg's work should be taken up at the point where he left it, and this is what Professor Hitti has done. Both his translation, entitled *An Arab-Syrian Gentleman and Warrior of the period of the Crusades* (Columbia University Press, 1929), and the present critical edition of the text are

founded on independent study of the incomplete and carelessly written MS. which has saved from oblivion one of the most remarkable books in Arabic literature. The results attained are considerable enough to justify the hope that the limits of possible advance will soon be reached. Limits there must be, for the imperfections of the MS. render conjectural emendation of many passages inevitable, while the author's (or his copyist's) colloquial style, abounding in popular idioms, often makes him difficult to understand; and in this connection Professor Hitti's familiarity with modern Syrian Arabic has proved itself to be a valuable asset. His corrections of Derenbourg are usually successful, though at least once

(in the substitution of مَخْرَج for مَخْرَج, p. 23, l. 19) the older reading seems preferable. On p. 113, ll. 2-3, where

the MS. has *القل مجانيق . . . ترمى القل* (Derenbourg, *القل*;

Hitti, *الثقل*), I suggest *الثقل* (pl. of *ثقال*, mill-stone);

this would confirm Professor Hitti's emendation *قوف* two

lines further on, for *قوف* is a species of rock from which mill-stones were made. In reading about fifty pages of the text I have noted half that number of places in which its soundness appears to me to be questionable, but very few in which a sure or even plausible remedy occurs to me. Certainty may

be claimed for *مقترنين* instead of *مقترين* (p. 50, l. 14)

in a passage referring to the famous exploit of al-Find, who transfixes two horsemen with one thrust of his spear. As the victims were riding, one behind the other, on the same horse (*Ḥamāsa*, ed. Freytag, p. 254, l. 6 from foot and foll.),

مرتدفين = *مقترنين* is obviously the correct reading.

On p. 28, penult., Usāmah describes a fine saddle as مَنبَتٌ بسواد مُجَرى, which Professor Hitti translates, "it was quilted [and] had a black border." How مُجَرى can mean "bordered" I do not know; probably we should read مَجْرَع, i.e. "with black stripes (or spots)". P. 45, l. 2, Professor Hitti reads لَا تَهْذِرْ, but تَهْذِرْ is nearer the MS. (تَهْدِي) and more suitable in this context. In the next line لَا تَغْتَرِّ "don't deceive yourself" is mistranslated. P. 11,

l. 3, عِلَّةٌ سَفَرِي وَقَدْ أَزَاح: the meaning is "he had removed the difficulties in the way of my journey", as the expert physician removes a disease.

Besides an introduction in Arabic, critical and explanatory notes at the foot of each page, and index, the new edition provides a sketch-map showing the places visited by Usāmah in Syria, Egypt, and 'Irāq. Its handy form and excellent typography should encourage many to make themselves better acquainted with the author than they can hope to do through the medium of any translation. The text is broken up into sections and paragraphs to which appropriate headings have been supplied. This innovation, though convenient to the reader, has obliged me to re-write several lines in the present notice, and I doubt whether it will be generally approved.

THE ORIGINS OF THE DRUZE PEOPLE AND RELIGION, WITH EXTRACTS FROM THEIR SACRED WRITINGS. By PHILIP K. HITTI, Ph.D. Columbia University Oriental Studies, vol. xxviii. 9 x 6, viii + 80 pp., 1 plate, 1 map. New York : Columbia University Press, 1928. 10s. 6d.

Fascinating as it is, the study of origins can seldom lead to precise and definite results when the analyst is confronted with a witches' cauldron in which the same ingredients are constantly being mingled in different proportions. The Druze doctrine emerged from the welter of sects and heresies classified as "Shī'ite", and for the most part it is nothing but a minor variation of the species, though its fossilized character makes it particularly valuable to modern students. Professor Hitti's personal association with the Druzes and first-hand knowledge of their writings enable him to supply many important details concerning their beliefs and practices, such as "the cult of the calf", metempsychosis, the religious hierarchy, etc. As regards the racial problem, he rejects the view of Hogarth and Gertrude Bell, who held the predominating element to be Arab and Aramaic. In support of his hypothesis that originally the Druze people "were a mixture of Persians, 'Irāqīs, and Persianized Arabs", he gives the following reasons : (1) Darazī's choice of Wādi 't-Taym as the starting-point for his propaganda indicates that the population were already imbued with the tenets of the *ghulāt* or extreme Persian Shī'ites ; (2) both Darazī and Ḥamza, the founders of the doctrine, were of Persian or Turco-Persian descent ; (3) the Druze religious vocabulary includes several Persian words ; (4) the leading families among the Druzes have always been of Kurdish, Persian, or 'Irāqī origin. There are two photostatic reproductions of title-pages of MSS. as well as a sketch-map.

IBN KHALDUN, HISTORIAN, SOCIOLOGIST, AND PHILOSOPHER.

By NATHANIEL SCHMIDT. $9\frac{1}{2} \times 6$, pp. 67. New York :
Columbia University Press, 1930.

As the author remarks in his opening chapter, "there is little evidence that even the name of Ibn Khaldun was known in Europe, outside of Turkey and for a short period in Spain, until the nineteenth century," and it is only within comparatively recent times that his importance has been discovered by scholars who are not specially concerned with the history of Islamic civilization. Professor Schmidt's judicious estimate of him derives much of its interest from the way in which he continually brings the ideas put forward in the *Muqaddama* into connection with those of mediaeval and modern historians and sociologists, and shows how the work of Ibn Khaldun, though reared on slight foundations, resembles the structure which is being built to-day on a wider and more solid basis. Some points, however, provoke dissent. To take one example, we may admit that Ibn Khaldun was not entirely lacking in idealism, but surely it is going too far to say that "he regards war as something abnormal". To him, such a view must have appeared to ignore the facts of history and human nature on which his theories rest. He neither approves nor disapproves of war as an institution; he simply accepts it, like any other social law, with all its good and evil consequences, and the military virtues play a great part in his conception of *'asabiyya*, the vital element in the body politic. Negative statements—"he was not an agitator for its abolition", "he was not a Darwinist before Darwin"—give a false impression. His views are always determined by strong practical sense and unshakable belief in the principle of causality. Hence he anticipated Darwin in assigning to the ape the position which more idealistic Muslim scientists reserved for the horse or the elephant. The account of Ibn Khaldun's life in chapter v refers to some curious details of his meeting with Timur, culled from the (as yet unpublished) continuation of his *Autobiography*, which in the opinion of

Dr. Ṭāhā Ḥusayn is undoubtedly genuine. A comprehensive, if not quite exhaustive, survey of extant manuscripts, editions, and versions adds to the usefulness of the volume.

R. A. N.

THE PERSIAN RELIGION ACCORDING TO THE CHIEF GREEK TEXTS. By EMILE BENVENISTE. Ratanbai Katrak Lectures. $7\frac{1}{2} \times 5$, pp. 119. Paris: Paul Geuthner, 1929. Fcs. 20.

The four lectures reproduced in this book were given at the Sorbonne in 1926, and form the first series of a quadrennial course instituted by Dr. Katrak, of Bombay, for the discussion of problems relating to the past of Iran. They deal with the analysis and interpretation of the well-known passages in Herodotus, Strabo, and Plutarch, over which so many battles have been fought. I can recommend Professor Benveniste's stimulating study to those who, like myself, are not experts in the subject; the few who are will appreciate his mastery of the material, whether they agree with his conclusions or not. Criticizing the faulty method hitherto employed, he points out that "the evidence of the ancients has always been examined as a whole, as if it belonged to the same period and relied on the same sources. . . . The only way is to examine them (the Greek texts) *individually*, and compare them with the Iranian texts." This process leads him to results of which the most important may be stated in his own words. "The Persian religion which Herodotus knew is not that of Zoroaster, but the primitive form of the Iranian religion, thoroughly impregnated with polytheism, and paying homage to the deified forces of nature . . . We have strong reasons for thinking that this very ancient god (Ahuramazda) was merely utilized and brought into prominence by the Zoroastrian reform. . . . These chapters of Herodotus give us a relatively correct picture of the religion of the Achæmenids. . . . Of all the indications by which

an attempt has been made to establish the hypothesis of a Zoroastrian Achæmenid dynasty, none will bear investigation." In his final lecture on Theopompus and Plutarch (pp. 69-117), the author has treated his theme with greater fullness than in the preceding pages. He argues that Plutarch's chapter must be regarded as an authentic and ancient exposition of Zervanism, which is really pre-Zoroastrian, though the Greeks from an early date attributed it to Zoroaster and the Magi.

There are too many misprints and other mistakes in the English translation, and the style is rather slovenly.

R. A. N.

MANOSCRITTI E CARTE ORIENTALI NELLE BIBLIOTECHE E
NEGLI ARCHIVI D'ITALIA. By GIUSEPPE GABRIELI.
10 × 7, pp. viii + 89, 3 pls. Firenze: Leo. S. Olschki,
Biblioteca di bibliografia Italiana, 1930.

What first strikes one on perusing this *catalogus catalogorum* is the peculiarly wide distribution of Oriental MSS. in Italy, a fact which may be explained by public and private enthusiasm for learning from the Renaissance onward, and also by the close political and commercial relations which existed at various periods between Italy and the East. Though most of these MSS. are now preserved at Rome, Milan, Bologna, Florence, Venice, and Parma, the remainder, amounting to at least 1,500, are shared by about forty cities and towns in different parts of the country. Thanks to Signor Gabrieli's laborious researches, we have before us a fairly complete account of catalogues and other notices of Hebrew, Syriac, Arabic, Persian, Turkish, Armenian, Coptic, Ethiopic, and Chinese MSS (together with some in less familiar tongues), owned by Italian and Sicilian libraries, museums, and record offices. The illustrated alphabetical list, beginning with Arezzo and ending with Volterra, comprises a large quantity of invaluable bibliographical information,

while another table shows how many MSS. in any particular language belong to each of the above-mentioned institutions. In the appendix a number of short hand-lists, unfortunately of little scientific use, are published for the first time.

R. A. N.

LA VIE DU BOUDDHA : et les Doctrines Bouddhiques. Par MARIE GALLAUD. 10 × 6½, pp. 220, 24 pls. Paris : Maisonneuve Frères, 1931.

In the absence of any introduction preceding these 220 pages, or of any indexes following them ; in the presence of the twenty-four “photogravures hors texte” culled from every variety of source, from India to Japan, and presented without any guiding principle, historic or other ; from the fact that the letterpress is an uncritical exposition of the contents of Pali and Sanskrit documents combined in a “mix-up”, without discrimination of the presumably earlier or later—from all this we are left to conclude, that the real object of the book may have been to be a guide to its illustrations. Divided, like an illustrious model, into three parts, the matter is on the founder and episodes in the life and teaching, on the development and decline of Indian Buddhism, and on the “sacred scriptures” and certain “opinions”. Thus the division lends itself well to historical treatment, had there been the will. At the outset, we do get a promise of this, but the wording is most unfortunate : “un des plus anciens livres du Canon pali, Les Jātakas.” And in what follows, quotations from Vinaya, Mahāvastu, Nidāna-kathā, etc. stand side by side in one “close-up”. The Benares Mantra is given, but whereas the categorical formula—a structure requiring years of ecclesiastical growth—is given verbatim, the real New Word, the Ends and the Man in the Middle Way, is made a mere preamble of reference. There is no reference to the religious conditions in India, of which the Sakyamuni’s gospel was the very child and outcome.

And in the second part, where most of us feel the need of historical suggestions, we are left with a few pages on Asoka and the Chinese pilgrims. It is only in the third division that the reader is given much useful information on documentary sources, on the external history of the spread of Buddhism, and the present state of the cult in Tibet and the Far East. The "Opinions" may also be informative to some. Accurate in every case they are not. I am classed with my late husband in having made a statement about Nirvana which I never made or held, we being the only "opinionists" for whom no reference checking the statement is given! But let this endorsement end a somewhat grouching critique: the writer "touches the spot" here in her very pertinent lament: "The conscientious students of Buddhism . . . who for nearly a century have been ardently bending over the canonical texts, have not, any more than Buddhists themselves, come to an agreement . . . as to what the most important (teachings) meant for the Sakyamuni himself." She is right. The rebuke is deserved.

C. A. F. RHYS DAVIDS.

TÜRK MUSIKISI KLASIKLERINDEN : İLÂHİLER : The Classics of Turkish Music: Hymns. Istanbul Konservatuvarı Neşriyatı (Publications of the Conservatory of Stamboul). 11 x 8, pp. viii + 48. Stamboul: Evkaf Press, 1931.

This is volume i of the publications of the Stamboul Conservatory of Music, which is to include the classical compositions of Turkish music. The present issue contains twenty-seven *tevchiks* of the birth of the Prophet (توشیحات)

(المولد النبوی), collected and noted by Ali Rifat Bey, Rauf Yekta Bey, and Zekâizade Ahmet Bey, who comprise the "Technical Section" (*Tasnif bey'eti*) of the Conservatory,

together with a preface by Rauf Yekta Bey, the President of the Section, dealing with the history of the *tevchiks*, their composers, and their poets.

The whole collection when completed will be a very valuable addition not only to our knowledge of Turkish music, but of

the ceremonies of the Muslim fraternities (طُرُق عليه) in

Turkey such as :—مَوْلَى, رُفَاعَى, قَادِرَى, بَدَوَى,

بَسْكَتَاشَى, سُنْبُلَى, etc., abrogated by Gazi, which origin-

ally numbered twelve. In addition there will be the morceaux sung in the mosques and at other religious ceremonies. One special musical monument will be a composition by one of the Superiors of the Mevlevi rite, erroneously termed the

Whirling Dervishes, named نَاصِي عُثْمَان دَدَه, which has for its subject a recital of the ascension of the Prophet

Muhammad (مِعْرَاجِيَه).

HENRY GEORGE FARMER.

TESTI RELIGIOSI DEI YEZIDI. By GIUSEPPE FURLANI.

Testi e Documenti per la Storia delle Religioni, vol. iii.

$7\frac{1}{4} \times 4\frac{3}{4}$, pp. 124. Bologna : Nicola Zanickelli, 1930.

The author of this small book gives us in a long introduction a succinct history of all the investigations hitherto carried out in studying the Yezidis. He passes in review numerous theories which have been advanced to explain the so-called "worshippers of the devil", who, as has been shown, are merely worshippers of the peacock and by a curious mistranslation of the name are believed to be worshippers of the evil spirit. Their beliefs have been connected with many of the ancient religions of Asia Minor, with the Manichean and Zoroastrian, and even with the ancient Babylonian, but, as

the author rightly remarks, most of the information has been derived from travellers who were just on a passing visit, and picked up here and there some haphazard information which has afterwards been presented to the reader as a true example of the sect and its practices. A few texts have, however, been published, and a little more light has now been thrown upon the actual beliefs of this sect.

The author pays a special tribute to Layard and Menant. He also mentions Menzel, Souiffi, and Anastas, and a few others. He then gives a full description of the religion, the cult, and the literature of the Yezidis. He then proceeds to give the translation of the texts, which he considers to be authentic. First the Book of Revelation, then a kind of cosmogony in which, no doubt, many traces of ancient worship can be found, and even parallels to the Mandeans. This he calls the "Scritto Nero". This is followed by a copy of the memorial presented by the sect to the Turkish Government when the latter endeavoured to recruit soldiers from them in 1847 and again in 1873. Then follows a short prayer of the Yezidis. In a note the author points out that a god to whom the Yezidis prayed, here fully described with all his qualifications, does not differ in any essential from the god of the Christians and the Mohammedans, and there is nothing of the devil in the prayer. It is directed in the first place to the angel peacock, and from him to God. Finally we have the panegyric of Šeyh 'Adī, almost a deified founder. Anyone interested in this sect can certainly use the book with great profit, although it is far from exhausting the subject. A critical edition of all the texts would have been a most valuable addition.

185.

M. G.

DIE DREI MÄNNER IM FEUER. By DR. P. CURT KUHLE.
pp. 171. Giessen: Alfred Töpelmann, 1930. 10s.

The author of this book has selected the episode of the three youths in the furnace, from the book of Daniel, for a

special and minute study. He has examined the chapter in that book verse by verse, and incident by incident, and he has endeavoured to try and find an historical background for the elements which have contributed towards the formation of that story. Incidentally he has had recourse to folk-lore, trying to find parallels in the legends and tales of the world, notably those better known in the eastern countries. To him this episode is nothing else but a tale drawn up or told by a pious Jew in Babylon, a kind of apologue for the encouragement and satisfaction of those who were steadfast in their faith, showing that God's help never fails. He points out that most of the incidents refer to the Persian period, all the dignitaries are those of the Persian court, and in the musical instruments some trace of Greek influence can be found. The story is much older than the Maccabean period, and belongs in all probability to the fourth century B.C.

The author then examines the apocryphal additions to the book of Daniel, the prayer of Azaria and the hymn of the three youths, sung by them in the furnace. He examines all the Greek MSS. extant, both the Theodotian and the LXX version, and he is satisfied that they all can be traced to one and the same old original. This he assumes to have been Hebrew. Then he retranslates it into Hebrew, but unfortunately he does not entirely succeed. The retranslation may be literal, but it is not in the true idiom of the Hebrew language. Following Schürer, but without any reason or justification, he declares the Aramaic text discovered by me to be a retranslation from the Greek. He has evidently not examined the proof adduced by me. It would be paradoxical to assume that the prayers and hymns were originally written in Hebrew whilst the story itself is written in Aramaic. The author tries to get over the difficulty by asserting that all the Aramaic texts in the book of Daniel were originally written in Hebrew, and then translated into Aramaic. His final conclusion concerning the book of Daniel is that the various chapters are independent of one another,

and that at a later time they have all been joined together into the present book. But this conclusion cannot easily be accepted. Considering that the last chapters are in Hebrew, and the beginning also in Hebrew, there is no reason why the intermediary chapters should have been translated into Aramaic. Thus the crux remains unsolved. Still, Dr. Kuhl has unquestionably greatly contributed, through his masterly examination, towards the explanation of this episode of the three youths and his book is, without doubt, a valuable contribution towards the elucidation of some of the many problems which the book of Daniel offers to the student.

N. R. M. GASTER.

LA PERSE AU CONTACT DE L'OCCIDENT. By ALI AKBAR SIASSI. 9 × 5½, pp. 273. Paris: Librairie Ernest Leroux, 1931.

The author of this work was one of a band of students sent to France a few years before the War, and is now a Professor at the Dāru'l-funūn of Tehrān, and Persian adviser to the French Legation in Persia. The book is divided into three parts—early relations up to the time of the Ṣafawīs, later history up to the War, and recent reforms.

The first and second parts are not particularly attractive. That Shāh Ismā'il adopted the Shī'a faith in order to consolidate Persian national feeling against Arabs and Turks is a very doubtful proposition. Uzūn Ḥasan is not correctly described as "un des Princes Timourides". It is hardly possible to state as an admitted historical fact that Shāh Tahmāsp was poisoned. That the Ṣafawīs favoured the development of contact with Christians seems a curious presentation of the facts.

But the important part of the book is the author's description of the present reforms. Professor Siassi is no admirer of the old régime, and he is an ardent believer in the capacity of Persians to take their proper place among modern civilized

nations. His discussion of the present situation is most interesting. It is natural that he should believe French culture most suitable for his country, and the French language the best medium of instruction. He would clearly like to follow the Turkish example and adopt the Latin script, but he fairly states the great difficulty presented by the existence of a vast and influential national literature written in the Arabic character. He urges that Persian students sent to Europe should be sent when quite young, and should stay long enough to assure a complete change of mental outlook. His criticisms and suggestions throw a clear light upon present conditions and future prospects, and should be read by anyone interested in a great experiment.

283.

C. N. S.

THE TRAVELS OF JOHN SANDERSON IN THE LEVANT, 1584—1602. Hakluyt Society, Second Series, vol. lxvii. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xlv + 322, 3 pls., 2 maps. London: For the Hakluyt Society, 1931.

The most interesting and valuable part of this volume, which is at least equal in these qualities to its predecessors, is Sir William Foster's introduction, which occupies the first 40 pages. He here introduces us to the writer of the manuscript which forms the basis of the present work—a young apprentice who later became a member of the Drapers' Company. He was transferred in 1584 to Constantinople, where he served the English Ambassador; he visited Egypt and Syria, Algiers, and Cyprus, but never penetrated further East than Damascus. He was a friend of Samuel Purchas, the author of the famous compendium of Eastern travel. He remained single all his life "better liking a free single life then with more welth to be subjected to woomans' humors".

An interesting sidelight on the commercial policy of the sixteenth century is afforded by the correspondence, alluded

to by Sir W. Foster, between the Sultan of Turkey and Queen Elizabeth, who is revealed (1580) as definitely opposed to monopolies of, or concessions for, trade. She requests that the grant of facilities by the Sultan should apply not merely to the two or three merchants concerned, but to "all our subjects in generall".

Her action in this case is paralleled by the insertion in the Vintner's Charter in 1577 of the statement, doubtless very distasteful to the Company, to the effect that everyone was free "to pursue such lawful calling whereby he may gain his living, as is most agreeable to his choice or taste".

What would the great Queen say to the restrictions under which all classes, desirous of earning a living, labour to-day?
276. A. T. W.

TEXTE UND UNTERSUCHUNGEN ZUR ŠAFATENISCH-ARABISCHEN
RELIGION. By DR. HUBERT GRIMME. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 160,
15 plates. Paderborn: F. Schöningh, 1929.

This work on the Safaitic inscriptions is one of the well-known series of studies which Dr. Grimme has devoted to the Sinaitic and cognate inscriptions. It is prefaced by a short linguistic analysis, in which the script is traced back through Thamudenian directly to the Sinaitic alphabet, not to the "Himyaritic" script of South Arabia. The greater part of the book is taken up with a detailed study of the inscriptions themselves, including, in addition to selected inscriptions from de Vogüé's and Dussaud's collections, the whole of the unpublished materials collected by Wetzstein, which are reproduced in facsimile in the plates. The light thrown by them upon the religion of these pre-Islamic Arabs is discussed in the concluding chapter, which is not only of the greatest interest to epigraphists, but of capital importance for all students of Semitic religion. The main thesis put forward by Dr. Grimme is that the inscriptions were not, as has hitherto been held, mere casual scratchings of ignorant

shepherds, but on the other hand were deliberately inscribed with a religious purpose in a locality to which a religious or sacred character was attached. Their invocatory character and general contents fully substantiate this view (if we may accept Dr. Grimme's renderings as correct), and show that these semi-nomads on the Syrian frontier, so far from being irreligious idolaters, possessed a highly developed religious cult, identical in its main features with the astral religion of South Arabia, and generally inclining to henotheism. Their supreme deity was apparently Athtar, and it would seem that the other divinities to whom invocation is made were either Athtar himself in various characteristic aspects (it is noteworthy that Allât, the most frequently invoked of all, is masculine) or else later intruders. A main feature of this religion was a lively belief in the association of the god or gods with the souls of the living and the dead, to which indeed the majority of the inscriptions are due. The bearing of these discoveries on the religion of the pre-Islamic Arabs requires no emphasizing, and, in conjunction with the studies of Père Lammens, they may supply a valuable background for the Islamic movement. It may even prove (though this is not suggested by Dr. Grimme himself) that they will throw new light on the obscure problem of certain of the rites of the Meccan pilgrimage.

In dealing with such a mass of largely unworked material, it is inevitable that a number of points of detail in regard to language and interpretation still remain conjectural and open to correction. These will doubtless be examined in due course by qualified epigraphists, but their final elucidation can hardly affect Dr. Grimme's main conclusions. I would venture only to make a few suggestions.

m-r-n (p. 43): "make smooth" (class. Ar. *marrin*) suits the context better than "make warlike".

t-r-d (p. 46): Dussaud's original reading *t-r-q* makes quite good sense ("fell upon"), and the emendation to *t-r-d* ("drove off") seems unnecessary.

n-d-m (p. 158): Dr. Grimme equates this with class Ar. *nādama* and translates "drank wine over". The analogies quoted are not convincing, and the use of *waliha*, *bakai*, *tashawwaga*, etc. in similar contexts suggests rather an equation with *nadima* "mourned", especially as it, like them, is followed by 'al.

The peculiar termination of the form 'Atarsamain (p. 134) is possibly to be explained rather by analogy with the Hebrew *shāmayim* than by the Arabic nutation. Aramaic influences cannot be entirely excluded from the vocabulary (cf. for instance, the use of *tallal* (p. 166) in the sense of "cover, overshadow"), and the rare word *s-b-r* (p. 35) is probably to be connected with Aram. *seber* ("hope") rather than with the secondary Arabic sense of "beauty".

P. 23.

H. A. R. GIBB.

STUDIES IN ORIENTAL MUSICAL INSTRUMENTS. By H. G. FARMER. 9 × 5½, pp. vi + 107. London: Harold Reeves, 1931.

The papers which Dr. Farmer has reissued in this volume appeared originally in the *Journal* between 1925 and 1930, and their contents will be familiar to most readers. The subject with which they deal is one which he has made peculiarly his own, and their reissue, in collected and revised form, will be welcomed as providing a valuable book of reference to medieval musical instruments, especially in the East. Seen together the papers have a new unity, although they differ in method and occasion. Two of them are simple descriptions of collections, but display none the less the familiarity of the author with their early history and the literature connected with them. The breadth and depth of Dr. Farmer's studies are more richly illustrated, however, in three controversial articles relating to the origins of the canon, the eschaquiel, and the rebec. It is not for an outsider to pronounce on the merits of the case, but one cannot

but admire the manner in which he has handled the material, scattered throughout a mass of recondite and mainly unprinted sources. In the first of these three articles, Dr. Farmer refers in passing to a statement by Julius Pollux that the monochord was an Arabian invention, and in another specially interesting article, devoted to the critical examination of a variant text of Ibn Khurdādhbih's famous discourse on music, the statement is referred to again, with a suggested explanation. Perhaps it is not too much to hope that Dr. Farmer will one day make a fuller investigation into this and similar attributions of musical instruments to the Arabs by late Greek writers, since it has an obvious bearing on the vexed question of the music of the early Arabs. In the foreword he makes a conditional promise of further studies in the same field, and both orientalist and musicians must hope that he will be encouraged to fulfil the promise.

THE ORIGIN AND GROWTH OF CASTE IN INDIA : Vol. I. By
NRIPENDRA KUMAR DUTT, M.A., Ph.D. $8\frac{3}{4} \times 5\frac{1}{2}$,
pp. xi + 310. London : Kegan Paul and Co., 1931.

In this interesting work Mr. Dutt, Professor of History at the Hooghly College, sets out to deal with caste origins in a series of three volumes covering successively the periods 2000–300 B.C., 300 B.C.–A.D. 1200, and A.D. 1200–1900. The work, which is ambitious, commences well, with a very full summary of caste up to 300 B.C. as revealed by the Vedas, Brahmanas, and Sutras, with a short sketch of certain Greek comments on caste as it presented itself to Megasthenes and others. The Buddhist *Jātakas* are also quoted. The attention of students has for many years been directed to the fact that in early days caste divisions were not rigid, that caste was not necessarily hereditary, that the highest castes were meat-eaters, consuming even the flesh of cows and horses, and that

marriage for women was adult. Modern practice has travelled very far from these origins.

The most important part of the writer's task will be his handling of caste and tribe in its present-day infinite complexity. Many scholars have been baffled by the immensity of the undertaking, which may be illustrated by the fact that a Koli Bhil differs from a Bhil Koli almost as greatly as a horse chestnut from a chestnut horse. We shall await Mr. Dutt's subsequent volumes with much interest. Meanwhile it may be remarked that in setting forth the well-known theories of Senart, Risley, and Nesfield, the writer has paved the way for the conclusion that caste is a function of more than one variable, race, occupation, language, residence, religion, and particularly, as Jackson showed, political boundaries, having all had a hand in creating caste fission. It is less commonly realized that a very important element in caste division is the quite disproportionate importance attached in India to trifling differences arising for one reason or another in the conduct of small groups of individuals. Modern India having created a caste of chauffeurs from the menials who tend motor-cars, is almost ripe for a Rolls Royce caste rejecting food or marriage with the Fords. Restrictions on marriage play an important part in all discussions bearing on caste practices. In the *Rigveda* widow re-marriage usually took the form of marriage with the deceased husband's younger brother, and there is some evidence that this was a survival of polyandry. The position of women was certainly much freer than in more recent times, which have treated widowhood so harshly. The irony of the situation in regard to the age of marriage in modern India lies in the fact that the upper castes who, starting with adult marriage, developed child marriages, are beginning to revert to adult unions just as the low castes and wild tribes are turning from adult marriage to the union of child brides with boys or adults.

Mr. Dutt has started well on his great task, and we shall welcome his further efforts.

R. E. E.

THE GOLDEN EAST. By SIRDAR IKBAL ALI SHAH. 9 × 6, pp. 288, 36 pls. London : John Lang, 1931.

In a brief preface the author describes his work as a book with a purpose. "The entire world of Islam is on trek," he says, "whither is it bound?" It must be said at once that the book does not provide the answer. This is much to be regretted, for the reasoned conclusions of an Eastern Muslim on the present tendencies of his co-religionists and their reactions to the immense and ever-quickenings changes occurring all over the world would be of interest and value. Nor can it be said that the book is worth reading from any other motive. In the first place the author lacks the proper equipment. He speaks of himself in one place as "blaspheming in an argosy of six languages". It is painfully clear that he is quite at sea in the one he has selected as his vessel in this book, for his English is repeatedly obscure and sometimes produces a result opposite to that intended, as, for instance, when he writes on p. 57 of "Aleppo being modernized and men exchanging European dress for the flowing robes". Concordances are ignored and the definite article misused. The reader's tedium is heightened by the Sirdar's efforts at wit, by his imaginary yet dull stories of adventure and shikar (when his "Afghan fighting blood" was up), by his ill-chosen and inopportune slang and by his disregard for correctness or even consistency in his rendering of Eastern words. His "native Persian" should have saved him from misuse of the *izāfat* and from mistakes of which the following are only a few; ferunghi, tahsilder, harem sharief, shiek, Beyreuth, Al Quids, Khilafa, Karbella, Allauddin. The printer is perhaps responsible for Husian and Chia Khanay. The book may be summed up by a phrase of the author's—"crambo-clink".

L'EMPIRE ÉGYPTIENNE SOUS MOHAMMED ALI ET LA QUESTION D'ORIENT (1811-49). By DR. SABRY. 10 × 6½, pp. 605. Paris : Paul Geuthner, 1930.

The historical education of Egypt by Egyptians is proceeding apace. Their work is always painstaking, their comments are frequently instructive. The thought is lucid, the writing unaffected. Dr. Sabry, the latest addition to the ranks, may fairly claim to have thrown fresh light upon the subject he has chosen. The period was momentous for Egypt and Mohammed Ali ("brave as a lion, sly as a fox," as some contemporary said of him), a romantic and arresting personality. His appetite for conquest was unquenchable. At one moment he counted the Sudan, Arabia, Syria, and Palestine in his dominion, and but for the interference of Europe would have added Asia Minor to the list. Simultaneously he developed the natural resources of Egypt, he created schools and factories, he introduced the cultivation of cotton, he initiated public security, he remedied abuses in the matter of justice, and all this and more he accomplished without burdening future generations with a load of debt. It was a remarkable record, even if his procedure was always arbitrary and occasionally savage. His mentality was in advance of his age. He disapproved of religious intolerance, he abominated Islamic superstition; he advocated education for all classes of the community, he preached the necessity of contact between the East and the West. His ambition to be reckoned an independent sovereign was not achieved; he had, in the end, to rest content with the hereditary pashalik of Egypt. Such in brief is the story that Dr. Sabry sets out to tell, and on the whole acquits himself creditably of the task. The book perhaps is too long (592 pages, or say, 230,000 words) for the general reader, but the student will be grateful for the author's patient search in the archives of Cairo, London, Paris, and Vienna. Nothing of importance has missed Dr. Sabry's keen eye. Two-thirds of *L'empire Égyptienne* are devoted to Mohammed Ali's struggle with his

overlord, the Sultan of Turkey, a struggle that brought England, France, Austria, and Russia eventually into the field. Dr. Sabry produces an intelligible and documented sketch of this confused period, but unhappily says little or nothing of Mohammed Ali's military operations in Syria. The omission is disappointing. Some account of the organization of the expeditionary force, of Ibrahim's marches and fighting formation, and of the conduct of the retreat across Sinai, would have been very welcome.

All students of the history of these times, will not agree with the writer's estimate of various personalities. He describes Palmerston, for example, as *pen intelligent*; yet, surely obtuseness was not one of that statesman's failings. Incidentally, Dr. Sabry's indictment of England seems laboured and too highly coloured. Was this Power inspired with such malevolence as the writer of *l'Empire Égyptienne* suggests? Her neighbours were no more altruistic surely than she. France, for instance, as Dr. Sabry points out, at one critical moment was pursuing in Constantinople a Franco-Turkish policy, in Alexandria an Egyptophile. But the book on the whole is written conscientiously and impartially, and it may be said that Dr. Sabry has made an important contribution to the history of his country.

P. G. ELGOOD.

THE LANDS OF THE EASTERN CALIPHATE. By G. LE STRANGE.

7½ × 5, pp. xvii + 536. 10 maps. Cambridge :
Cambridge University Press, 1930. £1. 1s.

This is the second edition of a book so well known and so much esteemed, that the briefest notice of it is all that is necessary here. It summarizes the information concerning Mesopotamia, Persia, and Central Asia scattered through the works of the medieval Arab, Persian, and Turkish geographers,

and is as valuable to the orientalist for the help it gives him and the trouble it saves him, as was El Aghânî to Ibn 'Abbâd.

The book is reprinted in the form in which it first appeared in 1905, with the addition of two pages of emendations.

A. R. GUEST.

KITÂB 'AJÂ'IB EL AQÂLÎM ES SAB'A. By SUHRÂB. Arabic text edited by HANS V. MŽIK. 10 × 6 $\frac{3}{4}$, pp. xvii + 201. Vienna: Otto Harrassowitz, 1930.

This book is edited from a unique MS. in the British Museum, of which the authorship is attributed in the catalogue, by mistake, to Ibn Serapion. The error was pointed out in the *Journal* for 1913 (p. 305). Nothing is known of Suhrâb, who is stated in the text to be the author or rather compiler, but Mr. Le Strange showed from internal evidence that the book was written between A.D. 902 and 945.

The contents do not in any way answer to the title. They have nothing to do with wonders, but consist of geographical arguments for a map—lists of latitudes and longitudes of towns, of points on the coast lines of oceans, of islands, lakes, mountains, and rivers, and so forth, together with instructions how to set the details out so as to make them into a map on plane projection. The substance is similar to that of *Šûrat el ard*, by El Khwarizmî, which is stated to have been taken from the *Geography* of Ptolemy, and was published in 1926 in the same series, but Suhrâb's compilation, though the text is generally worse, adds a little to Khwarizmî, and has slight differences in arrangement. *Šûrat el ard* was reviewed in this *Journal* for 1929. Translations of both texts with commentaries are promised, and will doubtless bring out their significance in relation to the geographical learning of the Arabs. The present book has been carefully printed, and contains an introduction by the editor.

A. R. GUEST.

TOD UND LEBEN NACH DEN VORSTELLUNGEN DER BABYLONIER.

By ERICH EBELING. Part I: Texts. 10 $\frac{1}{4}$ × 7, pp. 177.

Berlin and Leipzig: Walter de Gruyter & Co., 1931.

R.M. 15.

This is a very interesting volume containing transliterations and translations, with notes and introductions, of Babylonian texts, the cuneiform originals of which will appear in a second volume. Some of the texts are unpublished, others have been published imperfectly, and no attempt has previously been made to bring them into relation with one another. In fact, the whole subject, important as it is, has hitherto met with little attention at the hands of the Assyriologists owing to want of materials, one result being that one of the most interesting of the texts dealing with the subterranean world and its judgment seat, though first published as long ago as the sixties (in *W.A.I.* ii, fol. 60), has been wholly misinterpreted.

Dr. Ebeling begins with the account of a dream in which an Assyrian king visited the lower world, through which he was conducted like Dante in later days. Here he was dragged before Nergal, the lord of the Under-regions, but befriended by Isum the intercessor, who recounted how he had piously worshipped the gods and taken part in the New Year's festival. Accordingly he was adjudged admission to "the garden of plenty" (*kiri nukhsî*), where his dark funereal garments were exchanged for white robes and he lived for ever in the sunshine of heaven.

This text is followed by Dr. Ebeling with a revised copy and translation of the British Museum tablet to which I referred above (*W.A.I.* ii, 60). The latter, he shows, is an elaborate and highly important description of Hades with its gods and demons and the examination of the dead before its dread tribunal, which reminds us of the Egyptian Osirian hall of judgment and the so-called negative confession, though the Egyptian conception stands on a far higher moral

and spiritual level; indeed, an element of buffoonery has been intruded into the Babylonian account. Thus the dead man (called *nisu* "the soul") is made to reply to one of the questions put to him: "I am upright—as a murderess; I have a guardian angel—like a trap; I sing—like a she-ass; a thief is my abomination—for I leave nothing that I see." Among the demi-gods to whom the soul makes appeal is Nigara, the first woman according to one Babylonian myth, and among the names of Hades (or of a part of Hades) we find Sandalippi which, I pointed out many years ago, must be the Latin *sandapila* "a bier". The word might have made its way into Latin from Etruscan.

Another fragmentary text makes it clear that there was a version of the Creation story which ascribed "the victory to Tiâmat" in the struggle between chaos and order, and not to Merodach. Another fragment is a letter from Adapa, the first man, to a certain Libur-zanini, in which he refers to the death of Sumugan, the god of the cattle, and his residence in the lower world.

More important are the notes on the religious plays which were acted in Babylon, more especially during the Akitu or New Year's festival. The central point of the latter was the death and resurrection of the god Merodach. It would appear, however, that Merodach was in this version of the story the successor of Anu, since in one of the texts (p. 38) "the temple-tower is clearly described as the grave (*kirnakh*) of Anu". This temple-tower or *ziggurat*, however, must—at any rate originally—have been at Erech.

Among other texts in Dr. Ebeling's collection are conjurations against ghosts and also a ritual for "opening the mouth" of the image of a deity and thereby inspiring him with life. Dr. Ebeling identifies it with the rite of "washing the mouth" which was repeated two or three times, and may be compared with the Egyptian "opening the mouth" of a mummy. A very elaborate ritual was that prescribed for "restoring to life" or, rather, for restoration to health, for it

consisted in throwing the patient and a kid to the ground together, brandishing a wooden dagger over the man and killing the animal with a copper knife. The whole operation was an interesting example of sacrificial substitution of the animal for the man.

The last text in the book describes the creation of man, which Dr. Ebeling connects with the so-called "Atrakhasis myth". Here the goddess Mami is made the mother of mankind and the first man bears the name of Lullû. The story emanates from the northern part of Babylonia in contradistinction to the southern legend which made Adapa the father of mankind. Man, we are told, was moulded in clay, which was mixed with the blood of a god who, we elsewhere learn, was Kingu, the opponent of Merodach. Enki, we learn, said to other gods: "A god let us (lit. let them) slay so that the gods may be pure in the matter of justice. With his flesh and his blood let Nin-Kharsag mingle the clay. Let god and man arise therefrom, united in the clay." The parallelism with Gen. ii, 7, is striking; so, too, is the underlying belief that man could become what he is only through the propitiatory sacrifice of one of the gods themselves.

REVIEW OF ICONOGRAPHY OF BUDDHIST AND BRAHMANICAL
SCULPTURES IN THE DACCA MUSEUM, N. K. BHATTAŚĀLĪ,
By E. J. THOMAS. *JRAS.* October, 1931.

Mr. E. J. Thomas, in his review of Bhaṭṭaśāli's *Iconography of Buddhist and Brahmanical Sculptures in the Dacca Museum*, criticizes him for pinning faith on my "opinions" and rashly making identifications of certain deities based on me "alone". "This," he states, "appears to have led Bhaṭṭaśāli to start with the Ādi-Buddha as the Universal Father, and he goes still further in making Ādi-Prajñā the Universal Mother."

May I ask two questions in regard to the above statement? Firstly, where has Mr. Thomas found that I have referred to the Ādi-Buddha as the "Universal Father" and to the Ādi-Prajñā other than as his consort or *śakti*? Secondly, on what does Mr. Thomas base his conclusion that I have led Bhaṭṭaśāli astray when, in his clear exposé of the complicated system of the Ādi-Buddha and the Dhyānī Buddhas, he neither quotes nor mentions nor even refers to me? If Mr. Thomas were acquainted with Hodgson's profound work on the Ādi-Buddha system in Nepal, he would have realized that Bhaṭṭaśāli had gone direct to the source, and had drawn his data (as did I) from Hodgson "alone". So where is the "grave" error? If the Ādi-Buddha is not the Absolute, the Origin of All-Things, the "Universal Father" (as Bhaṭṭaśāli puts it "for practical purposes"), what is he, according to Mr. Thomas? Unfortunately, he fails to enlighten the student as to his personal "opinion" on the subject.

Mr. E. J. Thomas further states that there is still a "worse case" where I am apparently again accused of leading Bhaṭṭaśāli in error; that of the identification of Bhaiśajyaguru with the Arhat Piṇḍola, with the result that he commits the "grave" fault of writing "four pages of legends of Piṇḍola Bhāradvāja". Is Mr. Thomas prepared to prove incorrect my statement that Piṇḍola, one of the sixteen Rakhans, is sometimes identified in Japan with the Medicine Buddha, otherwise, with Baiśajyaguru?

If Mr. Thomas were a student of iconography and had travelled extensively in the East and Far East, he would have found that the worship of a deity in one country is often changed in conception in another; an alteration sometimes influenced by local legends. Is it not the duty of the iconographist with first-hand data, to note these various aspects and pass them on to students of iconography, who may not have had the privilege of travel?

ALICE GETTY.

As readers of Miss Getty's letter may be misled into thinking that I have attacked her views, I should like to point out that I have expressed no opinion on them. I have said, and I adhere to it, that Mr. Bhaṭṭasāli "repeatedly makes identifications based on Miss Getty alone", and that in this he has "perhaps been too incautious". Mr. Bhaṭṭasāli gave the reason why, and I will not repeat it. If readers want to know what I really said of Mr. Bhaṭṭasāli's treatment of Ādi-Parjñā and Piṇḍola, I trust that they will refer to p. 951 in the last volume of the *Journal*.

E. J. THOMAS.

OBITUARY NOTICE

Sir Charles Eliot

(NOTE: An obituary notice was published on p. 720 of the *Journal* for July, 1931.)

There are many, no doubt, who knew the late Sir Charles Eliot better than I, but I travelled out with him in 1926 on the *Hakozaki Maru*, at the time when he was revising his great work on *The History of Hinduism and Buddhism*. He did me the honour of asking me to make any suggestions I might please on the portion dealing with Siam and we had many talks on certain aspects of Buddhism in this country. One remark of his stands out clearly in my memory. I was questioning him about some particular point of doctrine, when he suddenly turned to me in that way peculiar to himself and said: "How should I know? I am not a Buddhist." You may perhaps agree with me that it will be of value to place this remark on record.

Sir Charles was a great man and a most lovable one to those who shared his interests and his love of the East.

His loss is an irreparable one to all interested in Buddhism, and his family may be glad to know that a tribute to his greatness and his services has been recorded in the annals of the Siam Society.

REGINALD LE MAY.

NOTES OF THE QUARTER

Archæological Discoveries at Nineveh

At the Royal Asiatic Society on Thursday, 1st October (Sir Edward Maclagan in the chair), Dr. R. Campbell Thompson read a paper on the 1930-1 season's excavations at Nineveh on behalf of the British Museum, when he was accompanied by Mr. R. W. Hamilton, Mrs. Thompson and Miss Hallett. The expedition, financed by Sir Charles Hyde, had as its objective the clearance of the Temple of Ishtar, which had been discovered the previous season. The new season's work has shown that the Temple, originally founded in the third millennium B.C., had been built, or more probably restored, subsequently on a solid foundation of unburnt brick. It was destroyed at the Fall of Nineveh in 612 B.C., and further gutted some hundreds of years later by Parthians, who found the brick foundations a mine of clay for their own buildings, and the stone inscriptions good material for their walls.

Definite proof that it was the Temple of Ishtar, called E-Mashmash, was found in a sculpture which bore an inscription of Ashurnasirpal, and in a pavement of bricks of the same king, who had restored it in the ninth century. An earlier building of solid unburnt brick walls about 10 feet high was found close by, and this latter building may have been that founded by the Babylonian king Manishtishu, c. 2500 B.C., whose presence at Nineveh has now been made certain for the first time by a reference in a fine stone cylinder of Shamshi-Adad, c. 1840 B.C. Near this building was found a magnificent life-size human head of copper, and a spear head inscribed "Temple of Nin (?) -lil", dating to the third millenium B.C. Much black-painted pottery of the kind hitherto found frequently at Susa and in Babylonia came to light, the designs being ibexes, birds, or fish.

Numerous pieces of cuneiform tablets were also found, the best being a large piece of a syllabary, and another large piece of the interesting historical epic found three seasons ago. But some of the most important points are to be seen in a large limestone inscription of Ashurbanipal, now in about 120 pieces. This contains an account of his buildings and campaigns including an amplified account of Dugdamê, hitherto known as a king of the Northern hordes, and how the gods destroyed his camp by fire from heaven. There is also mention of several new foreign princes, and among these last is "Kurash, king of Parsumash", "Cyrus, king of Persia", described as dwelling "on the far side of Elam". This can be no other than the grandfather of Cyrus the Great, who took Babylon, and who is thus mentioned for the first time in a contemporary text, which can hardly be later than 630 B.C.

"The Impressions of an Englishwoman in Lhasa"

In the course of a lecture delivered before the Royal Asiatic Society and the Royal Central Asian Society in the Lecture Theatre of the Royal Geographical Society, by the kind permission of the President and Council of the Royal Geographical Society, on 8th October, 1931, on the Impressions of the first Englishwoman in Lhasa, Mrs. Leslie Weir spoke of the high degree of culture displayed by the upper classes in Lhasa; of their taste in house decoration and in dress, a taste entirely unaffected by Western influence. Chinese influence undoubtedly there is, and all silks, porcelain, jade, etc., are imported from China. Intrinsic value in Tibet is a much more real and true factor than in Europe. Art and workmanship are, to them, cheap factors; therefore intrinsic value is more real. They were astonished when told that a piece of thin silk chiffon wrought into the shape of a European dress cost as much as a Tibetan dress made of solid satin brocade. The expenses of art and workmanship have certainly,

during the last few hundred years, altered and probably muddled our Western ideas of intrinsic value.

In spite of, or perhaps because of their lack of intercourse with the West, their manners and their standard of courtesy towards one another are very high indeed. The absence of hurry and of any idea of the vital importance of time, leaves them leisure for courtesy. We cannot realize how much we have sacrificed during these late years of scientific advance and of accelerated speed.

A great portion of their time is allotted to the spiritual side of life. Whether the trend of spiritual influence is right or not according to our standards, matters little. What does matter is that they have retained poise, dignity, and spiritual repose. All of these we have lost in our hectic striving towards scientific achievement. Can civilizations based on science alone, advance healthily if divorced from the spiritual side of life? This is indeed a matter for conjecture.

During Mrs. Weir's interview with His Holiness the Dalai Lama, she touched on various points of advance in the West— aeroplanes, wireless, etc., but His Holiness did not really evince much interest in Europe. The trend of his conversation invariably returned to his interest in the welfare of all living things, human and animal. He seriously considers himself responsible for their well being. She gathered from what he said that, in his opinion, the advance of science certainly did not make for the happiness of mankind. To this view may be attributed his strong desire to exclude completely all intercourse with the West.

Hygiene is practically unknown in Tibet, but thanks to the dryness of the climate at those high altitudes, epidemic disease is rare, save smallpox, which takes a heavy toll. Desire for vaccine, of which people in South Tibet have recently learnt the value, provides one exception to their taboo on the products of Western scientific achievement. There are no hospitals, and survival of the fittest is to them a good and proper procedure, leading to few tiresome

complications. Absence of rich imported food serves to keep people well and strong. Their food is generally speaking very simple, barley flour, butter, tea, dried meat and cheese, occasional vegetables and milk form the bulk of the diet. Sugar is a delicacy rarely seen by the lower classes. The upper classes use excellent Chinese tinned and dried foods for special occasions, seaweed being a favourite dish. The iodine content of seaweed is probably beneficial to people so far removed from the sea. Fuel is used almost exclusively for cooking purposes. Almost all households retire at sunset and rise at dawn, thus obviating the intricacies of lighting and the difficulty of importing oil. Women spin and weave wool into serviceable cloth, and hides serve for the colder months.

Few servants are paid in coin, nearly all in kind. This condition is closely akin to slavery. Poor relations work for their richer brothers, and appear to be content with their lot. Charity is considered spiritually beneficial to the giver only. By giving he improves his chances of a happier lot in his next incarnation. Beggars by the thousand gladly avail themselves of this advantage, thereby incidentally doing service to their betters.

The Potala is the wonder mystery palace dominating Lhasa. By kind permission of the Dalai Lama, Colonel and Mrs. Weir were enabled to explore many treasure rooms. Owing to recent serious thefts (attributed to the former chief warden himself), most of the treasures are linked together with sealed ropes or guarded by great iron chain curtains. The vaults are said to contain bullion and precious stones in considerable quantities.

Few have been permitted to lift the veil of secrecy which envelops Lhasa. Tibet is as inaccessible to-day as she was five hundred years ago. The League of Nations has, indeed, long to wait before she enters the fold.

Through Northern and Eastern Persia with a Ciné-Kodak

On 21st October, 1931, at a joint meeting of the Royal Asiatic Society and the Royal Central Asian Society, Mr. C. P. Skrine showed a number of slides and 16 mm. cinema films illustrative of his travels in Sistan and Persian Baluchistan during 1927-9 and of his journey by car during March and April, 1931, from Zahidan (Duzdap) on the Perso-Baluch border to Haifa in Palestine. The Sistan film showed the difficulties from mud, sand, and floods experienced by motorists in the "inland delta" of the Helmand; scenes in the bazaars of Sistan town (now renamed by the Persians Zabul), among the aboriginal lake-dwellers of the Hamun, and at the castle of a local landowner of old family, Sardar Ali Khan Sarabandi of Sehkoha. Slides were shown of the ruins of Zahidan, the ancient capital of Sistan, which was sacked and destroyed by Tamarlane in 1383, of the more recent ruins of the Arg or citadel and of sunset over the Sistan Hamun. A film not previously exhibited in London showed an ascent of the volcano Kuh-i-Taftan (13,035 feet) in October, 1929; Baluch and Persian local types, the latter including members of an ancient Persian race, remnants of which have escaped being swamped by the tide of Baluch immigration from the West and still inhabit a few secluded mountain valleys in the immediate vicinity of the Kuh-i-Taftan. One of these valleys, that of Ropask, contains two remarkable features. There is a cave-cemetery known as the "Tombs of the Seventy Mullahs", consisting of a number of superterranean graves dating probably from the early centuries of the Muhammadan era, all contained in a vast shallow grotto under a lofty overhanging scarp of lava on the flank of the Kuh-i-Taftan; close by is a cave-fortress of considerable size and probably about the same date. Other finds of antiquarian interest of which photographic records were made included beautifully

inscribed gravestones at two points in the Tamindan Valley ; fragments of a carved stone column and of glazed pottery at Tamin on the opposite (north) side of the Kuh and numerous signs of ancient irrigation-works and the massive stone-built villages once served by them.

The latter half of the lecture was taken up with a cinematographic record, supplemented by a few slides of Mr. and Mrs. Skrine's motor-journey from Duzdap to Haifa *via* Meshed, the South Caspian Coast, Tehran, Isfahan and Bagdad. A start was made from Duzdap on 12th March and Haifa was reached on 10th April. The time taken included halts of four days at Tehran, three at Barfurush near the Caspian coast and one each at Meshed, Isfahan, Kermanshah, Bagdad and Damascus. The moving and still pictures shown included the following: Persian Customs officials at Duzdap examining the luggage of Indian Shi'a pilgrims bound for Meshed ; a caravan of nomad Sistani Baluch on their way from their winter grazings in the Helmand delta to their summer pastures in the Sarhad ; a well-known territorial magnate of the Qainat among his retainers at his house near Birjand ; crossing the dreaded Amrani plain and the high passes, still covered with snow, between Turbat-i-Haidari and Meshed ; the beautiful Qadamgah tomb and fortifications near Nishapur, the birth-place of Omar Khayyam ; the Firuzkuh passes and the dense beech-forests, carpeted with primroses and violets, on the northern slopes of the Elburz Mountains ; the quaint architecture, picturesque costumes and varied landscapes of Mazanderan ; a tele-panoramic view of the snows of the Elburz from Barfurush, with Demavend (18,600 feet) towering above them all ; the British Legation at Tehran ; the late citadel of the Qajar Shahs just outside the capital, with another view of Demavend in the distance ; the shrine of Fatima at Qum ; and several of the architectural beauties of sixteenth-century Isfahan ; the old city at Sultanabad and interior views of the bazaars at Kermanshah ; Guran Kurds in camp near the Iraq frontier,

a glimpse which reminded the lecturer strongly of the Kirghiz of Central Asia ; the interior of the mosque of Shaikh Abdul Qadir Gilani at Bagdad and impressions of the magnificent Byzantine architecture of Damascus.

The Conquest of Kamet

This lecture was delivered before the Royal Asiatic Society on 12th November by Mr. F. S. Smythe, the explorer and mountaineer.

The lecturer described the work of the expedition that had as its objects the ascent of Kamet, 25,447 feet, one of the greatest peaks in the Central Himalaya and the second highest peak within the British Empire and explorations in the Badrinath range which forms the watershed of the Alaknanda and Gangotri rivers, the two parent tributaries of the Ganges. In both objects the expedition was successful.

The lecture began with a description of the nine previous attempts or reconnaissances on Kamet and the special equipment and food necessary for high altitude mountaineering. Leaving the hill station of Ranikhet on 18th May the expedition marched 150 miles to the base camp on the Raikana glacier to the East of Kamet. The route lay up and down the lower foothill ranges of the Himalaya through country of great variety and beauty. Photographs show the immense forests stretching up to the foot of the Himalaya and the tropical valleys. The 12,000 feet Kuari Pass was then crossed and the expedition ascended the Dhaoli valley to the Bhotia village of Niti. The base camp was reached on 7th June. From the base camp the expedition ascended the East Kamet glacier to Meades Col, establishing five camps, the highest being 23,300 feet on Meades Col. They were able to establish an advanced base on 20,600 feet provisioned for six weeks whence they could have besieged Kamet should the weather have broken.

By going slowly and advancing from one camp to the next only when acclimatized they kept fit and were able to make their attack on the summit on 21st June. The first party consisted of R. L. Holdsworth, E. E. Shipton, and the lecturer, with the Darjeeling porters, Lewa and Nima Dorje. Of the last two only Lewa reached the summit. Owing to altitude and bad snow conditions coupled with the difficulty of the upper part of the mountain, it took them eight and a half hours to climb the final 2,200 feet from Camp 5. On the way all were frostbitten save the lecturer owing to cold and exhaustion and the Sirdar Lewa subsequently lost all the top joints of his toes. The ascent was repeated by Captain E. St. J. Birnie, and Dr. R. Greene two days later, accompanied by the local porter, Kesar Singh.

After the completion of the ascent the party proceeded on the second part of the expedition. The range south of Kamet was crossed to Badrinath, the holy pilgrims' centre. Thence the Arwa valley was explored and the vast and complicated glacier system roughly mapped and photographed. Ten peaks between 19,000 and 22,000 feet were climbed by the expedition in the course of their explorations. The expedition then returned to Badrinath and Ranikhet, which latter was reached on 13th August.

Historical Documents relating to Ceylon

A REQUEST FOR ASSISTANCE IN BRINGING THEM TO LIGHT

SIR,—The Government of Ceylon has recently appointed a Commission for the purpose of inquiring into the existence of hitherto unknown documents relating to the history of the island, which are extant in the hands of private individuals and of institutions. Many important documents have been removed from the island, and have found their way into private collections; there are others among the private papers of those who have had official or semi-official connection with

the affairs of Ceylon, or who have at various times had occasion to visit its shores. To illustrate this point, the most important original authority for the period of the Portuguese occupation came to light in Rio de Janeiro, and of recent years much light has been thrown on the taking over of Ceylon by the British, by papers in private hands in Scotland.

The majority of such papers will be concerned with the history of the island during the last four centuries, but it is possible that there may be also some "sannases" (engraved copper plates) and "olas" (inscribed palm-leaves) dating perhaps from pre-European times, preserved as curiosities in private or even public collections. We are anxious to ascertain the whereabouts of such documents, and therefore ask you to allow this letter to appear in your valuable columns. If any of your readers are in a position to afford us any information, we shall be most grateful if they will put it at our disposal by writing to the Secretary of the Ceylon Historical Manuscripts Commission, Government Archives, Colombo, or to me.

Thanking you for your courtesy in inserting this letter,

I am, Sir, your obedient servant,

S. A. PAKEMAN,

Chairman, Ceylon Historical Manuscripts Commission.

UNIVERSITY COLLEGE,
COLOMBO.

15th September, 1931.

Will any member give or sell to the Society *Bengal Past and Present*, vol. 2, pts. 1 and 2, 1908, complete with the coloured plate to pt. 1, also title pages to both parts and the index which were issued in a supplement.

The Librarian would be grateful for the presentation of any of the following works of which the Library is in need. Information as to the existence of copies for sale would also be welcomed :—

Bibliotheca Indica, Sanskrit, etc.: No. 4: Nīti-Sāra fasc. 1, 1849. No. 9: Sahitya-darpana, text fasc. 3, 4, 5, 1850-75. No. 11: Taittirīya, etc., Upaniṣads, 1851-5. No. 27: Sāṃkhya-pravacana-bhāṣya, fasc. 1, 1854.

China Branch R.A.S., *Transactions*, pts. v-vii, 1855-9.

Cuneiform Texts from Babylonian Tablets, etc., in the British Museum, parts 1, 3, 5-11, and 26; 10 parts.

Cowley Memorial Fund

As brought to the notice of the public in *The Times* of 11th November, 1931, a fund is being formed to commemorate the life long devotion of the late Sir Arthur Cowley to the cause of learning, and his thirty-five years' service in the Bodleian Library. The Committee is seeking to found a Lectureship in Rabbinic Hebrew without restriction and, if possible, to unite it with the custody of Oriental books and manuscripts in the Bodleian Library, thus combining the two-fold work of a distinguished member of the Royal Asiatic Society. Friends who wish to subscribe are asked to communicate with Mr. G. R. Driver, Magdalen College, Oxford.

International Congress of Prehistoric and Proto-historic Sciences

The British Organizing Committee desire to bring to the notice of archæologists the First International Congress of Prehistoric and Protohistoric Sciences, which will be held in London from 1st to 6th August, 1932. The Congress will be divided into sections, the third of which deals with the Neolithic, Bronze, and Early Iron Ages in the Ancient World. Historical civilizations will only be dealt with in so far as the material is auxiliary to prehistoric and protohistoric studies or is treated according to their methods. The British Organizing Committee cordially invite the co-operation of archæologists engaged in research in Egypt and the Near East, more especially those interested in the relations of the Near East with the Ancient Mediterranean World and the area of the Caucasus and South Russia. Agenda and invitations will gladly be sent on application to the Secretary of the British Organizing Committee, Society of Antiquaries, Burlington House, London, W. 1.

TRANSLITERATION
OF THE
SANSKRIT, ARABIC
AND ALLIED ALPHABETS

THE system of Transliteration shown in the Tables given within is based on that approved by the International ORIENTAL CONGRESS of 1894. A few optional forms have been added so as to adapt it to the requirements of English and Indian scholars. The Council earnestly recommends its general adoption (as far as possible), in this country and in India, by those engaged in Oriental Studies.

SANSKRIT AND ALLIED ALPHABETS

अ	.	.	.	a
आ	.	.	.	ā
इ	.	.	.	i
ई	.	.	.	ī
उ	.	.	.	u
ऊ	.	.	.	ū
ऋ	.	.	.	ṛ or ṝ
ॠ	.	.	.	ṝ or ṝ̄
ऌ	.	.	.	ḷ or ḹ
ॡ	.	.	.	ḹ or ḹ̄
ए	.	.	.	e or ē
ऐ	.	.	.	ai
ओ	.	.	.	o or ō
औ	.	.	.	au
क	.	.	.	ka
ख	.	.	.	kha
ग	.	.	.	ga
घ	.	.	.	gha
ङ	.	.	.	ṅa
च	.	.	.	ca or <u>cha</u> ¹
छ	.	.	.	cha or <u>chha</u> ¹
ज	.	.	.	ja
झ	.	.	.	jha
ञ	.	.	.	ña
ट	.	.	.	ṭa
ठ	.	.	.	ṭha
ड	.	.	.	ḍa
ढ	.	.	.	ḍha
ण	.	.	.	ṇa
त	.	.	.	ta
थ	.	.	.	tha
द	.	.	.	da

¹ In modern Indian languages only.

ध	.	.	.	dha
न	.	.	.	na
प	.	.	.	pa
फ	.	.	.	pha
ब	.	.	.	ba
भ	.	.	.	bha
म	.	.	.	ma
य	.	.	.	ya
र	.	.	.	ra
ल	.	.	.	la
व	.	.	.	va
श	.	.	.	śa
ष	.	.	.	ṣa
स	.	.	.	sa
ह	.	.	.	ha
ळ	.	.	.	ḷa or ḷa
• (Anusvāra)	.	.	.	m̐
◌ (Anunāsika)	.	.	.	m̐
:	(visarga)	.	.	ḥ
×	(jihvāmūlīya)	.	.	ḥ
ॡ	(upadhmānīya)	.	.	ḥ
§	(avagraha)	.	.	'
Udātta	.	.	.	ˆ
Svarita	.	.	.	ˆ
Anudātta	.	.	.	ˆ

ADDITIONAL FOR MODERN VERNACULARS

ड़	.	.	.	ṛa
ढ़	.	.	.	ṛha

Where, as happens in some modern languages, the inherent *a* of a consonant is not sounded, it need not be written in transliteration. Thus Hindi करता *kartā* (not *karatā*), making; कल *kal* (not *kala*), to-morrow.

The sign ~, a tilde, has long been used by scholars to represent *anunāsika* and *anusvāra* and *nūn-i-ghunna*—when these stand for nasal vowels—in Prakrit and in the modern vernaculars: thus अँ *ā*, आँ *ā*, and so on. It is therefore permitted as an optional use in these circumstances.

ARABIC AND ALLIED ALPHABETS

at beginning of word omit; hamza elsewhere ' or
alternatively, hamza may be represented by ' or ,

ب	<i>b</i>
ت	<i>t</i>
ث	<i>ṭ</i> or <i>th</i>
ج	<i>j</i> or <i>dj</i> ¹
ح	<i>h</i>
خ	<i>ḥ</i> or <i>kh</i>
د	<i>d</i>
ذ	<i>ḏ</i> or <i>dh</i>
ر	<i>r</i>
ز	<i>z</i>
س	<i>s</i>
ش	<i>ṣ</i> or <i>sh</i>
ص	<i>ṣ</i>
ض	<i>ḍ</i>
ط	<i>ṭ</i> or <i>t</i> ¹
ظ	<i>ẓ</i> or <i>z</i> ¹
ع	'
غ	<i>g</i> or <i>gh</i>
ف	<i>f</i>
ق	<i>q</i>
ك	<i>k</i>
ل	<i>l</i>
م	<i>m</i>
ن	<i>n</i>

¹ Although allowed by the Geneva system, the use of *dj* for ج in England or India is not recommended; nor for modern Indian languages should ط be transliterated by *t* or ظ by *z*, as these signs are there employed for other purposes.

و w or v ه h ت t or h ي y vowels a, i, u lengthened $\bar{a}, \bar{i}, \bar{u}$ *Alif-i-maqṣūra* may be represented by \bar{a} diphthongs ay and aw , or ai and au respectively e and o may be used in place of \bar{i} and \bar{u} also \bar{e} and \bar{o} in Indian dialects, \bar{u} and $\bar{ö}$ in Turkish.—ل of article $ال$ to be always l Also in India, in transliterating Indian dialects, and for Persian, will be recognized $ṣ$ for $ث$, $ẓ$ for $ذ$, and $ẓ$ for $ض$ *waṣla*

A final silent h need not be transliterated,—thus *بندہ* *banda* (not *bandah*). When pronounced, it should be written,—thus *گنّاه* *gunāh*.

PART II.—APRIL

Mauryya Chronology and Connected Problems

By N. K. BHATTASALI

A STUDENT of Indian History is often surprised to find that what he has been accustomed to look upon from boyhood as sheet anchors of Indian Chronology prove, on closer scrutiny, to be very far from being so. The year 322–321 B.C. for the accession of Candragupta Mauryya is one of such dates.

Leaving aside older writers, let us see how the hand-books commonly in use accept the date.

Early History of India, by Dr. V. A. Smith, 3rd edition, p. 116.

“His (Alexander’s) death in June, 323 B.C., dispelled all fears of his return and the native princes *undoubtedly* took the earliest possible opportunity to assert their independence and exterminate the weak foreign garrisons. . . . We may *feel assured* that as soon as the news of the conqueror’s death had been confirmed beyond doubt and the season permitted the execution of military operations with facility, a general rising took place, and that Macedonian authority in India was at an end early in 322 B.C.”

As is evident, this is all conjecture, and a cautious historian, in conjecturing, should have avoided expressions like “Undoubtedly” and “feel assured”, as his business is to doubt and not to feel assured until satisfied with undeniable evidence.

Cambridge History of India, by Dr. F. W. Thomas, pp. 471, 473.

"A precise date for the overthrow of Nanda seems with our present evidence impossible . . . the year 321 B.C. would not be unlikely."

"The duration of the reign of Candragupta is stated by the Purāṇas, in agreement with the Buddhist books, at twenty-four years . . . the initial date is uncertain . . . it would be idle to dwell further on a matter of so much uncertainty. Our defective knowledge of the chronology is in striking contrast to the trustworthy information which we possess concerning the country and its administration."

This is refreshingly cautious, in comparison with the rather bold conjectures of Dr. V. A. Smith.

Inscriptions of Aśoka, by Hultzsch, Intro., p. xxxv.

"Thus the coronation of Candragupta falls between 323 B.C. (Alexander's death) and 304 (the treaty with Seleucus). As the consolidation of an empire, which, as described by Megasthenes in his *Indika*, reached from Patna to the Indus, must have been a matter of many years, I feel inclined to shift the date of Candragupta's accession towards the earlier limit, and to adopt as a working date the year 320 B.C. which Fleet has proposed."

All conjecture again!

Thus the sheet anchor gives way, and the date of the coronation of Candragupta Maurya remains as unsettled as ever.

Let us tackle the problems one by one.

§ 1. DID CANDRAGUPTA FIRST BECOME THE MASTER OF THE NANDA EMPIRE AND THEN DRIVE OUT THE GREEKS, OR VICE VERSA

In brief, the opinions on this point are as follows:—

(i) "It appears probable that before he undertook the expulsion of the foreign garrisons, he had already overthrown his unpopular relation, the Nanda king of Magadha, whom he deposed and slew."—V. A. Smith, *EHI.*, pp. 117–18.

(ii) "Whether he first made himself master of Magadha, and thence advanced northwards against the Macedonian garrisons, or first headed the risings in the Panjab and then with the forces collected there, swooped down upon the Gangetic kingdom does not clearly appear. *Footnote*.—The word *deinde* seems to indicate that the war with Alexander's officers followed the usurpation."—*Aśoka*, by V. A. Smith, second edition, p. 13-14.

(iii) "Candragupta had incurred the displeasure of Nanda whom he had served in the office of *Senāpati* or Commander-in-chief. He is said to have made an attempt against his master, instigated by the Brāhmaṇ Viṣṇugupta . . . but the outcome was . . . Candragupta fled with his fellow conspirators . . . it was as head of a confederacy in which the chief ally was the king of the Himalayan districts in the Panjab that Candragupta invaded the Magadha empire . . . there exists a Buddhist and a Jaina story which make Candragupta's second attempt begin with the frontiers."—Dr. F. W. Thomas, in *Cambridge History of India*, pp. 470-1.

The authorities on which these opinions are based are quoted below.

(A) "India . . . after Alexander's death, as if the yoke of servitude had been shaken off from its neck, had put his prefects to death. Sandrocottas had been the leader who achieved their freedom, but after his victory, he had forfeited by his tyranny all title to the name of liberator; for, having ascended the throne, he oppressed with servitude the very people whom he had emancipated from foreign thralldom. He was born in humble life, but was prompted to aspire to royalty by an omen significant of an august destiny. For when, by his insolent behaviour he had offended king Nandrus, and when ordered by that king to be put to death, he had sought safety by a speedy flight. When he lay down overcome with fatigue and had fallen into a deep sleep, a lion of enormous size approaching the slumberer licked with its tongue the sweat which oozed profusely from his body, and when he

awoke, quietly took its departure. It was this prodigy which first inspired him with the hope of winning the throne, and so, having collected a band of robbers, he instigated the Indians to overthrow the existing government. When he was thereafter preparing to attack Alexander's prefects, a wild elephant of monstrous size approached him and kneeling submissively like a tame elephant, received him on its back, and fought vigorously in front of the army. Sandrocottas having thus won the throne, was reigning over India when Seleucus was laying the foundations of his future greatness." Justin, as translated by MacCrindle, and quoted by Hultzsch, *Inscriptions of Aśoka*, Intro., pp. xxxiii-xxxiv.

Analysed, this passage yields the following pieces of information :—

(a) The movement for shaking off Greek yoke had begun *after* Alexander's death.

(b) Candragupta was the leader under whose guidance the movement began.

(c) He ascended the throne *after* putting to death Greek prefects, and thus liberating the Indians from Greek thralldom.

N.B.—Justin then goes on to give details, how Candragupta came to the throne. The following points may be culled from these details.

(d) He had offended king Nanda, and had to fly for his life.

(e) In his exile, he collected a band of robbers and instigated the Indians to overthrow the existing government, i.e. the existing Greek government in the Panjab because, in overthrowing it, he is said to have fought the prefects of Alexander, whom he had fought on the back of a wild elephant in front of the army, and had *thus* won the throne.

N.B.—Much depends here on the interpretation of the words "existing Government". If it is taken to mean "the Government of Nanda", the subsequent passage becomes unintelligible. The man who succeeds in supplanting the mighty Nanda emperor becomes himself a mighty emperor thereby. As is well-known from Indian legends, the elephant

taking somebody voluntarily on its back signifies his coming sovereignty—an omen which the successor to the empire of the Nandas, himself a full-fledged emperor, stood in no need of. The description of a warrior fighting with the prefects of Alexander in the Panjab on the back of a wild elephant in the front rank of the army suits very well a prospective man of fortune, but not the emperor of India.

The meaning of the expression “instigated the Indians to overthrow” also deserves to be considered. Instigation is the action here, and not the act of overthrowing, but the latter was undoubtedly the purpose and the desire. “Thereafter” should be taken to mean “after the Indians had been instigated to rise”.

(f) After winning the throne in this way, Candragupta gradually extended his sway over the whole of India.

In this passage of Justin, Candragupta's clash with Alexander's prefects and the overthrow of their government in the Panjab is the main theme, and there appears to be no mention of his collision with Nanda, except by implication in the statement that he ultimately came to rule over the whole of India. It is difficult to see how scholars have come to a different conclusion.

(B) In this connection, the following statement of Plutarch also deserves consideration :—

“Androkottos himself, who was then but a youth, saw Alexander himself, and afterwards used to declare that Alexander could easily have taken possession of the whole country, since the king was hated and despised by his subjects for the wickedness of his disposition and the meanness of his origin.”

Plutarch's *Life of Alexander*, quoted in V. A. Smith's *EHI.*, third edition, p. 43, f.n.

There would probably be no objection to taking this as pointing to the place of Candragupta's exile and the sphere of his first activities.

(c) The Ceylonese story of Candragupta taking a lesson

from the conversation between a mother and her son is as follows :—

“In one of these villages, a woman (by whose hearth Candragupta had taken refuge) baked a cake, and gave it to her child. He, leaving the edges, ate only the centre, and throwing the edges away asked for another cake. Then she said, ‘This boy’s conduct is like Candragupta’s attack on the kingdom.’ The boy said, ‘Why mother, what am I doing, and what has Candragupta done?’ ‘Thou, my dear,’ said she, ‘throwing away the outside of the cake, eatest the middle only. So, Candragupta, in his ambition to be a monarch, without beginning from the frontiers and taking the towns in order, as he passed, has invaded the heart of the country . . . and his army is surrounded and destroyed. That was his folly.’”—From *Mahāvamsa-tīkā*, in Rhys Davids’ *Buddhist India*, p. 269.

Candragupta is said to have overheard the conversation, and following the hint, he began his operations from the frontier and prospered.

(D) The Jaina story on this topic is contained in the *Sthavirāvali-carita* by Hemacandra, and is as follows :—

Candragupta and Cāṇakya made an attack upon Pāṭali-putra, the capital of Nanda, and, repulsed and pursued, were fleeing for their lives :—

“At evening, they reached a village, and going about in quest of food, they came to the hut of a poor old woman, who had just prepared the supper for her children. One of them greedily put his finger right in the middle of the dish and being burnt, began to cry. She railed at him for being as big a fool as Cāṇakya was. Hearing himself alluded to in such terms, Cāṇakya entered the house and asked the woman the meaning of what she had just said. The woman replied that the child had burnt his finger because he would eat from the middle of the dish instead of from the outer part which was cool ; in a similar way Cāṇakya had been defeated, because he had not secured the surrounding country before attacking the

stronghold of the enemy. Profiting by the advice thus unconsciously given him, Cāṇakya went to Himavatkūṭa and entered into alliance with Parvataka, the king of that place. . . . They opened the campaign by reducing the outlying provinces . . . (Parvataka dies by marrying a poison maid.) Thus Candragupta got possession of Nanda's and Parvata's kingdom. This happened 155 years after the Nirvana of Mahavira."

The Ceylonese and the Jaina stories, supplemented by the more trustworthy Greek evidence, would warrant us to arrive at the following conclusions :—

(i) Offended with Candragupta, King Nanda had driven him into exile.

(ii) With the help of Cāṇakya, he made an unsuccessful attempt on the capital, and fled to the Panjab, where he met with Alexander.

(iii) He led the revolt in the Panjab, that put an end to Greek authority.

(iv) Thus making himself master of the Panjab, he gradually advanced towards Pāṭaliputra, overthrew King Nanda, and became the master of Northern India.

We have now to fix a precise date for this Indian revolt against Greek authority in the Panjab.

§ 2. THE INDIAN REVOLT AGAINST GREEK AUTHORITY IN THE PANJAB

When Alexander left the bounds of India towards the end of 325 B.C., he made the following arrangements for his Indian territories.

1. Sind was put in charge of Pithon, son of Agenor, up to the confluence of the Panjab rivers with the Indus.

2. The territories north of this confluence, consisting of the conquered tribes of Mālavas, Kṣudrakas, etc., were put in charge of Philip. The kingdom of Taxila, north of the Satrapy proper of Philip, was under Ambhi, who had helped Alexander so much during his Indian campaign, but Ambhi's

rule appears to have been under the military suzerainty of Philip. Philip had a large army of occupation under him, consisting of Greek, Macedonian, and Thracian soldiers. The Thracian soldiers were under an officer called Eudamos.

3. East of this was the kingdom of Poros, who had a large accession of territories to his original kingdom between the Jhelum and the Chenub. He had submitted to Alexander, and had acknowledged the suzerainty of the Greek emperor.

4. North-west of the territories ruled over by Ambhi and Philip was the satrapy of Paropanisidae under Oxyartes, Alexander's father-in-law.

In 324 B.C. Philip was murdered by some of his own troops. On receipt of the news, Alexander appointed Eudamos to succeed Philip until a more satisfactory arrangement could be made. He was to be responsible for the administration of Philip's extensive satrapy conjointly with Ambhi, king of Taxila. Ambhi had all along been a faithful partisan of the Greeks, and was much trusted.

In June, 323 B.C., Alexander died at Babylon and no permanent incumbent in Philip's place could ever be appointed.

Soon after Alexander's death, his generals met in council in Babylon, and devised a scheme of partition of the empire. The Indian satrapies were, however, left as they had been arranged by Alexander (V. A. Smith's *Asoka*, p. 1; *Cambridge History*, p. 428, l. 23-8). So in this partition, there was no change in the personnel of the Governors of Indian provinces, and arrangements continued, as outlined above.

In 321 B.C. there was an amended partition at Tripuradeisos in Syria, under the leadership of Antipater. This partition shows some change.

(i) Pithon leaves Sind, and is accommodated in some territory west of the Indus and east of Paropanisidae.

(ii) "Poros is given a great accession of territory, his sphere of influence now extending all the way down the main stream to the sea" (*Cambridge History*, p. 428). This shows

that Pithon was not equal to the task of holding Sind, and retired west of the Indus, and Sind was somewhat loosely given over to Poros.

(iii) No attempt was made to curtail the power of Ambhi and Poros, as they were considered too powerful.

(iv) No mention is made of Eudamos ; but as he continued to stay in the country with his soldiers up to 317 B.C., and then had Poros treacherously slain, seized his war elephants and marched with all his forces out of India, we have no reason to assume that he did not continue to hold his acting satrapy and maintain his relationship with Ambhi up to the year 317 B.C., when he found India too hot for him.

Thus we find that the Greek authority and the Greek arrangement of Government continued in the Panjab and Taxila up to at least 317 B.C., and we do not hear a word about Candragupta or anybody else's aggrandisement up to that date. Then, when did it take place ? When did Candragupta, in the words of Justin, " Prepare to attack Alexander's prefects," " Fought with them vigorously in front of the army " on the back of a wild elephant, and " Put Alexander's prefects to death " ?

The late Dr. V. A. Smith appears to have indulged in much loose thinking in this connection :—

" But the officer (Eudamos) had no adequate force at his command to enforce his authority, which must have been purely nominal."—*E.H.I.*, p. 115.

Is there much basis for this conjecture ? Eudamos continued to be practically the only Greek satrap in India for eight years (324–317 B.C.) hemmed in between two powerful potentates Ambhi and Poros ; and when he did go out in 317 B.C., he had murdered the latter, and yet succeeded in getting out with all his force and with a large number of Poros' war elephants through Ambhi's country (there was no other easy way out of India). Does this look like the retirement of a man of weak resources, of purely nominal authority ?

" These arrangements clearly prove that in 321 B.C. within

two years of Alexander's death, the Greek power to the east of the Indus had been extinguished, with the slight exception of a small territory, wherever it may have been, which Eudamos managed to hold for some years longer."—*EHI.*, p. 116.

This is loose thinking, again. In the partition at Triparadeisos in 321 B.C., Ambhi and Poros are still regarded as Greek vassals. And Eudamos, with his Greek army of occupation, was also there, serving as satrap in place of Philip. It is hinted that no attempt was made to remove Poros and Ambhi because they were too powerful. All right. But do we hear of Ambhi or Poros or anybody else rising against Greek authority or of any cataclysm overtaking Eudamos? Is it then reasonable to hold that "Greek power to the east of the Indus had been extinguished"? And where and how did Eudamos hold on for four long years if Greek power had been extinguished and the country around had become actively hostile? Loyalty was a religion with the Indians in those old days, and it is not reasonable to accuse Ambhi and the heroic Poros with rising against Greek authority to which they had submitted, without any proof whatsoever.

"We may feel assured that as soon as the news of the conqueror's death had been confirmed beyond doubt, and the season permitted the execution of military operations with facility, a general rising took place and that Macedonian authority was at an end early in 322 B.C., except the small remnant to which Eudamos continued to cling."—*EHI.*, pp. 116-17.

As we have remarked in the beginning of this paper, we should seek for evidence in the pages of history, instead of feeling assured and drawing upon our own imagination. Does any account of a general rising in 322 B.C. exist? In the face of the account of the peaceful partition at Triparadeisos in 321 B.C., the supposition of a general rising in 322 B.C. is pure and unwarranted conjecture. And then, the existence of Eudamos with an army in the Panjab up to 317 B.C. is a

difficulty, which the late Dr. V. A. Smith unduly and unreasonably minimised.

It is impossible to ascertain what exactly took place, with the materials at our command. The murder of Poros by Eudamos, and his retirement from India by 317 B.C. are significant indications. The breaking out of the Indian revolt headed by Candragupta does not appear to be possible before this date. What led Eudamos to murder Poros? It is impossible to be sure, but it seems probable that the Indian revolt broke out at this time, and the loyalty of Poros, whose stout opposition to Alexander had not been forgotten by the Greek authorities headed by Eudamos, was suspected. This probably cost Poros his life. But presently Eudamos found the Panjab too hot for him, and the treacherous murder of the heroic Poros had surely the effect of exasperating the Indians still further. The result was that the Indian revolt headed by Candragupta gathered full momentum, and Eudamos had to leave India for good by 317 B.C.

§ 3. THE DATE OF CANDRAGUPTA'S ACCESSION TO THE THRONE OF PĀTALIPUTRA

Above, we have given reasons why the Indian revolt in the Panjab led by Candragupta should be dated in 317 B.C. Driving out Eudamos and storming all centres of Greek power must have taken some time, and we may assume that the consolidation of his power in the Panjab may have been completed by 316-315 B.C. Hemachandra in the passage from his *Sthavirāvalīcarita* quoted above (omitted in the quotation) describes how Cānakya and Candragupta, in alliance with the hill-chieftain Parvvataka, advanced leisurely towards the Nanda capital, taking town after town. The story is also told how the occupation of a particular town proved to be a protracted and difficult affair. All this may not be historically true, but it appears to reflect faithfully the actual course of events. Is it very unreasonable to hold then, that the whole campaign may have been the work of some years and the

Jaina date of 313 B.C. for the coronation of Candragupta Maurya is the correct date ?

This date for Candragupta's accession is found in many Jaina works.¹ Dr. Charpentier (*Indian Antiquary*, 1914, pp. 119-20) quotes from *Vicāraśreṇī* by the Jaina author Merutuṅga (composed, A.D. 1306), while Mr. Nahar quotes from *Tithoogaliya Payannā* and *Tīrthoddhāra Prakīrṇaka* (loc. cit., p. ii), about which books no details are given. By adding up the duration periods of the various dynasties before the Vikrama Era, it is found that the beginning of the Maurya dynasty falls in 313 B.C., which must be taken as the year of the coronation of Candragupta Maurya.

This Jaina date for this important event, I am constrained to remark, has not received that amount of attention from scholars which it deserves. They have allowed their fancies to roam wildly and practically ignored this positive and unanimous statement of the Jaina authors.² Dr. Charpentier, though hazily conscious that the Jaina date may be the correct one, had not the boldness to sift the matter to a final conclusion.³

This date receives very welcome support from Buddhist sources. The various authorities for the reign periods of the three principal Maurya kings are summarized below (*vide* Hultzsch, *Inscriptions of Aśoka*, Introduction, p. xxxii).

¹ "These three verses (containing the date for the accession of Candragupta) are repeated in many commentaries and chronological works (of the Jainas)." Dr. Charpentier in the *Indian Antiquary*, 1914, p. 120.

"We find this last date, viz. 312 B.C., referred to in other Jaina works of high antiquity as the date of this king." *An Epitome of Jainism*, by Nahar and Ghose, Appendix A, p. iv. Mr. Nahar makes the date as 312 B.C. by taking the Vikrama Era to begin in 57 B.C.

² It should be noted here that even this oft-repeated passage of Jaina literature has some confusion in its beginning, which Dr. Charpentier has taken pains to elucidate and remove. *Indian Antiquary*, 1914, "The Date of Mahāvira." But the confusion does not affect the date for Candragupta.

³ "The dynastic list of the Jainas mentioned above, tells us that Candragupta, the Sandrocottos of the Greeks, began his reign 255 years before the Vikrama Era, or in 313 B.C., a date that cannot be far wrong." Dr. Charpentier in *Cambridge History*, p. 158.

Authorities	Candragupta	Bindusāra	Aśoka
Purāṇas . .	24	25	36
Dīpavaṃśa . .	24	×	37
Mahāvaṃśa . .	24	28	37
Buddhaghōṣa .	24	28	×
Burmese tradition	24	27	×

The Ceylonese *Chronicles* further state that Aśoka succeeded his father Bindusāra 214 years after Buddha's Nirvāṇa, and his anointment took place four years later, i.e., 218 years after Buddha's Nirvāṇa.

The difference of four years between Aśoka's succession and anointment seems to be responsible for the difference between the record in the Purāṇas and that in the Buddhist sources for the period of the reign of Bindusāra. Let us assume that the tradition preserved in the Purāṇas, which name all the three kings (Pargiter, *Dynasties of the Kali Age*, p. 28) is the correct one. The result is startling!

Candragupta, 313 B.C. – (24 plus 25) = 264 B.C. becomes the year of Aśoka's accession. If we add to it 214 years, we get 478 B.C. as the year of Buddha's Nirvāṇa.

When we remember that the year 477 B.C. was fixed upon by Dr. Charpentier as the year of Buddha's Nirvāṇa, after laborious calculations on the assumption of the beginning of the Vikrama Era in 57 B.C. (*Indian Antiquary*, 1914, p. 173), and Dewan Bahadur L. D. Swamikannu Pillai, who was probably the greatest Indian authority in astronomico-chronological calculations, showed in the same *Journal* (p. 197 ff.) that the year 478 B.C. was the year that answered correctly to *all* astronomical calculations—we heave a sigh of relief at the thought that probably this knotty question has at last been solved! Astronomical calculations, when proper data are available, must be unfailing in their results; and the Dewan Bahadur put forward this date of 478 B.C. for

the Nirvāṇa of Buddha with as much emphasis as he could command, after elaborate calculations to show that no other proposed date for the event agreed with the known astronomical data for the events of the Buddha's life—whereas this year agreed in all the particulars. I wonder why such a laborious piece of calculation from so great an astronomical authority, has received so little recognition from western scholars!

When the date for the Nirvāṇa of Buddha, based on the Jaina date of 313 B.C. for Candragupta's accession, supported by the reign periods of Candragupta and Bindusāra recorded in the Purāṇas and further supported by the statement from the Buddhist sources that there was an interval of 214 years between Aśoka's accession and Buddha's Nirvāṇa, is found correct in all particulars for Buddha's corresponding life-events by astronomical calculations, let us hope, not without much misgiving and trepidation, that probably we have at last arrived at correct dates for these much-debated events. I am not blind to the fact that numerous arguments can still be advanced to destroy this harmony by the jarring notes of militant logic. For example, why should we accept the interval of 214 years of the Buddhist Chronicles and reject their record of the reign periods, etc. ? But let these engage those who love logic for logic's sake. Below, we shall take note of the most serious objection that can be taken to this chronology, viz., the date of the five Greek kings mentioned in Aśoka's Rock Edict No. XIII.

For a discussion of the identity and date of these kings, the reader is referred to p. xxxi of the Introduction to Hultzsch's *Inscriptions of Aśoka*. The dates of these kings are compiled from this work below.

Antiochus II Theos, of Syria	261-246 B.C.
Ptolemy II Philadelphus, of Egypt	285-247 B.C.
Antigonos Gonatas of Macedonia	276-239 B.C.
Magas of Cyrene	c. 300-c. 250 B.C.
Alexander of Corinth	252-c. 244 B.C.

According to our scheme, Aśoka came to the throne in 264 B.C., and was crowned in 260 B.C. The XIIIth Rock Edict in which the Greek kings are mentioned, cannot, as has been recognized by all scholars, be earlier than the thirteenth year after the coronation of Aśoka, and would thus be dated 248-247 B.C. It has been assumed that the Greek kings must have all been alive when they were referred to in the Edict of Aśoka (Hultzsch, Intro., p. xxxv), an assumption for which there is not sufficient grounds. In those days, when rapid locomotion was unknown, it is not improbable that some of the kings may have been dead by two or three years when reference was made to them in India by Aśoka. All the same, a glance at the reign periods of the above kings will satisfy the reader that all of them were alive in 248-247 B.C., except Magas of Cyrene, the end of whose reign is conjecturally given as 250 B.C. I have no materials by me with which I can attempt to fix the end of the reign of Magas more precisely. But, as I have stated above, even if the conjectural date of 250 B.C. for the end of his reign is proved to be the correct date, reference to Magas in distant India, two or three years after his death, does not appear to be improbable.

Below is compiled a list of important dates according to the chronology I have attempted to establish.

486 B.C. Death of Bimbisāra and accession of Ajāta-śatru.

484 B.C. Death of Gośāla, founder of the Ajīvika sect of the Jainas.¹

478 B.C. Nirvāṇa of Buddha.

468 B.C. Kaivalya of Mahāvīra.

¹ *Indian Antiquary*, 1914, p. 174. The event took place not long after the accession of Ajātaśatru and sixteen years before the Kaivalya of Mahāvīra. The followers of this Prophet, the Ajīvikas, receive warm attention later on from Aśoka himself and from his grandson Daśaratha, and they dedicated several caves to the ascetics of this order. For a long number of years, Gośāla was a follower and a co-worker of Mahāvīra, but ultimately turned out to be his bitter rival. The death of this prophet, who also may be regarded as a Nirgrantha (Jaina), was probably confused for the death of Mahāvīra himself in Buddhist sacred literature. *Vide Indian Antiquary*, 1914, p. 177.

c. 317 B.C. Indian revolt against Greek authority in the Panjab, under the leadership of Candragupta Maurya.

313 B.C. Coronation of Candragupta Maurya.

289 B.C. Accession of Bindusāra.

264 B.C. Accession of Aśoka.

260 B.C. Coronation of Aśoka.¹

¹ When this paper was nearing completion I was enabled through the courtesy of Mr. Jyotirmaya Sen, M.A., of the Dacca University, to read a reprint of Mr. O. Stein's paper on the coronation of Candragupta, published in "Archiv Orientalni", *Journal of the Czechoslovak Oriental Institute*, Prague, vol. i, No. 3, November, 1929. Mr. Stein's paper was prompted by a desire to criticize Mr. Jyotirmaya Sen's paper on the same subject published in vol. v, 1929, pp. 6-14, of the *Indian Historical Quarterly* of Calcutta. I was agreeably surprised and very much delighted to find that on the subject of the duration of the Greek occupation of the Panjab, Mr. Stein has taken the same view as I have taken in this paper. As far as I know, he is the only European scholar to take this view, which, as I have taken some pains to show above, is the only sane view that can be taken. The latter part of Mr. Stein's brilliant paper is marked by some confusion of thought and on p. 369, footnote 3, he unduly minimizes the importance of Dewan Bahadur Swamikannu Pillai's scholarly attempt to calculate the correctness of the dates of Buddha's Nirvāṇa in the *Indian Antiquary*, 1914.

There are numerous writings on Maurya Chronology, and it would be difficult to refer to them all. Mr. Jyotirmaya Sen's paper in the *Indian Historical Quarterly* has been ably criticized by Mr. Stein. Mr. Jayswal's paper in the *JASB.*, 1913, p. 317 ff., assumes that Magas of Cyrene died in 258 B.C., and supposes that the XIIIth Rock Edict of Asoka could not have been published before the fourteenth year of his coronation. As will be seen above, the death of Magas is now put at 250 B.C., and that also conjecturally. Thus the whole edifice that Mr. Jayswal based on this foundation goes away.

Another noteworthy paper is by Mr. K. P. Chattopadhyaya, in *JASB.*, 1927, p. 503 ff., on "The Social Organization of the Satakarnis and Sungas". It is a lengthy paper, and the chronology of the Mauryas is only incidentally referred to on pp. 536 ff. The writer practically ignores the Greek evidence and attempts to prove that the stories that Alexander heard about Xandrames, king of the Prasii, fit in with the traditions in Indian literature current only about Candragupta—completely ignoring the fact that the exact counterpart of the stories heard by the Greek emperor are to be found in Hemachandra regarding the origin of Nanda.

The Second Oldest Islamic Monument Known Dated A.H. 71 (A.D. 691)

From the time of the Omayyad Calif 'Abd-el-Malik
ibn Marwān

By HASSAN MOHAMMED EL-HAWARY
(PLATE I)

IN an article published in this *Journal* dated April, 1930, I discussed a tombstone which I considered as the most ancient Islamic monument. This was dated A.H. 31 (A.D. 652).

In this paper I intend to discuss another Islamic monument, which I believe to come directly after that dated A.H. 31 in the now known Islamic monuments.

This monument is a tombstone dated A.H. 71, which I found in a mausoleum in Aswān, known as the dome No. 77 Wali¹ in the registers of the Egyptian Survey of Antiquities. I had to go to Aswān in a special mission, and Mr. Wiet told me it would be better to seize the opportunity and examine some slabs which he had heard from a friend were to be found in some of the numerous tombs which are scattered in the ancient cemetery in the east of the town.

Therefore, following his advice, I examined all the slabs I saw until finally in the above-mentioned mausoleum I found this tombstone.

This mausoleum stands on a hill and has two domes, and on the north wall of the open court sixteen slabs were fixed. The fifth one from the right is dated A.H. 71.

I instituted inquiries in order to know the original place where the slab came from, and found that it had been put in that position with the other fifteen slabs by the Egyptian Survey of Antiquities.

These sixteen were part of a large number of similar slabs

¹ Ugo Monneret de Villard, *La Necropoli Musulmana di Aswān*, p. 34, fig. 63 et pl. ix.

which were found in the ancient cemeteries of Aswān, and which were sent to the Museum of Arab Art in Cairo.

This slab is 30 by 58 cm., of sandstone, and bears the following text:—

- (1) بسم الله الرحمن الرحيم
- (2) ان اعظم مصايب اهل الأ
- (3) سلام مصيبتهم با لنبى محمد
- (4) صلى الله عليه وسلم
- (5) هذا قبر عباسة ابنت
- (6) جريج (?) بن سد [?] رحمت [sic] الله
- (7) ومغفرته ورضوا نه عليها
- (8) توفيت يوم الأثنين لأربع
- (9) عشر خلون من ذى القعدة
- (10) سنة [sic] احدى و سبعين
- (11) وهى تشهد الا اله الا الله
- (12) وحده لا شريك له وان
- (13) محمدا عبده ورسوله
- (14) صلى الله عليه وسلم

- (1) In the name of God the merciful, the compassionate.
- (2) The greatest calamity of the people of
- (3) Islam is that which has befallen them on the death of
Mohammed the prophet ;
- (4) may God bless him !
- (5) This is the tomb of 'Abbasa daughter of
- (6) Guraig (?) son of سد [?]. May clemency,
- (7) forgiveness and satisfaction of God be on her.
- (8) She died on Monday four-
- (9) teen days having elapsed from Dhul-ka'da
- (10) of the year one and seventy,

THE TOMBSTONE OF 'ABBASA IBNAT GURAIG DATED
A.H. 71 (A.D. 691).

اسم الله الرحمن الرحيم

 ط ط ط ط ط ط ط ط ط ط ط ط ط ط
 ص ط ط ط ط ط ط ط ط ط ط ط ط ط ط
 ل ل ل ل ل ل ل ل ل ل ل ل ل ل ل ل
 ه ه ه ه ه ه ه ه ه ه ه ه ه ه ه ه

THE ARABIC ALPHABET FROM THE TOMBSTONE OF

- (11) confessing that there is no god but Allah
- (12) alone without partner and that
- (13) Mohammed is His servant and His apostle
- (14) may God bless him !

In my preceding article I classified the inscriptions of the first century into two kinds : the ordinary handwriting for ordinary purposes and the calligraphy for important cases. The Ḥajrī's tombstone (the A.H. 31 one) is of the first kind, while this one is of the second. In the latter the inscriptions lie in parallel equidistant lines similar to the specimens shown on Plate V of the *JRAS.* for April, 1930.

The date of the slab is A.H. 71 (A.D. 691) ; it lies in the reign of 'Abd-el-Malik ibn Marwān, to which also belong the inscriptions of the Dome of the Rock and the four Milestones. By comparing the letters of this slab which are shown on Plate I with those of the other monuments from 'Abd-el-Malik's reign, we find a great resemblance. Moreover, the archaism of this tombstone is proved by the following characteristics of some of the letters thus :—

(1) In most of the single *alefs* “ا”, like those of El-Ḥajrī's tombstone, there is no side appendix.

(2) The letter *dal* “د” in the words شهد, احدى, سيد and وحده is similar to the modern *dal*, with the only difference that the horizontal side lies on the line and not above it.

(3) The letter *ain* “ع”, whether median or terminal, is open from above like the letter V, as in the words مغفرته, ذى القعدة, لاربع, سبعين. This also shows resemblance to Ḥajrī's tombstone.

(4) The letter *heh* “ه” differs from that of the Ḥajrī's tombstone and from those written on some of the tombstones of the end of the second century of the Hegra, and which is like two circles one over the other, but it resembles the *heh* “ه” in 'Abd-el-Malik's milestone (Van Berchem, C.I.A.,

tome xlv of the *M.I.F.A.O.*, pl. i; *JRAS.*, April, 1930, Pl. V).

(5) The letter *lamalef* “ لا ” is similar to those on the brass plates in the Dome of the Rock, and to those in the mosaics over the arches of the Dome of the Rock (Van Berchem, *C.I.A.*, tome xlv of the *M.I.F.A.O.*, pl. xi et xiii).

Another point of interest is the fact that the formula . . . ان اعظم مصايب اهل الاسلام was used under different forms, such as ¹ان اعظم المصايب¹—ان اعظم مصايب اهل الدنيا² in the end of the second century of the Hegra and at the beginning of the third. Mr. Wiet has told me that he has not yet met with such formula in the inscriptions of the first century of the Hegra.

I believe that the absence of this formula from the known inscriptions of the first century of the Hegra does not necessarily mean that it was not used in this period, but it has not been met with owing to the small number of the inscriptions known from this century.

As to the name Guraig جريج there is some doubt whether the last letter is ج or ح. But I think that gim ج is more probable, since جريج is diminutive of جرج George. I believe this to be so because most of the people of Upper Egypt were Christians who were converted to Islam, and I have not met with any reference to the name جريج. If we take جريج as the right name, then it follows that the name سد should be سند and not سيد, because the father of Guraig, a Copt, should have a Coptic name.

¹ Répertoire No. 67 (186 A.H.).

² Répertoire No. 137 (205 A.H.).

³ Répertoire No. 261 (205 A.H.).

⁴ Répertoire No. 333 (234 A.H.).

This monument is now kept in the collection of the Museum of Arab Art in Cairo, and is registered under No. 9291.

Before closing this article I should like to thank Dr. D. S. Margoliouth for his comment on my previous paper, and I feel inclined to take his reading واينا instead of واتنا as the correct one.

NOTE.—Attention is drawn to “The Most Ancient Islamic Monument Known”, by the same author, in the *JRAS.* for April, 1930, p. 321.

Notes on the Gutian Period

By SIDNEY SMITH

1. A LETTER OF THE AGADE PERIOD

A LETTER from a man called Ishkun-Dagan has been published by M. Thureau-Dangin in *Revue d'Assyriologie*, xxiii, pp. 23 ff. Another letter of this man has recently been presented to the Trustees of the British Museum by Dr. N. L. Corkill, formerly Civil Surgeon, Baghdad, who very kindly allowed me to study and copy it at Baghdad; it is now numbered 121205. The tablet was obtained in Naşiriya, and though the statement of the fellah to whom it once belonged that it was found at Sinkarah is of no value, it certainly came from a site in the Muntafik area, very possibly from illicit excavations which are known to have been conducted at Warka. The tablet was probably found at the same time and in the same place as the tablet now in the Louvre, so that they were found in the archive of the sender, not of the addressee, a curious circumstance for which many parallels could be cited. The writing is delicate, very accurate, and large. Owing to an accident when I was examining the tablet at Baghdad, after making my copy of the text which was then complete, the tablet was broken and some signs have now been injured in lines 21-4.

Translation

Thus Ishkun-Dagan to . . . Cultivate the land and preserve the cattle. Up to now the Gutian did not cultivate the land. Don't say "How so?" You are strong, so settle Akkad (?), and do you cultivate the land. Let the store-places and the ponds be sought (?) out for you for an approach, and have the cattle brought into the city. With regard to (?) the cattle the Gutians have reared (?), now as for myself I shall say nothing, I shall pay you the money. I swear by the life of Sharkalisharri that if you will indeed deliver the cattle the Gutians reared (?) of your own free will, I will transport (? lit. carry), and that I will pay you the money when (the cattle) come to me. But you are not to keep the cattle. Make your cultivator camp (?) at the regular grain-dumps. You have been given instructions.

Notes

¹ This is probably a personal name; the element *RA* occurs in the personal names on the stele of Manishtusu published by Father Scheil. It is unlikely that the reading is *šarra*, though a similar form occurs in the Cappadocian texts, the language of which is closely connected with the language of the Agade period, e.g. in *CCT.*, iv, No. 113383, ll. 19-20, *ana kumra . . . dini*; Lewy (*ZA.*, N.F., iv, 244) considers this form a parallel to the *status determinatus* of Aramaic, but there is a good case for considering it an *indeterminatus* of the kind found elsewhere in Akkadian, the existence of which is denied by some. Mr. Gadd has suggested to me that *ana . . . RA* may be due to a mixture of Akkadian and Sumerian idiom by the scribe. But the interpretation really depends on the sense of the letter, and though ll. 4-21, might be addressed to a king they do not necessitate the assumption; *LUGAL.RA* may have been the king's principal officer in the south. The mention of Sharkalisharri in 28 precludes the addressee being the king if *uma* be taken as present, the natural view, in 29; if *uma* is preterite, then one of the alternative explanations given above may be correct. See note 17.

² *eruš* 2nd s. imp., *aruš* 3rd s. pret., *ariš* const. nomen agentis; we are justified in assuming an infinitive *arāšu* for this period. The verb is of the *u*-conjugation, whereas in the First Dynasty of Babylon period it belongs to the *i*-conjugation. The forms are used by a man whose name points to the Middle Euphrates area, judging from the element Dagan, and may be a local dialect. *aruš* seems to be a medial form in sequence *yahruš*, *aruš*, *eruš*, *eriš* (vowel assimilation). The imperative *eruš*, on the other hand, must derive from *huruš*, and shows a vowel modification dependent on the softened guttural. Note the form of the sign *e*, and its clear distinction on this tablet. There can be no question of a scribal error, the assumption to which recourse is so regrettably frequent.

³ The generalizing *ma*, giving the singular a collective significance. The double *m*, which also occurs in 19, is contrary to the general avoidance of double consonants, and may be due to the special character of *ma*, see note 8.

⁴ The differentiated use of the negatives in this letter is interesting. *a* as in Gadd and Legrain, *Ur Excavations. Texts*, i, No. 276 (where I should have transliterated and translated a *limud* "may he not allot", from *madadu*) with the preterite is the negative of the imperative; *ula*, with present, is the negative of the jussive. *ula* is also the negative of plain statement with either present or preterite. In the Louvre letter *la* is used with the subjunctive and with the jussive, and is not to be distinguished from *ula* by more than the emphasis. The difference in the stress is shown in later texts, e.g. Chiera, *Texts of Varied Contents*, No. 55, l. 21, *šumma bitati šāšu rabu la inakkis u šumma šihru ula* (not *šihru(u) la*) *uratta* "If those properties are larger (than the given dimensions) he shall not deduct therefrom, and if they are smaller he shall also not add thereto". The Assyrians used *ul* and *la* alternatively with the indicative, and this is true of all later periods; *la* alone is used with the subjunctive, the weaker form being preferred as in French. But throughout the history of the Akkadian language *ul(a)* and *la* may be parallel and the presence of *la* in parallelism or apposition is by no means a proof of a subjunctive, as some suppose.

⁵ *ana*. I take this to be for *anna*, demonstrative and indeclinable.

⁶ *maš*. I understand this to stand for the later *meš*, which appears in the Cappadocian texts as a declinable noun, but is here indeclinable. Though there is a slight break of the surface I consider the reading certain. The force of the question is: "How am I to do it?"

⁷ If the use of the signs *da* and *ta* in this letter be compared it may be thought that there is a method discernible. *da* is used (1) where it would appear in later script, e.g. *danata/dannata*, *anadaku/anaddakkum*, *anadanukum/anaddanukum*, *danadanu/tanaddanu*, *tida/tida* or *tide*; (2) it stands as the second syllable where *t* is doubled, e.g. *adda/atta*; (3) it stands for the *ta* of later orthography in the initial position, *danadanu/tanaddanu*, *danazar/tanaššar*. On the other hand, *ta* is used between vowels where *t* should not be duplicated, *danata/dannata*. In the Louvre letter the only instances of *da* fall under head (3). This suggests that the differentiation is between aspirate and unaspirated consonants, not that between fortes and lenes. But *zudarib/šuterib* is difficult to avoid, and I can find nothing

in the use of the other consonantal signs to suggest any system. I mention the matter in order to avoid any hasty generalizations, and to show that there is good ground for keeping a transliteration which differentiates different signs.

⁸ The rendering of this line is doubtful. I first thought that *maggati* might be pl. acc. of a noun connected with *magatu*, and that the phrase might be compared to the later *šuššubu niduta*; it might then be rendered "cause the fallen habitations to be inhabited". But the reduplicated consonant is unusual, and another view has suggested itself. *danata*, the permansive, requires some link with the imperative; that points to the use of *ma* as a disjunctive copula found in later texts, e.g. the Cappadocian. Thus in Lewy, *Die Kulteptexte der Sammlung Hahn*, No. 6, l. 12, where the sense of the letter, and particularly l. 25, require the reading *šuma inami NN. ilikani ma garum ana išrišu iduar* "If, when NN arrives, then the merchants' court makes a claim for his tithe", *ma* begins a line and is appositional in force. *aggati* should then be a country or district, and is parallel to *aggide KI* in the Sumerian column of Poebel, *Historical Texts*, No. 34, and to the later orthography *Akkud*, so far as the doubled consonant is concerned. The use of *ti* for the later *di* is usual. The historical inscriptions, of course, all have *A-ga-de*, but a phonetic spelling in a letter is intelligible. The absence of the determinative is disturbing but not conclusive, and the sense is good. For the use of disjunctive *ma* see further Gadd and Legrain, op. cit., No. 275, l. 29.

⁹ The use of *zu* where later orthography has *šu* points clearly to a pronunciation of the Shaph'el forms with *sin* for *shin*. The sibilants of the Agade period have been discussed by Thureau-Dangin, *RA.*, xxiii, 28. The whole question of the sibilants in cuneiform needs reconsideration, see *JEAS.*, xi, 238-9. I doubt whether the phenomena can be reduced to order in a land of mixed population where the people mostly wrote as they spoke. The same phenomena occur to-day.

¹⁰ The plural of *KI.KAL* does not require the repetition of *KI*. The meaning of the word is by no means clear. Both *KI.KAL* and *KISLAH* (*KI.UD*) are rendered *nidutu* or *terigtu*; the latter is presumably from *rēqu*, and means land that has been cleared of buildings or cultivation. In many cases *nidutu* seems to mean waste land, but a discussion of *KISLAH* by Götzke in *Kleinasiatische Forschung*, i, 194, Anm. 1, proves that in the Hittite texts the word is used of a place where grain was stored. In the present text *KI.KAL.KAL* and *agammu* are obviously to serve some useful purpose, and since the cattle would naturally water at the *agammu*, it is natural to suppose that they will find fodder at the *KI.KAL.KAL*; that the word refers, in fact, to the *išpiki kenutim* of l. 38. Now in the descriptions of the seven devils it is said that they jump about *ina nigīši iršiti* and lie down *ina niduti iršiti*, and the parallelism suggests that as the former means "in a cleft in the ground" the latter means something like "in a hole in the ground". Similarly these devils *ina niduti iršiti ittenenbu* "rise out of a hole (?) in the ground"; *tebu* could hardly be used of a flat surface. Grain, of course, is not stacked in Iraq, for obvious reasons, but stored in jars or simply in holes below ground, and I suppose *nidutu* is ground lying fallow and used for storage in silos in this way.

¹¹ This accusative to denote the intention of a verbal action is not easily paralleled in Akkadian. It may be classed as an accusative of extension in origin, delimiting as it were the action of the verb. For the accusative of extension see e.g. Driver, *Letters*, No. 64, 18-21, *ina ali (KI)-ki l šiglam kaspam riški ukal lu še-am ša šiglim riški ukal* "I will support you in your city to the extent of one silver shekel, or a shekel's worth of barley". Accusatives in Akkadian have much broader uses than is generally recognized. The double accusative, for instance, after verbs of making, the existence of which has been denied (*JRAS.*, 1926, p. 288), is to be found in one of the best literary texts extant, Sargon's *Eighth Campaign*, l. 401, where there is mention of various statues *ša (m)Ištarduri mar Išpuen eru ZUN bit (ilu)Haldia ana eqi utirruma ištāpuk širuššun* "into which Sarduris son of Ispuinis had turned the copper in Haldis' temple by means of moulds by pouring it into them". In fact, a special study of the accusative in Akkadian is badly needed.

¹² The sign *šik* is quite clearly written; there is no need to assume an error of the scribe or the copyist. It is possible to read *sik* here and derive the verb from *nasaku* "to choose", but the value *ši* occurs in Hammurabi's Code, l. 12, and is preferable; the verb is then *še'u* "to search".

¹³ This word is unknown to me. Is it a preposition governing the noun? And is it in that case comparable to *išbi*, of which Ungnad has collected instances in *MVAG.*, 1915, Heft 2? The sign for *bi* in that word is different. Or is it by any chance for *šuba*'i?

¹⁴ The ordinary usage does not require the preposition, see Thureau-Dangin, *RA.*, xxiii, 26, but the insertion is intelligible. Note that by the time of Sharkalisharri the form is already *eli*, not *al*, as previously.

¹⁵ For the subjunctive directly dependent on *uma* without conjunction see Thureau-Dangin, loc. cit., 27.

¹⁶ I understand *alakam* to be 3rd s. preterite energicus with dative suffix of the 1st person pronoun, and compare *aruš* above. Others may have other explanations.

¹⁷ The interpretation of this *u* depends upon the tense of *uma*; if, as I translate, the verb is present, then *u* is the copula, and introduces a new address to the recipient. If *uma* is preterite the sequence is not clear.

¹⁸ For *išpiku* "grain-dump", see Gadd, *Tablets from Kirkuk*, No. 43, Chiera, *Texts of Varied Contents*, No. 51.

¹⁹ I know no other instances of a verb *mat(i, d)ak(q, g)u* with which this word can be connected. If the word *madaktu*, not yet satisfactorily explained—the latest attempt may be found in *AJSL.*, xli, 274—belongs to a root *madaku* "to encamp", then *muduk* may be 2nd s. imper. ii, 1, and mean "make to camp", with double accusative.

This letter is of historical interest in that it gives a picture of confusion in Babylonia during the reign of Sharkalisharri caused by the Gutians. This people were obviously in control of some area, probably in southern Babylonia, for some time; that this is an incident due to the "horde of Gutium" which

figures in the dynastic lists is beyond doubt, for an unpublished and apparently mislaid chronicle states that the fall of Naram-Sin was caused by the Gutians. It has long been known that Sharkalisharri was at war with the Gutians, and that some trouble in the south led to a battle at Erech; the present letter seems to date from the period immediately following the success of the king of Agade. If this assumption is correct, the position shows that there was not an independent king at Erech, and the Fourth Dynasty of Erech which figures in the King Lists must be subsequent to the reign of Sharkalisharri.

2. THE OPPONENTS OF THE GUTIANS

The only cuneiform text which contains mention of the ravages of the Gutians in Babylonia is a copy of a lament first published and translated by Professor Pinches,¹ and re-edited by Professor Langdon.² This text, Rm. iv, 97, was written at Babylon on the 25th Elul, 297 B.C., and Oppert claimed that it had a direct reference to Antigonus' campaign in Babylonia, now known to have been conducted in 310-309 B.C. Few will now doubt, however, that the lament is a much older text than this, though the interests of the copyist in it may well have been due to the conditions created by Antigonus. Langdon at first suggested that the historical reference was to the Aramaean invasion of Babylonia in the reign of Eriba-Marduk, but this view has no inherent probability, and the same authority now rightly refers the historical position to the period of Gutian domination recorded in the King Lists.³ Now this lament, when analysed, presents an important feature worthy of closer attention than it has received.

The form of the lament is simple. Women of various towns

¹ *PSBA.*, 1901, May, and *Old Testament in the Light of Historical Records*, 477.

² *Sumerian and Babylonian Psalms*, No. xxv.

³ *Cambridge Ancient History*, i, 424. Hommel, *Ethnologie und Geographie*, 421, thinks the reference may be to the Kassites.

are first said to be weeping, and appropriate reasons, not of a religious, but of a secular, kind are given. The second half consists of a series of summonses to mourn for a certain number of the same towns. There is no reason to assume that the women are intended for the goddesses of the various cities in this particular case, indeed, the fact that the lament proceeds from a mention of "the woman of Erech" and the "woman of Agade" to "the daughter of Erech" and "the daughter of Agade" shows fairly clearly that human women, young and old, are meant. The list of women mentioned is as follows: (1) the distressed one, *maršatu*, of Erech; (2) the distressed one of Agade; (3) the woman of Erech; (4) the woman of Agade; (5) the daughter of Erech; (6) the daughter of Agade; (7) the daughter of Larak; (8) the woman of Ħursagkalamma, (9) the woman of Ħulḥudḥul; (10) the woman of Mar (?)¹; (11) the woman of Agade; (12) the woman of Kesh; (13) the woman of Dunnu; (14) the daughter of Nippur; (15) the woman of Der. The towns named are Erech, Larak, and Nippur. There is one feature of this list of women which immediately attracts attention. The second, fourth, and sixth are connected with Agade, the eighth with Ħursagkalamma, the eleventh again with Agade, the thirteenth with Dunnu, and the fifteenth with Der. Now this group of towns forms a geographical group of a striking kind. Agade was the capital of a dynasty which the Gutians are said to have overthrown. Ħursagkalamma, the modern Ingharra, the site of the excavations of recent years popularly called "Kish", lay near the centre of Akkad. Dunnu was the western fortress of Akkad, and is the site visited by Miss Gertrude Bell between Raḥḥaliyah and Shafathah.² Der was the eastern fortress of the same land, a *tall* near the modern serai of Badrah, on

¹ *MAŠ.KI* is not otherwise known in Southern Babylonia and I suggest with due reserve that *MAR.KI* may be meant.

² *Amurath to Amurath*, pp. 134-5. The spelling there given, *Shetatch*, is an error which is perpetuated on the survey maps, though implicitly corrected by Reuther, *Ukhaidhir*.

the Persian border. The other group consists of Erech, Larak, Hulḫudḫul, Mar (?), Kesh, and Nippur. Of these, Hulḫudḫul is otherwise unknown, but Erech, Larak, Mar (?), and Kesh all lay in Sumer, roughly the modern area of the Muntafik. Nippur is in a central position, but belonged by tradition to Sumer, and no dynasty can have been secure at Warka, which had not secured itself by gaining possession of the place.

If, with these geographical groups in view, we turn to the lament, the use of these compositions for choral performance of a primitive kind suggests that there were two bands of women and that each half-chorus sang alternately lines appropriate to the two geographical groups. The summons to mourn for the three cities may have been announced by the whole chorus. The lines may be allotted as follows:—

- | | |
|--|------------------|
| 1. 1 (A). <i>marṣatu Uruk</i> | } <i>šunulak</i> |
| 1. 1 (B). <i>marṣatu Agade KI</i> | |
| 1. 2 (A). <i>Urukaitum tabku.</i> | |
| 1. 2 (B). <i>KI.MIN (Agadeitum tabku)</i> | |
| 1. 3 (A). <i>marat Uruk tabku</i> | |
| 1. 3 (B). <i>marat Agade KI tanambi</i> | |
| 1. 4 (A). <i>ša marat Larak KI</i> | |
| 1. 5 (B). <i>Ḫursagkalammaitum tabku</i> | |
| 1. 6 (A). <i>Ḫulḫudḫulitum tabku</i> | |
| 1. 7. <i>MAS.KI-itum tabku</i> | |
| 1. 8 (B). <i>Agadeitum tabku</i> | |
| 1. 9 (A). <i>Kešuitum tabku</i> | |
| 1. 10 (B). <i>Dunnaitum tabku</i> | |
| 1. 12 (A). <i>marat Nippuri tabku</i> | |
| 1. 14 (B). <i>Deritum tabku</i> | |
| 1. 16 (all). <i>ašša Uruk bika'</i> | |
| 1. 18 (all). <i>ašša Larak bika'</i> | |
| 1. 20 (all). <i>ašša Nippuri bika'</i> | |

The only irregularity in this arrangement occurs in lines 6-7, where one half-chorus sings of two cities, and that is not, I think, sufficient to make us dismiss this interpretation as

too artificial. The division between half-choruses is inherently probable ; it accords with what we know of Sumerian practice, with other literatures and with the modern Shi'ah practice at the Muharram ceremonies. Assuming that this interpretation is correct, I see in this text an instance in cuneiform, in the first two lines, of the way in which later scribes copied on one line, without any mark or space, that which was originally written in two, a practice exemplified in Hebrew in certain Psalms, as Principal Slotki has shown in a brilliant study.¹

This division of the text is not without historical significance. These two small groups of cities centre round two capitals, Erech and Agade, in exactly the manner we should expect if the events referred to occurred at some time during the domination of the Gutians, subsequent to the death of Sharkalisharri. The position corresponds, in fact, so closely that there need be no doubt that the lament originated during the period of the Gutian domination.

Reasons have been adduced above for believing that the Fourth Dynasty of Erech must be dated later than Sharkalisharri. This dynasty lasted either twenty-six or thirty years, while the kings of Agade who succeeded Sharkalisharri reigned some thirty-nine years. On the authority of the unpublished chronicle from Ashur, we may assume that the beginning of the Gutian period, which lasted in all some 125 years, was reckoned as from the end of Naram-Sin's reign, twenty-four years earlier than the commencement of the Erech dynasty. The fall of Erech on this reckoning took place about half-way through the Gutian period, and the available figures seem to show that the dynasty of Agade was able to retain independence after the fall of the southern capital.

The summons to mourning at the end of the lament mentions only three cities, and all belong to the southern group. The

¹ *Journal of the Manchester Egyptian and Oriental Society*, xvi, pp. 31 ff., and further references there.

passages concerning these towns are barely intelligible, but the language points to the towns having been captured. The omission of the northern towns in this connection is significant, and serves to show that the lament was composed before the final fall of Agade.

But perhaps the most interesting feature of the lament may be found in the very restricted geographical grouping. Agade has not yet been precisely located, but must have been within reasonable distance of Babylon, and probably nearer the Tigris; the other towns of the northern group lie in a narrow band of territory stretching from the eastern border near the hills to the western desert. The southern towns all seem to lie between the Euphrates and the modern Shatrah canal, with Nippur as the northern, Erech as the southern point, again a strictly limited area. There is no mention of many important towns, and the most striking omissions in this respect are Umma, Lagash, and Ur. It might be supposed that the last-named had been so sorely smitten by Rimush that it had for a time ceased to be of any importance, and no remains of the period have yet been found in the excavations there; but there is, in fact, evidence that Ur at this period was at least for a time independent, as will be seen. As to Lagash, we know that the town was little affected by the Gutian invasion, and, in fact, shortly after the fall of Erech the most flourishing period there began, though complete independence was apparently never claimed. Recently evidence has turned up to show that there was a connection between Lagash and Ur at the time of Gudea and Ur-Bau. Perhaps the explanation of the omission of these and other important cities from the list in the lament is that they did not oppose the Gutians at all, but accepted their overlordship, in order to be free, first from Agade, then from Erech.

3. A NEW KING OF UR

A broken clay cone now in the British Museum, No. 121343, was obtained at Khidhr, and the exact provenance is uncertain,

but as there were at the time many antiquities in Khidhr from illicit excavations at Warka, there is some reason to believe it came from that site.

Transliteration

(1) (d)En-ki (2) *lugal* (3) *Eridu KI-ra* (4) $E-\frac{li}{ii}$ (?) (5) *lugal*
Uri KI-ma-ge (6) *abzu-ni* (7) *mu-na-du*.

Inscription on broken cone.

Translation

Elili (?) king of Ur has built his *apsu* for Enki, king of Eridu.

The reading of the name is by no means certain ; I can only suggest that it is perhaps to be read Elili, and to be compared, so far as the form of the name is concerned, with Elulu, a king of the First Dynasty of Ur according to the king lists, or with Ilulu, one of the four names given for the three troubled years after the death of Sharkalisharri. There is no reason to identify him with either at present.

The writing of the inscription is of the style of the Third

Dynasty of Ur, but might be as early as Gudea. The signs are elongated and straggling. It is historically impossible to date this unknown king of Ur later than Ur-Nammu, and we are therefore justified in assuming that Ur was for a time independent during the Gutian domination. As the cone was certainly not found at Ur or Eridu, for reasons on which it is unnecessary to dilate, the "kingdom" included a city outside the immediate confines of Ur, possibly Erech itself, so that the importance of this king, though probably exaggerated by his title, was not purely local.

4. UR-NIN.MAR, GOVERNOR OF LAGASH

The Iraq Museum acquired in 1929 a stone cone bearing a hitherto unknown inscription. The object is now numbered 7053 (29-10-1). The stone is red with a white streak, the base

Stone cone.

is slightly hollowed out into a cup-shape, the stem is gently curved, and the top is broken off almost square. The provenance is uncertain, but it came from southern Babylonia.

The inscription denotes a votive object, whereas clay cones bear building inscriptions, but what purpose the object served I do not know. The style of writing is that of the Third Dynasty of Ur, and seems to me probably subsequent to Gudea. As the name of Ur-NIN.MAR does not occur on tablets of the time of the Third Dynasty, this governor may have ruled Lagash at the end of the Gutian period.

Transliteration

(1) (d)Ba-u (2) nin-a-ni (3) nam-til (4) Ur-(d)NIN.MAR.KI
(5) iššak (6) Lagaš KI-ka-še (7) gim-gir-nun (8) dam-amar-šu
(9) dumu al-ge (10) u nam-til-ni-šu (11) a-mu-na-ru.

NOTES

1. Jensen reads the name of this deity Baba, and is supported by Thureau-Dangin, *Homophones sumériens*, p. 40.

7. Presumably a female proper name.

8. This appears to describe the lady's relation to the governor for whose life the object is dedicated, but I do not understand the phrase.

9. *dumu* seems to stand for *dumu.sal* as in Gadd and Legrain, *Ur Excavations. Texts*, i, No. 12, or No. 17. *al* alone is a peculiar personal name; one expects *al-la*, but the scribe is given to contracted forms.

Two Hymns of the Catuḥ-stava of Nāgārjuna

By GIUSEPPE TUCCI

THE two hymns here edited are respectively the first and the last of the four *stavas* attributed to Nāgārjuna, and generally known and quoted under the comprehensive name *Catuḥ-stava* or *Catu-stava*; the other two *stotras*, missing in our manuscript, are the *Lokāṭīta-stava* and the *Citta-vajra-stava*. As to their authorship, there is but little doubt; the style itself is the same as that of the *kārikās* of the *Mūla-mādhyamika-kārikās*. Moreover, Candrakīrti in his *Prasannapadā* quotes from the *Catuḥ-stava*, attributing one of them, viz. the *Lokāṭīta-stava* to the Master, *ācārya-pādāḥ* (p. 413).

We are naturally inclined to attach little importance to the hymnology of the Hindus, because, even if some of the *stotras* are very beautiful from the literary point of view, we think that they do not add very much to our knowledge of Hindu thought. But I venture to disagree. Many of the *stotras* are not mere prayers or hymns in praise of God. In a certain way they cannot be dissociated from the *dhyānas*, which very often are embodied in them, that is to say, their aim is to produce an inner ecstasy by which the vision of God is made possible. They are therefore essential moments of the complex process of *sādhana*, just as the *pūjā*, the *nāma-japa*, the *kīrtana*, etc.; they are, in other words, instruments by which the intelligence grasps the religious truth therein expounded, while in a second moment the spirit focuses and visualizes, as it were, that same truth in a direct experience. It is therefore evident that the immense *stotra*-literature has a great bearing upon the study of Indian mysticism, and must be thoroughly investigated by the students of religious psychology or by those who want to understand the true and fundamental characters of Hindu religious experience.

In the *Catuh-stava* we are confronted, no doubt, with one of the best specimens of this kind of literature. As a matter of fact, the four *stotras* contain in a great synthesis the entire Mahāyāna dogmatics conducive to the supreme realization of the *śūnyatā*, considered as *paramārtha*, viz. as the Absolute. At the same time they show, paradoxical as this might appear at first sight, that Buddhism even in its Mahāyāna derivatives remained fundamentally what it was at its very beginning ; I mean a kind of mysticism which does not admit the existence of any god as an absolute entity. Of course its Olympus is full of gods and divine beings, crowned by the Buddhas and Bodhisattvas, but all these gods have only a relative reality, they exist in so far as *prapañca* exists, viz. in so far as the play of *vikalpas* and *samkalpas*, the synthetic and analytic imaginations, takes place in our mind. Even the *dhyāni*-Buddhas of later Mahāyāna-mysticism are subjective projections of the purified mind of the Bodhisattvas or of the Yogins. Their vision can be enjoyed in the highest stages of *dhyāna* and *samādhi* ; but, when all impressions of the great cosmic ignorance representing the negative but necessary side of the Eternal are destroyed, even Buddhas and Tathāgatas disappear, since any activity of mind is lost in the *paramārtha*. This *paramārtha* is the Absolute beyond words, which may be called void only in so far as no predicate can be applied to it.

In the sphere of relative existence there is place for all sorts of gods, but in the plane of truth even the Tathāgata vanishes (v. Haribhadra's *Abhisamayālaṅkāra*loka, p. 542, of my edition).

This process is indicated by the *Catuh-stava* ; the four parts into which it is divided cannot be dissociated. There must be four *stavas* because the truth can be realized in a fourfold gradation of different intensity corresponding to the fourfold body of the Buddha. Each *stava* is therefore to be related to a particular aspect of the truth, of which one of the four bodies of the Buddha is to be considered as the symbol. It seems to me that the *Catuh-stava* codifies, as it were, the

buddhology of Nāgārjuna, showing at the same time that the great doctor knew the system of the four bodies of Buddha, though he gives each one of them a name different from the usual one. But, reading the hymns, we shall easily recognize behind the difference of denomination the analogy of doctrine, and it will not be difficult to identify *nirupama* with *nirmāṇa*, *lokātīta* with *sambhoga*, *citta-vajra* with *dharma-kāya*, *paramārtha* with *svābhāvika-kāya*. This implies analogy between Nāgārjuna and Maitreya, and it shows that the four-kāya-theory is much older and more diffused than is generally supposed.

My text is based on a Nepalese paper manuscript, not very old, which I bought in Nepal; the text is accompanied by a *Ṭikā*, which is a mere *bāla-bodhinī*, giving the grammatical construction of the sentences, nothing more.

The Tibetan translation is contained in *bsTan agyur*, *mDo* (Narthang edition), i, 74, b, 4 ff.

¹ Quoted by *pañjikā* on *Bodhicaryāvatāra*, p. 420, and by *Advayaavajra* (in *Advayaavajra-saṅgraha*, ed. by Haraprasāda Shāstrī), p. 22.

² Quoted by *pañjikā* on *Bodhicaryāvatāra*, p. 489.

5. Thou dost not take *nirvāṇa* as the suppression of *saṃsāra* ; since thou, O Lord, dost not perceive any *saṃsāra*, thou obtainedst quiescence.¹

6. Thou knowest that the defilement of passion and the purification of virtue have the same taste ; since no discrimination is possible in the reality thou art completely pure.

7. Thou, O Master, didst not utter a single syllable, and (yet) the entire [mass of] people fit to be converted was gratified with the shower of the law.

8. Thou art not adherent to the *skandhas*, to the *dhātus*, or to the *āyatanas*. Thou art mind only (as infinite and pure) as the ether, nor dost Thou reside in any contingent thing (*dharma*).

9. The notion of being does not occur to Thee at all, and yet Thou art exceedingly compassionate towards all beings tortured by sorrow and pain.

¹ *Nirvāṇa* is not the result of suppression of *saṃsāra* ; suppression of something implies previous existence of something ; but *saṃsāra* is not existence—inasmuch it is *pratītya-samutpanna*, relative ; *nirvāṇa* also is relative, if it is considered as the result of suppression of *kleśas*, viz. of *saṃsāra*. As a matter of fact, neither merit nor demerit exist, because any judgment of values as well as any notion is *vikalpa* or *saṃkalpa*. But truth is beyond the two ; *nirvāṇa* and *saṃsāra* are therefore equivalent, since they are imagined as reciprocally connected, but in the realization of *paramārtha* they must disappear just as all contraries must necessarily vanish.

10. Thy mind, O Lord, is not attached to those multifarious opinions as regards pleasure and pain, existence of an ego, non-existence of an ego, affirmation of some eternal being, negation of some eternal being.

11. Thy belief is that things do not go (changing into some other condition), nor do they come (into existence by the agency of some force) : nor dost Thou admit that there is a whole as the conglomeration of many parts. Therefore Thou knowest the absolute truth.

12. Thou art followed everywhere, but Thou art born nowhere ; oh great ascetic, Thou art beyond our thought, as regards attributes of birth and corporeity.

13. Thou, the irreproachable One, didst understand that this world is neither unity nor multiplicity ; it is like an echo, it is subject neither to changing [into other forms] nor to destruction.

14. Thou, my Lord, didst know that the cycle of existence is neither eternal nor impermanent, that in it there is no predicable nor predicate, (since it is) similar to a dream or to a magic play.

¹ My xylograph is effaced here, and the reading is doubtful.

15. All defilements which have their root and their fruit in the faculty of projecting new karmic series have been completely overcome by Thee, immaculate One. By (realizing) the nature of the defilements thou obtainest immortality.

16. O Thou, firm in thy resolve, Thou didst see the world of material appearances as devoid of any predicate and like the immaterial. Still in the material sphere Thou appearest with a body shining with the (thirty-two) marks of the great man.

17. But even if Thy appearance has been seen, it cannot be said that Thou hast been seen. When the object has been seen, Thou art well seen, but reality is not the object of vision.¹

18. Thy body has not the nine holes (as mortal beings have), it has no flesh, no bones, no blood ; still Thou manifestedst a body (which is a mere reflex) just as the rainbow in the sky.

19. Neither disease nor impurity are in Thy body ; it is not subject to hunger or thirst and still in order to comply with the world, Thou hast shown a worldly behaviour.

20. O impeccable One, no fault whatsoever (caused) by the obstruction of the actions can be found in Thee ; still on account of thy pity for this world Thou hast shown (an apparent) diving into *karman*.

¹ The various ways of worshipping the Buddhas are the first moment in the long *anupureī* or *krama*, which leads to the supreme realization. The same theory is accepted by the Śaiva system of Kashmir, and generally by all Indian systems following Vedānta philosophy. The idea of God and the meditation on God as a personal being are mere *upāyas* for the *buddhi*, which makes the *sādhaka* fit for higher stages of mystic realizations.

21. Since the reality cannot be differentiated, there are no different vehicles (of liberation); only in order to convert living beings (according to their different tendencies and maturity) Thou preachedst the three vehicles.¹

22. Thy body is eternal, imperishable, auspicious. It is the very law, it is the Victorious one. Still on account of the people to be converted (to the path of salvation) Thou showedst Thy passing away into *nirvāṇa*.

23. In the infinite universe Thou art now and then beheld by those who have faith in Thee, and are anxious [to become Buddhas and to imitate Thy] descending upon earth, Thy birth, Thy illumination, Thy preaching, Thy entering into *nirvāṇa*.

24. No feeling, O Lord, no ideation, no motion are in Thee. Thou art accomplishing in this world the duty of a Buddha, without participating in it.

25. I have spread over the perfect One, who is beyond our thoughts and any limitation, the flowers of his very attributes. Through the merit which I have begot may all living beings in this world participate in the extremely deep law of the sublime ascetic.²

¹ Viz. *ekayāna* theory, as opposed to the three-*yāna* theory; the truth being one, the vehicle to its realization must be one. But the truth appears to beings in a different way according to their different preparation and maturity.

² The usual *punya-pariṇāmanā* is contained in this verse.

THE HYMN TO THE SUPREME REALITY

1. How can I praise Thee, O Lord, (since Thou art) unborn, residing in no place, surpassing any worldly comparison, abiding in the sphere which is beyond the path of words ? ¹

2. Anyhow, having recourse to worldly convention, I shall praise my Master with devotion, as Thou art, [only] accessible in the sense of reality.

3. Since Thou hast the nature of the unborn, for Thee there is no birth, no coming, no going. Homage unto Thee, O Lord, who art devoid of any essence !

4. Thou art neither existence nor non-existence, neither impermanent nor perennial,² neither eternal nor non-eternal. Homage unto Thee who art beyond any duality !

5. No colour is perceived in Thee, neither red nor green nor scarlet, neither yellow nor black nor white. Homage unto Thee, who art without colour !

¹ The *paramārtha* is beyond words ; how can it be praised ? It is the Absolute and therefore, by definition, no further determination is possible. When we want to say something about it we cannot help limiting it within our ideas. But it is always through words and ideas that truths become present to our spirit and are afterwards realized. The following verses insist therefore on the negative description of the *paramārtha*, of which the best determination is complete negation of all predicables ; *omnis determinatio est negatio*.

² *Śāsvata*, when used with *nitya*, indicates that being which, having had an origin, is never destroyed ; *nitya* is the being without beginning or end, *sadasatpariṇāmaśūnya*.

6. Thou art neither big nor small, neither long nor globular. Thou hast reached the stage of the limitless. Homage unto Thee, the unlimited One.

7. Thou art neither far away nor near, neither in the sky nor in the earth, neither in the cycle of existences nor in Nirvāṇa. Homage unto Thee, who dost reside in no place!

8. Thou dost not stay in any *dharma*, but art gone into the condition of the Absolute and hast obtained the sublime deepness. Homage unto Thee, the deep One.

9. Praised in this way, let Him be praised ; but has He been praised ? When all *dharma*s are void who is praised or by whom can he be praised ?

10. Who can praise Thee, as Thou art devoid of birth and decay, and since neither end nor middling, neither perception nor perceived exist for Thee ?

11. I have praised the Well-gone (Sugata) who is neither gone nor come, and who is devoid of any going. Through the merit so acquired may this world go along the path of the Well-gone.

Assyriological Notes

By S. LANGDON

I

AGALLA = *mu'iru*

THE Gudea cylinder A, col. iii, 12, contains a *crux interpretationis* which editors have failed to overcome. Thureau-Dangin's new copy, *Les Cylindres de Gudea*, TC. viii, has *NE-gi-BAR a-gal-la dū-a-me*. That this is the true division of the signs is proved by iv Raw. 29**, 9 = my SBP. 268; á-ma-al dū-a-bi-e-ne = *li'at kalama* "wise (goddess) in all things", and by v Raw. 44, B 14, N.Pr. ^dNannar-á-gal-dū-a-bi = *Sin-li'i-kullati*. The passage occurs in an address of Gudea to Gatumdug. The passage was left untranslated by Thureau-Dangin, SAK. p. 93, but P. Maurus Witzel, *Keilschriftliche Studien*, Heft 3, p. 2, rendered the line, "Thou art she who causes *wheat* to thrive by the overflow of waters," without any note on the text. It is obvious that *agalla dū-a-me* means "thou art wise in all things". For *gal* var. of *gál*, see VAT. 10216 in Meissner's *Beiträge zum Assyrischen Wörterbuch*, p. 81, 40, note 56, and *a* for *á* in *a-ma-al* = *le'u*, Ebeling, KAR. 44, Rev. 18.¹ *á-gal* = *rabiš*, CT. 21, 48, 6 = VS. i, 33; ii, 4; *ug-e a-gal*, powerful panther, Genouillac, *La Trouvaille de Dréhem*, No. 1, 3. *NE-gi-BAR* cannot possibly be a word for wheat, fruit, or some grain in this passage. It is true that the ideogram does have this sense; Gudea, St. E., 5, 22; G., 4, 15; *še R-laḡ-laḡ* "the white grain R", Thureau-Dangin, RTC. 69, i, 6; 71, i, 4, with *R-gig* (black), l. 5, and 69, ii, 1; Allotte de la Fuyé, DP. 141, i, 1. There is every chance that it has some entirely different sense here and must be left untranslated for the present. Witzel is, however, entirely right about line 8 of

¹ Zimmern, ZA. xxx, 212.

this passage, *a-mu šag-ga šu-ba-ni-dûg unû-a ni-tud-e* "My seed (begetting) was 'filled into' the womb and in the great chamber thou (suffix *e*) didst bear me". Cf. *Stela of the Vultures*, obv. v, 1-3, *a-šag-ga šu-dûg-ga* (*malû*), whose seed was "filled into" the womb (by Ningirsu). The passage *a-šag-ga šu-ba-an-ti a^d.Enki-ga-ka* "she received semen in the womb, the semen of Enki", Langdon, *Paradis*, pl. ii, 33; iii, 12, was misunderstood by me. See my new rendering in *Semitic Mythology*, pp. 196-7, and p. 403, n. 15.

II

THE SIGN  (eri, era) = *mu'irru*, DIRECTOR

In *Recueil de Travaux*, xxxvi, *Nouvelles Notes*, xxi, Professor Scheil published an Assyrian duplicate of K. 2012 = Meissner, *Supplement*, pl. 4. Scheil's copy has MAL + PA (e-ri) = *mu-ir-ru*, but Meissner gave an uncertain sign which looks like MAL + ME-EN. According to Meissner in his *Beiträge zum Assyrischen Wörterbuch*, p. 81, 40, the Berlin tablet VAT. 10216 has also an uncertain sign here which looks like MEN, and glossed *e-ra*. K. 2012 restored by VAT. 10216 has then gal-X(era) = *mu-ir-ru*, var. *mu-'i-ru*. Now it is certain that gal-MAL + PA is right from ZA. 29, 79, ii, 5; Scheil-Legrain, *Dél. Per.*, xiv, p. 121, No. 88, 3; Clay, *Miscellen.*, 12, iii, 6. Note also that the Ibe-Sin liturgy, Ni. 8310, obv. iii, 13 = Barton, *Miscellaneous Babylonian Inscriptions*, No. 7, has MAL + PA-ra, i.e. era-era(ra)-na, his ministers, delegates.¹ The sign contains the ideogram PA = *hattu*, sceptre. To the known values of Brünnow, No. 5489, *sila* and *išhara*, *išhur* as name of the goddess ^dX, must be added *era* and *eri*.

K. 2012 has definitely the sign MEN. It has been collated for me by Mr. Gadd, who has no doubt about it. MEN, therefore, is for some reason either a corruption of the old sign or a variant based upon some unknown homophone.

¹ Barton's copy agrees with my own.

III

NOTE ON THE YEAR DATE 2 OF SAMSUILUNA

Professor Elihu Grant, *Cuneiform Documents in the Smith College Library*, p. 28, published a year date, *mu Sa-am-su-i-lu-na lugal-e še-ga dingir-gal-gal-e-ne ama-ar-gi ki-en-gè (MI) Uri(ri)*. Samuel Feigin in *AJSL* vol. xlii, pp. 52-3, established the identity of the abbreviated forms of this date (he seems to have overlooked the Smith College tablet), *mu še-ga dingir-gal-gal-e-ne*. It is the second year date formula of Samsuiluna. Feigin translated the full form, "In the year Samsu-iluna, the king, obedient to the great gods, established (*in-gar*) the freedom of Sumer and Accad." There is a grammatical difficulty here; for *še-ga dingir* cannot mean "obedient unto God". Cf. King, *LIH*. 61, 9-10, *En-lil-da giš-tug še-ga Utu*; also 62, 7-9; Legrain, *PBS*. xv, 85 (pl. viii, and p. 49), col. i, 5, *En-lil-da giš-tuk* "obedient unto Enlil". But *še-ga Utu*, *LIH*. 58, 34 = 57, 37, *mi-gi-ir iuŠamši* "Favourite of Shamash". The translation should be "favourite of the great gods" in the date formula. But in *Rev. d'Assyriologie*, 27, 83, is published a Samsuiluna date which I could not identify. *Mu Sa-am-su-i-lu-na lugal da-ām-gur-ti LU*. The text seems clear but is carelessly written; see *ibid*. It is possible that the scribe meant *damgurti AN-GAL*. In any case, *damgurti* is the translation of *še-ga*. The usual meaning of *tamgurtu* is "agreement", *RA*. 23, 84, n. 1 (Gadd). But it must mean *grace, favour*, in this passage, and *še-ga* corresponds to *tamgurtu*, unusual for *nam-še-ga*. But for *šega* as an abstract noun, see Poebel, *BE*. vi, 40, 17; *še-ga-ne-ne-ta (ina tamgurti-šunu)*; also Chiera, *PBS*. viii, 21, 25; Hunter, *OECT*. viii, p. 27, 44; 25, 46, etc. Here the word means "agreement". For the construction of *šeg* in the sense of "be obedient unto", see Gadd-Legrain, *Ur Excavations*, 123, 9, *Ninlil-da še-ga-dm* "obedient unto Ninlil", pleasing unto; and iv Raw. 12, *Rev*. 35, with *ki*; *ki En-lil nitlam-a-ni dūg-bi ab-še-ga-e-a = ša itti Enlil ħairi-ša amat-sa magrat* "Whose word is

pleasing unto Enlil her husband". With *ki . . . ta*; *ki a-a ugu-ni-ta zīb-ba-ni še-ga* "Whose word is pleasing unto the father her begetter", Gadd, *JRAS.* 1926, 681, 8-9.

The full year date of Samsuiluna, therefore, means "When Samsuiluna by the grace of the great gods, etc."

IV

THE SIGN TAG, VALUE *paḥ*, *baḥ*

In Dr. R. C. Thompson's *Assyrian Medical Texts*, 36, 1, 11, the word *ta-na-TAG* is to be read *ta-na-paḥ*, thou shalt blow (into his ears). That the sign *TAG* has this value is now proved by Mr. Gadd's new text, CT. 41, 48, 83, TAG (*ba-aḡ*). This value is probably derived from TAG (*šu-um*) = *tabāḥu*, and is consequently omitted in *Vocabulary Scheil*, after l. 175, and CT. 12, 24, 53-62. The new value should be added to Thureau-Dangin's *Le Syllabaire Accadien*, p. 14.

V

SUMERIAN *bad-bad* = *babbad* = *tapdû*, *padānu*, *taḥtû*

According to RA. 10, 73, 36, KI-KAL (*ba-ad*) = *dannatu*, the Sumerian word *bad* means "disaster, destruction". Cf. *ina puški* (u) *dannati uštēsi* "He shall escape from distress and disaster", Ebeling, KAR. 26, 26, with Gadd, CT. 38, 34, 21 f., *ina puški u KI-KAL uštēsi*. In King, *Chronicles*, ii, 43, 5, *da-ap-da-šu-nu* corresponds to *bad-bad-šu-nu*, 33, 32; 36, 8. But the ideogram <I>- <I>- has the value *ba-ab-bad*, Meissner, MAG. iii, 3, 49, 79 = at least three Semitic words. *babbad* stands for *bad-bad*. But CT. 12, 42, A. 54, has *ši-ši giš-tukul-sīg-gi* = *maḥāṣu ša tup-di-e*, and Delitzsch, H. W., *sub tapdû*, *taḥtû*, proved that ŠI-ŠI = *tapdû*, *taḥtû*, defeat, disaster. In Ebeling, KAR. 128, 30, *ba-ab ag-ug-eš* = *ana šakān tap-di-e*; here *ba-ab* is false for *ba-ad*, either in the copy or original text. Hence *bad* alone = *tapdû* (cf. *ta-ap-da-a*, or *ta-ab-da-a*, also *ṭ* possible, *tapṭû*? Scheil, RT. xx, note xxxv, ll. 1-3-7, and Thureau-Dangin, *Sargon*, p. 12, n. 1). Genouillac, RA. 25, 124, 7, has ŠI-ŠI (i.e. *babbad*) = *padānu*, certainly

derived from *padû*, *paṭû*, as is *tapdû*, i.e. destruction, defeat. The three words to be supplied in MAG. iii, 3, 49, 79 ff., are *tapdû*, *taḥtû*, *padānu*, perhaps also *tupdû*.

What then can be the root of *padû*, *paṭû*? A verb *badû*, *baṭû*, occurs in *ubaddi-ani*, Ungnad, BA. vi, *Briefe aus Dilbat*, 74, 17. This passage is too obscure to be of any use. Is it possible that *padû* is a loan word from Sumerian *bad*? It would be entirely unusual for a Sumerian loanword to be used as a verbal root, and the basis of two derivatives *tapdû* (*tupdû*), *padānu*. But no Semitic root for this word *tapdû* has been found; perhaps Sumerian loanwords were more completely Semiticized than Assyriologists have been inclined to admit.

RA. 10, 73, 37, has KI-KAL (du-bad) = *awāti*; CT. 12, 36, A. 18, *awātum*, wrath, destruction; cf. CT. 12, 6, B. 19, and PSBA. 1916, 134, n. 74. Can *tupdû*, *dupdû*, be derived from *dubad*, and is a form *dabad* the source of *dapdû*, *tapdû*? These are suggestions apparently contrary to all rules of Semitic philology, but they are worth considering.

VI

birîš = IN HUNGER, HUNGRILY

The adverb *birîš*, *bi-ri-iš*, according to K. 4369, Rev. ii, 8 = *Babyloniaca*, vii, p. 94, pl. iv, has the Sumerian equivalent *ú-sîg-sîg-e*, followed by *bar-e* = *ma-ti-iš*, "in need," not *madiš* as entered in lexicons. *ú-sîg-sîg-e* probably means *šammu-arḫu* "yellow grass", i.e. "parched pasture". Ebeling, *Berliner Beiträge*, i, 1, *Ein Babylonischer Kohelet*, l. 141, *bi-ri-iš lu-ut-te-lu-me*, rendered the word by "hungry", which Meissner, MAG. iii, 3, *Studien zur Assyrischen Lexicographie*, p. 45, seems to have entirely overlooked. In the proverb published by me, AJSL. 28, 242, Bu. 80-7-19, 130, line 8, *bi-ri-iš (iš-)ni-il*, *iš* is undoubtedly false, and a repetition of *iš* in *bi-ri-iš*. Both passages have the verb *na'ālu*; *lutte'lu*, ii, 2, and *ni-il*, Perm. i, 1. Meissner rightly restores [*ú-sîg-sîg*]-*je ba-nad* = *birîš nîl*. The context in Ebeling, *Kohelet* proves

that *biriš* means "in hunger", and *bi-ri-iš* is from *barû*, to hunger, *birû* hunger and hungry. The proverb in AJSL. 28, 242, should be read as follows:—

6. *alap na-ka-ri šam-me ik-kal*.

7. *alap ra-ma-ni-¹šû*.

8. *bi-ri-iš ni-il*.

"The ox of a stranger feeds on grass (Sumerian *kû-kû* = he causes to feed on grass), but his own ox lies in hunger."

The point of this proverb is obvious. Some men treat the possessions of others better than their own. That this is the true meaning of *biriš* is proved also by Ebeling, KAR. 375, col. iii, 37 = v Raw. 52, No. 2, Rev. 23.

37. *me-ri an-na gud kû-e e-zí kû-kû-e u-šim !-e ba-nad*.

38. *šá pa-tar^a A-nim a-ki-il al-pi u im-me-ri bi-ri-iš² ni-i-il³*.

"The sword of Anu, consumer of oxen and sheep, lies in hunger."

That is, the sword of the priest of sacrifice lies idle because there are no victims. That this is the sense is proved by lines 39–40:—

39. *me-ri-[?] (pa-at-ri-šû) ág-šêg-gà-bi KUN-bi nu-un-sug-e*
40. *ú-zu-ul-ta-šu ina ba-áš-lim ši-ki-ir-ša ul i-ra-[kab]*.⁴

"His sword moistens not its blade in roast flesh."⁵

The ideogram for *biriš* in both KAR. 375 and v Raw. 52, is *ú-šim-e*, but this must be due to an error of some early copyist, whose mistake was propagated by all later editors.

¹ So Meissner undoubtedly right.

² Var. *riš*.

³ Var. *ni-il*.

⁴ Or *i-ša-[ab-bi]*, "dips".

⁵ Nötscher, *Enlil in Sumer und Akkad*, 105 and 107, misunderstood these lines.

The Beginnings of Marāṭhī Literature

By NICOL MACNICOL

IT is usually taken for granted that Marāṭhī literature begins with Mukund Rāj, Jñāneśvar and Nāmdev. These are likely to continue to hold their position as the real inaugurators of the intellectual awakening in Mahārāshṭrā which broke away from Sanscrit and made use of the vernaculars as the literary medium. The recent research which has revealed the fact that these outstanding personalities were not alone in this new departure, has yet to be fully investigated, and the value of the earlier literature which has emerged has to be determined. That the Mānbhāu sect with which this newly discovered literature is associated had a very long and curious history has been known for a good many years, and Sir Ramkrishna Bhandarkar and others had become interested in it, but it is to the late Mr. Vinayak Lakshman Bhave that we owe the discovery that this sect were the guardians from the twelfth century at least of what he calls "an unknown chamber in the palace of Marāṭhī literature". Of the 500 hitherto unknown authors whose names, he tells us, he has catalogued, and whose works number five or six thousand it is not likely that many will take high literary rank. But to the followers of the Mānbhāu sect who wrote or translated these Gitās and Bhāgavatas so long ago, and who carried the Marāṭhī tongue and their books in old Marāṭhī to Peshawar and beyond, so that to-day in these far-off Maṭhs one can talk to their inmates in that language—to them Mahārāshṭrā owes a real debt. The members of this remarkable sect did more, it would appear, than anyone has hitherto dreamed of to shape the language for literary expression and to make it the channel to its followers of the ancient Sanscrit lore.

The discovery of these hidden treasures has altered the

whole aspect of the beginnings of the literature of Mahārāshṭrā. It was always obvious to anyone who considered the matter in the light of the growth of other literatures that the language cannot have become on a sudden the finely tempered philosophical weapon that it is in the hands of those who, according to the tradition, lead the succession of the Marāṭhī poets. Now what before was guessed is proved to be the truth. As with every language, so with Marāṭhī, there were earlier and humbler blossomings before the great flowering period. The language grew gradually in grace and flexibility in the hands of lesser men before it came to be made use of to convey profounder messages at the bidding of such writers as Mukund Rāj and Jñāneśvar. No opinion, however, can be formed of the literary value of these earlier works until they have been examined and appraised by scholars. It seems probable that their value will in the end be found to consist rather in the philological contribution that they make to our knowledge of the growth of the literary language than in their worth as poetry or as philosophy.

For that reason we may preserve still for Mukund Rāj his traditional place as the coryphæus of the line of Marāṭhī poets. The arguments for and against this tradition are too evenly balanced to justify its rejection. They centre around the question of the identity of an individual whom he mentions in his *Viveka Sindhu* as his patron and who is called "Jayantpāl, son of Ballāl, son of Nṛisinha". According to Mr. Bhavé, this person was simply a wealthy Mæcenās, of whom we can know nothing further. Others believe him to have been identical with Jaitrapāl, the son of Bhillam, a famous Yādhava king who was on the throne of Devagiri in A.D. 1191. A third possibility is that he was some unidentified son of the Hoysala king, Vīra Bellāla, who was the son of Nṛisinha, and ruled from 1173 to 1220. The Hoysalas under Vīra Bellāla ruled as far north as the modern district of Dharwar, and may well have had Marāṭha scholars and poets attached to their court. However this may be, the

probabilities on the whole seem to point to Mukund Rāj having flourished in the first half of the thirteenth century A.D.

These conjectures, however, which are of very doubtful value, would still be held by many scholars to assign Mukund Rāj to a date which does not agree with the character of the language which he uses. There certainly appear to be far fewer archaic forms made use of in the *Viveka Sindhu*, the *Paramāmṛita*, and the *Mūla Sthambha* than in the *Jñāneśvarī*, which is generally acknowledged to have been written in A.D. 1290. There is at the same time the possibility that the language of his poems was modernized by a later editor or by the copyists of the MSS. Professor W. B. Patwardhan appears to be strongly inclined, on the ground of the language of the poems, to date Mukund Rāj considerably later than Jñāneśvar, and this view has also the weighty support of the late Mr. Hari Narayan Apte. The whole question of the date of this poet appears to be beset with uncertainties that make a confident decision in the meantime impossible.

The four works that are attributed to Mukund Rāj are all of them of a philosophico-religious character and afford little opportunity for a display of distinctively poetic qualities. The general direction of their philosophical teaching appears to be towards the Advaita of Śaṅkara. The writer proclaims this definitely in the *Viveka Sindhu*, which is the most important of his works: "I have uttered my Marāṭhī speech," he says, "depending upon Śaṅkara. Accordingly it may be accepted by the wise as true scripture." He seems throughout the poem to be arguing in opposition to any doctrine of duality. So also in the *Paramāmṛita*, though he speaks of *Sayujyata* and emphasizes *prema*, the union that is its aim is the unity of Advaita.

It is not difficult for us to see, on a general survey of the works that tradition has assigned to Mukund Rāj, that at the time when they were written, while their author was a decided upholder of the unqualified monism of Śaṅkara, the teaching of Śaṅkara's great rival Rāmānuja was in the

atmosphere about him, and he had come in some measure under its influence. The idea that their message can "make the world happy" (*Viveka Sindhu*, i, vii, 56) or "can save the world" (*Jñān.*, xviii, 1765) is common to both the *Viveka Sindhu* and the *Jñāneśvarī*, and it is an idea that springs rather from the teaching of Bhakti than from any doctrine of Advaita. We may, indeed, go further still in our generalization, and maintain that the proclamation of their message in the language of the people was in itself a token that aristocratic *jñāna* was coming under the influence of a more democratic faith. Something of this kind seems to be suggested in Mukund Rāj's summary of the aim of the *Viveka Sindhu* as he states it at the end of that work. "For those who have not the knowledge of experience," he says, "nor know the method of deduction—for their benefit this book has been prepared in the Marāṭhī speech." It is not, I think, fancy to discern in the *Viveka Sindhu* and the *Paramāmṛita* the first stirrings of the religious quickening that reveals itself increasingly in the poets that come after Mukund Muni, and notably in Jñāneśvar, Nāmdev, Eknāth, and Tukārām. In each of these poets there are two rival movements of the spirit always present—that which derives from Śaṅkarācārya, on the one hand, and that which is more akin to Rāmānuja on the other. It is an interesting study to examine how these irreconcilable elements are mixed in the case of each poet and saint, and the determination of the doctrine that they hold by has been a problem that has long divided the students of their works. There seems to have been, indeed, throughout this period among thoughtful men a continuous effort to find some way to unify their religious thinking.

Professor Patwardhan has noted in some verses of the *Viveka Sindhu* "the presence of the germs of the Bhakti school of thought". "The boon that Mukund Rāj's teacher or guru," he points out, "asks of Śaṅkara . . . is *prema* and love of Śaṅkara." We may further note that the guru's name is Harināth or Hariśaṅkara (*Viveka Sindhu*, ii, 11, 61),

a name which may be taken as a further indication of the *rapprochement* that was apparently in process between those, on the one hand, who, like Mukund, followed the Saivite philosophico-religious tradition and belonged to the Śaṅkara School of Vedānta, and those, on the other, who were feeling the first movements of the Bhakti quickening with its desire to enter into the divine fellowship. Such a conflation of rival doctrines was in process in the Kanarese country to the south, and the Hoysala kings, whose family, as we have seen, may have supplied the patron of Mukund Rāj and the inspirer of his chief poem, seem to have encouraged it. "It is worthy of note," we read in Mr. Rice's *History of Kanarese Literature*, "that the revolt against the teaching of Śaṅkara was shared by Saivas also, and the feeling that they had a common cause led, during the twelfth, thirteenth, and fourteenth centuries, to various attempts being made to reconcile the rival Vaiṣṇava and Saiva creeds by building temples to a combined deity called Harihara or Śaṅkara-Nārāyaṇa" (Rice, p. 76). It is not possible, on the evidence at least of Marāṭhī literature, to speak of "a revolt against the teaching of Śaṅkara" in Mahārāshṭra. Perhaps Mukund's date was too early for any such movement to be able to assert itself, perhaps he lived and wrote too far away from the scenes of Rāmānuja's and Madhvācharya's influence to yield to it. At the same time, one is conscious in these two poems, the *Viveka Sindhu* and the *Paramāmṛita*, of the ground swell of the Vaiṣṇava movement which converted the Hoysala Raja Viṣṇu-varḍhana from Jainism to that faith.

When we turn from Mukund Rāj to Jñāneśvar we are in the presence of one whose significance in Marāṭhī literature and religion is immensely greater and one whose work is upon a far higher poetical level. "Jñāneśvar's influence," according to the witness of Mr. M. G. Ranade, "has been greater than that of any other Marāṭha *sādhu* except Tukārām." In his case, as in that of so many of his successors, Sanscrit learning and philosophy still cast a somewhat sombre shadow across

the poet's inspiration, prescribing its direction and limiting its free expression. At the same time, in his case far more than in that of Mukund, the poet triumphs over the philosopher. He delights in his "national Marāṭhī speech", in its charm "as many coloured as the sky", in the meaning it can convey "as deep as is the sea". Flowers blossom at his touch on the arid philosophic soil and nature provides picture after picture to assist us in the understanding of his ideas. As Mr. H. N. Apte notes, he scatters his illustrations with an effortless ease that we may compare, borrowing his own figure, with the ease with which the moon draws to herself the ocean. Scholar as he is he is, at the same time, one who has watched with seeing eye the flowers, the birds, the many-coloured sky. He is well aware, too, of the melody of words and in one quaint passage he describes a contention among the senses as to which shall receive and taste their charm. "Then when the verse stands forth complete, Mind himself darts out and takes it in his arms." With Jñāneśvar the artist in Marāṭhī speech has at last been born.

Jñāneśvar or Jñāndev, according to the legend, was a son of a Yajurvedī Brāhman named Viṭhalpant and his wife Rukhmābāī. He had two brothers, Nivṛttināth and Sopāndev, and a sister, Muktā. These names, since they are unusual as personal names but are designations of successive steps towards salvation, have brought doubt upon the historical value of the tradition. Professor W. B. Patwardham rejects the whole story as an ingenious allegory. If we still follow the guidance of tradition we find that Jñāndev was said to have been born in A.D. 1271, and to have died in 1296 at the age of 25. He is said to have taken "jivant samādhi" at Alandi near Poona, a village which is traditionally associated with his name, though the weight of authority seems to incline to the view that Apegaon on the Godaverī was his birth-place. It seems advisable, in regard to all the traditions of this early period, to exercise considerable scepticism and to accept their testimony only if it is otherwise confirmed. The

testimony, however, of these old tales is to a certain extent supported by a passage in the poet's *Jñāneśvarī*, which affirms that that poem was completed in A.D. 1290, and was written down by Sacchidānand Bāwa. If the traditional date of Jñāneśvar's birth is accepted, he must have composed this long and learned commentary at the age of 19. This does not seem probable. Mr. Rajevadi, who has done so much investigation into early Marāṭhī history and literature, claims to have found a very early copy of the *Jñāneśvarī* which does not contain this verse, and he is of opinion that it is a later addition. Even if this be so, it can hardly be doubted that the verse comes down from a very early period and has much more authority than mere oral tradition. That the *Jñāneśvarī* was written in 1290 is, indeed, one of the few fixed points that loom with some substance and certainty out of the mist of early Marāṭhī literary tradition. We may accept it with thankfulness, however sceptical we may remain as to much else that is commonly believed of these dim and far-off figures.

We are on fairly firm ground when we proceed with circumspection to deduce certain conclusions from the internal evidence that Jñāneśvar's works supply. There are two philosophical poems ascribed to his authorship, the *Jñāneśvarī* or *Jñāndevī*, otherwise known as the *Bhāvārīhdīpika*, which, as we have seen, is a commentary on the *Bhagavadgītā*, and the *Amṛitānubhāva*, which is an original work.

The *Jñāndevī*—to use the name for his book that the author himself seems to prefer—was, Jñāneśvar affirms, the earliest attempt to present the teaching of the Gītā in the Marāṭhī language. He was, naturally, unaware of what had, apparently, been already done in this direction by the adherents of the Mānbhāu sect. His own ambition was to make widely known the message of the Gītā. "Now has dawned the happy day," he says, "when the Gītā-message has come into Marāṭhī." He speaks of proclaiming this message to "the world". It is in this spirit that he undertakes his poetic task. "I shall so speak," he says, "that I shall show

the Formless in form and let the supersensual be experienced by the senses" (vi, 36). His aim is to seize and bind in simple words what up till that time had been—at least to the unlearned—a remote and baffling mystery.

That he has discharged his task *con amore* is evident not only from the warmth and enthusiasm that breathes in many passages, but from the abundance with which he pours forth his exposition. The 700 Slokas of the Gītā are multiplied to 9,000 Ovis or verses. One can judge by the tone of the various chapters and by the fullness of his treatment of them where his own interest was keenest. If we submit the poem to this test and compare it with the traditional narrative of his life we discover certain elements of agreement between them. Thus in his case as in the case of Mukund Rāj the poet is said to have belonged to the Nāth Sampradāya, a somewhat obscure Saivite sect. The name of Gorakhnāth, the most famous of the saints of this order, is included in the list of his ancestral gurus. Mr. Bhave has examined some Marāthī works that are attributed to Gorakshanāth, especially a MS. of his *Amarnāth Samvād*, which contains an exposition of Yoga and is believed by Mr. Bhave to belong to the twelfth century or even earlier. He is persuaded that there is a similarity between passages in this book and passages in the *Jñāneśvarī*, which he believes proves their authors both to have been of the same way of thinking. (*Mahārāshtra Sarasvatī*, i, p. 39.)

This alleged affiliation with a Yoga sect appears to be confirmed by the contents of Jñāneśvar's poem. The passages that describe Yoga practice and doctrine, especially in chapter vi, are particularly full, and are evidently the work of one with an intimate knowledge of the subject. He speaks as an adept, as one who "has torn away the veil over the words" (vi, 25). This is an esoteric doctrine, and though the poet has set out avowedly to make known to the multitude of men truths hitherto reserved for the learned, still in the case of Yoga doctrine there is a barrier which is beyond and beneath that of language. The Yogic state of oneness "cannot

be seized or expressed by any language ; language cannot enter that domain " (vi, 311). But if Jñāneśvar was a Yoga adept and could discourse learnedly of Kuṇḍalinī and Susuṃpā, it was not these things that held his heart. The ninth chapter of the *Jñāneśvarī* is accounted by those who study this book as the most precious portion of the whole poem ; and of that chapter of the *Gītā* Jñāneśvar himself says that to describe it is beyond the power of speech. Its message of deliverance granted to the devout and loving heart is quite evidently an evangel to this poet-seeker. It is when Jñāneśvar is chanting the praises of Bhakti, Professor Patwardhan maintains, that he is at his best, that his spirit, as the Professor puts it, " is in the full swing of its pinions and his soul in sympathetic raptures."

That, it may be conjectured, is the reason why tradition has identified this poet with the author of a collection of *abhangs*, utterances of lyrical devotion offered at the feet of Viṭhobā of Paṇḍharpūr. With this highly contentious question I do not propose to deal, but to leave it along with many other perplexing problems relating to these early poets to be unravelled by the research and the critical discernment of Mārāṭhī scholars.

The *Amṛitānubhāva*, whether it is an earlier or a later work of this poet philosopher, is certainly one of far less charm. It is difficult to believe that he who dwells in this desert of arid speculation is the same who in the *Jñāneśvarī* describes the hermitage of the sage, a scene in which, it is evident, his heart rejoices, as a place of shady trees and running streams and cool and gentle breezes.

" A kingdom might be left for this," he says,

" That one might here in quietness repose."

It is difficult to believe that it is the same mind that is behind both these works, but it is not impossible that it was so. We remember that it is the same William Blake who sings the *Songs of Innocence* and who threads " the infinite dark

passages and the labyrinthine catacombs" of *Jerusalem* and the *Book of Thel*. But it is when Jñāneśvar lets his fancy wander after "the water-loving *haṃsas*" and listen to the kokil and not when he is expounding Brahmajñāna that he is most inspired and it is these passages in his poem that justify the claim that here Marāṭhī literature touches its highest level. In the *Amṛitānubhāva*, we are told, Jñāneśvar expounds the metaphysical foundations of his own faith, and we are not surprised to learn that that faith does not view the world as māyā. One can hardly rejoice, as a poet must rejoice, in the beauty and the fragrance of the world, if all the time he knows it to be a deceitful mirage.

It was well for the literature of Mahārāshṭrā when it escaped from the prison house of monistic speculations. The last of these early poets to be considered here, Nāmdev, is one whose utterances are for the most part passionate and intense enough. Most of the lyric cries of Nāmdev and of those who come after him are inspired primarily with their religious needs and longings. Their interest in the world and its concerns and in the beauty that it spreads around them is altogether secondary to their absorbing interest in their relation to God. The nature upon which their eyes are ever turned is their own human nature with its failures and its yearnings. The visible world is for them "a hieroglyphic of the spiritual world", and in that world their thoughts mainly dwell.

"Purity of heart, humility, self-surrender, forgiveness, and the love of God," says Sir Ramkrishna Bhandarkar, "form the sum and substance of the teaching of Nāmdev." It need hardly be said that there is a wide gulf between a literature occupied solely with subjects such as these and expressing itself in regard to them in a hundred different tones of desire and submission and the literatures of the West. When these poets look up to the night sky it is not to see and rejoice in "the moon's beauty and the moon's soft pace", but to be reminded of the lotus longing for the moon's light even as

their hearts long for God. The rain bird's cry is the very voice of their spiritual craving ; the lost and frightened fawn in the wide and desolate jungle is to them a picture of their soul's solitude and desolation. All nature is but a mirror in which they see their own sorrows, and its beauty is secondary to the pathos of their inward need. Through innumerable *abhangs* (legend attributes to Nāmdev alone many thousands) the one note sounds, the one absorbing subject is presented. Narrow as that outlook on the universe may appear to us to-day, monotonous as its expression must be with so limited a range of music, these poets have in their possession the eternal theme of poetry. Seldom surely have the deeply implanted sense of exile and the longing to return been expressed with more simplicity and pathos than in the lyrical cries of such a singer as the tailor, Nāmdev. "It is the sorrow of separation," says Dr. Rabindranath Tagore, "that ever melts and flows in song through my poet's heart." That sorrow comes to us like the shrill cry of a lost child down the winds of the centuries from the days when Nāmdev clanged his cymbals and sang his heart out in Ghuman or in Paṇḍharī.

"In Ghuman or in Paṇḍharī"—that brings up before us other problems that the legends of Nāmdev's life present to us and which scholarship must seek to solve. When did Nāmdev live ? Was he, as the old stories aver, a contemporary and friend of Jñāneśvar who went on pilgrimage with him ? Or did he live in the fourteenth century and die at Ghuman in the Punjab 150 years after the time when his supposed comrade flourished ? At that village there is to this day a temple in his honour and a sect who claim to be his followers and a certain body of Hindi verse which he is said to have written. Some of his Hindi poems, too, we know are included in the Sikh *Granth*. This whole tangle of tradition calls for careful investigation and the question whether there was one Nāmdev or several, and to what period he or they belonged, is a question that fully deserves the careful study of scholars. It is good to note the steadily growing interest of Indian

scholars in the vernacular languages and the vernacular literatures. Marāṭhī is a language which possesses a notable literature, extending back through at least six centuries. Its history and its poetry present deeply interesting problems which only its own children can solve.

The Uṣas Hymns of the R̥gveda

TRANSLATED BY A. A. MACDONELL

IT was well known to his friends that the late Professor A. A. Macdonell had long contemplated the making of a complete English translation of the R̥gveda. Indeed, he would sometimes point out that a great deal of his work, the edition of the *Brhaddevatā*, the *Vedic Mythology*, the *Vedic Grammar*, and the *Vedic Index*, could be regarded as necessary preliminaries to that undertaking. This was the task he hoped to complete in some five years or so on retiring from the Boden Chair. Unhappily his strength failed him too soon for this to be possible.

Two of his old pupils have examined his papers and it seems clear that not enough had reached the final stage to warrant publication in book form. The contents of the R̥gveda are, of course, so interlaced by repetitions, one book with another, that the final draft of one hymn may affect many others. One point which it is known the late Professor had in view was an exact consistency in the translation of repeated passages and phrases. Another hindrance to reaching finality in many hymns seems to have lain in the desire to take into consideration any changes in Geldner's views as shown in his German translation—of which only the first portion had been published.

There was also the question of the form to be adopted. In his *Vedic Reader* the Professor's translations are literal and straightforward, without any attempt to reproduce the metrical form of the original. In a small volume of Hymns translated in the *Heritage of India Series* he sacrificed a little of verbal exactitude to the taste of the general reader and endeavoured to represent the form of the original not only in the length of the lines but also in the rhythm.¹

¹ In the preface to his *Hymns from the R̥gveda*, in the *Heritage of India Series*, Professor Macdonell wrote: "I have endeavoured to make the rendering as close as the use of verse will admit. Prose would have been more exact if I had had in view the requirements of linguistic

In most of the drafts, which appear to be the latest, the Professor has aimed at giving the contents of each *pāda* in a line of the same number of syllables but without metrical rhythm. Often the grammatical construction makes it impossible to keep two *pādas* apart, but the hemistiches can generally be kept separate. While experimenting in this numerical limitation the translator was obviously not willing to omit anything at all and very loath to insert any words as padding. So it happens that in drafts setting out to follow this scheme there are often lines with a syllable or so too many or too few. On the other hand, there are other hymns, and among the later work apparently where this limitation is disregarded, with advantage perhaps to the translation. It is difficult to decide to what extent the metrical limitation would have been retained to the end.

That the translation was not completed (nor any considerable section of it) after a lifetime spent in Vedic studies, is a great misfortune. It seems, however, desirable to publish some of the hymns that appear nearest to the final stage in order to illustrate the Professor's mature views as to the way in which they should be rendered into English, and to indicate the degree of success he attained in the combination of accurate scholarship and literal translation with intelligibility and something of the form of the original. Any future translator into English will find the Professor's method carried further in these hymns than in those previously published. For this purpose the hymns to Uṣas have been chosen (omitting x, 172). These hymns appealed to the Professor as literature more than most others, and have evidently received his special attention. A few changes would doubtless have been made before they were sent to the printer, but essentially they represent his maturest work and give a fair idea of what

students, but the general reader, to whom the spirit of the original hymns is the important thing, would have lost the means of appreciating to some extent at least, the poetic beauty of the Vedic metres which form a considerable element in the literary charm of the hymns."

the whole translation would have been like, had the Fates been kinder, and, in consequence, of the loss that has befallen all that are interested in the Rġveda, whether as linguists or as students of religion.

It only remains to add that the translations have been printed as found except for bringing the transliteration of proper names and the punctuation throughout to the form apparently intended by Professor Macdonell, and for two or three obvious corrections, and for a few notes in square brackets which were all inserted by the preparer of the copy for the *Journal*.

E. H. J.]

1.48

(1 Br̥hatī 8 8 12 8, 2 Satob̥rhatī 12 8 12 8 and so on alternatively)

1. With fortune flush upon us, Dawn,
Thou who art daughter of Heaven,¹
With lofty splendour, O thou Goddess refulgent,
(To man) bountiful with riches.
2. Rich in steeds, rich in kine, procuring all good things,²
They'll make many efforts to shine.
Summon forth abundant rewards towards me, O Dawn,
Stir up the bounty of the rich.³
3. Dawn has shone and she will shine now,
Goddess who starts her cars, prepared ⁴
To set out at her approaches, as those eager ⁵
For glorious deeds at flood-time ⁶ are.

¹ 1b = 5.79, 3b.

² *viśva-vasu-vido*.

³ 2d = 7.96, 2d.

⁴ Which are ready to set out when dawn appears.

⁵ Like ambitious seafarers seeking glorious adventures on the sea, ready to start at the beginning of the flood-tide—this seems to be the meaning of this line.

⁶ This seems the best time to encourage the liberal, being equivalent to the beginning of the flood-tide at sea in stimulating an adventurous spirit.

4. Where'er, O Uṣas, the patrons apply their mind
To giving on thy journey's course,
There indeed does Kaṇva, leader of the Kaṇvas,
Praise the distinction¹ of those men.
5. Uṣas approaches gladdening
Like a noble youthful woman :
The host of footed things she stirs, awaking them,
And birds she causes to fly up.
6. She who lets loose the fight and sends forth the busy,
She tracks as it were eagerly the steps of men.
The birds having (once) flown away at thy flushing,
Rest not still, thou rich rewarder.
7. She has yoked (to drive) from afar,
From the uprising of the sun ;
With a hundred cars this beauteous Dawn
Advances onwards towards mankind.
8. Everything that moves turns to her contemplation :
The beauteous one diffuses light.²
Uṣas, the openhanded daughter of the sky,
Shall shine (all) hate and foes away.³
9. Dawn, light hither with thy shining
Radiance, daughter of the sky ;
Bringing hither for us abundant fortune's good,
Shining forth at rites of the day.
10. For the breath, the life of everyone rests in thee,
When thou shinest forth, beauteous one.
So on thy lofty chariot, O radiant one,
Hear our call, thou of shining gifts.
11. Thus, Dawn, win for thyself the prize
That gains awe in the race of men.
Thereby drive to the rites of the virtuous man
The sacrificers that praise thee.
12. All the gods to the draught of Soma do thou drive
From the firmament, O Uṣas.
As such bring us wealth in kine and steeds worthy of praise,
The prize of honour, herohood.

¹ i.e. the liberality of the patrons.

² 8b = 7.81, 1d.

³ 8d = 7.81, 6d.

13. Whose ruddy auspicious rays
Have appeared before us, Uṣas¹
Shall give us riches, fulfilling all (our) desires,
Well-adorned, easy to obtain.
14. As many earlier seers invoked
Thee for aid, for grace, great (goddess),²
So do thou recompense our praises graciously
With bounty, Dawn, and brilliant light.³
15. O Dawn, when to-day with thy light
Thou op'nest the door[s] of [the] sky,
Do thou to us [grant] wide security from foes⁴
And, goddess, food along with kine.
16. Unite us to great wealth with all adornment decked,
And to all kinds of nourishment,
And to all-surpassing splendour, O mighty Dawn,
And to strength, O thou rich in gifts.

1.49

(Anuṣṭubh)

1. Come, Dawn, with thine auspicious (rays)
Even from the heaven's bright realm.⁵
May they of ruddy aspect⁶ waft
Thee to the Soma-giver's house.
2. With well-decked, lightly-running car,
That thou hast mounted, (goddess) Dawn,
Favour, O daughter of the sky,
The man of goodly fame to-day.
3. Thy winged birds, that have two feet,
(And) what has four feet, brilliant Dawn,
Have sped forth from the ends of heav'n
In accordance with thy seasons.

¹ 13b = 4.52, 5a.² 14ab = 8.8, 6ab.³ 14d = 4.52, 7d.⁴ 15c = 8.9, 1c (*pra asmai yachatam = pra no yachatād*).⁵ 1b = 5.56, 1d, and 8.8, 7a.⁶ Scil. steeds—the ruddy rays of Dawn. Cf. 1.113, 14.

4. For flushing far and wide with rays
 Thou lightest up the whole bright realm.¹
 Thee as such, Dawn, the Kaṇvas have,
 Desiring wealth, invoked with songs.

1.92

To Uṣas 1-15 and the Aśvins 16-18

(1-4 Jagatī, 5-12 Triṣṭubh, 13-15 Uṣṇih)

1. These Dawns there have set up (their) banner² :
 In the eastern half of space³ they deck themselves with
 sheen,
 Like bold men furbishing (their) weapons.
 The ruddy kine return,⁴ the mothers.
2. Up have leapt merrily the ruddy beams :
 They have yoked (their) ruddy kine (so) lightly yoked.
 The dawns have made their web (of light)⁵ as of yore :
 The ruddy ones have spread afar their shining light.
3. They sing (their song of praise) like busy women at (their)
 work ;
 Upon the selfsame course from far
 Bringing refreshment for the righteous man,
 Always indeed for the sacrificer pressing Soma-juice.
4. Like a dancer she throws on gay garments ;
 Like a cow her udder (?) she displays her breast.
 Creating light for the whole world,⁶
 Dawn has unclosed the darkness, as the cows (their) stall.
5. Her brilliant sheen has become visible :
 She extends, she drives away the black monster.
 As one anoints the post as an ornament at feasts,
 The daughter of the sky has extended her brilliant beam.

¹ 4b = 1.50, 4c. Cf. 3.44, 4b.

² Cf. 1.113, 15b.

³ 1b = 1.124, 5a.

⁴ The ruddy kine = the beams of light in the team of Dawn. The ruddy kine return = dawn is renewed.

⁵ Regulating time as opposed to darkness.

⁶ 4c = 4.14, 2b (*kṛvatī* = *kṛvan*).

6. We have crossed to the farther shore of this gloom¹;
 Uṣas dawning marks the sacrificial times.
 Dawning she smiles like a lover for good fortune.
 Of fair countenance, she has awakened us to gladness.
7. A bright bringer of gifts,² the daughter of the sky,
 Is praised by the Gotamas.
 Bestow rewards of children (and) men, O Dawn,
 With kine leading the way and steeds ending the line.³
8. O Dawn, may I obtain that glorious, ample wealth,
 Rich in hero sons, forming a crowd of slaves, based on steeds,
 O thou that shinest forth with wondrous glory,
 Urged on to (grant) rewards, thou beauteous (goddess).
9. The goddess shines forth afar facing (every) eye,
 Surveying all created things.
 Awaking every living being to motion,
 She has found the voice of every pious man.
10. Being born again and again (though) ancient,
 Adorning herself with the selfsame colour;
 A goddess diminishing the throws like a skilful gambler,
 Bringing the life of the mortal nearer old age.
11. She has awakened, disclosing the ends of the sky :
 She banishes her sister⁴ far away.
 Diminishing the generations of men,⁵
 The maiden shines forth with the light of (her) lover.
12. Brilliant (and) lovely, spreading (her rays) like cattle,
 She has spread her light like a river its flood.
 Infringing not the statutes divine
 She has appeared flushing with the rays of Sūrya.
13. O Uṣas, bring that brilliant (gift)
 To us, thou that art rich in gifts⁶;
 Whereby we may attain offspring and descendants.⁷

¹ 6a = 1.184, 6a, and 7.73, 1a.

² 7a = 1.113, 4a.

³ As cows and horses drawn out in long lines.

⁴ i.e. night.

⁵ 11c and 12c = 1.124, 2ab.

⁶ 13b = 4.55, 9c.

⁷ 13c = 9.74, 5d.

14. Refulgent Dawn, thou that art rich in kine
And steeds, upon us here to-day
Dawn forth abundant wealth, goddess benign.
15. Yoke, Dawn, to-day thy ruddy steeds,
O thou that bearest rich rewards;
Then to us hither do all fortune's gifts convey.
16. Ásvins, make towards us your round
Rich in kine and gold, ye marvels,
Hither one-minded (guiding) your car, arrest it.¹
17. Ye who have made the call of day
And have brought truly light to men,
Do ye two, O Ásvins, vigour to us convey.²
18. Hither may the early-waking (priests)
Bring healing marvel-workers,³
Whose fellies are golden, to the Soma-draught.⁴

1.113

(Trīṣṭubh)

1. This fairest light of lights has come :
The bright harbinger⁵ has been born effulgent.
As she, urged on, yields to Savitar's impulsion,
So Night has yielded up her place to Dawn.⁶
2. With a radiant calf,⁷ brilliant, white she has come.
Black (Night) has yielded up her seats.
Akin, immortal, following each other,
Day⁸ (and Night) travel exchanging (their) colour.

¹ 16c = 8.35, 22a.² 17c = 1.157, 4a.³ 18b = 5.75, 2c.⁴ 18c = 8.1, 24d.⁵ "The bright harbinger of Dawn" (1.94, 5) must mean the morning sacrificial fire (cf. 1.124, 11).⁶ Dawn gives way to the Sun (*savitar*) as Night to Dawn.⁷ The sun.⁸ *dyāvā*, dual of *dyu* "day" = Day and Night (= *Uṣāsānāktā*).

3. Same is the road of the sisters,¹ unending :
On that they, taught by the gods, alternately fare.
They neither clash, nor stand they still, well-balanced,²
Night and Dawn, one-minded (though) of different forms.
4. Bright bringer of good gifts³ she has shone forth
For brilliance : she has unclosed the doors⁴ for us.
Pervading the world she has now displayed wealth to us :
Uṣas has awakened all living beings.⁵
5. The bountiful one (has awakened) him
That lies athwart (the ground), to activity,
One to seek for maintenance, another for wealth ;
Dawn has wakened those who see little, to see far.
Dawn has awakened all living beings.
6. One for dominion, another for fame,
Another for acquisition of greatness ;
Another to go, as it were, to his goal,
To seek out various kinds of livelihood.
Dawn has awakened all living beings.
7. This daughter of the sky has appear'd,⁶ a maiden
Shining forth in resplendent raiment.
Disposing of all earthly treasure, Uṣas,
Shine forth, beauteous one, here to-day upon us.⁷
8. She follows the path of those that have passed away,
The first of the endless dawns that are coming ;
As she shines forth arousing the living,
But not again awakening one that's dead.
9. O Dawn, since thou hast made Agni to kindle,⁸
Since thou has shone forth with the light of Sūrya,
Since thou hast wakened men about to sacrifice :
In that thou hast done good work among the gods.

¹ Night and (dawn =) day.

² = well-measured (from the root *mi*), regular, so that they do not clash. Cf. *Festgruss an Böhtlingk*, p. 114.

³ 4a = 1.92, 7a : as bringing the poet his reward at dawn.

⁴ Of the sky and given light.

⁵ 4d = 5d and 6d.

⁶ 7a = 1.124, 3a.

⁷ 7d = 1.123, 13c.

⁸ Cf. 7.77, 1c.

10. At what distance (is it) that she shall be midway
Between (those) that have dawned and that will dawn in
future? ¹
The earlier (dawns) she follows right willingly,
Expected by the others, she follows their desire.
11. Departed are those mortals who saw the Uṣas
Of earlier days shine forth
And she has now become visible to us;
And they come who in later days shall see (her).
12. Dispelling foes, observing order, born in season,
Gracious, stimulating liberality,
Auspicious, bearing invitations to the gods,
Do thou, Dawn, shine forth as fairest here to-day.
13. Always in the past goddess Dawn has shone forth,
So, too, the bounteous one has here shone forth to-day.
And so may she shine forth throughout later days.
Ageless, immortal, she fares with powers her own.
14. In the sky's framework she has shone forth with gems,
Her black garment the goddess has cast away.
Arousing (the world) with (her) ruddy horses,
Uṣas approaches upon (her) well-yoked car.²
15. Conveying desirable gifts of nurture,
She lifts her shining banner, attracting the gaze;
Last of innumerable (dawns) departed,
First of those that are coming, Dawn has flushed forth.³
16. Rise up! the breath of life has reached us;
Darkness has gone away, and light is coming.
She leaves a pathway for the sun to travel;
We have arrived where (men) prolong their lifetime.⁴
17. With directing rein of speech the praising singer ⁵
As guide drives forth the refulgent dawns:
To-day shine this upon thy praiser, bounteous (goddess):
Long life, in offspring rich, shine down upon us.

¹ i.e. half-way between past and future.

² 14d = 4.14, 3d.

³ 15cd = 1.124, 2cd.

⁴ That is, we have reached the beginning of a new day. -- 8.48, 11d.

⁵ Charioteer and singer are here compared.

18. The dawns that shine forth for the pious mortal,
Bestowing kine and full tale of valiant sons :
May the steed-presenting Soma-presser gain these
When the song for generous gifts bursts forth like the wind.¹
19. Thou, mother of gods, the face of Aditi,
Banner of sacrifice, shine forth exalted !
Showing favour to our prayer, gleam forth, cause
Fruitfulness among our kin, granter of all desire.
20. What brilliant, auspicious wealth the dawns convey
To the zealously active sacrificer—
That may Mitra, Varuṇa, may Aditi,
(And) Sindhu, Heaven and Earth bestow upon us.²

1.123

(Triṣṭubh)

1. The broad chariot of Dakṣiṇā³ has been yoked ;
The immortal gods have (now) ascended it.
Out of the black (darkness) the noble, mighty (goddess)
Has risen, wishing to appear to the race of men.
2. Earlier than all the world she has awakened,
Triumphant, lofty, winning the prize of victory.
On high the maid, reappearing, has shone forth :
Dawn has come first to early invocation.
3. When thou shalt to-day deal out to men their share
Among mortals, O nobly born goddess Dawn,
May then god Savitar, our domestic friend,
Pronounce us free from sin to (god) Sūrya.
4. To every house she goes dawning day by day :
Assuming (her own appropriate) name,⁴
Shining constantly, she has come, desiring gain⁵ :
Always she acquires the best of good things.

¹ Cf. Geldner, *Der Rigveda*, i, p. 136, 18c.

² 20cd = 1.94, 16cd, and refrains of many hymns in Book I ;
cf. 7.52, 2a.

³ The poet's reward, here personified as a sacrificial goddess, and thought of as coming on her car to the morning libation.

⁴ i.e. Uṣas, which is her proper name, besides being one of her descriptions. Cf. 12d.

⁵ As winning in competition the prize of being first and fairest.

5. As sister of Bhaga, to Varuṇa¹ akin,
Do thou, O beauteous Dawn, awaken first.²
May he who (is) author of ill remain behind³ :
May we conquer him with the car of Dakṣiṇā.⁴
6. Let liberal gifts, abundant rewards arise⁵ :
Up the brightly flaming fires have arisen.
Desirable goods, hidden away by darkness,
The Dawns (now) shining forth make manifest.
7. Away goes the one, hither the other comes :
The two halves,⁶ different in form, together meet.
The one⁷ has hidden the darkness of the two that spread
around⁸ :
Dawn has flushed with (her) brilliantly gleaming car.
8. Alike to-day and alike even to-morrow,
They follow the wide control of Varuṇa.
Blameless (they complete) their thirty yojanas⁹ :
Each one goes round (her) circuit in one day.
9. Knowing the name of the first day, bright, white-hued,
She has been born from the black (region of night).
The maid infringes not the rule of order,¹⁰
Coming every day to the appointed place.
10. Like a girl, with form resplendent, thou goest,
O goddess, to the god¹¹ who desires (thee).
A maiden smiling in the east toward him,
Shining forth thou displayest (to him) thy breasts.

¹ Bhaga and Varuṇa both Ādityas.

² 5b = 7.76, 6d.

³ May his rival fall short—be beaten as in a race.

⁴ May the poet beat his rival with his reward as with a car in a race.

⁵ Cf. 1.48, 2.

⁶ Night and Day.

⁷ Dawn.

⁸ Heaven and earth.

⁹ The length of the course completed in a day is 30 yojanas (= 30 *muhūrtas*); lit. *yoking* = stage (as a distance). Cf. the 30 *dhāma* (10.189, 3).

¹⁰ As knowing the succession from the first day.

¹¹ = Sūrya, several times spoken of as the lover of Dawn (*jāra*).

11. Like a maiden of aspect fair, by her mother decked,
Thou makest manifest thy form to be seen.
Auspicious, do thou, Dawn, shine more widely forth.
That deed of thine¹ no other dawns (yet) attained.
12. Bringing steeds and kine, fulfilling all desires,
Ranging themselves with the rays of Sūrya,²
They go away as well as come back again,
Bearing auspicious names, the Dawns.
13. Being guided by the rein of order,
Bestow on us ever auspicious skill.
Dawn, shine on us to-day, easy to invoke :
On us and on our patrons be riches shed.³

1.124

(Triṣṭubh)

1. While the fire is kindling, the dawning Uṣas,
The rising Sūrya has spread (his) light afar :
God Savitar has urged on our bipeds here,
On (our) quadrupeds to advance now to (their) goal.
2. Infringing not the divine ordinances,⁴
(But) diminishing (the length of) human lives,⁵
Uṣas has dawned as the last of countless (dawns)
That have passed, the first of those that are coming.⁶
3. This daughter of the sky has appeared, clothed on
With light, at the same time⁷ in the east.
She follows straight the path of order ; as one
Who knows the way, she misses not the quarters.

¹ The wide extent of dawn.² 12b = 5.4, 4b (°māno = °mānā).³ This hymn is conspicuous for its repeated words, probably meant to emphasize the recurrence of the phenomena of dawn.⁴ 2a = 1.92, 12c.⁵ 2b = 1.92, 11c.⁶ 2cd = 1.113, 15cd (*vy āsvait* for *vy adyaut*).⁷ With reference to the regularity of the recurrence of the time of dawn.

4. Her breast, as of a *śundhyu* bird (?),¹ has appeared,
Like *Nodhas* (?)² she has manifested (her) charms.
Like a fly awakening sleepers she has come,
As the first of many that return again.³
5. In the eastern half of the watery space
The mother of kine⁴ has set up her banner.
She spreads herself out more widely, filling up
Both the laps of her parents.⁵
6. Thus very frequently to sight appearing,
She avoids not one not-kin nor akin;
Splendid with unblemished form she withdraws not
Either from small or great, when shining forth.
7. Like a brotherless maid⁶ she goes to meet men,
Like one who mounts a stage for the gain of wealth;
Like a well-clad wife, longing, to (her) husband,⁷
Dawn exposes her breast, like a courtesan.
8. The sister⁸ her place to her elder sister
Has yielded; departs from her to reappear.
Shining forth with *Sūrya*'s beams, she decks herself
With gems, like women thronging to a meeting-place.
9. On the days of these earlier sisters follow
The later after the earlier. May these dawns,
Newer, shine wealth upon us now and brilliant
Days anew as in the olden time.
10. Awaken, O beauteous Dawn, the liberal,
Let the niggards sleep on without awaking⁹;
With wealth, beauteous one, shine on the bountiful,
With wealth on the praiser, beauteous one, waking (him).

¹ The commentators, *Durga* and *Sāyaṇa*, take *śundhyu* to be an aquatic bird; its colour is perhaps akin to that of the rays of dawn; but the meaning is uncertain.

² There is not sufficient evidence of the meaning of this noun.

³ i.e. of recurring dawns.

⁴ i.e. the rays of dawn.

⁵ i.e. heaven and earth.

⁶ And therefore having no one to protect her.

⁷ 7c = 4.3, 2b; 10.71, 4d, and 10.91, 13d.

⁸ Night.

⁹ 10b = 4.51, 3c.

11. Down here the maiden has brightened in the East,
She draws up the array of (her) ruddy kine.
May she shine forth now ; may (her) banner be in front.
May Fire establish himself in every house.
12. Even the birds have flown up from their nests,
The men that earn their food (have risen).
To him that is at home, the pious mortal,
Thou bringest much wealth at daybreak, goddess Dawn.¹
13. Ye have been extolled by my prayer, ye praiseworthy ones,
Ye have been willingly exalted, O Dawns.
By your favour, goddesses, we would acquire
A hundredfold and a thousandfold rewards.

3.61

(Triṣṭubh)

1. O Dawn, thou that art rich in recompenses,
Wise, rejoice in the singer's praise, bountiful (goddess).
Ancient (yet) youthful, bestowing abundance,
Thou comest, according to fate, desired by all.
2. O goddess Dawn, shine forth as one immortal,
Having a brilliant car, urging on rich gifts.
May the steeds, lightly guided, broadly gleaming,
Drive thee, the golden-coloured, hither (to us).
3. O Uṣas, turned towards all beings, thou standest
Upright as emblem of immortality.
Striving towards the selfsame goal,²
Turn hither like a wheel, thou newest.³
4. Like a (woman) drawing out a seam,⁴
The bounteous Dawn comes, mistress of early pasture.
Producing the Sun, the beauteous artistic one
Has spread out to the end of heaven (and) earth.

¹ 12 = 6.64, 6.² i.e. as earlier dawns.³ As just appearing ; as Agni is often called " youngest " as kindled every morning.⁴ The interpretation of the first hemistich is uncertain. It may mean " dawn undoes the seam of the covering of night " (cf. 2.17. 4).

5. I invite for you the goddess Dawn (now) shining forth :
With obeisance present your song of praise.
The shedder of sweetness (?) ¹ has placed aloft her lustre in
the sky :
The brilliant one, of joyous face, has shone forth.
6. The orderly (daughter) of the sky has been roused by songs :
The rich (goddess) has mounted brilliantly the two worlds.
The coming dawn, O Agni, shining forth, thou approachest
For valuable possessions, imploring (her).
7. In the basis of the law, desiring the dawns,
The bull ² has entered the two great worlds.³
Great is the craft ⁴ of Mitra (and) Varuṇa :
Like gold he ² has spread on many sides his light.

4.51

(Trīṣṭubh)

1. Here has that most abundant light in the east,
That makes things clear, arisen from the darkness.
Now may the daughters of the sky, the Dawns,
By shining forth, make a pathway for mankind.
2. The brilliant Dawns have mounted in the east
Like pillars erected at sacrifices.
The two portals of darkness, (as) of a pen,
Shining forth they have opened, the bright, the pure.
3. Growing light to-day may the Dawns rich in gifts
Illumine the lib'ral to bestow rewards.
In obscurity let niggards slumber on ⁵
Unawakening in the midst of darkness.
4. Should this be, O goddesses, an ancient course
Or a new one, O Dawns, for you to-day,
On which on Navagva, Aṅgira, Duṣagva,
Saptāśya,⁶ ye have shone wealth, ye wealthy ones ?

¹ This compound is not analysed in the *Paḍa-pāṭha*.

² The sun.

³ 7b = 10.80, 2b.

⁴ Cf. 5.63, 4, where Sūrya is the *māyā* of Mitra-Varuṇa.

⁵ Cf. 1.124, 10b.

⁶ Brhaspati in 4.50, 4.

5. For you, goddesses, with your duly yoked steeds
Proceed around the worlds in a single day ;
Waking up, O Dawns, the sleeping, all that lives,
The biped and the quadruped, to motion.
6. Where, pray, and which ancient one of them (was it)
On which they¹ imposed the tasks of the R̥bhū ?
When the beaming Dawns move on (their) shining (course),
They differ not, (being) alike (and) ageless.
7. Those auspicious Dawns were formerly the same,
Splendid in help, born in order, true to time,
At which the toiling sacrificer with chants
Praising, reciting, at once riches obtained.
8. They approach at equal distance from the east,
Spreading themselves from the same place equally.
Waking from the seat of order, the goddesses,
The Dawns, like herds of kine let loose, are active.
9. The same even now, equal in the selfsame way,
With undiminished colours the Dawns proceed,
Concealing the black monster with (their) bright (hues),
Glowing in their shining forms, pure (and) radiant.
10. Do ye, daughters of heaven, shining forth, bestow
Upon us wealth, rich in offspring, goddesses.
Awaking towards you from (our) pleasant couches
We would be masters of (many) valiant sons.²
11. For that, daughters of the sky, refulgent Dawns,
I, whose banner is the sacrifice, implore.
We would be glorious among the people ;
Let Heaven and the goddess Earth that vouchsafe.

4.52

(Gāyatrī)

1. Before us there the beauteous maid,
Shining forth from out (her) sister,³
Daughter of the sky, has appeared.

¹ They, the gods (1.161, 2) ; the tasks, the fashioning of the
beakers, etc.

² 10d = 9.89, 7d ; 9.95, 5d, and 10.131, 6d.

³ Night.

2. Like a brilliant ruddy mare,¹
The timely mother of the kine,
Dawn has become the Ásvins' friend.
3. Dawn, thou art both the Ásvins' friend
And thou art the mother of kine ;
And over wealth thou wieldest sway.
4. Towards thee that drivest hate away,
O high-souled (goddess), thoughtfully,
We have wakened with songs of praise.
5. The auspicious rays have appeared,²
Like herds of kine issuing forth.³
Dawn has filled up the wide expanse.
6. Having filled (it), refulgent one,
Thou hast laid o'er the gloom with light.
Dawn, aid (us) by thine own sweet will.
7. With rays thou coverest the sky,
The dear wide middle region's space,⁴
O Dawn, with lustrous brilliant sheen.⁵

5.79

(Pañkti, 2 × 8, 3 × 8)

1. Awaken us to-day, O Dawn,
To great wealth, as resplendent (goddess) ;
As thou didst always waken us
Near Satyaśravas, Vayya's son,
Thou nobly born, bounteous in steeds.⁶
2. Who didst shine forth on Sunītha,
Śucadratha's son, daughter of the sky ;
So shine forth on one mightier still,
Satyaśravas, son of Vayya,
Thou nobly born, bounteous in steeds.

¹ Cf. 1.30, 21.² 5a = 1.48, 13b.³ Cf. 4.51, 8d.⁴ Cf. 7.47, 4.⁵ 7c = 1.48, 14d.⁶ 1de = 2de and 3de. This fifth *pāda* forms the refrain of all the ten stanzas of this hymn.

3. So bringing wealth for us to-day,
Shine forth, O daughter of the sky,
Who didst shine forth on one mightier still,
Satyaśravas, son of Vayya,
Thou nobly born, bounteous in steeds.
4. The offerers who, resplendent
(Goddess), sing to thee with praises,
With bounties, bountiful (goddess),
(Be they) prosperous, rich in gifts, bestowing much,
Thou nobly born, bounteous in steeds.
5. For whenever these crowds appear
To thee fit for receiving gifts,
The willing ones giving have placed
Abundant wealth around (us),
Thou nobly born, bounteous in steeds.
6. Bestow fame with heroic sons,
Bountiful Dawn, on these patrons,
Who generously have conferred
Upon us abundant treasures,
Thou nobly born, bounteous in steeds.
7. To those (patrons) bring, bounteous Dawn,
Glory (and) wide celebrity,
Patrons who lavished upon us
Treasures in horses and in kine,
Thou nobly born, bounteous in steeds.
8. And bring to us an abundance
In kine, O daughter of the sky,
Together with the Sun's (bright) rays,¹
With (his) shining, brilliant beams,
Thou nobly born, bounteous in steeds.
9. Shine forth, O daughter of the sky,²
(And) do not long delay (thy) task,
Lest the sun with (his burning) ray
Do scorch thee like a thieving foe,
Thou nobly born, bounteous in steeds.

¹ 8c = 8.101, 2d.² 9a = 1.48, 1b.

10. So much, Dawn, or more, thou deignest
 To give, who ceasest not shining,
 On (thy) praisers, radiant (goddess),
 Thou nobly born, bounteous in steeds.¹

5.80

(Trīṣṭubh)

1. The priests (looking) toward (her) belaud with prayers
 The goddess Dawn, whose course is radiant, by law
 Sublime, true to order, of aspect ruddy,
 Effulgent, bringing light (to the world of men).
2. She fair to see, awaking mankind, making
 The pathways easy to traverse, goes in front.
 High, on lofty chariot, all-impelling
 Dawn gives (her) radiance at the days' beginning.
3. She, with ruddy bulls yoked (to her chariot),
 Producing no harm, bestows wealth constantly.
 The goddess, clearing pathways for faring well,
 Possessing all boons, shines forth, by many praised.
4. She of varied splendour becomes doubly great,
 Displaying her form in the eastern region ;
 She follows straight the path of order ; as if
 Knowing the way, she misses not the quarters.²
5. She, like a radiant (maiden), assuming forms,
 Has stood up, as if bathing, for us to see.
 Driving away hostility (and) darkness,
 Dawn, the daughter of the sky, has come with light.
6. She turning towards men, the daughter of the sky,
 As a radiant maiden exposes her breast.³
 Disclosing costly gifts to the pious man,⁴
 The maiden has again made light as of old.

¹ [A mark in the draft shows that it was intended to expand the translation to five lines so as to make this stanza correspond with the others.]

² 4cd = 1.124, 3cd.

³ 6b = 1.124, 7d.

⁴ 6c = 6.50, 8d.

6.64

(Tristubh)

1. Up have risen the radiant beams of Dawn,
Like the (brightly) gleaming waves of the waters.
She makes all the fair paths easy to traverse ;
She has become a giver, kindly, benign.
2. Thou art seen to be auspicious, far and wide.
Up have flown brilliantly to the sky thy rays.
Radiant thou makest manifest (thy) breast,
Goddess Dawn, radiant with gleaming splendours.
3. Ruddy bulls shining convey her, (auspicious)
Goddess beautiful (and) spreading far and wide
She repels foes like a heroic archer,
(And) like a swift driver dispels the darkness.
4. And beauteous are thy paths upon the mountains ;
O self-lighted, thou crossest in windless space
The waters ; as such bring us, O broad-pathed one,
Wealth, lofty daughter of the sky, to cheer (us).
5. Thou who drivest safely with thy bulls, Uṣas,
Bringing wealth according to our wishes ;
Thou who hast appeared at early call with bounty
As beauteous goddess, O daughter of heaven.
6. Even the birds have flown up from their nest
And men earning their food (have risen) ;
To him that stays at home, the pious mortal,
Thou bringest much wealth at thy break, goddess Dawn.¹

6.65

(Tristubh)

1. This daughter, child of heaven, has wakened us,
Shedding her light on human habitations,
Who in the night-watches with her brilliant ray
Has shown herself e'en through the shades of darkness.
2. This they drove through, yoked with ruddy horses ;
The Dawns shine brilliantly with beaming cars.
Leading the front of the lofty sacrifice,
They drive far away the darkness of the night.

¹ 6 = 1.124, 12 [where the translation has "daybreak"].

3. O Dawns, bringing fame (and) vigour, might (and) food
To the mortal that worships (you with his heart)
(Dawns that are) bountiful (and) rule like heroes,
That¹ grant help (and) wealth to your servant to-day.
4. For now there's treasure for him that worships you,
Now for the hero paying (you) homage, Dawns,
Now for the priest, when he sings songs of praise,
As for me ye brought (treasure) in times gone by.
5. For now, Dawn, that retest on the mountain ridge,
The Aṅgirasas praise the stalls of thy kine.
They have burst them open by song and prayer :
Men's invocation of the gods became true.
6. Shine on us, daughter of the sky, as of old,
On our worshipper as on Bharadvāja,
Bounteous one ; grant the singer wealth with hero sons ;
And far extending renown on us bestow.

7.75

(Triṣṭubh)

1. Uṣas, born in the sky, has duly shone forth,
Making manifest (her) greatness she has come.
She has dispelled the fiends, the hated darkness.
Best harbinger,² the paths she has awakened.³
2. For great well-being awake for us to-day,
Advance (us) to great good fortune, O Uṣas.
Bestow on us splendid, glorious, famous wealth
Among mortals, O goddess, to men benign.
3. These beams over there, splendid (and) immortal,
Of the lovely Uṣas have come (hitherward).
Creating divine ordinances, filling
The realms of air, they have extended afar.
4. She there, having yoked (her car) from a distance,
Goes round the five peoples in a single day,
Observing the (various wondrous) works of men,
Daughter of the sky, the lady of the world.

¹ ["That" is not in the original here, the last *pāda* constituting the main sentence. It is apparently a slip for some other word.]

² *āṅgirastamā* = most like Aṅgiras.

³ = made visible.

5. Bestowing bounties, the bride of Sūrya,
Bringing splendid gifts, deals out wealth (and) treasures.
Praised by seers, inducing old age, (but) bounteous,
Dawn shines forth, belauded by sacrificers.
6. The ruddy, splendid horses have (now) been seen
Before (us) drawing on the shining Uṣas.
Brilliant she goes with her all-adorning car :
She bestows treasure on the man that worships.¹
7. The goddess, the true, the great, the worshipful,
With the gods, the true, the great, the worshipful,²
May she break the firm (rocks), (and) give of the kine ;
The cows have lowed (intensely) toward the Dawns.
8. Bestow on us now treasure in kine, in men,
O Dawn, in steeds, in abundant food on us.
Despise not our straw³ because of our frailty.
Do ye protect us evermore with blessings.⁴

7.76

(Triṣṭubh)

1. Up the god Savitar, common to all men,
Has raised the immortal light for all mankind.
The gods' eye has been begotten by (her) might :
Dawn has made the whole world manifest (to all).
2. The paths trodden by the gods have (now) appeared
Before me, (paths) that fail not, supplied with goods.
The banner of Dawn has appeared in the east :
She has come towards (us) from her habitations.
3. Those days indeed were many which were turned (back)
Eastward toward the rising (quarter) of the sun,
Whence approaching like a lover, O Uṣas,
Thou hast appeared like one who comes back again.
4. They indeed were the gods' fellow-revellers,
The pious sages of times long gone by :
The (ancient) fathers found out the hidden light :
With spells that came true they generated Dawn.

¹ 6d = 4.44, 4d except *dádhat̥ha* for *dádhāt̥i*.² 7b = 4.56, 2a, but *yajaté* for *yajātā*.³ = sacrificial straw.⁴ 8d = the refrain in book 7 (1, 20d, etc.).

5. They are assembled at [the] same meeting-place ;
They agree ; they strive not with one another.
They do not infringe the gods' ordinances.¹
Unwearying they fare on with (their) good things.
6. The Vasiṣṭhas exalt thee with songs of praise,
Awaking at dawn, lauding (thee), fair goddess.
Leader of kine, lady of wealth, shine on us :
O nobly born Uṣas, be first to wake us.²
7. She, leader of wealth, (bestower) of blessings,
Shining Dawn, is chanted by the Vasiṣṭhas,
Bestowing widely famed riches upon us.
Do ye protect us evermore with blessings.³

7.77

(Triṣṭubh)

1. She has come with light, like a youthful maiden,
Urging on every living soul to motion.
(God) Agni has come to be kindled of men.
Driving away the darkness, she has made light.
2. Turning towards all, far-extending she has risen ;
Wearing a bright ruddy robe, she has grown light.
Of the colour of gold, of beauteous aspect,
Mother of kine, leader of days, she has brightened.
3. The blessed one, bringing the eye of the gods,
Conducting the white steed beautiful to see,
Dawn has appeared (to us) with rays refulgent,
With brilliant bounty pervading the whole (world).
4. Bringing goods near, drive the foe away with light,
(Give us) wide pasture, and make safety for us.⁴
Drive away hostility ; bring goods, bounteous one.
Stimulate riches for him that sings (your praise.)
5. Shine forth upon us with (thy) most brilliant beams,
O goddess Uṣas, lengthening out our lives,
Granting us both refreshment, giver of all boons,
And rich wealth in kine, horses and cars.

¹ Cf. 7.47, 3c.² Cf. 1.123, 5b.³ 7d = refrain of 7.1, 20d, etc.⁴ 4b = 9.78, 5d.

6. Thou whom, daughter of the sky, the Vasiṣṭhas
Magnify with hymns, O nobly born Uṣas,
Bestow on us riches prominent (and) high.
Do ye protect us evermore with blessings.¹

7.78

(Triṣṭubh)

1. Her earliest beams have appeared before us ;
Aloft her bright radiances spread far and wide.
O Uṣas, with chariot turned hitherward
Lofty (and) resplendent, convey wealth to us.
2. Towards her Agni enkindled roars (aloud) ;
Towards (her) the priests singing with hymns (utter praise) ;
Uṣas, the goddess, goes driving (far) away
With (her) light all darkness and distress (from us).
3. These dawns there have appeared (aloft) before us,²
In the east, extending light (and) shining forth.
They have produced the Sun, sacrifice and Fire³ :
The hated darkness has gone to the westward.
4. The daughter of the sky, the bountiful one,
Has appeared ; all men see Uṣas shining forth.
She has stood upon (her) car yoked by itself,
Which well-yoked horses direct hither (to us).
5. To-day we have observed thee before us,
Our kindly disposed patrons and we (ourselves).
Do ye shining forth, O Dawns, show yourselves rich.⁴
Do ye protect us evermore with blessings.⁵

7.79

(Triṣṭubh)

1. Uṣas has shone forth along the path of men,
Awakening the five races⁶ of mankind.
She has raised (her) beam with her bulls fair to see.
Sūrya has disclosed the two worlds with his light.

¹ 6d refrain in book 7 : = 1, 20d, etc.

² Cf. 1.191, 5a.

³ Cf. 7.80, 2d.

⁴ i.e. and so bestow riches on us.

⁵ 5d = refrain of book 7 (1, 20d, etc.).

⁶ *pañca kṣitayaḥ* or *pañca janāḥ*, "the five races" of men.

2. At the ends of the sky, they adorn (their) rays,
Like tribes yoked together the dawns march onwards.
Thy cattle cause the darkness to turn away.
They extend the light, as Savitar (his) arms.¹
3. Dawn has become bounteous, most Indra-like²;
She has generated fame for (men's) welfare.
The goddess, daughter of the sky, distributes
To the welldoer, most Angiras-like, wealth.
4. So much treasure, O Uṣas, grant unto us,
As, being praised, thou didst bestow on singers;
Thou whom they generated by the bull's roar,
Whose³ doors of the firm rock thou didst unclose.
5. Rousing one god after another grant us
Splendid gifts, sending them hither towards us;
Shining forth bestow upon us thoughts for gain.
Do ye protect us evermore with blessings.⁴

7.80

(Triṣṭubh)

1. The Vasiṣṭhas as first priests have awakened
Towards Uṣas with laudations and songs of praise,
Her who unrolls the two adjoining regions,
Making manifest all the worlds (to mankind).
2. She there bestowing new life, having hidden
The darkness, Uṣas has awakened with light.
In front the maiden goes (onward) unashamed:
She has made apparent Sun, Fire, sacrifice.⁵
3. May the Dawns rich in steeds, kine, (and) heroic sons,
Always shine forth upon us auspiciously,
Dripping with ghee, swelling with food on all hands.
Do ye protect us evermore with blessings.⁶

¹ i.e. his two arms.² = as bestowing wealth.³ [Apparently a slip of the pen for "The".]⁴ 5d = refrain of 7.1, 20d, etc.⁵ Cf. 7.78, 3a.⁶ 3 = 7.41, 7; refrain as before.

7.81

(1, Br̥hatī 8 8 12 8; 2, Satobr̥hatī 12 8 12 8 and so on alternately)

1. Coming towards us has appeared,¹
Shining, the daughter of the sky.
She draws off the darkness in order that we may see :
The fair (goddess) diffuses light.²
2. Rising up with (her), the sun, the brilliant daystar,
Sends forth the ruddy rays (of dawn).
At the flushing of thee, O Dawn, and of the Sun,
May we unite with the possession of gain.
3. Towards thee, O daughter of the sky,
We have awakened to action, Dawn,
Who bringest much desirable joyous treasure
To the pious man, lovely one.
4. Who shining, with readiness, great goddess, makest
The sun to be illumined, seen ;
For thee as such bestower of treasure we long :
Be we sons as of a mother.
5. Bring that brilliant treasure hither,
That may be far-famed, O Uṣas.
What (is) thy mortal nurture, daughter of heaven,
That grant us that we may enjoy.
6. Give fame to princes, unperishing possessions,³
Goods abounding in kine to us,
Who art the rich impeller of the bountiful ;
May Uṣas shine away (our) foes.⁴

¹ *práty adarśy āyati* = 8.101, 13c.

² 1d = 1.48, 8b.

³ 6a = 8.13, 12c.

⁴ 6d = 1.48, 8d.

An Achaemenian Tomb-Inscription at Persepolis

By A. W. DAVIS

(PLATES II AND III)

IN vol. xxix of the *Abhandlungen der königlichen sächsischen Gesellschaft der Wissenschaften*, Professor F. H. Weissbach published a number of the inscriptions which appear above the figures supporting the throne of Darius the Great on his rock-hewn tomb at Naqsh-i-Rustam, nine or ten miles north-west of Persepolis. Three other tombs of the Achaemenian kings exist at Naqsh-i-Rustam, but they are unfortunately uninscribed. Three similar Achaemenian tombs are found at Persepolis itself, two in the mountain face immediately behind the palace platform and one, unfinished, a little way off towards the south. These tombs, being quite easy of access, have often been visited and described. They have always been believed to be lacking inscriptions. Two, the North Tomb and the Unfinished Tomb, have in fact no inscription, but the South Tomb has a well-preserved trilingual inscription which so far as the writer is aware has hitherto completely escaped notice. The inscription is found above the heads of the figures supporting the throne of the Great King, exactly as in the tomb-inscription of Darius the Great, but in a far better state of preservation. The Old Persian text is as follows (see Plate II):—

15. Saka *with pointed cap* (?). 16. Babylon. 17. Assyrian.
 18. Arab. 19. Egyptian. 20. Armenian. 21. Cappadocian.
 22. Sardinian. 23. Ionian. 24. Saka beyond the sea.
 25. Skudra (Thracian ?). 26. "Shield-bearing" (i.e. perh.
 "wide-hatted") Ionian. 27. Pautaiia. 28. Ethiopian.
 29. [.]¹ (Outside throne to left.)
 30. Karaka. (Outside throne to right.)

(v, vi, and vii and the first part of viii are quite illegible on the rock. The figures below these inscriptions are also weathered beyond recognition.)

The Babylonian and Elamite texts are almost as well preserved as the Old Persian version given above, but the writer regrets that owing to his lack of acquaintance with these scripts he was unable to bring away copies of them.

Most of the signs of the Old Persian text are easily legible from the level rock-cut platform in front of the door of the tomb, but in order to make absolutely certain of them the writer, who was then stationed at Shiraz as Acting British Consul, took ladders out to Persepolis on 24th August, 1930, and by means of these gained access to the throne-bearers themselves. A further precarious erection of ladders enabled him, not without some risk, to reach the level of the figure

¹ This place in the Darius inscriptions at Naqsh-i-Rustam is occupied by the *maḫiia*. In the present case the Old Persian and Elamite versions are almost wholly destroyed. Mr. Davis's copy of the Babylonian gives: *du-ma-a-a*, with which is to be compared the full reading of the Darius grave *a-ga-a amēḫa-du-ma-a-a* (and *maḫa-du-u* in the main inscription) as given by Weissbach in *Abhandl. sächs. Gesell. d. Wissens.*, xxix, 32. Collation of both examples is evidently advisable before attempting to explain the different forms of the name as between the Old Persian and the Babylonian versions, or to identify the nation. The following name *Karaka*, as to which various guesses have been made, has lately appeared in a new inscription of Darius as engaged with the "Ionians" in transporting cedarwood from Babylon to Susa. The latest attempt to explain the last two names is to be found in some confident propositions of Herzfeld, *Archaeologische Mitteil. aus Iran*, Band iii, 60, 61, who does not, however, consider the form *maḫa-du-u* quoted above. According to him *Karaka* are the *Karians*, *Makiya* the people of *Oman*. [C. J. G.]

THE THRONE-BEARERS FROM THE S. TOMB AT PERSEPOLIS
 (after E. HERZFELD, *Archaeologische Mitteilungen aus Iran*, i, 1, pl. 27).

gives a good photograph (see Plate III) of the throne-bearers above whose heads the inscription appears. The door and the interior of the same tomb are also figured on Plates 26 and 28 respectively, but no general view of the tomb is given. There is a general view in Sarre and Herzfeld's *Iranische Felsreliefs*, p. 57.

To the foregoing article by Mr. Davis I have added a transcription and translation of the Persian text and a drawing (Plate III) from the best available photograph. It is unfortunate that he did not feel able to copy the Elamite and Babylonian versions as well. The photographs are hardly clear enough to repay reproduction.

The full list, as now recovered for the first time from the superscriptions over the throne-bearers, does not present any surprises but corresponds, as expected, to the list given in the principal Darius inscription at Naqsh-i-Rustam, save that the "Persian" appears at the head of the throne-bearers, as he does on the Darius tomb, though not included in the list of subject-peoples, thus accounting for the extra figure on the reliefs. This fact was, however, already ascertained from the Darius tomb. It may be hoped that Mr. Davis's interesting discovery will soon lead to the obtaining of the full inscriptions, since the South Tomb at Persepolis seems to be much less inaccessible than the Darius tomb at Naqsh-i-Rustam, where many of the superscriptions are also believed to survive, but have not as yet been copied.

C. J. G.

An Old Moorish Lute Tutor

(continued)

By HENRY GEORGE FARMER

JULES ROUANET, the well-known writer on the music of the Maghrib, lamented not long ago that none of the mediaeval treatises of the Western Arabian musical system had survived.¹ This he said, was all the more regrettable because to-day not a solitary practitioner in the Maghrib had the slightest acquaintance with musical theory.² The *ṭubū'* or modes were confused in the various parts of the country. The *ṭab'* known in Algiers as *mazmūm* is called *dīl* in Tlemcen, whilst the *mazmūm* of Tlemcen is the *dīl* or *māya* of Algiers.³

The texts and translations of the Maghribī treatises that are now brought forward for the first time cannot, therefore, fail to have some value. Besides furnishing us with a fairly comprehensive technical musical nomenclature, we are at last able to make a complete list of the twenty-four *ṭubū'* ("modes") and *naubāt* ("suite des pièces") which the Moors of Spain are said to have possessed. Finally, the tuning of the lute of the *Ma'rifat al-naghamāt al-thamān* treatise reveals a system anterior to that of the Eastern Arabian theorists whose works have come down to us. The notation, too, has a passing interest.

§ 1

THE ṬUBŪ' AND NAUBĀT

In mediaeval Moorish Spain, the professional *mughannī* or minstrel knew twenty-four musical modes (*uṣūl* and *furū'*)⁴ which came to be known as the *ṭubū'* (sing. *ṭab'*),

¹ Lavignac, *Encyclopédie de la musique*, v, 2914.

² Ibid., v, 2920.

³ Ibid., v, 2918.

⁴ Delphin et Guin, *Notes sur la poésie et la musique arabes*, 63. *Le monde oriental* (1906), 215.

because each mode was claimed to have a cosmic relation with the four elements (*al-tubū' al-arba'*). The term *ṭab'* also stood for "a note" or "a tone", hence *nusf ṭab'* meant "a semitone".¹ Among the Eastern Arabs we see a similar practice. With them the word *naghma* stood for "a note", but later it came to stand for "a mode",² a practice which still obtains.³

Attempts have been made from time to time to enumerate the Mediaeval Andalusian *ṭubū'* or musical modes, notably by Delphin and Guin in their *Notes sur la poésie et la musique arabes dans le Maghreb Algérien* (1886),⁴ and by Jules Rouanet in Lavignac's *Encyclopédie de la musique* (1913-22).⁵ The former enumerated nineteen. To these the latter added five others. That both these lists are erroneous is proved by the Maghribī treatises which have been presented in the foregoing pages.⁶ Here we see for the first time a complete list of the twenty-four *ṭubū'* of the Moors of Spain.

The copyist of the *Ma'rifat al-naghāmāt al-ṭhamān* treatise says that there were six branch modes to *dāl*, yet he only mentions five. Fortunately we are able to supply the sixth from the two other authorities, and it is '*irāq al-'ajam*'.⁷ The names of two of the modes, *muḡannab* and *mazmūm*, can be traced to the ninth or tenth century. The former was the

¹ For the various musical applications of the term *ṭab'*, see the *Vocabulista aravigo* of Pedro de Alcalá (Granada, 1505) sub "Musica", "Tono", "Canto", "Diapason".

³ Darwish Muhammad, *Ṣafā' al-awqāt*, 6. Muhammad Kāmil al-Khula'i, *Nail al-amānī*, 8. With the Greeks of old the term *τονος* stood for both "tone" and "mode".

⁴ pp. 61-3.

⁵ p. 2859.

⁶ The inclusion of the modes *ṣika* and *jārka* by these writers was clearly a blunder. These were adopted much later in the Maghrib, evidently under Egyptian or Turkish influence. They were borrowed from the Eastern Perso-Arabian modes *sika* and *jāhārka*.

⁷ Unfortunately in my *History of Arabian Music* (p. 204), when enumerating the twelve *maqāmāt* of the Eastern Arabian system, I have omitted the mode *isfahān*.

THE TWENTY-FOUR MODES (ṬUBŪ')

(5 *uṣūl* + 19 *furū'*)

"Ma'rifat al-naghāmāt al-ṭhamān."	Lisān al-Dīn Ibn al-Khaṭīb.	'Abd al-Raḥmān al-Fāsi.

name for the first semitonal fret on the lute of Al-Fārābī (d. 950).¹ whilst the latter is the name of one of the early modes mentioned by Ibn Khurdādhbih (d. 912).² The names *dīl* or *dhīl*, *ḥamdān*, *zaidān*, *mashriqī*, and *gharīb* are peculiar to the Maghrib. *Raṣd* (= *rasd*), 'irāq, *hijāz*, 'ushshāq, *iṣbahān* (= *iṣfahān*), *ḥusain*, and *zaurakand* or *zaurankad* (? = *zīrāf-kand*), are to be found among the primary modes (*maqāmāt*) of the Eastern Arabian system as early as Ibn Sīnā (d. 1037).³

¹ Kosegarten, *Lib. cant.*, 85.

² Al-Mas'ūdī, *Prairies d'or*, viii, 99.

³ Brit. Museum MS., Or. 2361, fol. 201v.

Māya occurs in the secondary modes (*awāzāt*) of the twelfth century and in Ṣafī al-Dīn 'Abd al-Mu'min (d. 1294),¹ and *ramāl* and *ḥiṣār* occur in the branch modes (*shu'ab*) of the Perso-Arabian system of 'Abd al-Mu'min ibn Ṣafī al-Dīn (twelfth century),² Al-Shīrāzī (d. 1310),³ and Ibn Ghaibī (d. 1435).⁴

There is considerable divergence of opinion among the musicians of the Maghrib and orientalist concerning the name of the mode *dāl* or *dhāl*. Höst,⁵ Christianowitsch,⁶ Yāfil and Rouanet,⁷ and a *Collection of Naubāt Verses*,⁸ have ديل, whilst Salvador-Daniel,⁹ Barbier de Meynard,¹⁰ Dozy,¹¹ and Lachmann,¹² write ذيل. Further, the vocalization according to Dozy is *dhail*, and this appears to be borne out by the verses of Lisān al-Dīn Ibn al-Khaṭīb¹³ and the *Vocabulista* of Pedro de Alcalá.¹⁴ Of course, the exigencies of verse create poetical licence, but it is worth while noting that Lisān al-Dīn also writes *raml*, *raml al-dhail*, *'irāq al-'ajm*, *inqilāb al-raml*, *aṣbahān*, and *masharqī*. The two latter have this vocalization in the Maghrib to-day.

The *marṣad al-dhāl* mentioned by Al-Fāsi is doubtless a poetic licence for *raṣd al-dhāl*. It will also be noticed that *mujannab* and *mashriqī* change places in the *Ma'rifat al-naqhamāt* treatise. Salvador-Daniel registered a mode called

¹⁴ s.v. "cuerda".

by him *asbein*,¹ which Barbier de Meynard says is اصبعين.² It is repeated by Rouanet who writes it صبعان or صبعين.³ Dr. R. Lachmann also mentions it.⁴ I suggested, however, in the *Journal of the Royal Asiatic Society* (1929),⁵ that this was really the mode *ishbahān*, but Dr. Lachmann informs me that the Tunisian musicians claim that *aṣba'in* and *ishbahān* are two distinct modes, and Rouanet mentions both. On the other hand, it is more than likely that the confusion is due to the fact that there was an *ishbahān al-kabīr* and an *ishbahān al-saghīr*.⁶

The mode called *zaurankad* or *zau[r]akand* must be an Andalusian pronunciation of the Persian mode *zīrāfkand*, *zīrafkand*, or *zarfakand*.⁷ The writer has also seen *zīrkand* (زیرکند)⁸ and *zīraukand* (زیروکند)⁹ although these are probably the errors of copyists. Höst mentions a mode *zarnak* (زرنک).

Many of the Mediaeval *ṭubū'* are still practised in the Maghrib, their preservation being due to a great extent to the *nauba*, a vocal and instrumental *suite des pièces*, which is considered the classical art form in Arabian music.¹⁰ After the fall of Granada (1492), one of the refugees from this last stronghold of the Moors in Spain was a musician named Al-Hā'ik, who took shelter in Morocco. Here he piously collected the traditional artistic music of Al-Andalus. To make it acceptable to the public, he had, however, to simplify this music,

and at the same time he reduced the number of the twenty-four *naubāt* to eleven. This became the foundation of the classical art of Morocco.¹ Verses of the five vocal movements of eleven or twelve of the *naubāt* have been preserved :—

BRIT. MUSEUM MS. Or. 1535.	MS. QUOTED BY CHRISTIANOWITSCH.	MAJMŪ' AL-AGHĀNĪ EDITED BY YĀFĪL.
Dīl Ramal Mujannaba Raşd al-dīl 'Irāq ... Ramal al-māya Husain Raşd Mazmūm Zaidān Gharība	Dīl Ramal Mujannaba Raşd al-dīl ... Māya Ramal al-māya Husain Raşd Mazmūm Zaidān Gharīb	Dīl Ramal Mujannaba Raşd al-dīl 'Irāq Māya Ramal al-māya Husain Raşd Mazmūm Zaidān Gharīb

The music of the five vocal movements of these *naubāt* is also known with the exception of 'irāq of which only two movements have survived.² Some of the instrumental movements have also come down to us.³ The *ṭubū'* or modal scales of some of the lost *naubāt* are still used in the Maghrib, however, and among them the *istihlāl*, '*ushshāq*', '*irāq al-'ajam*', *ḥijāz*, *işbahān*, *mashriqī*, and *gharībat al-ḥusain*. The word *ṭab'* (plur. *ṭubū'*) is still used in the Maghrib, but not always in the particular sense of "a mode" in music. It frequently has the meaning of traditional music, i.e. classical music, as does another word *ṣan'a* ("a work of art") often employed instead of the term *nauba*.⁴

¹ *La monde oriental* (1906), 215. Al-Hā'ik probably received this name because he was "a weaver of melodies".

² The five vocal movements are :—the *maşdar* or *muşaddar*, the *bataih*, the *darj*, the *insirāf*, and the *khalāş* or *mukhlāş*.

³ The two instrumental movements are :—the *mustakḥbir* and *taushīha* or *tūshīyya*.

⁴ Delphin et Guin, op. cit., 61; Lavignac, op. cit., v, 2877; Höst, op. cit., 258.

§ 2

ACCORDATURA AND SCALE

The single octave *accordatura* of the lute described in the *Ma'rifat al-naghamāt al-thamān* treatise is of considerable interest. Here we are told that the interval from the *dīl* to the *māya* string, and from the *ramal* to the *ḥusain* string is a tone (بعد طى = 204 cents),¹ and that the interval from the *māya* to the *ramal* string is a fourth (بعد بالاربع = 498 cents). The place of the first finger can be fixed at 204 cents from the nut because we are told that it is identical with the interval of the *dīl* to the *māya*. As for the place of the third finger this must be at 294 cents from the nut since on the *ḥusain* string it gave the octave of the *dīl* string. The use of the third finger (the *binṣir*) instead of the second finger (the *wustā*) would be difficult to explain if we did not know that it was one of the vagaries of the Western musicians.² With these particulars we are able to fix the scale as follows:—

Symbols : ا ب ج د ه و ز ح .

Notes : C D E F G a b c .

The actual order of the strings on the fingerboard of the lute as laid down in the treatise is (from left to right), *C a D G*. This is identical (= *G E A D*) with that of the *kuwitra* (smaller lute) of the Maghrib to-day.³ Cf. Pedro de Alcalá, *Vocabulista aravigo* (1505), s.v. "cuerda": Höst, op. cit. (1787), Tab. xxxi: Mitjana, in *La monde orientale* (1906), p. 214.

¹ Cents are hundredths of an equal semitone. See Helmholtz, *Sensations of Tone*, 3rd Engl. ed. (1895), p. 446.

² All four fingers (*sabbāba*, *wustā*, *binṣir*, and *khinṣir*) were used by the Mediaeval Eastern Arabic writers on music. See Lavignac, *Ency. de la musique*, v, 2927, on the use of the *wustā* in the Maghrib to-day.

³ Rouanet, *Ency. de la musique*, v, 2927.

	<i>Dāl</i> string. C	<i>Māya</i> string. D	<i>Ramal</i> string. G	<i>Ḥusām</i> string. a
The open string (الضرب)	0	204	702	906
The 1st finger (الـدس بالسبابة)		E 408		b 1,110
The 3rd finger (الـدس بالبصر)		F 498		c 1,200

This is an older system than that of Ishāq al-Mausilī (d. 850), Al-Kindī (d. 874), Yaḥyā ibn ‘Alī ibn Yaḥyā (d. 912), Al-Fārābī (d. 950), and the Ikhwān al-Ṣafā’ (late tenth century) whose lutes were tuned in fourths (*A-D-G-c*)¹ which gave, with a “shift”, the double-octave (الجماعة التامة), the *σύστημα τέλειον* of the Greeks. When the Arabs actually passed from the older single octave system to that of the double octave ought not to be difficult to determine. In all the above-mentioned writers the four strings of the lute are called from the highest to the lowest *zīr*, *mathnā*, *mathlath*, and *bamm*, the first and last names being Persian.² It would appear, therefore, to be a reasonable assumption that the first or highest and the fourth or lowest strings originally had Arabic names just as the second (= *mathnā*) and third (= *mathlath*) had, but that under Persian influence their names were changed. Apparently, the Persian *accordatura* was *A-D-G-c*, whilst that of the Arabs was *C-D-G-a*, as in the Maghribī treatise, the difference being in the lowest and

¹ The lute *accordatura* attributed to the Ikhwān al-Ṣafā’ by Oskar Fleischer (*Vierteljahrsschrift für Musikwissenschaft*, ii, 35, 37) is incorrect.

² Ibn Sīdā.

highest strings. When the Persian *accordatura* was adopted the Persian names *bamm* and *zār* for the differently tuned lowest and highest strings were taken over with them. As to the date of this, we know that Mecca adopted the Persian lute about the year 684,¹ and that Ibn Misjah (d. c. 705-14) introduced certain Persian and Byzantine ideas into Arabian music.² Even after the Arabs had adopted the Persian *accordatura* which gave them the Greek double octave on their lute, they still viewed their theory as being expressed within the single octave as we know from the *Risāla fī'l-mūsīqā* of Yahyā ibn 'Alī ibn Yahyā ibn Abī Manšūr al-Munajjim (d. 912), the solitary exemplar of which is preserved in the British Museum.³

§ 3

NOTATION AND TABLATURE

In the alphabetic notation such as we see in the Mediaeval Latin treatise *De harmonica institutione* attributed to Hucbald (d. 930),⁴ one may perhaps discern an Arabian influence. Notker Labeo (d. 1022) says that this notation was used for the *lira* and *rota*,⁵ and Pseudo-Bernelinus testifies that it was intended for instruments (*organa*), and that it was not derived from the theoretical writers on music.⁶ From this we see that it was borrowed from the minstrel class which had been considerably influenced by Moorish customs.⁷ An alphabetic notation had been known to the Arabs for at least a century earlier than Hucbald, and may be found in one of the treatises of Al-Kindī (d. 874).⁸ It is certainly curious

MA'RIFAT AL-NAḡHAMĀT	{	Symbols : ح ز و ه د ج ب ا
		Notes : C D E F G a b c.

Alphabetic notations, often miscalled tablatures, for musical instruments continued to be used until the fifteenth and sixteenth century as evidenced by the lute notation of Paumann in Germany.

As for the lute tablature of the Spanish *vihuelistas* of the fifteenth and sixteenth centuries which Mitjana opined may have been derived from the notation of the *Ma'rifat al-naḡhamāt al-thamān* treatise,¹ the conjecture is not quite admissible, one being a tablature and the other a notation.² It is quite true, however, that the Spanish *vihuelistas* did borrow their tablature from the Moors. Morphy, in his book on *Les Luthistes espagnols du XVI^e Siècle* (1902), was rather guarded in admitting this oriental influence,³ although his friend, the more erudite Gevaert, appears to have had no reserve on the question.⁴ We have positive proof of this

¹ See *JRAS.* (1931), p. 350.

² In an alphabetic notation, letters represent definite notes, whereas in a tablature the same letter may represent several notes according to the particular string on which it is placed. For instance, the letter "A" will have the constant value of the note "A" in an alphabetic notation, but in a tablature the letter "A" may stand for the first fret note of all the strings of the lute.

³ Morphy says (p. xvii) : "Elle [la tablature] est probablement d'origine orientale et l'on peut supposer qu'elle a été inventée chez les peuples qui, depuis tant de siècles, ont connu et pratiqué ce genre d'instruments ; mais, faute de preuves, je ne saurais l'affirmer, et je me mets prudemment en garde contre la fantaisie plus ou moins vraisemblable des hypothèses."

⁴ Gevaert says (p. xi) : "De bonne heure les Castellans et les Aragonais (pour ne pas parler des Andalous), en contact fréquent avec les Maures, ont dû s'initier à l'usage de l'*ūd* et apprendre à y exécuter leurs propres chants nationaux. Plus tard, parvenus à une culture musicale plus avancée, les instrumentistes chrétiens auront élaboré leur tablature à l'imitation de celle des Musulmans . . ."

borrowing in a Latin work dated 1496-7 on the *Ars de pulsatione lambuti et aliorum similium instrumentorum*, the text of which was published by Villanueva in his *Viaje literario a las Inglesias de Espana* (Valencia, 1821).¹ Here we see a lute tablature in which each open string is allotted the letter *l*, and each succeeding fret position on each string the sequential letters *ب ج د*, etc. This tablature, which was adopted by the Spaniards, is said in the *Ars de pulsatione lambuti* treatise to have been *invented by a Moor of the Kingdom of Granada*. The identical system is found in the later French, Italian, and other schools of lutenists, but they all had their origin in the tablature of the Moors of Spain.²

¹ I have given the text, together with a translation, in my *Historical Facts for the Arabian Musical Influence*, pp. 99-101.

² The French school used the letters of the alphabet whilst the Italian school used the numerals. The Arabic alphabet in the *abjad* series as used in lute notation and tablature also has a numerical value. See also L. de la Laurencie, *Les Luthistes* (Paris, 1928), p. 19.

Philological Note : Maḥḥû, not Magus

By S. LANGDON

THE title *maḥḥû* has been entered in the lexicons as "prophet", and the Persian-Greek *μᾶγος* has been derived from it, a derivation now generally abandoned. In the first place *maḥḥû* = galu-gub-ba, is placed after *kalû*, psalmist, *galamaḥḥu*, chief psalmist, *munambû* = i-lu-di, wailer, *lallaru*, wailer, CT. 19, 41, K. 4328 A 14-20 = Meissner, *Suppl.* 21, Rm. 338 Rev. ii, 1-5 = VAT. 10216, iv, 1-5, Meissner, *Beiträge* 83, *Oriental Institute of the University of Chicago, Assyr. Studies*, i, 1. VAT. 9558, ii, 32 ff. has three ideograms for *maḥḥû* (all broken away), and *maḥḥûtu*, Meissner, *ibid.*, 86 n. 123.¹

galu-gub-ba, the Sumerian word for *maḥḥû*, occurs in *Bab.* vii, 96, K. 4395, ii, 7, after *galu-ad-du* (wailer) and before *galu-gal-meš* (seer). The *galu-gub-ba-meš* and *amēlba-ru-te našir pirišti*, keepers of the mystery, BA. iii, 323, vi, 21, here with *bārû*, seer, prophet; *galu-gub-ba* = a- [ši-pu], magician, after *šabrû*, seer, II Raw. 51 No. 2, Rev. 6. Finally, *maḥḥû* is explained by *eššepû*, II Raw. 51, No. 2 Rev. 19, apparently "magician", Frank, *Studien*, 10. Since the *šipir maḥḥê*, work of the *maḥḥû*, consists in omens, dreams, and visions, *ittāti šutti egirrê*, Streck, *Assurb.* 120, 95, it is clear that the *maḥḥû* is also connected with prophecy. The *maḥ-hu-u* is a wailer, Langdon, *Epic Creat.*, 38, 28. Bezold, *Glossar*, 167, derived *maḥḥû* from *maḥû*, to which he assigns the meaning "rage", of a storm, and "to become mad". From this root he also derives *mēḥû*, whirlwind; hence *maḥḥû*, "the raving," so Bezold. *maḥû* is constantly represented in Sumerian by UD-DU(e) the common ideogram for *ašû*, to go forth; CT. 41, 28 Rev. 6. al-è-a al-è-a = *imtaḥḥâ imtaḥḥâ* (i²), Langdon, SBP. 104, 11-12. *tūr-e al-è maḡ-e al-è* = *šihru imaḥḥi rabû imaḥḥi*, *Bab.* ii, 157, 58-62 = Reisner, SBH. 133, VAT. 258, 1-2. In these passages *maḥû*, "to go forth, depart, go far away", seems to be indicated. This *maḥû* (1) is clearly connected with Arabic مَحَى (*maḥḥâ*,

¹ *maḥḥûtu*, probably the female *maḥḥû*, *maḥḥûtiš*, like a female wailer. See Schott, *MVAG.*, 1925, 19.

Inf. *tamhātun* = ii¹), "to remove far off," "remove," and preserves the i¹ form, "to go far away," "go forth," otherwise lost in Arabic. Cf. Arabic v form "be free from", "to abstain from". More definite proof for *mahû*, "to go out," is Falkenstein, *Uruk*, 53 Rev. ii, 5 (ku-dé)¹ *la i-ma-hi*, "He shall not go out into the street," for which V Raw. 49, viii, 4 has *sila-al-dib-ba na-an-dib-ba* (= *sûka ba'u la iba'i*), "Entering he shall not enter into a street"; cf. *sûka u sulâ la iba'u* = *sil-e sir-ra nu-mu-un-dib-ba*, Bab. iv, 189, 7-8; *sila dagal-la mu-un-dib-dib-bi* = *sûka rapša ibtana'u*, PBS. i², 128, iv, 9 = CT. 17, 36, 18.

mahû in the sense "rave", i.e. "the mind goes forth", is perhaps possible, and Bab. ii, 157, 58-62 may mean, "The little one raves, the great one raves"; cf. *gur-mu al-è-dé* IV Raw. 30, No. 2, Obv. 39-40, "My mind? departs"! Rendered [*kabatti-ja? ša im*]-*ma-hu-u*: *ik-ka-mu-u*, SBH. 67, 5. Here Syn. *ikkamu*, "is bound."

Also *mahû* in this sense in the paraphrase *urû ma-al e-la-lu = ðlu im-mah-hu ina lallarati*, "The city raves in lamentation," Syn. *šisît ðli*, SBP. 72, 5. Therefore, a *mahû*, "destroy, wipe away," Heb. החריב, Arabic حَرَبَ (*delevit*), does not exist in Accadian.

mahû (2) to be powerful, syn. of *kabātu*, exists according to my interpretation of IV Raw. 60* B, Obv. 21. See *Babylonian Wisdom*, 39, 21.

It is extremely probable that Bezold is right in deriving *mēhû*, hurricane, and *mahhû*, "magician, prophet, dervish," from *mahû* (1). The Sumerian word *lu-an-dib-ba-ra* = *mahhû*, CT. 19, 7, K. 8670, 10, possibly contains the verb *dib*, syn. of *è* in the parallel phrases, *sila al-dib-ba na-an-dib-ba* and *sila nu-è*, cited above. If so, then *mahhû*, "One who enters" (into state of trance); or perhaps *dingir-dib-ba*, "One whom god has seized, made mad."

¹ *ku-dé* = *sûku*, street, restored from *ibid.*, iii, 13 [ku-]dé nu-dib and *ku-dé na-an-tuš-šu*, V Raw., 49, ix, 13, "He shall not sit in the street," for usual *sila nu è*, "He shall not go out into the street," *Uruk*, 53. Obv. i, 3; KAR. 178, Obv. i, 16 = 176 Obv. i, 9, *et passim*. Cf. *ana harrani nu è*, "He shall not go out on the road," 178, Obv. iii, 20.

MISCELLANEOUS COMMUNICATIONS

VARDHAMĀNA AND ŚRĪVATSA

In a note in the *Journal* for October, 1931, Dr. Coomaraswamy points out that, in dealing with *vardhamāna* in an article in the preceding number, I had overlooked an article of his in the *Ostasiatische Zeitschrift*, N.F., 4. It appears to me that, if I have rightly understood his article and note, his contentions challenge in two respects views that have long been regarded as well-established, and therefore a fuller examination of the questions at issue seems desirable.

Firstly, in his article he drew attention to the fact that *vardhamāna* is used by the Jains to denote a lidded jar, which commentators state was employed to hold powder, and he pointed out that the same meaning was given to it in the commentary on the *Mahāvamsa*. From his note it is to be inferred that he goes further and would treat this as the primary meaning of the word from which its other uses derive, as against the usual view that its primary sense is the name of a particular lucky pattern. That it should be a lucky object he explains as being due to its use as a powder jar reserved for special occasions. Secondly, he holds that the *śrīvatsa* had two entirely different shapes, one confined to early times, the other to late times, as against the ordinary view that it maintained more or less the same shape throughout the whole period. One form of the pattern which he names *śrīvatsa* for the early period is the pattern I had provisionally identified with *vardhamāna*.

To start with general principles on the first point, lucky objects fall into three entirely distinct classes: (1) objects lucky in themselves, generally from the use to which they are put, such as the *dhvaja*, *vajra*, and *amkuṣa*; (2) those which are lucky from symbolical association, e.g. the fish of the Jains; (3) those which are lucky from their pattern, such as

the *svastika* and *nandyāvarta*. In the first two classes it is the object itself, and not its shape, which is important ; hence little use is made of the names of such objects as names of anything else which might have a resemblance to them in shape so as to become lucky thereby. In the third class the precise opposite is the case.

Now, in my original article I have shown how multifarious is the application of the word *vardhamāna*, as in the case of my third class. In earlier references it is nearly always associated with lucky-shape objects, particularly *svastika* and *nandyāvarta*, less frequently *śrīvatsa*. Another instance of this, besides those I quoted, is to be found in Śābarasvāmin's *bhāṣya* on *Mīmāṃsāsūtras*, i, 1, 5 (p. 11 of Chowkhamba S.S. edn.), where *rucaka*, *svastika*, and *vardhamānaka* are named together. In later times, so far as I know, it is not so associated, but is explained in the way Dr. Coomaraswamy holds to be original (e.g. the *Mahāvamsaṭīkā*, possibly twelfth century). It is also a distinguishing mark of this class of lucky patterns that their names indicate their lucky nature ; this also goes to show that *vardhamāna* belongs to this class, for the word as primarily the name of a jar would be hard to explain. It is worth noting that the Buddha's feet at Amaravati have no marks corresponding to the later jar form of the *vardhamāna*. Nor was its jar form necessarily associated originally with powder ; for *MBh.*, xiii, 3263, 4243, mention it as used for holding sesamum seeds for ritual purposes, and these passages are many centuries earlier than any mentioning its use for powder. Its lucky character cannot be explained in this way.

I infer accordingly that, whereas originally the name of a lucky pattern applied to a number of objects, *vardhamāna* in later times was used only to denote a special kind of jar, and was then little known except among the Jains. Possibly the obvious connection of the name with Mahāvīra may have given it a special value for them, while their appropriation of it may have made it unpopular with others.

The identification of the pattern is a far more difficult matter, and I deal first with *śrīvatsa*. Dr. Coomaraswamy seeks to prove a different shape for it in earlier times by the following argument. *Aupapātikasūtra*, § 16, states that Mahāvīra had on his breast a *śrīvatsa* mark. Therefore the mark (his fig. G) to be found on the breast of a Mahāvīra statue of Kuṣāṇa date from Mathurā (Smith, *The Jain Stupa and other Antiquities of Mathurā*, pl. xcii = Vogel, *La Sculpture de Mathurā*, pl. xxxviiia) must be a *śrīvatsa*. This mark he identifies, firstly, with the pattern found on various statues of Tīrthaṃkaras from Mathurā and in various ornaments there, which differ, in fact, slightly from it, and, secondly, with the "shield" pattern in the arms of the *trīśūla* (?) on the Sanchi gateways, which I tentatively identified with the *vardhamāna*. His illustration was not perhaps quite happily chosen; for the statue in question is almost certainly of Gupta date (Vogel, p. 113), and may be a statue of some Tīrthaṃkara other than Mahāvīra.¹ Nor, to judge from Vogel's reproduction, is Führer's drawing quite accurate. This, however, hardly affects his argument; for it is clear that from the beginning of the Kuṣāṇa period down to some time in the Gupta period, statues of Tīrthaṃkaras at Mathurā used to have a pattern on the breast, consisting of two scrolls (?) curled round at the ends with an upright between them, the whole held together by a ring. The scrolls remind me of the forms leaves often take in the stylized ornamentation of Sanchi and Mathurā, and the central upright sometimes looks like a tall pistil rising out of a bud (e.g. Glasenapp, *Der Jainismus*, pl. ix). This pattern was replaced towards the end of the Gupta period by a *śrīvatsa* in the lozenge-shaped form affected by the Jains (Smith, pl. xciv, with characters that may be of the fifth century, and pl. xci).

¹ The inscriptions from Mathurā, *Ep. Ind.*, i, ii, and xix, show ten statues of Mahāvīra, three of Rṣabhanātha, and one of Pārśvanātha. Smith's plates show one of Pārśvanātha (pl. xc, fig. 1), with whom the stūpa was specially associated, and one of Mahāvīra (pl. xciv), the others being uncertain.

The two patterns are totally unlike, and there are no transitional forms to explain the change.

Yet the sudden change has to be explained and perhaps we should seek it in a misinterpretation of the *Aupapātikasūtra*, which in its present form can hardly be as early as most of the statues in question. Mahāvīra is described as *sirivacch'āṅkiyavacche*, but a variant reading is *sirivaccharaciyavacche*, which presumably means "with a chest shaped like a *śrīvatsa*". It is difficult to see how the variant could have arisen unless it dates from a time previous to that in which it was held that Mahāvīra had a *śrīvatsa* on his breast, and it looks as if the reason for the comparison in the author's mind was the equation *vaccha* (*vatsa*) = *vaccha* (*vakṣas*). A precise parallel is afforded by the description of Mahāvīra's head in the same passage, *ghaṇaniciyasubaddhalakkhaṇ'unnayakūḍāgāranibhapiṇḍiy'aggasirae*. The natural meaning of the last part of this compound is that he had a dome-shaped forehead, but it was taken in later times to mean that he had a protuberance on the crown of his head as shown in the late statues. Now this protuberance is not found on any of the Tirthaṅkara statues of the Kuṣāṇa period, and its first appearance is as a slight elevation of the crown in some of the Gupta images (Smith, pls. xcii and xciv¹). The correct application of the *Aupapātikasūtra* description to early images, is, in fact, open to considerable doubt.

Further, it is necessary to Dr. Coomaraswamy's theory that the later shape of the *śrīvatsa* should have been unknown till some date in the Gupta period. But, as he himself half recognizes, a pattern exactly akin to the later *śrīvatsa*, except that it has been turned through half a right-angle from the ordinary Jain position, appears in the four corners of a Kuṣāṇa *āyāgapatta* from Mathurā (best reproduction, Vogel, pl. liva), and this pattern occurs again twice in positions

¹ It is perhaps significant that of these two the first is the latest one to show the old breast-mark, and the second the earliest to show the *śrīvatsa*.

where it seems to have symbolic as well as decorative value, on the girdle of Kaniṣka (Vogel, pl. i) and on the fragment of a relief of the seven Buddhas and Maitreya (Vogel, pl. xxxvic).¹

It seems to me, therefore, that Dr. Coomaraswamy's theory is in need of more definite proof before it ought to be accepted, even though its rejection involves the necessity of finding some other explanation of the breast-mark on the early images of the Tirthaṃkaras. It does not, therefore, much affect my tentative identification of the *vardhamāna*, whether this mark is the same as the "shield" pattern or not. There is a certain likeness in outline and there is a possible transition form in the shape the Tirthaṃkara mark takes as one of the four sacred symbols in the Mathurā *āyāgapatta* figured in Smith's plate ix, but, as the "shield" pattern seems to be solid, I am not fully assured of the identity.

Turning now to the *vardhamāna*, there is a jar figured among eight lucky symbols in the *āyāgapatta* already discussed (Vogel, pl. liva), which Dr. Coomaraswamy identifies with the later *vardhamāna* jar (his fig. 25c). It consists of a jar with a narrow base splaying out to the top, so as to be half-way in shape between a bowl and a saucer, and containing fruit (or cakes ?) covered by an inverted jar of similar shape.² A precisely similar jar with fruit appears under the demigod's seat in the well-known relief of Nemesa (Vogel, pl. xlvia, but clearer in Bühler's reproduction, *Ep. Ind.* ii), and a pot or basket with similar fruit appears at the bottom of another Kuṣāna *āyāgapatta* (Smith, pl. xi). For this vessel to be identical with the lidded *vardhamāna* jars of Dr. Coomaraswamy's illustrations from much later MSS.

¹ In fact the *śrīvatsa* may date in its ordinary shape from as remote an antiquity as the *svastika*. For a head from Kish (now apparently at Chicago) dating from the fourth millennium B.C. bears a circlet to which are attached three ornaments, which seem to me unmistakably *śrīvatsas* as known in India (E. Mackay, "Further Links between Ancient India, Sumer, and elsewhere," fig. 8, in *Antiquity*, December, 1931).

² For a similar use of inverted jars in prehistoric burials see *Indian Antiquary*, 1931, p. 137.

(his figs. 23 and 24), the fruit would have to be taken to be a line of beading on the lower jar, and that seems to me impossible. This relief contains eight lucky symbols, but they are not the eight standard symbols of the Jains, for the *svastika* and *nandiyāvarta* are certainly missing. There is, therefore, no necessity to find among them either a *vardhamāna* or a *śrīvatsa*.

To conclude, I frankly admit that, as I made clear in my original article, there is no certain proof of my identification of the *vardhamāna* with the "shield" pattern, but at least it requires no upsetting of established views for its acceptance, and I am unable to agree that the "shield" pattern is a *śrīvatsa* or that Dr. Coomaraswamy has produced any certain reproduction of a *vardhamāna* in its jar form earlier than his MSS.

I should like to avail myself of the opportunity to add short notes on two points to my article.

Kubbara.—I omitted to deal with the use of *kūbarī* in the ritual literature, where the word first occurs in Sanskrit. If the movements of the priests in *Śatapathabrāhmaṇa*, 4, 6, 9, are traced out on a plan of the sacrificial ground, it becomes obvious that *kūbarī* was something which could be reached from the rear of the *havirdhāna* carts and could not possibly have been the pole. I conclude that it has much the same sense as I would give to *kūbara*.

Caṅgavāra.—It has been pointed out to me that the *Papañcasūdanī* explains the word by *khāraparissāvana*. In the *Jātaka* passage the commentator connects it with a *rajaka*. I would suggest that the Ceylonese commentators understood the word to mean a wooden filter frame, such as is still used by dyers (Grierson, § 507). Their explanation runs directly counter to all the Indian evidence, and unless some proof can be produced in support of it I should hesitate to follow them.

BĀQIR ĀGĀH AND THE DATE OF THE NAME URDŪ

In *JRAS.*, Apr., 1930, pp. 391-400, under the heading "Urdū : the Name and the Language" I discussed *inter alia* the question of when the word was first used by itself as the name of a language, and said that the first definitely datable instance I could find was in Gilchrist's *Grammar of the Hindoostanee Language*, 1796, p. 261, but that a couplet from one of Muṣḥafī's poems, date unknown, was probably earlier. Another quotation, which also might be earlier, was from Mīr's son 'Arsh. Since then I have not been able to get anything which certainly bears a date before 1796, but the following facts are worth recording as a further contribution to the subject.

MĪR ḤASAN.—The *Tazkira e Ḥasan*, a *tazkira* by the famous poet Mīr Ḥasan, has been published with the title of *Tazkira e Shu'arā e Urdū*. Mīr Ḥasan died in 1786 and the work itself was written about ten years before his death; it appears, therefore, at first sight, as if here we had an instance twenty years before Gilchrist's *Grammar*. I do not think, however, that the title of the book is authentic. There is no proof that Mīr Ḥasan ever used the word "Urdū". He refers to his anthology on its first page as a *tazkira e sukhān āfrīnān i Hindī*, an anthology of Hindī poets, meaning Urdū poets.

BĀQIR ĀGĀH.—The word "Urdū" occurs in the introduction to the *Dīvān i Hindī* of Muḥammad Bāqir Āgāh, 1745-1805, a prolific writer in Arabic, Persian, and both dialects of Urdū (the southern dialect spoken in the Deccan, and the northern spoken in Delhi). He was a spiritual disciple of Sayyid Abu'l Ḥasan Qurbā, 1705-68, and belonged to the Deccan, being a native of Ellore. Our chief source of information about him is the *Tazkira Gulzār i A'zam*, the compiler and author of which was Muḥ. Gauṣ Khā. It is an anthology of Karnātak (Carnatic) poets, begun in 1841 and printed in 1855, the year of the author's death. Other authorities

which may be consulted are *Fihrist Urdū Makhtūtāt i Kutubkhāna e Kulliyā e Jāmi'a e 'Uṣmāniya e Ḥaidarābād Dakan*, pp. 17-21, 127-8; *Urdū*, Apr., 1929, pp. 281-318; and *Urdū ke Asālib i Bayān*, pp. 30 and 32 (only a few lines).

Āgāh frequently refers to the well-known Delhi poet Saudā, who died in 1780, and indeed sometimes pokes fun at him, as in the following couplet :

*Āgāh gar sune namkīn nazm tirī
Saudā kahe kī shī'r se mere namak gayā*

O Āgāh, if Saudā hears this tasty poem of thine, he will say "all the taste has gone out of my verses".

One of his numerous works was the *Dīvān i Hindī*, a book of *qaṣīdas*, *gazals*, *rubā'īs*, *qit'as* and other poems, almost all in Urdū, the majority in Persian metres, but some in Hindī metres such as the *doha* and the *kabitt*. To this *Dīvān* he wrote a prose *dībāca*, or introduction, of great interest. It was published in *Urdū*, Apr., 1929. From a perusal of it we get valuable information. Amongst other things we learn that he used the name "Hindī" for "Urdū", whether Delhi Urdū or Daknī, but that when he wished to distinguish the language of Delhi from that of the Deccan he used the terms "Urdū" and "Daknī" (or "Dakhnī"), while verses in either dialect he called *rekhte*.

We have thus the following terms as employed by him :—

Hindī for the Urdū language, whether northern or southern.

Urdū for the language of Delhi.

Daknī for the variety of Urdū spoken in the Deccan.

rekhte for verses in either dialect of Urdū (both Persian and Hindī metres).

The fact that he confines the name "Urdū" to the Delhi dialect and does not include Daknī is very important.

Another interesting Urdū work is *Farāid dar Favāid*. This has not been published, but a MS. exists in the Library of the Osmaniyyeh University in Hyderabad.

In the *Dībāca* to the *Dīvān i Hindī* he uses the word Urdū

three times. As he was born in 1745 and began writing verse in his fifteenth year, he might have spoken of Urdū any time after 1759. The question to be decided, therefore, is the date of the *Dībāca*, which is nowhere given. We begin our study of it with high hopes that we may be able to put it between 1765 and 1775, and so claim for the use of the term *Urdū* (as the name of a language) a date twenty or thirty years earlier than 1796, when Gilchrist's work appeared.

Alas for such hopes ! It soon becomes abundantly clear that the *Dībāca* cannot have been written before 1795 and may have been later. In the second quarter of it he refers to his *Hasht Bihisht*, begun in 1791, in the last quarter he mentions his *Riyāz i Jinān*, written in 1792, and to his *Farāid dar bayān i Favāid*, which was not written till 1795. The authority for the date of *Riyāz i Jinān* is a quotation from a MS. of the work in the Osmaniyyeh University (*Urdū*, Apr., 1929, p. 292), as follows :—

jab the bāra sau aur sāt baras tab banā hai yeh nuskhā e aqdas, in the year 1207, was written this holy book. The date of the *Farāid*, given on the same page, is taken from another MS. in the University, but no sentence is quoted.

Just before the reference to *Riyāz i Jinān* we read these words : *yeh ḥaqīr i nāras āke tīs battīs baras ke kyā Fārsī aur kyā Hindī mē sab aqsām shī'r mē nazm kiā thā*, this unworthy despicable person (the author) thirty or thirty-two years ago wrote poetry in every style of verse, whether Persian or Urdū : (*āke* is, of course, for *āge*). This suggests that he had been writing verse for thirty-two years. If to this we add, say, $14\frac{1}{2}$ years, his age when he began writing, we get $46\frac{1}{2}$, the equivalent of 45 of our years. That brings us to 1790. But it may well be that he dated from a few years after his fifteenth year, and in that case we get back to 1795 or later. We arrive at the reluctant conclusion that Bāqir Āgāh's *Dībāca* to his *Dīvān i Hindī* does not furnish us with a date before 1796 for the use of the word Urdū.

We may now proceed to quotations illustrative of the

terms Urdū, Daknī, Hindī, and rekhtē. We cannot say to what extent, if any, Āgāh pronounced the *izāfat*, so I omit it whenever it is not marked in the text.

(a) A few lines after the beginning of the *Dībāca* : *maḥfī na rahe ki rekhta bajuz muḥāvra Hindī ke sab amūr mē Fārsī kā tābi' hai*, let us not forget that Urdū verse, apart from its being in the Hindī language (i.e. Urdū), follows Persian in everything.

(b) *Farāid dar Favāid*, ii. 5, 6.

Yeh nuskha garci hai Hindī mē manzūm

Yihī hai ijmal se zikr us kā marqūm

Although this book is in Urdū verse and this is in brief an account of it.

(c) After discussing different classes of poems in the *Dībāca*, he says *agar shu'arā e Dakhan alfāz mazkūr ko zer zabar karē to candā muzāiqa nahī rakhtā hai kyā vastē ki unho tasfiya muḥāvra mē is qadr jadd o kadd nahī krē bakhilāf ṣāhibān muḥāvra Urdū ki is bāb mē sa'ī balīg kar kar us roz-marra ko muḥāvra Fārsī kā ham pahlū kar dē*, if the poets of the Deccan make alterations in the words I have mentioned (Arabic and Persian words), it doesn't matter very much, for they have not made great efforts to purify the language, in contradistinction to those who talk (or write) Delhi Urdū ; they with their enormous efforts in this matter have made that form of speech equal in dignity to Persian.

(d) A little over a page further on he writes of his romance, *Gulzār i 'Ishq*, *is kā muḥāvra ba'ainhi muḥāvra Urdū kā hai magar kahī kahī tā 'alāmat vaṭaniyyat Dakan bāqī rahī*, its language is absolutely Delhi Urdū, but in places there are signs of my belonging to the Deccan.

(e) About a page from the end of the *Dībāca* he winds up a long sentence with the words *tā yeh majmū'a agarci mukhtaṣar hai sab aqsām i sukhan par mushtamil rahe aur ise muḥāvra Urdū se maḥsūs kar dā*, in order that this collection of poems, though short, may include every kind of poetry ; and I have used Delhi Urdū exclusively for it.

(f) *ba'z 'ulamā e mutaakhkhirīn khulāṣā 'arabī kitābō kā nikālkar Fārsī mē likhe haī tā voh log jo 'Arabī nahī paṛh sakte haī in se fāida pāvē, lekin akṣar 'aurtā aur tamām ādmī Fārsī se bhī āshnā nahī haī is līe yeh 'āṣī bātalab unke bahut ikhtisār ke sāth lekar Daknī risālō mē bolā hai*, some scholars of recent times have made a summary in Persian of their Arabic works in order that those who cannot read Arabic may profit by them, but few women and not all men know even Persian ; so this rebel (the author), at their request has spoken very briefly in Daknī tracts. (Quoted in *Urdū ke asālib i bayān*, p. 33.)

(g) In the *Dībāca*, just before the quotation in (c) above, he says *akṣar rekhta koyā alfāz mashhūr 'Arabī o Fārsī ko zer o zabar karte haī*, generally writers of Urdū verse change well-known Arabic and Persian words.

82.

T. GRAHAME BAILEY.

LATE PROFESSOR E. G. BROWNE'S SPECIMEN OF THE GABRI DIALECT

In the January number of this *Journal* for 1897, pp. 103-10, the late Professor E. G. Browne published a short specimen of the Gabri (or "Dari") dialect of Persian, which was written for him, in Arabic letters, by one of his Zoroastrian friends of Yazd. To the original text of the specimen he added a translation, notes, and a transliteration in English characters. The latter was not a phonetical transcription, but simply a mechanical rendering of the Arabic letters. Besides, it seems to be not quite what it should be from the grammatical point of view. Studying the Gabri dialect with a Yazdi Zoroastrian, I had this specimen read by him, and wrote it down from his dictation in a phonetical transcription, to show, as far as possible, how it really sounds. As only few specimens of this dialect are published so far, this one may be also useful to students.

It may be noted that unlike the specimens of a translation of the Bible into the Gabri, by J. H. Petermann, edited by F. Justi in *ZDMG.*, vol. xxxv (1881), pp. 327-414 (more

particularly 330-8), the present specimen is quite intelligible to the Gabri-speaking people, and my teacher suggested only a few corrections, here and there. They are included in the parentheses in the text.

In my system of transcription I tried to keep as close to that used by Professor E. G. Browne as possible, and left the same signs for the consonants. For the vowels, however, I had to introduce the signs as follows: Browne's long *ā* sounds in reality either as *o* in "more", rarely as *a* in "all", and usually is more inclined towards the shadings of *u*, not only before nasals, but in other combinations also, sounding almost as a pure English *oo*. What is given by Browne as *a* or *e*, i.e. the so-called "short *a*", may sound as pure guttural *a*, as a middle-mouth sound *ä*, and even as indifferent *e*, or something like *u*. The *kesra*, rendered by Browne all through with *i*, never sounds in reality in this way. It is rather *e*, of different shadings, from a clear sound, when stressed, to an indifferent and elusive *ě*, which is almost inaudible. The clear sound of *i* is only met with when the sound is stressed, and the consonant elements of the syllable are favourable to its clearness. The shadings of *u*, both of the "short" and "long", i.e. stressed and not stressed, variety, are very elusive. They range from an elusive indifferent sound almost similar to *e*, to a pure and dense *u* (deep English *oo*), passing through different shadings of *o*-like sound, and often are almost indistinguishable from the shadings of the "long *ā*".

There is no systematic distinction between what is called "long" and "short" vowels, and their duration depends on their being under the stress, or on different modifications of the syllable, such as syncopation, which may artificially prolong them.

1. *Yā rūji yā (yāki) gurpú khádo yā (yāki) popāni pīshi yāk arbóbi (yāki arbob) kur shu ka (kart)*. 2. *Vas-ki kur shu kart, bā eplok kápten*. 3. *U arbobe mīyé (iye) har da (sic!) she wiyovun sār dud*. 4. *Miyé (iye) shoen, charo-gā-i shu di ka, we chān wakhti oné wuw-u sābzi shu kha, wā hul umóhen*

(*chuk bohen*). 5. *Yak ru gurpó bano'sh kart arar wuj durtwun*. 6. *Pupāni bichorá ar-chi dud ush kusht ki wúje kha ma-ku (ma-bur), (shuyád) khudumí pahmen-u 'túen, mu 'prónen, du-burá bār mo bur ekrén, mo tu mārōrāt (zahmat) evenén*. 7. *Gurpu āz khar-gāri ki'sh durt gush ush na-ka; ush wut ki "khunāndāgi peder-um me viri umdā, me wu wé-khine"*. 8. *Ba parmune Khudu kurewūni u sār zemīne devārt (devarten)*. 9. *Surwūni wuj-ush ush ashunft wa dumbuli wuj sha (sho)*. 10. *Puri rā ná-sho ki khem gārdishi (dī) uma*. 11. *Ush dī, bale, (yā) khari wā (yāk) ushturi chuk-u luki muné (hen) (wā) duren ucharen*. 12. *Gālī mūli har-da'sh pront, ush wurt (wurten) she shīwi bur keshud (keshuden)*. 13. *Pupāne tashi deli narmi shīwi bur doshwun she gurpu dud ki "āz nudumī wā gap-na-shnuftunī (na-shnuwī) khar du-burā gir káptim"*. 14. *Hoshtur mu yūse she sārī deli'sh dud narmi she wut "dogh-u márgi gurpū wakht-ush we-but, tálupī'sh wu'kre"*. 15. *Yak tikā rā ki shoen, khar beno'sh kart (ka) shaludwun*. 16. *Shu did khar shal bo*. 17. *Būri khar shu 'shtud shu nud buluyi būri bichorá ushtur (hoshtūri bichorá)*. 18. *Hoshtur narmi tu kha she wut, "bahbah khub mu ka."* 19. *Bēdi yāk tikā rā ki shoen khare wu mind; omōen dasht-u puyi khar shu basht, khar shu nud ā ri ushtūr (shu ri hushtur nud), cherā ki ush shuste keshud*. 20. *Hushturi pālāk-zādā tu kha lunud (nulud), to rāsuden sārī yāk gārdānāyi*. 21. *Muné sar ā shiwā vyuste sho*. 22. *Ushtur benu'sh kart ar-washtwun*. 23. *Khar dud-u wi-dud ush kusht ki "te pe ke!"* 24. *Ushtur jāwub-ush dud ki "ta de virē'tud ke narmi de wut ki khunāndāgi peder-ut de viri umdā?"* 25. *Me-jī hamun ar-washtwūn-i mēr-um me viri umdā"*. 26. *Hushtur ar-washt-u khar she gaw wenud*. 27. *Khar ki āz buluyi hushtūre tuk kapt, astā-u plangā she mart uma, wu mart*. 28. *Āz mu dustume musé dī we-ha ki pāndi khudumí ki na-shnuwīme bā mukhufūte rāsīm, rāwi ki u khare rāsud. Yu ba*.

(As one may see, the particle *jī* = "also", is omitted in sentences 4, 19, and 24, as superfluous.)

NOTICES OF BOOKS

SOCIAL ORGANIZATION OF THE NORTHERN TUNGUS. With introductory chapters concerning geographical distribution and history of these groups. By S. M. SHIROKOGOROFF. 11 × 8, pp. xv + 427, with 9 maps, 2 plates in colour, 3 text-illustrations, and numerous tables. Shanghai: The Commercial Press, Ltd., 1929.

This large and authoritative work treats of a people, an ethnical stock, of whom probably less is known in Europe and America than any considerable race still extant in the whole continent of Asia. Even their name, or that by which their neighbours call them, for it is not what they call themselves, is unfamiliar to all but a few ethnographers. Yet this is a notable breed, and an ancient, nomads and hunters and reindeer keepers, forming a sparse population scattered over a huge territory. The various clans of the northern branch, with which this book is concerned, are found in the basins of the Yenisei (the Enissy of our author), the Lena, and the Amur, and beyond these, east of the Stanovoi Mountains as far as Kamchatka. "And," adds Mr. Shirokogoroff, "they are found almost everywhere in China, and especially in Sinkiang province, where they have preserved their original tongue." This is a remarkable statement; does the latter part refer to the reindeer-breeding Uriankai, otherwise mentioned in this book only as Soicts?

Of these Tungus, their probable origin, their complicated waves of migration, their exogamic clans, their nomadic life, their systematized hunting, their social patterns, customs, and moral standards, their prospects of continued ethnical existence, and their own remarkable views thereon—of all these topics Mr. Shirokogoroff writes in the fullest and most informative manner. One or two of his chapters, indeed, may prove too detailed for non-specialist readers. But the

captions of the different chapters may be usefully cited to show the scope and scale of Mr. Shirokogoroff's work. After a foreword, and an introduction of 11 pages, there follow nine chapters. I, Primary *Milieu* and Tungus adaptation; II, Geographical Distribution and Classification of the Northern Tungus Groups and their Relations with Neighbours; III, The Tungus Clans and Notes on the History of the Tungus; IV, Clan Organization and Functions; V, Marriage; VI, Family Organization and Functions; VII, Property and Associations; VIII, Social Customs and General Characteristics of the Tungus; IX, Supplementary Notes. To which are added a glossary, a list of works mentioned, a general index, an index to authors and investigators, and an index to geographical names.

To carry out, among other duties, scientific researches among this and other East Asiatic ethnical stocks, Mr. Shirokogoroff was dispatched by certain Russian societies of high standing, and conducted three expeditions into Transbaikalia during 1912 and 1913, and again was in charge of a mission to China, Mongolia, and the neighbouring regions of Siberia from 1915 to 1917. The present work, and an earlier one, *The Social Organization of the Manchus*, 1924, reviewed in our *Journal* for October, 1925, represent part, but only part, of the material amassed. From this and in English (apparently not in Russian) the author has arranged, classified, and generalized the multifarious facts learnt, and the conclusions reached by a trained scientific mind, a very observant faculty, but, above all, by an invaluable sympathetic attitude towards the subjects of his studies, and by the rare gift of comprehension of a culture and mental outlook far different from his own.

Regard for space precludes attention being called to more than two or three of the topics treated in this instructive and stimulating account of the Tungus race. In the first place, who are they, where did they come from, and what is the origin of the name Tungus? Negatively, they are not

Mongols, or Buriats, or Yakuts, or Chinese, or Koreans, or perhaps even "Palæasiatics", though they are, or have been, in contact with all these races, and in various ways affected by such contacts. As for the name Tungus, which is not the name used by themselves of themselves, Mr. Shirokogoroff states that it owes its origin to the Yakut word *tongus*, and, having been adopted by the Russian settlers in Siberia, was thus introduced to Europe. However, Chinese historical records mention these "barbarian" aliens as *Tung Hu*, or Eastern *Hu*, and it is indeed "a strange coincidence" if these two almost identical names are of independent invention.

But returning to the question: Who are the Tungus and where did they come from? this opens matters of greater interest and far wider importance. In the author's view of the results of his own and his predecessors' investigations, it is beyond doubt that both the northern and southern branches—the latter now represented by the Manchus—are derived from a common pre-Tungus stock of great antiquity, existing already in the late Stone Age. On the original home of this stock, Mr. Shirokogoroff states two theories held by earlier authorities, one being that Manchuria was the racial cradle, while the other favours Northern Mongolia. With both of these Mr. Shirokogoroff disagrees. His own examination of the problem has inclined him to believe that this cradle was the territory formed by the lowlands and the highlands of Northern and Central China, namely the middle, and partly the lower, courses of the Yellow and Yangtze Rivers. Into these regions from the north-west penetrated the Chinese immigrants "about the third millennium B.C.". In part, the indigenous population may have gradually accepted the newcomers' culture and control. But large numbers must have wandered north-eastwards via Liaotung into what is now Manchuria. Some of them, the ancestors of the northern groups, must have again migrated further north into Siberia and the basins of the Amur and the Lena. Such appears to constitute the author's hypothesis of the earlier migrations

of the Evengki tribes, which he illustrates by three maps, facing p. 146, described as Hypothetic Early Geographical Distribution of Ethnical Groups, showing respectively the conjectural distribution about the third millennium B.C., the first millennium B.C., and the first millennium A.D. It is to be remarked that if Mr. Shirokogoroff's theory is well-founded, some of the "barbarous" tribes mentioned on the Honan Relics, and notably the 夷 I, must have been among the pre-Tungus.

Among the most potent factors of Tungus clan life is Shamanism, as it is, in varying forms, in other East Asiatic peoples. Apparently the author intends to devote a special work to this quasi-religion, while contenting himself here with a valuable supplementary note formulating certain generalized conclusions. Before dealing with these, however, a few remarks may be made by the present reviewer not altogether due to material found in this volume. Shamanism, then, is not a religion, but a system of psycho-therapy. Those who have observed it in its operations or *séances* do not seem to deride it as a mere exhibition of Mumbo-Jumbo, nor the Shamans themselves as conscious imposters or even victims of mental delusions. But incidents and phenomena are related as things seen by the observer, unexplained and apparently inexplicable, and, in Mr. Shirokogoroff's words, "many of the phenomena of this kind cannot be elucidated with our present knowledge of the matter" (p. 365).

To return, however, to the author's own observations on Shamanism. Animism, he declares, is a primary condition of the system. The latter involves the recognition by certain exceptional individuals of a faculty of being possessed or inspired by spiritual beings when these individuals (Mr. Shirokogoroff does not term them "mediums") so desire, and by their aid, and "using particular methods unknown to other men, to know phenomena of a supernatural order". Such exceptional characters know the special rites, clothing, and instruments requisite for their purposes, and hold a social

standing in the clan corresponding to their acknowledged powers. During the ecstatic trance or transport into which the Shaman is able to work himself his normal consciousness is almost suppressed, and his mental activities follow "a peculiar succession of logical moments". In some manner he thus obtains superior knowledge and "new possibilities of conscious and unconscious influence over the people". But such men, Mr. Shirokogoroff hastens to point out, must be no weaklings, physically or mentally, but must have healthy bodies, good nervous and normal "psychical" functions. Otherwise physical infirmity might obstruct self-control, and nerve maladies convert the Shamanistic ecstasy into an ordinary nervous attack. Now nervous and psychical maladies are common in the Tungus clans (as amongst other Siberian populations), and are apt to spread dangerously among the members. The Tungus recognize the clan spirits as the origin and workers of the mischief, and are convinced that the Shaman alone can "master" the active malevolent spirit. The Shaman is thus, as Mr. Shirokogoroff says, the "safety valve" of the clan, and "Shamanism as a preventive is a kind of clan self-defence". No wonder then if this forceful and thaumaturgic personage has great influence not only in his own clan but sometimes beyond it, especially in the presence of a great crowd, and "particularly if he uses hypnosis and other methods possibly even more effective, but still unknown to us". Neither need we be surprised if such hyper-sensitive men and unfeignedly believing "spiritualistic" mediums, as much evidence seems to show they are, in view of their particular social standing, and the cautious and sometimes hostile attitude of their clan members, do in their private lives suffer incessant troubles which render their lives "a sort of exploit".

There remains only space to notice briefly the author's account of the Tungus mental capacity and his social and moral standards, as set out in the particularly interesting Chapter VIII. In general, these people are hunters and

wanderers. By their success in hunting they live, and by their failure they must starve. One of the consequences is that no idiotic or feeble-minded persons are to be found among them, and the reason is simple, such persons perish at different ages and especially during childhood. For to the Tungus a love of knowledge, inquisitiveness, and curiosity are a necessity, whether for men or women, hence they are patient and accurate observers, and not only gather facts, but arrive at conclusions and generalizations. Lacking these powers, the individual is likely to perish when meeting animals of prey, or when nomadizing or hunting. Mr. Shirokogoroff concludes from his intimate knowledge of them that they "may be considered as people of high mental power".

And what is the Tungus socially, in relation to others? The author sums up, in the main, as follows: "Usually very correct, polite, attractive, attentive, rarely rude or rough, very rarely tiresome, never greedy, never cowardly, and never treacherous." Owing to the nature of their social organization, they have developed "a consciousness of duty, love for truth, faithfulness and honesty, a great discipline among individuals, as well as among collective units, self-sacrifice and self-denial, when such is required in the interests of the unit."

It is high praise indeed, and with it we must take leave of them and of the author, on whose great advance in his mastery of the English language the present reviewer ventures to offer his congratulations.

L. C. HOPKINS.

SAIFUDDAULAH AND HIS TIMES. By MUHAMMAD SADRUDDIN, M.A., D.Litt. 8 × 6, pp. xi + 231. Lahore: Hind Electric Press.

Saif al-daulah the Ḥamdānīd is an interesting figure, about whom anecdotes accumulated. He was immortalized by the poet Mutanabbi, whose most famous odes are addressed to him. Dr. Sadruddin was right in choosing him for the subject

of a monograph, in which he gives the earlier history of his hero's family, an account of his career in a series of chapters devoted to its different periods, a study of his character, notices of the literary circle which adorned his court, and other matters closely connected with his theme. Since Saif al-daulah's life was spent in campaigns partly against Muslim enemies, and partly against the Byzantines, who utilized the weakness of the Caliphate to regain some of their eastern possessions, the author has very properly devoted some space to geographical description. He has naturally made considerable use of the *Geschichte der Hamdaniden* contributed by Freytag to some early volumes of the *ZDMG.*, but he has employed besides many authorities, both eastern and western. Among works by the latter, of which the name is missing in the footnotes, mention may be made of Schlumberger's *Épopée Byzantine*, which perhaps is not easily accessible in India; the omission of Miskawaihi among the former is surprising. Some authorities of importance have come to light too late to be used by Dr. Sadruddin. In the second part of Tanukhi's *Table-talk*, Saif al-daulah gives a lengthy account of the events which led to his becoming an independent sovereign, which has every appearance of being authentic, though it is not easily worked into the narrative.

Dr. Sadruddin's work should prove exceedingly useful to students of Mutanabbi and Abū Firās, of whom the former occupies the first place, and the latter an honourable place in Arabic versification. The odes are mentioned by the author on the occasions in Saif al-daulah's career which suggested them, and this helps the elucidation of their import, and enables the reader to appreciate the poet's ability.

The chapters on Saif al-daulah's character, administration, and patronage of art are marked by sobriety in general, though anecdotes could be produced which suggest that the author's estimate of the first is too high. One which is both gruesome and amusing is recorded in the first part of Tanukhi's *Table-talk*. Saif al-daulah ordered an execution, and when

the order was carried out abused his courtiers for their unmannerliness. When asked wherein their offence lay, he told them that they should have pleaded for the man's life. They were therefore responsible for unnecessary bloodshed! They apologized humbly, and promised not to commit the offence again.

D. S. M.

BEITRÄGE ZUR GESCHICHTE DER STAATSKANZLEI IM ISLAMISCHEN ÄGYPTEN. VON WALTHER BJÖRKMAN. 12 × 8, pp. 217. Hamburgische Universität, Abhandlungen aus dem Gebiet der Auslandskunde, Band 28, Reihe B, Band 16. Hamburg, 1928.

The work of Qalqashandi, called *Subḥ al-A'shā*, published by the Khedivial Library in a magnificent edition of fourteen volumes, is provided with an ample table of contents for each volume, but sadly lacks an index, such as the same institution has recently been providing for its publications. Herr Björkman's work, while not altogether supplying this need, goes a considerable way in that direction; he has furnished a conspectus of the contents of the volumes, and a series of indices which will be very helpful to those who have occasion to consult Qalqashandi; few are likely to peruse the fourteen volumes, which take a liberal view of the attainments necessary for a state secretary or clerk.

To his conspectus and indices Herr Björkman has prefixed a very valuable introduction, dealing with the history of the bureaux and their clerks, both in the Eastern Caliphate and in Egypt, with which Qalqashandi is naturally more closely concerned. He has collected with great industry a bibliography of the subject, with analysis of such works as have come to light, and notices of others which are either lost or not known to exist. His copious references to European treatises and articles will be very useful to those who study this side of Islamic civilization.

D. S. M.

CHRONIQUE DU RÈGNE DE MENELIK II ROI DES ROIS D'ÉTHIOPIE. Par GUÈBRE SELLASIÉ, traduite de l'Amharique par TESFA SELLASIÉ, publiée et annotée par MAURICE DE COPPET, ancien ministre de France en Ethiopie. Vol. I: 11 × 7½, pp. xiii + 382, ill. 164, plates 10; Vol. II: 15 × 11, atlas. Paris: Maisonneuve, 1930.

This work is the translation of an official chronicle composed in Amarigna by the "Ministre de la Plume" of Menelik II, emperor of Abyssinia, 1889-1913. The present volume carries the narrative down to 1895, and is to be followed by another, which will conclude the translation and contain some appendices that are promised. The original, which exists only in MS., is the first official history of Abyssinia composed in the vernacular; previously the ecclesiastical language known as Geez had been employed for this purpose. The biography of the emperor is preceded by a brief sketch of the earlier history of the country.

Whatever may be the defects of the chronicler's narrative, it would be difficult to find any in the ample commentary with which M. de Coppet has elucidated and supplemented it, and which occupies about half of each page. No pains have been spared to collate the author's statements with those of other witnesses to the events, in whatever language they may have written, to elucidate the numerous local words which are transliterated, and to locate the towns, villages, rivers, etc., which happen to be mentioned, with the aid of visitors, ancient and modern. The geography is besides rendered intelligible by an atlas of well-executed maps.

The judgment passed by the editor on the work itself is likely to commend itself to readers. The chronicler is an Abyssinian priest, writing under the supervision of the emperor and his very competent empress. His own interests (like those of the author of the Biblical Chronicles) are ecclesiastical, the building of churches, miracles, and religious festivities; on these subjects his pen is indefatigable. As

satisfactory, and the suggested etymology of the name (*parisaṃkhyāna*, with the impossible meaning of "abandonment", p. xviii f.) is not at all convincing. The statement that release is "to be eagerly looked for, to be striven for", by Prakṛti (p. xxxii) is surprising, seeing that Prakṛti is *ex hypothesi* unconscious. Regarded as a whole, however, the book is a very creditable performance, scholarly as well as practically useful.

95.

2. YOGA PHILOSOPHY IN RELATION TO OTHER SYSTEMS OF INDIAN THOUGHT. By S. N. DASGUPTA, M.A., Ph.D., I.E.S. $8\frac{3}{4} \times 5\frac{1}{2}$, pp. x + 380. Calcutta : University of Calcutta, 1930.

Dr. Dasgupta maintains—and in the main rightly, as we believe—that the Yōga is not an adaptation of the classical or Kāpila Sāṅkhya enlarged by the addition of a Deity and a system of physical exercises, but that the two schools are *ebenbürtig* children of a common parent, the Primitive Sāṅkhya, from which they have both diverged to some extent, so that, although they "are fundamentally the same in their general metaphysical positions, yet they hold quite different views on many points of philosophical, ethical, and practical interest". This thesis he works out in the present volume, in which he studies successively from this standpoint the germs of Yōga in the earlier Upaniṣads, the Yōga in connection with Patañjali (we may note that he proves the impossibility of demonstrating from internal evidence the posteriority of the Yōga-sūtra to the Mahā-bhāṣya, while he admits the weakness of the tradition attributing the Sūtra to Patañjali), the theory of *gunas* and some ontological problems in relation to it, Yōga psychology, cosmology, and physics, Sāṅkhyan theism as opposed to Yōgic theism, and Yōgic ethics. The treatment is ample—in places perhaps somewhat more ample than is strictly necessary—and is marked by the author's usual ability and learning.

A possible criticism is that, although the author is justified by its importance in concentrating his energies upon the Pātañjala Yōga, he might profitably have given some attention to the other developments of Yōga, such as the systems connected with the Śāiva and Śākta cults. There are also a few minor points on which improvement is possible. Thus on p. 46 he describes the Bhagavad-gītā as "probably pre-Buddhistic", which is rather too bold; it would be better to say that it shows no definite traces of Buddhist influence. On p. 58, 1, 2, "none" seems to be a misprint for "some", and on p. 91, 1, 19, "studium" is a slip for "stadium". On p. 104 we are bidden to "cf. Aristotle", but no reference to any book is given, and often elsewhere we are put off with vague references. It is seldom that the author's phrasing is open to criticism ("unrelationable with any change" on p. 155 is one of these few slips); but he shares in his fellow-countrymen's bad habit of referring to writers by their titles instead of their names, e.g. "Bhikshu" for Vijñāna Bhikṣu. P. 32.

3. TRANSLATION OF SIDDHANTA BINDU. Being Madhusūdana's Commentary on the Daśaśloki of Śrī Śāṅkaracarya. By P. M. MODI, M.A., with a foreword by Rev. Dr. ZIMMERMANN. $8\frac{1}{2} \times 5\frac{3}{4}$, pp. x + 54 + 183. Bhavnagar: Baroda printed, 1929.

The propaganda of the Advaita philosophy in India has been immensely aided by popular little poems summing up its doctrines in catchy verse. Such a one is the *Daśaśloki*, ascribed to the great Śāṅkara; the correctness of this attribution is not beyond question, but it is possible. Of the *Daśaśloki* an exposition, styled *Siddhānta-bindu*, was composed by Madhusūdana Śarasvatī in the sixteenth century, which deservedly enjoys a high reputation; and this, together with the *Daśaśloki* embedded in it, is translated, with notes, in the present volume. To his rendering Mr. Modi has prefixed an introduction on the life, literary activity, and

doctrinal attitude of Madhusūdana, and he has also added appendices, of which the second and third discuss Madhusūdana's conception of *bhakti* or devotion as a means to salvation and the important differences between him and Śaṅkara on this point. In his frank and clear recognition of these fundamental divergences between Śaṅkara and his commentator Mr. Modi shows sound critical sense. His rendering too deserves praise, for, although rather free, it is generally accurate in substance. Altogether, the work is a very creditable performance, except as regards printing.

P. 32.

4. THIRTEEN TRIVANDRUM PLAYS ATTRIBUTED TO BHĀSA.
Translated into English by A. C. WOOLNER . . . and
LAKSHMAN SARUP. Vol. i. (Panjab University Oriental
Publications, No. 13.) 2 vols. 10 × 7, pp. ix + i + 200,
181. Lahore : Oxford University Press printed 1930,
1931. 9s.

On the affiliation of these plays to Bhāsa much has been written, and the question may be allowed for the present to rest, especially as Professors Woolner and Sarup give a fair summary of the case, and, "though one translator has been more sceptical than the other," both tactfully refrain from dogmatic pronouncements. But whether Bhāsa is the author of the plays, or of a part of them, or of no part thereof (I am as sceptical as ever, and am glad to see that doubts are spreading), it is certain that they have come to occupy an important place in Sanskrit literature, and therefore the present translation by two competent scholars is welcome.

The translators' aim, they tell us, "has been to represent all that is in the original (excepting a few repeated or redundant words), but to shake off the burden of the Sanskrit sentence just enough to make the dialogue and recited passages tolerable to the general reader." In this they have on the whole been successful. But in "shaking off the burden of the Sanskrit sentence" they have sometimes come perilously

near to looseness, and even to inexactitude. In rendering single words and phrases also they are occasionally too free, and sometimes decidedly wrong. To take a few examples from the first volume, they render *nīpatita-turagas* "fallen from his horse" (p. 11); *avasthā* "distress" (p. 12); *viśrambhēṇōtpādita-viśrambhā* "gratified by your cordial welcome" (p. 42); *kasyārthaḥ kalaśēna* "who, then, needs a beggar's bowl?" (p. 42); *sīmām ivāmbara-talasya vibhajya-mānām* "like a boundary line it cuts the sky in two" (p. 53); *yatra me patitaḥ kāmāḥ* "Love has come to me" (p. 83); *strīṇām tu kānta-rati-vighna-karī sapatnī* "but a real rival to the ladies who delay their delights" (p. 89); *vacanīya-dōṣam* "a famous wrong" (p. 97); *manmatha-grhītam* "torn by passion" (p. 99); *mā khu mā khu evvaṃ mantiya* "restraining him with warning words" (p. 101); *sadiśa iti* "how well he looks" (p. 173); *mānuṣa-viśvāsātāsām* "they look just like men" (p. 174); *niyama-prabhaviṣṇutā* "tyranny of rule" (ibid.); *śīla-saṃkrānta-dōṣāḥ* "with virtue turned to sin" (p. 177 f.); *dāityēndra* "Indra and the demons" (p. 179); *mātēva bhāvaṃ tanayē nivēśya* "like a mother, whose heart is melting for her son" (p. 182). Moreover the *nāndī* is not "a benedictory stanza", but a prelude; and *Avanti* should not be written *Avantī* (p. 45, etc.). Turning to the second volume, we may observe that "Potsherd" is not an exact equivalent for *ghaṭōtkaca*. In the *nāndī*-verse on p. 64 "brine" is used instead of "water" to render *jalād*; *nīhata-diti-sutām* is wrongly construed with *āji-madhyē*, instead of with *vasudhām*; *sva-bhuja* is translated "his powerful arms"; the name of Rāma, not in the text, is inserted in the translation; and no equivalent of *ucchrita* appears. On p. 65 *bahubhiḥ kāraṇāir* is loosely rendered as "a thousand reasons", and *mē duhiā* as "my little girl". On p. 72 *yuvati-vapuṣām* is translated "a damsel's charms"; it should be "damsels' forms". On p. 81 "desire brings no joy" is an erroneous version of *saṅgam asukhadam*, for *saṅga* is not "desire". In the last

verse on p. 85 the translation omits *viśadāu*. On p. 115, verse 7, "Triple Word" is a mistake for "Triple World". Ibid., verse 9, there is a serious mistake: *bhramati nabhasi vidyuc* is a separate clause, distinct from the words following it; moreover, *samiti* is not "clan" but "gathering" or "battle". In verse 10 on the same page "to save her seventh and avoid the loss that befell six sons" is a wholly impossible rendering of *ṣaṇṇām sūtānām apacaya-gamanārtham saptamaṁ rakṣamāṇā*: *apacaya* must have the meaning of *apaciti*, "compensation", so that the words mean that by saving her seventh child Dēvakī will compensate herself for the six whom she has lost. On p. 138, verse 8, *vikṛṣṭa* is translated "muscular"; it means "broad". And on p. 133, verse 2 of act iv, *dharṣayāmi* is not exactly "I shall drag forth". Errors of these sorts are perhaps not excessively serious, but to a certain extent they mar the real merits of the work, which are considerable.

409.

5. YAKṢAS. By ANANDA K. COOMARASWAMY. (Smithsonian Miscellaneous Collections; Vol. lxxx, No. 6; Publication 2926.) $9\frac{3}{4} \times 6\frac{1}{2}$, pp. 43, 23 plates. Washington: Smithsonian Institution, 1928.

YAKṢAS. Part ii. By ANANDA K. COOMARASWAMY. (Smithsonian Institution; Freer Gallery of Art; Publication 3059.) $9\frac{3}{4} \times 6\frac{1}{2}$, pp. 84, 50 plates. Washington: Smithsonian Institution, 1931.

In these fascinating and erudite monographs Dr. Coomaraswamy studies with his usual fullness of knowledge and keenness of vision the Yakṣas of Indian mythology and their connections from the earliest times, skilfully illustrating his themes by numerous and well chosen plates. In the first fascicule he examines the status of Yakṣas and Yakṣīs in the religion of ancient India and the various characters covered by that title; the parts played in religion and art by prominent Yakṣas, especially Kubēra and Gaṇēśa; the functions of

Yakṣas as tutelary deities and guardian spirits ; the nature of their sanctuaries ; the forms of worship offered to them ; the types of Yakṣas which the art of Buddhism and other creeds used to represent various deities, and the application of the type of the woman and tree in Buddhism and Jainism, out of which were evolved (a) the theme of Buddha's birth ; (b) the *dōhāda*-motive in classical literature, and (c) the figures of river-goddesses in medieval art. In his second fascicule his theme is the " Water Cosmology " : the Yakṣas as spirits of fertility are connected with water, and already in the Vēda we have theories of the world's origin from water, of which the presiding deity is Varuṇa. Our author in investigating this sphere of thought, which he endeavours to detach from the rest of Vedic religion, traces with striking ability not only its literary documentation, but also its manifold representation in art by means of plant-motives, the *makara*, vases of plenty, and water-goddesses, and connects it further with the legend of the Grail.

Dr. Coomaraswamy describes the Yakṣa-cult as a " phase of non- and pre-Aryan Indian ' animism ' " (I, p. 3.). This seems to be rather too sweeping. Many individual Yakṣas may have been of non-Aryan origin ; but the term Yakṣa was one of exceedingly wide compass, including a vast number of deities of very miscellaneous sorts, of whom many may have been Aryan. Dr. Coomaraswamy admits that " the designation Yakṣa was originally practically synonymous with Deva or Devatā " (i, p. 36) ; in fact, it might denote much more, as may be seen from the discussion of it by Prof. Hertel in *Die arische Feuerlehre*, I, pp. 29 ff. and 41 ff. The character and cult of the ordinary Yakṣa in post-Vedic times do not, I think, prove him to be non-Aryan in origin : *pūjā*, though originally un-Aryan, was offered to deities of Vedic provenance, and even the use of meat has Aryan analogues, for there is reason to think that meat was sometimes used in Grhya rites (cf. Hillebrandt, *Ritual-Litteratur*, p. 71), and in Śrāuta rites animal sacrifices abounded. Certainly the word *yakṣa* is of

Aryan origin. It stands, I believe, in the same relation to *yaśas*¹ as **śrōṣa* to *śravas*, or *dakṣa* to **daśas* (cf. *daśasyati*, etc., Lat. *decus*), or *vatsa* to *žtos* and *vetus*, or *jēṣa* to *jaya*, or perhaps as *-ōśas* and *ōṣa* to *avas* (cf. *Ar. Feuerlehre*, I, p. 160 f.). I conclude then that the Aryans had cults of this kind, which were fused with similar aboriginal worships; all these deities were generically termed *yakṣas*, a name which from meaning generally deities or divine objects came to denote the particular class of deity worshipped by the common folk, i.e. minor tutelaries or godlings.

To say that a cult is "Aryan" because it is documented in the *Vēda*, or the *Avesta*, or both, is not to say that it originated in the religious experience of the Aryans. The Aryans of the *Vēda* and *Avesta* were a congeries of tribes, comprising perhaps several races; and their cults which figure in these books were a heterogeneous medley, in which were perhaps included cults borrowed from other peoples. But all these worships were capable of being in a crude way coordinated by being brought under the general formulae of the *Feuerlehre* taught by the Brahmins, whose traditional deities were Agni and Sōma. Thus every worship admitted into the *Vēda* formed part of a canon, a corpus of cults believed to embody the religious consciousness of the Aryan peoples, in more or less definite opposition to the religions of the aborigines of India. In this sense everything Vedic is Aryan. That some Vedic cults were borrowed by the Aryans from the despised aborigines is possible. But it is most unlikely that they took over anything entirely new to them: they were only likely to borrow such cults as resembled their own. Such was the worship of water and fertility: both Aryan and Dasyu had these, and often they were mutually assimilated. For these reasons Dr. Coomaraswamy's attempt to drive a wedge between the worship of water and the other Vedic cults (II, p. 14 ff.) fails to convince me. The worship of the waters

¹ Thus it would etymologically mean a bright being. To the Hindu fame has always been something white and lustrous.

in the Vēda is merely an aspect of Vedic *Weltanschauung* : water is regarded here as a form of Sōma, the divine essence of vital force.¹ And if, as our author holds, Varuṇa is the chief deity of this water-cult, so much the worse for his argument, for Varuṇa is thoroughly Vedic and Aryan, though he belongs to a cult-circle other than that of Indra.²

Since the Yakṣa-cult was definitely a popular one, Dr. Coomaraswamy is probably right in discerning in it germs of the *bhakti*-movement of later times. He remarks : "as the greater deities could all, from a popular point of view, be regarded as Yakṣas, we may safely recognize in the worship of the latter (together with Nāgas and goddesses) the natural source of the Bhakti elements common to the whole sectarian development which was taking place before the beginning of the Kuṣāna period" (I, p. 36). I would however prefer to say : "one of the natural sources."

Apart from these not very material questions, Dr. Coomaraswamy's studies are excellent in all respects, throwing much valuable light on important issues and laying students of Indian religion and art under a weighty debt of obligation.

L. D. BARNETT.

SIAMESE STATE CEREMONIES : THEIR HISTORY AND FUNCTION.

By H. G. QUARITCH WALES, M.A., Ph.D. $9\frac{3}{4} \times 5\frac{3}{4}$,
pp. xiv + 326, 46 plates, 5 figures. London :
B. Quaritch, 1931.

Dr. Wales has peculiar qualifications to write on Siamese culture. Starting on his career with a sound scientific training, he has held office at the Court of Siam in the Lord Chamberlain's Department and learned there not only the language and practices but also the mind of the Siamese, *καὶ νόον ἔγνων* ; and the materials gathered in these

¹ See Macdonell, *Ved. Myth.*, p. 85 f., and my remarks in "Yama, Gandharva, and Glaucus," in *BSOS.*, vol. IV, p. 706, etc.

² The latest discussion on Varuṇa is to be found in Professor Charpentier's judicious criticisms in his article "Indra" in *Le Monde oriental*, XXV, 1931.

experiences he has carefully studied from the standpoints of ethnography, sociology, and history. The task has been difficult, for the culture of Siam is very complex: on a groundwork of primitive crudity have been superimposed Śaiva and Vaiṣṇava doctrines and rites from India, from which the ceremonies of state are mainly derived, as well as Buddhism of both the Mahāyāna and the Hīnayāna schools, especially the latter, and these various and incongruous elements require to be analysed, described, and appraised with regard to both their historical and their functional values. This arduous undertaking has been accomplished with notable skill, thoroughness, and success.

The book is divided into six parts. The first is introductory (the scope and sources, the history of Siamese culture in outline and the social organisation of the country); the second deals with the kingship¹ and the Court Brahmins; the third describes the ceremonies of installation, viz.: the coronation in its various grades, the rite of the tonsure, cremation, and worship of dead sovereigns; the fourth treats of functions associated with kingship, namely royal audiences, the oath of allegiance administered to officials with the ceremonial ordeal of drinking sanctified water, royal bounties, and anniversaries of the king's coronation and birthday; the fifth is devoted to rites concerned with agriculture (kite-flying and the "Speeding of the Outflow", festivals of first-fruits, and the Swinging Festival, with an appendix on the part played by "temporary kings"); and the sixth is reserved for miscellaneous state functions, namely, those concerned with the White Elephant, the Feasts of Lamps, minor Brahmanic ceremonies, and rites for propitiation of spirits and expulsion of evil. Finally we have a brief chapter of general conclusions as to the sources and history

¹ Incidentally, I may remark that I cannot agree with the view put forward on p. 36 and elsewhere that the king represented the sun. In some rites he did; but his essential character will be better understood from a study of Hertel's *Die awestischen Herrschafts- und Siegesfeier*.

of these ceremonies and their functional significance to the people. The materials on which the work is based, as is obvious, are vast, comprising oriental written records, scientific literature of the West, and—what is equally important—abundant and careful personal observation; and by his industrious and skilful treatment Dr. Wales has produced a monograph which not only describes the state ceremonies of Siam, but also illuminates them with the light of critical science.

No. 12. The Dabhades and the Conquest of Guzerat, pp. 102 + 3, 2*s*. No. 13. Bajirao's Entry into Malwa and Bandelkhand, pp. 51 + 5, 1*s*. 1*d*. No. 14. Maratha Conquests in the North, pp. 66 + 4, 1*s*. 3*d*. No. 15. Bajirao's Advance upon Delhi, 1737–8, pp. 105 + 5, 2*s*. No. 16. Bassein Campaign, 1737–9, pp. 137 + 3, 2*s*. 6*d*. No. 17. Shahu and Bajirao, pp. 130 + 4, 2*s*. 9*d*. 9½ × 6. Bombay: Government Central Press, 1931.

The publication of Marathi documents from the great treasure house of the Peshwa's records at Poona is continued with an interest and importance fully maintained. The pamphlets are indeed indispensable for the complete study of the period they cover, from 1707 to about 1750. They confirm in a striking degree the general accuracy of Grant Duff, but they make many doubtful points clearer, and afford personal touches about many individuals, particularly the founders of the Sindia, Holkar, Patwardhan, and Powar families.

They refer to that stormy and critical time when the Nizam and the Marathas were contending for the inheritance of the fast crumbling Mogul Empire. The rise, through statesmanship and skill in war, of the second Peshwa, Bajirao Ballal, is of special interest. He had to contend not merely with the great influence of the first Nizam in the Deccan, but with the dissensions and jealousies of the Maratha Sirdars, and the other ministers of the Maratha States, and with the rival claims of the two Maratha kingdoms of Satara and Kolhapur, both directly claiming leadership by descent from the great Shivaji. The contest was finally decided in favour of the Brahmin Peshwa, by the greater prowess of the Marathas on the field of battle as much as by statecraft. The year 1728 is rightly claimed by the editors as a Maratha "*annus mirabilis*", in which they defeated the Nizam in the south and the Emperor's lieutenants in the north. In their raids on Delhi they were, however, undoubtedly helped by the lukewarmness of the Rajputs, who were anxious to throw off the Moslem supremacy. It is interesting to note the caution with which the Marathas refrained from collision with Nadir Shah, though they were prepared to resist him if he advanced to the south.

The most attractive figure that emerges from the welter of intrigue and warfare is that of Shahu, the Raja of Satara, and the titular head of the Marathas. We can follow him from his early period of energy and diplomatic tact, which deteriorated through his easy-going nature and love of sport to indolence and eccentricity. We find him insisting that "the ryots of our Swarajya must not be molested", and reproving Bajirao for selling justice, and yet sinking into the position of a puppet king, who did not give the Peshwa much ground for anxiety, except by his habit of accumulating debts. It is, however, his love of shikar, and his anxiety to follow up any "khubber" of tigers that will appeal most to English readers. It is not without an element of comic relief to find the Peshwa Bajirao, that astute statesman and stout warrior,

falling a victim to the allurements of a Mahomedan dancing girl, and causing danger and scandal to the Brahman supremacy by his fondness for meat and strong liquor. Another interesting feature is the prominent part played by ladies more respectable and more highly placed than the dancing girl. The Brahmin dame, Radhabai, wife and mother of a Peshwa, and the Maratha Umahai, wife of the great fighter, Khanderao Dabhade, are striking examples. The latter, though her husband and at least two of her sons had fallen in battle, was quite prepared to fight on, and led her army in person. Only at intervals do we hear of the sufferings of the cultivators in the midst of the fighting ; but there is no concealment of the predatory objects of the Marathas.

“Go roaming wherever you like,” says Bajirao to his brother Chimnaji, “but bring back money somehow or other.” The account of the Maratha conquest of Salsette and Bassein from the Portuguese shows clearly that it was largely due to the religious persecution indulged in by the latter. The Marathas indeed were not anxious for the campaign, as they were fully and more lucratively employed elsewhere, and they were afraid of incurring English interference. As Forrest’s records show, however, the English were still more chary of interfering with the Marathas. The letter which refers to a naval engagement between the English and the Sidi is surely wrongly dated by the editors as belonging to the year 1759. The extracts are in Marathi, with the briefest of explanatory notes in English. The Marathi, however, though archaic, is simply written and easily understood.

P. R. C.

SIAMESE TALES OLD AND NEW. Translated by REGINALD LE MAY. $8\frac{3}{4} \times 5\frac{1}{2}$, pp. 192. London: Noel Douglas, 1930. 8s. 6d.

This little collection of folk-tales collected in Siam follows closely on the issue of *Best Stories* in India, and Mrs. Stevens’

Folk-tales of Irak. They make excellent reading, the "Love Lesson" and "The Four Jolly Robbers" being marked by a real humour which is not usually a characteristic of Eastern tales.

The compiler, in a few pages of "Reflections" which follow the stories, gives us his views of the form of Buddhism which prevails in Siam, and throws some interesting light on primitive practices in those regions. Love philtres and strange cures for unfaithfulness are described. *Ghuls* and *phi*, i.e. evil spirits, abound. In Siam, as in India and Burma, disease seems very generally to be regarded as a form of spirit possession, and to be the subject of numerous spirit-scaring rites.

It is to be hoped that the compiler of these stories may feel drawn to the preparation of a work dealing more fully with the primitive religion of the Siamese, which seems to underlie their orthodox Buddhist practices.

461.

R. E. E.

FOLK-TALES OF IRAQ: Set down and translated from the vernacular by E. S. STEVENS, with an Introduction by Sir A. WILSON. $8\frac{3}{4} \times 5\frac{1}{2}$, pp. xxiv + 303, plates 25. London: Oxford University Press, 1931. 15s.

The students of tales from the East will welcome the appearance of this collection of Mrs. Stevens, introduced by a few lines of Sir Arnold Wilson's. It coincides with the publication in Bombay of two volumes of similar tales collected by various scholars in India, reproduced from the earlier issues of the *Indian Antiquary*. Mrs. Stevens, in her interesting translations from the Arabic, introduces the reader to the *s'iluwa*, the *se'ir*, the *dāmi*, and the *qarīna*, witches, ogres, and evil spirits corresponding to the *bhut*, *chudel*, *rakshas*, and *yoginis* of Indian folk-lore; and we note that iron and running water are as efficient as spirit-scarers in Mesopotamia as throughout the Indian Empire.

In these tales, as might be anticipated, we catch echoes of other well-known stories: Androcles, Samson, Cinderella, and Aladdin peep through the curtain at times. Incidents that are the stock-in-trade of Indian story-tellers, such as learning secrets from birds and the twin existence of an ogre and some animal, crop up at intervals throughout these pages. In No. xxviii, "The Woman of the Well," we are given a tale of real humour, perhaps the best-told story in the book. "If you take to listening to stories in the day-time, your trousers will be stolen," said one of Mrs. Stevens' narrators before commencing his tale. Many of the tales are well worth running the risk that was incurred. As to the antiquity of the anecdotes, of which Sir Arnold Wilson expresses himself confident in his introduction, the reader may be permitted a certain scepticism, since we find (p. 250) references to communication by means of the telegraph service, which certainly has not the antiquity that Sir Arnold would attribute to the robot in Tale xlv.

The compiler of this welcome little volume hints at an intention of following it up with a work on the folk-lore of Irak. The basis for such an enterprise is to be found in the numerous and interesting evidences of primitive beliefs and practices that the present work contains. The similarity to Indian folk-lore is so striking that we may trust that in her next work Mrs. Stevens will show some recognition of the fact.

R. E. E.

GURUSABD RATNĀKAR: An Encyclopedia of Sikh Literature.

By KAHAN SINGH of Nābhā. 4 volumes, 12 × 9, pp. 3339, plates 54, maps 16. Patiala, 1930. Rs. 110.

This huge work is a monument to the industry and research of Sardar Kānh Singh, or, as he writes it in English, Kahan Singh. He has devoted his life to the study of all matters connected with the Sikhs, their history, their religion, and their religious literature. The Encyclopedia is the fruit of

fourteen years' labour. Its principal aim is to explain the words used in the Sikh Scriptures and give some account of the Scriptures themselves, although in some ways it might be called an encyclopedia rather for Sikhs than of Sikhism.

The language employed throughout is southern Panjābī, and the character Gurmukkhī. The type is good and clear, and the paper excellent. Mention should be made of special signs to indicate Persian or Sanskrit letters not found in the Gurmukkhī alphabet. Some of these we are already familiar with, e.g. those for Hindī or Persian *sh*, but others are new, e.g. those for *zoe*, *toe*, *zwād*, *swād*, *he*, and Skr. *ṣ*, *kṣ*, and superscribed *r*.

It is above all a religious work. It has articles on the doctrines of Christianity, Islam, Hinduism, and the religion of the Parsis, along with the holy books of these religions. Naturally the account of Sikhism, its Scriptures, and great men, is fuller than that of the others. Sardār Kahan Singh has ransacked the writings, both prose and poetry, of Sikhism and explained all the words in them. These amount to over 60,000. Words of Arabic or Persian origin, 7,000 in number, are printed in Persian script as well as in Panjābī, and words from Sanskrit or English are given in the scripts of those languages. The compiler endeavours to give the roots of many of these words. In his explanations he does not scruple to use words of other languages when he thinks the meaning will be rendered clearer. Thus he explains *unnati*, as *vridhī*, *taraqqī*, *uciā*, *balandī*.

Among the interesting English words which he gives are *garnāḍīl* "grenadier", *guljarī* "bull's eye", *kumēdār* "commander", *giṭam* "gaiters", *rapoṭīā* "reporter".

Outside the religious books he treats of historical personages such as Akbar, Aurangzeb, Prithvirāj, Aristotle, Alexander the Great, and Colonel Skinner of Skinner's Horse.

A special feature is the account of all the Gurudvāras in the Panjab with plans and history.

In illustration of words sentences are framed, or, more

often, quotations are given, from sacred and other books ; thus, under birds used in falconry, there is a quotation of four long lines from the Granth, containing the names of twelve of these birds.

There are many short articles on subjects which do not appear to come under the heading of the religious vocabulary of Sikh books, such as those on electricity, earthquakes, and whirlwinds ; or again on famous towns such as Mecca, Kabul, and Delhi, or on the Seven Wonders of the World, and the Seven Modern Wonders of the World. Trees and plants, medicines and diseases, are fully discussed.

The volumes contain fifty full-page illustrations. These include three pages of hunting birds, four pages of ancient weapons, towns like Mecca, Lahore, Bagdad, and Amritsar, old writings in Gurmukkhī, and rulers of Sikh states.

Considerable space is devoted to musical subjects (with prosody and metre) and to proverbs and riddles.

The Encyclopedia is prolific in different forms of words. Thus, for transmigration of souls seven Panjābī forms are given, viz. *āvāgaūṇ*, *āvāgaman*, *āvāgavaṇu*, *āvāgaun*, *āvāgavan*, *āvāgaun*. Yet the form I am most familiar with, *āvāgaū*, has escaped the eagle eye of the compiler.

The articles are not long. The "Granth" receives four pages or eight columns, while that on Jesus Christ is one and a half columns. Others are : Sects of Islām, six and three-quarter columns ; Sitā, three columns ; Abraham, Guru Gobind Singh, and England, one and a half columns each.

In conclusion, we must offer our heartiest congratulations to the Sardār on the successful accomplishment of an arduous piece of work. His eyes may rest with legitimate pride on these four volumes.

To those able to understand Panjābī and read Gurmukkhī, they will be a mine of information on many subjects.

YOGĪ AUR ARTHAR (Goldsmith's *Hermit* and Tennyson's *Morte d'Arthur*, translated into Braj and Khari Boli respectively). By CHATURBHUJ DĀS CHATURVEDĪ. 7 × 4½, pp. 20 + 16 + 2. Bharatpur, 1931.

This is a translation into Hindī verse of two well-known English poems, Goldsmith's *Hermit*, here called *Yogī*, and Tennyson's *Morte d'Arthur*. The first is in Braj, and the second in Khari Boli mixed with some Braj forms.

We must congratulate the translator on his initiative and on his desire to make known to his countrymen unacquainted with English those poems which have called forth the admiration of English readers. The simplicity of poems like the *Hermit* and *Morte d'Arthur*, with their straightforward narrative and avoidance of fictitious adornment, will appeal to an increasing number of people in India; and on the other hand these translations will be of value to Englishmen anxious to read easy Hindī verse, and to see how English expressions can best be turned into an Indian language.

We wish the author every success on the path he is now treading, in which he is following the late Śrī Dhar Pāṭhak, who translated Goldsmith's *Deserted Village* and *Hermit*.

Perhaps he will excuse me if I point out that the words "Morte d'Arthur" are not read as a personal name "Morty D. Arthur", and that Goldsmith may not be referred to as "Smith Sāhab".

464.

T. GRAHAME BAILEY.

LEHRGANG DER CHINESISCHEN SCHRIFTSPRACHE. VON E. HAENISCH. I. Textband. 1929. RM. 7. II. Hilfsmittel, Zeichentafel, Noten zu den Lektionen, Grammatischer Abriss, Uebersetzungen der Uebungstücke, Wörterverzeichnis. 1931. RM. 15. 8½ × 5¾. Leipzig: Verlag Asia Major G.m.b.H., 1931.

The first volume of this work, consisting of the Chinese text alone, appeared some two years ago. It comprised a

series of lessons taken from the Governmental textbooks of 1909, and was therefore fairly free from modern or non-Chinese matter. The second volume, published within the last few months, completes the work, which should be infinitely valuable to students of the Chinese written language.

Part II opens with a concise but useful chapter on "aids to study". Dr. Haenisch describes the dictionaries, concordances, histories, geographies, and so forth available to the student. The section on "Lessons in Speech and Script" is very short, and might with advantage be amplified. Neither *Syntaxe Nouvelle* by Stanislas Julien, nor *Progressive Exercises in the Chinese Written Language* by J. L. Bullock, to say nothing of other English and French textbooks are here listed, although some of them are mentioned in the preface. The bibliographical chapter is followed by an excellent "character table" in which all the characters contained in the lessons up to number 30 and a few more, are reduced to their elements.

Then follows the most important part of the book, a hundred pages devoted to "Notes on the Lessons". In these Professor Haenisch undertakes the analysis and explanation of the text provided in China, by the pedagogue. As he points out, "to deny that the Chinese language has a grammar and rules of speech amounts to 'throwing out the baby with the bath'." He further deprecates an attempt to learn "the most difficult of literary languages" by routine and without method. The notes he provides are clear, logical, and most extraordinarily helpful.

The remainder of the book, which should take its place in every school devoted to Chinese studies, consists of a "Grammatical Section", "Translation of the Lessons", and a "Vocabulary", which is arranged under the Radicals.

Professor Haenisch is to be congratulated upon having produced a work which will certainly help to smooth the thorny path of the budding sinologue.

LA PEINTURE SÉFÉVIDE D'ISPAHAN, DE PALAIS D'ALA QAPY. By J. DARIDAN and S. STELLING-MICHAND, with a Preface by M. RÉNÉ GROUSSET. 11 × 9, pp. 24, plates 21. Paris : Les Beaux Arts, 1930. Frs. 25.

The building usually known as the Ali Qapi stands to the west of the Maidān at Isfahān. Both it and the larger Chihil Sutūn (on which a further publication is contemplated) have often been described, but this is, we believe, the first study devoted to the details of the numerous mural paintings with which it is adorned. The paintings, which mostly date from the early seventeenth century, are of considerable importance as, though they have suffered seriously from time and past neglect, nearly all other mural paintings of the period, with the earlier examples of this ancient art, have perished utterly.

Two main types of figure paintings are represented, some being in the style, purely Persian, of the court miniaturists of Shāh 'Abbās, and others being apparently the work of European artists. The paintings abound, too, in decorative patterns, and the authors make some illuminating comments on the character and sources of the various motives, and on the points of resemblance with the sixteenth century carpets, illustrated by figures in the text.

Unfortunately, the reproductions are not very successful, which is the more to be regretted as the text, while it makes no pretence to exhaustiveness, is a well-written and helpful piece of work.

158.

J. V. S. W.

THE KASHMĪRĪ RĀMĀYAṆA, comprising the Śrirāmāvatāra-carita and the Lavakuśayuddhacarita, etc. Ed. by Sir GEORGE A. GRIERSON. Bibliotheca Indica, No. 253. 10 × 6½, pp. 1 + 139. Calcutta : Baptist Mission Press, 1930.

Sir George Grierson has collected and edited the fragments which he has been able to procure of the Ramayana in

Kashmīrī by Divākara Prakhāśa Bhaṭṭa. These are the texts quoted in his Kāshmirī Dictionary and the publication is peculiarly valuable for the specimens of the language which it gives. An interesting feature is the metre into which Sir George goes fully. The editor also gives a synopsis in translation, and notes many variants from Vālmiki's version, the most important being that Sītā is here the daughter of Rāvaṇa, destined from birth to slay her father.

J. A.

BENGALISCHE TEXTE IN URSCHRIFT UND UMSCHRIFT. Ed.

G. J. REINHARD WAGNER. Lehrbücher des Seminars für Orientalische Sprachen zu Berlin, Band xxxiii. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. 132. Berlin und Leipzig: Walter de Gruyter and Co., 1930.

This book by the teacher of Bengali in the University of Berlin, contains representative Bengali texts by three authors, in Bengali script and transliteration with a very full vocabulary and some notes on pronunciation. They are selections from Hemendra Kumār Rāy, representing the literary language and in his dialogue the standard colloquial languages, from Rabīndranāth Tagore, also representing the colloquial, and from the well-known historian and archæologist Nalinikānta Bhaṭṭaśālī, who here appears as a man of letters, using the Sādhubhāṣā. The little book is very handsomely produced, and makes an admirable Bengali reader.

109.

J. A.

INVENTAIRE DES FONDS CHINOIS DE LA BIBLIOTHÈQUE DE L'ÉCOLE FRANÇAISE D'EXTRÊME-ORIENT. $11\frac{1}{4} \times 7$. Tome 1^{er}, fasc. i, pp. viii + 320; fasc. ii, pp. 321-644. Hanoi: Imprimerie d'Extrême-Orient, 1929, 1931.

The French School of the Far East at Hanoi is immensely to be congratulated on the publication of this catalogue which promises to be the most important work of its kind in any

European language. It is an alphabetical list of the Chinese books in the library of the School, this first volume including 5,347 entries (with duplicates), A-Hou. In reflecting on the size of the collection, which has nearly 5,000 works in one-third of the alphabet, English readers will remember that in French spelling *a-hou* excludes the large class of words which in *Giles* begin with *ch*. When Professor Giles catalogued the Wade Collection at Cambridge in 1898, it contained but 883 works in all. A comparison between Professor Giles's catalogue, which is probably still the best we possess in England, and this new French list, will show the value of the latter for bibliographical purposes. In the Catalogue we find at random "C 13-16 (Chinese) Fang yü chi yao chien lan : A geography of the Eighteen Provinces, by (Chinese) P'an To. 1858. 26.5 cm."—and in the *Inventaire*: "3150. *Fang yü ki yao kien lan*, par P'AN TO; édition de KOU TSOU-YU. (and then, all in Chinese) title, 34 chapters; critical preface by Imperial order; preface by P'an To, 8 Hien-fong year (1858); contents; original preface; maps. The original work was by Kou Tsou-yu (King-fan) of K'ouen-chan in the Ming, re-issued by P'an To (Mou-kiun) of Ts'ing-kiang [? Kiang-ning] in the Ts'ing; Hien-fong meou-ou (1858); published by the Hong-hing Book House. T. 1, 1-12; T. 2, 13-22; T. 3, 23-4. [1230." And even more conspicuous is the advantage when we come to the *ts'ung shu* which form, or should form, so important a part of every Chinese library. Let us take: "B 1240-71 (Chinese) Shou shan ko ts'ung shu. A collection of 111 miscellaneous works, reprinted in uniform edition by (Chinese) Ch'ien Hsi-tsu, with a preface by (Chinese) Yüan Yüan . . . 1844. 28 cm." (祚 is misprinted 祖.) We are given no idea what the 111 miscellaneous works may be. But in the *Inventaire* we have: "1870. *Cheou-chan ko ts'ong chou*, par TS'IENT HI-TSOU. (and then, in Chinese) title; prefaces by Hou P'ei-houei, 23 Tao-kouang year (1843), and by Jouan Yuan (I-sing lao jen), 24 Tao-kouang year (1844); note by Ts'ien Hi-tsou, Tao-kouang sin-tch'eu (1841); short notice

of Ts'ien by Ling K'ouen, 1844. Collected by Ts'ien Hi-tsou (Hi-tche) (Hiue tche che) of Kin-chan in the Ts'ing; lithographed by the Hong-wen Book Store, Kouang-siu ki-tch'eu year (1889); contents." Then follow in Chinese the titles of all the 112 works, numbered and properly distributed into twenty-three divisions, and the four general classes (*king, che, tseu, tsi*). Not only so, but each of the 112 works is, or will be, entered separately also. Thus: "4149. *Han Wou-ti nei tchouan*, par PAN KOU. title, one chapter; additional critical notes; appendix; notice from *Sseu k'ou ts'iuén chou t'i yao*. Written by Pan Kou (Mong-kien) of Fou-fong in the Han. In *Cheou chan ko ts'ong chou, tseu* class. [P. 98, 22."

There is no need to emphasize the value of such a book to all librarians, bibliographers, and students of Chinese.

413, 414.

A. C. M.

OUTLINES OF TIBETO-BURMAN LINGUISTIC MORPHOLOGY.

By STUART N. WOLFENDEN. Prize Publication Fund (vol. xii) of the Royal Asiatic Society. $8\frac{1}{4} \times 5$, pp. xv + 216, table 1. London: Royal Asiatic Society, 1929. 15s.

Mr. Wolfenden's modest description of his work as "the preliminary sketch here attempted of the mechanism of Tibeto-Burman linguistic morphology" is characteristic of the scholarly restraint, with which he industriously sifts out masses of linguistic matter, at times obscure and unpromising, and only after a patient and minute analysis and comparison offers his conclusions. His views are often original, especially with regard to the Tibetan verb.

The book's main purpose is the elucidation of the original functions of those various Tibetan prefixes and suffixes, which present such pitfalls to the student of Tibetan orthography.

Readers must be prepared to find this book somewhat

formidable fare, both on account of its matter and presentation, and it is no easy task for a reviewer to do justice to it, as it contains in highly compressed form the fruits of much untiring industry and ranges over a wide and often as yet inadequately explored linguistic field. For, as the preface states, this investigation, as it progressed, enlarged its original scope, which was "to embrace, primarily, certain of the prefix usages of the Assam area in relation to those of Tibetan". Also, it has been necessary, in the case of some languages, to introduce a great deal of material properly belonging to systematic grammars. The important introduction contains a summary of conclusions based on the subsequently presented material. Apart from the Tibeto-Burman family directly under consideration, it is of interest that the author also states "that we can adduce evidence from the Siamese-Chinese field itself in support of former prefixes can hardly be denied".

As regards compilation of material alone Mr. Wolfenden's achievement is no mean one. Even a glance at the excellent table of contents will show the range. Within 202 pages he has classified and closely analysed material from some thirteen Tibeto-Burman languages, or groups of languages. Apart from Tibetan itself (pp. 12-69) and Burmese (pp. 196-202), the languages treated are : Kachin (pp. 70-92) ; the Bodo languages Bārā, Dīmā-sā, and Gārō (pp. 110-25) ; the Nāgā languages Āo and Lhôtā (pp. 126-54) ; the Nāgā-Bodo languages Mikir and Ēmpêo (pp. 154-75), and the three groups of Kuki-Chin languages (pp. 175-96). We may here note that much of the material is, as is to be expected, derived from the *Linguistic Survey of India*, vol. iii, pts. ii and iii, though full use has also been made of other original sources, where available, as the text, notes, and bibliography indicate.

These "younger" languages of Assam and Burma are chosen, because, unlike literary Tibetan, they are still grammatically unstable and "we can recover much of the old Tibeto-Burman verb mechanism" from them. In other

words, the author considers that certain related languages are now at various stages of development the same as, or similar to those passed through by pre-classical Tibetan sometime anterior to the seventh century, when the Tibetan language was reduced to writing and influenced by Sanskrit grammar.

That these linguistic groups, Kachin, Bodo, Nâgâ, and Kuki-Chin, form links between Tibetan and Burmese has long been recognized, as is explained in Dr. Sten Konow's "Introduction to the Tibeto-Burman Family" (*LSI.*, vol. iii, pt. i, p. 11). B. H. Hodgson, indeed, recognized their relationship more than a century ago. But it is no exaggeration to say that the work under review is the first definitely to advance our knowledge of the purpose of the Tibeto-Burman prefixes, infixes, and suffixes since Conrady's *Eine indochinesische Kausativ-Denominativbildung* was published in 1896. One may appropriately recall A. H. Francke's remark (p. 141 of the addenda to Jäschke's *Tibetan Grammar*, 1929) that "the fullest information about the great variety of (verbal) forms . . . is given in the first part of A. Conrady's work". Mr. Wolfenden also pays due tribute to Conrady's pioneer researches, though his conclusions often differ (e.g. p. 93).

The author's preface and introduction provide the key to his mode of inquiry. Briefly it is the comparative method rigorously applied and an absolute refusal to consider any formation in isolation, or "without reference to other processes in the same, and related languages". Native Tibetan grammarians' theories as to the prefixes help little for two reasons (pp. 23-4); firstly, they are based on the language at too late a stage of development, when the ancient prefixes, etc., had long lost their original functions; secondly, they are strongly influenced by Sanskrit grammar, especially as to the verbal tenses.

Among the most important of Mr. Wolfenden's conclusions, in which he radically differs from Conrady for apparently convincing reasons, is that "the prefixes or infixes do not

appear to be in any sense 'formatives' employed to mould the verb into a transitive, causative, or other form" (introduction, S. 2). In the Kuki-Chin languages he finds the fullest verbal mechanism still in use. This is (1) Subject-Prefix + (2) Directive Infix + (3) Root + (4) Adverbial Infix + (5) Tense Suffix. The literary Tibetan verb, or rather verbal noun, often discloses in its several "roots" all these elements, except (4) the Adverbial Infix. For instance, the Tibetan verbal form may show (1) S.P. *b-* + (2) D.I. *-r-*, *-t-*, *-s-* (and ? *-d-* and *-g-*) + (3) Root + (5) Tense Suffix; or (1) S.P. *m-* or *b-* + (3) Root + (5) Tense Suffix; or in certain forms—e.g. the infinitive—(2) the Directive Infix alone may be found, here an exact parallel to the Latin *in-*, *ad-*, *a-*. The prefixes are regarded as in origin of a "recapitulating" nature, the subjective or pronominal prefix referring back to a previous subject and the directive infix back to an idea of movement already expressed. For example, in the sentence *Kos kyi-la rdo brgyab-nas* (he having thrown a stone at the dog), originally the *b-* before the verb referred back to *Kos* and the *-r-* to the *-la*. Objective elements and the interchange of various prefixes (e.g. *a-*, *b-*, *m-*) are also dealt with and it is reasonably suggested that the prefixes *m-* and *b-*, which appear to have been at one time demonstrative rather than personal pronouns, are related to the common *-ma*, a substantival, and *-ba*, a verbal infinitive suffix. And a late, but incompleting, movement towards a transfer of the directive element to a position after the root is also indicated in the *-s* or *-d*, in the forms *agebs-pa* and *abyed-pa*, etc., where we also have other parallel forms without the *-s* and *-d* elements.

Attention may be drawn to the most instructive note on pp. 141-3 on the Jyarung dialect of Eastern Tibet, which is placed at the end of the *Âo Nâgâ* section, as in both the common *te-* prefix used with nouns, especially those denoting parts of the body, may almost certainly be derived from the Tibetan demonstrative *de* "that", a possibility that did not occur to Conrady, von Rosthorn, or B. Laufer. It is

obviously important to find a Tibetan dialect at the same morphological stage in this and other features (e.g. the numeral prefix *k*, perhaps originating from *k'o*) as the Nâgâ and Bodo languages.

It is interesting that as a group the Assam and Burma languages contrast with Tibetan and Kachin "in not exhibiting the inflexible prefix systems which these latter possess". Other and more recent elements have now taken their place, with certain exceptions. Here "lateness of nearly all the prefix usages . . . is everywhere evident". In these younger languages the prefixes are also pronominal in origin, but have a different function from the Tibetan prefixes, which repeated, or referred back to, the subject. But it is a constant feature throughout that, where a pronoun comes to be used as a prefix, that pronoun ceases to be used independently and another takes its place for separate use. For instance, when the Tibetan *ba*, became attached to the verb as prefix, *k'o* (he, she) came into use as the independent 3rd personal pronoun; when in Bodo, Nâgâ, etc., *k'o* became the prefix *ka*, *ga*, etc., new forms were introduced for separate use. Except in Burmese, the author finds in this group "no evidence of the so-called 'causative' formation which grew in Tibetan and Kachin out of the use of directive particles, particularly *-s-*, when the verb root was called upon to express a transitive or causative meaning".

Still another interesting development is a new adjectival formation, unknown to literary Tibetan and Kachin; that is the adjectival form with the prefixed demonstrative, such as *ga-*; for instance, *ga-lan* (Bârâ) and *ga-lão* (Dîmâ-sâ) meaning "long".

In the preliminary remark on the Kuki-Chin languages we find a valuable general disquisition on the widely employed *a-* prefix, which the author, disagreeing with B. Laufer, tentatively considers non-pronominal in Tibetan, etc., but pronominal in all the dialects of Assam and western Burma.

As to Burmese, the writer protests against the confusion of

the *ok myit* and *še pok* signs with tones. They are, he emphasizes, "signs of *quantity* from which is inseparable *stress*". With regard to Burmese tones we agree that knowledge has advanced little in recent years. Mr. Wolfenden has in another place—*Journ. Burma R.S.*, xix, iii, 1929—argued for an improved terminology in order to distinguish quantity, pitch, inflection, and stress in their proper relation to one another. Here is an important and unduly neglected field awaiting further investigation. The place of Burmese is interesting. It has no longer any pronominal prefixes of the literary Tibetan type. The universal aspiration of the initial consonant of verbs with causative sense, however, indicates that they once existed. But Burmese has never developed a second and different set of elements with the verb, as have the Kuki-Chin languages.

We may add that the reduction of a language to a written literary form naturally tends either to arrest or slow down morphological change. Burmese had advanced a stage further than Tibetan when writing was introduced. But the non-literary dialects and languages are still unstable. So we have for comparison two languages arrested abruptly at different stages in development : literary Tibetan, which conservatively preserved the old prefix elements, though they had lost their vocalization and original function, and literary Burmese, which had shed them. At the same time we have also a third set of languages, which had shed most of the old prefix elements, but, unlike Burmese, have developed a new set of prefixes and suffixes.

In this review an attempt has merely been made to indicate Mr. Wolfenden's problems, his method, and some of his more important conclusions. We hope that this attempt will prove sufficient to stimulate interest in an exact and scholarly investigation. Obviously, the conclusions cannot be accepted or rejected in themselves, apart from the evidence which is far too copious even to sketch here. But we may confidently say that Mr. Wolfenden may be accepted as a cautious and

safe guide. He has definitely thrown new light on vexed problems and substantially advanced our knowledge of the general lines of Tibeto-Burman linguistic growth. There are commendably few mistakes, as far as we have cursorily checked the linguistic matter. A very full, perhaps too full, bibliography is supplied. But we should have appreciated a linguistic map, showing the relative positions of the several languages examined.

H. LEE SHUTTLEWORTH.

VERSTREUTE BOGHAZKÖI-TEXTE. By ALBRECHT GÖTZE.
41 plates. Marburg: Author's Printing Press,
Gartenweg 3, 1930.

Professor Götze has published a very useful collection of more or less fragmentary Hittite texts, some of which are in private collections. Several of them have appeared before, but at a time when the forms of the Hittite characters were unfamiliar to the copyist, and revised copies of them were therefore much needed. This is more especially the case with the important geographical text in the Chantre collection which describes the official progress of the Hittite king from Arinna, the city of the Sun-goddess, to Boghaz Keui, and enumerates the towns and villages on the road. One of them is Kutilla (ii, 9, *Rev.* 2), which in another tablet (95, 5) is coupled with Arinna.

Another text, the revised copy of which clears up several difficulties, is the Tel el-Amarna letter in the Arzawan form of Hittite speech which relates to Labbayas. Here it would seem we must read at the beginning of the letter: (1) [*K*]*ḏsa-mu kī teit* D.P. Labbayas (2) *tuk memista manwa-nnas* (3) *iskhanittarâtar iyaueni* "See, Labbayas speaks thus to me; to you he has said that we are getting the mastery" (or less probably, "are incurring blood-guiltiness"). A revised copy of the "Yuzgat" tablet which is now in the Louvre is also given, as well as copies of texts in my own possession which have appeared in pre-war days in this *Journal*.

There is also a copy of the long and well-preserved Yale tablet, first published and analysed by Professor Sturtevant. The tablet has been often quoted as proving that the dominant population in Mitanni was called Khurrian and not Murrian as I have maintained. It begins: "Thus (says) Ânniuiyani mother of Ârmati the bird-catcher, the male-servant of Khûllus." Khûllus, however, is a proper name, with the determinative of an individual and not of a country (NISU) before it; in fact, had the name been Gentilic it would have been Khullis or Khullas, Khullus being the plural. Moreover, it is very improbable that the mother of the slave of a foreigner and not a native would have been an accepted directress of the Hittite religious ritual.¹

A. H. SAYCE.

THE LINGUISTIC SOCIETY OF INDIA

It would hardly be becoming for our venerable Society to pass over in silence the inauguration by the Linguistic Society of India of its Bulletin, *Indian Linguistics*. The Society itself is one of our youngest colleagues, having been formed no more than three years ago, but it has proved itself a most promising youngster.

The Society is almost exclusively an Indian one, indeed, its only European member appears to be our Member, Mr. A. C. Woolner; but it has accepted without question the advantages of modern European linguistic methods, and has set before itself the ideal of combining the best of those methods with the best of the methods of the great Indian grammatical school founded by Pāṇini.

The first number of its Bulletin contains three scientific articles: "A new view point for Vernacular Grammars," by

¹ Ânniui-yani, it may be noted, is a derivative from Anniwi, the name (in cuneiform) of a king of Sidon (belonging to the Tel el-Amarna period) on a seal-cylinder in the De Clercq collection reproduced by Contenau: *Manuel d'archéologie orientale*, ii, p. 1055. Anniwi seems to be the same name as that of Ennāwi, the father of Aduni-abia whose torso has been discovered at Sifera near Aleppo (see Contenau, op. cit., p. 1023).

the Society's first President, Dr. I. J. S. Taraporewala; "Recursives in New Indo-Aryan," by Professor S. K. Chatterji; and "The Dravidian Base 'Uḷ'," by L. V. Ramaswami Aiyer, which are a good earnest of the Society's practical attachment to its ideals.

It includes also a copy of the graceful covering letter from the Society which accompanied the Commemoration Volume to Sir George Grierson.

I feel sure that all Societies devoted to the study of the past, both here in England and elsewhere, will heartily wish our newest Indian colleague all success in its undertaking.

G. L. M. CLAUSON.

THE MAHĀBHĀRATA (SOUTHERN RECENSION). Critically edited by P. P. S. ŚĀSTRĪ, B.A. (Oxon), M.A., Professor of Sanskrit, Presidency College, Madras. Vol. I: Ādi Parva, Part I. Published by V. Ramaswamy Sastrulu & Sons, Madras.

This is the first volume of a series of eighteen volumes, in which it is hoped to publish the text of the Southern recension of the great Sanskrit epic. It represents the initial instalment of a plan, which is ancillary to and does not attempt to compete with the great critical edition of the *Mahābhārata*, which is being brought out by the Bhandarkar Oriental Research Institute under the editorship of Dr. Sukthankar. It contains the Sanskrit text of 137 adhyāyas of the Ādiparvan, and therefore comprises—having regard to the greater number of ślokas in most of the adhyāyas included—almost as much of the *Mahābhārata* as is included in the fascicules published by Dr. Sukthankar in the course of the last five years. At the contemplated rate of progress the work will be completed in nine years, but it may be unduly optimistic to assume this as certain.

The text published is mainly based on a palm-leaf manuscript in the Tanjore Palace Library. Its great length may be judged

from the fact that in the *Ādiparvan* alone, according to the figures given by Professor Śāstri, it contains a thousand more ślokas than are contained in any of the printed texts hitherto produced, while in the whole *Mahābhārata* it contains 95,286 ślokas as compared with 84,829 and 84,836 in the Bombay and Calcutta printed texts respectively.

Dr. Śāstri's edition is very well printed and easy to handle, and the price is remarkably low, being fixed at only fifty rupees for the whole set. It does not, of course, attempt to compete in scholarliness or critical methods or wealth of material with the monumental Poona edition. It is a much less ambitious project, merely attempting to supply a text based on a few South Indian palm-leaf manuscripts, so the carrying out of it can naturally be brought to an end much more rapidly. The typography of this volume and its freedom from mistakes, so far as it has been possible to test it, are both creditable in a high degree to the editor and to the printers.

R. P. DEWHURST.

DER MESSIASGLAUBE IN INDIEN UND IRAN AUF GRUND DER QUELLEN DARGESTELLT. VON EMIL ABEGG. Mit acht Lichtdrucktafeln. $9\frac{1}{2} \times 6$, pp. vi [1] + 286. Berlin and Leipzig: Walter de Gruyter & Co., 1928.

Dr. Abegg, who in 1921 published a translation of the *Preta-kalpa* of the *Garuḍa-purāṇa*, which relates to Hindu worship of the dead and beliefs concerning the Beyond, has in this volume fully expounded the Hindu notions concerning Kalki, the Buddhist conception of Maitreya, and the Zoroastrian doctrines concerning the return of the founder of that religion. In the Introduction he refers to the connection between the idea of a Golden Age in the past and that of a Messianic restoration, noting the widespread occurrence of one or other of these ideas and citing the literature on this subject and on its psychology. The Hindu doctrine is treated in pp. 1-144, the Buddhist in pp. 145-202, the Iranian in

pp. 203-40. The conclusion occupies pp. 241-4, after which come full indexes of words and things, pp. 245-86. The treatise being based on the original sources, Dr. Abegg has, it will be seen, had to deal with texts in Sanskrit, Pali, Saka-Khotanī, Tibetan, Chinese, Zend, and Pahlavī. The notes, which are full, provide, so far as I am competent to judge, reliable elucidations of the questions arising in connection with the texts, including explanations of many matters which, had the book been intended only for specialists, might have been taken as familiar. Among those annotations which have a more pointed interest we may mention those concerning *pralaya* (p. 34), Śambhala (p. 58), the state of the *Avatāras* when their work is accomplished (p. 65), magic steeds (p. 87), the swallowing of Indra by Vṛtra (p. 110), the sleeping king (p. 111), *Avatāras* of Vṛeṣṭrayna (p. 139), Kāśyapa (p. 157), the world-winter (pp. 223-4). In note 2 on p. 78 the implication of the expression *śyāla*, as a term of abuse, does not seem to be apprehended.

Dr. Abegg's main sources are, for the Hindu the *Kalki-Purāṇa*, a rare and rather late work belonging to the *Upapurāṇa* class, which seems to have some special relation to the *Bhāgavata-Purāṇa*, and is also named *Anu-Bhāgavata*; for the Buddhist Maitreya the Pali *Cakkavatti-sīhanāda-Sutta* (of the *Dīgha-Nikāya*), the *Anāgatavaṃsa*, the *Divyāvadāna* (c. iii), and a number of Maitreya texts existing in Tibetan and Chinese versions, all previously brought together and examined by Leumann in connection with his edition of the Saka-Khotanī *Maitreya-samiti*; for Zoroastrianism, where from the first the eschatological interest was prominent, several Gāthā and Avesta texts and especially the Pahlavī *Bundahišn*, *Dēnkart*, and *Vahman-Yašt*. Naturally there are in all three cases minor literary references and citations.

For critical purposes the interest of apocalyptic literature, as of all fictions, consists mainly in the light which they may shed upon the ideas and circumstances of their authors and

of those among whom they were current. For the Hindus, Buddhists, and Zoroastrians respectively the importance of the Messianic idea may be considered to be in the ascending order. Upon the Hindus, who fundamentally believe in the eternity of the world, with only periodic dissolutions, the idea of a really final restoration has had no very strong hold; Kalki is the last of a series of *Avatāras* of Viṣṇu, but whether at the end of a *catur-yuga* or a *kalpa* seems rather obscure, and in any case the whole cycle is to be repeated. In a note on p. 144 Dr. Abegg makes a rather grim comment upon a reported partiality of some degraded classes in India for the worship of Kalki, whose coming will make them Śūdras indeed. In Buddhism, especially outside of India, Maitreya seems to fill a relatively larger place, although in the consideration of Buddha-spheres and Buddha-æons of incalculable number, extent, and duration, he must have seemed microscopic; whereas in Zoroastrianism, with its more limited computations and its essential finalism, the future vindication of right was central.

In regard to the Hindu Kalki, whose relations to the theories of the *Yugas* and the *Avatāras* is considered in Dr. Abegg's introductory chapter (pp. 5-39), the most important questions concern (1) his connection with the horse, and (2) his connection with Buddhist conceptions of Śambhala. The earliest references to Kalki (*Mahā-Bhārata*, etc.) represent him as a Brahman of Śambhala-grāma, a place in Hindustan or else in the Central Provinces (Sambhalgaon). Not until later times does the idea of the horse present itself: whether the horse is Kalki or belongs to him is not consistently indicated. On general grounds Dr. Abegg decides (pp. 48-9) that the original relation must have been the former: accordingly this horse-*avatāra* must be associated with the wider mythology of the horse, whether representing the sun or otherwise. Dr. Abegg calls attention (pp. 53-5) to the mythological importance of the horse, which, unfortunately, has many rivals in this general sphere and also among the

incarnations of Viṣṇu. The figure of the Kalki-horse reminds us of the *Cintāmani* horse of Northern Buddhism. Upon the evidence we must agree that this aspect of Kalki, which will have been introduced from quarters having some special interest in horses, is an accretion upon the original conception. That the Kalki of Śambhala-grāma has somehow developed into the Buddhist king Kulika of the mythical country Śambhala has been noted long ago by Dr. Grünwedel (*Mythologie des Buddhismus*, pp. 41 sqq.); but the manner of the connection is still involved in the obscurities of "the way to Śambhala" and the Kāla-cakra system.

In the Buddhist Maitreya-cycle perhaps the most interesting particular is the statement that the Arhat Mahā-Kāśyapa is to postpone his *nirvāṇa*, awaiting in the recesses of the Kukkuṭapāda hill the coming of the Messiah. Despite the legend of Kṛeśāspa, Dr. Abegg, who cites the parallel of the kings Meru and Devāpi in connection with Kalki, seems well advised in declining to find in this example of a widespread conception (the Buddhism of Khotan had a local variant) a borrowing from Persia.

The Zoroastrian account of the Saošyant Astvātəreta has the peculiarity that this Messiah, or in some versions the three Messiah Saošyants, will be born of the preserved seed of Zoroaster himself. Neither Hinduism, though replete with stories of abnormal procreation, nor Buddhism has any conception of such direct connection between the prophet and the Messiah.

The details of the conditions in which the several Messiahs are to appear, their particular actions, their companions and helpers, and the Millenniums which they are to establish, are exhibited by Dr. Abegg in the form of full abstracts of the texts, with explanatory notes. Naturally, they follow the beliefs and mythologies of the several peoples. Dr. Abegg finds little evidence of interchange of ideas: only in some traits of the Buddhist Maitreya, his emanations of light and his supernatural power of vision, is he willing to recognize

a borrowing from Zoroastrianism : he thinks that in Central Asia the Mahāyāna Buddhism may have been affected not only by the Parsi religion, but by Manicheism, Gnosticism, and Nestorian Christianity.

F. W. T.

TOCHARISCHE GRAMMATIK. Im Auftrage der Preussischen Akademie der Wissenschaften bearbeitet in Gemeinschaft mit WILHELM SCHULZE von EMIL SIEG und WILHELM SIEGLING. Pp. 6*, 518, paper covers. Göttingen : Vandenhoeck und Ruprecht, 1931. Marks 33.

A notice of such a work can follow only general lines. The Tokharian language, of which the Indo-European character was first made known by Drs. Sieg and Siegling in 1908, was brought to light no more than thirty years ago ; and of published material we have little beyond the fragments identified and edited, with notes exegetive and linguistic, by Professors Sylvain Lévi and Meillet in 1911-12 (*Journal Asiatique*, xvii, pp. 431-64; xviii, 119-50 ; also (Professor Lévi), 1913, ii, pp. 311-80 ; *Mém. Soc. Ling.*, xviii, pp. 1-32), and the volume of Buddhist fragments edited with facsimiles by Professors Sieg and Siegling themselves in 1921. Particular features of the language or individual words have been studied by Orientalists and Indo-Europeanists (Dr. E. Smith, Professor Reuter, Principal Woolner, and others) ; but in the work of constructing the grammar the authors have had to rely almost exclusively upon themselves. It is ascertained that the available literature represents two different dialects, of which one, known as the B-dialect, has been shown by Professor Lévi to be native in Kucā. It is the other (A) dialect, represented by MSS. discovered in the Turfan region, that is mainly contemplated in the present work.

That a language whose literature is so scantily preserved should require a grammatical exposition extending to over 500 pages, close packed with detail, is almost as remarkable as that the requirement should be so fully met. The language

has, in fact, an extremely complex morphology and, partly, no doubt, in consequence of phonological changes, it abounds in exceptions and special cases. Its *quasi*-primary nouns are of various forms, and for derivatives, both substantival and adjectival, it employs numerous suffixes. It has Genders, Masculine, Feminine, and Neuter, with some special inter-relations; Numbers, Singular, Dual, and Plural. In Declension it retains the Indo-European system of synthetic Cases, but superadds the [Oblique-*cum*-]postposition system characteristic of Agglutinative languages and of the Indian Tertiary Prakrits. It makes free use of nominal composition and of group flexion. The Pronominal system is complicated; the Postpositions, Particles, Adverbs, and Conjunctions numerous. In Conjugation there are Voices, Active and Middle; Moods, Indicative, Conjunctive, Optative, Imperative, with Infinitives and Participles; Personal terminations, Primary, Secondary, and Imperative, with Singular and Plural. There are twelve classes of Present Stems, five forms of Preterital flexion, five Imperfects. There is also a Causative. The Paradigmatic relations are various; the changes of conjunct sounds numerous and alterative. Thus the language is one of the most difficult and confused of Indo-European dialects: as a human product it deserves a severe condemnation, and a comparison with the simple means whereby such neighbouring languages as Tibetan, for example, are able to represent all the nuances of Sanskrit philosophy is embarrassing to persons of Indo-European speech. The analysis from fragmentary texts, of which moreover the script is economic in punctuation, and the digestion of the material into categories must have demanded immense labour and acumen. Such work commands the warm gratitude of all scholars who may be concerned with Tokharian, or with Indo-European at large, or with Central Asia and Buddhist philology.

The authors have studiously avoided all "Comparative" observations, maintaining an attitude of strictly descriptive

objectivity. But the Indo-European nature of the language seems to pervade all the departments of the morphology. In addition to the wide, still unsolved, problem of its geographical situation, isolated from all other “*Centum*” languages, it provides a feast for Comparative Indo-European linguistics. Other studies may be interested in possibilities of borrowings into or from neighbouring Central Asian languages of alien origin: as *prima facie* possible instances of importation into Tokharian we may cite the suffixes *-imci* and *-si* (notable in Chinese Turkestan), and the recourse to group flexion with the latter.

F. W. T.

N.R. 1.

MOHENJO-DARO AND THE INDUS CIVILIZATION: Being an official account of Archæological Excavations at Mohenjodaro carried out by the Government of India between the years 1922 and 1927. Edited by Sir JOHN MARSHALL, C.I.E., Litt.D., Ph.D., F.S.A., Hon.A.R.I.B.A., Hon. Fellow of King's College, Cambridge, late Director-General of Archæology in India. In three volumes, with plan and map in colours, and 164 plates in collotype: Volume I, Text, Chapters I–XIX (pp. xxv, [1], 1–364) and plates i–xiv; Volume II, text, Chapters XX–XXXII (pp. xii, [1], 365–716); Volume III, pp. xi, plates xv–clxiv; large 4to. London: Arthur Probsthain, 1931.

The publication of Sir John Marshall's eagerly expected volumes brings to a head the various archæological, philological, ethnographical, and historical interests which have been accumulating around the work in progress at Mohenjodaro, Harappā, and other sites associated with the “Indus Valley Civilization”. Sanskritists, hitherto alarmed by the antiquity and alien character of the civilization, and realizing the intellectual outlay preliminary to a modest competence in things Mesopotamian, will have to make terms with the facts brought to light and to contribute, if possible, to their

interpretation. The territorial dimensions of the problem have not yet fully declared themselves. But, since sites apparently connected with the same civilization extend far northwards into the Panjab, along the Sutlej even to within a distant view from Simla (pp. 91-3), Sir John Marshall seems to be justified in conjecturing that a like culture may have flourished throughout the Panjab and may have penetrated to the valley of the Jumna and the Ganges. For the full archaeological exploration of the terrain a period of perhaps a century is demanded: so that the younger generation of Sanskritists will have time for adjustment to the new situation.

The possibility of early Mesopotamian influences upon Indo-Aryan culture was contemplated long ago, when the Vedic word *manā*, a certain (gold) weight (?), was regarded as borrowed from Babylonia and the Indian *nakṣatra* system was credited to the same source (see Max Müller's *India: what can it teach us?* pp. 125 sqq.). At a later date Oldenberg, in his *Religion des Veda* (pp. 193 sqq.), contended that the Vedic divinity Varuṇa bore a Semitic character. The late Dr. H. R. Hall propounded¹ the view that the Sumerian civilization had arrived by sea from Dravidian south India. In 1917 Mr. Tilak suggested (*R. G. Bhandarkar Commemoration Volume*, pp. 29 sqq.) for the Vedic words *Taimāta* (name of a snake in the *Atharva-Veda*) and *Apsu* a connection with Babylonian Tiamat and Apsu. For the old words *karṣa*, a certain weight, *kiṣku* "a span", *nimitta* "a sign", *niṣka* "a necklace of lumps of gold" (cf. plates xii, xciv of this work), a Mesopotamian source is either proved or may be conjectured. Attention has also been called (*JRAS.*, 1920, pp. 158-9) to the fact that the cosmographical chart of the Jainas is based upon an old Mesopotamian design. But, as Sir John Marshall remarks (p. v), "never for a moment was it imagined that five thousand years ago, before ever the Aryans were heard of, the Panjāb and Sind, if not other parts of India as well, were enjoying an advanced and singularly uniform

¹ *The Ancient History of the Near East* (1912), pp. 173-4.

civilization of their own, closely akin but in some respects even superior to that of contemporary Mesopotamia and Egypt." If the present reviewer may insert a personal qualification of this statement, it is on the ground of having written in this *Journal* for 1916 (p. 363): "I suspect that our Indo-European kindred, when they first penetrated into India, may, like the Hellenic invaders of Greece, the Teutons, Celts, Kassites (?), etc., have found in places a material civilization far in advance of their own. The cities of the demons mentioned in the *Rig-veda* may have been by no means merely cloud cities."

The very great importance of the Indus Valley discoveries is not over-emphasized in Sir John Marshall's Preface. India now joins with Crete, Egypt, and Babylonia in furnishing evidence of a very early civilization of an advanced type. At periods approximating to the old Biblical date for the creation we find peoples inhabiting cities with walls, temples, and other great edifices, leading a full civic and national existence, advanced in laws, commerce, and the arts. For the further tracing of the developement of this civilization, which may, as Sir John Marshall urges, have been conditioned by geographical and climatic circumstances (he believes it to have originated along the great rivers of an "Afrasian belt"), India now furnishes a new point of observation. An antiquity dating at least to *c.* 3000 is established by Mesopotamian correspondences; and the present indications suggest that the "Indus" culture, which had some distinguishing features, had at that time already a long history. The first impression that it was intrusive in India, having possibly been imported by sea from Mesopotamia, does not receive confirmation; it is now rather a question of continuity with still older stages represented by the pottery brought to light in the course of the researches of Sir Aurel Stein and Mr. Hargreaves in Baluchistan, where there are faint signs of a meeting of influences from east and west respectively.

It was in the year 1922 that Mr. R. D. Banerji, in the course

of his enterprising activities as Superintendent of the Western Circle of the Archæological Survey, commenced operations upon the Buddhist *stūpa* crowning one of the mounds known collectively as Mohenjo-daro, which Sir John Marshall renders "Mound of the Dead",¹ about 25 miles north of the town of Lārkāna in Sindh and not far from the present bed of the Indus. A find of inscribed stone tablets similar to what had long been known as the Harappā seals was at once recognized by him as indicating a remote period : his trial diggings, made with inadequate means, revealed the possibilities of the site. In the following season the work was continued by Mr. Banerji's temporary successors, Messrs. M. S. Vats and K. N. Dikshit, and then the operations were systematically taken in hand under the orders of the Director-General, who already in 1921 had arranged for a commencement of excavations at Harappā (p. 11). From 1925 onwards the work has been in progress on a large scale. It has revealed at least seven strata of building above the present subsoil water level, which still rises 10-15 feet above the ancient level of the plain ; the lie of the city, with main streets north to south and east to west and many side alleys or thoroughfares ; large houses of elaborate plan, with walls still standing to a considerable height ; an extensive public bath ; culverts, drains, and graves ; and the multifarious objects illustrated in the plates. The first publication of the results was in Sir John Marshall's illustrated articles contributed to the *Illustrated London News* of 1924 (pp. 624 sqq.) and 1926 (p. 346) : it has been followed by regular full reports, with photographs, in the Annual Reports of the Archæological Survey for 1923-4 onwards.

In the present publication the general descriptions and archæological evaluation of the results, and also the account of the operations upon one (the *stūpa*) area, are the work of Sir John Marshall himself, who has also, as editor, appended notes and criticisms to the contributions of his collaborators.

¹ Could it be the "Mound of the Confluence", with *mohen* = *muhān*, *muhānā*, etc., on which see Professor R. L. Turner's *Nepali Dictionary*?

The latter are numerous ; permanent members of the Department, Mr. Hargreaves, Rai Bahadur Dayaram Sahni, have dealt with the areas which they themselves excavated ; Mr. Ernest Mackay, whose services were specially procured in consideration of his Mesopotamian experience and qualifications, describes the work on three areas, and also discusses in eleven further chapters and half-chapters, the architecture and masonry, the pottery, figurines, statuary, faience and stone vessels, seals, etc., household objects, tools, utensils, ornaments, games and toys, and miscellanea of technical interest. For the study of the script the help of three experts, Mr. Gadd, Mr. Sidney Smith, and Professor Langdon, has been invoked, a fact which has seriously circumscribed the field of choice for a reviewer of the book. The Archæological Chemist to the Government of India, Mr. M. Sana Ullah, has, beside furnishing the collaborators with results of his analyses, contributed a part chapter on Copper and Bronze Utensils and other objects. Finally, the special scientific questions are investigated in chapters on the System of Weights by Mr. A. S. Hemmy, on Human Remains by Colonel R. B. Seymour Sewell, on Zoological Remains by Colonel Seymour Sewell and Dr. B. S. Guha, and on Minerals and Metals by Sir Edwin Pascoe.

No reviewer could cope with such a variety of topics exhaustively treated by writers of high authority. In the main we can only advise the expectant world of persons interested "Here is the menu ; now fall to, as you will". The discovery of an unknown civilization, like the discovery of a new territory, furnishes subject matter for many, or most, departments of study. The general archæological interests and the matters for comparison with the old civilizations of Egypt, Babylonia, Crete, etc., are too wide and miscellaneous for any conspectus, even if the requisite competence were secured : the bibliography, notes, and references in the text will show that the relevant points of contact have been sought out and judiciously investigated.

As regards communications, it is perhaps noticeable that, whereas Indus Valley seals have been found with relative frequency in Babylonia, no Babylonian or Sumerian equivalents have been unearthed at Mohenjo-daro (one or two have been found promiscuously in India), and the evidences of direct influences in that direction seem to be vague. Of communications by sea there seems to be no trace : and the situation of the site, fronting the Bolan Pass, suggests that westward connections may rather have been by land. Though established in the neighbourhood of at least one great river, and although shown by evidences of diet to have been in some measure at least fishermen, the people have left among the innumerable major and minor relics of their culture no trace of any interest in boats or riverain life. They built very substantial houses of kiln-dried brick with entirely plain exteriors (unless there were decorated upper storeys of wood which have disappeared). The houses were carefully designed with courtyards, staircases, upper floors, bathrooms, and drains ; there were large corbel-arched culverts and sink-pits in the streets to carry off both the refuse water and the rain, which is shown to have been considerably more abundant than at the present time. The stage of civilization was that known as " chalcolithic ", when copper and bronze were in use, but stone and flint (along with shell, etc.) were retained for many purposes : of the other metals gold and silver were the most familiar, though there are traces of tin (in alloy) and lead. The text discusses the provenance of each of these, as also of the numerous semi-precious stones which were cut to form beads for necklaces. It is in the carving of stone, especially of steatite and soap-stone, and in the designs on the abundant seals of such material, that the greatest artistic and manual skill is manifested. Stone sculptures of human figures have been found in only a few instances : two of them, displaying a maturity on the level of the best Greek period, arouse questionings which Sir John Marshall discusses in full. The numerous clay models, toys, etc., of

a crude character, remind us of the similar trouvailles from Buddhist sites in India, Afghanistan, Khotan, etc., of very much later times. Pottery, of course, both plain and ornamented, was abundant.

One of the most generally interesting chapters is that dealing with religion. Sir John Marshall finds plentiful evidence of worship of an earth or "mother" goddess, which seems to have been a characteristic of all ancient Afrasian cultures. There appear to be also possible traces of the Enkidu-Gilgamesh legend and of other Mesopotamian ideas. Phallicism and baetulism are fairly apparent. But for Indianists the greatest importance attaches to the figures representing unquestionably a pre-Vedic worship of Śiva, who appears seated in *yoga*-posture and attended by animals, *paśu-pati*, as he is designated (with *paśu* = animals both domesticated and other) in later ages.

So far there is nothing to suggest an extra-Indian origin of the Indus civilization or of the people among whom it flourished. It is natural to sympathize with the old view that the original population of India was Munda-Australasian and that from the west and east respectively there came an admixture of Dravidians and Mongolians. A Dravidian origin of the Indus civilization has a general likelihood, supported by the constantly cited fact of the Dravidian character of Brahui speech. We may also take note of the proportionately rather numerous resemblances of some of the marks on south Indian pottery (*Journal of the Hyderabad Archaeological Society*, 1917, p. 57) to signs in the "Indus" script. Then there is the quasi-Śivaite religion of the Indus people, taken in connection with the fact that during historical times Śaivism has certainly been specially favoured by peoples of Dravidian speech. On the other hand, Sir John Marshall draws attention (pp. 109-10) to the indefiniteness of the term "Dravidian" as an ethnographical designation, and to the hopelessness of recognizing at such a date as 3000 B.C. a corresponding racial type.

The craniological tests carried out by Colonel Sewell and Dr. Guha result in the recognition of four such racial types among the "Indus" population : (i) Proto-Australoid ; (ii) Mediterranean Race ; (iii) Mongolian Branch of the Alpine Stock ; (iv) Alpine Race ; Nos. (iii) and (iv) (brachycephalic) being each represented by a single skull. The evidence is altogether too scanty and accidental to affect the consideration of racial origins. The fact that the horse was not known to the Indus civilization renders it highly probable that the people, if they came from outside India, and especially if they came ultimately, as many analogies would suggest, from somewhere in Central Asia, arrived at a very early date, before the horse was known, or, at any rate, was domesticated.

The important questions concerning the seals and the writings are to be reviewed by another writer, who has made them the subject of an elaborate study. But it seems permissible for an outsider not to part with a subject which is still to a considerable extent an open one without recording his impressions. That the tablets were used for sealing is proved by actual examples and by the Mesopotamian and other analogues ; that, despite the numerals apparently abundant on them, they were not labels denoting particular substances and amounts is proved by the fact that they were for the most part elaborately carved in stone ; that they cannot have been employed as money is clear from the large variations in the inscriptions. On the other hand, the great predominance of certain designs on the seals, from Harappā as well as from Mohenjo-daro, and from all strata of the excavations, is inconsistent with the nature of a seal as a personal indication : the designs can be explained only as community symbols, whether tribal, national, social, or religious. Possibly, however, the combined functions of seal, amulet (with dates in days ?), and *ex-voto* may furnish a fairly adequate account of the situation, frequently constant design with mostly variant inscription.

The ascertained cultural connections with Mesopotamia

naturally direct to that quarter the inquiry for an interpretation of the script. The scholars who are familiar with the handling of hieroglyphic and pictorial writings are obviously the best prepared for tackling a new species of apparently the same genus. Investigators not familiar with such early modes of writing can hardly even realize the nature of the task or the possibilities and impossibilities involved. Accordingly, we look to the experts in Sumerology, Assyriology, etc., for guidance in this matter. The actual result is, however, not quite proportional to the expectation. Mr. Gadd, Mr. Sidney Smith, and Professor Langdon have made most able and valuable contributions to the understanding of the nature of the script: they have demonstrated that its direction was from right to left; by very ingenious examination of collocations and combinations and of the "mechanics" of the writing they have shown that some of the signs must be independent parts of the phrases, and they have made other interesting deductions; they have furnished authoritative lists of the signs (Professor Langdon, pp. 434-52), and have grouped their occurrences (plates cxix-xxix); they have also indicated those signs which resemble signs found in other scripts, Mesopotamian, Egyptian, Cretan, etc., and have made suggestions as to "determinatives", etc. But they do not claim to have made sure of the meaning of any single sign (pp. 41, 411-12). The main general result is a lesson as to how with the full resources of Mesopotamian scholarship the problem can be approached, and what sort of information is to be sought in the materials. But the experts are rather pessimistic in regard to the possibility of decipherment, unless the Sumerians, with their highly philological tendencies, have left somewhere a vocabulary or a bilingual (p. 406).

This comparative paucity of detailed results is explained by the great variations of kindred scripts, even in adjacent regions (p. 411). But perhaps the problem is not on the same level in the case of the Indus script and the Sumerian. It is conceivable that even the earliest Sumerian writing is

more advanced towards the syllabic stage and the representation of sounds. In the Indus script there seems to be no proven case of merely syllabic value (pp. 420-1). There are, indeed, few obvious pictographs (listed, e.g. by Mr. Gadd, pp. 407-8), or recognizable representations of utensils, parts of the body, etc. But the unrecognizable signs may be, in general, those which are more worn down and conventional (p. 427), some of them going back, perhaps, to an immense antiquity. We may rely upon the experts to have detected practically all the signs—such as the signs for “cross-road” or “road” and that for “great”—which are probably identical with the older Sumerian forms. It may, however, be suggested that signs Nos. cccvii-ix in the plates (Professor Langdon's No. 63) are too similar to a Sumerian sign for city-wall (*dūru*), and at the same time too complex, to be otherwise than identical with it.

In the circumstances, and considering the possibility that some of the signs may have come originally from “Central Asia” (the normal historical source of conquests of Persia and India) and the necessity of seeking inspiration in all directions, there seems to be no harm in inquiring whether from the oldest Chinese *writing*, which also is of considerable antiquity and may have come in part from Central Asia, some hints may be gleaned concerning the substantial meaning of some of the signs. Mr. C. J. Ball, in his *Sumerian and Chinese*, contemplated relations of both script and language. But, if we confine attention to the former, there seem to be some undoubted similarities, e.g. between the oldest signs for “darkness”, “mountain”, “cross-roads”. If the authorities on Chinese palæography could be induced to scrutinize the “Indus” script, they might be able to contribute some suggestions. For instance, the “Indus” sign which is suggestive of mountain (No. clvii = Langdon 119), and which is probably not “mountain”, that being Nos. cxxvi-vii = Langdon 53 = Sumerian *kur*, is of identical form with an old Chinese sign for “fire” or “flames”,

which also seems to have Sumerian analogies. It is found several times in conjunction with No. cclxiii (= Langdon No. 80), which resembles an old Chinese sign for "light". The oldest Chinese form for "heaven", "god" is apparently the sign for "son" under an angle (representing the sky), which angle is used in the Indus script. Naturally there are further possibilities which might seduce and delude an ignoramus in such matters. But those who have the requisite knowledge might elicit something reliable; and clearly we should like to recognize in the Indus script signs representing "son",¹ "sun", "moon", "temple", "king", "Śiva, the three-crested god", and certainly a sign for "seal" or "amulet", which might well be one of the most common finals.

But, even if an early material meaning of some signs is elicited, we are not necessarily, the writers remind us (p. 422), much furthered, since the Indus script may be using them in its own language with syllabic values representing that meaning in a language where they were first used (or in an intermediary language). In the case of Sumerian values this does not *totally* deprive such comparisons of possible significance: for in that case the pronunciation seems usually to be known, and as between material sense and sound a test could be applied to the Indus script in connection with any hypothesis as to the language. In such a hypothetical test the first choice would be, no doubt, the Dravidian: the Dravidians *claim* a very ancient civilization, and for some selected words a proto-Dravidian form of appropriate antiquity might perhaps not be too speculative. The sign for "great", which has the pronunciation *gal*, *might* prove decisive, if it could be shown to be used, either alone or in conjunction, as a mark of *plurality*, since in Tamil *gal* has that value—it cannot, however, be shown to be proto-Dravidian.

A special feature of the Indus script which perhaps has

¹ If this were one of the fish signs (No. cccxxi = Langdon, No. 175), then the inscription on Professor Cook's seal (*JRAS.* 1932, pp. 47-8) would conveniently mean "Of Axy son Az".

helped to incline the experts towards a predominantly syllabic hypothesis is the use of diacritical marks Professor Langdon prefers to speak of "accents". This feature is considered to be unfamiliar elsewhere, and to invite comparison with the denotation of vowel modifications in later Indian alphabets. Sanskritists will be inclined to regard this as a delusive indication. They will be prone to think of the vowel signs as an invention of Sanskrit-speaking Paṇḍits of a relatively late age, and unoriginal in both the Brāhmī and the Kharoṣṭhī scripts. If that is so, those "accents" which have, to use Mr. Sidney Smith's expression, a "mechanical" value, as belonging to signs in some positions (e.g. initial) and not in others, will be something else. The most likely supposition is that they represent "postpositions", "postfixes", "empty words", such as in agglutinative and monosyllabic languages we find employed to convey material and grammatical relations. This has, of course, been contemplated by the experts; but perhaps it has not been sufficiently tested. For clearly the two commonest grammatical and material relations, namely "of" and "in", would tend to classify the terms to which they are appended. It will be noted, in fact, that the sign for "street" or "cross-roads" is for the most part followed by an "accent" (No. xxxix) which attaches itself to certain selected signs, whereas others (e.g. Nos. lxxii, etc.) decline it, and prefer No. ii (extremely common). Naturally, if such expressions as "street", "wall", "house", etc., occur in the texts, we shall have to contemplate, along with names and titles, "addresses" also as possible items of the information which the texts conceal.

Any possibility of conceiving Sanskrit as the "Indus" language has been completely refuted by Sir John Marshall (pp. 110-12). Neither Sanskritists nor Indo-Europeanists will admit of Indo-Āryans in the Panjab at such a date as 3000 B.C., or as at such a time acquainted with cities and writing and with a god of the Śiva type, and unacquainted with the horse. Mr. Gadd's playful and non-committal

experiment (pp. 413-4) concerning Sanskrit *putra* "son", as indicated by a certain collocation of signs, will probably be met with the doubt whether the word existed at that time in that form: **putlos* would be more likely. In the same way any representation of the Sanskrit *anusvāra* would be quite discountenanced. Is there, then, no contribution to be made from the Sanskrit side towards the solution of these problems? Although the archæological stratification at Mohenjo-daro may not require a period of more than *circa* 500 years (in Sir John Marshall's view, c. 3250-2750 B.C.), it seems hardly likely that the Indo-Āryans nowhere encountered any survival of the same civilization. They might, however, be as indifferent to it as the Hellenes were to the Ægean civilization, and perhaps they destroyed it. They were fighting tribes, and they brought into India, no doubt, a greater human vigour, a more metaphysical language and mind, and an inferior civilization. But it would be strange if there were no detectable traces of what they destroyed or absorbed. The Sanskrit and Prakrit (and also the Dravidian) vocabularies must be scrutinized afresh: and the beginning made by Professor Pran Nath in investigating the religions and superstitions must be followed further, especially in matters connected with Śaivism. If the Indus people shared the philological proclivities of the Sumerians, it might be no accident that Sanskrit grammatical studies flourished earliest in the Panjab: it is curious that the early Sanskrit grammatical term *guṇa*, whose meaning of "vowel strengthening" has no clear relation to its other senses, so closely resembles the Sumerian term *gunu*, applied to modified forms of signs which in pronunciation are to be reduplicated: perhaps, however, the mathematical idea of "power" or "times" may account for the particular technical sense of *guṇa*. The word *mudrā* "seal", etc., is possibly of interest here; the Greek *μόδρος* denotes a "lump of [hot] metal", and Sumerian *mudru* means "comb". The "comb" sign exists, with unknown value in Sumerian, and it is common

on the Hyderabad pottery : in the Indus script, where it is frequent, it seems to be restricted to the (final) position, where a word for "seal" or for "impression" (in case a different sign should be read "seal") might be in place.

It would not be proper to omit all reference to Colonel Waddell's pioneer attempt (*Indo-Sumerian Seals Deciphered* (1925), *The Makers of Civilization in Race and History* (1929)) to decipher and expound the seals. In principle his method of finding likely Sumerian equivalents and recording their accepted syllabic values seems unexceptionable as an experiment, and he may have identified more signs than is yet admitted; but his readings do not seem to satisfy Sumerologists, and they are associated with philological interpretations which are rather widely disapproved.

MOHENJO-DARO—INDUS EPIGRAPHY

In the following pages I shall endeavour to review in detail the contributions of Messrs. Mackay, Gadd, Smith, and Langdon to the elucidation of the Indus script, as set forth in Chapters xxi to xxiii of Sir John Marshall's *Memoir on Mohenjo-daro*. Thanks to their efforts the direction of the writing is now definitely established, while valuable clues for further research have been suggested regarding the possible affinities of the script with Sumerian, Elamitic, and other contemporary scripts, as also with Brahmi. The pictographic significance of many of the signs has been established, and the presence of phonetic elements demonstrated. With the very limited material at their command, it is surprising that so much should have been accomplished. It is, however, inevitable that in pioneer work of this kind mistakes should occur, some evidence be overlooked, certain inferences escape notice. Favoured then as I have been by my opportunities to pay three protracted visits to Mohenjo-daro and Harappa (1927, 1929, 1931) where, by the courtesy of the

Archæological Department of the Government of India, I have been permitted to copy on the spot every inscription excavated up to April, 1931, and encouraged by the opinion of Oxford University, which granted me a doctorate for my research in connection with the Indus script between 1926 and 1929, and by the discoveries I have since been able to make, I have endeavoured, in reviewing in the following pages the contributions of the above-mentioned scholars, to check every statement, weigh every inference, and fill as many lacunæ as the present state of my knowledge of the subject seemed to warrant. And this must be my apology for the inordinate length of my review.

CHAPTER XXI

Page 373 : Seal No. 63, Hr. 1695, is incorrectly analysed. For No. 63 is clearly a fragment of a square seal. Perhaps 1695 is a misprint, and 1964 is intended, "Seal" No. 514. It will probably be found that the boss of this "seal" has broken off, causing it to be wrongly identified. Wherever the error may lie it is very misleading, as faience does not appear to have been used at Mohenjo-daro or Harappa for making inscribed seals; and I am doubtful whether any of the objects listed as faience seals are seals at all.

Page 371 : "Cylinder Seals (?)" Objects Nos. 529-533 are certainly *not* seals. In every case the sequence of signs shows that they were intended to be read direct, and not reversed. They are in just the opposite order to that in which they appear on the seals. Again, the signs are very lightly incised, not deeply as they are on the seals. N.B.—Objects almost identical, except for the absence of any script, are on exhibit in the Museum at Taxila, suggesting a link between Taxila and Mohenjo-daro, which has apparently been overlooked.

Page 373 : "Button Seals." B. 650 is an ordinary square "Unicorn" seal. It is No. 269 on pl. cx. Why it is classed as a button seal is not clear. As regards the remainder,

they are probably not seals at all but amulets, usually of faience and cast in a mould for economy, but occasionally prepared individually by incising on steatite. The boss is different from that on the seals, and probably was designed merely for suspension, not for gripping with the fingers. The same duality of incised and moulded objects is noticeable in the treasury receipts (?) of Harappa.

Page 375: "Cube Seals." These are clearly not seals at all, inasmuch as—

- (1) They are made in a material different from all other seals ;
- (2) They are impressed on some sides ;
- (3) They are not perforated ;
- (4) The imprints on them are typical seal imprints.

If they themselves are sealed, how can they be seals ? When I read Hr. 3388, "Seal" No. 528, it showed clearly ||Q|| with "unicorn" below on one face, and the unicorn with defaced signs—probably the same—on another. E. 492 = Seal No. 526 showed the unicorn surmounted by defaced signs on four faces. A third I cannot identify with certainty, as it was without a museum number at the time of my visit in March, 1927. I have since seen another of these objects, again with a typical seal-imprint, but as this has not yet been published I must not describe it. I think enough has been said to make it clear that these objects are not seals, but probably votive objects, impressed before baking with the seal of the prospective owner on some sides, and scratched on the remainder to prevent those surfaces being used by unauthorized persons to inscribe their own names—to the diversion in their direction of the benefits to be obtained.

Page 375: "Round seals with perforated boss." Only three are published. And I have only seen one since, making four out of a total of over twelve hundred seals that have been dug up in Mohenjo-daro alone. Whereas in Mesopotamia three Indus seals of this type have been found out of a total

of seven Indus seals found in that land or, if we include the Indus seal with cuneiform characters, four out of eight. Unfortunately, these four Mesopotamian examples of the Indus circular press seal are not datable; but if the analogy of the Sumerian circular press seal is any guide, we should expect them to be not later than 3000 B.C., or even 3500 B.C.

Again, the four examples found in Mohenjo-daro show well-supported sequences, whereas the three from Mesopotamia show sequences of signs not paralleled elsewhere in the Indus script. But the ordinary square Indus seals found in Mesopotamia show the normal Mohenjo-daro sequences. In other words the square seals are in the Indus language, and were probably imported in the course of trade; while the circular seals, though in the Indus script, are in a different language, and were probably manufactured in Mesopotamia for a Sumerian- or Semitic-speaking person of Indus descent, who though not speaking his ancestral language, used the sacred signs for sacrificial purposes, engraving his non-Indus names in Indus characters that the Indus gods might be in no doubt as to the identity of the donor of the sacrifices, which the sealings made from these seals doubtless accompanied. The seals in question are:—

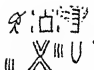

(1) Delaporte, *Catalogue des Cyindres, Louvre*, i, pl. ii, t. 24;

(2) *Journal of the Royal Asiatic Society*, January, 1932, p. 48.

(3) An unpublished (?) seal in the Louvre, which I copied in 1928, and which reads: 𐎧𐎠𐎫𐎠𐎥 (see my Bodleian Manuscript "The Script of the Indus Valley", p. 3, No. 11).

With regard to the language of these three seals, there is of course the alternative possibility that they may be earlier than Mohenjo-daro, and figure the language of an earlier people.

Page 376: "Round seals with no Boss and Inscribed on both Sides." No. 527. The signs depicted on the imprint

are: . This gives us a left to right reading in each line, which is very improbable. Whereas if we take the signs as they are actually incised on the original we have, reading from right to left: , which readers of my Bodleian manuscript will recognize as the normal form of treasury receipt at Harappa with the well-represented sequences: 1, first element in officer's name; 2, second element in officer's name; 3, ablative suffix; 4, numeral 3; 5, commodity; 6, numeral 3; 7 = cup, Sumerian "sila". It is clear then that No. 527 is to be read as written, and not from an impression, i.e. it is *not* a seal.

"Seals of Unusual Character." Seal 18. The significance of the recurrence on the boss of a sign found on the face of the seal will be discussed later. Seal L. 323, Nos. 227, 230, and 356, has on face and reverse the same animal design accompanying different legends. Seal Hr. 2596, Nos. 252 and 378, has on face and reverse the same legend accompanying different animal designs. This proves, what may already be inferred from the fact that the same animal is found with a multitude of different legends, and the same name with several animals, that the relationship of animal to legend is coincidental. The animal is not added for the purpose of identifying the owner. It is not the man's totem. These seals, containing as they do both names and living creatures, are probably manufactured for the purpose of stamping actual offerings, or tampons accompanying offerings. Such an offering, placed in the cattle-pounds outside the city—simply on the ground, for the domesticated elephant and humped bull, on a manger, for the domesticated ox ("unicorn")—and in troughs on the "maidan" at the edge of the jungle for wild animals (note the difference in the attitude of the wild elephant, No. 369, from that of the tame one, Nos. 362-7, 370-5), and carefully portraying all the essential elements of the transaction—the donor, the recipient, the receptacle—may be hoped by processes of sympathetic magic not only to attract the

correct recipient to the sacrifice, but also to confer the mystical results of the consumption thereof to the correct donor. Probably each man has his favourite tutelary deity. Perhaps in the case of L. 323 husband and wife have the same; whereas in Hr. 2596 the same man has two favourites. If for any reason—e.g. an outbreak of smallpox—he may need to propitiate some third deity, doubtless he will have to make a new seal. If I am right in regarding .!.. as the dative post-fix, and that which precedes it as: (a) the word “god”, “goddess”, sometimes preceded, as in Indian languages, by the name of the particular deity; (b) the name alone of the deity without suffixed “god”, “goddess”, then it is clear from the seals that many different deities are approached through the same animal. But this need not surprise in view of the immensity of the Hindu pantheon.

Page 378, last line: “Occasionally the arrangement of the characters is quite haphazard.” Never, to my knowledge. In the instances given all the signs are in the correct order and give sequences well represented elsewhere provided we read them correctly, viz. starting from the right of the top line and continuing boustrophedon.

“Purpose of the Seals,” pages 379–81: To take the seals as amulets is impossible. For if they were, how do we account for the fact that in about 99 per cent of these objects the writing is reversed as compared with the writing on all embossed, stamped, and moulded objects, and with that on the copper tablets? This reversed writing can only be explained as intended for reproduction by sealing. The almost complete absence of sealings impressed with these seals (most of the impressed objects have been cast from moulds and have not come from our seals) is readily understood, if their purpose was the stamping of unbaked clay to be carried outside the city with the offerings, as suggested above. They would all be yearly obliterated by the annual floods, if not earlier! That the seals were intended for a religious purpose a moment's reflection will show. Their

find-spots suggest that every family in Mohenjo-daro possessed a seal. Only religion can account for this universality. How many families in London to-day employ a seal? But every family possesses (or used to possess) a Bible! That occasionally a man who happened to be a merchant used his seal for the mundane purpose of authenticating his merchandise, or a potter his pottery, is only to be expected. But it is significant that even these rare occurrences suggest that he sometimes tried to avoid reproducing the sacred animal—he pressed on the inscribed portion only—as though fearful of sacrilege! Again, it is significant that with one exception pottery is always stamped with a different kind of seal—a seal that gives a name or initial only.

Direction of Writing: The only published seals reading from left to right are Nos. 167 and (possibly) 302. In both these cases the animal is also facing left instead of right. But it does not follow that this is of consequence; for in Nos. 112, 341, 376 the animal is reversed though the direction of the writing is not.

Page 383, footnote 2: The object in front of the animal in Seal 550 is simply the sign  in its normal place in the script, viz. final. It appears where it does merely because there is no room for it in the top line. A similar example of displacement for lack of space is illustrated on the same plate, No. 554. Cf. 534.

“Standard in front of animal.” This I take to be a sort of manger. What Mr. Mackay calls the manger, page 385, is what I have described above as a feeding-trough. It is significant that this object is not found with the ox (“unicorn”), the Brahmani bull, and the elephant. Now these animals were certainly domesticated, as their tranquil pose shows. All the animals that are shown accompanied by this feeding-trough are either known to us to be wild—the tiger and rhino—or, if now domesticated were probably then wild—the buffalo and short-horned bull—as is suggested by their charging attitude. There seems then to be a

connection between the feeding-trough and the wild or angry nature of the animal. I suggest that here we have an exhibition of sympathetic magic. If the animal which it is desired to attract to the offering is not likely to come to it, since he will have no knowledge of its existence, he must be attracted by figuring the place or local of the offering. This is done by depicting the receptacle. In the case of domesticated animals the necessity does not arise, as they will be led to the offering. It is to be observed that where composite or mythical animals are figured there is no "manger". Perhaps because in these cases the offering is not destined to be consumed by any real animal, but offered direct to the deity . . . through the sacrificial fire (?).

"Seal Impressions," p. 393. Of all the "sealings" figured, only Nos. 6, 7, 15, 16, 21-3, and 30 could possibly have been produced from the types of seals figured in this volume. And of these the only two which show clear traces of having been so stamped are Nos. 6 and 30. The remainder have been made from moulds, giving indeed names and animals known to us from the seals, but usually differently arranged, e.g. giving a horizontal instead of vertical juxtaposition of animal and legend. These moulds were probably of wood, as none appear to have survived.

"Copper Tablets," p. 398: Certainly not seals, as the writing is always direct, never reversed. I can only explain the presence of the feeding-trough on the supposition that its original significance has been forgotten; that it has become stereotyped into a mere cult object closely associated with the sacred (?) animal, and therefore reproduced with him regardless of intention. These copper tablets are generally regarded as late; and possibly by this time the original purpose of engraving the sacred animal on seals had been lost sight of, and had, by the time of these copper tablets, become merely heraldic. The names on these tablets are certainly proper names, nearly all of which can be completely paralleled from the seals.

The really interesting question is, granted these tablets bear proper names, how do we account for the comparative paucity of names, the frequent recurrence of the same name, and even the occurrence of two names on the same tablet, one of which is found repeated alone on other tablets. I have seen three instances of this. I think it will be difficult to avoid the conclusion I drew in 1929, that in these copper tablets we have coins, or stamped ingots, and in the names so frequently repeated the name of the king or magistrate, sometimes together with his successor designate. One must also observe the complete absence, from all the 104 copper tablets I have copied at Mohenjo-daro, of the ablative suffix . This sign is invariable on the Harappa receipts (they run to nearly a hundred), common on the votive tablets, and not infrequent on the seals. But there is naturally no place for it on a coin.

One must congratulate Mr. Mackay and his staff on the excellence of the photographs of the seals and sealings and, if I may reveal a secret, Mrs. Mackay on her remarkable success in delineating the animal designs on the copper tablets, which were often so faint or blurred on the originals as to be almost untraceable.

CHAPTER XXII

Page 407: How far may the signary be regarded as complete? Very nearly, I think. The 1,400 inscriptions I have copied on objects excavated subsequently to the material utilized in this volume have revealed very few new signs, and these mainly compounds of signs here published.

The contention that, because certain signs (e.g. the bird signs) are "faithful representatives of the originals", therefore the script has "not been worn down to conventional summaries" is not warranted by the evidence. Thus an examination of the sequences shows that  has been worn down to ,  to ,  to , etc.

Sign cecclxxxvii : It is not likely that this is a compound. The upper portion is simply a modifying element of the phonetic order. It occurs with several signs in circumstances where it cannot possibly be taken for \bar{U} , e.g. $\text{III}, \text{III}^{\text{w}}, \diamond, \text{X}^{\text{w}}$ and $\text{V}^{\text{w}}, \text{O}, \text{O}^{\text{w}}$.

The sign X which is grouped under ccclxix is quite distinct from A , which belongs to the fish group.

No. cccxlvi is for X and related to X .

No. cclxi is clearly a compound of \bar{U} and X ; cf. $\text{X} = \text{X} + \text{X} + \bar{U}$.

No. cccxxii, hardly a table! Since it consists of the sign $\text{X} + \text{X}$, a fairly common modifying element; cf.

$\text{X}, \text{X}^{\text{w}}, \text{X}, \text{X}^{\text{w}}, \text{X}, \text{X}^{\text{w}}, \text{X}, \text{X}^{\text{w}}, \text{X}, \text{X}^{\text{w}}$. It appears to indicate the vowel *o* in combination with those signs that are too broad at the top to take the normal form \wedge , both forms being apparently derived from the detached form $\text{X} = o$.

Page 408 : I am unable to follow the logic of the contention that X occurs especially where \bar{U} or X would be expected. The commonest group with this sign and its variant X is O A , which I have found eighteen times preceding this sign, but never once before \bar{U} or X . The modifications of the fish sign are puzzling if we seek a pictographic explanation, but understandable if we adopt a phonographic one. That the pictograph is indeed a fish is clear from the form of the fish in the crocodile's mouth, pl. cxvi, No. 20.

Page 409 : "Modifications of signs." To explain the nature and principles of sign modification would require a treatise in itself, and I would refer the reader to my manuscript in the Bodleian Library at Oxford. Suffice it here to summarize a few points. X and X detached are the vowels \bar{i}, \bar{e} ; enclosed, they indicate a modification of the vowel in the enclosing sign. \wedge, X is *o* in composition; X, X is the vowel *u*; X below a sign is \bar{u} in composition; X so placed is \bar{u} ; above a sign it is \bar{e} ; *u* preceded or followed by a vowel has the

value *v*. Thus: ʅ, ʁ, ʁ is *vi*; ʌ, ʌ, ʌ, etc., is *uv*.
 ... between vowels is the semi-vowel *y*, and is frequently inserted in these texts between words (and even between names that are elsewhere found as complete texts) for the sake of euphony, to prevent a hiatus when one word ends with a vowel and the next begins with one.

The so-called "enclosures" are with one exception simply signs taken apart for the purpose of inserting another sign or signs with which they are to be read as a single word. Thus, |.....| is for ||, ||.....|| I have not met. In every case where I have found two || on the same text the sequences have shown that each has belonged in sense to the sign preceding or following, i.e. the two || are not mutually connected, do not form an enclosure. (.....) is for Q when the size of the sign to be inserted is too big to write it legibly within.).....) is)) taken apart. "....." I have not seen, but there are several examples of "....." and its variant "....." where it is clearly "..." taken apart to make a compound, just as we have "....." for "...", and "....." for "...". The only genuine enclosure is '.....'. This is not a compound, but a phonetic modification, probably changing the value of the final consonant of the word or syllable it encloses into Visarga. It is not possible to regard ccclxxxvi as 𐎠 + 𐎡 for the sequences show it is a mere graphic variant of the former. For the relation of the Indus script to Sumerian see the sign list appended to my Bodleian manuscript.

Mr. Gadd is to be congratulated on the caution and moderation with which he has formulated his deductions regarding the script on pages 411-13. With his speculation (c), however, on page 414, I am unable to agree. Since he wrote a seal has been found complete and clear, bearing nothing (apart from the "unicorn") but 𐎡|||𐎠. It is hardly possible, then, that this group should be other than a complete name in itself. It cannot therefore signify "son". From

Mr. Gadd's description I recognize Harappa H. 173 as the seal numbered 2789 in the Harappa museum. It reads:—

𐎶𐎵𐎠𐎶

𐎶
𐎶
𐎶
𐎶 | 𐎶 | 𐎶

Now each of these three groups is found elsewhere as a complete seal inscription by itself. I think it is only possible to conclude that this was a seal containing the names of three persons, not unlike the "burgul" seals affixed to Sumerian contracts.

THE SIGN MANUAL

It is a pity that the compilers did not arrange the texts so that the key signs appear one above the other; and that those texts showing the key sign in the same contexts are not grouped together, e.g. in Table ccxl (pl. cxxv), Nos. 41, 24, 140, 442, 212 should have been placed in succession, with Sign ccxl in 24 vertically below the same sign in 41, etc. If this had been done certain uniformities of sequence would have been immediately apparent, and Mr. Gadd would have been enabled to advance to the next step—the isolation of those signs which form distinct groups. By adopting this method I have succeeded in isolating 242 distinct groups, which are appended to this note. From this it is a short step to separating names from titles, commodities, gods' names, and isolating the grammatical suffixes. Furthermore, this treatment of sequences enables one to determine, often with absolute certainty, whether signs similar in appearance are to be regarded as (a) mere graphic variants, (b) allied and occasionally interchangeable though distinct, or (c) totally distinct.

"The Mechanical Nature of the early Indus Writing," page 416: "Sign lxxiii is able to stand by itself." This is not proven. The only text to support this statement is No. 547; and this is clearly but a fragment of a seal, which may well have contained other signs.

Page 417 : To call lxvi a modified form of lxv, and lxxv a modified form of lxxiii, and so on throughout the sign manual, is misleading. For ^{'''} can apparently follow any sign, being in effect a grammatical post-fix.

"Numeral signs" : "This mechanical characteristic of the modified signs, which throws them into a forward position as compared with the simple signs." This generalization is far too sweeping. ^ʒ modified by internal strokes is essentially quasi-final, i.e. occurring at the end of a name group, where it is clearly doing duty for ^ʒ simple, the modification being of a phonetic order (i.e. a vowel change) required by what follows in accordance with principles of vowel harmony. Incidentally, simple ^ʒ is itself sometimes found medial and even initial. "O is not always initial—I have twice seen it final—while cxv, which Mr. Smith says can only occupy an initial position, is by himself shown as final in No. 476 (see pl. cxxiii, first entry). Again, some modifications, e.g. ¹.....¹, have a tendency to throw their signs not forward but backward to the end of the text. The fish group when thus modified is usually final, when unmodified hardly ever (see cccxxxi and cccxxxiv; cf. also [Ⓢ] and [Ⓢ] modified and unmodified). The tendency which Mr. Smith discerned does not apply to modifications as such, but only to the particular detached "modifications" ¹..... and ¹....., and this not because they are modifications, but because ¹....., being often the liaison sign between words, that which precedes it will naturally tend to appear in the first half of this text, and ¹....., being the dative post-fix, and the dedication being always prefaced to the rest of the inscription, that which precedes ¹..... must necessarily appear at the beginning of the text.

Page 417 : "Small and large signs," plate ccelxxviii, Nos. 65 and H. 54. The small ¹..... is here identical with the large || ; but it is erroneous to conclude that the small ¹..... is always identical with the large ||. The large is never found for the small in the commonest sequences, "O", "O", "O". The small is never found for the large in the commonest

sequence, $\text{𐎧}||$. The only case where the small is used for the large is where it is initial and there is insufficient room above the horn of the "unicorn" to draw it full length. This accounts for the slight shortening in No. 65, and the more pronounced shortening in H. 54. Even here, however, it is distinctly longer than the final 𐎧 in the text, which is the true short 𐎧 , incorrectly reproduced as 𐎧 in the sign manual (see the photograph of the original seal in the *Illustrated London News*, 4th October, 1924). It is on this incorrect reproduction in his sign manual, and his failure to recognize that the right-hand sign was merely $||$ slightly truncated, that Mr. Smith appears to have built his entire theory of the "mechanical" similarity of the "modifications" and the "numeral" signs. The truth is that there are three distinct signs that can be written with two vertical strokes: viz. (a) $||$ long, sometimes a numeral = 20 (?), but usually a mere homophonous (?) phonogram; (b) 𐎧 short, usually written on a level with the axis of the inscription = 2, the digit; (c) 𐎧 short, invariably written above the axis, and on a level with the top of the line = the dative post-fix, probably pronounced \bar{v} . The "collocation of modified beginning signs and numeral signs" exists only in Mr. Smith's imagination. There is no evidence to suggest that 𐎧 is normally followed by a numeral sign. It is followed by nearly every sign known to the script. There is hardly a name group in the script that is not found preceded by it. In every case where one of these numeral signs is found to follow 𐎧 it can be shown from the sequences that it is to be read with the sign following, and not with 𐎧 , e.g. :—

$\text{𐎧}||, \text{𐎧}|||, \text{𐎧}|||, \text{𐎧}|||, \text{𐎧}||, \text{𐎧}|||, \text{𐎧}|||, |||, \text{𐎧}|||.$

These groups, frequent after 𐎧 , are even more frequent without it, and sometimes appear as complete texts in themselves. The fact that, when occurring on the same texts as 𐎧 , they are invariably found immediately after 𐎧 , is explained when we remember that these groups are not

proper names at all, but numerated commodities, and that it is the unvarying practice with this amazingly methodical race to place the commodity offered immediately after the name of the person to or for whom it is offered (i.e. immediately after the preface) followed, if necessary, by the name of the donor. The full formula is "To (or for) x , so many articles, from So-and-so the (title or profession). The exact order is: 1, god's name; 2, dative post-fix; 3, number; 4, article; 5, man's name; 6, ablative post fix; 7, title. Any one or more of these elements may be omitted, but the order, so far as I am aware, is never reversed.

Sign Manual, No. X, Seal 130: " Ψ " is for Ψ ^{||||}; cf. xvii, No. 71. Several other occurrences of " Ψ " have since come to light, always with an enclosed sign that is found elsewhere with 8 or some other digit. As a matter of fact Sign X as a sign in itself does not appear to occur in the Indus script, no doubt because the eye can easily read $|||| = 4$. It is only when we get on to the higher digits that it becomes desirable (as in Proto-Elamite) to write in two registers. " Ψ ;" is probably for Ψ ^{||||}, for Ψ has been found preceded by the digits 2 to 5, and is evidently peculiarly liable to association with numerals. X, No. 162, is wrongly copied. The original (seen in a looking-glass) reads $\Psi \Psi$ " Ψ ," " Ψ ". Other examples of " Ψ ;" have since come to light, sometimes with the variant " Ψ ," which seems to place it beyond doubt that it stands for Ψ ^{||||}. Sign X therefore does not exist. It is but a portion of signs ^{||||} and ^{||||} divided for the purpose of writing a compound ideogram (or phonogram). Apparently any two or more signs forming a single concept (not necessarily a single word) may be thus compounded (see Appendix II).

Sign No. cccix can, according to Mr. Smith, be written either to the right or left of numeral signs. This is incorrect. In inscriptions reading normally, i.e. from right to left, Ψ invariably appears on the left of the numeral. This can be proved by taking any text in which Ψ plus numeral is

found along with any other signs in one and the same line, e.g. H. 239, 319, to which I could add many others not yet published. It is only when U plus numeral occurs as the sole inscription on the reverse of an object inscribed on both sides that we find U to the right of the numeral. And the explanation is simple. A large number—about 40 per cent—of the objects inscribed on both sides read on the reverse from left to right, as can be seen from an examination of the sequences. This is only what we should expect in a script that is frequently written boustrophedon.

Page 419: Mr. Smith says: "There is only the probability that in certain cases the 'numeral' signs denote numbers." We can go a little further than this. A more detailed examination of the sequences would have revealed that certain signs like , , and  are found associated with one numeral only, while others, such as  and  are associated with nearly every known variety of numeral sign. Surely we may conclude that in the latter cases the numeral signs denote numbers, while in the former they are probably only homophones of the numerals they depict.

Page 420: H. 148. To take the penultimate sign as having a sense in itself seems (at any rate in this context) to ignore the obvious. A glance at Table xliii will show that the combination  occurs no less than seven times, always final. Surely there can be no doubt that these signs are to be read together as one concept, not as independent ideograms? Is it possible that Mr. Smith did not recognize in the form  a graphic variant of ? Apparently he did not, for we find  classed as a sign *sui generis* (celxxii). And what of signs  and , with their manifold variants—two of the commonest signs in the texts? (see Professor Langdon's sign list, page 439, Nos. 96, 97). They have not been listed at all! In view of this it seems superfluous to attempt to correct the sign-manual in detail. The reader can correct the key signs for himself by referring to the sign list attached to this note.

Page 421. To read the signs on Seal 435 as a series of separate words—i.e. to ignore the association of  and —is not permissible. The explanation that the reverse (No. 440) stops short at  is not far to seek.  is a separate ideogram—probably a title.  is a detachable terminal element in proper names, but  is a man's name, of which the first element is a prefix and the two following the root.  is abbreviated to  on the reverse (No. 440). In modern languages we use the initial letter of a name for abbreviations; but we are not so compelled by logic. To a people more familiar with speech than with writing it would probably occur to use the stressed rather than the initial letter or syllable for purposes of abbreviation. In the case of Seal No. 18 the first two signs are the owner's name. It is the second sign which we find reproduced on the boss as an abbreviation. The boss has been specially flattened, unlike the bosses of any other seals, in order to receive this sign, which has been deeply engraved, like the signs on the face, evidently for the purpose of sealing. The owner could therefore either seal with the face of the seal (he would do so doubtless for religious occasions) giving his full name and designation, or with the boss of the seal alone giving his "initial" only (doubtless for secular occasions). Further evidence of the habit of using abbreviations for secular purposes is furnished by the stamped pottery, chiefly at Harappa, where abbreviations are frequent. The commonest is the single sign . Another is . One pot has a solitary  painted on it. A bangle is engraved with the single sign . On pottery found with the owner's name scratched on it after firing, single signs are more common than whole names, e.g. , , , , , ,  [sic], , , , , , , . So, then, in No. 340  appears in abbreviation of, or, as we should say, as the "initial" for, . I do not think we need look further than this for the explanation of the apparent anomaly of this Seal 335/340, which seems to have puzzled several epigraphists.

CHAPTER XXIII

Page 423 : "It is not possible to separate words and sign groups." I disagree. A tabulation of all the sequences occurring on some two thousand odd inscriptions that I have copied from the originals in the Museums at Harappa and Mohenjo-daro has shown me that certain associations of signs are undoubtedly to be regarded as forming single words, names, or concepts. These words seldom extend to more than two signs (and the large majority of these signs are of very common occurrence), suggesting that the language is bi-syllabic, i.e. that some, at any rate, of the roots of the language are tri-literal. A list of these words, names, and concepts is given at the end of this note. (Appendix I.)

"This script is in no way even remotely connected with the Sumerian or Proto-Elamitic signs." This generalization Professor Langdon revises in his postscript. That the languages are unconnected is probable, and the phonetic value of the signs may well be different. But that they are unrelated in origin seems to be contradicted by the number of resemblances that seem to be too close to be explained by coincidence. As early as 1926 Professor Sayce pointed out to me the obvious resemblance of the Indus script to Proto-Elamitic. I do not accept Professor Langdon's explanation (page 455) of the difference in the phonetic values of the respective Sumerian and Brahmi equivalents of Indus signs. Admitting for the sake of argument that his Sumerian and Brahmi equivalents for Indus Nos. 2 and 14 are correct, I should take the Brahmi as giving the correct phonetic value, since Brahmi is, as he has shown, a lineal descendant of the Indus script when the latter was probably completely syllabic (it is already largely syllabic as we have it in 3000 B.C.). While I should regard the Sumerian phonetic value as entirely irrelevant, since the connection of the Sumerian and Indus scripts, being almost certainly that of collateral descent from a common ancestor rather than the result of borrowing one from the other, refers us to a remote date—certainly before 4000 B.C.—when the common parent

was surely in a purely pictographic or ideographic stage, with the corollary that any parallels between the signs of its descendants would indicate an ideographic only and not a phonetic relationship.

Page 425, "The Susa Seal": Subsequent finds have convinced me that Professor Langdon's No. 194 is distinct from No. 193.

I differ to some extent from Professor Langdon regarding the reading of the seals discovered in Mesopotamia, reproduced on pages 425, 426. But it is only fair to observe that we have on these pages not photographs of the Professor's own transcription, but of copies thereof made by an amanuensis in India. My readings in the case of Nos. 1, 2, and 4 below are taken from the originals (reversed). My reading of No. 3 is taken from the photograph in *R.A.* xxii, p. 99; that of No. 5 from the photograph (reversed) in *JRAS.*, 1925, pl. x, opp. p. 698; that of No. 6 (see *JRAS.*, July, 1931, p. 595) from the original (reversed) in the Ashmolean Museum (No. 1931, 119); that of No. 7 from the photograph (reversed) in *JRAS.*, January, 1932, p. 48. No. 8 I copied from the original (reversed) in the Louvre (unpublished).

No. 1. 𐎶'𐎶𐎶 𐎶𐎶 𐎶𐎶𐎶𐎶

No. 8. 𐎶𐎶𐎶𐎶𐎶𐎶

Nos. 2, 7, 8 are circular. Their shape and sequence are unusual, and they were probably manufactured in Mesopotamia. Ditto No. 1, which is cylindrical. The remainder show normal Indus sequences and shape, and are doubtless of Indian origin. The fourth sign in No. 1 is unique. The first sign in No. 4 is found on a seal (unpublished) from Cunenjo-daro, near Mohenjo-daro, where it is a clear pictograph of a man with bow and arrow in each hand.

Pages 424 and 427, "Egyptian affinities." "The Indus inscriptions resemble the Egyptian hieroglyphs." The only

parallels that I have been able to detect are the *homo* signs. Like the Egyptians the Indus scribes depicted the *homo* signs in full silhouette, whereas the Sumerians show the head and neck, or head and bust (e.g. in *LU* = man), only.

Page 427 : " Nothing can be determined about the [direction of] Proto-Elamitic writing." I disagree. The Proto-Elamitic sequences clearly show that Father Scheil is right in reading the Proto-Elamitic texts from top to bottom, i.e. from right to left in the original upright position of the signs, before the scribes inclined the tablet 90° to the left.

Page 428. Under " accents ", first paragraph, penultimate line, delete " or ' ' ". ' ' is never found alone, but only as part of ' ' '. It is difficult to take detached ' ' and ' ' as Visarga and Anuswara respectively, unless we are going to give a totally different value to ' ' and ' ' detached to their value when enclosed within a sign. For in the latter case there is little doubt they indicate vowel modifications. These vowel modifications are exactly paralleled in Brahmi, viz. ' ' = *i*; ' ' = *ī*; - or / about the axis of a sign = *ā* or *ē*; - - or ^ = *o*; ' ' = *ū*; ' ' = *ū*. It is difficult to identify either Visarga or Anusvara in the Indus script; but in view of: (a) the doubt attaching to the value of the sign : : on the Asoka inscriptions; (b) the alternative form ' ' for ' ' ' (once only it is true) in the Indus script; (c) the fact that ' ' ' is always found enclosing a final or quasi-final sign; (d) the fact that Visarga is one of the few final consonants permitted in Sanskrit by the rules of Sandhi. I regard ' ' ' as the most probable equivalent of Visarga in our texts. It must be noticed also that ' ' ' makes no sense-change but only a sound-change in the Indus script, the antecedents of a sign so enclosed being the same as with the sign unenclosed.

I do not follow Professor Langdon when he says that ' ' added to Brahmi *Ā* and *Ī* lengthens them to *Ā* and *Ī*. The stroke that lengthens *ā* in Brahmi is not ' ' but -. Again, it would be rash to assume the identity of the Indus oblique ' ' , placed at the bottom of Nos. 50 and 130, with the Indus vertical ' ' , written at the top of the line or inserted

in the upper portion of a sign. On the analogy of Brahmi we should expect this nether oblique stroke to indicate *ũ*.

Nos. 47 and 48 are shown by their respective sequences to be distinct. I hesitate to accept Professor Langdon's identification of No. 48 with Brahmi *ma*. For there is nothing in the Brahmi script to suggest that the Indus signs were turned 90° to the left when evolved into Brahmi.

To conclude regarding accent "*A*". Quite apart from the evidence of Brahmi, there is strong internal evidence in the Indus texts themselves for reading detached *ũ* as *ĩ*. For *ũ* is frequently found after final signs and before initial signs; i.e. its place is often intermediate between whole words or names. On several occasions I have found it separating two groups of signs each of which groups are elsewhere found as complete texts in themselves. Yet it is no mere divider, as in Sabæan, for it is only found between certain names. I think only one explanation is possible: it is required between names only when one ends in a vowel and the next begins with a vowel; i.e. to avoid a hiatus. *ũ* therefore here has the value that in English we represent by a semi-vowel, *y* or *w*, which means that its true vowel value is *ĩ* or *ũ*. I prefer *ĩ*, as I think we can already detect the detached vowel *ũ* in the sign *ũ*, *ũ*. Consider a moment accent *H*. I agree with Professor Langdon in regarding *ũ* as accent *A* after a slanted line. But we can go further. An examination of the sequences shows the variants *ũ*, *ũ*, *ũ*, etc. In other words the slanted line is a simplification of *ũ*, *ũ*. Now this is a sign by itself. We next note the group *ũ*, which the sequences show also appears as *ũ*, *ũ*, *ũ*, etc. Again the sequences show that *ũ* is invariably to be read with the sign preceding it and *ũ* with the sign following it. Again *ũ* frequently occurs where we should expect the dative suffix *ũ*, e.g. *ũ* alternates with *ũ* on our texts. If we take *ũ* as *ĩ* and *ũ* as *ũ* this gives us *wi*, which we may explain as the dative suffix *ĩ* pronounced with a labial glide after a syllable ending in *ũ*. But if we take *ũ* as *ũ* it becomes impossible to account for *ũ* taking the

place of 𑀓 . But if 𑀓 is \check{i} , / must be \check{u} . If 𑀔 were the only case where / stands for the dative suffix we might deny this, and urge that / may be merely a repetition of the final consonant in 𑀔 , on the well-known principle of the phonetic complement. But then how do we account for initial 𑀕 , 𑀖 , etc? It is most unlikely that 𑀔 , 𑀕 , 𑀖 (and one could add several more) all end in the same final consonant. It is much more likely that they all end in the same vowel, and that / is inserted because a glide is required. And as it is not the palatal glide “ y ” (for that is) 𑀓 , it must be the labial “ w ”. This being so it is natural also that / always goes with the sign preceding it. Equally natural that the syllable $\text{𑀗} = \check{u}$ (in composition) + \check{u} (detached) = uw , goes with the sign following it, since it is a closed soft syllable, and cannot be allowed as final by the rules of Sandhi. The form / for detached \check{u} explains its shape 𑀘 in composition.

Accent *B*. B. 23 may be either 𑀙 or 𑀚 , but hardly both; for the sequences suggest that they are distinct signs. B. 30 is more likely to be 28b, which has a variant form \square , or even No. 33, than No. 125. No. 126 is perhaps distinct from 232, for I have seen a seal on which both occur. No. 11 is pictographically distinct, being shown by its sequences to be a simplified form of 𑀛, probably a lateen sail with mast.¹ No. 6 is probably a spade. The sequences show that it is quite distinct from No. 11. Moreover, it is found with the variants 𑀜 and 𑀝 , where the shape of the upper stroke seems to preclude the possibility of regarding it as \square (still less as \diamond) modified by 𑀓 . To regard two strokes—apparently indifferently vertical, horizontal, or oblique, and attached anywhere to the sign, above, below, or in the middle—as being equal to \bar{u} or \bar{o} (indifferently) in Brahmi, when in that script we know that it is the position of the attached stroke or strokes that is all-important, determining whether the vowel is to be read \bar{i} , \bar{o} , or \bar{u} , and to ignore the fact that

¹ For the proof of all the statements I make in this note regarding the evidence of sequences, the reader is referred to my manuscript in the Bodleian Library, vol. ii, “Tables.”

in the Indus script also the texts themselves show that the position of the strokes is significant— are clearly distinct in value, being found on the same text—is surely to do violence to all the evidence.

To regard the addition of three strokes as signifying \bar{i} seems unwarranted. On the analogy of Brahmi it would be more rational to regard  as equal to \bar{i} .

No 49. The sequences show that the two signs are identical. The first form is but a simplification of the second.

Sign 26 is incorrect, owing no doubt to the defaced nature of the seal, making a clear photograph impossible. In my copy of the original the sign is .

No. 274 is, as I have shown above, only part of a sign. It cannot, therefore, be identified with B. 4.

B. 1 seems to be much more reminiscent of Sign 19, one variety of which is  (see Seals 342, 237).

Accent *C*. It is significant that this "accent" is found once only. The text is defaced; but it must be noted that  is itself a well-represented sequence, while the  on the left may be part of . I am inclined, therefore, to regard  as non-existent as an entity. But if it is the sign on Seal No. 39, it does not follow that it forms one whole with the two preceding signs. And further, if we do read , and take it as one group, I would sooner interpret it as  plus 4, on the reasoning given earlier in this note, than as an "accent".

Accents *D* and *E*. *D* is only half of *E*, as explained earlier. My analysis of Seal 373 is "accent *E* enclosing the whole word ". Seal 348 makes this reading certain. Here we have identical inscriptions except that in 348 the accent encloses the last syllable only of the word, whereas in 373 it encloses the whole word. But as the effect of the accent is to modify the sound of the final consonant of the word, it would be epigraphically a matter of indifference to the scribe whether he wrote it round the final syllable only, or round the word as a whole. It follows I am unable to accept Professor Langdon's explanation of accent *E* as an on and off glide.

I regard it rather as a product of Sandhi, indicating that a syllable properly ending in a soft consonant is here to be pronounced with the corresponding hard consonant. It may not have the value Visarga in our texts; but it may well be that the Aryans, on account of this usage, gave it the value of Visarga when they borrowed it.

Accent *F* is not an accent at all, but the numeral 8 (see above).

Accent *G* does not exist. Of the seals quoted against No. 232c, viz. Seals 131 and 39, the most plausible analysis is—No. 39: $\uparrow \parallel$ = one group; " \odot = one group. No. 131 [i.e. V.S. 3391, which was clear and unbroken at the time I copied it]: $\Psi \parallel \parallel$ = one group; " \odot = one group.

Accent *H* I have dealt with under accent *A*. No. 264b, Seal 113, reads $\parallel \parallel$, \wedge , \prime , \parallel ; cf. Seal No. 192, which reads \overline{U} , \wedge , \prime , \odot .

I. The "circumflex" accent, and *J*, I have explained earlier as = *o*. I do not take No. 25 as an instance of *J*. I think it is a single pictograph belonging to the same group as Nos. 5, 7, and 63. No. 120b is also a single pictograph. Incidentally this pictograph has itself since been found modified by *J*, viz.: \overline{A} .

Page 430: Determinatives. No. 68: I have seen this sign some forty times. It is almost invariably found following Nos. 47 or 50. Surely it is not possible to regard it as other than part of a proper name.

No. 124 is only found after a very limited number of signs: nearly always one of the fish group or the word $\parallel \odot$. No. 130 is of too rare occurrence to justify any deduction. No. 182, when terminal, is invariably preceded by No. 87, and when it is other than terminal, as in Seals 218, 117, H. 32, it is clearly not a post-fix at all.

No. 87 is almost invariably final, and there are strong *prima facie* reasons for regarding it as a determinative. But it is difficult so to regard its inflected forms, which are never found final, though often with the same antecedents, and therefore the same meaning. Since the sense is the same

why is the sign often (but not always) inflected when followed by other signs, and never once in all the hundreds of instances when it is final? Surely only for phonetic reasons—some application of the principle of vowel harmony with reference to the quality of the following syllables. But if this is admitted, then 𑀓 was certainly pronounced. This lessens the likelihood of its being a determinative.

No. 190 is only found once in the published texts, nor have I seen it elsewhere in the 2,000 inscriptions I have copied. It is therefore not possible to dogmatize about it.

Nos. 193 and 195 are distinct signs, as the sequences show. They are found nearly always final, but, like No. 124, are peculiarly frequent after two or three signs, viz. No. 193 after 𑀓, 𑀔, 𑀕; No. 195 after 𑀖, 𑀗, 𑀘. This, again, suggests a final element in particular names rather than a determinative.

No. 198. If this is a prefixed determinative why is it so definitely prefixed to certain signs only; e.g. it is prefixed to the tree sign in eleven out of thirty-six occurrences.

Nos. 204, 205. Is certainly a prefix in many contexts. On the other hand, it seems definitely to form a single word when prefixed to 𑀙, with which I have found it ten times. Again, in many contexts it appears to be the final element in a concept that commences with a numeral. It would therefore seem safer to regard it when prefixed as an initial element in names rather than as a determinative.

On the whole, then, we must conclude that an examination of the evidence tends to eliminate the probability of the presence of determinatives in the Indus script.

The outstanding contribution of Professor Langdon to the study of the Indus script is his perception that Brahmi was its lineal descendant. Professor Langdon wrote this chapter in 1927. Five years' subsequent research, with four times the material at Professor Langdon's disposal, has only served to convince me of the correctness of this brilliant hypothesis which Professor Langdon was the first scholar to conceive.

APPENDIX II.—SIGN LIST

Explanation

The first line of signs, given against the roman numeral, shows the basic sign and its simple graphic variants. The second line shows the phonetic and “*gunu*” modifications, if any. The third line (or second, if there are no phonetic or “*gunu*” modifications) shows the compounds or “*Sanyukt*” signs. It will be noticed that some of the signs have already reached forms identical with letters in our alphabet. This may not be entirely coincidental if, as I believe, it can be shown that the Sabæan script is, in the main, derived from the Indus script.

CEYLON LITERARY REGISTER. Third Series, vol. i, No. 1,
January, 1931.

We welcome the revival of the *Ceylon Literary Register*, originally started and edited by the late Donald W. Ferguson, proprietor and editor of the *Ceylon Observer*, in a Third Series, the first number of which is before us. The issue contains portions of four articles relating to the history and administration of the island, of which "The Remonstrance of Marcellus de Bouchouwer" (translated from the Dutch many years ago by the late Mr. Ferguson) should prove of considerable interest, as throwing light upon some of the earliest negotiations between the Dutch and the king of Kandy (1609-17). It is hoped that the editors will be able to maintain the publication of the *Register*, which they have succeeded in restarting in a useful form.

C. E. A. W. O.

ARABIA FELIX: ACROSS THE EMPTY QUARTER OF ARABIA.

By BERTRAM THOMAS, O.B.E., formerly Wazir to H.H. the Sultan of Muscat and Oman, etc. With a Foreword by T. E. LAWRENCE (T. E. S.), and Appendix by Sir ARTHUR KEITH, F.R.S., M.D., etc. 9 × 6: pp. xxix + 380: pls. 22: maps 3. London: Jonathan Cape. 1932. £1 5s.

The title which Mr. Thomas has given to the narrative of his courageous, well-planned, and well-executed expedition is apparently not intended to be ironical, yet it is difficult to imagine one less appropriate to the portion of Arabia which he describes. The name is supposed to be a mistranslation of the Arabic Yaman (connected with *yumn* "luck"), which meant "country to the right" opposed to Sha'm (Syria) "country to the left"; and Horace, like other Romans, supposed the Arabs to be rolling in wealth. Now "the Empty Quarter" is not only destitute of wealth in a marked degree, but what philosophers regard as a surer source of happiness and virtue, would seem to be equally wanting among

its inhabitants. Hence "the Empty Quarter" appears to be a more appropriate designation of the region, and Mr. Thomas has the great merit of having at much personal risk and expenditure demonstrated its emptiness.

His results, however, are by no means purely negative. His book is rich in keen observations of the customs, beliefs, and practices of the different groups of nomads, many of which are illustrated by anecdotes narrated by his companions. He has made substantial contributions to many sciences; primarily geography, but also anthropology, zoology, and ethnology. Linguistics are not neglected in this volume, though his ampler treatment of this subject has been reserved for other publications, some of which have appeared in this *Journal*. Further, he has under circumstances of grave difficulty executed a series of admirable photographs which elucidate his narrative; they are not needed to enliven it, as his style requires no help of the kind. Indeed, the success of the book, of which the first impression seems to have been at once exhausted, furnishes good evidence of the author's skill in this line.

Though Mr. Thomas needed no introduction to the public, the reader is likely to welcome Colonel Lawrence's proem, which is characteristic of its author. When he says that "the readable Arabian books are all in English, bar one", he might well have specified the exception; for many of us have found Wrede, Nolde, and Euting far from dull. Neither is Maltzan unreadable. Wrede's work remained unpublished till Maltzan rescued it from oblivion because of a story about a quicksand which v. Humboldt branded as an *Aufschneideri*; Mr. Thomas is unable to confirm it, though he is unwilling to impugn Wrede's veracity. The only statement of his own which is likely to provoke incredulity deals with a matter for which even the Latin language would scarcely provide an adequate veil. Still, like Doughty and unlike Palgrave or Burton, he creates the impression of impeccable accuracy.

D. S. M.

NOTES OF THE QUARTER

Angkor: the New Discoveries in Cambodia

On 22nd October a lecture was given before the members of the Royal Asiatic Society at 74 Grosvenor Street, W. 1, by Miss Lucille Douglass, the painter-etcher.

The lecturer described what great changes have taken place in Angkor since that January morning in 1861 when the French scientist, Henri Mouhot, saw the five towers of Angkor Vat rising like lotus buds from the green sea of the Cambodian jungle. Since that time these marvelous ruins have gradually emerged from the oblivion in which they were shrouded during the centuries when they were given over to the ravages of the tropic vegetation. Owing to the skilful and intelligent work of the French archæologists, the restoration has been conducted in such a manner as to satisfy the most fastidious taste. While the monuments are sufficiently cleared to allow the visitor to move freely, yet, wherever the tropical growth does not impair the building, it is left undisturbed, thus preserving the mysterious charm which is the result of the union of masonry and nature. Where a stone has fallen it is replaced if still available, but no new material is used—the temples still belong to the jungle.

In the past few years important discoveries have been made which produce radical changes in the history of the Khmer civilization. These discoveries have necessitated a redating of the temples. A theory proposed by M. Philippe Sterne several years ago advanced the building of the Bayon or city temple and the allied monuments by a century and a half. However, it was Professor George Coedès, head of the École Française d'Extrême Orient, who deciphered some long-neglected inscriptions on one of the Prasats or little temples, at the corners of the walls of Angkor Thom, which more or less definitely establishes the fact that the Bayon, the great monastery temples of Prah-Khan, Ta-Prohm, and Banteai

Kedai, were built by Jayavarman VII, after his successful war against the Chams in the latter part of the twelfth century. This places the Bayon and its kindred group of temples in the period of the decadence of Khmer art, instead of in the primitive period as formerly accepted. The date of the little temple of Banteai Srei, a perfect gem of Khmer art, has been advanced from a very late period, the fourteenth century, to a much earlier time.

Of undoubted Hindu origin, the Khmers migrated from India about the beginning of the Christian era, and settled on the banks of the Mékong, where an earlier migration had already established itself. In the fourth century A.D. they revolted successfully against their overlords and established their own sovereignty, claiming descent from the exiled Indian prince and the daughter of the Naga King. From this time their rise was rapid. So strong and powerful did they become, that by the sixth century they were firmly established, with a well organized government and powerful army. Chinese travellers noted their prosperity—great cities and a country whose fields of waving green reached as far as the eye could see.

Like another originally nomad race, the Mayans, the Khmers built capitals only to abandon them, pushing steadily southward. At the beginning of the ninth century, however, a prince from Java ruled this kingdom and introduced the building in stone. His grandson, the great Yaçavarman, decided to make a permanent capital for his people on the shores of Tonle' Sap. Later kings added to the glories of the capital—for they were ever patrons of the arts. Between wars with their neighbours, the Thai and the Chams, they occupied themselves with the construction of splendid monuments of stone. Great temples, magnificently carved and gilded, arose to the gods of ancient Angkor, for religion was the dominant note in Khmer life. Tolerance in such matters, as has always been the case in India, prevailed in Angkor and in consequence both Buddhism and Hinduism flourished. The construction of such vast buildings was made

possible by the great number of slaves brought back from the foreign wars, for the Khmer kings lavished on their temples, rather than on their queens, the spoils of victory.

Nor can it be said that the kings were noted for their modesty. When they erected a temple to their favourite deity, on the walls were carved in bas relief the achievements of the royal builder. The height of the classical period was reached with the building of the vast temple of Angkor Vat by Suryavarman II in the twelfth century. For this purpose he selected a site about a mile and a quarter to the south of Angkor Thom. Covering an area of more than $3\frac{1}{2}$ miles of ground, surrounded by a moat some 700 feet wide, this, the most splendid of all the Khmer achievements, simply challenges criticism. Only by the untold agony of countless thousands of slaves could the great pile have arisen. Only by the patient concentration of thousands of craftsmen, directed by a master artist, could each stone have been covered with carving. This temple marks the Golden Age of Khmer art. Had the Khmers left but this one monument, it would place them among the greatest artists of the world.

The fortunes of the kingdom rose and fell—war followed war—not always foreign, for there were serious internal rebellions with disastrous consequences. After the completion of Angkor Vat, came a chaotic period when the Chams advanced to the very gates of the capital and ravaged the Holy of Holies. To revenge this insult the Khmers retaliated under a great leader, Jayavarman VII, who, to commemorate his victory over the hereditary enemy, the Chams, erected the Bayon in the centre of the city and dedicated it to the Bodisattva Lakesvava, placing the four faces of this beneficent saint on the fifty-four towers. Significant of the troublesome times, Jayavarman fortified his capital, Angkor Thom, with a great wall and surrounded it with a moat. This wall was pierced by five imposing gateways, each crowned with the four faces. It is recorded also that this king loved his people and in order to ameliorate their sufferings he built the hospital

monasteries of Prah-Khan, Ta Prohm, and Banteai Kedei, and the lovely little temple of Neak Pean. This period marked the final days of construction. The splendour and glory of Angkor lasted another two hundred years, but by the end of the fourteenth century the Khmers went down before their more vigorous neighbours, the Siamese, leaving only the great temples, whose carven stones are eloquent of Khmer magnificence. The tropic rains and the white ants have destroyed everything perishable which might have thrown light on the tragic end of the Khmer civilization. Angkor, once the beloved of kings, was abandoned to the wild beasts and the hungry arms of the jungle.

The only surviving record of the life and customs of the Khmers is contained in *Mémoires sur les Coutumes du Cambodge*, by Tcheou Ta Kouan, a Chinese secretary who accompanied the Mongol Ambassador to Angkor in 1295. This document containing forty-five paragraphs was translated from the Chinese by the eminent French philologist, Professor Paul Pelliot, in 1900.

From the inscriptions on the stelae found in the various temples, the archæologists have since been able to establish a clear line of kings from the fourth century down to the fall of the kingdom.

"In my thanks to the Council of the Royal Asiatic Society for its hospitality and cordial welcome, I wish to include my appreciation of the generous co-operation of the French archæologists, both in French Indo-China and in Paris, without which it would not be possible for me to present this picture of Angkor."

Ancient Art in Siberia

On 14th January a lecture was given before the Society at 74 Grosvenor Street by Dr. Alfred Salmony, Curator of the Cologne Museum of Far Eastern Art, entitled Ancient Art in Siberia.

The lecturer mentioned how few people realized that the Steppe zone of the Eurasian Continent was the home of an indigenous art, of which the beginnings are most obscure. Surprising as it may seem, these are already to be found there in the earliest period of man, the palæolithic age, though at present the evidence is confined to the site at Malta, west of Irkutsk. The stone sculptures there excavated are allied partly to the European Aurignacian and partly also to the Magdalenian, but they all appear in naturalistic forms.

The neolithic sculpture for the most part follows the great watercourses of Siberia. Such representations, in stone and bone, of animal types, as are at present known, come mainly from the valleys of the Angara and Yenisei rivers. As is the case everywhere else in this period, they are naturalistic in character.

With the advent of metals, definite foci of culture can be recognized in the steppe zone. The most important, and presumably the oldest, is near Minussinsk on the Upper Yenisei. There is evidence there of several distinct periods of the age of metals, the oldest of which is without doubt Iranian and obviously indigenous. It is specially characterized by stone sculptures, representing figures or heads, conventionalized to the point of being unrecognizable. They may possibly be connected with the small artefacts from Türkis, which derive from the Chinese Chou period. Weapons crowned with animal heads also belong to the early Minussinsk period, and can be dated there about the middle of the first millennium B.C. It is remarkable that their numerous Chinese imitations cannot be dated earlier than the third century B.C.

In the bronze age there is another determining factor for the Siberian types, namely the Scythian art of the Black Sea coast and Southern Russia. Only certain of its types extend, with intermediate links, as far as China. This applies especially to the curled animals and recumbent stags. On the other hand the mirror with central loop occurs only in the West and East of the steppe region.

In the fourth century B.C. the Sarmatians, who were Iranians related to the Scythians, made their way to the Black Sea. They enriched North Asiatic Art with types which in their turn travelled as far as China. They decorated their bronzes with coloured cells, such as had already appeared, but without inlay of colour, in Siberian patterns. They showed a preference for the combat of animals, a theme which appears in the Altai region (the neighbourhood of which was certainly the central source of Peter the Great's gold plaques, though the spot has not yet been determined), and again on the frontier of China. Winged mythical beings, inherited from the Ancient East, are often represented; but these are lacking at Minussinsk and in the little explored Baikal region, as are also the animal combats altogether. On the plaques of these regions only the local fauna is represented. But two Sarmatian motifs can be traced over the whole of the steppe zone, namely birds' heads affixed inorganically to the ends of animals' limbs, and the bodies of animals twisted in the middle.

With the commencement of the first millennium A.D., and the preponderance of the Turks and Mongols, Siberian art also lost its vitality. In the South, in the old centres of culture, it yielded to Chinese, and later on to Seljuk, influences. Meanwhile in the North, and especially between the Urals and the Yenisei, there was developed a special art, not transmitted to China, which conventionalized animals in a heraldic style and often used them as protective totems for men. From this special Northern Siberian style the art of Shamanism is to be derived; and it is possible that it may have had some influence on the Indians of North America.

Many of the photographs showed pictures of articles which had never been published before.

The Language of the Mohammedan "Traditions" (Ḥadīṭ) as Indication of Origin and Sources

On Thursday, 11th February, Dr. A. S. Yahuda, formerly Professor of the Madrid University, read a paper before the Royal Asiatic Society at 74 Grosvenor Street, W. 1, on "The Language of the Mohammedan 'Traditions' (Ḥadīṭ) as Indication of Origin and Sources".

His object was to show that a special study of the linguistic and stylistic peculiarities of the Ḥadīṭ yielded the best means for detecting their sources, in order to establish whether a "tradition" was derived from Hebrew, Syriac, Persian, or other languages, i.e. was of Jewish, Christian, or Iranian origin respectively. By a long series of examples chosen from among the authorized and unauthorized Ḥadīṭ collections, Dr. Yahuda proved that many obscure words and hitherto unintelligible passages became perfectly comprehensible by the discovery of their sources and the identification of the languages from which they were taken.

In applying the same criteria to the text of the *Qu'rān*, the lecturer was able to explain some passages which had always been a *crux interpretum* for Muhammedan and modern *Qu'rān* Exegetes.

It is hoped that the lecture may be published in another issue of this *Journal*, followed by the publication of some of Dr. Yahuda's abundant materials on the language and sources of the *Qu'rān* and the Ḥadīṭ.

From Cairo to Mekka and El Medina

Before the Royal Asiatic Society on Thursday, 10th March, Mr. Eldon Rutter gave a fascinating lecture on the Mohammedan Pilgrimage, illustrated by lantern slides taken at great personal risk and entitled "From Cairo to Mekka and El Medina".

Amongst other things he said :—

I planned to set out on my journey to Mekka in the spring

of 1925. On the 20th May I left Cairo by railway for Suez, travelling alone. At Suez I found lodging for the night in a pilgrim lodging-house. Early next morning I embarked in a little steamer which was sailing to Massowa in Italian Eritrea. We arrived there four days later. I joined some Moors and two Arabs, all of whom were going to Mekka. I was disguised as a Syrian, and passed under the name of Ahmad Salalh-ed-Dîn.

Our party had to find some means of crossing the Red Sea. The political situation in Arabia was normal, that is to say, fighting was going on. War was in active progress between King Husein of the Hijâz and Ibn Saûd the Wahnâbi Sultan. This made things more difficult for us pilgrims, for the Hashimites were blockading the coast in order to prevent supplies from reaching the Wahnâbis, and the Wahnâbis, while welcoming smuggled supplies, looked with extreme suspicion on all strangers who landed in the country.

However, at length we found a dhow whose captain agreed to take us across to the Arabian side. We set sail on the 30th May, and after creeping for eight days over the waters of the Red Sea, half stupified by the fierce rays of the sun, we came to the Arabian shore at a place called El Gahm. Here we landed, and hired camels to take us northward to Mekka. For sixteen days we crawled across sun-scorched sandy plains and threaded our way through mountains of barren rock, where the air was like a blast furnace. The wells were infrequent, and all the water was brackish. At last we came to a large dry water-course, called the Wâdi Yelamlam, which marks the southern boundary of the haram or sanctuary of Mekka. It is not only Mekka itself which is sacred, but the country surrounding it on all sides to a distance of about 20 miles also.

Being now about to pass the limits of the sanctuary, we were obliged to discard our ordinary clothes, and put on the pilgrim dress known as El Ihrâm. This consists of two pieces of cotton material, one of which is worn about the

waist and the other thrown over the shoulders. Thus attired, we repeated certain prayers, and then mounted and moved off again.

As darkness fell the hills merged in the blackness of the night sky. The stars seemed to come down, growing nearer and more real than the ground which glimmered and faded under the feet of my camel. Occasionally the pilgrims cried, "At Thy command, O Allah, here am I." Thus we moved onward in the silent night. I thought the Arabs must have lost their way. There could not be a great city in the midst of this desolation. I looked eagerly about me as my camel paced forward. Then, without warning, the tall forms of shuttered houses became detached from the darkness. We were passing into a narrow unpaved street. Houses rose up on either hand, shutting out the sky. I was in Mekka.

I had passed the forbidden limits, and entered the very streets of the Muslim Holy City. Discomfort was forgotten as my camel carried me further into the maze of alleys which surrounds the Great Mosque. I dismounted in the Market Place, and a man whom I met there conducted me to the house of a pilgrim-guide named Abdurrahman. I had not been there many minutes when I heard the Call to Prayer being chanted from the seven minarets. I left the house with my host, and made my way to one of the gates of the Mosque. I stepped across the threshold and peered through a forest of stone columns. Beyond this I saw a great open quadrangle, in the centre of which stood a cube-shaped building about 50 feet high. This was the House of Allah. It was covered by a black cloth, and hundreds of pilgrims were hurrying round and round it, repeating prayers. Over the eastern hills the faint light of dawn was beginning to appear in the sky.

Having duly performed the rites of the Muslim Pilgrimage, and spent some nine months in and around Mekka, I set out for El Medina, in order to visit Muhammad's tomb. El

Medina lies nearly 300 miles north of Mekka. Travelling with a number of Egyptian pilgrims, I reached it in twelve days' camel-march.

We entered the city through the western gate, and as we came to a gap in the inner wall, there burst upon our view the sight of a lofty green dome, surrounded by five white minarets. The Prophet's Tomb lies under this dome.

I found a guide to conduct me in the rites of visiting the Tomb and I lived in his house for the two months of my stay in the city. The rites are not obligatory. They form no part of the religion of Islam, but most of those Muslims who can afford the time and expense visit El Medina out of veneration for the Prophet.

The days of my sojourn in Arabia were now drawing to a close. I arranged to travel down to the coast with a couple of Arab merchants. We set out on the 18th June, and reached the port of Yanbua five days later. From there I travelled by steamer to Port Sudan, whence I reached Cairo by way of Khartoum.

The First Bombay Historical Congress

The First Bombay Historical Congress was held in Bombay from 22nd to 27th December, 1931. The Rev. H. Heras, S.J., M.A., Director of the Indian Historical Research Institute, St. Xavier's College, Bombay, had kindly accepted the post of Delegate of the Royal Asiatic Society of Great Britain and Ireland.

The Congress proved a very successful introduction to what we all hope will be a long series of such meetings for the purposes of filling in the blanks in the wonderful history of India, and the seeking to form a perfect picture of the ancient civilizations which have passed across her stage. The Congress was opened by H.E. The Rt. Hon. Sir F. H. Sykes, P.C., G.C.I.E., G.B.E., H.C.B., C.M.G., Governor of Bombay, in the presence of nearly 1,500 people. A number of interesting papers were read and two expeditions had been

thoughtfully arranged as a representation of the artistic productions referred to.

These public meetings and the private conversations which ensued will go far to influence the advancement of historical research in Bombay. Father Heras' full report, a copy of the Presidential Address delivered by Rao Bahadur Dr. S. Krishnaswami Aiyangar, M.A., Ph.D. (member of the R.A.S.), together with a Guide and Catalogue to the Congress, are lodged in the Library of the Society for consultation by persons interested.

Notices

In accordance with Rule 93, the Library will be closed for cleaning and repair throughout the month of August.

UNSIGNED CORRESPONDENCE

Will the writer of a request for information as to the rules of membership, dated 22nd December, 1931, from Ballia, U.P., India, kindly let the Secretary have his name, or resubmit the request. So far it has been impossible to reply.

The Quarterly Numbers of the *JRAS.* are forwarded to subscribers about the 15th January, April, July, and October respectively. Should a volume not be received within a reasonable time after the prescribed date, notification should be sent to the Secretary of the Society as early as possible, but, in any event, by the end of the quarter concerned. Should such notice not be received by the Secretary within six months of the first day of the quarter for which the volume has been issued, the onus cannot be admitted, and the volume cannot be replaced.

The Annual List of Members will be published with the *Journal* in July. Members who wish to make any alteration in name, style, or address, must send the fully corrected entry so as to reach the Secretary by 1st June.

Local Self-Government in the Vedic Literature

By B. G. BHATNAGAR

I. THE GLEANINGS FROM THE RIGVEDA—I to IX *Maṇḍalas*, 1200 TO 1000 B.C.

IN the first nine *maṇḍalas* of the *Rigveda* there is hardly anything which deals directly with local government or which, even indirectly, could give us an idea of the constitution and working of local government institutions of the period. The only terms which we find used in the sense of a locality of some sort are: (1) *Gaya*, (2) *Gṛha*, (3) *Pastya*, (4) *Harmya*, (5) *Grāma*, (6) *Pūr*, (7) *Viś*, and (8) *Rāṣṭra*. Of these the first four are all used in the sense of a house or household. The term *Grāma* is used both in the sense of a village ¹ (that is a locality) and a body of men ² (that is a division of the Āryan people). The term *Pūr*, though understood by some ³ to mean a town, is distinctly used in the sense of a fortification.⁴

The term *Viś* is interpreted by some to mean the area under the settlement of a *Viś*; while others think that it was merely a division of the people (the *Jana*) and was not the name of that locality which happened to be colonized by a *Viś*. However, I am inclined to think that, like the term *Grāma*, *Viś* was also used in both the senses noted above.

¹ *RV.*, i, 44, 10; 114, 1; ii, 12, 7.

² *RV.*, i, 100, 10; iii, 33, 11.

³ Pischel and Geldner, *Vedische Studien*, i, xxii, xxiii.

⁴ *RV.*, i, 53, 7; 58, 8; iii, 15, 4; iv, 27, 1, etc.

The reason which leads me to the above view is, that in these *maṇḍalas* we also come across such terms as *Gṛhapati*, *Jāspati*, *Pūrpati*, *Viśpati*, and *Rājan*. The presence of these terms indicates that of the eight terms that we find used in the sense of a locality only four were recognized administrative units in the society of the period, and these four were the *Gṛha* (with its variants *Gaya*, *Pastya*, and *Harmya*) with its head the *Gṛhapati*, or *Jāspati*, *Pūr* with its head the *Pūrpati*, *Viś* with its head the *Viśpati*, and *Rāṣṭra* with its head the *Rājan*.

Out of these four the *Pūr*, being merely a fortification, should not be classed as a local administrative unit. The idea that the *Gṛha*, *Viś*, and *Rāṣṭra* were local administrative units finds further support from the fact that during this period the subdivisions of the Āryan people appear to be into (1) *Gṛha*, (2) *Viś*, and (3) *Jana*.

Starting with the well-recognized facts that the Āryans when they entered India consisted of a number of *Jana*, that each *Jana* consisted of a number of *Viś*, and each *Viś* of a number of *Gṛha* (or families), we may suppose that a certain territory came to be under their influence. The next step would be to allot it to the people. The land which a *Jana* got as its share came to be its *Rāṣṭra* and its head the *Rājan*. The territory constituting the *Rāṣṭra* of a *Jana* must have been divided into the same number of allotments as the number of *Viśaḥ* within the *Jana*, and the head of each *Viś* came to be known as the *Viśpati*. Now, when the problem of allotting land to each *Gṛha* (family) within the territory assigned to each *Viś* arose, most probably it was not considered safe for an individual family to settle down by itself in a state of isolation, surrounded as the Āryans were by a host of enemies on all sides. Therefore, within the territory assigned to a *Viś*, groups of families with their cattle and other possessions were formed into settlement units and each such unit was called a *Grāma*, and the land assigned to it also came to be known as *Grāma*. I take the view that in the beginning *Grāma* was

not a distinct division of the Āryan people. The term came in use to denote a band of warriors, detached from the main body of the Āryan people either for war or for colonization, and later on when colonization became more important, it also came to be used for a group of families, within a *Viś*, that was detailed, or voluntarily decided, to go and settle on a certain piece of land. Being a resultant of the peculiar circumstances of the situation it was not a well-recognized administrative unit in the beginning and that is why we do not find any mention of a leader or headman of the *Grāma* in the early Rigvedic hymns. The Āryans, so far, were in a continuous state of flux. Neither had they had time and leisure enough to develop the new organization in all its details, nor, when we reflect upon the facts of the situation, as they appear to have then existed, was there any necessity for any such development from the very start.

Now arises the very interesting question whether the tribal-cum-local chiefs such as the *Gr̥hapati*, the *Viśpati*, and the *Rājan* were hereditary or elective, autocratic or constitutional, and what was the administrative organization within the *Grāma*. Some people have tried to see in the *Vidatha*, the *Sabhā*, and the *Samiti* popular assemblies in which election of the king took place, and which acted as a constitutional check on his powers. This view, I am afraid, appears to be based on far-fetched interpretations of the Vedic texts, and is by no means justified by the data available in these *maṇḍalas*.

The term *Vidatha* is mentioned in a number of places in the early *Rigvedic* texts and onwards. Though in some passages the term is used in the sense of a house, yet in most of the passages the sense of a gathering for sacrificial or religious purposes seems to fit in. However, none of the passages in which the term occurs, suggest even remotely the connection of *Vidatha* with administrative affairs whether central or local. We can, therefore, safely ignore it in the present connection. Coming to the "*Samiti*" we find it mentioned that "the sage

adorns the depths of air with wisdom ; this is the meeting (*Samiti*) where the gods are worshipped".¹ Yet another interesting datum that lends support to the above view is to be found in the fact that we find *Parīṣad* and *Samiti* used as synonyms in the *Upaniṣad* period. We find a common story repeated in two *upaniṣads*—(1) the *Chāndogya*, v, 3, 1, and (2) the *Bṛihadāraṇyaka*, vi, 2, 1. Here we find one Śvetaketu, the son of Aruṇi going to the religious assembly (*Samiti* in the *Chāndogya* and *Parīṣad* in the *Bṛihadāraṇyaka*) of the Pāṇcālas. The idea of Mr. Jayaswal that the *Samiti* was "the national assembly of the whole people or *Viśaḥ*", that the function of the *Samiti* was "electing the *Rājan*", and that "it could also re-elect a king who had been banished", and that "they were thus a sovereign body from the constitutional point of view", does not appear to be correct. To begin with, in the entire Vedic literature there is nothing to show that the *Samiti* was the assembly of the whole Āryan people. Jayaswal himself does not mention any direct reference in support of this statement of his. The line of argument which has led him to the above conclusion is that because we find either the whole Āryan people (*Viśaḥ*) or the *Samiti* electing or re-electing the king, therefore the *Samiti* was the national assembly of the whole Āryan people. Without questioning the soundness of his line of argument, I may be permitted to say that from none of the passages relied upon by Jayaswal in this connection is the alternative character of the *Samiti* to the whole Āryan people even remotely suggested.² We may now note that we cannot, on the strength of *Atharva-veda*, iii, 4, 2, maintain that "re-electing a king who had been banished" was another of the functions of the *Samiti*. Nor can we say that the *Samiti* was a sovereign body from the texts of *Rigveda*, x, 191, 3, and *Atharva-veda*, vi, 64. Jayaswal has argued that "this indicates

¹ *RV.*, i, 95, 8 : *tveṣaṃ rūpaṃ kṛṇta uttaraṃ yatsaṃ-prūcānaḥ sadane gobhiradbhiḥ. Kavir budhnam pari marmrjyate dhiḥ sasādevatātā samitir babbhūva.*

² Jayaswal has based his idea on *RV.*, x, 173, 1 and *AV.*, vi, 87, 1 ; 88, 3 ; iii, 4, 2 ; 4, 5 ; v, 19, 15.

that matters of state (*mantra*) were discussed in the *Samiti*". Whitney and others have translated the word *mantra* to mean counsel and that is also the opinion of the learned teachers of the Vedic lore in our University.

The opinion of Dr. Ganga Natha Jha is that the word *mantra* in the sense of counsel given by a *mantrin* (the adviser of the king) has not been used in the Sanskrit literature till the period of Kauṭilya, that is till the third century B.C., and therefore its interpretation in that sense by Jayaswal is unwarranted.

After the examination of the data available on *Samiti* it appears to me that the *Samiti* was primarily the name of religious gatherings and later on, as the specialization of functions became more and more rigid, it came to be more or less a gathering of those who were well versed in the Vedic philosophy and literature. The continuous wars through which the Āryans had to pass while settling down in India brought into prominence the Kṣatriyas as the fighting and the ruling class. The same set of conditions appears to have brought into existence the *Samiti*, a specialized body of philosophers and religious teachers, that is, the priestly class. And, as by this time the priestly class had come to acquire almost an exclusive hold on the religious lore, and by introducing complexities of ritual had succeeded, remarkably well, in acquiring a predominant hold on the minds of the people, it was but natural for every king and, much more so for an exiled king, seeking restoration, to see that the assemblage of the priestly class, as typified in the *Samiti*, was agreeable to his cause. The same appears to be the case with the people in general. What these hymns indicate is not any regular election by the people, but some sort of general approval of a new king and general acquiescence in the case of a king returning from exile.

Coming to the *Sabhā* we find that it was a gathering "where men of lofty birth sit down together".¹ It was cherished

¹ RV., vii, 1, 4.

with considerable regard.¹ Fire was kept burning in it,² and it was primarily a gathering for secular purposes.³ However, in the first nine *maṇḍalas* the data are so meagre that not much can be said about the functions of the *Sabhā*.

II. BRĀHMAṆA PERIOD, 1000 B.C. TO 500 B.C.

In the literature of this period we get a little more information about the conditions of life in Vedic India. For one thing, we notice a gradual evolution and a gradual development of life in some of its phases. This gradual development, though most clearly visible in religious philosophy and religious ritual, is yet noticeable in the case of things mundane also, such as the rites of a king's consecration and the various rites prescribed for securing headship of a village.

In the earlier portion the idea of the ownership of land does not appear to have come into existence. In the hymns of that period nobody prays for the acquisition of land. What they pray for is cattle, longevity, and offspring. Here, however, it is very much in prominence, and the prayers for the acquisition of a village and *mantras* for securing a village are numerous. We may, therefore, conclude that the texts of the Brāhmaṇa Period give us an idea of the stage when the Āryans had settled down in the country and had evolved some sort of a regular government. This hypothesis is suggested by the general development of social organization as noted above, and finds support from the occurrence of a number of officials in the texts of the period. In addition to the eleven *Ratnins* ⁴ whose presence we note at the time of the king's consecration we find a few others such as the *Jīvagrāh*,⁵ the *Grāma-vādin*,⁶ the *Madhyamāsi*,⁷ and the

¹ RV., i, 91, 20.

² RV., ii, 24, 13; iv, 2, 5; vii, 1, 4.

³ RV., i, 167, 3; vi, 23, 6; viii, 4, 9.

⁴ *Black yajus*, Keith, i, 8, 9.

⁵ RV., x, 97, 11; 12.

⁶ *Taittirīya Saṁhitā*, ii, 3, 1, 3; *Maitrāyaṇī Saṁhitā*, ii, 2, 1.

⁷ RV., x, 97, 12. *Vājasaneyi Saṁhitā*, xii, 86. AV., iv, 9, 4.

Sthapati.¹ Some of these, viz. the *Grāmaṇī*, the *Grāma-vādin*, and the *Sthapati* appear to have been distinctly local officers.

The presence of these officials suggests a development in the administrative organization of the country, and the acquisition of a certain degree of stability and order in the government. The presence of such local officers as the *Grāmaṇī* and the *Grāma-vādin* indicates that by this time the *Grāma* had come to be definitely recognized as a distinct territorial administrative unit. In the literature of this period also we come across the term *Pūrpati*. But the *Pūr* does not appear to have been understood in the sense of a city or town, but still, as in the early Rigvedic period, only as a fortified place, with a *Pūrpati* at its head to command the forces within the fortification. The reason why I am inclined to take this view is to be found in the absence of the *Pūrpati* in the list of the *Ratnins*. The mention of the *Grāmaṇī* and the *Sthapati* amongst the *Ratnins* suggests that they were important functionaries in the administrative organization of those days. And the absence of the *Pūrpati* suggests that the realms of those days mostly consisted of villages and that the towns had not come into existence, or at least into administrative prominence. Though there is no evidence on the point, yet it may be hazarded that the realm of a king, if it happened to be large enough, was divided into a number of divisions with a *Sthapati* at the head of each division.

The question whether the two terms, *Grāmaṇī* and *Grāma-vādin*, stand for one and the same officer or represent two distinct officials is very interesting. But from the data available it hardly admits of any conclusive answer. According to the *Vedic Index* the term *Grāma-vādin* "apparently means a village judge". And the term *Grāmaṇī* "the headman of a village". The term *Grāma-vādin* occurs only twice² in

¹ *Taittirīya Saṁhitā*, iv, 5, 2, 2, and *Maitrāyaṇī Saṁhitā*, ii, 9, 3. *Vājasaneyi Saṁhitā*, xvi, 19.

² *Taittirīya Saṁhitā*, ii, 3, 1-2 ff. *Maitrāyaṇī Saṁhitā*, ii, 2, 1.

the entire literature of the period, while the term *Grāmaṇī* occurs very often : and this may be made to suggest that the two terms are interchangeable.

However, there is one point to be noted in this connection : it is that in both the cases where the *Grāma-vādin* is used, the king is in trouble. In the first case (*Taittirīya*, ii, 3, 1-2 ff.) the king is expelled and is trying to win back his kingdom, and in the other (*Maitrāyaṇī*, ii, 2, 1) the king is being besieged. This peculiarity is significant and may be made to suggest that the *Grāma-vādin* was the spokesman of the village community and, as it were, the popular representative. His connection with the village *Sabhā* (*Maitrāyaṇī*, ii, 2, 1) also strengthens this view ; while the *Grāmaṇī*, whom we never find connected with the *Sabhā* and always prominent at the time of the king's consecration and military affairs along with the *Senānī*, appears to have been an officer of the king. On the whole I am inclined to the view that the *Grāma-vādin* and the *Grāmaṇī* were two distinct officers. The *Grāma-vādin* was pre-eminently a representative of the people, and as such the leader of the village community. He had his *Sabhā* and he decided the questions of *meum* and *teum* in the village with the assistance of the village *Sabhā*. Though there is no direct evidence on the point, yet from his position in the village community it may be inferred that the post of the *Grāma-vādin* was not in the gift of the king, but depended upon the goodwill of the people. Coming to the *Grāmaṇī*, we may say that the idea of Zimmer that the *Grāmaṇī* had military functions only appears to have a grain of truth in it. The idea is suggested by the fact that both *Senā* and *Grāma*, in the beginning, were names of military units, the *Senā* for the army as a whole and the *Grāma* for a detached body of people, presumably sent on a minor expedition. But, when the *Grāma* came to be settled down on a piece of land, and the area settled upon by it came to be known as *Grāma*, then certainly the leader of the *Grāma* could hardly be expected to have continued as a military head only. Under conditions

of settled life he must have acquired civil functions also. That he had both civil and military functions and was the chief executive officer in the village is suggested by a number of texts.¹ That the *Grāmaṇī* was appointed from amongst the people (*Viśaḥ* or *Vaiśya*) is clear.² The *Grāmaṇī*'s connection with the royal person seems to point to his having been a nominee of the king rather than a popularly elected officer.³ The offering of *Grāmaṇī* to *Yādra* in the *Purushamedha* definitely points to the unpopularity of this office amongst the people, and may suggest that he was an appointee of the king rather than an elected representative of the people. However, the reference to *Manu* as *Grāmaṇī*⁴ may suggest that he was not an elective officer or a nominee of the king, but just a hereditary officer who occupied that place because of his patriarchal position in the village community. I, for one, am inclined to take the view that the *Grāmaṇī* was an officer of the king, and that his office was hereditary. This view not only reconciles the two sets of conflicting references about the *Grāmaṇī*, but also well accords with our theory of evolution of the term *Grāma*, as discussed in the early Rigvedic Period. The first military leader of the *Grāma* and his immediate descendants had military functions only, and the civil functions were performed by the popular representative of the people—the *Grāma-vādin* and his *Sabhā*. But later on, as the power of the king increased, and the internal government became more and more organized and consolidated, the power of the popular representative and the popular assembly, the *Sabhā*, declined, and the power of the king's executive officer—the *Grāmaṇī*—became more and more. In this connection it is also interesting to note that the *Grāma-vādin* occurs only in the *Taittirīya* and the

¹ *RV.*, x, 107, 5. *Vāj. Sam.*, xv, 15. *Tait. Brāh.*, ii, 7, 18, 4. *Sat. Brāh.*, v, 4, 4, 18. *Bṛihad. Up.*, iv, 3, 37-8.

² *Kāthaka Samhitā*, viii, 4; xv, 4. *Maitrāyaṇī Samhitā*, i, 6, 5. *Tait. Brāh.*, i, 1, 4, 8; 7, 3, 4. *Sat. Brāh.*, v, 3, 1, 5.

⁴ *Kāthaka Samhitā*, viii, 4. *Taitt. Brāh.*, i, 1, 4, 8.

Maitrāyaṇī Saṁhitās, and not at all in the *Atharva-veda*, the tenth *maṇḍala* of the *Rigveda* and the *Brāhmaṇas*, etc., all of which are of later date than the *Taittirīya* and the *Maitrāyaṇī*. In the later literature of the period the occurrence of the *Sabhā* in connection with villages is also absent. This perhaps indicates that in the early part of our period the democratic sense of the tribal organization was still somewhat strong, and the king and his officers had not come to acquire a very dominant position. And that later on, as the power of the king increased and as the system of government became more and more consolidated, the village *Sabhā* with its leader and spokesman, the *Grāma-vādīn*, receded into the background and the position of the king's executive officer, the *Grāmaṇī*, became more and more important in the village.

THE SABHĀ

Paucity of data in the early *maṇḍalas* of the *Rigveda* prevented us from saying much about the *Sabhā*. But in the literature of the period under consideration we get, though by no means full and convincing, yet more detailed and comprehensive data about the *Sabhā*. To begin with, the data of this period suggest the idea that the term *Sabhā* also came to denote a meeting-place. In a number of passages the word *Sabhā* means nothing but a hall or a place of meeting.¹ Some passages would indeed suggest that it meant a meeting-room, something like a modern drawing-room in a private house.² There are other passages which indicate that each village had a common meeting-place, something like our modern *Caupāl*, *Cāvdī*, or *choultry*.³ Some passages also indicate that the king had his *Sabhā*.⁴ In this connection it is

¹ *RV.*, x, 34, 6; *Taittirīya Saṁ.*, iii, 4, 8, 6; *Maitrāyaṇī Saṁ.*, i, 6, 11; iv, 7, 4; *Taittirīya Brāh.*, i, 2, 1, 26; i, 1, 10, 3; iii, 4, 16, 1; *Kauṣītaki Brāh.*, vii, 9.

² *Taittirīya Saṁ.*, iii, 4, 8, 6. *Taittirīya Brāh.*, i, 1, 10, 3; *Chāndogya Up.*, viii, 14.

³ *Maitrāyaṇī Saṁ.*, i, 6, 11.

⁴ *Satapatha Brāh.*, iii, 3, 4, 14; *Chāndogya Up.*, v, 3, 6.

not clear whether the *Sabhā* stands for that room in the king's house where he used to receive visitors or for a group of the king's courtiers and officials.

However, recalling to our minds the sense in which the term *mantra* was used during this period, we may say that the *Sabhā* in connection with the king stands for the room in which he used to receive visitors.

The data of this period further support the idea that the *Sabhā* was also the name of a gathering where we find people sometimes gambling,¹ sometimes merry-making, and sometimes busy in debates and discussions on serious matters of socio-political importance.² More than this, we find some terms and details which suggest that in villages the *Sabhā* was more or less a well-recognized and respected institution³ with a definite constitution and functions. The presence of terms like *Sabhāpati*⁴ and *Sabhāsad*,⁵ suggests that the *Sabhā* in its regularly constituted aspect of a public body, had its president, the *Sabhāpati*, and its members, the *Sabhāsads*. This idea finds further support from the occurrence of the term *Sabheya*, which means fit for the *Sabhā*, that is, fit to become a *Sabhāsad*. That the term *Sabheya* stands for a person or class of persons distinct from *Sabhāsads* is suggested by one passage in the *Taittirīya Brāhmaṇa*.⁶ Whether this distinction between the two terms could suggest that, while a number of people may have been considered to have the necessary qualification for being considered *Sabheya* (that is, fit to become members of the *Sabhā*), only a few could actually become *Sabhāsads*, or members of the *Sabhā*, is difficult to

¹ *RV.*, x, 34, 6. *Maitrāyaṇī Sam.*, i, 6, 11; *AV.*, v, 31, 6; xii, 3, 46; *Taittirīya Brāh.*, iii, 4, 16, 1.

² *RV.*, x, 71, 10; *Taittirīya Sam.*, i, 8, 3, 1; iv, 5, 3, 2; *Maitrāyaṇī Sam.*, ii, 2, 1; *AV.*, vii, 12, 1; xii, 1, 56; xv, 9, 2, 3; v, 31, 6, etc. *Taittirīya Brāh.*, i, 1, 10, 6.

³ *Taittirīya Sam.*, iv, 5, 3, 2.

⁶ *Taittirīya Brāh.*, i, 2, 1, 26.

say. The fact that some people were particularly considered fit to go to the *Sabhā*,¹ and for others it was not considered proper to go to the *Sabhā*² (women were not thought fit to go to the *Sabhā*) also lends support to the idea that for being considered a fit person to be a member of the *Sabhā* certain qualifications were insisted upon. The occurrence of a passage in the *Atharva-veda* which lays down a rite for becoming *Sabheya* also supports the above point of view.³

That one of the functions of the *Sabhā* was adjudication of suits is indicated by (1) the connection of the village *Sabhā* with the *Grāma-vādin*—the village judge,⁴ and (2) the occurrence of the term *Sabhācara*.⁵ According to the *Vedic Index*, “as he (the *Grāma-vādin*) is dedicated to *Dharma* (justice), it is difficult not to see in him a member of the *Sabhā* as a law court, perhaps as one of those who sit to decide cases; there is nothing to show whether the whole *Sabhā* did so or only a chosen body. The special use of *Sabhācara* suggests the latter alternative.”⁶

Yet another interesting term which occurs in the literature of this period is *Sabhāvin*, which according to Sāyaṇa means the keeper of a gambling hall. The occurrence of this term is significant, as it completes the working and administrative organization of the *Sabhā* in its threefold aspect. As a general administrative body of the village, it had its *Sabhāsads* and its president, the *Sabhāpati*; as a law court it had, probably, a few selected *Sabhāsads* out of the whole body of the *Sabhāsads* of the *Sabhā* of a village; its *Sabhācaras*, most probably presided over by the *Grāma-vādin*; and, in its aspect as a common village hall, where people met for gambling and merry-making, it had its social secretary or some such person in the *Sabhāvin*.

The Date of the 11th Paripāḍal

By K. G. ŚAṆKAR

THE *Paripāḍal*, which belongs to the *Ettutogai* collection, is of unique interest in that it enables us to fix the Saṅgham age accurately, by a careful consideration of its astronomical data. The data are contained in the following opening lines of the 11th *Paripāḍal* of Nallanduvanār :—

*virikadir madiyamodu viyal viṣumbu puṇarppa
verisaḍaiyelilvēlan talaiyenak kīlirundu
teruviḍaiippaḍutta mūṇṇonpadirrukkaiyu
lurukēlu vēllivandēriyal śēra
varudaiyaip paḍimagan vāyppap poruḍeri
pundi mitunam porundap pular viḍiya
laṅgiyuyar nirpa vantaṇan paṅguvi
nillattunaiykkuppāleyda viraiyaman
villirkaḍai makaramēvap pāmbollai
madiyamaraiya varunālil vāynda
podiyin munivan puraivaraikkīri
mitunamaḍaiya virikadir vēni
ledirvaravu māriyiyaikena vivvārrār
puraikēlu śaiyam polimalaitāla.*

In this passage the actual positions of the leading planets and stars are given as observed at daybreak on a day at the beginning of a rainy season. The first three lines inform us that the heavens were divided into three *vīlīs*, named after the *rāśis* indicated by *eri* (Kṛttikā, whose God is Agni), *saḍai* (Ārdrā, the asterism of Śiva), and *vēlam* (Rēvatī or Bharanī, whose *yōni* is the elephant). Parimēlaḷagar, commenting on them, says that by Kṛttikā is meant R̥ṣabha, which includes $\frac{2}{4}$ Kṛttikā segment. But this assumes without proof that Nallanduvanār used a Rēvatyādi zodiac; and it is besides strange that he should have indicated a *rāśi* by a *nakṣatra* segment, part of which was in another *rāśi* (Mēṣa).

We must, therefore, infer that Kṛttikā, Ārdrā, and Rēvatī or Bharanī are the asterisms so named, and not the segments, and that they were in R̥ṣabha (30° to 60°), Mithuna (60° to 90°) and Mēṣa (0° to 30°) respectively. The longitudes of these asterisms are given in several *siddhāntas*, but the only dated *siddhānta* is the *Brahma-Siddhānta* of Śaka 550 = 628 A.C. According to it, the polar longitudes of Rēvatī, Bharanī, Kṛttikā, and Ārdrā are 0° , 20° , $37^\circ 28'$, and 67° respectively. The *yogatārā* of Rēvatī is identified with ζ Piscium, whose longitude in 1690 A.C. was, according to Flamsteed's *Catalogus Britannicus*, $15^\circ 32'$. If therefore by *vēlam* we mean Rēvatī, it could not have been in Mēṣa before 628 A.C., and the *Paripādala* would have to be dated then or thereafter only. But this is not necessary, as by *vēlam* Bharanī may have been meant. The *yogatārā* of Bharanī is identified with 35 Arietis ($42^\circ 36'$ in 1690 A.C.), or with 41 Arietis ($43^\circ 52'$ in 1690 A.C.). The true longitude of Bharanī, corresponding to its polar longitude of 20° is $24^\circ 41'$, and its precession in 1,062 years (from 628 A.C. to 1690 A.C.) is therefore $17^\circ 55'$ or $19^\circ 11'$. Since these give us the rate of sidereal precession as 1° in every $59\frac{1}{4}$ or $55\frac{1}{3}$ years, of which the former accords more closely with the true rate of 1° in 61 years, as determined by Mr. L. D. Svāmikanṇu Pillai, we have to identify Bharanī with 35 Arietis only. Accepting this identification, we may infer that Bharanī could not have been in Mēṣa before $24^\circ 41' \times 59\frac{1}{4} - 627 = 835$ B.C. or after $(30^\circ - 24^\circ 41') \times 59\frac{1}{4} + 628 = 943$ A.C. This period of 1,777 years (835 B.C. to 943 A.C.) is too wide for our purpose. But Kṛttikā and Ārdrā will help us to define the limits more closely. The *yogatārā* of Kṛttikā is identified with Aleyone ($55^\circ 40'$ in 1690 A.C.), and its true longitude is $38^\circ 58'$. Its precession in 1,062 years is therefore $16^\circ 42'$, yielding a rate of 1° in $63\frac{3}{8}$ years, and it could not have been in R̥ṣabha before $628 - 8^\circ 58' \times 63\frac{3}{8} = 58$ A.C. The *yogatārā* of Ārdrā is usually identified with ∞ Orionis ($84^\circ 25'$ in 1690 A.C.), and its true longitude is $65^\circ 5'$. Its precession in 1,062 years is therefore $19^\circ 20'$,

yielding a rate of 1° in 55 years. But this rate is too wide of the true rate (1° in 61 years), and the latitude of α Orionis is $16^\circ 4' \text{ S.}$, while the polar latitude of $\text{\AA}rd\text{\AA}$ is given as 11° S. The *yogat\text{ā}r\text{ā}* of $\text{\AA}rd\text{\AA}$ may therefore be more correctly identified with 135 Tauri of $9^\circ 10' \text{ S.}$ latitude, and true longitude of $83^\circ 20'$ in 1690 A.C. Its precession in 1,062 years would be $18^\circ 15'$, yielding a more probable rate of 1° in $58\frac{1}{2}$ years, and it could not have been in Mithuna before $628 - 5^\circ 5' \times 58\frac{1}{2} = 332 \text{ A.C.}$ Even calculating at the true rate of 1° in 61 years, $\text{\AA}rd\text{\AA}$ could not have been in Mithuna before $628 - 5^\circ 5' \times 61 = 318 \text{ A.C.}$ Putting together the inferences from the positions of $\text{R}\ddot{\text{e}}\text{v}\text{at}\ddot{\text{i}}$ or $\text{Bhara}\text{\AA}\text{n}\ddot{\text{i}}$, $\text{K}\ddot{\text{r}}\text{t}\text{t}\text{i}\text{k}\ddot{\text{a}}$ and $\text{\AA}rd\text{\AA}$ in $\text{M}\ddot{\text{e}}\text{s}\text{a}$, $\text{R}\text{\AA} \text{sabha}$, and Mithuna respectively, we may conclude that c. 300 A.C. is the earlier limit for the date of the 11th *Parip\text{ā}ḍal*. On the other hand, it is certain that c. 700 A.C. is the later limit, as according to the Cinnaman\text{ū}r plates the Saṅgham was founded and the victory at Talai-\text{ā}laṅgānam won by ancestors of M\text{ā}ravarmaṇ Arik\text{ē}sa\text{r}\text{i}. The *Parip\text{ā}ḍal* must therefore be dated between c. 300 and c. 700 A.C. It may also be pointed out that according to the *Parip\text{ā}ḍal* the *nakṣatras* were not $\text{K}\ddot{\text{r}}\text{t}\text{t}\text{i}\text{k}\ddot{\text{a}}\text{d}\text{i}$, as in that case $\text{R}\ddot{\text{e}}\text{v}\text{at}\ddot{\text{i}}$ or $\text{Bhara}\text{\AA}\text{n}\ddot{\text{i}}$ should be in $\text{M}\ddot{\text{i}}\text{n}\text{a}$, not $\text{M}\ddot{\text{e}}\text{s}\text{a}$.

We are then told that Venus was in $\text{R}\text{\AA} \text{sabha}$ (30° to 60°), Mars in $\text{M}\ddot{\text{e}}\text{s}\text{a}$ (0° to 30°), and Mercury in Mithuna (60° to 90°). Then we have the phrase *aṅgi uyar n\text{ir}pa*. $\text{Pa}\text{r}\text{i}\text{m}\ddot{\text{e}}\text{l}\text{a}\text{\AA} \text{ḷaḡar}$ says this means that $\text{K}\ddot{\text{r}}\text{t}\text{t}\text{i}\text{k}\ddot{\text{a}}$ was in the zenith. If this is right, the Sun was in $90^\circ + 39^\circ = 129^\circ$, and Venus and Mercury, whose maximum distances from the Sun are 48° and 26° , cannot have longitudes less than 81° and 103° , which are at least 21° and 13° beyond the required positions. *Uyar* cannot therefore mean "Zenith", but only "visibly high up". Again, *aṅgi* may mean either $\text{K}\ddot{\text{r}}\text{t}\text{t}\text{i}\text{k}\ddot{\text{a}}$ (the asterism of Agni) or the asterism Agni, identified with β Tauri, whose longitude in 1690 A.C. was $78^\circ 14'$. Jupiter is said to be in $\text{M}\ddot{\text{i}}\text{n}\text{a}$ (330° to 360°). The position of Saturn is indicated by the words *vill\text{ir} kaḍai makara m\text{ē}va*. $\text{Pa}\text{r}\text{i}\text{m}\ddot{\text{e}}\text{l}\text{a}\text{\AA} \text{ḷaḡar}$ takes it

to mean that Saturn was in Makara (270° to 300°). But in that case, the mention of *vil* (Dhanu) has no significance. It will be noticed that Mars, Venus, Mercury, and Jupiter are all in what are astrologically known as *svakṣētras* (own houses), and it is possible that Saturn was really in Dhanu, but Nallanduvanār was influenced by the astrological notion of planets in *svakṣētra* indicating heavy showers to link Dhanu with Makara in placing Saturn. If so, we have to consider the possibility of Saturn being in Dhanu (240° to 270°), especially as Nallanduvanār was acquainted with the *svakṣētras* of planets (*paṅguvin illattunai*) and the theory of *vīthi*s. Then we have the words *pāmbollai madiya maraiya varunāḷil*. They naturally mean that a lunar eclipse was shortly expected, though it is possible to take them to mean that the moon set in the region of Āślēṣa (the asterism of Sarpa). Agastya (Canopus) is then said to be in Mithuna (60° to 90°), but there is no reference here to its heliacal rising, which in Varāha-mihira's time (c. 500 A.C.) happened when the Sun was in 143° . The longitude of Canopus in 1690 A.C. was $100^\circ 46'$, and so in c. 300 A.C. its longitude was $100^\circ 46'$

$$- \frac{(1690-300)}{61} = 78^\circ.$$

Since Agastya (at least 78°) is said to have been above the horizon, the Sun's longitude cannot be less than 78° . Nor can it be more than 108° , as Venus, whose maximum distance from the Sun is 48° , was between 30° and 60° . The Sun's longitude was therefore between 78° and 108° , and the solar day must have been between the 81st and the 111th. Between the 81st and 111th solar days, the mean longitudes of the major planets, corresponding to their geocentric ones, Saturn (240° to 300°), Jupiter (330° to 0°), and Mars (0° to 30°), are Saturn (243° to 306°), Jupiter (321° to 348°), and Mars (314° to 351°). Between these same solar days in 1 B.C. their mean longitudes were Saturn (73° to 74°), Jupiter (170° to 172°), and Mars (297° to 313°). The required increases in their mean longitudes are therefore: Saturn (169° to 233°),

Jupiter (149° to 178°), and Mars (1° to 54°). Between 300 and 700 A.C., these increases are found only in 397 A.C. and 634 A.C. The increases in 397 A.C. are Saturn 171° , Jupiter 168° , and Mars 28° , and in 634 A.C. the increases are Saturn 187° , Jupiter 161° , and Mars 31° . But in 397 A.C. there was no lunar eclipse between the 81st and 111th solar day, while in 634 A.C. there was a lunar eclipse on Āshāḍha Purnamī, 16th June (89th solar day), the Purnamī *tithi* ending at .94 of the day. At daybreak on that day the planets were all in their required positions, Saturn 257° , Jupiter 341° , Mars 18° , Venus 43° , and Mercury 69° . Since 634 A.C. is only six years after Brahmagupta, the longitude of Kṛttikā was then 39° and, the Sun being then in 86° , the asterism, if it is the *aṅgi* of the text, was 47° above the horizon. If, on the other hand, the asterism was Agni, its longitude was then $78^\circ 14' - \frac{(1690-634)}{61} = 61^\circ$, and it was 25° above the horizon. The longitude of Agastya in that year was $100^\circ 46' - \frac{(1690-634)}{61} = 83^\circ$, i.e. it was in Mithuna; and it is well

known that the monsoon generally begins about the 16th June. The 16th June, 634 A.C., is therefore the only date that completely satisfies the astronomical data of the *Paripāḍal*, and the credit for discovering it is due to Mr. Svāmikaṇṇu Piḷḷai, though his demonstration left much to be desired. It will be noticed that this date for the *Paripāḍal* is in perfect agreement with the date for the Saṅgham age (seventh century A.C.) determined by me on other grounds, in my paper on "The Date of Māṇikyavācaka" (*Journal of the Mythic Society*, vol. 22, pp. 54-5).

CALCUTTA.

1st November, 1931.

The Chandonukramaṇī of the Maitrāyaṇī Saṃhitā

By RAGHU VIRA

THE Chandonukramaṇī forms a part of the Vārāha-pariśiṣṭas.* As is evident from the text given hereunder, it is of immense importance. This little booklet is unknown from any other source. Few scholars know of its existence. The original MS. is in the Baroda library, and was discovered by my friend Mr. R. A. Sastry.

As there is only one MS., and that also bristles with absurd readings, it was a fairly difficult task to reconstruct the correct text and find out the original meaning of the author. I have not always succeeded in my efforts, and have to leave some phrases doubtful.

The text of the first section is as follows:—

(a) General Introduction

गोमहः सुमहाः प्राज्ञस्कन्दोऽनुक्रमलक्षणम् ।
अल्पग्रन्थं महार्थानां षड्गुणं वेदविस्तरम्¹ ॥ [१ ॥]
वक्ष्यते वेदविज्ञानं यज्ञियं च हितं च यत् ।
आनुपूर्व्ये प्रमाणं च वैकृतं च निबोधत ॥ [२ ॥]
मन्त्रब्राह्मणमाम्नायः² कल्पश्चेतत् त्रयं शृणु ।
उच्यमानं पृथक्त्वेन मिश्रं ह्येतदिहो स्थितम् ॥ [३ ॥]

* Of the Vārāhas we know a Śrautasūtra, a Gṛhyasūtra, and two Gṛhyapaddhatis. Of these the Gṛhya with extracts from the Paddhatis has been edited by me for the Panjab University Oriental Series, and is to come out shortly. The Śrauta and the Pariśiṣṭas are also being critically edited by me with the collaboration of Professor W. Caland of Utrecht.

¹ The MS. अल्पग्रन्थां महार्थानां षड्गुणां वेदविस्तरां. Note that there is no verb in the verse. For the last quarter cf. षष्ठां यः प्रविभागज्ञः सोऽध्वर्युः कृत्स्न उच्यते (sec. 6, verse 21).

² The MS. मन्त्रब्राह्मणमाम्नाय.

आध्वर्यवे द्वया मन्त्रा ऋचश्चैव यजूंषि च ।
 तयोरपि च नानात्वं वक्ष्यामृषिद्वयानि (?) च ॥ [४ ॥]
 मन्त्रस्य लक्षणं विद्याद् यः प्रयुज्येत कर्मणि ।
 परिपाटिं च वक्ष्यामि आम्नायस्य विशुद्धये ॥ [५ ॥]
 यः क्षित् पादवान् मन्त्रो युक्तश्चाक्षरसम्पदा ।
 विनिर्युक्तावसानश्च तामृचं परिकल्पयेत् ॥ [६ ॥]
 यश्चान्यकरणैर्युक्तो न च पादोऽक्षरैर्वृतः ।
 अनिर्युक्तावसानश्च तद्यजुः परिकीर्तितम् ॥ [७ ॥]

(b) *The Mantrānuvākas*

स्थानानि नव मन्त्राणामादितस्त्रीणि खण्डशः¹ ।
 उत्तरः कौकिलीयाज्याः प्रैषाः ष - - वानि च ॥ [८ ॥]
 षट् षष्टिरनुवाकानां समाहार्यास्ततस्ततः² ।
 अनुवाकैकदेशांश्च कल्पब्राह्मण उच्चितान्³ ॥ [९ ॥]
 मन्त्रानुवाकाश्चत्वारः⁴ चतुष्पादोऽपरस्य च⁵ ।
 द्वौ परस्य⁶ परश्चैव⁷ चित्तिः सुगिति चापरौ⁸ ॥ [१० ॥]

¹ The MS. खंडलः. The sense of the verse is : There are nine "places" for the mantras, the first three books (known to us as the *prathama-kāṇḍa*, *dvitīya-kāṇḍa* or *madhyama-kāṇḍa*, and *tṛtīya-kāṇḍa* or *upari-kāṇḍa*), and the last six *prapāṭhakas* of the supplementary fourth book. उत्तरः in the text stands for *pravargya*, IV, 9, कौकिलीयाज्याः for IV, 10. 11. 12, प्रैषाः for IV, 13, and the last word (to be reconstructed to षट् पाशवानि ?) for IV, 14.

² ततस्ततः is not clear. The number of sections in the last six *prapāṭhakas* of Schroeder's edition of *Maitrāyaṇī Samhitā* is 73. See note on VI, 3.

³ The *mantrānuvākas* specifically enumerated in the following three verses are those which are interspersed by *kalpa*- and *brāhmaṇa-anuvākas*, viz. I, 4, 1 - II, 6, 13. The rest form continuous wholes, and hence the author of the *Ch.* did not deem it necessary to enumerate them here.

⁴ I, 4, 1-4.

⁵ I, 5, 1-4.

⁶ I, 6, 1-2.

⁷ I, 7, 1.

⁸ I, 9, 1-2.

अनुवाकास्त्रयो ऽन्यस्मिन्नमे वेरादयः स्मृताः¹ ।
 चत्वारो वाजपेयाद्या² अन्यः पञ्चम उत्तरः³ ॥ [११ ॥]
 उत्तरास्त्रिष्टिषु ग्राह्या⁴ अनुवाकाश्च षोडश⁵ ।
 राजसूये समान्नाताः प्रागन्यात् सप्तमादयः⁶ ॥ [१२ ॥]
 पञ्चान्ते न - वशारीरास्त्वादित्वेकविंशतिः⁷ ।
 शेषाः षट्षष्टिरान्नाता द्वे शते सदृशेन च ॥ [१३ ॥]
 द्वे तु षष्टिंशते सर्वमनुवाकाश्च षोडश ।⁸

¹ I, 10, 2-4.

² I, 11, 1-4.

³ I, 11, 10 (the last section of *Vāj.*). उत्तरः could have better been replaced by उत्तमः.

⁴ In *Kāmyā iṣṭayah* there are four mantra sections : II, 2, 6 ; 3, 4. 8 ; 4, 7.

⁵ Sixteen is the total number of the five sections of *Vājapeya*, four of the *Kāmyā iṣṭayah*, and seven of *Rājasūya* mentioned in the next line.

⁶ II, 6, 7-13.

⁷ Thus the MS. The entire line is unintelligible. The second hemistich is equally difficult.

⁸ A complete list of *mantrānurvākas* is given here for ready reference and verification :—

I, 1, 1-13, *darśa-pūrṇamāsa*.

2, 1-18, *adhvaraḥ*.

3, 1-39, *grahāḥ*.

4, 1-4, *yajamāna-brāhmaṇam*.

5, 1-4, *agnī-upasthānam*.

6, 1-2, *ādihānam*.

7, 1, *punar-ādihānam*.

9, 1-2, *catur-hotāraḥ*.

10, 2-4, *cātur-māsyāni*.

11, 1-4. 10, *vājapeyaḥ*.

II, 2, 6, *kāmyā iṣṭayah*.

3, 4. 8.

4, 7.

6, 7-13, *rājasūyaḥ*.

II, 7, 1-20, *agnī-citiḥ*.

8, 1-14.

9, 1-10.

10, 1-6.

यथा हविष्कृदित्यादि¹ कल्पब्राह्मण उच्चितान् ॥ [१४]

तेषां नित्यावसानेषु यजुश्चमुपकल्पयेत् ।

प्रेयमगादितृचां³ तु ब्राह्मणसंख्येति (?) च ॥ [१५]

(c) *The Yajur-anuvākas*

इषे⁴ वेषाय⁵ देवानां⁶ वर्षवृद्धमियं⁸ विभूः⁹ ।

निर्याभ्याः स्य देवश्रुतः¹⁰ स्य यज्ञपतिराशिषा¹¹ ॥ [१६]

अग्निर्यजुर्भिस्त्रिंशतिः¹² स्रुग्निरैकाक्षरमपि ।

सप्तमो राजसूयस्य¹⁵ त्रयश्चाष्टादशादयः¹⁶ ॥ [१७]

प्रमाणमाशुः¹⁷ स्मृताः स्रष्टी¹⁸ स्रष्टारश्चाष्टमादयः²⁰ ।

II, 11, 1-6.

II, 13, 1-23.

12, 1-6.

III, 11, 1-12, *sautrāmāṇi*.

12, 1-21, *aśva-medhaḥ*. Twenty-one is the number of sections according to Schroeder's edition. See note 1 on verse 26.

13, 1-20.

III, 15, 1-11.

14, 1-21.

16, 1-5.

IV, 9, 1-27, *pravargyaḥ*.

IV, 12, 1-6.

10, 1-6, *yājyānuvākyaḥ*.

13, 1-10.

11, 1-6

14, 1-18.

The total amounts to 350 *mantrānuvākas* in Schroeder's edition, while according to *Ch.* it is only 336.

¹ I, 4, 10 (p. 58, ll. 10 and 11), IV, 1, 6 (p. 8, l. 8). The word यथा is not to be understood.

² The MS. तेषां निषां नित्या०.

³ The MS. प्रेयमगादि रुचानां. I, 1, 2; IV, 1, 2. प्रेयमगादितृचां is not a satisfactory emendation, for the fifth syllable is long.

⁴ I, 1, 1.

⁵ I, 1, 4.

⁶ I, 1, 5.

⁷ I, 1, 7.

⁸ I, 2, 4.

⁹ I, 2, 12.

¹⁰ I, 3, 2.

¹¹ I, 4, 2.

¹² I, 9, 2.

¹³ I, 9, 1.

¹⁴ I, 11, 10.

¹⁵ II, 6, 7.

¹⁶ II, 7, 18-20.

¹⁷ II, 8, 2.

¹⁸ II, 8, 4.

¹⁹ The MS. स्मृतः स्रष्टीश्. Perhaps स्रष्टीः signifies here three, for the next two sections are also *yajurmaya anuvākas*.

²⁰ II, 8, 8-11.

अवाञ्च मध्यमा रुद्राञ्चाम (?) राष्ट्रभृतस्त्विति¹ ॥ [१८ ॥]
तपो योनिरसि² प्राणा³दृचा त्वा⁴ द्वादश⁵स्तयः⁶ ।

मा हृन्दो ऽष्टौ⁷ द्वितीयश्च सौत्रामण्यां सपञ्चमः⁸ ॥ [१९ ॥]
चतुर्दश द्वितीयाद्याः⁹ शरीरा अविकेति च¹⁰ ।

प्रागन्याद् द्वौ द्वितीयश्च त्रयः प्रैषेषु याजुषाः¹¹ ॥ [२० ॥]
(= 79)

अशीतिरनुवाकानामेकोना येषु नार्चिकम् ।

तपने (?) परिसंख्याताः कृत्वाः सर्वे यजुर्मयाः¹² ॥ [२१ ॥]

(d) The *Rg-anuvākas*

अष्टायांस्तु प्रवक्ष्यामि यथावदनुपूर्वशः ।

येषु स्थानेषु यावन्तः संख्याया¹³ परिकीर्तिताः ॥ [२२ ॥]

प्रथमश्चाग्न्युपस्थाने¹⁴ द्वितीयो वाजपेयिकः¹⁵ ।

अग्नौ पञ्चममाम्नोति¹⁶ तत ऊर्ध्वं त्रयोदशः¹⁷ ॥ [२३ ॥]

¹ The reference is to II, 8, 13 (the last section but one of the eighth *prapāṭhaka*), II, 9, 3-8, II, 11, 1-6, and II, 12, 2 (*rāṣṭrabhṛtaḥ*).

² II, 13, 2.

³ II, 13, 3.

⁴ II, 13, 4.

⁵ II, 13, 12.

⁶ त्रयः refers back to II, 13, 3. 4. 12.

⁷ II, 13, 14-21.

⁸ "The second and the fifth in *Sautrāmaṇi*," III, 11, 2. 5.

⁹ III, 12, 2-15.

¹⁰ Thus the MS. Cf. verse 13. The reference is to III, 13, 2-20 (?).

¹¹ Among the *praiṣas* there are three *yājūṣa* sections, the two preceding the last (IV, 13, 8-9), and the second one (IV, 13, 2).

¹² The *yājūṣa* sections, not containing any *ṛks*, are:

I, 1, 1. 4. 5. 7.

I, 3, 2.

I, 9, 1. 2.

2, 4. 12.

4, 2.

11, 10.

II, 6, 7.

II, 11, 1-6.

7, 18-20.

12, 2.

8, 2. 4-6. 8-11. 13.

13, 2-4. 12. 14-21.

9, 3-8.

III, 11, 2. 5.

III, 13, 2-20.

III, 15, 1-11.

12, 2-15.

14, 1-21.

IV, 9, 5. 8-10. 13-26.

IV, 13, 2. 8. 9.

Our total is 137, as against that of the *Ch.* 79.

¹³ The MS. यावन्तः संख्यायाः.

¹⁴ I, 5, 1.

¹⁵ I, 11, 2.

¹⁶ II, 7, 5.

¹⁷ II, 7, 13.

पर^१शान्यौ रुद्राणां^२ द्वितीयादय आर्चिकाः^३ ।
 विश्वे^४ येनादयः^५ स्थाने सप्तान्ये पञ्चमादयः^६ ॥ [२४ ॥]
 त्रयोदशसमाप्तां द्वौ^७ सौत्रामण्यां य आदितः^८ ।
 तृतीयस्त्वथ षष्ठश्च नवमो योत्तमोत्तमौ (?)^९ ॥ [२५ ॥]
 विश्वः^{१०} परश्च पञ्चान्ते सप्तैते महति क्रतौ^{११} ।
 सर्वयाज्यानुवाक्यास्तु^{१२} तृतीयो ऽथोत्तमोत्तमाः(?) ॥ [२६ ॥]
 त्रैवेष्वाद्यतृतीये तु षष्ठं^{१३} ष - - - चानि (?)^{१४} ।
 षट् सप्तत्वामृचाध्रुवामन्यदेताश्चैव इहाचिकाः(?)^{१५} ॥ [२७ ॥]

^१ II, 7, 14.^२ II, 9, 1-2.^३ II, 10, 2-6.^४ II, 12, 1.^५ II, 12, 4-6.^६ II, 13, 5-11. स्थाने means the *prapāthaka*. The *Kāthaka Samhitā* designates its chapters as *sthānakas*.^७ II, 13, 22-23.^८ III, 11, 1.^९ III, 11, 3. 6. 9. 10 (?). 11. 12.^{१०} The MS. विश्वः. In Schroeder's *Mait. S.* text the *ārcika* sections are III, 12, 18. 21 ; 13, 1. It is very probable that the eighteenth section of Schroeder's edition was a part of either the preceding or the following section, and hence not an *ārcika* section. Thus the last section of the third book would be the twentieth, and परः would refer to III, 13, 1.^{११} For महति the MS. has मदिति. महति क्रतौ = *asvamedha*. The five *ārcika* sections at the end are III, 16, 1-5. The seven *anuvākas* are III, 12, 20 ; 13, 1 ; 16, 1-5.^{१२} IV, 10-12.^{१३} IV, 13, 1. 3. 6.^{१४} IV, 14, 1-18.^{१५} Thus the MS. This line is very corrupt, though the sense is fairly clear—the number of pure *ārcika anuvākas* is 76. Here is my own list :—

I, 5, 1.

I, 11, 2.

II, 7, 5. 13. 14.

II, 12, 1. 4-6.

9, 1. 2.

13, 5-11. 22. 23.

10, 2. 6.

COIN OF ABŪ MUSLIM.

A Coin of Abu Muslim

By R. GUEST

(PLATE IV)

THE copper coin (*fals*) shown in the plate was unearthed recently during work for irrigation on the lesser Zâb. Mr. W. Allard, Director of Irrigation in 'Irâq, has kindly allowed it to be photographed for publication. The inscriptions on the coin are :—

Obverse

Centre لا اله الا الله وحده

Border قل لا اسئلكم عليه اجراً الا المودة في القربى

Creed.

Say, I ask you not for any reward on account of of these good tidings but that you should love my relations (*Qur'ân*, 42, 19).

Reverse

Centre محمد رسول الله

Border بسم الله الرحمن الرحيم . ما امر به ابو مسلم امير
آل محمد سنة احدى وثلاثين ومئة

Creed.

By order of Abû Muslim, the amîr of the family of Muḥammad. Year 131.

Abû Muslim, as will be remembered, brought the Abbasid dynasty to the throne by long sustained effort, not by a sudden stroke. The first Abbasid Khalif did not become acknowledged until more than two years after Abû Muslim raised the Abbasid standard in *Khurâsân*. Abû Muslim took Merv, then the capital of the province, in 130 (February, 748), and thenceforward that town doubtless remained his usual place of residence. Following Tabarî, one finds him ruling there in 132. But early in 131 (c. September, 748) after his troops under Qaḥṭaba had entered Raiy, Abû Muslim moved westward from Merv to

Nisâbûr, where he would have been more closely in touch with his general. During the year, Qaḥṭaba's armies advanced with continual success through Persia, bearing down the resistance of the opposing Umayyad forces, and before the end of it were passing into Mesopotamia, the chief incidents marking the end of the contest, the occupation of Kûfa by the partisans of the Abbasids (August, 749), the accession of the first Abbasid Khalif (November, 749), and the rout of the last Umayyad Khalif Marwân on the greater Zâb (January, 750), all falling in the year 132. Accordingly it is probable that the coin was struck either at Merv or at Nisâbûr. The coin is not unique. Zambaur in his *Contributions* (i, 7), mentions another apparently identical specimen. Coins bearing the name of Abû Muslim seem, however, to be very rare.

The text from the *Qur'ân* on the border of the obverse, exhorting believers to love the relations of the Prophet, was an excellent watchword. It may be noted that the first Abbasid Khalif introduced it in his inaugural address (Ṭabarî, 3, 29). Abû Muslim does not seem to have been the first to employ this text on a coin. It seems probable that it was adopted by the 'Aliyid 'Abdallâh ibn Mu'âwiya in 127.

Ṭabarî records that Abû Muslim used the title *amîr* of the family of Muḥammad (3, 60), just as Abû Salama, the protagonist of the cause in Kûfa, was styled the vizier of the family of Muḥammad. The individual member of the family at the head of the movement when it started was in the power of Marwân, so he could not be named. The titles adopted, moreover, had the advantage of appealing to the followers of the house of 'Alî as well as to the supporters of the Abbasids.

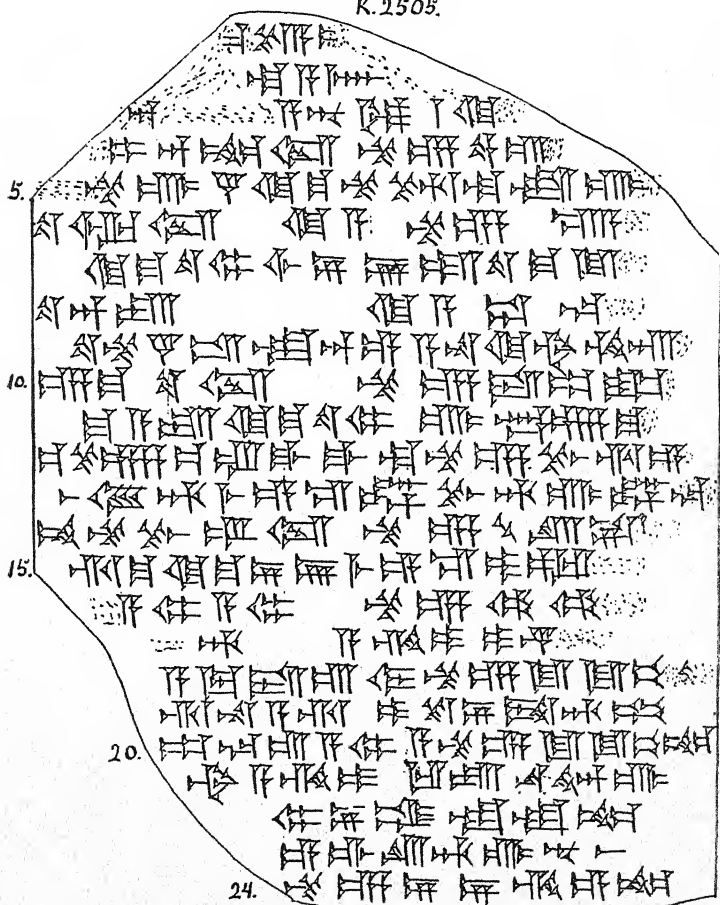

The editors of Ṭabarî have altered Abû Muslim's title to *amîn âl Muḥammad*, in deference to the readings of the MSS. of other standard historical works. *Amîr* seems to be written on the coin, but *amîn* would be so little different that it is impossible to be certain.

An Unplaced Fragment of the *Utukke Limnuti Series*

By S. LANGDON

THE unpublished text K. 2505 has been partially utilized by the late Professor Zimmern in a few entries communicated by him to Professor Meissner for the *Nachträge* to the latter's *Seltene Assyrische Ideogramme*. It was obvious from the few

K. 2505.

extracts available in this important book that K. 2505 contains much valuable and new material, and I am grateful to the Keeper of Egyptian and Assyrian Antiquities of the British Museum, Mr. Sidney Smith, for permission to copy and publish this text. It throws much new light upon the forms and uses of Sumerian verbs. I cannot discover any duplicates in the extensive incantation literature, although the fragment obviously belongs to a long and an important text of the *utukké limnûti* series.

K. 2505

1. *kár*
2. *lal-]la a-meš [lal-la ki-a lal-la]*
3. [*ana me-]e ? tar-šu ana iršitim [tar-šu]*
 upon the waters they stretch, upon earth
 [they stretch]
4. [. . . .]—*mi ?—an-bil ¹-gim mu-un-lag-ga-[e-ne]*
5. *-mu-u šá ki-ma mu-uš-la-li ú-[ša-an-ba-tu ?]*
 They are which scorches like the midday sun.
6. *ud-ġul-gim ki-a mu-un-dirig-[gi-e-ne]*
7. *ki-ma ū-mi lim-ni ² ir-ši-tam ma-lu-[u]*
 Like an evil storm they fill the earth.
8. *ud an-ta ki-a gub-ba [e-ne-ne]*
9. *ū-mu šá iš-tu šame-e a na irši-tim kun-nu [šu-nu]*
 A storm, which from heaven upon earth is fixed,
 are they.
10. *kalam-ma ud-gim mu-un-da-ab-šar-[ri-e-ne]*
11. *ma-a-ta ki-ma ū-mi u-šah-ma-[tu] ³*

The land like a heat storm they cause to be parched.

¹ But read an-bi-ir = *muṣṭakum*, Voc. *Martin* ii, 29; see Meissner, SAI. 372; *an-NE-ra*, Reisner, SBH. 53, 10 (twice) = SBP. 108, 10. *bi* > *bir*, *Sum. Grammar*, § 44.

² *ámu limnu*, regularly used in hemerologies for "evil day", sinister day; Sumerian *ud-gál-gál*; III Raw. 53, No. 4, 33-4; PSBA. 1904, 56, K. 19-20. I do not know other examples of *ámu limnu* as used in this text.

³ *sar*, *šar* = *hamātu* to burn, not *hamātu*, to hasten. Meissner, SAI., p. 690, placed *šar* = *hamātu* (2849) under *hamātu*, to hasten. The only known Sumerian word for *hamātu*, hasten, is *būr* = *hamātu*, CT. 12, 13 B 34, but reading (*du*) $\gg \text{𒂗𒍪𒍪}$ = *hamātum ša alaki*, ZA. 10, 198, 8 + 13 is

12. *giš-tir giš-mes-gal-gal-la*¹ *mu-un-bu-ri-e*-[ne]

13. *ina kiš-ti me-e-si rab-bu-ti ú-rab-ba*-[tu]²

In the forest they cause the great mountain ashes to quake.

14. *am mudul*³-mes-gim *mu-un-gur-ru-uš*-[e-ne]⁴

15. *ri-ma ki-ma ni-ir me-e-si i-šab*-[ba-tu]

The wild bull(s) they torment like a yoke of ash.

16. *a-gè-a-gim mu-un-rū-rū*-[ne]⁵

17. [ki-ma] *ti a-gi-i i-šur*-[ru]

Like the of the flood they rush.

18. [ki-a] *íd-da-ge gír-mu-un-dib-dib-bi*-[ne]⁶

more probable. Hence *šar-ra* = *ana šuḫmuṭu*, to cause to be consumed in fire, SBH. 20, 30 = 23, 14 = Langdon, SBP. 86, 30. *e-sir-ra gub-ba mu-un-šar-ri-e-ne* = *ša ina sáki izzazzu uštaḫmiṭu*, Those that stand in the street consumed themselves in fire, IV Raw. 28*, No. 4, Rev. 56; var. *mu-un-šar-ri-dam*, CT. 15, 13 (Rev.) 31.

¹ See also SBP. 40, 31; 78, 24; 82, 32; 100, 55; 188, 33 (= SBH. 95, 33); 52 Rev. 2.

² It is difficult to decide between *rabābu* and *rabātu* for the restoration here. The Sumerian for *rabābu*, to waver, tremble, is *DUL*, K. 3021, 3-6, *dul-dul* = *murabbib*, OECT. vi., pl. xxiv; *TÚL*; *túl-túl-la-bi* = *rabbiš*, frightfully, K. 69, Rev. 9; *túl-túl-bi*, SBP. 42, 56; *dul-dul-bi*, Zimmern, KL. 17, i, 8; *ge-tu-ul* = *irbā* (*rabā* = *rabābu*), ATU. i, 306, 12. Also *TUR*, *nam-ba-tu-ur* = *turabbib*, K. 9282, Rev. 6. *šu-dul* = (*rabbu*) *rabbiš*, in misery, RA. 13, 137, Obv. 14.

For *rabātu*, in forms *našarbuṭu*, *itašrabuṭu*, the Sumerian is usually *BUL*, reduced to *bu-u*, *bu*. So *bú-bú-meš*, var. *bu-bu-meš* = *muttašrabibūti*, CT. 16, 15, 4; *ni-bu-bu* = *ittanašrabbiṭu*, CT. 17, 29, 5; *al-bú-bú-ne-ne* = *ittanašrabbiṭu*, CT. 17, 4, 10, *BUL* > *BUR*, to waver, tremble, rush, is proved by *BUR* (*bu-ur*) = *parādu*, CT. 12, 13, B 29 and *BUL* (*bu-ur*) > *nu*-[*us-su ša* . . .], to shake, said of . . ., Yale Syllabary 98 = PBS. v, 104; ii, 7. These are synonyms of *rabātu*, *šurbuṭu*. On the change *l* > *r*, *bul* > *bur*, see Sumerian Grammar, § 44 and § 38, 6. Also *lagal* > *lagar*, psalmist, *dagal* > *dagar*, wide, SBP. 276, 10, note 5; IV Raw. 14, No. 1, 24; *d-Lir-ra* for *Lil-la*, SBP. 24, 3.

Hence read here *mu-un-bu-ri-e-ne*, i.e. *bu-ri* for *buli* = *rabātu*.

³ *MU-BU*, dialectic for *giš-BU*, values, *mudla*, *madla*, *mallā*, *gazinbu*, *giššašku*, *gidi*, Zimmern, MAG. iv, 259; *mudul*, *muḡur*, *iskim*, rod, beam, board, Meissner, MAG. iii³, 11-12. This text cited by Zimmern in Meissner, SAI. 10124, *nīru*, yoke, is perhaps the meaning here, but "yoke" in connection with wild bulls is unsatisfactory.

⁴ Cf. [.] *guruš* = *ša-ba-tu ša É-NIM*, CT. 12, 50, K. 4359, Obv. 24.

⁵ Cf. CT. 16, 12, 24; 17, 21, 102. Value *dú-dú* = *šāru* also possible.

⁶ *gír-dib* = *etēku*.

19. [*ina kib-*]ri na-a-ri i-te-ni-it-ti-ku

On the shore of the river they trespass.

20. ab-ba-ge a-gè-a mu-un-dib-dib-bi-ne

21. [. tam]-tīm a-gi-i ib-ta-na'-ū

. of the sea, as a deluge they enter.

22. mi-ni-ib-gú(r)-gú(r)-ne ¹

23. me?-e mar-ru-ti ú-tar-rum

The (sweet waters ?) into bitter (waters ?) they turn.

24. mu-un-díg-díg-gi-ne ²

NOTE ON TRANSCRIPTION

To avoid all unusual diacritical marks in transcription, I propose to use, henceforth, only the ordinary marks, e.g. *gur*, *gúr*, *gùr*, *gūr*, *gûr*, *gǔr*; for homophones exceeding this list, *Gur*, *GUr*, *GUR*, *guR*, *gUR*, *gu(r)*, *gŪr*. This system provides for thirteen signs in the case of trilateral homophones. By experience with the proposed system of inferior figure exponents I have concluded that it is unworkable.

¹ Cf. *zi-šú ba-an-gúr* = *i-šu ana marti ittur*, His turns to gall, CT. 17, 10, 53-4.

² The ordinary meaning of NI(dig) is *labāku*, *raṣābu*, *narābu*, pour out. In hostile sense, *ḥušaḥḥu māti NI-ik* (*illabik*), hunger will be "poured out" on the land; *bartum NI-ik*; *nukurtum NI-ik*; Virolleaud, *Astrologie*, *Sin*, 34, 19; 20; *Ishtar* 1, 70.

The Influence of Al-Farabi's "Ihsa' al-'ulum" (*De scientiis*) on the Writers on Music in Western Europe

By HENRY GEORGE FARMER

"He [Al-Fārābī] composed a noble work [the *Iḥṣā' al-'ulūm*] in which he enumerated the sciences and indicated the object of each; this treatise, the like of which had never before been composed and the plan of which had never been adopted by any other author, is an indispensable guide to students in the sciences."—ṢĀ'ID IBN AḤMAD AL-QURṬUBĪ (*d.* 1070).

THE question of the Arabian influence on the music of Western Europe has been considerably stressed of recent years.¹ In the practical art, the minstrel class of the Middle Ages not only adopted the actual instruments of the Arabs, such as the lute ('ūd), rebec (*rabāb*), guitar (*kaithār*), and others, but also the actual musical devices of the performers on them. In the theoretical art, clues in the Mediaeval Latin treatises on music enable us to follow a track which leads us to the conclusion that the teachings and writings of Arabian or/and Mozarabian theorists of music also had some influence on the theory of music of Western Europe.

Among the writers who can be claimed to have contributed to this influence are Al-Fārābī, Ibn Sīnā, and Ibn Rushd. Their works were translated into Latin and became the text-books of the schools of Western Europe. The most outstanding of these treatises were:—

ARABIC TITLES.

1. Al-Fārābī, *Iḥṣā' al-'ulūm*.
2. Al-Fārābī. [Title unknown.]
3. Ibn Sīnā, *Fī'l-nafs*.
4. Ibn Sīnā, *Fī taqāsīm al-ḥikma*.
5. Ibn Rushd, *Sharḥ fī'l-nafs*
l' Aristutālīs.

LATIN TITLES.

- Alpharabius, *De ortu scientiarum*.
- Avicenna, *De anima*.
- Avicenna, *De divisione scientiarum*.
- Averroes, *Commentarius in*
Aristotelis de anima.

¹ See H. G. Farmer, *The Arabian Influence on Musical Theory* (1925), *Historical Facts for the Arabian Musical Influence* (1930), *The Organ of the Ancients from Eastern Sources* (1931), and *Studies in Oriental Musical*

The earliest, and probably the best known, of these works was the *Iḥṣā' al-'ulūm* of Al-Fārābī, and for that reason it deserves special attention.

§ I

AL-FĀRĀBĪ

The recently published French translation of Al-Fārābī's monumental *Kitāb al-mūsīqī al-kabīr*¹ will doubtless confirm the opinion already expressed elsewhere,² that Al-Fārābī was probably the greatest writer on the theory of music during the Middle Ages. His treatment of speculative theory was not only an advance on that contributed by the Greeks, but in Western Europe he had no peer as an independent thinker until Ramos de Pareja (c. 1440-1521) made his appearance, and he, like another great theorist—Salinas (c. 1512-90), came from Spain, a land that had been greatly influenced by the Arabian sciences.

It was only natural that Al-Fārābī, so worthy a follower of Aristotle, should deal perspicuously with this subject. If he deserved the title, which the Muslims gave him, of "The second teacher" (i.e. second to Aristotle) in mental philosophy, he was certainly *facile princeps* in the philosophy of music.

Although Al-Kindī (d. 874) had already used the Greek theorists of music to some advantage, it was not until the time of Al-Fārābī, when the works on music by Aristotle (*De anima*), Aristoxenus, Euclid, Nicomachus, Ptolemy, as well as the commentaries on *De anima* by Themistius and others, had been translated into Arabic,³ that the full

Instruments (1931), as well as the same writer's chapter on music in *The Legacy of Islām* (Clarendon Press, 1931). See also J. Ribera, *La música de la cantigas* (1922), *La música Andaluza medieval en las canciones de trovadores, troveros, y minnesinger* (1923-5), and *Historia de la música Árabe medieval y su influencia en la Española* (1927).

¹ Al-Fārābī, *Grande traité de la musique. Traduction française par Baron Rodolphe d'Erlanger.* (La musique arabe, tome 1.) Paris, 1930.

² See Farmer, *Historical Facts* . . . , p. 292.

³ See Farmer, "Greek Theorists of Music in Arabic Translation": *Isis*, xiii, 1930.

bounty of Greek genius came to be felt. It is no wonder therefore that the Arabs were able to make an advance beyond Western Europe in this respect, seeing that the latter had no knowledge of the Greek writers themselves save what could be gleaned from Boëthius and the compends of Martianus Capella, Cassiodorus, and Isidore of Seville.¹ Al-Fārābī took the fullest advantage of these treasures.

Born at Fārāb in Transoxiana about the year 870, Al-Fārābī received the best part of his education at Baghdād and Ḥarrān, where he studied the disciplines, including the theory of music. Unlike other theorists, Al-Fārābī was a practical musician of no mean reputation,² and this gave him a distinct advantage over others. Under the patronage of the Ḥamdānid sultān, Saif al-Daula, he settled at Aleppo, where he wrote his most important works, and earned a reputation as "the greatest philosopher the Muslims ever had".³ He died at Damascus about 950.

Besides his *Grand Book on Music* (*Kitāb al-mūsīqī al-kabīr*), he wrote other works on music including a compendium (*mukhtaṣar*) entitled *A Discourse Concerning Music* (*Kalām fī l-mūsīqī*) and a *Book on the Classification of Rhythm* (*Kitāb fī iḥṣā' al-īqā'*).⁴ Unfortunately, only the first-named of these works has come down to us, although a *Book of Musical Modes* (*Kitāb al-adwār*) is catalogued in a library in the Levant as a work on music.⁵

The *Grand Book on Music* was looked upon as the most authoritative work of its kind in the East, and all the great Arabic, Persian, Turkish, and even Indian writers on music,

¹ See Farmer, *Historical Facts* . . . , p. 187.

² Ibn Ghaiḥī, *Sharḥ al-adwār* MS. Ibn Khallikān, *Biog. Dict.*, iii, 309.

³ Ibn Khallikān, *Biog. Dict.*, iii, 307.

⁴ Ibn al-Qiftī gives a shorter title—*Book of Rhythms* (*Kitāb al-īqā'āt*). Steinschneider, in his *Al-Fārābī* (p. 216), gives the title of another book on rhythm, but it would appear that this latter is merely a continuation of the title of the previous work. See Ibn Abī Uṣaiḥ'a, ii, 134; Ibn al-Qiftī, 280; and cf. Farmer, *History of Arabian Music*, p. 176.

⁵ *Al-Hilāl*, xxviii, 214.

from Ibn Sīnā in the eleventh century¹ to Ṭanṭāwī in the twentieth century,² make their obeisance to the name of Al-Fārābī and his famous treatise which had become a text-book even in the Jewish schools, as we know from Ibn 'Aqnin (c. 1160-1226).³

§ II

THE IHṢĀ' AL-'ULŪM

We possess little information concerning the school curricula in those days, although we know the subjects and the books that were studied. Fortunately, however, we get a fair idea of their scope in another treatise by Al-Fārābī entitled the *Ihṣā' al-'ulūm* or the *Classification of the Sciences*,⁴ a work which the Arabs of Spain considered, as Ṣā'id ibn Aḥmad (d. 1070) says: "An indispensable guide to studies in the sciences."⁵ In the twelfth century it was translated into Latin by both John of Seville and Gerard of Cremona under the title of *De scientiis*. It was already known in the Jewish schools, since Moses ibn Ezra (d. c. 1140) used it, and we possess a condensed Hebrew version made by Qalonymos ben Qalonymos (d. c. 1328).⁶

Although it was known in the eighteenth century that the Arabic text of the *Ihṣā' al-'ulūm* existed in the Escorial Library at Madrid,⁷ yet it was a long time before it was recognized that this was the original of the popular Mediaeval Latin treatise *De scientiis*. Indeed, for some time it was thought that the *Ihṣā' al-'ulūm* was a sort of "encyclopædia", an idea due primarily to Casiri's description, but perpetuated by Steinschneider, which brought a protest from Munk.⁸

¹ *Al-Shifā'*.

² *Al-mūsīqī al-'arabiyya*, Alexandria, 1914.

³ Steinschneider, *Al-Fārābī*, 81.

⁴ Or the *Statistics of Sciences*.

⁵ Ibn Khallikān, *Biog. Dict.*, iii, 308.

⁶ Steinschneider, *Al-Fārābī*, 83.

⁷ Casiri, *Bibl. Escur.*, Madrid, 1760-70, No. 643.

⁸ Munk, *Mélanges*, 343. It is to be regretted that the word has also been used by the present writer in his contribution to the *Legacy of Islām*, p. 369.

The work is not an encyclopædia, but simply a handbook of the sciences and a guide to curricula and deeper studies. The idea of a handbook of this type was soon borrowed by others in the East, including Ibn Sīnā, and in the West by Gundissalinus.¹

In spite of the existence of the Arabic text of the *Iḥṣā' al-'ulūm* in the Escorial Library and the fact that for a century and a half it was looked upon as a sole exemplar,² no attempt was made to edit the text or even to place it under contribution by the collation of the Latin texts of *De scientiis*. Even Dr. Ludwig Baur, who edited *De divisione philosophiae* of Gundissalinus in 1903,³ and Dr. Eilhard Wiedemann, who made a translation of the mathematical section of the *De scientiis* in German in 1907,⁴ did not attempt to consult the Arabic text.

In 1921, however, fresh interest was aroused in the Arabic text owing to the discovery of another manuscript of the *Iḥṣā' al-'ulūm* at Najaf in Al-'Irāq by the Shaiḫ Muḥammad Riḍā. This manuscript dates from the thirteenth century, and is therefore older than the Escorial manuscript which may be dated 1310. The Shaiḫ Muḥammad Riḍā published the text of his manuscript in the Arabic journal *Al-'Irfān* in 1921,⁵ and at the same time contributed a number of emendations, although much escaped his notice. It may be

¹ The older writers wrote this name Gundisalvi, a form which does occur in some MSS. More recent examination shows that the name is more generally written Gundissalinus, and this is the form adopted by Baur in his edition of the *De divisione philosophiae* of this writer. In the *Legacy of Islām* the form Gundisalvus has been adopted.

² The old number (Casiri, *Bibl. Escur.*) was 643. The present press mark (Derenbourg, *MSS. arabes de l'Escorial*) is 646.

³ Baur, *Dominicus Gundissalinus: De divisione philosophiae* (*Beiträge zur Geschichte der Philosophie des Mittelalters*, Band iv), Munster, 1903.

⁴ *Beiträge zur Geschichte der Naturwissenschaften*, xi. *Über Al-Fārābīs Aufzählung der Wissenschaften (De Scientiis)*. (*Sitz. der physikalisch-medizinischen Sozietät in Erlangen*, Band 39, 1907.)

⁵ The *'Irfān* is a monthly review published at Saida in Syria under the editorship of Aḥmad 'Araf al-Zain. The above text is given in vol. vi, pp. 11-20, 130-43, 241-57.

urged on his behalf, however, that he did not collate his text with the Escorial manuscript nor with the Latin versions.

Two years later, a further contribution to the subject was made by Père Bouyges in the *Mélanges de la Faculté orientale de l'Université Saint-Joseph (Beyrouth)* in a critical scrutiny of the text of the Shaiḵh Muḥammad Riḍā.¹ By comparison with the Latin version of the *De scientiis* as reflected in the *De divisione philosophiae* of Gundissalinus, and through the part-translation of Dr. Wiedemann, Père Bouyges was able to rectify some of the errors of the Shaiḵh Muḥammad Riḍā, and to suggest other valuable rectifications. Yet again, as with Dr. Baur, Dr. Wiedemann, and the Shaiḵh Muḥammad Riḍā, the Escorial text was ignored in the collation.²

§ III

THE ESCORIAL ARABIC TEXT

Since the appearance of the Najaf text of the *Iḥṣā' al-'ulūm* in the *'Irfān*, another manuscript has been discovered in the Köprülü Library at Constantinople. The copy is not dated, but we are informed that it is an old one. Now that we possess at least three copies of this famous work, the time may be considered ripe for the editing of the text together with the Latin versions. In the meantime, the present writer's researches into the Arabian influence on Western Europe prompt him to offer a collation of that portion of the three Arabic texts of the *Iḥṣā' al-'ulūm* which deals with music, together with a similar collation of two manuscripts and one printed text of the Latin *De scientiis*, as well as two unedited manuscripts of *De divisione philosophiae* of Gundissalinus, and four other texts.

As a guide to the reader, the following notation has been used for the Arabic MSS. :—

¹ Beyrout, 1923. Tome ix, pp. 49-70.

² The difficulty of access to the MS. has been pleaded as an excuse.

All the sciences in the above have subdivisions, but only those of mathematics are mentioned here because they concern the subject under discussion. The order of the mathematical sciences in the *Ikhwān al-Ṣafā'* is—arithmetic, geometry, astrology, geography, music, and proportion.¹ In the *Mafātīḥ al-'ulūm* of Al-Khwārizmī the plan is—arithmetic, geometry, astrology, geography, music, mechanics, and chemistry.² These writers also lived in the tenth century, but slightly later than Al-Fārābī.

Here is the Escorial text of the section on the 'ilm al-mūsīqā in the *Iḥṣā' al-'ulūm* of Al-Fārābī:—

وَأَمَّا عِلْمُ الْمَوْسِيقَى³ فَإِنَّهُ يَشْتَمِلُ بِالْجُمْلَةِ عَلَى⁴ تَعْرِفِ⁵
أَصْنَافِ الْأَلْحَانِ وَمَا مِنْهُ تَوْأَلَفَ وَعَلَى مَا لَهُ تَوْأَلَفَ وَكَيْفَ
تَوْأَلَفَ⁶ وَبِأَيِّ أَحْوَالٍ يَجِبُ أَنْ تَكُونَ⁷ حَتَّى يَصِيرَ
فَعْلُهَا أَنْفَذَ⁸ وَأَبْلَغَ وَالَّذِي يَعْرِفُ بِهَذَا الْأِسْمِ⁹ عِلْمَانُ *
أَحَدُهُمَا عِلْمُ الْمَوْسِيقَى الْعَمَلِيَّةِ * وَالثَّانِي عِلْمُ الْمَوْسِيقَى النَّظَرِيَّةِ.

¹ Dieterici, *Die Propädeutik der Araber*, Berlin, 1865.

² *Liber Mafātīḥ al-'ulūm* . . . Ed. Van Vloten, Leyden, 1895.

³ This word is vocalized throughout the Escorial MS. as *mūsīqā* not *mūsīqī*. This form also occurs in the thirteenth century *Vocabulista in Arabico* edited by Schiaparelli. Perhaps the Latin *musica* influenced the Maghribī form. In the East it was generally written *mūsīqī*, although *موسيقا* may be found.

(الحنان), and what they are composed of, and for what they are composed, and how they are composed, and in what forms (احوال) it is necessary that they should be in order that the performance of them be made more impressive (افذ) and effective (ابلق). And that which is known by this name¹ [i.e. 'music'] comprises two sciences. One of them is the science of practical music, and the second is the science of theoretical music.

"And as for practical music, its concern is the production of the various kinds of perceptible melodies in the instruments adapted for them either by nature or by artifice. And as for the natural instrument[s], they are the larynx and the uvula, and what is in them, and then the nose.² And the artificial instrument[s] are like the reedpipes (مزامير), and the lutes (عیدان), and such like. And the exponent of practical music only produces notes (نغم), and melodies, and their adjuncts, in so far as they are in the instruments upon which it is customary to perform them.

"And the theoretical gives the science of them. And it is metaphysical, and it gives the reasons for everything out of which the melodies are composed, not in so far as they are in a material, but independent and irrespective of any instrument or any material. And it takes them [i.e. the melodies] according as they are usually heard³ from any

¹ MS. X has "science" (علم) instead of "name" (اسم). The latter word occurs in the Latin translation of Gerard of Cremona.

² The nose as a medium is mentioned by the Jewish writer Profiat Duran, writing in 1403, who quotes a passage from an Arabic treatise by Abū'l-Salt Umayya (1068-1134) as follows: "Says Abū'l-Salt in his book *Haṣṣaḡah* dealing with music: 'Now for the media by which music is produced, some are natural as the throat and the nose.'" Duran's *Ma'seh Efod*, Vienna (1865).

³ In MS. X and Z the word is "heard", and this agrees with the Latin texts. MS. W has "produced" (مصنوعة) with an interlineal correction to "heard" (مسموعة).

instrument and from any body (جسم = 'material') whatever.

"And the science of theoretical music is divided into five major parts. The first of them is the discourse about principles (مبادئ) and fundamentals (اوايل),¹ the purpose of which is that they should be used in the elucidation (استخراج) of what is in this science, and the method of the application of those principles, and in which way this art is elucidated, and from what things and from how many things it is made up, and what sort of person the enquirer into it should be.

"And the second [part] is the discourse about the rudiments (اصول) of this art. And it is the discourse about the derivation of the notes, and the knowledge of the constitution² of the notes, and how many they be, and how many their species, and the distinction of their ratios one from another, and the demonstrations for all that, and the discourse about the species, their structure, and their arrangement by which they become facilitated,³ because one derives from them what one requires and composes from them the melodies.

"And the third [part] is the discourse about the conformity of what is explained in regard to the rudiments, and opinions,⁴ and demonstrations to the different kinds of artificial instruments which are prepared for them, and the producing of all of them from⁵ them, and their position in them, according to valuation (تقدير) and arrangement, as is explained in the rudiments.

¹ MS. W has "opinions" (اقليل), but a marginal note has "fundamentals" (اوايل) which is also confirmed by X and Z.

² Cf. the passage in X and Z.

³ W has "facilitated" (مواطة). X and Z have "concordant" (مواطاة).

⁴ X and Z have "fundamentals" (اوايل) instead of "opinions" (اقليل).

⁵ Cf. X and Z, where the word is "in" as in the Latin texts.

"And the fourth [part] is the discourse about the various kinds of natural rhythms (إيقاعات) which are the measures of the notes.

"And the fifth [part] is about the composition of the melodies in general; then about the composition of the perfect melodies—and they are those set in poetical speech, composed according to arrangement and order, and in the manner of their employment¹ in view of the main object of the melodies, and the definition of the melodies,² which become through that more effective and impressive in attaining the object for which they are made."

§ V

THE LATIN VERSIONS

During a considerable part of the Middle Ages, Muslim Spain was the intellectual hub of Western Europe. Ibn al-Hijārī (*d.* 1194), an Andalusian Arab, says that during the rule of the Umayyads in Spain (eighth to eleventh century) "students from all parts of the world flocked . . . to learn the sciences of which Cordova was the most noble repository, and to derive knowledge from the mouth of the doctors and 'ulamā who swarmed in it".³ The pointed comparisons made by Adelard of Bath (eleventh century),⁴ Daniel of Morlay (twelfth century),⁵ and Roger Bacon (thirteenth century),⁶ between the culture of Christian Europe and Muslim Spain are probably just. All this is amply borne out by the hundreds of treatises which were translated out of the Arabic into Latin to become the text-books of the schools of Christian Western Europe.

Among the numerous Arabic writers translated was

¹ Cf. the word in X.

² Cf. X and the Latin texts.

³ Al-Maqqarī, *Mohammedan Dynasties in Spain*, i, 30.

⁴ *Quaestiones naturales*. See Gollancz, *Dodo Ve-Nichdi*, viii.

⁵ Thorndike, *Hist. of Magic and Experimental Science*, ii, 173.

⁶ Fr. Rogeri Bacon, *Opera quaedam hactenus inedita*, ed. Brewer, xxxv.

Al-Fārābī, and no less than eight of his works appeared in Latin including his popular *Iḥṣā' al-'ulūm* which was known as *De scientiis*.¹ Two translations of this work are known to us; one attributed to John of Seville, and another definitely by Gerard of Cremona.²

John of Seville is nowadays identified with John of Spain, John of Luna or Limia, John of Toledo, and even with John Avendehut (= Ibn Dā'ūd).³ John of Spain translated the *De differentia spiritus et animae* of Costus (= Qusṭā ibn Lūkā) from the Arabic for Archbishop Raymund of Toledo (1125-51). He can be traced by other dates, more or less precise, from 1135 when he translated the *Rudimenta astronomiae* of Alfraganus (= Al-Farghānī) to 1153 when he (John of Toledo) translated the *Liber de nativitatibus* of Albohali (= Abū 'Alī Yahyā ibn al-Khayyāṭ). He is said to have died in 1157, but a John of Spain was living in 1176-80,⁴ and in 1187.⁵

Gerard of Cremona (1114-87) also worked at Toledo for a time. This city was the Christian centre for the study of the "Arabian sciences", and when Gerard arrived there he was amazed, he tells us, at the multitude of Arabic books in every field.⁶ Daniel of Morlay, the English translator of Arabic works, describes how he found Gerard translating

¹ The remainder were: *De ortu scientiarum*, *De naturali auditu*, *De causis*, *De intellectu et intelligibili*, *De syllogismo*, *De tempore*, and *Declaratio compendiosa super libris Rhetoricorum Aristotelis*. Others were translated into Hebrew. See Munk, *Mélanges*, 351-2.

⁵ Thorndike, ii, 76.

⁶ Haskins, 15.

Ptolemy's *Almagest* into Latin with the help of a Mozárabe named Galippus (= Ghālib), who probably turned the Arabic into Spanish whilst Gerard fashioned the Spanish into Latin. A similar literary partnership existed between Gundissalinus and John Avendehut (= Ibn Dā'ūd), Plato of Tivoli and Savasorda (= Abraham ibn Hiyya), and Michael Scot and Alphagirus (= Al-Fakhr) or Abuteus, the assessors in each case being either Jews or Arabs.

Dominicus Gundissalinus (Gundisalvi, Gundisalvus), the Archdeacon of Toledo, was also credited with a translation of *De scientiis* by both ¹ Jourdain and Leclerc,² but this was due probably to confusing this work with the *De divisione philosophiae* of Gundissalinus which had been ascribed to Al-Fārābī.³ Gundissalinus was certainly one of the translators who worked for the Archbishop Raymund (1125-51), and if we allow that his assessor John Avendehut is identical with John of Seville and John of Spain, it is quite likely that Gundissalinus may have had a hand in the translation. He was the author of a more extended handbook of the sciences entitled *De divisione philosophiae*. Two-thirds of this work is a compilation from other treatises, notably the *De scientiis* and *De ortu scientiarum* of Al-Fārābī.⁴ This has been fully demonstrated by Dr. Ludwig Baur in his *Dominicus Gundissalinus : De divisione philosophiae* (1903), who published the full text of the latter based on five codices.

Of the two versions of Al-Fārābī's *De scientiis* that have come down to us, we know for certain that one of them was translated by Gerard of Cremona. This is stated in the Paris codex (*Bibl. Nat.*, 9335, fol. 143 v.).⁵ Although this text has

¹ Jourdain, 117.

² Leclerc, ii, 377.

³ Cf. Wüstenfeld, 39. Leclerc, ii, 379.

⁴ It is scarcely correct, however, to say that the *De scientiis* appears in its entirety in the *De divisione philosophiae*. Cf. Wulf, *Histoire de la philosophie médiévale*, 1905, 286.

⁵ "Lib. Alfarabii de scientiis translatus a Magistro Girado Cremonensi in Toletto de Arabico in Latinum."

frequently been referred to, yet it has not been published. In 1907, however, Dr. Eilhard Wiedemann issued a German translation of the portion dealing with the mathematical sciences.¹ The other version, ascribed to John of Seville, is probably older than Gerard's rendering. This was published at Paris in 1638 by Guiliemus Camerarius, a Scotsman, who was a Professor of Theology and Canon Law at Paris.² He says that his text was based on an "antiquissimum manuscriptum" in the "Bibliotheca Sancti Albini apud Andes".

If the *De divisione philosophiae* of Gundissalinus dates from the mid-twelfth century as Dr. Baur suggests, then the translation of *De scientiis*, from which he borrowed so extensively, must have been accomplished earlier.³ Karpinski says that his work as a translator for Archbishop Raymund may have started as early as 1133,⁴ and Dr. Thorndike is of opinion that the *De divisione philosophiae* was written later than this.⁵ However, whether Gundissalinus had any hand in translating Al-Fārābī's *Ihṣā' al-'ulūm* into the *De scientiis* or not, it is quite certain that the version used by him in his *De divisione philosophiae* was the one attributed to John of Seville and not the Gerard version.⁶

The question arises: "Why should there be two versions of the *De scientiis*, seeing that their authors were contemporaries?" As already pointed out, John of Seville's version would appear to be the older, and a comparison of the texts

¹ *Sitz. der physikalisch-medizinischen Sozietät in Erlangen*, Bd. 39.

² The title runs: *Alpharabii vetustissimi Aristotelis interpretis, opera omnia, quae latina lingua conscripta reperiri potuerunt, ex antiquissimis Manuscriptis eruta, studio et opera Guiliemi Camerarii, Scoti. Fintraei, Sacrae Theologiae professoris, juris canonici doctoris etc.* Dr. George Sarton (*Intro. to the Hist. of Science*, II, i, 340) attributes the Camerarius version to Gerard of Cremona. (See also Wüstenfeld, p. 67, and Wiedemann, p. 77.) A comparison between my texts and the Camerarius version will show that this cannot be maintained.

³ Baur, 163.

⁴ Karpinski, *Robert of Chester's . . . Algebra of Al-Khowarizmi* (1915), 23.

⁵ Thorndike, II, 79.

⁶ Cf. Baur, 163. Thorndike, II, 79.

seems to show that Gerard had the John of Seville version before his eyes whilst engaged on his recension. Although both versions are correct translations, yet that of John of Seville reveals an occasional hiatus. It was on this account probably that Gerard sought to produce a more faithful rendering.

§ VI

THE LATIN TEXTS

The section dealing with the "science of music" in the *De scientiis* according to the two versions of Gerard of Cremona and John of Seville is subjoined from two thirteenth century MSS., neither of which have been published hitherto. For the sake of further comparison, two uncollated and unpublished texts of the *De divisione philosophiae* of Gundissalinus, both of the thirteenth century, are also dealt with. These were not noticed by Dr. Baur when he collated the texts of the latter. In addition to these, the appropriate portions of the *De scientiis* and the *De divisione philosophiae* borrowed, either directly or indirectly, by Vincent of Beauvais, Jerome of Moravia, Pseudo-Aristotle, Pseudo-Bede, and Simon of Tunstede, have also been included for the sake of identification.¹

THE LATIN TEXTS

- A = Gerard of Cremona, *De scientiis*. (Bibl. Nat., Paris, No. 9335, fols. 148-148 v. Thirteenth century.)
- B = John of Seville, *De divisione omnium scientiarum* [= *De scientiis*]. (Brit. Museum, London. Cotton MS. Vesp. B.X. Thirteenth century.)
- C = John of Seville, *De scientiis*. (In Camerarius, *Alpharabii vetustissimi Aristotelis interpretis*, . . . Paris, 1638, pp. 23-5.)
- D = Vincent of Beauvais, *Speculum doctrinale*. (Venice, 1494. Lib. xvii, Cap. xv et seq.)

¹ The texts are quoted verbatim, contractions excepted.

- E = Jerome of Moravia, *Tractatus de musica*. (In Coussemaker, *Scriptorum de musica mediæ ævi* . . . Paris, 1864-76. Tome i, Lib. i.)
- F = Gundissalinus, *Compendium scientiarum* [= *De divisione philosophiæ*]. (Brit. Museum, London, Sloane, 2461, fols. 26-27 v. Thirteenth century.)
- G = Gundissalinus, [*De divisione philosophiæ*]. (Brit. Museum, London, Sloane, 2946, fols. 214-214 v. Thirteenth century.) Wrongly attributed to Isaac [Israeli].
- H = Pseudo-Aristotle. (In Coussemaker, op. cit., Tome i, Lib. vi.)
- J = Pseudo-Bede, *De musica quadrata*. (In Bede, *Opera* . . . omnia, Cologne, 1612, Tome i.)
- K = Simon of Tunstede, *Quatuor principalia musicae*. (In Coussemaker, op. cit., Tome iv, Lib. ii, Cap. xiii-xvii.)

§ VII

THE INFLUENCE IN EUROPE

The influence of the *De scientiis* on the scholars of the Middle Ages was far-reaching,⁸ and the work appears to have become almost as "indispensable" in the Christian schools as it was in those of the Muslims, although the *De divisione philosophiae* of Gundissalinus, which contained most of it, was probably quite as popular.

Daniel of Morlay, who was in Toledo in 1175 as a pupil of Gerard of Cremona, was probably responsible for the introduction of the *De scientiis* of Al-Fārābī and the

⁸ Baur, *Die Philosophie des Robert Grosseteste*, . . . 1917, p. 11.

De divisione philosophiae of Gundissalinus into England. Perhaps they were among the *pretiosa multitudo librorum* which he brought from Spain.¹

Vincent of Beauvais (c. 1190–1264), in his section on music in the *Speculum doctrinale*, quotes almost verbatim from John of Seville's translation of the *De scientiis*, which is used as freely as the works of Boëthius, Isidore of Seville, Richard of St. Victor, Guido of Arezzo, and Peter Comestor.²

Roger Bacon (c. 1214–80) was also deeply indebted to the *De scientiis* which he specially recommends in his *Opus tertium*, Al-Fārābī being mentioned with Euclid, Ptolemy, Censorinus, Albinus, St. Augustine, Martianus Capella, Boëthius, and Cassiodorus.³ The *De ortu scientiarum* of Al-Fārābī is also recommended.⁴

Jerome of Moravia, a musical theorist of the first half of the thirteenth century, also placed the *De scientiis* under contribution in his *Tractatus de musica*. In the chapter entitled *Quid sit musica*, the definition of Al-Fārābī is quoted along with that of Boëthius, Isidore of Seville, Guido of Arezzo, Hugh of St. Victor, Richard [of St. Victor], John [Cotto], and John of Garland. Chapter v, which is entitled *De divisione musice secundum Alpharabium*, is taken up wholly by the section on music from *De scientiis*, although borrowed probably from Vincent of Beauvais.⁵

¹ For evidence of the possibility of Al-Farabian teaching in music being already known in England, see my *Historical Facts for the Arabian Musical Influence*, pp. 268–9.

² Lib. xvii, cap. xv et seq.

³ "Et non solum isti Latini, sed principales auctores, scilicet Ptolomaeus et Euclides, et etiam Alpharabius libro *De scientiis*, in hoc concordant. . . . Nam musicaliter tractant ista per causarum assignationem; sicut etiam confirmat Alpharabius in libro memorato." *Opus tertium*, cap. lix.

⁴ Loc. cit. He also quotes Ibn Sīnā (Avicenna) and 'Alī ibn al-'Abbās (Haly). "Et Avicenna primo Artis Medicinae docet quod, inter omnia exercitia sanitatis, cantare melius est," cap. lxxiii. "Nam nunquam bonus erit medicus et perfectus in consideratione pulsuum, nisi sit instructus in proportionibus musicae, sicut docent auctores medicinae, ut Haly in libro *De regimine regali*, et multi alii," cap. lix.

⁵ Coussemaker, *Script.*, i (1).

Pseudo-Aristotle is the name given to the author of a treatise on music written about the year 1270.¹ At first this work was attributed to Bede, hence the name Pseudo-Bede which is given here, and it was included in the Cologne edition of his works published in 1612. Since the time of Bottée de Toulmon (*d.* 1850) it has been recognized as a pseudograph.² The author draws on the *De scientiis* through the *De divisione philosophiae* of Gundissalinus.

Simon of Tunstede (*d.* 1369) is generally considered to have been the author of the *Quatuor principalia musicae* (written in 1351) printed by Coussemaker.³ Chapters xiii to xvii are based almost verbally on Pseudo-Aristotle (= Pseudo-Bede) who borrowed from Gundissalinus, whose original authority was the *De scientiis* of Al-Fārābī.

Raimon Lull (*c.* 1235–1315), the mystic, who was also an Arabist, seems to show acquaintance with a definition in the *Iḥṣā' al-'ulūm* when he says: "*Musica is duplex: naturalis et artificialis.*"⁴ His contemporary, Johannes Ægidius Zamorensis (*c.* 1270), another Spanish theorist, also uses it.⁵ Indeed, there are reasons for suspecting that Johannes Cotto (twelfth century) and Adam de Fulda (fifteenth century) were also influenced by it.⁶ If Johannes Cotto did borrow from, or was influenced by, the *Iḥṣā' al-'ulūm*, then his *Epistola ad fulgentium*, generally assigned to the year 1100, must be given a date later than the mid-twelfth century, when the Latin *De scientis* appeared, unless, of course, Johannes Cotto had been influenced by oral Al-Fārābīan teaching.⁷ Al-Fārābī still continued to interest Europe

¹ Johannes Wolf says "about 1242" (*Handbuch der Notationskunde*, i, 242, 247). Both Eitner (*Quell.-Lex.*) and Grove (*Dict. Mus.*) say twelfth century, which is too early.

² Coussemaker, *Script.*, i (6). See Farmer, *Historical Facts* . . . , 218.

³ Coussemaker, iv (2).

⁴ Lull, *Opera* (1617), 209. Cf. Regino Prumiensis in Gerbert's *Scriptores eccles. de musica* . . . (1784), i, 232, 236.

⁵ Gerbert, *op. cit.*, ii, 378, 392.

⁶ Gerbert, *op. cit.*, iii, 333.

⁷ See my *Historical Facts* . . . , p. 269.

until the opening of the sixteenth century, as we know from Reisch's *Margarita philosophica* (1496) and Valla's *De expetendis et fugiendis rebus* (1501).¹

As I have pointed out elsewhere,² the intrinsic value of the *Ihṣā' al-'ulūm* to the European theorist in music was inconsiderable. Its real use was that it called attention to the "Arabian Sciences", as they were called, which European students were busy acquiring. It doubtless led these students who, as Ibn al-Ḥijārī says, had "flocked from all parts of the world" to Muslim Spain, to consult, or be instructed from, the various works in Arabic on music, such as those by Al-Kindī (d. 874), Thābit ibn Qurra (d. 901), Qusṭā ibn Lūqā (d. 932), Al-Fārābī (d. 950), Ibn Sīnā (d. 1037), Abū'l-Ṣalt Umayya (d. 1134), Ibn Bājja (d. 1138), and Ibn Rushd (d. 1198), as well as the writings of Aristoxenus, Aristotle, Euclid, Nicomachus, and Ptolemy which, although unknown in Latin, were available in Arabic.

Whether any of these works were translated from Arabic into Latin we do not know.³ It is possible that the sections on the science of music from the *Shifā'* and *Najāt* of Ibn Sīnā may have been known in Latin.⁴ The *madkhal* or introduction to the *Kitāb al-mūsīqā* of Al-Fārābī was certainly known in Hebrew. There can be little doubt, however, that Christian Europe was influenced by the Arabic theorists, and mensural music, with its rhythmic modes and the *ochetus* or *hocket*, was one of the benefits derived, as I first showed in this *Journal* in 1925.⁵

¹ Reisch says: "Denique, Alfarabio auctore, per harmonias, gratiā contemplationis et divinarum scientiarum, studia non mediocriter juvantur." *Lib. v, tract. i, cap. i.*

² Farmer, *The Arabian Influence on Musical Theory*, 15.

³ There is no ground for the wide statement made by J. B. Trend on this question in *The Legacy of Islām* (pp. 17-18).

⁴ Other portions of both of these works were translated into Latin.

⁵ Sarton, *Introduction to the History of Science*, ii, 25.

The Vannic Inscription of Nor-Bajazet

By A. H. SAYCE

IN 1927 an inscription of the Vannic King Rusas I was discovered by the Armenian Archæological Commission at Nor-Bajazet on Lake Gotcha. Its decipherment has been attempted by several Armenian and Russian Vannic scholars and it has been made the subject of an interesting article by one of our leading Hittite decipherers, Professor Friedrich (*Archiv Orientalni*, iii, 2, p. 257). Unfortunately the younger decipherers do not always show themselves acquainted with the older work on the subject or with the script and character of other forms of cuneiform. Nor do they always remember that common-sense is a necessary preliminary to any attempt at the decipherment of ancient texts.

The new text is difficult and Professor Friedrich's interpretation of it is not very successful, as his division of the sentences in it is incorrect. My own rendering is as follows :—

1. *AN Khal-di-ni-ni us-ma-si-ni † Ru-ša-s*
To the Khaldis-gods, the powerful, Rušas
2. *† AN RI-du-ri-khi-ni-s a-li SARRU MAT U-e-li-khi*
son of Sarduris says : The king of the Uelians
3. *ka-ru-bi ARAD-as-tu-bi MAT-ni e-di-ni*
I conquered, I reduced his (?) country to servitude.
ta-am-khu-bi
I appointed (?)
4. *NISU EN-NAM e-di-a te-ru-bi AN Khal-di-ni-li*
a governor over it (?). I set up Khaldis-
KA-MES
gates.
5. *Ê-GAL ba-du-ši-e si-di-is-tu-bi te-ru-bi*
The palace which was ruined I restored. I established
ti-i-ni
the name

6. *AN Khal-di-e-i* *ALU MAT Bi-a-i-na-u-e*
 of Khaldis, (being) of the city of the Vannic land
 us-ma-a-se
 the master,
7. *MAT NAKRU na-a-pa-khi-a-i-di* ¶ *Ru-ša-ni*
 of a foreign land in the territory (?); (belonging to) Rušas
 ¶ *AN Sar-du-ri-khi*
 son of Sarduris,
8. *SARRU DAN-NU a-lu-s ebani Bi-a-i-ni-li*
 the powerful king who to the land of Van
 nu-ul-du-a-li
 is returned

1. "The Khaldis gods" correspond to the Elim and Elohim of the Phœnician and Aramaic texts (see Cook, *North Semitic Inscriptions*, 10, 2; 69, 20; etc.).

3, 4. The signification of *edini* and *edia* is undetermined. In the Kelishin inscription (l. 14) *ulgusiani e[dini]* is rendered by the Assyrian [*ana*] *put balādhī-su* "in view of his life", and I have therefore translated it "for the sake of". Professor Friedrich proposes to see in it the equivalent of the Assyrian *istu libbi*, *edia* being *ana libbi*. But I am now doubtful whether it is really a postposition and not rather a pronominal form, *ulgusiani* being a dative corresponding to *ana put* and *edi-ni* corresponding to the pronominal *-su*. Unfortunately most of the passages in which the word occurs are either mutilated or contain words of unknown signification. On the other hand, the natural sense of *edia* would be "there". Cf. xlv, 17: *EN-NAM-MES eši-a terubi* "governors of the place I set up".

6. *Usmase* is defectively written for the usual *usma-si-e* and *usmasi-i-e*. At the end of a word *-se* properly represents *-s*.¹ Similarly I believe that *-ni* represents *n* (and perhaps also *ṇ*) in the declension of the noun and adjective, as *-li* also may do, *II SARRU-MES-li-li edi-ni* "their(?) 2 kings"

¹ It is possible that this is also the case here, *usmas* representing the nominative of the verb *terubi* in the preceding line.

in xxx, 24 (Lehmann-Haupt: *Corpus*, 27, 24), for instance, being pronounced *erilil edî-nî*.

7. Professor Friedrich is certainly right in regarding the second character as the ideograph *PAP*. *Nâpa-khia-di* is found elsewhere only in xcviî m, 16 (Lehmann-Haupt, *Corpus*, xxvii, A 2, 16), where I have divided the words erroneously: the reading is *MAT Bîaina-ue usmâse-e MAT Luluina-ue nâpâ-khî-ai-di* "to the mighty (god) of Van in the territory of Lulu" (i.e. the Lulubi of the Assyrians). The analogy of other inscriptions indicates that *Ruša-nî* (or *Rušan*?) agrees with *Khaldinîni* (or *Khaldinni*) in the first line.

8. Professor Friedrich is also certainly right in seeing in *alus* the ordinary relative pronoun. But I am doubtful about this being the last line of the inscription; a comparison with the Topzawa inscription (*JRAS.*, 1906, p. 625) would seem to indicate that we ought to have some word after it like *zel-du-bi*. Neither the root nor the signification, unfortunately, of the Assyrian equivalent of the latter is known with certainty; Professor Lehmann-Haupt reads *ušiḡ* and accordingly translates "I narrowed", but the Vannic word looks like a compound of *du-* and *zil(bi)* "name", "seed", or, as I formerly supposed, of *zel(di)*, which is coupled with *barzani* "a chapel" in xix, 9, liv, 3. In any case, *nuldâli* is rendered by the Assyrian *irtidi* "I went (down" or "back"). The ideograph *uri* here is, of course, not *Akkadu* "Babylonia", but *Urdhu* "Ararat" (rendered Tilla "the Highlands", *WAI.*, ii, 48, 13).¹ Professor Götze has pointed out that in verbal forms in *-u-li*, it is the first person only which terminates in *-u-li*, the 3rd person being *-ua-li* or *-wa-li*. The form appears to denote the uncompleted perfect as opposed to the aorist in *-li*.

In continuation of my former notation the present inscription will be No. CI.

¹ *URI* is also stated to be *Amurrû* (*CT.* xi, 15; ii, 5). Since *Amurrû* denoted the country west of the Euphrates this is difficult to explain unless *Amurrû* here represents *Murrû* (usually misread *Khurrû*), that is to say northern Mesopotamia. *URI* might stand for *Wuri*, *Muri*.

MISCELLANEOUS COMMUNICATIONS

HATHUR AND ARURA

Hathur and Arura are at present two villages in the Panjab, which have important history behind them. Hathur is situated about 12 miles from the town of Jagrāon, in the district of Ludhiana. Its ancient name was Arhaṭpura; there Mahāvīra, the great teacher of Jainism, passed in religious meditation the four months from July to October, the period which in India is known as *Chumāsa* (Sk. *Chaturmāsa*) and during which Hindu ascetics of almost all denominations abstain from their usual wanderings, remain in one place, and engage in spiritual practices. Mahāvīra is said to have breathed his last in the year 527 B.C.; and from that time the place grew into importance, with the result that a big town was established there. The town of Arhaṭpura, which derived its name from Arhaṭ, the honorific title of Mahāvīra, was in a flourishing condition in the time of king Azes I, whose coins are still discovered in its ruins. It appears that the prosperity of the town continued till the fifteenth century, when it was under the sway of the Muhammadan Rajputs of Raikot. Thereafter, with the growth of Jagrāon and Raikot, Arhaṭpura lost its importance and dwindled to a village. The people, for the sake of convenience, turned the name Arhaṭpura into Hathur; analogous changes have befallen other places in the Panjab, for example :—

<i>Ancient Name.</i>	<i>Modern Name.</i>
Chandratatā	Chanot
Lavapura	Lahore
Kuśapura	Kasur
Upaplavya	Palwal
Gurugrāma	Gurgaon

Researches in the history of Jainism have established beyond all doubt that Mahāvīra, the 24th Tīrthaṅkara,

was not the founder of that religion, inasmuch as the existence of his predecessor, Pârśva Nâtha, the 23rd Tîrthankara, is quite established. Pârśva Nâtha can now safely be considered as the founder of Jainism, which underwent marked developments from the teachings of Mahâvîra. The time when Mahâvîra flourished is stated in the following ślokas of the Sanskrit manuscript *Gurjara-Deśa-Bhūpāvalī*, to which I made a detailed reference in my paper on the Samvat Era read before the Ninth International Congress of Orientalists, and published in the Asiatic Quarterly Review of January-April, 1893, page 363 :—

वीरतीर्थपतिराप निर्वृतिं
यत्र तत्र धरणीधरो निशि ।
पालकाङ्क्षयन्पुं ऽजनि क्षिती
षष्टिवर्षमितराज्यपालकः ॥ २ ॥

वीरमोक्षाच्च सप्तत्या युते वर्षचतुश्शते ।
व्यतीते विक्रमादित्य उज्जयिन्यामभूदितः ॥ १२ ॥¹

Arura, whose ancient name is Ahichhattâ, lies a little north of the village of Bhadaur (Patiala territory) at a distance of 8 miles from Hathur. Ahichhattâ is a corrupt form of the Sanskrit name Ahichhatrâ, mentioned in the last portion of chapter 140 of the Âdi Parva of the *Mahâbhârata* (Calcutta edition). A local tradition, which is well supported by the literature of Jainism, is to the effect that Pârśva Nâtha was miraculously protected at that place by a serpent during a great flood of water. The serpent kept Pârśva Nâtha fixed on the ground by means of its tail, and brought its hood over his head to serve as an umbrella. As a result of his vast study, a reference is made to this miracle by Mr. Thomas

¹ Translation :—

2. During the very night when Lord Vira breathed his last one named Pâlaka became king of the land. He reigned for sixty years. . . .

12. In the kingdom of Ujjayini flourished Vikramâditya, four hundred and seventy years after the death of Vira.

Note: 470 before Vikramâditya corresponds to 527 B.C.

in his *Life of Buddha as Legend and History* on page 232. As this religious teacher was protected and saved by a serpent, the place where the event took place bore the name of Ahichhatrâ (*ahi*, serpent; *chhatra*, umbrella). Through lapse of time this Sanskrit name has assumed the corrupt form Ahichhattâ. Locally the place is called by some people Aichhattâ Nagari. A few explorers of Indian history are inclined to think that Hathur and Ahichhattâ are one and the same place; but in reality they were different places, and a distance of 8 miles existed between them. Pârśva Nâtha selected the site of Ahichhatrâ for his spiritual meditation; and it was during that meditation that his protection by the serpent is alleged to have taken place. Mahâvîra, on account of his great regard for his predecessor, looked upon Ahichhatrâ as a place of much sanctity, and selected for his own spiritual meditation a site not very far from it. Mahâvîra's place secured an independent sanctity, and bore the name of Arhatpura quite distinct from that of Ahichhatrâ. In ancient geography only one place in India bore the name Ahichhatrâ, to which a reference is made in the *Mahâbhârata* as I have stated above. Jainism, no doubt, took its rise long after the actual war of the *Mahâbhârata*, and we cannot believe that a town of the name of Ahichhatrâ existed at the time of that war. The author of the present epic *Mahâbhârata* brings in the name Ahichhatrâ when he describes the story of partition of the country of Pâñchâla between Drupada and Droṇa through the agency of Arjuna. It can reasonably be inferred that Jainism existed before the *Mahâbhârata* in its present form was composed. Having in view the general style and diction of the book, as also the post-epical ideas which are incorporated therein, I see reason to believe that it was composed long after the war but not later than the third century B.C. I quote for facility of reference the ślokas of the *Mahâbhârata* mentioning the names of the town of Ahichhatrâ and of the country of Ahichhatra :—

पुत्रजन्म परीप्सन् वै पृथिवीमन्वसञ्चरत् ।
 अहिक्चञ्च विषयं द्रोणः समभिपद्यत ॥
 एवं राजन्नहिक्च पुरी जनपदायुता ।
 युधि निर्जित्य पार्थेन द्रोणाय प्रतिपादिता ॥¹

Besides the point of chronology chapter 140 of the Âdi Parva of the *Mahābhārata*, considered along with the local tradition mentioned above, may help us much in fixing the northern boundary of the old country of Pañchâla. After the battle alluded to in the above *ślokas* this well-known country was divided in two equal portions. South Pañchâla was approximately the portion of Pañchâla south of the Ganges, as far as the River Charmanvati (Chambal); and its capitals were Kâmpilya and Mâkandî. North Pañchâla was the portion north of the Ganges, with its capital at Ahichhatrâ, whence it was called the Ahichhattra country. From these data it can fairly be concluded that the country of North Pañchâla lay to the north and west of the country of the Kurus, and included a portion of the Panjab now occupied wholly or partly by the Cis-Sutlej Indian States, and the British districts of Ludhiana and Ambala. In this view I am supported by the following Sanskrit quotation, which I have read under the word Pañchâla in the lexicon known as *Śabda-kalpa-druma*, whose author took it from a book on the Tantra Śâstra :—

कुरुक्षेत्रात् पश्चिमेषु² तथा चोत्तरभागतः ।
 इन्द्रप्रस्थान्महेशानि दशयोजनकद्वये ।
 पञ्चान्देशी देवेशि सौन्दर्यगर्वभूषितः ॥³

¹ Translation :—

Drupadā wandered over the earth to find means of securing a son (who could defeat Droṇa), and Droṇa occupied the country of Ahichhattra.

It was in this way that Arjuna won in battle the town of Ahichhatrâ, together with the country, and made it over to Droṇa.

² Another lexicon, *Śabdārtha-chintāmaṇi-kośa*, reads पश्चिमेषु as पश्चिमे तु.

³ Translation :—

O Parvatî! to the west of Kurukṣetra, to the north a distance of 80 kos from Indraprastha, lay the country of Pañchâla, adorned with pride and beauty.

Within the distance of इन्द्रप्रस्थात् दशयोजनकद्वये exist even down to this time beautiful gardens known as Panjaur, near Kalka (Patiala territory), which show the art and skill of engineers of the Hindu period of Ancient history. The Mughal emperors of India copied the style of Panjaur and constructed Shalimar gardens in Śrīnagar (Kashmīr) and Lahore. The name Panjaur seems to have an affinity with the name of the country (Pañchāla) in which the gardens existed. It is worth consideration how far we can rely upon the position of the ancient town of Ahichhatrâ, fixed by Mr. V. A. Smith on his map attached to page 287 of *Early History of India*.

To fix the geographical position of towns and countries of Ancient India is fraught with much difficulty. I am inclined to think that much assistance in this respect can be rendered by local traditions, if they are carefully studied and sifted. After all we have to bid farewell to the accuracy of the well-known dictum that civilization leads to historical truth, since it has so often been found that tradition is more trustworthy than record.

JWALA SAHAI MISRA.

AMRITSAR.

17th December, 1931.

NOTICES OF BOOKS

MARCO POLO.¹

The story of the Polo family begins with the three brothers Marco, Nicolo (father of the great traveller), and Matteo, and their sister Flora. No corroboration seems to have been found of Ramusio's statement that they were the children of Andrea Polo of the parish of S. Felice. They were Venetians, where there is some reason to think that their home was in the parish of S. Severo, but the brothers' business was chiefly in the East, with depots at Constantinople and at Soldaia (Sudaq). In his will of 27th August, 1280, Marco describes himself as "once of Constantinople", and his son Nicolo the younger was then living at Soldaia. We shall very likely be right in regarding Marco, when the brothers first come on the scene, as the resident manager of a settled business house at Constantinople, while his younger brothers were the travelling partners of this "brotherly company"; but the long absence of twenty-four years which was to follow must have automatically dissolved the partnership, and there is no sign that Marco or his heirs shared in the profits or losses of his brothers' great adventure. Some confusion or misunderstanding of the opening chapter of *Marco Polo* has caused

Ricostruito criticamente e per la prima volta integralmente tradotto in lingua italiana da LUIGI FOSCOLO BENEDETTO. 9½ × 6½, pp. xi-xxiv, 456, map. Milan: Treves-Treccani-Tumminelli, 1932. 40 l.

it to be widely believed that it says that Nicolo and Matteo left Constantinople for Soldaia and the East in 1250, and that date has in consequence been corrected to 1260. In fact, while some MSS. say they "were there" in 1250, some say more or less explicitly that they left Venice for Constantinople in 1250 or 1252 (*P*¹). The further undated move from Constantinople to Soldaia may well have been in 1260, a date perhaps slightly more probable than Orlandini's 1261, when the Venetian colony at Constantinople was temporarily dispersed, a year fatal to Venetian supremacy in the East, but far from fatal to the enterprise of the two brothers who went on by slow stages, forced eastward by circumstances, till they reached Kubilai's summer court at Shang-tu. Thence they were sent back as envoys to the Pope, and reached Acre in April, and Venice probably in the summer of 1269. Here again the French MSS. read 1260, but the correction to 1269, given by one Venetian MS. at least, rests securely on the known dates of the death of one Pope and the election of his successor. At Venice, Nicolo found that his wife was dead and had left him a son named Marco, now 15 years of age. This gives the impression that it was the first that Nicolo had heard of his son. If the two brothers had left Venice late in 1252, Marco might have been born so long after his father's departure—as indeed some of the Venetian texts and *R* state—that he had not reached his sixteenth birthday by the summer of 1269. But the dates and facts of this first journey must be examined and accepted with caution. Between the start from Constantinople and the

¹ The principal MSS. mentioned below are *F* (Paris, B.N., fr. 1116; Franco-Italian, early fourteenth century), *FA* (ibid., fr. 2631; French, fourteenth century), *FB* (ibid., fr. 2649; French, fifteenth century), *TA* (ibid., it. 434; Italian, ? fourteenth century), *LT* (ibid. lat. 3195; Latin, fourteenth century), *P* (London, B.M., Reg. 14 C xiii; Latin by Pipino from Venetian, fourteenth century; the most widely diffused of all the classes of text), *Z* (Milan, Ambrosiana, Y 160 pars. sup.; Latin, 1795, a certified copy of an old MS. now lost); with the printed text *R* (J.-B. Ramusio, *Navigazioni e Viaggi*, vol. ii, 1559). See also the list of MSS., pp. 017 ff. below.

return to Venice eight or nine years of travel or of delays are mentioned in the narrative, and it seems to be necessary to suppose that the two brothers reached Bukhara in or about 1262, and left it in 1265. Bukhara "was ruled by a king called Barac", but modern authorities tell us that Barac (Burac) only began his reign in 1266. The travellers may have accidentally substituted the name of the king who was reigning there on their return journey. The question does not seem to have troubled the commentators, and is not dealt with even in Mr. Penzer's most admirably lucid introduction to the Argonaut Press *Marco Polo*. During his two years stay in Venice, Nicolo married Fiordalisa, daughter of Giordano Trevisan, of whom he had a son Matteo, born presumably about the end of 1271. These facts, correctly guessed by Yule with his usual brilliance, now rest securely on published documents, and indeed on some Venetian MSS. Sloane 251, for example, has, "steteno do anj in Va aspetando la elezion del nuouo papa nel qual tempo miser nicollo tollse moier essi la laso graueda." In the summer of 1271, the two brothers left Venice again with the young Marco, going this time to Acre and Laias. Long delayed by the election of the new Pope on 1st September, they cannot have left Laias finally till near the end of the year, and little did they think that it would be twenty-four years before they could come home. They cut themselves off, as has been said above, from their business headquarters which remained under the management of the elder Marco and the younger Nicolo, but they were not forgotten. In 1280, Marco made his younger brothers his executors, in evident expectation of their sure return.

Ramusio's picturesque story of the travellers' return is often repeated, but is not much supported by the known facts. *Marco Polo* itself says simply that they "rode so long day after day, that they reached Trebizond; from Trebizond they passed to Constantinople; from Constantinople to Negropont; and from Negropont to Venice". That is all.

But was it all? Matteo's will—perhaps the most interesting of all the interesting documents unearthed and published by Professor Orlandini—dated 6th February, 1309 (O.S., the legal year began at Venice on 1st March), has this passage: "I wish to make known to my executors that I have satisfied the aforesaid Marco Polo my nephew with regard to those 500 pounds which he lent me to be given by me as a loan to the aforesaid Nicolo Polo [his nephew] as I said before, namely [*sic*] with regard to half of a set jewel which is in the house belonging to me, and with regard to the three tablets of gold which were from the magnificent Chan of the Tartars, and in addition with regard to those $333\frac{1}{3}$ pounds which were due to me out of those 1000 pounds (? £233 6s. 8d.) which the said Marco Polo received from the lord Duke and from the Commune of the Venetians for part of the loss inflicted on us both by the lord Comnenus of Trebizond and in the territory of the same lord Comnenus and also in other affairs of ours. And I testify that with regard to all other accounts which I have to make with the said Marco Polo I have satisfied him in full and in future I ought to have the third part of all which shall in any way or under any pretext be received or recovered. And I testify that the aforesaid loss inflicted on us as well by the said lord Comnenus of Trebizond as in his territory was in sum about 4000 hyperpera (? £2200)." It is tantalizing that we are not told who were the three on whom the loss was inflicted, or the exact occasion. But the dates which are known seem to justify Orlandini's assumption that the trouble occurred when the party reached Trebizond on their way home from China. And we may be fairly sure that the three who shared equally in the loss were Nicolo, Matteo, and the younger Marco. Marco, who certainly represents himself as the leading figure in China, and who was of a vigorous and grasping character, may well have insisted on having an equal share of the profits with his father and uncle. It was Marco who had actually received the 1000 l. which had already been recovered. On the other hand Matteo's will,

which has been quoted, mentions two other combinations. In the very next sentence he says "When I was in *fraterna compagnia* with the said Marco and Matteo Polo, sons of the late Nicolo once my brother"; and here, too, he claims only one third of the property concerned, sharing equally with his two nephews. And some way further on in his long will he describes the division of rights in the property in S. Giovanni Grisostomo. We may conjecture that that property had been bought while Marco was in prison at Genoa. The value had apparently been divided into twenty-four equal parts. Of these the elder Marco had paid four and a half, and Nicolo and Matteo shared the remainder equally. Matteo, who had no children, now bequeaths four parts of his share to his nephews Stefano and Giovannino (Nicolo's natural sons born perhaps in the East), two parts to his nephew Nicolo, and the remainder (three and three-quarters) to his nephew Marco. Thus we find Marco already in possession of more than half the property, and lending money to his uncle and other relatives, always, apparently, to his own advantage. In July, 1319, he obtained judgement against his cousin Marcolino for repayment of a debt of the latter's father, plus double the fine and interest at 20 per cent for thirteen years. And so, while the Polo family was carried on in the male line only through the elder Marco, whose great-great-grandson Marco is mentioned in the fifteenth century, the family fortunes were quickly gathered into the hands of Marco, the traveller, and of his daughter Fantina. Some time after his return from the East—whether before or after his imprisonment is not certainly known—Marco married Donata, daughter of Vitale Badoario, by whom he had three daughters, Fantina, Bellela, and Moreta. Professor Orlandini has not been led by the study of legal documents to admire Marco's character and he asks us, not unfairly, to observe that in his will (published by Yule) there is no bequest to the cousins whose debts to him had been so severely exacted; nothing, apart from conventional religious bequests, but to his wife and daughters.

The great traveller died at the age of about 70, on 8th January, 1323/4—In nome de Dio 1323 die 8 zener mori miser Marco Polo. His will is dated 9th January. This is quite possible, as the clerical notary would begin the day at sunset ; but it does show that his will was made at the last moment, and enable us to date his death within a few hours in the late evening of Sunday, 8th January, 1324. His immortal fame rests on his great book, not *The Travels of Marco Polo* but *The Description of the World*, in which he gave at least some information about almost every part of Asia, the islands of Japan, Sumatra, Ceylon, Socotra, and the east coast of Africa, revealing a vast new world to his astonished and incredulous hearers.

Marco Polo may be thought to be both fortunate and unfortunate in his editors and translators. As regards exposition more fortunate than unfortunate, but as regards the text of the book misfortune preponderates. A contemporary book of no special literary pretensions was regarded by medieval copyists and editors in a very different light from a Biblical or classical text, and in spite of—even perhaps because of—the popularity of *Marco Polo*, there has survived no single known copy which may claim to be complete or correct. Not only so, but it appears that there are some errors and omissions which infect every MS. which has yet been examined ; as if the multitude of extant MSS. were all ultimately derived from one copy, and that already corrupt. The original must have been very long, and not a little dull, and it was apparently written in an uncouth French much mingled with Italian, and so each copyist omitted, abridged, made errors and mistranslations, as he saw fit, influenced naturally by his own point of view and immediate purpose. Some were looking for scientific news about the world, some for marvels, some for battle stories, and some were interested in the religious state of the world. The writer of *Z*, for example, carefully notes in the margin *adorant ydola* every time that he meets with the monotonous formula : “ They

are idolaters, are subject to the Great Kaan, and have paper currency," and wherever else idolaters are mentioned.

The whole problem of the manuscripts has been very thoroughly examined by Professor L. F. Benedetto in his long Introduction, the value of which it would be impossible to exaggerate; but he would probably be the first to say that the problem is still unsolved, and that the exact history of the transmission of the text remains a mystery. From his researches, however, a few points emerge with sufficient certainty. Among the 120 or more extant MSS., *F* remains the prince. Any reasonable reconstruction of the text must necessarily take *F* as the foundation. It is the only survivor of what may be called the second or at most the third generation of MSS., taken direct or very nearly direct, from the actual original without change of style or language, and naturally, therefore, with little or no sign of being a translation.¹

Benedetto, at all events, is convinced that "Franco-Italian" was the original language. But *F* is much abbreviated, not usually by compression of style, but by sheer omission of chapters, paragraphs, sentences, and words; and it is carelessly, if beautifully, written by a scribe who did not know what he was writing, and would put *chant* as clear as print for "hot", and *chaut* for "song". So if *F* is the only possible foundation, there is much need to correct and supplement it. Correction, at least in the smaller details, can perhaps best be done with the help of *FB* or some other of Benedetto's *FG* class (a very early pure French version), but for supplement there are two other principal sources. The first of these is Ramusio's printed text of 1559 (second edition, 1583), which contains long passages of the first

¹ In one place in the chapter on Dagroian *F* has *chouse* and *FB* *robes*. It is hard to see how *FB* can have translated *chouse* (*chose*) into *robes*, but easy for both readings to be derived from an original Italian *robbe*. But this instance stands, as far as I have noticed, alone. And Benedetto in another place suggests that the original may have contained even more Italian than *F* does.

importance which are found in no known manuscript. As examples of these passages, the story of the murder of Ahmad may be mentioned, and the long additions to the chapter on Quinsai. These passages came from an ancient Latin MS. which Ramusio borrowed from the house of the Ghisi at Venice, and of which nothing seems to have been heard since the sixteenth century. The second great source for additions is *Z*. This is a transcript finished on 8th July, 1795, of an old Latin MS. which cannot now be found. It was first examined by Professor Benedetto in the Ambrosiana at Milan, and found to contain in its latter part not only much of the material hitherto peculiar to Ramusio, but also many interesting passages peculiar to itself. In *Il Milione* we have then the text of *F* printed far more correctly than it was in 1824. Benedetto has to a certain extent standardized the spelling, he has corrected mistakes (almost always noting the original at the foot of the page, and sometimes justifying his correction from another MS.), and he has supplied accidental omissions in square brackets. Below this we have in small print what purport to be critical notes. They do give the original of words which have been corrected in the text, but it still seems to me, as I have written elsewhere, that the space wasted in cataloguing the errors of the 1824 edition would have been well used in giving some of the variants of a few good MSS., especially in the case of dates and numbers. The date of the two brothers' return to Acre is correctly given as MCCLX, without note, and in his Introduction to Ricci's English version, Sir Denison Ross says that he has admitted the correction to 1269, because 1260 is historically absurd. Of the texts available to me at the moment, *F*, *FA*, *FB*, read 1260; *LT* 1270; *P*, *TA*³ 1272; *R* and Sloane 251 (Venetian) 1269; and this information would have been more interesting and valuable than that about the mistakes of 1824. These notes are followed by the additional passages from *R* and *Z*, and many smaller ones from Venetian or Latin texts, or summaries, more or

less allied with *Z*, such as *V*, *VB*, *L*, etc., and a few from the more independent texts such as *FG*. In quoting *Z*, Benedetto has silently corrected the many blunders of that curious text—reading, for instance, *nolens vacare* for *volens vacare*. The total result is that we have before us in large clear print on hand-made paper, the text of *F* correct and complete, and on the same page, arranged with an almost incredible lucidity, the important additions from the other texts; and for this it is impossible for students to be sufficiently grateful to Professor Benedetto. This text is followed by an appendix giving some less important additions from other texts, and by a full and excellent index. The study of the additional passages is most interesting. Most of them fit easily and exactly into their places, so that one feels that *F* + *Z* may sometimes be very much like the actual original, but some give the impression that from a very early date there may have been actually divergent recensions. The combination for example of *F* and *R* in the Quinsai chapter has baffled all previous editors. Benedetto has attempted it in his continuous modern Italian text (known as yet only in Ricci's English version), but he has had to include two contradictory accounts of the public baths!

In so large and intricate a book as *Il Milione* there are bound to be some misprints and slips; and some of those which I have noted are given in no fault-finding spirit, but as a small contribution to the usefulness of so great a work.

p. xxxii, read, I think, securely *monsir Mark & Poule de le melion*

p. xxxiv (3), Pauthier's *contrescris* is certainly right.

p. lxxvi, for *toins* read *tonis*

p. lxxvii, is it possible in a fourteenth or fifteenth century MS. to distinguish *vies* from *uies*?

p. lxxx, for 1452 read 1458 For di p. read di 7

p. xcii, for *morì una* read *morivvi*

p. xciii, for *e fferonne* read *e ffecionne*

p. civ (1), is there not confusion of *VA*³ and *VA*⁴?

p. cxlviii, for 1902 . . . *livre* read 1922 . . . *livro*

p. clxiv, I have noted "there are some small places where *F* has a French word, and *Z* an Italian:—*que—che, dame—donne*"

p. clxvii, is the *al* of *Alochayray*, in *Alchatai*, and in *Alchalif* Italian (as *B.* implies) or Arabic?

p. clxxv, for *XL* read *XLI*

p. clxxx, for *XCIII* read *XCIV*

p. clxxxvii (1), for *indefellità* read *infedellità*

p. ccxii, for *Differentia LXII* read *Differentia LXVII*

c. I 23, *Rustaciaus* is the only possible reading. *B.* has not quite realized the clear distinction between *u* and *n* in *F* (except in the last part).

c. III 18, *au taesse*. It seems to me likely that the prototype had *retorner au dereain a uenesse* ("to return at last to Venice"). *au dereain* is supported by *tandem*, which *B.* quotes from *L*; *a uenesse* by *uenetias* (*LT*); the omission of *au dereain* before *auenesse* is easy; and the corruption of *auenesse* to *autaesse* is exactly paralleled in *F* itself (c. CXXXV 27), *lautature* = *laurenture* (*B.* prints *l'avanture* without note).

c. XXIX 14 (note), read *comment*

c. XXXII 23–4 (note), read *Z* "tertius de Caxam". I cannot vouch for *L*, *V*.

c. XXXIII 6, *tunocain only* 7 *tucoain only*.

c. XXXVII 22, read *tonis*

c. XXXVII 54 (note): for *maimodi* read *rucumodi* (?). It is unfortunate that *maimodi*, which *B.* here corrects to *Ruemedan*, should have been adopted by *Ricci* as correct. The original name may have been *Rukn udDin*, as *Mr. Penzer* suggests.

c. XLI 3 (note): *M.* will not allow *Desaram* but only *desarain*

c. XLV 9: the MS. reads *dogaua*

c. XLVI *a* read *abundantes*

c. L *a* read *Et illic*

c. LVII 11, *eiue deueres* why not "water in winter"? And read *M. ha nin*

- c. LVIII (note), for 26 opp. read 27 opp.
- c. LXIX 26 (note), read *feunes*
- c. LXX 58 (note), read *deus* inv. di *deus*
- c. LXXIX c add R :
- c. LXXX 10, read Sichintinguu or -gui
- c. LXXX 10 (note), read M e S (p. 531) cauli
- c. XCIV 75-6 (note), for Z read R
- c. XCV 8, de jugn *FB*⁴ and Pauthier : may *FA*¹ : moy
- c. CV a (Z, l. 6), *sed* must represent *secundum* (R : *secondo*).
- c. CXIX 12, a small addition from Z : Christiani *Turchi* Nestorini *sed principales sunt ydola adorantes* might have been noted.
- c. CXXII 19, read *LX*^M.—This misprint reappears in Ricci's translation.
- c. CLIV 21-2 (note), Tutti i testi, etc., but *LT* : sine *salle dico*—Z : *absque sale dicit*
- c. CLVI 34 (note), read *vugen*
- c. CLX 31, omit [sus] *monter* here has the sense of *montare* "to weather", "to steer clear of".
- c. CLXII 2, read e de celz de ceste—the scribe, having written *e celz de celz de ceste*, cancelled the second *celz* by mistake instead of the first. In line 3 read probably *celz* [de ceste] isles.
- c. CXCII 1 (note), read *mogclasio* . . . Mogdaxo (Sir Denison Ross still identifies Mogdasio with Madagascar).
- c. CXCIV 4 (note), .III. the first dot has become enlarged, so that it looks like IIII.
- c. CXCIV 19 (note), read *sire dou rauec*
- c. CXCIV e, read *XII vel XIII*

etc.

The English version by the late Aldo Ricci is very closely connected with Benedetto's edition of the original text. The history of it may be given in the words of the Introduction. "Since the publication of his fine edition Benedetto has made a translation of the Geographic text [*F*] and embodied

in it the most important additional passages from the other texts. While making his Italian translation he has frequently had recourse to readings in the FG family of MSS. not noted in his edition. The present volume represents in the main the English translation of his Modern Italian version made by the late Signor Aldo Ricci, whose untimely death occurred shortly after he had completed it. This English rendering has since been checked with the original texts by myself in consultation with Professor Benedetto." And "I have not myself seen the Italian version from which Signor Ricci made his translation, but I gather that certain differences will be found to exist between that version and the English translation as it now stands. This is especially the case in regard to obvious errors in matters of fact, for whereas Professor Benedetto has corrected these in his translation with a view to accuracy in the narrative, I have persuaded him to allow me in such cases to adhere to the original readings, however faulty, with a view to accuracy in the text."

The translation is a remarkable performance and will certainly take precedence of all former translations for purposes of serious study, both for its accuracy and for its completeness. It is written in plain, lucid, ordinary English, with no ornaments and no archaisms, except an occasional unfortunate *puissant* or *sooth*. The translator defends this style as against Yule's in a way with which many will agree. His accuracy needs no defence. It is naturally difficult to criticize the translation of a translation which has not been seen, for one does not know whether he is really criticizing Benedetto's Italian or Ricci's English; but when it is said that it is always easy to identify the underlying text and the exact reading adopted in doubtful cases, it will be seen that the standard of accuracy could hardly be higher. There are naturally a few small slips: *pasant* is translated "along the road" (p. 99) instead of "grazing"; *grosses* is "broad" (p. 70) "in breadth" (p. 98) instead of "thick". Some mistakes seem to be due to difficult handwriting. Thus "gold

and silver" appears at least four times (pp. 149, 168, 225, 231) for "gold and silk"; and to the same cause may be due "spring" (p. 207) for "swim", "often" (p. 255) for "fifteen". Among pure accidents may be reckoned "thousand" for "hundred" and "sell" for "buy", both on p. 147. Sir Denison Ross flattered himself that he had eliminated all Benedetto's wilful corrections of the text except one date, but the Professor has eluded him with "yellow" for "blue" on pages 102, 140, and with "twenty-three pillars" (p. 168) where the texts have twenty-four (or thirty-four), and *R* corrects better to *venticinque*, and elsewhere.

The style as we have said is clear and good. While there is a slight tendency to paraphrase and even to abridge in the many added passages from *Z* and other MSS., the translation of *F* is very exact. But Marco Polo is robbed of some of his charm. His picturesque points of the compass, named after the sun, stars, and winds, appear almost for the first time as dull N., E., S., W., and so on; and on p. 284, Ricci, in his zeal to be ordinary, even talks of "the stars of the north-west", where it assuredly means "the stars of the Plough".

What is the text which is so well translated? The extract from the Introduction quoted above would lead us to suppose that we have the text of *F* complete and correct with all the important matter from other sources woven in to make a continuous whole. And this is approximately the fact, but not exactly. In the first place Benedetto and Ricci have renounced once more the idea of giving *F* absolutely complete. A passage like "And these same people of whom I have told you have such a usage as I shall tell you. For I tell you that when a man . . . And know quite truly that these *bacsi* of whom I tell you above . . . do so great a marvel as I shall tell you. I tell you that when . . ." was too much for them, and appears (p. 100) as "They also have another custom that I will tell you of: when someone . . . Know, too, that these *Bacsi*—namely, those I have just spoken of . . .

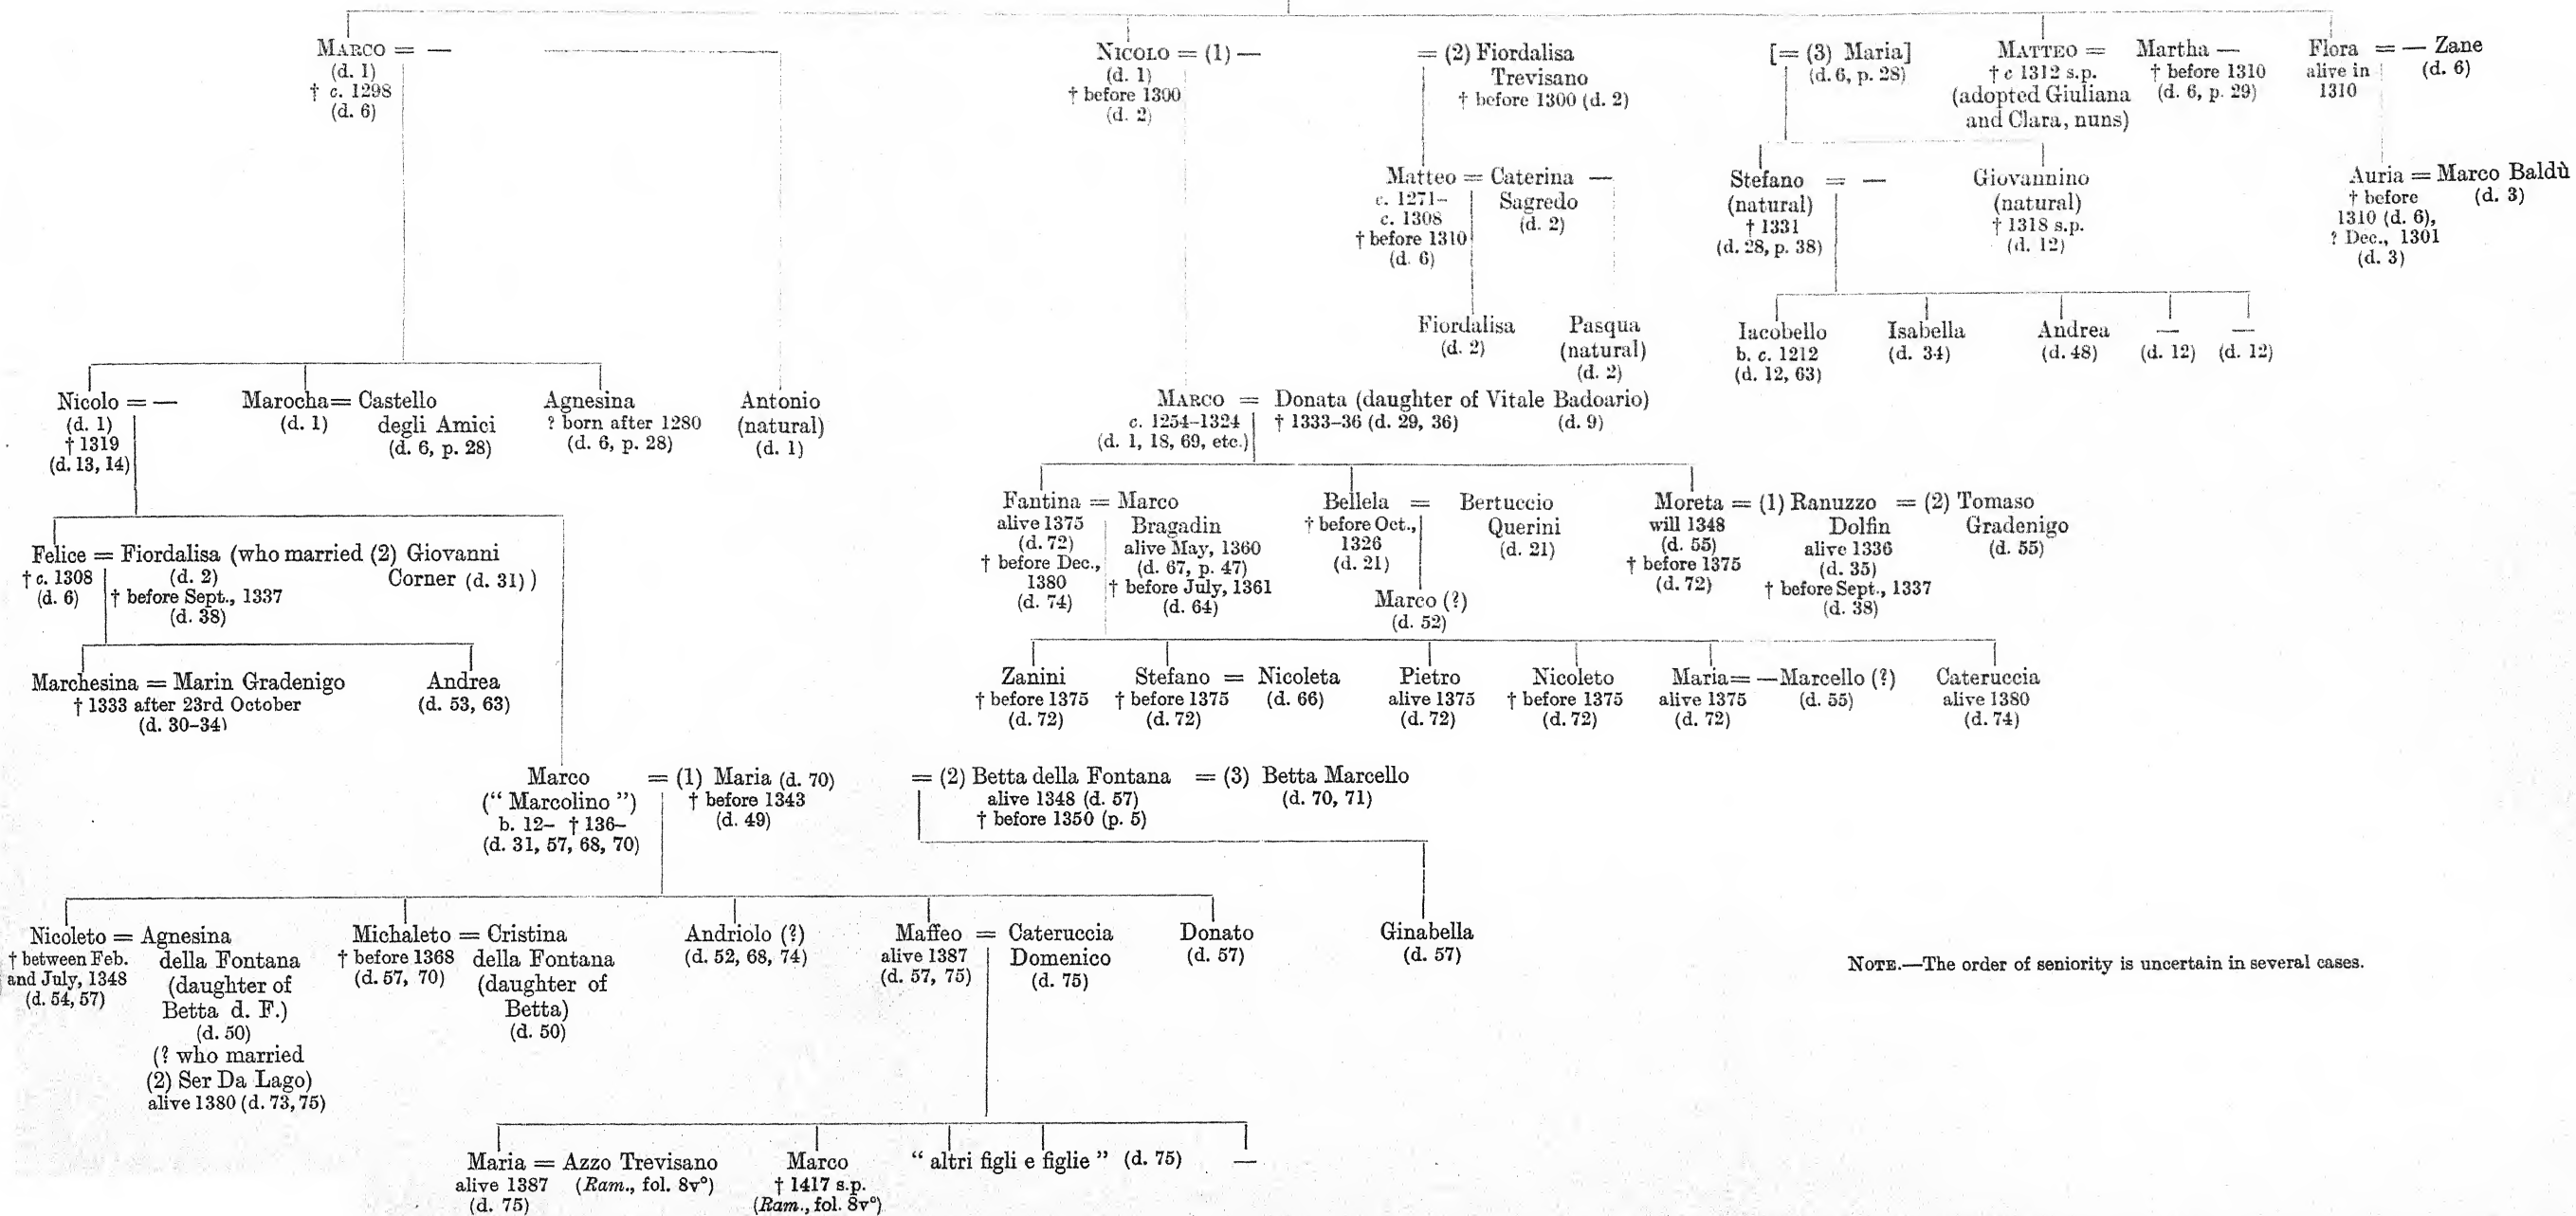

perform a very great wonder, even as I shall tell you. When . . .” So it is throughout the book. A more serious loss is when a word or whole sentence of *F* is *exchanged* for the corresponding word or sentence in some other manuscript, and this happens sometimes as often as twice, or even three times, on a page. The additions are most important, sometimes filling several consecutive pages, and are on the whole very well done. But none of these omissions, substitutions, or additions are marked in any way, and a student can tell almost less well than in Yule’s edition what *F* really consists of, and what is its relation to *R* or to *Z* or to any other manuscript. Nor are the additions complete. Benedetto may fairly claim to have put in all the important passages, but there are many more which while of little intrinsic value may well be genuine parts of the original text. We have, after all, what Benedetto thought worthy of inclusion, not everything that could possibly be included; and we have great cause to be thankful that his judgement is so sound, and his workmanship so skilful.

The translation, which occupies 408 pages, is printed without note or explanation of any kind. It is followed by an index, to which notes have been added, so combining index and commentary arranged in alphabetical order—an excellent idea which seems unfortunately to have been carried out with haste. The information, being largely derived from Professor Pelliot’s published work, is for the most part, of course, reliable. Mr. Perceval Yetts also contributes one or two interesting notes. But what with misunderstandings, confusions, and misprints, the number of errors small or great is unfortunately large. A few examples will be enough. That a place hitherto known as Chingjinju (Tinghingui, etc.) should suddenly appear as Canju seems to call for explanation, but the older name is not once mentioned. We are, however, told *on Pelliot’s authority* that the place must no more be identified with Ch’ang-chou but with Chên-ch’ao. What Pelliot and I myself have remarked is that the story

THE POLO FAMILY

(From the Documents published by G. Orlandini.) d. = document

(?) ANDREA of San Felice (*Ramusio*, tom. ii, fol. 8v°)

NOTE.—The order of seniority is uncertain in several cases.

of Kubilai's troops being massacred by the Chinese when they were drunken is told in the *Yüan shih* not of Ch'ang-chou but of Chên-ch'ao. The rest of Marco Polo's story is exactly corroborated by the *Yüan shih* and by contemporary documents and the identification with Ch'ang-chou is as certain as any in the whole work. The reference is given as "See Pelliot, *T'oung Pao*, 1914, p. 21". *T'oung Pao*, 1914, is a convenient way of referring to Pelliot's brilliant article, "Chrétien d'Asie Centrale et d'Extrême-Orient," but p. 21 is the page in the separate reprint, and not in "*T'oung Pao*, 1914"; and finally the index reference to p. 231 where Canju is described in this book is omitted! "Gat-paul" has an interesting note (unconsciously repeating much that appeared recently in *Notes and Queries*), and a reference to p. 328. But the word does not occur in the book at all, its place being taken by "apes" on p. 328 and on p. 352. Proper names—this applies to the whole book—are as a rule spelled on Yule's principle, so as to enable the English reader to reproduce the Italian sounds—*ju* for *giu*, *chu* for *ciu*, and so on; but there are some anomalies. Carachoco is kept in its original form instead of Caracojo or Caracozo. Cuigui is identified with Kuei-chou, but yet spelled Chuju instead of Cuiju. Thai is retained, though *R* correctly intended the sound of English *tie*, not *thy*; and Choncha for Konka. No convincing explanation of this name has yet been published. Perhaps the least bad is that Choncha should be Chochan (a very common transposition), and that Chochan is a reasonably good transcription of Hok-kien the local sound of 福建 Fu-chien. *R* has also Cangiu and VB Cagui for Fuchou; and it is just here that Marco Polo tells us about the dialects of spoken Chinese. Sachiu should be Sachu or Saju. In Ha-ch'a-mu-tuan, read -tun. French *tuen* is Wade's *tun*, not *tuan*. "Nankin, Nan-ching—An-ch'ing" will not do. Nankin represents *either* Nan-ching (K'ai-fêng) or An-ch'ing in An-hui. A neglected reading of *Z* which puts Nankin "in confinibus Manzi" seems rather to support the

old identification with K'ai-fêng. It is unfortunate that the dates of Chinghis, Mongu, and Kubilai, and of the publication of the Geographic Text (*F*) should be among the misprints. The submission of the Old Man's son to Hulagu will not be found on p. 53 or anywhere else, nor that rhubarb is protective against the effects of the sun on pp. 75, 253. Rhinoceros and Sain Khan are out of place; Arabia, Mulehet, Pashai, Porcupine, the first chapter on Seilan, are omitted. Many references to Rice besides its use in the making of wine might have been given. And so on.

In the translation no allowance is made for the apparent intention to distinguish khan (*can*) from qagan (*caan*) in *F*, nor for the fact that *sire* takes the place of *can* or *caan* in every case but one from chapters 90 to 113 inclusive. It would have been a great help to readers if the chapters had been numbered. Mr. Penzer in the Argonaut Press has set a very good example in giving not only consecutive numbers to his chapters, but also the corresponding numbers in Yule, Ramusio, etc. The curious omission of a map has been made good by the subsequent issue of the map of "The Itineraries of Marco Polo" from Mr. Penzer's edition. This leaves nothing to be desired in point of clearness, but only a very few of the places appear with the names, or spellings, which are used in Professor Ricci's text or in the Index.

In spite of its faults, the book remains a most valuable addition to the long list of editions of Marco Polo, and is nicely printed and very pleasant to handle.

Readers will, I hope, be grateful to the Editor for allowing me to add to these notes the Tree of the Polo family which is inserted above and the lists of manuscripts which follow.

307.

A. C. MOULE.

A short note must be added on Professor Benedetto's popular Italian version which was received in the middle of April. In plan it is naturally like the English version by Professor A. Ricci and Sir Denison Ross. That is to say there is an Introduction containing an original and very brilliant

description of Marco Polo's book ; the text, without note or comment ; a few pages of " Note alla traduzione " ; an Index of Persons and Places with brief notes ; an Index of Subjects ; and a folding map. The map is exceptionally clear, and has all the places spelled as in the text, and is unobstructed with a line of route. The notes in the first index are concise and clear and on the whole represent the latest results of research, though some of the statements are open to question ; and they appear to be free from the unfortunate signs of haste which tend to mar the English edition. The spelling of modern Chinese names does not quite escape the usual confusion. Thus we have Su-chow and Soo-chow, Wu-kiang hsien and Ou-kiang tcheou, and so on. To the production of this popular edition Professor Benedetto has evidently brought the same high enthusiasm, learning, and scholarship with which he produced his great critical edition in 1928, and the student can ask for little (apart from elaborate commentary) which will not be found in one of these two books.

A LIST OF THE MANUSCRIPTS AND EARLY PRINTED EDITIONS
OF MARCO POLO DESCRIBED BY PROFESSOR L. F. BENEDETTO

(References are to the pages (here given in Arabic numerals) of Professor Benedetto's Introduction. The *Letter* is not in every case taken from Benedetto.)

A HISTORY OF INDIAN LITERATURE FROM VEDIC TIMES TO THE PRESENT DAY. By H. H. GOWEN. $8 \times 5\frac{1}{2}$, pp. xvi + 593. New York and London: Appleton and Co., 1930. \$4.

Professor Gowen has attempted in this useful book to provide American readers with a wider knowledge of Indian literature than is at present available for them. He rightly gives a full account of the invasions of India, and emphasizes the indebtedness of the country to outside influences for advances in its culture. We may agree, moreover, that Indian literature has been so profoundly affected by historical and geographical conditions that it was advisable to give a full description of these for his American readers. It is at the same time necessary to observe that the information he supplies is not always accurate. It is, for example, many years since Madras and Bombay were the only Presidencies, and Bengal and the Panjab Lieutenant-Governorships. The Lahnda language is not spoken in Sind; and some of the historical details are likely to mislead. It should not, for instance, be suggested that Chandragupta was a camp follower with the army of Alexander the Great, without pointing out the unlikelihood of the story; and, to come to much later times, Ala-ud-din Khilji was not the son, as well as the murderer, of his predecessor Jalal-ud-din. The characters of Sanskrit literature, and its lasting influence on Hindu thought throughout the ages, is however admirably described. It is rightly pointed out that such literature is far from being entirely religious or mystical. The Brahmins were, indeed, intensely practical, and the *Arthaśāstra* of Kautilya imparts, not merely a knowledge of Macchiavellian state-craft, but an extremely low standard of morality. The *Kāmaśāstra* and similar works are again the direct negation of the asceticism which some suppose to have been a general feature of ancient India. The Sanskrit classics and the dramas of Kālidāsa and others are clearly described. Too much space, considering the necessary limitations in the size of the book, seems to be

given to the history of Buddhism and Jainism, but their literature also is adequately described. When we come to mediaeval and modern times the book becomes less adequate.

In dealing with the Middle Ages, for example, there is an insufficient account of Tamil literature (due perhaps, to judge from the bibliography, to a lack of knowledge of Dr. Pope's works); no mention of the Guzerati poets such as Narsinh Mehta and Mira Bai; no account of the Sufi poets of Sind and of the Shah-jo-Risala of Abdul Latif; no mention of the popular folk-poetry illustrated by the stories of Hir and Ranjha in the Panjab and of Laili and Majnun in Urdu. Nor is the very widespread and important literature of modern India adequately dealt with. There is a full account of Bengali literature, largely due to the vogue of Rabindranath Tagore in America; though we may note that the author relies on Dr. E. J. Thompson's work on Tagore published in 1921, without reference to the much fuller book by the same author of 1927. No reference is, however, made to the almost equally large output of Tamil literature, to say nothing of the other Dravidian languages. A comparatively minor Marathi writer is mentioned, without notice of the two Tilaks, whose writings on widely differing subjects were both remarkable. No mention is made of the large Guzerati outturn, particularly that produced by the Parsis, and finally there is no mention of the Urdu poets, such as Sir Muhammad Iqbal. Some attention might also have been given to the new school of historical writers, the most distinguished of whom is Sir Jadunath Sarkar. Nor is any mention made of the great journalistic activity of modern India, and, if it be objected that such journalism seldom produces literature, there have at least been several reputable literary periodicals. Professor Gowen has rightly included a review of foreign writers, since these have had so great an influence on Indian writers, in addition to being the chief source of knowledge about India to English and American readers. It must, however, be observed that his survey of such writers is inadequate and incomplete, and

this appears to be due largely to excessive reliance on Mr. Oaten's little book, which was little more than a prize essay. Incidentally, it may be noted that this reliance is responsible for an incorrect account of the German traveller, de Mandelslo. Where the omissions are so numerous, we need only note that of Thomas Stephens, the first historical Englishman in India, and certainly the only one to write an epic poem in an Indian language; and, among the moderns, F. W. Bain and E. J. Thompson, who is only mentioned as the writer of a work on Tagore. Rudyard Kipling is, of course, and very properly, mentioned at full length; but the quotation of a criticism on him by Richard Le Gallienne seems rather unnecessary, at least to English eyes. The only Anglo-Indian writer mentioned (in the modern and non-literary sense of that expression) is De Rozio, whose Christian name the author gives as Henri.

The mention of these defects does not prevent a recognition of the solid merits of the book. The truth is that India is a congeries of nations, with diverse literatures, and wide personal knowledge and much research would be necessary before a history could be written which would adequately cover them. To such knowledge and research this book makes no claim. But it is sanely and modestly written, with a marked absence of prejudice or partiality, and it therefore serves as a very useful introduction to an important and interesting subject.

P. R. C.

BEYOND THE SUBLIME PORTE. By BARNETTE MILLER, the Grand Seraglio of Stamboul, with an introduction by H. EDIB. 9 x 6, pp. xxv + 281. New Haven: Yale University Press; London: Oxford University Press. \$5.

This is a scholarly and painstaking account of the Grand Seraglio of Constantinople, much of the necessary knowledge

being acquired while the author was teaching in Turkey. It succeeds in giving a real meaning to the Sublime Porte, which to most readers must be little more than an expression. The most interesting portion of the book is the description of the educational system of the Sultan Muhammad, the conqueror of Constantinople, and in particular of his foundation of the Palace School of Pages. This contained many of the features which we generally regard as peculiarly distinctive of the great English public schools, and to it was in great part due the efficiency of the Turkish generals and Turkish administrators during the reigns of the earlier Sultans. The struggle between the Royal Harem and the Vazirate is fully recounted. The evil genius of the Sultana Roxelana led to the triumph of the women for one and a half centuries, and laid the seed for the downfall of the Ottoman Empire. The architectural history of the Grand Seraglio is given in great detail, and, if this causes the book to be one for the student rather than for the general reader, it adds considerably to its usefulness.

P. R. C.

A SHORT HISTORY OF INDIA. By P. T. SRINIVAS IYENGAR.

7 $\frac{1}{4}$ × 4 $\frac{1}{2}$, pp. 214. London, Oxford University Press :
Humphrey Milford, 1930. 2s. 6d.

It is difficult to get the whole history of India into the compass of so small and low-priced a book, but, if the author has not quite succeeded, he has made a very good attempt. No effort is made to trace the distinction between the Indo-Aryan and Dravidian races. The latter, indeed, are never mentioned as such, and one would imagine that the difference between them was not one of race, but of the performance and non-performance of fire sacrifices. It is perhaps rash to assume that the people of India were highly civilized six thousand years ago, because of the discoveries at Mohenjodaro ; it has yet to be proved that this culture extended

beyond the Indus Valley. There are curious omissions, such as the failure to mention the Arab invasion of Sind, or the doubling of the Cape of Good Hope. Some of the statements are of doubtful correctness. It is, for example, stated that the plateau of the Deccan is the land of the cotton plant. The excavations at Mohenjodaro have shown that the true cotton plant existed in Sind, from which country, or more accurately from the River Indus, the Hebrew and Greek word for cotton piece-goods was derived. It seems rash to assert positively that the Indo-Greek king Menander was a Buddhist of the Hinayāna doctrine ; and it is surely incorrect to say that the frequent invasions of Mahmud of Ghazni did not in any way change the course of Indian history. The author rightly mentions events in Tamil history too often neglected, but he hardly shows how they affected events in Northern India. The author avoids comment on events which might yet cause ill-feeling ; but it is surely carrying euphemism too far to say that during the Indian Mutiny, when British forces were besieged at Lucknow and Cawnpore, "relief came and the places were saved." Incidentally, practically no mention is made of the military character of the Mutiny. The upheaval is ascribed to Lord Dalhousie's policy, but it is not explained why the Madras and Bombay Presidencies remained calm, though that policy had been applied in them also. Although there is a marked and praiseworthy absence of racial prejudice, it must be observed that the account of the policy of Lord Wellesley and Lord Hastings approaches a travesty of their objects. Nor will it be generally accepted as correct that, while the rule of Indians is personal, under the British system the people and the officers see as little as possible of each other. The book is, however, free from any cause of offence, and, when its illustrations are considered, is very good value for its cost.

MANDELSLO'S TRAVELS IN WESTERN INDIA (A.D. 1638-9).

By M. S. COMMISSARIAT. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xx + 115, plates 6. London, Bombay, Calcutta, Madras : Oxford University Press, 1931. 11s. 6d.

Mandelslo occupies a somewhat special position among early European travellers in India. As a young German of good family and clearly of very pleasing character, he was not connected with any of the rival commercial nations trading in India, and at the same time was on the most friendly terms of intimacy with both the English and the Dutch factors in Western India. But he was no writer, and had always intended to entrust his Journal to his German friend, Olearius, who had been secretary to the Duke of Holstein's Embassy which Mandelslo had accompanied as far as Persia. Mandelslo died soon after his return to Europe, and Olearius published his journal in 1646, along with his own travels, and in an expanded form in 1656. When this was translated into and published in French by A. de Wicquefort in 1659, the French editor added largely to Mandelslo's account from other books and sources, some of which have not been traced, and it was from this French edition that John Davies of Kidwelly published his English translation of 1662, of which a further edition appeared in 1669. The result was Mandelslo was credited with journeys and observations which he never made, and the reputation thereby attaching to him had its inevitable aftermath when Vincent Smith in the *Journal* of this Society for April, 1915, pointed out the small portion of the Travels really due to Mandelslo, and went on to declare, with undue severity, that the parts of the book written by him are almost valueless and that his "bubble reputation is pricked beyond the possibility of repair". Professor Commissariat's study of the admittedly original part of the so-called travels is therefore especially useful. He originally intended it to be a portion of his *History of Guzerat*, and the resulting form of the book is perhaps somewhat unfortunate. Not only does he thereby lose the picturesque effect of John

Davies' English translation (as, for example, his description of the "Rasboutes", or Rajputs, as "Tories or highwaymen"), but he omits also many pleasing touches, such as the discovery by Mandelslo at Cambay of the inscription cut in 1616 by Methwold, the President of the English factory at Surat, and Mandelslo's host in 1638, of the couplet :—

"The English and the Dutch were here,
And drank toddy for want of beer."

Still Professor Commissariat fully establishes the value of Mandelslo's observations, however baldly they may have been set down. There is a very pleasing account of the social life of the English and Dutch factors, between whom much friendly intercourse at the time existed, probably in large measure due to the character of Methwold, and the fact that he spoke Dutch well. There are interesting details, such as the meeting of the married English factors on Fridays, to drink to their wives, since they had parted from them in England on that day, and the fact that both English and Dutch factors constantly assumed Indian dress, though they kept up their taste for European food and drink. In his account of the tyranny of the Mogul governors, of the insecurity of the roads, and of the effect of the great famine of 1630, Mandelslo is both informative and trustworthy, and his details are amusing, such as the interest of the dancing girls in the lovelocks, which he wore like other cavaliers of the period, and which made the damsels doubt his sex. Vincent Smith himself assigns sixty-five out of the 232 pages of Davies' edition of 1669 to Mandelslo, and there can be little doubt of the veracity and value of his account. We think that Professor Commissariat might have given a fuller account of that remarkable man William Methwold, and might have emphasized the importance of the treaty which he made with the Portuguese Viceroy at Goa in 1638, when Mandelslo was in his company. Although, moreover, Mandelslo's visit to Agra and Lahore was brief, and his description, as his French editor said, "*assez maigre*," his

account would have been of more interest than his view of Amsterdam. On the other hand, Professor Commissariat's personal knowledge of Surat and Ahmadabad has enabled him to make valuable remarks on Mandelslo's description. The best epitaph of Mandelslo himself is to be found in the letter of the President and Council of Surat to the East India Company. "He hath lived among us, the civillest, modestest, and fairest behaved that we have ever known of his age and education."

P. R. C.

THE EDUCATIONAL SYSTEM OF THE ANCIENT HINDUS. By SANTOSH KUMAR DAS. 9 $\frac{3}{4}$ \times 7, pp. xii + 508. Calcutta : Mitra Press, 1930.

This is a very weighty book by Professor Das of the Tri-Chandra College in Nepal, and it is due to the patronage and aid of the Prime Minister of Nepal that so large a book has been published at so moderate a price. It gives us a full and learned study of the educational system of ancient Hindu India. Professor Das throws his net very wide. He includes under education much vocational training such as the teaching of the soldier in the use of arms, and many descriptions of what can only be called very indirect education, such as asceticism, discussions, religious tournaments, pantomimes, displays of wild animals, and "club life". It may be true that culture and not literacy was the highest form of education in ancient India, but the impression gathered certainly is that education in the modern sense was very limited in extent. Higher education was not open to all, and Brahmans alone were authorized to teach. Studentship was confined to the twice-born castes. Its full course lasted from 32 to 101 yrsrs, and Megasthenes puts the period at thirty-seven years. In these circumstances the numbers of the highly educated must have been limited, and it would be interesting to know what proportion of the lower classes had

any teaching at all. Vincent Smith correctly observes that Asoka would have not have recorded his decrees upon stone, if they could not be generally read; but the number of actual readers may have been small. It does not appear that the poorer classes received any form of teaching of letters, except in the schools of the Buddhist monasteries, where the teaching may well have been as general as it still is in Buddhist Burma. When he treats of female education, the author is still more general in his application. The fact that only certain classes of women, such as courtesans, princesses, and daughters of noblemen, should have their intellects sharpened by direct study indicates a very limited application of teaching to women. A courtesan "of good character, beauty, and virtue" was entitled to higher education, but this would indicate that her non-professional sisters were not so instructed.

The author is fully justified in saying that we should judge an educational system by the average men it produces, and by quoting the ancient Greek and Chinese writers in respect to the truth and justice-loving character of the Indians of their time; but he is scarcely justified in ascribing the deterioration which he evidently believes as having taken place in the Hindu character to the results of Muslim and British Rule. Surely the maxims and precepts of Kautilya's *Arthaśāstra*, a work to which he constantly refers, do not indicate a community altogether free from falsehood and deceit. Even one of the teachings which he quotes as showing the respect for learning, "In cases where by speaking truth a student is killed, a witness may speak untruth," does not inculcate a high regard for truthfulness. The book is not free from generalities and deductions of this sort, but it is an interesting examination of our slender knowledge of general education in the early ages.

THE IMPERIAL GAZETTEER OF INDIA, Vol. XXVI. Atlas. New (revised) edition. Published with the authority of the Government of India. $8\frac{1}{2} \times 5\frac{1}{4}$, pp. vii + 41, plates 66. Oxford: Clarendon Press, 17s. 6d.

The last edition of the official *Gazetteer of India* was issued in 1909, and the time had certainly come for the revision, if not of the whole *Gazetteer*, at any rate of the valuable atlas which constitutes its last volume. There are new provincial boundaries, new military commands, large railway extensions, and many other developments which have come into existence during the last twenty years, and the Government of India has done well in undertaking the revised edition of the atlas and in entrusting it to such capable hands. The names of the officers responsible for the revision are not given, and this seems unfortunate. Although the labour of revision is nothing like so great as that involved in the original preparation of the maps, the investigations of fresh data must have involved an immense amount of careful research; and one would have liked to have known to whom we are indebted for the revised edition.

A meticulous investigator can find one or two defects: a recently constructed bridge omitted from a city plan, for instance, or a new line of railway entered in one map and not in another. But generally speaking, the maps appear to be well brought up to date. Those in which the Society may be thought to be specially interested are, as a rule, of a "static" character, and there is little or nothing of change to record in maps which deal with the races or the religions or the languages of the country. Those that illustrate the history of India appear to reproduce with little or no alteration the maps compiled by Mr. J. S. Cotton for the edition of 1909. There are, however, considerable changes in the archæological map. In amplification of the old classification of sites as Buddhist, Hindu, and Muhammedan, we have two further classes introduced to cover the prehistoric sites and those of uncertain origin. The number of sites indicated has been

greatly enlarged and places such as Harappa and Mohenjodaro, together with a host of other sites in Baluchistan and the Indus Valley, and elsewhere find themselves entered for the first time in this revised map.

The production of the maps has been entrusted as before to Messrs. John Bartholemew and Sons, and it has been carried out with the same skill as in 1909, and with even greater clearness of outline and colouring. The whole volume reflects great credit on all concerned in its publication.

ANON.

CONFUCIUS AND CONFUCIANISM. By RICHARD WILHELM, late Professor of Chinese at the University of Frankfurt on the Main; translated into English by GEORGE H. DANTON, Ph.D., and ANNINA PERIAM DANTON, Ph.D. $7\frac{1}{4} \times 4\frac{3}{4}$, pp. x + 181. London: Kegan Paul, Trench, Trubner and Co., Ltd., 1931. 6s.

A timely and welcome publication. At the moment when Confucianism, that system upon which the longevity of the Chinese Empire has depended, seems doomed to annihilation, it is well that the world should realize what is being swept away. It is difficult for the Western student to obtain the texts of *The Chinese Classics*, translated by Legge, and long out of print; furthermore, having obtained them, it is a lengthy process, undertaken by but a small minority, to read them from cover to cover; therefore a concise account of the Master and his writings has long been overdue. English readers must be grateful to Dr. Danton and his wife for making available the excellent handbook prepared by the late Richard Wilhelm, whose premature death is an irreparable loss in the field of Chinese studies. No other Sinologue of the generation is possessed of the burning enthusiasm which drove Wilhelm to labour, even on his death bed, at the work he loved.

The book under review opens with a translation of Ssū-ma Ch'ien's biography of the Sage; Chapter II is entitled,

"Critical Examination of the Data of Sse-ma Ch'ien; the Historical Significance of Confucius"; Chapter III is an interesting discussion of "The Documents containing the Confucian Teachings"; Chapter IV, in a way the most interesting in the book, as it gives Wilhelm's often unorthodox interpretation of the Confucian Canon, presents a lively and sympathetic account of the teachings of the Sage; and Chapter V gives "Specimens of the Text"; the book closes with a bibliography by Wilhelm and a supplementary bibliography provided by the translators; unfortunately no index is included. The book is a clear and comprehensive introduction to the study of Confucianism, and should be widely distributed.

Numerous footnotes regarding various points of interest are provided by the translators. In one of these a curious error, quite unconnected, however, with the subject under discussion, has crept in. On page 37, after describing the *ch'i lin*, one of the four fabulous animals, Dr. Danton continues: "it is the so-called *fo dog*, so often found in curio shops." As a matter of fact, the two fantastic creatures are quite distinct. The *ch'i lin*, which resembles a deer, has been mentioned since early days, and, as stated, is one of the "four fabulous animals"; the others being the *lung*, the *fêng*, and the *kuei*. The *shih tzü*, called by Europeans the *fo dog*, is a Buddhist importation, and its prototype is probably a lion. Figures of the *fo dog* are widely represented in China, and always in pairs. The female nurses her offspring through the tips of her claws, and the male plays with a ball in thoroughly masculine fashion. On the low flight of steps leading to the Ch'ien Ch'ing Kung in the Forbidden City both animals are represented. On the first tread dogs of *fo* roll their variegated ball, and on the second appear *ch'i lin* who portend peace and good fortune. See *A Chinese Mirror*, by Florence Ayscough, p. 316. The *Tz'ü Yüan* gives full description of both *ch'i lin* and *shih tzü*, and a short study of the latter appears in the *Dogs of China and Japan* by Collier.

It is to be hoped that *Confucius and Confucianism* will run through many editions, but before the next is printed the spelling of Chinese names should be standardized. The authors state that they use the Wade system, but they do not follow it consistently. The surname of the great Chinese historian, a translation of whose work absorbs half the book, is spelt, according to Wade, *Ssü-ma*, here it appears as *Sse-ma*. Other spellings are also inconsistent. For instance, we read on one page of Liang Ch'i Ch'ao, on the next of the same person as Liang Ch'i-chao, and so on. This is an annoyance which should be remedied, but it in no way detracts from the great value of the book.

405.

FLORENCE AYSCOUGH.

THE CULTURE CONTACTS OF THE UNITED STATES AND CHINA :

The earliest Sino-American Culture Contacts, 1784-1844.

By GEORGE H. DANTON. $9\frac{1}{2} \times 6\frac{1}{4}$, pp. xiv + 133.

New York : Columbia University Press, 1931. 10s. 6d.

Once, in discussing the Chinese Revolution, I remarked to an official high in the British Consular Service : " Do you not agree that the Revolution, for weal or woe, would have been long delayed had it not been for the teaching of Protestant missionaries ? " " I would go much further," he replied, " I would say that it would have been long delayed had it not been for the teaching of the *American* missionaries." And it is true this judgment of his. " No single factor has played a greater part in producing the late developments in China than has the widespread absorption of those ideals which may be termed ' Americanism '." Dr. Danton, of Oberlin College, in a monograph which is the first of a series, commences an analysis of this phenomena, and discusses the reasons why " Americanism " found a fertile soil in China.

Firstly, as he points out, both people are fundamentally democratic, both are more loyal to the State than to that individual who happens to be the chief executive of the moment.

Secondly, the social development in each country is similar ; both lack an hereditary aristocracy, and each have " a somewhat touching faith in education as a panacea, not merely for social, but for moral ills ".

The book, which treats only the years closing with the Treaty of Wang Hsia, that Treaty which first mentioned extraterritoriality in connection with China, and which introduced the important " most favoured nation " clause, contains but five chapters. Each is carefully sub-divided and profusely annotated. It is a pity, however, that in his effort to avoid mention of facts already " sufficiently documented " Dr. Danton has produced a book which can only be useful for specialists. The subject being of great interest, it should be made comprehensible to the lay reader who most certainly does not possess the knowledge of China in her international relations which the author pre-supposes. If Dr. Danton shrinks from amplifying his text, a concise glossary of reference would help, and it is to be hoped that volume two will be made more generally intelligible. In the one under review incidents and individuals with which the reader is supposed to be perfectly familiar are touched upon and left at that. A library of reference is therefore an essential corollary to the reading of the book, which ably treats a subject that, in the light of subsequent events, is shown to be of supreme importance.

404.

FLORENCE AYSCOUGH.

PAPYRI GRAECAE MAGICAE. Die Griechischen Zauberpapyri.
Bd. II. Herausgegeben und Übersetzt von KARL
PREISENDANZ. $6\frac{3}{4} \times 9\frac{1}{2}$, pp. 218. Leipzig: Teubner
Verlag, 1931. 20s.

On p. 397 of the 1929 *JRAS.* there was published a notice of Vol. I.

With this volume Professor Preisendanz completes his great undertaking of collecting in two handy volumes all the known papyri scattered throughout the numerous libraries

of Europe and America. The importance of this publication can scarcely be exaggerated and already, when noticing the first volume in our *Journal*, the hope was expressed that in spite of all the difficulties which at that time threatened the continuation of the publication the work would not be left in mere torso. This hope has now been fulfilled. Wherever a scrap of magical papyrus could be found it was all gathered in. The author divides the material into two sections, the largest one being that which he describes as pagan, and a smaller number of papyri in which the Christian influence is becoming paramount. The system observed by the author is throughout the same. He gives as far as possible a critically emended text, and such variations at the bottom which are of importance. This is followed by a German translation line by line in which, however, the mystical names and diagrams are merely referred to since they are printed in the Greek text above, and then also notes referring to parallel passages in other papyri. The difficulties which these texts offer especially in the interpretation of ingredients and formulæ do not seem to have presented a very serious obstacle to Professor Preisendanz. By comparing the text he has with rare exceptions been able to give us a most authoritative translation on which scholars can rely. The number of fragments is : Pagan, 53, from page 60 to 188, and Christian, 20, from page 189 to 208 ; some are larger, some are smaller. Not only has the author given us here those texts but also all the larger diagrams and illustrations found in various papyri and printed in three plates at the end of the volume. Actual conditions in Germany have also left a very deep trace in this publication. In spite of the generosity of the publishers, for whom the publication of such a book must have been a matter of great financial sacrifice, the author had to omit all the fuller explanations and footnotes as well as references and quotations from elsewhere. But even so he has offered quite enough to make this book a most valuable one. The expense of production must also have been very

heavy considering that in the text all the small diagrams for which special dies have to be cut have been carefully reproduced. On the basis of this material the history of the magical literature during the Middle Ages will be much more easily traced, not a few parallels can be found, e.g. in the Hebrew sword of Moses, Hebrew-Arabic conjurations and talismans as well as the numerous MSS. of a similar nature, such as the *Clavicula Solomonis*. There is scarcely a link missing in this chain.

It would have been a great boon if the author could also have seen his way to follow the example set by Wessely and give us an index of all the proper names of persons and gods, and the titles of the various recipes and conjurations, so as to make it more easy to find one's way. It is to be hoped, however, that together with the material omitted in this volume, the author may see his way to give us these various indices on some future occasion. A word of praise must also be added for the admirable technical execution of this book, which is quite in keeping with the old tradition of the Teubner firm.

N.R.

M. G.

ETUDES SUR LES ORIGINES DE LA RELIGION DE L'EGYPTE.

By SAMUEL B. MERCER. The Oriental Research Series, Vol. I. With a preface by A. MORET. 9 $\frac{1}{4}$ x 6, pp. xi + 105. London: Luzac and Co., 1929. 10s.

Professor Mercer, who has made use of some of the notes of the late Professor Maspero, develops here his theories as to the origin of the predynastic Egypt. He endeavours to show that the Egyptian civilization is the result of a development represented by four races worshipping four different gods, which one after the other occupied Upper Egypt and afterwards contributed to create the Egyptian pantheon and the Egyptian nation.

The first of these is represented by the god Seth, the worshippers of which were probably indigenous Egyptians.

The second race, which invaded Egypt from Arabia via Kossier and Suez, were the worshippers of Horus, the falcon god. The third race were the worshippers of Osiris, whom Professor Mercer describes as being of Assyrian origin, and who brought from that part the beginning of civilization and, as he believes, also the first beginnings of that writing which in time developed into the Phoenician alphabet. Of course it has taken a long time until that evolution has become perfect, but he believes that the Phoenician alphabet is much older than has hitherto been assumed. Finally, the fourth race were the worshippers of the god Re, the worshippers of the obelisk, the round-headed people who were also worshippers of the sun and the sun disc. These may have come from the Mediterranean from the north, and according to Professor Mercer introduced into Egypt the highest form of civilization, far surpassing that which was due to the followers of Osiris. He also draws attention to the fact that the idea of the sun rising from the water and setting in the water as well as travelling in a barge can only be due to the influence of the people who had come from an island, and thus probably Crete has also had an influence upon the religion of Egypt. Of course, we are dealing here with the Neolithic period, predynastic, and therefore resting to a large extent upon hypothesis and on the archæological discoveries made in tombs and elsewhere. Thus the civilization of Egypt is a product of a mixture of four races, the Semitic race having given to Egypt a large part of its vocabulary, and the Libyan its grammar. Professor Moret, who writes an introductory note, whilst fully approving of most of the results of Professor Mercer, still has some doubt upon the manner in which other races may have reached Egypt from the north and by the east of Suez.

The book is divided into six chapters. The first five are devoted to the study of the assumed races, distinct in their character and worshipping one of the gods mentioned above. It is in the sixth chapter that the author sums up the

conclusions at which he has arrived by a careful investigation of all the available data. Valuable though it is, the book seems to be rather expensive at the price.

M. G.

HEBREW UNION COLLEGE ANNUAL, Vol. VII. Board of Editors : D. PHILIPSON, J. Z. LAUTERBACH, J. MORGENSTERN, S. H. BLANK. pp. 577. Cincinnati, 1930.

The present issue of the *Annual* contains ten contributions, nearly half the volume being taken up by the second essay.

(1) Dr. Bittenwieser opens with a short paper on "The date and character of Ezekiel's prophecies". Ezekiel claims that in 592-586 B.C. he carried on his prophetic activity at Tel-Abib, and also (xxiv, 25-7 ; xxxiii, 21, 22) states that he remained silent in these years. The inconcinnity is solved by recognizing cc. i-xxxi as *vaticinia post eventum*, a feature of apocalyptic writings. Another feature of such writings is the prominence given to visionary voyages, common also in Ezekiel ; those in the prophecy are typical cases of prophetic ecstasy and can be paralleled in profane literature, of which Bittenwieser gives some interesting examples ; and hence we may gather Ezekiel's primitive conception of inspiration. The book was written some time after the fall of Jerusalem in 586 B.C., the dating of xl, 1, and xxix, 17, marking the terminus ad quem at 570 B.C.

(2) Dr. J. Morgenstern pursues his study of "The Book of the Covenant", the first part of which was published in 1928. He critically analyses Exodus xx, 23-xxiii, 19, recognizing four different types of law which may be designated as *דברים*, *משפטים*, *חקים*, and *מצוות* respectively. The *Mišpaṭim* of the section are discussed with a fulness which amounts to a learned critical and expository commentary ; then the other *Mišpaṭim* of the Bible are dealt with and compared with those in the Book of the Covenant. The *mišpaṭ* of Deut. xxv, 5-10, receives (pp. 159-83) fuller treatment than elsewhere, and gives clearly the various stages

in the evolution of levirate marriage in Biblical times. The importance of the essay cannot be over-estimated, and we look forward to its completion in subsequent issues of the *College Annual*.

(3) Dr. S. H. Blank examines the LXX renderings of the Old Testament terms for divine law, and comes to the conclusions that in several passages the terms *תורה* and *מצוה* were added as glosses at a late date by Hebrew scribes ; that the LXX translators were careful in their renderings of the different Hebrew terms, the literal character and consistency of their translation being apparent on analysis ; that the conclusions reached by several scholars as to several hands being at work on the translation of various books are supported by the renderings of the terms considered in his essay.

(4) An interesting essay follows on the present state of textual criticism of the Old Testament, by Dr. Joseph Reider, of Dropsie College, Philadelphia, the main thesis being that "there has cropped up in recent years a great and unwieldy mass of far-fetched and unnecessary emendations which, far from lending any help towards the elucidation and understanding of the biblical text, threatens to bring confusion and chaos into it". One is reminded of the dictum of a great Hebrew teacher (P. H. Mason) : "Your business is to read the text before you whenever possible," and it is pleasing to see this advice coming from the other side of the Atlantic to a later generation. Dr. Reider gives copious illustrations from modern critics of unnecessary emendations, justly complaining that Lagarde's canons of textual criticism for the LXX, in every way very sound, are constantly disregarded by them. After consideration of emendations based on the Versions, he deals with those conjectural, in whose name "more sins are committed than in the name of any other critical discipline of the Bible", and he singles out Duhm as the chief offender. Modern scholars, with few exceptions, have turned topsyturvy the recognized canons of textual criticism, and of this many examples are given ; at the same time attention is

drawn to the revolt on the part of Cannon (*The Sixty-eighth Psalm*, Cambridge), and C. C. Torrey (*Second Isaiah*), and he might have added here the work of C. H. S. Godwin on *The Anglican Proper Psalms* (Cambridge, 1915). Of the metrical theorists he complains that their chief fault is that "they cut the text to their own measure instead of forming their measure to the text", a notable instance of which is Dr. Briggs' Commentary on the Psalms. The only safe way of explaining difficult passages and words is from the cognate languages, a method to which the Higher Criticism from the middle of last century gave a quietus, though Perles, Erhlich, and a few others continued in the old paths, with great gain to Biblical exegesis; and it is on this line that Dr. Reider hopes the way to clearer understanding of the Old Testament will proceed.

(5) The librarian of Yale University, Dr. Nemoy, gives a translation into English of those parts of Al-Qirqisānī's *Book of Lights and Watch-towers* (כתבא אלחבוור ואלמראקב) which have been edited by Harkavy and Hirschfeld, containing his account of the Jewish sects and Christianity.

(6) Dr. Englander investigates Rashi's view of the weak, ע"ע and פ"פ roots, with special reference to the views of Menahem b. Saruk and Dunash b. Labrat, and arrives at the conclusions that, save the פ"פ (where he follows Dunash), the weak roots ע"ע and פ"פ are bilateral to Rashi; that like Menahem and Dunash he held certain weak roots to be unilateral; and that for the most part he was in close agreement with these two writers in his explanations. The article is an advance upon the contributions of Kronberg and S. Poznański on the subject.

(7) Monsieur Ginsburger, of Strassbourg, contributes an article in French on the biblical exegesis of German Jews in the Middle Ages. We now possess in a MS. of the library of Karlsruhe (MS. Reuchlin, 8), written by a German Jew in the first half of the fourteenth century, a source enabling us to form some idea of the exegesis of that period. In this

MS. we have a Judeo-German glossary of the Old Testament followed by an explanation in Hebrew. An examination of these explanations seems to indicate that the influence of Rashi was paramount, and that our author was not acquainted with Aben Ezra or David Kimhi.

(8) The essay by Dr. Bettan on "The Sermons of Azariah Figo" is a welcome study in Jewish homiletics, and a fitting sequel to the study of Judah Moscato's sermons which he contributed to the *Annual* of 1929. Figo (1579-1647) was rabbi at Pisa for twenty years, afterwards at Venice, where he was head of the Sephardic congregation. The collection of sermons, bearing the title **בִּנְיָה לְעֵתִים**, was published at Venice in 1648, the year after his death. The extracts given show that Figo was an outspoken and courageous speaker, dealing fearlessly with the sins and shortcomings of the age; he insists on simplicity of living ("though in exile we live like royal personages"), draws attention to the indifference to the requirements of the ritual law, and to the exactment of exorbitant interest on loans. The form of his sermons was influenced greatly by Moscato, though there is in them a simplicity of outline and freedom from mysticism which marks the latter's discourses, with a tendency to interpret Biblical verses and rabbinical passages symbolically where the simpler exegesis (**פְּשָׁט**) fails. He was no plagiarist, for, as he tells us elsewhere, from his youth up he had detested "that low and degrading practice of wrapping in a toga not one's own, of glorifying myself with the labours of others". After reading Dr. Bettan's essay, couched in beautiful English, we are not surprised that the Jewish preachers of the old school are turning to the **בִּלְעֵי** for inspiration and for models on which to base their art.

(9) Dr. Simon Bernstein, of New York, publishes from MSS. in the Jewish Theological Seminary of America thirty-one of the letters of R. Mahalalel Halelujah of Ancona (seventeenth century), which throw light on matters of public and communal concern. The main object of the letters was

to exhibit a style which should be used in Hebrew composition, and this accounts for the fact that in most of them there is no indication of the date when they were written. It is well-known that R. Halelujah was an adherent of Shabbethai Zevi, and we have printed here a hymn composed in his honour, found in two versions, one written before, and the other after the fall of the pseudo-Messiah; in the latter version, which is described simply as a prayer for Israel's redemption, can be detected the author's still steadfast belief in Shabbethai Zevi.

(10) With a biographical introduction and explanatory notes Dr. J. R. Marcus prints the love letters of Bendet Schottlaender (1763-1846), which are preserved mainly in the Jewish National and University Library in Jerusalem. These letters, written in 1806-7, reflect the changes caused by "the emergence of the Jews of Central and Western Europe from the Ghetto life to the wider Christian national life". None of the letters written by his fiancée, Miss Therese Frank, is preserved—probably Schottlaender had the good sense to destroy them, and his own will hardly rank with the great love letters of the world. It is not as a letter-writer, but as an educationist that he will be remembered.

A. W. GREENUP.

PSEUDO-EZEKIEL AND THE ORIGINAL PROPHECY. By CHARLES CUTLER TORREY, Professor of Semitic Languages in Yale University. Yale Oriental Series: Researches, vol. xviii. $9\frac{1}{2} \times 7$, pp. 119. New Haven: Yale University Press; London: Milford, Oxford University Press, 1930. 9s.

Dr. Torrey's reconstruction of the latter part of the Old Testament history is familiar to Biblical scholars, and the conclusions he arrives at in this monograph on Ezekiel, the most important work on the subject published this century, are but a corollary to his previous researches. Since the story

of a Babylonian Exile is, according to him, a pure invention, the Ezekiel of Babylon is a myth, and the book pseud-epigraphic. On this assumption of the history he works out his case well. Stated briefly it is that the Book of Ezekiel was written about 230 B.C., and was redacted a few years later in the interest of a supposititious Babylonian captivity; erase the editorial additions and, with a few changes in the remaining text, you get the original prophecy of a prophet resident in Jerusalem. This new picture of the prophet Torrey holds will in the end be recognized as "the only interpretation which satisfies the evidence, literary, historical, and even traditional". It remains to indicate briefly the lines on which this evidence is collected.

Dr. Torrey opens with the Jewish tradition as gathered from certain passages in the Talmud (Sabb. 14*b*; Hag. 13*a*; Men. 45*a*),¹ which centre round the well-known story of Hananiah ben Hezekiah; and from the locus classicus on the Canon in Baba Bathra 14*b*, 15*a*, where it is said that, amongst other books, Ezekiel was written by "the men of the Great Synagogue". From this it is surmised that they did not ascribe the book to Ezekiel because they knew that it was not written by the "Ezekiel" of the Babylonian captivity. It is well known that the beginning and end of Ezekiel were forbidden to be read by those under thirty years of age owing, as Talmudical contexts suggest, to the mystical speculations the former would lead to, and to the supposed contradictions of the latter with the Torah.² But Torrey suggests that the real reason why the reading of the first chapter is forbidden is because of the glaring anachronism contained in the opening verses, the difficulties of which are apparent to anyone consulting a good commentary. The pundits of Jerusalem knew the difficulties which almost led to the exclusion (יָצָא) ³ of the book from the canon of

¹ See Hyman, *Toldoth Tannaim v'Amoraim*, ii, 506, col. 1.

² See Streane, *Chagigah*, p. 71, note 1.

³ On this term, see Moore, *Judaism*, i, 247.

Scripture; but "the claims of the prophecy . . . could not be gainsaid; it must by all means be given a place in the sacred library, and thus be saved for the public use". The position here taken up depends on a theory elaborated by Torrey in a former work on Second Isaiah that there existed in Jerusalem in the third century B.C. a company of scholars who edited the Later Prophets, a theory which has found but little acceptance.

In his second chapter Dr. Torrey discusses a question which, he says, has for two thousand years awaited the true answer: To what hearers is the prophecy addressed? and he answers without hesitation: Apart from the oracles on the foreign nations, to the people of Judah and Jerusalem. Passages bearing on the question are examined in some detail, and there is a trenchant criticism of Bertholet's view that Ezekiel had in Babylon a sufficient audience of captive Jews to save his reputation as a prophet. Maybe the solution of the difficulty can be found in the suggestion of A. B. Davidson¹ that "the truths spoken by him, though uttered in the ears of the exiles, bear reference to all Israel . . . in general he regards the exile carried away with Jehoiachin as representatives of Israel, and feels when addressing them that he is speaking to the whole house of Israel". Previous writers have not been unmindful of the difficulties which are now to be elucidated by an elimination from the text of all references to the Golah, though Dr. Torrey concedes the possibility (for those rejecting his reconstruction of the history) of Ezekiel's transference in imagination from Babylonia to Palestine.² The symbolic actions are a difficulty, but as they appear to be done in vision (cf. c. xi, 1 ff.) we are absolved from taking them in literal significance. The troublesome passage, xxiv, 21, where the words "whom ye have left behind (אשר עזבתם)" are

¹ *Cambridge Bible*, 1892, on c. iii, 11. Kraetzschmar, 1900 (quoted by Torrey, p. 30), uses similar language.

² See on this the interesting essay by Battenwieser in the *Hebrew Union College Annual*, vol. vii, 1930, pp. 1 ff.

held to be an insertion by the Babylonian redactor, may be emended to **אשר עזבני**, and so good sense is obtained. Dr. Torrey's comment on the MT is just, unless with Lofthouse (*Century Bible*, in loc.) we hold the words to be "a valuable (!) sidelight on the character of the first deportation".

To pave the way for a discussion of the dates, original and secondary, of the book, Dr. Torrey next deals with the success of Josiah's reformation; and here he thinks the account in Second Kings, and not the representation of Ezekiel (as currently interpreted), must stand uninfluenced by the midrashic interpretation of the Chronicler. It would be impossible in a few words to indicate the reasons given for this view, which leads to the conclusion that "the reform of Josiah was successful and its effect lasting, as would long ago have been definitely established but for the confusion which the 'Babylonian' editor of Ezekiel has introduced". Attention is particularly drawn to the statements of 2 Kings xxiii, 26; xxiv, 3, that the punishment of Israel was the result of the sins of Manasseh, one of which was the introduction of the Melek (Moloch) cult which was rooted out once for all under Josiah. Ezekiel describes the cult as still going on (xx, 31); so the circumstances pictured in the original uninterpolated prophecy require a time earlier than the eighteenth year of Josiah. As to the dates scattered throughout the Book it is maintained that they are the work of an editor and of no worth, being based on i, 2, 3, which verses were the insertion of the "Babylonian" redactor. The difficulty in the opening verse of the first chapter, where "thirtieth year" is given without further dating has been explained in various ways; Dr. Torrey argues, from the content of the prophecy, that the reference is undoubtedly to the thirtieth year of Manasseh (663 B.C.), and that the whole prophecy is built on 2 Kings, xxi, 2-16. He accordingly rearranges the dates (see table on p. 61) in accordance with this hypothesis. One might conjecture from this that the prophecies themselves were delivered and written in

Manasseh's reign by a Judean seer, and that the redactor wished them to be allocated to the time of a supposed Babylonian captivity; but it is argued that, for many reasons, the original book of prophecy was composed many generations after the destruction of Jerusalem (586 B.C.):—the mention of Persia in xxvii, 10, xxxviii, 5; the reference to Persian ritual in viii, 17; the language of the book belongs to the later stratum of Old Testament literature; there being no clear evidence of dependence upon Ezekiel till we come to Sirach (xlix, 8). On these grounds, and others for which we must refer the reader to the essay, Dr. Torrey places the composition of Ezekiel in the Greek period. A terminus ad quem is found in 180 B.C., the mention by Sirach, and allowing for the book being some time in use before this date, Dr. Torrey concludes that a date c. 230 B.C. meets the case, especially as the author has a knowledge of Daniel i–vi, which is to be dated just before 240 B.C. All the points brought forward as to this late dating of the book are capable of other explanations, e.g. the references to Persia are doubtful (see Cheyne in *Ency. Bib.*, 3584 f.); the rite of viii, 17, may relate to some pre-Persian Magianism, as was suggested by Moulton, or we may follow the Jewish interpreters in rendering “now they are sending a stench to my nostrils”¹; the Aramaic element in the book does not necessarily involve so late a date; and the dating of the Book of Daniel cannot yet be considered a settled matter. To clench his arguments for this late date, Dr. Torrey says that the last chapters (xl–xlviii) of the book more naturally spring from a priest living in Jerusalem in the third century than from one transplanted to Babylonia under Nebuchadnezzar. “There must have been many who hoped for a new and more imposing edifice [than the temple of Zerubbabel], especially since the temple on Mount Gerizim

¹ See Rashi, Kimhi, Tanhuma, *Ki Thetse*, § 10. Many of Ezekiel's expressions are coarse to Western ears. The Massora on **עֵשֶׂן** in this verse notes: **הָד מִן י"ה מִלִּי תִיקוֹן סוּפְרִים**. I observe that C. F. Kent, in *The Student's Old Testament*, 1910, follows the Jewish traditional interpretation.

was still an unpleasant rival. To prepare the plan of such a building . . . was as natural a proceeding as could be imagined." This is carrying literalism to an extreme; and the vision, with its elaborate details of architecture and ritual, would set before the Babylonian exiles (if there were such) an ideal which had become obscured in the later days of the monarchy. "It was in the quiet of the exile," says Toy, "that the development of the ritual was carried on"; and this period would seem to be an appropriate one for setting before the people a true idea of God's house and its worship.

In his concluding chapter Dr. Torrey deals with the editor's work, showing how he wished to preserve the tradition by interpolations few in number, which are indicated by our essayist, though he makes no claim to finality in the list; by accommodation of dates; and by alterations here and there in suffixed pronouns. It is maintained that we have no editorial labour apart from that of the "Babylonian" redactor; and so "the great work in its true form and character is far more valuable for our understanding of the development of Hebrew literature and religion than the utterly anomolous and self-contradictory 'exilic' prophecy, out of place as it stood, in any normal construction of Old Testament history". As we said at the beginning of this notice, he has made out a good case if his reconstruction of the history is to be accepted. But there lies the whole difficulty, and that is why, as he himself anticipates, "this new picture of the prophet will be met with suspicion."

A. W. GREENUP.

THE KADAMBA KULA. A History of Ancient and Mediaeval Karnataka. By G. M. MORAES. 9½ × 6, pp. xxiii + 504, illustrations 56, maps 4. Bombay: B. X. Furtado and Sons, 1931. (London Agents: Luzac). 25s.

The author, Mr. George Moraes, is to be congratulated upon having provided us with the first complete record of the Kadamba dynasty which played such an important part

in the history of ancient and mediaeval Karnataka. Not content with a thorough examination of all the published records, he has supplemented this knowledge by a successful search for fresh epigraphic and numismatic evidence in the countries formerly under the sway of the Kadambas.

The first half of the book is a critical study of the chronology of this almost forgotten dynasty. When it is remembered that, like the Kushan inscriptions of northern India, the grants of the Kadamba kings were not dated according to any particular era, some of the chief difficulties in the construction of a chronology of this period will be realized. Readers interested in the solving of chronological puzzles will follow the painstaking author from the origin of the dynasty in the fourth century of the Christian era to the middle of the fourteenth century when the various Kadamba kingdoms were annexed to the empire of Vijayanagar.

The most interesting part of the book to the general reader is that which deals with the religion, literature, architecture, and administrative systems of this period. Mr. Moraes throws fresh light on the progress of Jainism in southern India, and the guild system of mediaeval Karnataka. He concludes his work with a valuable appendix containing both the text and translation of several hitherto unpublished inscriptions, which have been used as sources in the preparation of this volume.

418.

C. COLLIN DAVIES.

AJANTA : The Colour and Monochrome Reproductions of the Ajanta Frescoes based on Photography. With an Explanatory Text by G. YAZDANI, M.A., Director of Archaeology, H.E.H. the Nizam's Dominions, and an Introduction by LAWRENCE BINYON. $12\frac{1}{2} \times 10$, pp. xix + 55, plates 53 (20 \times 16). London : Oxford University Press, 1930.

Ajantā has been the subject of so many books and articles, and its frescoes have been so often reproduced, that the great

importance of the present publication may possibly be overlooked. Its importance lies in the fact that never before have facsimiles, based on photography, been attempted, earlier reproductions being based on hand-made copies, executed under peculiar difficulties, and inevitably therefore falling far short of the originals. Excellent, therefore, as such books as those of Mr. Griffiths and Lady Herringham were, and valuable as they will remain, the difference between the present beautiful plates, both in line and in colour, and all earlier reproductions is quite startling. It is improbable that any attempt will be made to better them, for they are as near to the originals as modern skill and science could make them. For this achievement gratitude is primarily due to H.E.H. the Nizam, without whose generous support the great enterprise could never have been brought to a successful conclusion, and secondly to the body of experts who co-operated by their advice, by skilful preliminary cleaning, and by colour photography, to make the facsimiles a success. The colour-plates were made by Messrs. Henry Stone & Son, from the colour photographs.

This, the first of four parts of the work, consists of a portfolio of plates and a volume of explanatory text. It is devoted entirely to Cave 1, a *vihāra*, architecturally the finest of all the caves, in which the sculpture and paintings probably belong to the fifth century A.D. It is of especial importance as it contains what is generally considered the greatest masterpiece of Indian wall-painting in the celebrated *Padma-pāṇi* figure, as well as the two "foreign" subjects round which so much heated controversy has centred. In addition, the ceiling is covered with a delightful series of fanciful motives—perhaps representing, as M. Goloubew suggested, the Paradise of Kuvera. This is, in fact, probably the richest, in varied interest, of all the caves.

Mr. Lawrence Binyon contributes an eloquent and helpful introduction, in which he discusses the æsthetic qualities of the paintings and emphasizes their "supreme and central

position" in the art of Asia. The main body of the text, by Mr. Yazdani, consists of careful accounts of the subjects and treatment of the different episodes, mainly of *Jātaka* tales, which the plates illustrate, with some good notes on disputed points.

Mr. Yazdani is modest about his qualifications, but he knows the frescoes so intimately and has devoted so much study to them that his descriptions have a special value. If one wished to criticize them one might possibly suggest that he is inclined to over-annotate points of drawing.

The production of the whole work is of the highest excellence.

157.

J. V. S. W.

WOMAN IN PRIMITIVE MOTHER-RIGHT SOCIETIES. By DR. J. H. ROKHAAR. $8\frac{1}{2} \times 5\frac{1}{4}$, pp. x + 541. London: David Nutt (A. G. Berry), 1931. 15s.

Much has been written in recent years upon this topic, and the views put forward in this book will be found useful as correctives to many preconceived ideas upon this subject.

The author adopts the inductive method, and examines (Chapter IV) five peoples in Melanesia, three peoples in Micronesia, four peoples of British India (Garos and Khasis in Assam, with Maravans and Nayars from Malabar), seven peoples of Northern America. There are matrilineal societies in Africa—in Tanganyika, Northern Rhodesia, and the West Coast—in Australia and in Formosa. Indeed much excellent work has been done by modern and trained workers in these important areas which in a comprehensive study must not be overlooked.

In his discussion of the principles on which a scientific classification of social types should be framed, Durkheim recognized that "Chaque peuple a sa physionomie, sa constitution spéciale, son droit, sa morale, son organisation économique, qui ne conviennent qu'à lui" and laid down as the basis of classification the morphological principle,

criticizing and dismissing the methods and principles of workers like Steinmetz with the observation that "ces tentatives, quoique conduites par des sociologues de valeur, n'ont donné que des résultats vagues, contestables, et de peu d'utilité." In sociological studies note has therefore to be taken of common or general features as well as of what Bartlett calls group differences. Both elements spring from the fact that all human societies have common problems to solve, and have attained a measure of similarity as well as much variety in the long course of time. Historical data, where available, must be taken into account.

In the Indian cases cited there are obviously features which in a sociological study deserve and demand attention. In the case of the Garos, who speak a Tibeto-Burman language, there is a dual organization of matrilineal clans into two, and in one area three, phratries. The solidarity of society is maintained by an effective reciprocity in marriage, descent, and inheritance. The marriage system is simple. The widow of a man must marry a man who is, or is socially classed as, her brother's son, the term brother being used in a classificatory sense. The woman may have had daughters by her first husband who is, or is classed as, brother to his successor's mother. If she has had more than one daughter, the elders are free to mate under the general law of phratry exogamy—the youngest, however, is reserved for mating and continuing the line, and may actually mate with the man (the *nokrom*) destined for her during her mother's life; and her mate is the man who is required by custom to marry her mother, the *nokrom* (The Garos, p. 68), "thus assuming the anomalous position of husband to both mother and daughter. When there is no *nokrom* for a widow to marry, she is governed by the law of *akim*, which lays down that a widow or widower may not marry again without the permission of the family of the deceased husband or wife, and then only into their respective motherhoods." These facts—the general constitution of Garo society, the weakness in political structure, and

the absence of any centralizing influence, the matrilineal marriage with the widow (the paternal aunt) of the maternal uncle, and the law of Akim require weight in estimating the way in which this matrilineal society actually functions.

The Khasis speak an Austro-Asiatic language, and their society presents notable features. Its social organization comprises the *kur* or clan and the *kpoh* (belly), the extended family, and the *iing* or house (The Khasis, p. 63.), and the *seng*, a grouping which in one area at least is patrilineal (op. cit., p. 90). The political order is developed.

The youngest daughter "holds the religion". Her house is called "Ka iing seng" and is the centre of family ritual or clan puja house (p. 141). In the funeral ritual (p. 143), the bones of males are kept distinct from those of the females. Rules governing Khasi marriage are that a woman may not marry her father's sister's son during the lifetime of her father, or the son of her mother's brother during the life of her uncle.

I have reason to believe that in the case of the youngest daughter of a Siem, she is required to marry a Khasia. The word *ring kongor* describes the force used to secure the bridegroom. In any case, the youngest daughter remains in the ancestral house. Khasis allow, but Syntengs do not allow, elder sisters to move away and with their husbands to found separate houses, which are maintained by the joint earnings. Khasis hold that the father's misdeeds may be visited on his children, so that the paternal tie is fully recognized, and the word, *kha*, means a relation on the father's side, a proof of bilaterality.

Another fact to be noted is that in this area we have the Rabhas, where inheritance is patrilineal and descent matrilineal, and the Kacharis with sex descent where the sons belong to the father's group and the daughters to the mother's group. In estimating the significance of any single phenomenon, I think we are compelled to consider both the functioning of an institution as part of an organic whole,

and the adjacent anthropology if only because features which have received emphasis and attention in one related society may well exist in other societies, but have received there less stress, or even have escaped observation.

In regard to the Malabar area, consideration must be given to the fact that the whole of the social and religious arrangements there have been profoundly modified, disturbed, and dislocated by contact with the Nambutiri Brahman community who restrict marriage to the eldest son, thus driving the younger sons elsewhere for sexual life. This feature—henogamy, as I ventured to call it—will be recognized as operative in both the Garo and Khasia groups, and must be borne in mind when examining the working of the social institutions as a whole. African matrilineal societies present interesting features, and the section on secret societies, initiation of girls and boys, would have gained much if the study had included this area. So, too, the Australian evidence has to be taken into account.

There are numerous misprints. The denunciation of other writers on this topic is—to put it mildly—vigorous. In some instances it is hardly just. This work is, however, interesting, and within limitations will be useful. It concludes with an appeal to Colonial Governments to order a description of the peoples in their territories to be made by scientifically trained men. To this plea every learned society will readily assent. Those of us who are engaged in training workers for the field and administrators for their service abroad, would welcome—did circumstances permit—a comprehensive scheme by which all governments engaged in the administration of peoples of levels of culture different from those of Europe should make ethnological work an integral and continuous feature of their activity. But sympathy, tact, intelligence, as well as sound method, are required, and the human qualities are of primary importance. The British Government has on the whole a very good record in this matter.

DECORATIVE PATTERNS OF THE ANCIENT WORLD. By FLINDERS PETRIE. 12 × 9½, pp. 16, plates lxxxviii. London: University College and Bernard Quaritch, 1930.

To the student of the history of ornament, the collection of examples assembled in the plates of this book will provide a useful index for reference.

As the author says in his foreword, the subject is boundless, and he has limited the geographical scope of his work to Europe and Western Asia, "with their links to other lands, but ignoring designs which are special to Siberia, China, or India." His chronological limit is placed at about A.D. 1000.

Within these limitations, the ground covered by the patterns and the order of their arrangement are evidence of the interest taken and the knowledge applied in the selection of the material. But the text appears sometimes to lack that critical regard which the subject calls for, and which we are justified in expecting from an archæologist of such great experience as Sir Flinders Petrie. It is probable that his many activities allowed him insufficient time for adequate revision. Had he given more time to this part of his task, it is unlikely that he would have described early examples as "origins". The spades of his own diggers are ever busy searching for concrete arguments against the assumption of origins. In using the word he therefore probably does not intend it to be understood in its literal sense.

He says "the value of decoration historically is due to its having no stimulus of necessity". But what is necessity? Are not many, so called, decorative motifs, defensive or protective emblems considered by the users as necessary guardians of the home, shrine, stronghold, or tomb? The stimulus of necessity arising from the call of the spiritual self, perhaps in appeal to some unseen power—superstition in fact—is often more powerful than that of material, physical needs. In this connection we may refer also to the author's note on page 5, relating to Plate IX. In alluding there to

naturalistic plant forms occurring in France and Egypt, he says, "As no magic powers can be supposed to be gained by this variety of species . . ." But why suppose this? We simply do not know in the case of this prehistoric French specimen, whether or not magic powers were supposed to attend the plant.

Returning to the foreword, in the third paragraph it is stated that the Chinese were "limited to two or three stock devices". It is unlikely that this assertion will be acceptable to students of Chinese decorative art. It recalls the remarks of Owen Jones in the Chinese section of his *Grammar of Ornament*. But that was published in 1856.

The grouping of the examples given in the eighty-eight plates is by subject, beginning with Hero and Animals, I-III; Animals, IV-V; Vase and Animals, VI-VII; Octopus, VIII; Naturalistic Plants, IX; and so on. The collection of patterns is so extensive and selected with so much care that it is a matter for regret that the text is so restricted.

The notes referring to the plates indicate partially the general line of development of the motifs, but these indications are so condensed that their implication is often difficult to follow. A few of the points that might, with advantage to the student, be made clearer in a future edition, may be mentioned.

As already indicated, the frequent use of the word "origin" and synonymous expressions is doubtless intended to express "early".

In the note relating to Plate V it is stated that the "Glutton head is the main figure in Chinese decoration", without any qualification of period, but which we must suppose refers to the period ending with A.D. 1000, the author's assumed limit downwards. He seems to have overlooked the wealth of design which enriched the Han and T'ang dynasties.

Again, referring to Plate XIX, he says that the Dacian form of arabesque, dated 105 B.C. (the reference number of which is misquoted) "may have started the Chinese Han type",

206 B.C. to A.D. 220. As the two types are widely different from each other, the Dacian example far more sophisticated than the other and the Chinese period quoted commences a century earlier than the date of the Dacian specimen, elucidation of the reason for the conjecture seems to be needed.

The Lotus (Plate X) might well have been treated rather more fully in consideration of its importance as the basis of so much architectural ornament of Greece and Rome.

The development of the Lily is very amply illustrated, but in the absence of adequate explanatory text the inclusion of some forms is not easy to understand.

The grouping of squares, "joggles," chequers, key patterns, platting, and other straight line forms seems to be rather confused.

The work does not claim to be a textbook or anything more than a collection of patterns, the order and grouping of which may be varied to agree with the progress of our knowledge of the subject.

The author has done a valuable service in attaching an extensive bibliography.

It is to be hoped that we may not have to wait twenty years, the recurring interval suggested, for the publication of additional plates, and that there may be no geographical boundaries in the next edition.

FRED H. ANDREWS.

DESCRIPTIVE CATALOGUE OF ASSAMESE MANUSCRIPTS. By
HEMCHANDRA GOSWAMI. $6\frac{1}{4} \times 6$, pp. xxxvi + 274.
Calcutta: University of Calcutta on behalf of the
Government of Assam, 1930.

As has been stated by Professor Bhuiyan in his interesting note on Assamese manuscripts, p. xxiii, the first attempt to collect Assamese manuscripts was made by the Rev. Nathan Brown and other early workers of the American Baptist Mission, stationed at Sibsagar, in Assam. The collection thus made comprised several *Buranjis*, or Ahom histories,

two of which appeared in the *Arunodai*, a periodical published by the American Baptist Mission from time to time. The manuscripts, a list of which is given in the foot-note to page vii of the preface, were collected by the Rev. Nathan Brown sometime between 1840-50. "In the year 1894, the late Sir Charles Lyall, who was then officiating Chief Commissioner of Assam, pointed out that the time had come for a sustained and systematic endeavour to arrest the process of destruction of such historical manuscripts as still survived." Mr. Gait (now Sir Edward Gait) drew up a scheme, which was duly sanctioned, and an inquiry took place in the course of which a number of *Buranjis* came to light, a list of which is given on pages vi-vii of Gait's *History of Assam*. The results of that inquiry were detailed by Sir Edward Gait in his report on the "Progress of Historical Research in Assam", published in 1897. No further attempt to rescue the *puthis* from destruction was made till 1912, when Sir Archdale Earle, then Chief Commissioner of the province, sanctioned the deputation of the late Srijut Hema Chandra Goswami to collect and describe all the ancient manuscripts which are of interest or importance in the Assam Valley districts. When this deputation was sanctioned people had no idea that such a wealth of interesting and valuable material would be brought to light. It was known that in the *sattras* (religious monastic institutions) there were many *puthis*, and in the possession of private persons also, but it was little thought that the work of collection, and afterwards of description, would be so successful. The result has been a valuable book, containing an excellent description of the manuscripts, accompanied by an introduction and note by Professor S. K. Bhuiyan, of the Cotton College, Gauhati, which gives a useful preliminary sketch of the material collected, besides other interesting information. There is a good index to the main work. In the choice of the late Srijut Hema Chandra Goswami, no better selection could have been made, for the author had shown a special aptitude for research work, he had had the advantage

of serving in the Assam secretariat under Sir Edward Gait, and was himself a gosain ; further, he possessed an attractive personality, and therefore was well fitted to obtain the confidence and good graces of other gosains, and other important personages in the field of research. Although not in possession of a degree in Sanskrit, he was well versed in that language. He was a recognized authority on Assamese, and in his day one of the keenest protagonists for the cause of that language and its literature ; in this connection may be mentioned his work in joint editing and helping to see through the Press, the Assamese portion of the *Hemakoshā*, the standard etymological dictionary of the Assamese language. It is a matter of the greatest regret that Hema Chandra Goswami did not live to see the publication of his descriptive catalogue, for he died in 1928, the year before the work appeared from the Press. The manuscripts have been catalogued in two parts, viz. the Assamese, including Ahom, manuscripts, and the Sanskrit. Only three Ahom *puthis* have been included, e.g. Amar, No. 2, a dictionary of the Ahom language, No. 39, Deo Buranji I, and No. 40, Deo Buranji II. The important Ahom Buranji, translated and edited by Rai Sahib Golap Chandra Barua, and published under the orders of the Assam Government in 1930, does not appear in the catalogue. It is stated in the preface to this Buranji that Sir Edward Gait obtained therefrom the material for his *History of Assam*. Owing to considerations of space, it will not be possible to mention in this review more than a few of the more important and interesting *puthis*. The following are some of them :—

No. 35 : Dāk Bhanita. This contains the wise sayings of Dāk Purusha, which are famous in Assam, as also in Bengal. The sayings embrace many subjects, the best known being those dealing with agriculture. Dāk, a man of humble origin, was born in the village of Lehi Dangarā, in the Barpeta subdivision of the Kamrup district.

No. 42 : Dipika Chandra, published for the first time by

the late Rai Madhab Chandra Bardalai Bahadur. This book, *inter alia*, describes the Chandra Bipras and Surjya Bipras, and in its third chapter asserts that the Daibajnyas, or Ganaks, are the equals of the Brahmans. As might have been expected from such a statement, the publication of the book caused some controversy.

No. 48 : Gitar Puthi is a collection of religious songs, amongst which are some said to have been composed by the Ahom Rajas, Rudra Singha and Siva Singha, "rendered in excellent Assamese."

No. 53 : Guru Charitra, by Damodar Das, being a short account of Sankar Deva's life. Sankar Deva, the great Vaishnavite reformer of Assam, is said to have been born in A.D. 1449, and to have died in A.D. 1569. If these dates are correct, Sankar Deva reached the great age of 120 years, but in this connection Gait's *History of Assam*, p. 57, may be seen. Sir Charles Eliot, in his interesting article on "Hinduism in Assam" (*JRAS.*, October, 1910, pp. 1155-86), stated (p. 1169), that the Vaishnavism which entered Assam was of Chaitanya's School. This opinion, however, has been strongly combated, and, in the writer's opinion, refuted, by competent Assamese authority, e.g. Srijut Satyanath Barah, and Rai Bahadur Kanaklāl Barua, who occupies a high position in the Government of Assam. This last authority wrote a very full and interesting note for the writer on this subject. It is, however, beyond the scope of this review to pursue this matter further at present, but it is hoped that it may be possible for the writer to do this in a separate article should time and opportunity permit.

No. 55 : Hastividyanaba, the ocean of the science of elephants. This is one of the most interesting, if not the most interesting of the collection. The author is Sukumar Barkaith, and the names of the artists of the numerous and effective illustrations are Dilbar and Dosai. The *puthi* was written and illustrated under the orders of the Ahom King Siva Singha and his Queen, Ambika Devi, in Saka 1656, or

A.D. 1734. The illustrations are of considerable merit, the paintings being water colours. The paints used must have been specially good, for the colours are to this day quite fresh and are in nearly every case extremely well preserved. A certain amount of gold paint evidently was used the lustre of which still remains. The subjects of the paintings are different types of elephants, as well as scenes from the Ahom Court. Elephants are classified according to the Hindu, the Bengal, and the Ahom methods. The Bengal or Muhammedan method is the one generally in use at the present day. Under it there are seven kinds of elephants, e.g. Singhali, Beleā, Doāchaliar, Komoriā, or Komorābandhā, this latter being of short stature, round body, with fore and hind quarters of equal height; Nagabānchi Dariār, with a tail reaching the ground, and Mriga, which is a tall long-legged elephant. Good and bad points of elephants are given, and lists of medicines, with their ingredients, are included. An interesting description of the installation ceremony of the Royal Elephant is stated at length. The origin of the *puthi* is said to have been in the country of the Raja of Kheh, or China, whence it came to *Mān des*, or Burma. How it came to Assam is not clear, but as communication between Burma and Assam, in olden days, was comparatively frequent, it is quite possible the *puthi* came across the Patkai range from Burma to Assam, like Chung Deo, the patron god of the Ahoms. This *puthi* was examined by Sir John Marshall, who agreed to publish it officially, but the War came, which rendered the project impracticable. If it is the intention of the Assam Government to publish it now, great care should be exercised in the reproduction of the valuable illustrations and, if possible, the *puthi* should be acquired from the owner, Srijut Lokeswar Bura Gohain, and placed in the Assam Museum.

No. 155: Vamsabali, being the history and origin of the Koch kings, by Surgyakhari Daibajna, is a very fine illuminated *puthi*, containing 771 Slokas in Assamese verse,

which has been published in book form by the Assam Administration. Sir Edward Gait has referred to this *puthi* in his *Koch Kings of Kamrup*. Naranarāyan, the greatest of the Koch kings, receives special mention here as being the patron of Assamese literature and art.

No. 12 of the Sanskrit *puthis* is important as being by Krishnaram Nyāyā-Bagish, the founder of the family of the Parbatiya gosains. For information regarding this gosain, a reference is invited to page 177 of Gait's *History of Assam*. This *puthi* contains an elaborate process of worshipping the goddess Durga, with the appropriate *mantras*.

No. 16 is the celebrated Gita Gobinda, by Jaya Deva. The date of this is said to be A.D. 1200. But this must be the date of the original. The contents are the exploits of Krishna, e.g. "Krishna amuses himself with the *gopis* and Rādhā, his first love, weeps bitterly, and Krishna is the subject of her reverie by day and in dreams by night. A milkmaid comes and sings :—

"Thy lover, thy Krishna, is dancing in glee

With troops of young maidens, forgetful of thee."

No. 25 is a copy of the *Hitopudesha*, made in Saka 1729, transcribed in Assamese character, and there is a good copy of Kumārā Sambhava, No. 36, by Kali Das, the famous Hindu poet.

Many other manuscripts deserve mention, but space does not permit.

Before concluding, it should be stated that a special debt of gratitude is due to the Government of Assam for the great interest it has shown throughout, and for its generosity in providing funds. Lastly, Professor S. K. Bhuiyan, the author of the interesting introductory note, deserves a full meed of praise, not only for his present work, but for all the valuable research he has carried out in his capacity as secretary of the Kāmarūpa Anusandhān Samiti. The writer of this review was associated with the late Srijut Hemachandra Goswami in his work of collecting these manuscripts, but the descriptions

are the work of Srijut Hemachandra Goswami alone. The work has been well printed and produced by the Calcutta University Press, Senate House, Calcutta.

P. R. GURDON.

LA FEMME BENGALIE DANS LA LITTÉRATURE DU MOYEN AGE. By J. HELEN ROWLANDS. 10 × 6½, pp. vi + 241. Paris : Adrien Maisonneuve, 1930.

The researches of Dr. Dineścandra Sen into the treasures of old Bengali literature have been worthily continued and added to by this work of one of his most brilliant pupils, who is the only European who has so far graduated as a Master of Arts of the Calcutta University in Bengali.

The book is an attempt to reconstruct the domestic life of Bengali women in the middle ages from the literature of the period 1203–1757. In such an attempt one is handicapped by the absence of critical editions of the texts to be used as sources, and by the lack of any reliable chronology. In these circumstances it might have been better to have limited the scope of the inquiry to one work or class of works, for example, the *Manasāmaṅgala* or the *Caṇḍāmaṅgala*. Miss Rowlands has naturally given a large amount of her space to these two cycles of poems, but she has also included evidence from many other sources of widely differing dates, including some quite modern editions of folk-tales like “*Ṭhākurmār Jhuli*” and other collections by Dakṣiṇārañjan Mitra Majumdār. She has also availed herself of modern works describing the Bratas at present practised by women in Bengal. The result is a very composite picture containing material from different periods.

The main body of the book falls into two parts, the first dealing with the domestic life of women as reflected in the literature, and the second giving a sketch of the lives of some of the women famous in Bengali legend and history. The general reader would be well advised to read the second part

first, in order that he may understand the various references contained in the first part.

The book will be extremely valuable to all students of the old Bengali poetical literature, which deserves much more attention than it has yet received as a source, and indeed almost the only source, of information on the life and customs of Bengal in the period before the East India Company's administration of the country.

It is to be hoped that the author will follow up this more general sketch with other and more detailed descriptions of the contents of individual works for which her preliminary survey of the whole field has certainly admirably prepared her. In particular one may perhaps be permitted to suggest that she should give us a critical and annotated edition of either Bijay Gupta's *Padmā Purāṇa* or the *Kabikāṅkana Candī*. Her interesting and valuable chapter dealing with the celebrated women of the Vaiṣṇava movement also makes one wish that she would give us a more extended treatment of the subject.

W. SUTTON PAGE.

THE MAHĀBHĀRATA. For the first time critically edited by VISHNU S. SUKTHANKAR, Ph.D. Ādiparvan : Fascicule 5. $11\frac{1}{2} \times 8\frac{1}{2}$, pp. 401-640 = 239. Poona : Bhandarkar Oriental Research Institute, 1931.

This fifth fascicule represents the fifth annual instalment of the gigantic task begun by Dr. Sukthankar, a brief account of which has already been given by me in the pages of this *Journal*. It contains sixty more adhyāyas of the Ādiparvan of the *Mahābhārata*. As there are nearly seventy more adhyāyas of the Ādiparvan still to appear, and the Ādiparvan only constitutes roughly one-tenth of the whole epic, it will be obvious that at the present rate of progress, which hardly seems likely to be accelerated, few living scholars can hope to witness the conclusion of this ambitious enterprise.

The work continues to be carried out on the same lines and in the same masterly manner, which has already gained the enthusiastic commendations of all the chief Sanskrit scholars in India, England, the continent, and America. This last fascicule contains a very interesting editorial note, commenting on passages of the Vulgate text which are omitted in the Kāshmīrī version, which has been adopted as the basis of the constituted text. This Kāshmīrī version is considerably shorter than the Vulgate text, as represented in the printed editions published in Calcutta in 1834, and following years, and in Bombay in 1878, while it is very much shorter than the Southern recension. As compared with the Bombay text four whole adhyāyas and parts of four other adhyāyas have been omitted altogether in the part of the Ādiparvan dealt with in this fascicule. This fascicule contains five more of the charming coloured illustrations painted by the Chief of Aundh, to which reference was made in the previous notice. They add greatly to the attractiveness of each fascicule.

R. P. DEWHURST.

STUDIES IN THE LANKAVATARA SUTRA. By DAISSETZ TEITARO SUZUKI. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xxxii + 464, pl. 1, table 1. London: G. Routledge and Sons and the Eastern Buddhist Society, 1930.

The author describes the Lankāvatāra Sutra as "one of the most important texts of Mahayana Buddhism, in which all its principal tenets are presented, including the teaching of Zen". He has endeavoured to extract from its confused and confusing pages the main elements of its teaching, and has placed students of Mahayana Buddhism deeply in his debt by the publication of these studies. The late Dr. Bunyū Nanjō published a Sanskrit version in 1923, and it is a pleasure to learn that the author has himself translated the Sutra into English, which translation he hopes to make available

to Western students. He says that "Mahayana Buddhism is just beginning to be known in the West", and in view of the paucity of translated material it is not surprising that many, who presume to knowledge, are really ignorant of the true meaning of Far Eastern developments of this cult.

Tradition says that when Bodhidharma was urged to name the sutra which best agreed with his intuitional views he handed a copy of this sutra to his disciple Hui-k'e. A portrait of Bodhidharma, the "wall-gazing" father of Ch'an or Zen Buddhism, is given as a frontispiece; it was painted by Mu-ch'i of the Sung dynasty. Four translations of the sutra have been made into Chinese, the first by Dharmaraksha was lost "as early as A.D. 700"; the second, by Gunabhadra in 443, is possibly the one given to Hui-k'e; the third was by Bodhiruci in 513; and the fourth by Śikshananda and others in 700-4. There are two Tibetan translations from Chinese.

"The whole *Lankāvatāra* is just a collection of notes unsystematically strung together," says the author, and "it is useless to attempt to divide them into sections, or chapters, under some specific title". In these studies the sutra is treated subjectively. The author shows, *inter alia*, that it contains "the doctrines of Mind-only, Tathāgata-garbha and Ālaya-vijñāna", but it deals as its main thesis with the "all importance of an inner revelation". It is this "inner light" which is its fundamental feature, and this is the doctrine which Bodhidharma emphasized to the minimizing or disdaining of book-knowledge. "The ideas that things are devoid of self-substance (*svabhāva*), that is, they are by nature empty (*śūnya*), that the world is nothing but Mind, that in order to reach the ultimate end of Buddhahood one must transcend all the limitations of dualism and particularization, and finally that the state of enlightenment must be realized within one's self—these are the common property of Mahayana Buddhism; but in the *Lankāvatāra* these ideas are developed in a way peculiar to this sutra. By this I mean that it lays

special emphasis on the importance of self-realization, without which the Buddhist life remains a mere philosophical exercise . . . the essence of Zen Buddhism must be sought in this that the constant refrain of the *Laṅkāvatāra* is the all-importance of an inner perception (*pratyātmagati*) or self-realization (*svasiddhānta*)." The value of the sutra "lies in its perpetual upholding of this intuitive element", "an inner perception of the deepest truth, which goes beyond language and reasoning," for "the world, as seen in the light of self-realization, is to be interpreted in terms of absolute idealism".

The author expresses the usual Far Eastern view, however vigorously it may be disputed, that the Hinayanist's "object of spiritual discipline does not extend beyond his own interest", while that of the Bodhisattva is to impart all his attainments to his fellow beings. "Mahayana stands firmly on two legs, *Prajñā* and *Karunā*, transcendental idealism and all-embracing affection for all kinds of beings."

The chapter on Mind-only (*Cittamātra*) naturally is of particular interest, for this doctrine runs through the sutra "as if it were warp and weft". The sutra "makes everything hinge on this point; the salvation of the world not to say anything of the individual". "Speaking in the modern way, the theory of 'Mind-only' is a form of pure idealism. All that we habitually consider having an objective value, such as our own body (*deha*), property (*bhoga*), and the land (*pratishthāna*) where we have our abodes, are no more than our own mind, projected and recognized as externally extending and real. Even Nirvāṇa, the truth of suchness, emptiness, reality—all these are but our mental creations, having no objective validity as far as they are forms of discrimination."

Other subjects are discussed in varying detail, e.g. the Śūnya doctrine, that of No-birth (*Anutpada*), Nirvāṇa, the Trikāya, the Tathāgata, the Bodhisattva. Altogether the book is a valuable compendium of Mahayana Buddhism as viewed from the Far Eastern standpoint, and especially that

of the Ch'an or Zen school. The extensive Sanskrit-Chinese-English glossary at the end of the book is a useful addition to this scholarly interpretation of a difficult sutra.

167.

W. E. SOOTHILL.

A COPTIC DICTIONARY. Compiled by W. E. CRUM, M.A.,
Hon. Ph.D. Berlin. Part II: ⲉⲣⲣⲉ-ⲛⲟⲩⲭⲥ. $11\frac{1}{4} \times 8\frac{1}{2}$,
pp. vii + (252 -- 89) 163. Oxford: Clarendon Press,
1930.

The excellence of the first part of this great undertaking is even surpassed by that of the second, which contains a page and a half of corrections and additions, the latter drawn from old sources as well as new, and including seven hitherto unrecorded words. In the new part, consisting of 163 pages in double columns, the richness of vocabulary and illustration is marvellous. As before, every possible letter and stop is jettisoned to make room for important matter. The result is an orderly Thesaurus for scholars to hunt in with the greatest profit, curbing their impatience, however, until the formidable remainder of the collection is available. The new vigour with which Coptic and the allied studies, theological and linguistic, are pursued will be encouraged and made effective by this potent instrument of research. We are indeed grateful to the author and his coadjutors that they did not permit the war, which put an end to so many promising schemes, to extinguish the Dictionary.

F. LL. GRIFFITH.

EUROPE AND CHINA: A SURVEY OF THEIR RELATIONS FROM
THE EARLIEST TIMES TO 1800. By G. F. HUDSON, M.A.,
Fellow of All Souls College, Oxford. Edward Arnold
and Co.

Of the many books that have been published in recent years in connection with China, this is one of the most scholarly and original. It shows wide research, and is written in a style that interests the reader from the beginning to the end.

Its object is to show the influences of the Hellenic culture of Europe in China, and of the civilization of China in Europe from the earliest times until 1800. The survey of this long period of years begins with the legendary journey of Aristeeas of Proconnesus, dating from either the sixth or the seventh century B.C., to the land of the Hyperboreans which the author identifies with Northern China. He then discusses the embassy of Chang Ch'ien to Ferghana, sent in 128 B.C. by the Emperor Wu Ti of the Han dynasty, and gives an account of the campaigns west of the Pamir divide which ended in bringing a Chinese army under Li Kuang-li to the valley of the Iaxertes, where it "encamped perhaps on the very ground which two hundred and twenty-seven years before had seen the tents of Alexander of Macedon". But the great march of Alexander from the Hellespont to the Pamirs and the Panjab did not open a road to China. "It was the Chinese who first by an exploring diplomacy, and then by force of arms, broke through to the land which alike for Achaemenid and Macedonian had been nothing but a cul-de-sac." In Chapter III a detailed, instructive, and very interesting history of the Traffic of Silk is given, followed in Chapter IV by an account of the smuggling into the Roman Empire of the silk-worm moth, about 552 A.D., with the introduction of which "the commerce in raw silk naturally began to dwindle, and at last ceased altogether".

After all contact between Europe and China had been lost for nearly four centuries, mutual knowledge and communication were restored by the Mongol conquests under the great Emperor Chingiz Khan. The Mongol Empire at its zenith included both China in the East and Russia in the West, and a single suzerain power prevailed from the Black Sea to the Pacific. The *Pax Tatarica*, described in Chapter V, was established, and "the thirteenth and fourteenth centuries gave to Europe a knowledge of China such as had never been transmitted during even the most flourishing days of the ancient silk traffic. . . . A great idea of religious *Weltpolitik*

gives character to the travel to China under the *Pax Tatarica*, and imbues it with a will to observe and know which is lacking in the purely commercial travel of antiquity. Before the thirteenth century Christianity had been represented in China by Nestorian missionaries from Mesopotamia; now the Latin Catholicism of Europe entered the field and took the lead. Its missions were obliterated after 1368, when the Mongols, who had favoured them, were expelled from the country, but they were renewed after the Portuguese had opened the all-sea routes from Europe to China, and from the sixteenth century up to the present day Christian religious propaganda has been one of the main factors in European-Chinese relations." The history of the discovery of the sea routes to China round Africa and by Mexico are given in Chapter VI, "The Way round Africa," and Chapter VII, "The Way by Mexico," and in Chapter VIII, "China Besieged," is described foreign relations with China from 1514 to the close of the eighteenth century, during which period the nations of Europe drew a cordon round China both by sea and land, "so that at the end of the period the country bore a resemblance to a walled city in a state of siege." In the two concluding chapters, Chapters IX and X, entitled "The Rococo Style" and "The Jesuits in Peking", the author deals with the intellectual contacts established between Europe and China by the Jesuit missionaries at Peking between the sixteenth and eighteenth centuries, and by the influence of Chinese art in Europe as manifested by the development of the Rococo style. "In France a new style full of Chinese traits arises at the beginning of the eighteenth century, and for a brief period dominates taste in most European countries." The author is of opinion that "because of the complete extinction of the cult of China after 1789, the great majority of European historians have failed to do justice to the influence of Chinese ideas in eighteenth century Europe", and he states that, "in spite of the advances which specialized sinological scholarship made in the nineteenth

century, it is true to say that the ordinary educated public was better informed about China in the eighteenth."

This is a book that should be read and studied by all who take an interest in our relations with China. If it reaches a second edition, the index, which is not sufficiently detailed, should be made more complete, and a general map, giving the names of all the places mentioned in the text, together with a bibliographical list of all the works to which reference is made in the footnotes, should be added.

J. H. STEWART LOCKHART.

TRAITÉ DE GRAMMAIRE HÉBRAÏQUE. Par MAYER LAMBERT,
 Directeur d'Études à l'École des Hautes Études.
 Fascicule I. 9 $\frac{3}{4}$ × 6 $\frac{1}{4}$, pp. vi + 224. Paris : Ernest
 Leroux, 1931.

Notwithstanding that Hebrew grammars may be counted by the hundred, and most students of Semitic languages may possess more than one, there seems to be always room for more. This is doubtless due to the fact that every teacher believes that his predecessors have not put things as they ought to be stated, and it is better to produce something absolutely fresh rather than recommend an old work or a reprint, things which are seldom really satisfactory, even when compiled by a celebrated Hebraist of old time.

In the present case, however, the publication is of the nature of a pious memorial of a deeply-learned Hebraist and a well-beloved teacher, for the author is no longer with us, and the work is considered to be so important that those who knew him when he was alive could do no less for his memory than publish this important grammatical treatise, to which he had devoted the last five years of his life—years of suffering and distress.

That his friends and pupils were right there is no doubt, for the work may be classed among the fullest and most detailed of its kind and its subject. The publisher, Ernest

Leroux's successor, who gives the details concerning the author outlined here, tells us that this first part includes the *sémasiologie*, the phonetics, and a part of the morphology as far as the end of the study of the noun. The second part, continuing the morphology with the study of the verb, is now in the Press.

Naturally a book of the extent which this will assume on completion is bound to contain details concerning the grammar of the Hebrew language not always found in the grammatical works which have preceded it. From the books dealing with the Akkadian (Semitic Babylonian) language and geography the author has been able to fill out the details of the position of Hebrew with regard to the other Semitic languages, and the pronunciation of the letters of the Hebrew alphabet are more fully and more correctly stated than in many of the grammars already known.

As this first part of the treatise contains no less than 640 sections, it will be gathered that it is exceedingly detailed, and owing to its extent it is difficult to single out any chapter or division of the book for special notice. Thus that part dealing with the construct-case of the nouns occupies sections 225-44, covering more than twelve pages. It is needless to say that this is a very informative chapter, giving much food for thought. From it we learn how *d'mê hinnām*, *elohê miqqārôb*, and *n'biê millibbām* ought to be translated, and what "the chastisement of our peace" (מִיָּסָר שְׁלוֹמֵנוּ) really means. The examples in this division of the book, as in all the others, are numerous, and though containing nothing new to the Hebraist, make the book especially useful to the beginner.

In addition to the explanation of the use of the vowel-points, the portion dealing with the accents will be found by students to be exceedingly complete. Diagrams illustrate their use, both in poetry and in prose, and will be appreciated by those who like something in the nature of a picture.

The rule for the pronunciation of two *shewas* in succession at the end of a word is explained in section 84. When this

occurs a "furtive è" is introduced between them, to enable the two consonants to be pronounced. This rule ought apparently to be observed also in the first component of the Babylonian name of Daniel, Belteshazzar. The Babylonian inscriptions imply that it should be read Belets(h)azzar, not Belteshazzar—" (Nebo, Merodach, or possibly Yawah), preserve thou his life."

In a footnote on page 7 the various styles of Hebrew writing are given, among them being *k'thab Asshurith* "Assyrian writing." This, the author explains, means merely Aramean. Though the Assyrians, in their dockets, etc., used the so-called Phœnician (really, seemingly, old Aramean), it is probable that the Babylonian style of Aramean is meant. In this case it was not the old so-called Phœnician forms, but the late running styles known as Syriac. With regard to this, it may be noted, that the late Hormuzd Rassam always called it Chaldean, doubtless because he was a "Chaldean" Christian. It may be noted that some of the ordinary "square" Hebrew characters bear a strong likeness to their Aramaic equivalents in the Babylonian dockets. The Aramaic (Syriac) forms generally used must, therefore, have been developed on different lines to produce the "running hand" with which we are familiar.

It may be noted that the abandonment of Akkadian as a lingua franca, with its complicated syllabary, by the ancient nations of Western Asia was an important step. It naturally took place after the date of the Tel-al-Amarna letters, but the date at which the so-called Phœnician alphabet came into use, and the stages of its development, have still to be discovered. The simplicity of the new system of writing must have attracted the attention of all intelligent men, especially the commercial element. It is probably due to this circumstance—the use of a twenty-two-letter alphabet for trade-documents and inscriptions cast as it were more or less in the same mould—that those twenty-two letters of which it ultimately consisted were all regarded as consonants, as the

author of this treatise suggests. Most of the nations which accepted it must have felt, sooner or later, the need of the vowel-sounds, especially in names, as the Egyptians seem to have done. It was Hebrew, however, which developed the vocalization most elaborately, hence its importance among the old Semitic languages, Ethiopic coming next. When once developed, the vocal system emphasized again the inferiority of Akkadian, which could only indicate, very imperfectly, the sounds *a*, *e*, *i*, and *u*, though the Greek transcriptions show that the sound of *o* in Akkadian and Sumerian was not uncommon, and that *t* (𐤐) was often pronounced as *th*. This grammatical treatise shows us that the Hebrew scribes, whilst performing a very useful service, gave way to the temptation of elaborating too much.

The notes upon the different forms of the language at different periods give the reasons for variations in words and grammatical forms very clearly, and it is pointed out in this connection that in the poetry the moods and tenses of the verbs are less precisely indicated than in the prose. It is difficult to decide as to possible dialectic differences in Israel and in Judah.

The author regarded the substitution of Aramean for Hebrew as having taken place after the Babylonian captivity. The influence of the Exile in Samaria must have contributed to the adoption of this language and script. But the Assyrian and Babylonian Aramaic dockets prove that Aramean was used as the language of trade long before the captivity at Babylon. Hebrew, however, must have continued to exist for a long time, especially in Judea. The Hebrew of the *Mishna* is strongly Aramaicized. The participle is often substituted for the personal tenses (as in Akkadian), and the *waw* conversive is no longer used.

The late M. Lambert's *Treatise of Hebrew Grammar* is likely to become a standard book of reference.

LE PROBLÈME DES CENTAURES. Étude de Mythologie comparée Indo-Européenne. By GEORGES DUMÉZIL. 10 × 7, pp. viii + 278, plates 2. Paris : Paul Geuthner, 1929.

This is a work of considerable length, and is not only valuable on account of the conclusions arrived at, but also from the multitude of details brought together, and the large number of authorities quoted or referred to. We realize from this bulky book that the question of the Centaurs is a big one. The first chapter deals with the festivals in which the modern representatives of the Centaurs appear. Afterwards we have the Persian or Mazdean legends, in the course of which *Sām* the *Narīmārien*, who killed the demon *Gandarē-pak*, is one of the subjects, and we are told that at the period between winter and spring, in Iran, rites sad and gay are performed. In this *Mlle Menant*, the French lady-specialist, and *Hyde*, who wrote in 1760, are often referred to. Of special interest is Chapter VI, headed "Gondu et le Mariage" — "Marriage under the sea, where dwelleth the race of the Centaurs."

On page 26 the author gives an account of the horses in the *Chek* masquerades which imitate the postchaise of old times. These are harnessed to a kind of sledge in which there is a postillion and a passenger. If, in their course, they come across a girl, "Woe to her!" The girl is seized, dragged into the vehicle, and the whole thing starts on a mad gallop. In the end, the horses run away, the coach sways, and finally overturns, and the occupants are thrown out in a heap. This is said to be the final scene, and is, in fact, the result aimed at.

Under the heading "the exploits of the horse", the author says that, as in all similar masquerades, the animals have a grudge against women, especially girls. He quotes several examples of this, ending with a description of the Greek "Arab steed of the New Year" at *Vlakhojani*, which wears a mask of goat-skin, with a beard of the same animal. He

'steals' an affianced girl, and is killed by her future husband.

Considerable space is given to the various details bearing upon such symbolic practices as the above.

Treating of the Centaurs of Greece, the homeland of these strange compound mythological beings, M. Dumézil laments the absence of exact information as to the time and place where the legends of the Greek gods and heroes arose, and the rituals associated therewith. This, however (he adds), is not the case in the matter of Heracles' twelfth labour, in which he undertook to capture Cerberus. This feat he could not accomplish without being initiated into the Eleusian mysteries, and for this initiation he had to be purified from the murder of the Centaurs. The Minor Mysteries were therefore instituted for him, and were connected with the spring equinox, with which the Centaur was also associated. "It is supposed that Heracles became, by his initiation and his exploits, a kind of Pluto as dispenser of riches, whom men addressed in preference to the true Pluto. . . . When we see this succession of facts—murder of Centaurs, capture of Cerberus, and the ride of Pluto on the back of Heracles—we can only think of the myths which Iran attaches to its festival of the spring equinox—Keresaspa killing successively Srvara and Gandarepa, and the various scenes of the 'bestriding of demons' by the hero—be the hero Keresaspa himself, or Tahmurap, or Jemshid." "In this Heracles and Pluto doubtless take the place of more ancient heroes, for a very archaic Attic vase to which M. Dieterich has called attention, shows, even at that date, scenes evidently 'carnavalesque', where bestrider, bestridden, and horn of plenty occupy the same respective places as in the myth of Pluto and Heracles, but in which the central group of personages is surrounded and *carried* by a procession of naked men, ichthyphallic, and with mien as devout as you like. It is a sort of triumph of Jemshid or of Kubera in wildest style—and at the same time a masquerade of the type of those which Europe still practises."

We all know what the Centaurs as represented by the great

sculptors of Greece, were like—the body and head of a man joined to that of a horse where the horse's neck should be. They take their name from a tribe, lovers of women and wine who dwelt in the mountains of Thessaly. They were probably noted horsemen, hence the combination of man and horse, either on two legs or on four, which the Greeks present to us. Nothing quite like them seems to have existed either in Egypt or among the Assyro-Babylonians, a near approach thereto being the winged bulls of Sennacherib which guarded the gates of Nineveh. These seem to have had not only the four legs of a bull, but also the arms of a man. That the Greek Centaurs should have been imitated in the other countries of Europe is not to be wondered at, and the tracing of the connections of these mythical beings is the task which M. Dumézil has set himself—a task which he has performed with considerable success. It will probably be the standard work upon the Centaurs, to which all students of the subject must necessarily refer.

This study of the problem of the Centaurs takes our author very far and wide. He seeks his material in Wales, in Germany in Russia, and even in the far Indies and China. There seems to have been hardly a nation of the ancient world which did not possess some legend similar to those connected with the Centaurs in Greece and the spring (or winter) festivals with which they were associated. But are all similar legends always connected? Among those referred to is that of Romulus and Remus on the Tiber, and their salvation by the she-wolf, which has its parallel in the exposure of Sargon of Agadé on the Euphrates and Moses on the Nile. Are these borrowings, or are they simply a proof of the working of men's minds in the same direction, owing to the convolutions of their brains being more or less alike?

Most interesting as parallels are the masquerades which are common in all parts of the world. The festivals characterized by these extend from Christmas to Easter, but the choice of the date was capricious. The masquerades of Europe probably

celebrate divisions of times and seasons. The changes in the calendar are, or have been, so erratic and unscientific, that we are often confused when dealing with festivals handed down to us from remote ages or past centuries. (In connection with this, it seems likely that the reform of the calendar said to be now in progress, is likely to be of considerable advantage.) M. Dumézil admires the learned men who attribute to the Indo-European world—Babylon's pupil—the task of according the solar and the lunar years. It is possible, but it would be very fine (if it could be done).

As winter, owing to its nature, was (and still is) a period of social life, hence the masquerades and processions usual at this time of the year. In connection with this the author points out that the word *Calendar* naturally comes from the Latin *Calends*, forms of which occur in most of the languages of Europe, "and the Jews have finished by calling *qalandas* a festival of the winter solstice."

The dummy horses, popular and rough imitations of the Centaurs, appear on plates i and ii, as has already been stated. The originals, when in procession, must have added much to the fun of the festivities.

T. G. PINCHES.

DÉTAILS RELEVÉS DANS LES RUINES DE QUELQUES TEMPLES ÉGYPTIENS, avec Traduction Anglaise par Mlle D. M. BELAIEFF. 1^{re} Partie : Abydos. Texte complété par G. JÉQUIER. 2^e Partie : Behbeit-el-Hagher. Appendix, Samanoud. Texte rédigé d'après les notes d'ED. NAVILLE et accompagné de descriptions tirées d'anciens auteurs par Mme NAVILLE. 15 × 11 $\frac{3}{4}$, pp. 67, pls. 31, planches phototypiques 6, planches photographiques 11, vignettes 6. Paris : Paul Geuthner, 1930. Fcs. 250.

The descriptive portion of this work occupies 67 pages in French and English side by side. Abydos finishes on page 37, and Behbeit-el-Hagher begins on page 40, and finishes on

page 63, the remainder (thirty-two lines in the English rendering) is devoted to *Samanood*.

The reproductions are exceedingly well done, as might be expected from a scholar of Edouard Naville's experience and reputation, and the photographs (mostly views) are likewise fair.

Madame Naville, in her *Avant-Propos*, tells us that the book is the result of excavations made by M. Naville in the winters of 1910-14 for the Egypt Exploration Society to the west of two temples at Abydos—those of the *Osireion* and the Grand Reservoir behind the temple of Seti I, in which she took part. They worked at the copies of the frescos and reliefs reproduced in the first part of this work. All these had been carefully revised by M. Naville, but his death in 1926 has left two rooms unfinished.

The description of five of the plates is due to M. Gustave Jéquier.

These ruins of Egypt's old temples have been examined and reproduced by hundreds of savants and travellers, so they are well known, but there is doubtless always something more to be said about them, and new editions are always needed from time to time, so the publication of this book upon the temples of Abydos will doubtless be appreciated. That there is always something more to be said is not to be wondered at, when we take into consideration the number of scenes and the figures shown in this book, and it will be realized that the work entailed in redrawing them must have occupied M. Naville for a considerable time. The work, however, was certainly well worth doing, as completions and improvements were in many cases possible. This was especially the case, for example, in the pictures shown on plates ii-iv, which were taken from "Room B". This room has no carvings, the hieroglyphics and pictures being only painted. These had suffered with the lapse of time, so the explorers thought it best to place on record what was left of them. A translation of the inscription is given, and there are interesting descriptions of the

scenes. The pictures deal with the slaughter of animals for sacrifice. The details of this scene are interesting, and give an idea of the value of the sculptures and inscriptions in these temples as a whole. The description of the pictures is necessarily minute.

But in all probability it is the historical portion which will interest the reader most. In the temple of Ramesses II, a building which it has been agreed to call a Memnonium, there is the record of the great battle of which Ramesses II was evidently very proud, namely, the battle of Kadesh. There is no need to enter into details of this conflict, as it is well known, except to say that the incidents of the poetical record here given are well told, with the latest views and theories concerning the conflict and the geographical situation. As is also well known, it forms the theme of what is called the Poem of Pentaur, and is of extreme interest from a military point of view. Spies, it is pointed out, were questioned under the bastinado.

The book is a worthy production, and reflects honour on all who have taken part therein. It is gratifying to see such additions to the great scholar's life-work and, as such, will be much appreciated. An index would have been an advantage, but its production would doubtless have been troublesome, and to print it would certainly have entailed extra expense.

T. G. PINCHES.

BEITRÄGE ZUR RECHTSGESCHICHTE IM BEREICHE DER
KEILSCHRIFTLICHEN RECHTSQUELLEN. VON MARIAN SAN
NICOLÒ. $7\frac{3}{4} \times 5$, pp. xiv + 273, plates 9, period table 1.
Oslo: H. Aschehoug; London: Williams and Norgate,
1931.

This book, which is published under the auspices of the
Institutet for Sammenlignende Kulturforskning, is a very

complete survey of the discoveries in the domain of Assyro-Babylonian law, and the progress made in its interpretation and development. It is described on the first title-page as belonging to "Serie A : Forelesninger, XIII", and we learn from the Vorwort that the book is the outcome of some lectures which the author gave before the Institute in 1930. The chapters deal with the extent and development of the history of Assyro-Babylonian law, the position of the documents in Near Eastern and Egyptian law, the laws and the collections of legal documents, the clay tablets as the originals of civil law, and sidelights upon the law of debt in Mesopotamia. It will be seen from these headings that the work covers a wide range of legal study in that section of Assyriological literature, and cannot fail to be of interest to those who make a speciality of it. It may be noted that the list of books quoted occupies four pages.

There are probably but few Assyriologists who have not been attracted by the many Assyro-Babylonian legal documents and the multitudes of contract-tablets—often themselves legal documents of great importance—which have been found. They have been able to trace the changes which have taken place through a couple of thousand years, during which, passing from nation to nation, the laws of the Sumerians were translated into Akkadian for the Babylonians, and passed into Assyria on the north, Elam on the east, and the land of the Hittites in the far north-west. Other lands around probably used them, and may later furnish important details bearing upon them. It is with these matters that the book now under consideration deals, and furnishes details and an exceedingly interesting survey.

Concerning the differences in the penalties, in the countries mentioned, the author refers to the *Lex Talionis* (p. 74), which appears so prominently in the Code of Hammu-rabi, adding to the eye for eye, bone for bone, and tooth for tooth, the further punishment of cutting off the hand of anyone who should strike his father. Also there is the cutting off of the

breast of a faithless nurse, and the cutting out of the tongue of a foundling who should deny his foster-parents, this last showing the light in which the Assyro-Babylonians viewed such an offence. "The system of penalties is therefore very severe: the death-penalty is often threatened, and in various forms. Maiming occurs also in cases not entailing retaliation, whilst bodily chastisement is only inflicted in one case, where the penalty is sixty strokes with a stick." (§ 202). Very common were fines to compensate an injured person, but without any sharply defined difference between smart-money and compensation. In contrast to this, imprisonment in Hammu-rabi's Code is unknown, as in Near-Eastern antiquity in general; they knew only imprisonment on remand or as coercion.

Another matter of interest in Assyro-Babylonian law is the position of women. This is probably most fully indicated in a tablet of which photographic reproductions are given and which may be called "The Women's Lawbook" (*Rechtsbuch für Frauen*). This is a nearly complete tablet of fine ivory-coloured clay inscribed in eight columns of finely-written lines of writing totalling 828, detailing the laws current in Assyria governing the position of women, especially wives. In this document the author points out that two kinds of marriage seems to have existed, one in which the husband and the wife lived together, and the other a relationship in which the woman returned to the house of her father, a state of things due to the failure of the man to provide a home where they could live in common, and the husband had either to live with her or content himself with visits. This latter form of marriage naturally gave the wife a more independent position, and it may have been a more primitive form of marriage than when the wife lived in her husband's house.

In this way the author treats of every aspect of Assyro-Babylonian law, describing, comparing, and contrasting.

In connection with the marriage laws, he says, there is a detailed series of ordinances dealing with women's dress—

garments obligatory or forbidden. Therein it was a privilege for decent women and maidens to be veiled; servant-girls had to appear in the streets with unveiled faces under severe penalties. Interesting also is the ordinance which follows, wherein the legal veiling of a concubine (*esirtu*) by her life-partner could make her a legitimate spouse.

The photographic reproductions of tablets, which are nine in number, show the obverse of the text known as the *Frauenspiegel*, finely written in Assyrian characters; the obverse of a tablet of the "Hittite Lawbook", in the Hittite style of cuneiform; an old Babylonian will dated in the seventh year of Sin-muballit (about 1961 B.C.), written in large Babylonian characters; an old Babylonian case-tablet, inner and outer text, the latter with cylinder-impressions—a loan-tablet of the time of Sin-muballit (about 1955 B.C.); an old Babylonian letter; an Assyrian loan-tablet with a seal-impression; and a text of the Seleucid-period referring to the sale of temple-revenues. The photographs of all these are so good that the writing can be read except where it is carried on to the right-hand edges of the tablets. The seal-impressions do not show up so well.

To the list of Assyro-Babylonian legal inscriptions and texts resembling them on pp. 19–20 may be added *The Babylonian Tablets of the Berens Collection*, published by this Society in 1915; and others will be found in the *Journal* for October, 1905, pp. 817–22 (transcribed into late Babylonian); October, 1922, pp. 9–18; and October, 1917, pp. 723–34 (original texts). The loan-tablet dated in the reign of Saracos, *JRAS.* July, 1921, pp. 383–7, may also be mentioned. Several of them have seal-impressions.

This book by Dr. San Nicolò forms a remarkably complete and noteworthy contribution to the works dealing with Assyro-Babylonian law, manners, and customs.

DIE HEILIGE SCHRIFT DES ALTEN TESTAMENTES ÜBERSETZT UND ERKLÄRT. Herausgegeben von FRANZ FELDMANN und HEINR. HERKENNE. IV. Band. 4. Abteilung. Die beiden Makkabäerbücher. Übersetzt und erklärt von HUGO BÉVENOT. 10 × 7, pp. xii + 260, 2 maps. Bonn : Peter Hanstein, 1931. Mks. 11.60.

No one, except perhaps the most fanatical of Assyriologists or Egyptologists, will deny that the two most significant elements in our present civilization are the Hellenic and the Hebraic. The survival of these two elements is little short of a miracle. For who would have expected the comparative handful of Greeks to defeat the Persian hosts or the small band of Jews brought together by Judas Maccabæus to resist successfully the mighty forces of the Syro-Greeks ? On these two occasions Providence was certainly not on the side of the big battalions. By the irony of history the first of these battles was fought for the preservation of Hellenism from the domination of the Persian form of civilization, the second for the survival of Judaism in the face of an all-powerful Hellenism to which every other civilized state within the orbit either of its cultural or political influence had completely capitulated. Yet, while one war was fought for Hellenism and the other against it, they were both fundamentally right, because both the Greeks and the Jews had challenged the forces of tyranny, and had asserted the right of freedom for the human spirit.

While Herodotus paints a vivid picture of his countrymen's fight for liberty, the author (or rather, authors) of the two books of the Maccabees describe with equal vividness, and with a religious passion wholly absent in the Greek chronicler, the epic of Judas Maccabæus.

The present instalment of the Catholic Bible published at Bonn, which contains a translation and notes upon the first two books of the Maccabees, is a fine piece of scholarship which it is a pleasure to praise. The author, Père Hugo Bévenot, has skilfully digested the fairly large literature on the subject.

He is an excellent expositor dealing briefly but authoritatively with the problems and difficulties which confront these two books of the Apocrypha. While he sums up the conclusions of the experts with admirable lucidity, he is quick to detect fallacies and extravagances and does not hesitate to dispose of them neatly and effectively, yet without the slightest acrimony or unfairness. Père Bévenot's edition marks a great advance upon any of his predecessors, and cries aloud to be translated. Finally, the work is provided with excellent indexes and two maps.

J. LEVEEN.

A SANTALI GRAMMAR FOR BEGINNERS. By the REV. P. O. BODDING. 7 × 4½, pp. i + 104. Benegaria, Santal Parganas, India: The Santal Mission of the Northern Churches, 1929.

An accurate short Santal grammar has been a desideratum for a long time now. Skrefsrud's *Santal Grammar* has long held the field, but is somewhat difficult to begin with for a newcomer dealing with the agglutinative type of language. The Church Missionary Society had a small grammar, but this primer by the Rev. P. O. Bodding must now be regarded as the best help available for beginners. It is written by one who has given a lifelong study to the language, while living in the heart of the Santal country. He has already published a monumental grammar in two volumes, entitled *Materials for a Santali Grammar*, and this little primer gives the results of the larger book in skeleton form. Apart from its value to missionaries living amongst the Santals, the book supplies a long-felt want on the part of managers in the tea-plantations and coal-mines, where many Santals are employed. They are very cheery workers and one of the first ways into their hearts is to speak to them in their own language. The word for "a man" and "a Santal" is the same, so that one who speaks their language is every inch a man. When they

leave their native jungle to work under conditions of modern industrialism, they work very willingly under a manager who can speak their own tongue. Colliery managers have frequently asked even for a list of phrases in Santali so that work might proceed more smoothly. Such a list of phrases, as well as sentences to illustrate the use of certain words, would have added greatly to the value of the book for beginners. But this primer will lead them into the enjoyment of a most interesting language and people.

Mastery of the Santali letters and pronunciation is first dealt with. As giving evidence of the meticulous care of the author, take the letter *r*. In his large grammar, the author takes two pages to show how it should be pronounced. Here is what he says of it in his primer :—

“*r*, a sound that gives many Europeans trouble, is pronounced by drawing the inverted tip of the tongue towards the middle of the hard palate, but without touching the palate. The tip of the tongue is then moved rapidly forward towards the front teeth along the palate, which, however, is not touched. When passing the upper gum the inverted tongue tip momentarily touches this. The end of the movement is that the tongue tip strikes against the lower front teeth, at the same time doing away with the inversion. It is a rough kind of sound, and not difficult to one knowing how to produce it.” The ordinary *r* is pronounced more like the Scottish burr. All sorts of amusing errors are made if this pronunciation is not accurately acquired. The word for a man is *hor*, and the word for a road is *hor*. Unless the letter *r* is pronounced properly, a person may mean to say, “I sat down in the middle of the road,” and find the Santals laughing because he has said, “I sat down in the middle of the man.”

The Santali language has also what Mr. Bodding calls checked consonants of which there are four: *k'*, *c'*, *t'*, and *p'*. Someone once said that men from Clydeside would make good Santal linguists, because they too checked their

consonants. To which a Norwegian replied that his countrymen did the same. Here again Mr. Bodding defines accurately what happens, but the Clydeside expression "Pass the but'er", explains at once what is meant.

Practically all words may function as nouns, adjectives, verbs, and adverbs, without any alteration in form. Even a pronoun or an interjection may be used as a verb.

The use of the pronoun is very interesting. There are four words for *we* in Santali, a dual and a plural, each having two forms, an inclusive and an exclusive. All depends upon whether the person addressing you is including you or not. For example :—

alang means "We two, or you and I".

aling means "We too, apart from you"; "I and someone else."

abo means "We, more than two and including you".

ale means "We, more than two, but not including you".

As mentioned above, the language is agglutinative, consisting of roots rather than of words. One word may have subject, predicate, and object, with genitive and dative additions as well. A pronoun may come in between the root and the verbal ending. "A Santal verb consequently consists of base word *plus* verbal suffix *plus* object infix (in the Active and if animate) *plus* possessive infix (optional) *plus* the finite *a*, *plus* subject pronoun."

As showing the expressiveness of the language, mention has often been made of the Santali word for *came*, which can be expressed in two ways. One means that a person came and is still here, the other that though he came he has gone away again. In speaking of the death of an ordinary person, the Santal says "goc'enaë", but in the Santali version of the Apostle's Creed, the expression used is "Jisu goc'lenaë" the tense showing that though He died, He is no longer dead but rose again.

In a small book of little over a hundred pages it is regrettable that there are over twenty mistakes in spelling.

Throughout, too, the author uses the archaic "in stead of" for "instead of". There are awkwardnesses in style also, which are almost inevitable. For the author hails from Scandinavia, and writes in English about the Santal language. But this book will be a boon for beginners, written by the greatest living authority on the Santal language. A great Indian scholar has stated that Mr. Bodding's large grammar, the first volume of which is devoted to phonetics, is the first attempt on a large scale to apply the science of phonetics in a really scientific way to the writing of a grammar.

13.

W. HAMILTON.

A SANTAL DICTIONARY. Vol. I, Part 1. By P. O. BODDING.
Der Norske Videnskaps-Akademi, Oslo. $10\frac{1}{2} \times 7$,
pp. ii + 154. Oslo: Kommissjon Hos Jacob Dybwad,
1929.

A very hearty welcome will be given to this Santal dictionary, planned on such a large scale, and based on such a scientific use of phonetics. This first volume contains 154 pages, and deals solely with the letter *a*. As the Santals only number a little over two million people, some idea will be gathered of the thorough and painstaking care that is being taken to make this dictionary definitive. The format of the book is good, the type is beautifully clear, and the spacing all that could be desired. One can only marvel at the minuteness which Mr. Bodding brings to bear on every word, and the delicate shades of meaning he is able to disentangle. In addition to the meaning of each word, examples of each meaning given are embodied in sentences taken from the every-day talk of the people. All sorts of interesting facts about the Santals and their customs emerge on page after page. Many words have a specialized meaning which leads the author to give us the origin or rite or custom or institution with which the word is associated, and this makes the dictionary more than a dictionary. It is a mine of Santal folk-lore as well as a history of their antiquities, so that this is

a dictionary that can be read as well as consulted. Hitherto, Dr. Andrew Campbell's Santali dictionary has held the field, and references to it are included throughout. These references are marked C, Mr. Bodding quoting them when the word dealt with has not been heard among the Santals with whom he came into contact. That is very possible among a people like the Santals who are forced from time to time to migrate, and while clinging tenaciously to their own remarkable language, can scarcely avoid appropriating words from the languages of the people among whom they sojourn, till they regard them almost as their own. The Santals themselves are not aware sometimes that they have borrowed at all. The Rev. W. E. White, the coadjutor with Dr. Campbell in his dictionary, tells of a Santal who on looking at a telegraph pole in the tea-plantations, asked him what the English word for that was, adding that the Santali word was "telegraf". It is perhaps ungracious of Mr. Bodding to say of the words where C is used, that "in many cases such words are in a form written by persons who have had little proper training".

For a work that is to become the standard dictionary of the Santal language, this first volume contains an extraordinary number of misprints and mis-spellings. There are mistakes, too, in style and in expression, phrases in English being used that no one speaking the English tongue would ever use: "To fondle himself upon you," "epidemy," "entrapped him to be unconcerned," "always daily," "ejaculate" for "eject," "dabblingly," "untractable," and so on throughout. There are mistakes on almost every third page. In future volumes it would be desirable to have the proofs read over by someone whose mother tongue is English. Otherwise this really monumental work will be marred by flaws which are out of keeping with its accuracy in other respects.

This dictionary will be the final authority on the language when completed. But for every day use, Dr. Campbell's one-volume dictionary with its felicitous and succinct examples coupled with the ease with which the student can turn up

Santali-English or English-Santali at will, is still indispensable, and the forthcoming new edition is eagerly awaited. We trust that Mr. Bodding will be able to give us the whole of this dictionary which embodies the labours of a lifetime. He has already put all lovers of the Santals deeply in his debt, and this dictionary will be the fitting coping stone to his erudition, industry, and research.

W. HAMILTON.

-
1. ICONOGRAPHIE DES ÉTOFFES PEINTES (PAṬA) DANS LE MAÑJUŚRĪMŪLAKALPA. Par MARCELLE LALOU. Buddhica : Documents et Travaux pour l'Étude du Bouddhisme. Première Série, Tome vi. 10 × 6½, pp. 117, pls. 7. Paris : Paul Geuthner, 1931. Frs. 75.

The *Āryamañjuśrīmūlakalpa* is a work of much interest for its information on iconographical, magical and lexicographical matters, but is hardly accessible to the ordinary student, because the Sanskrit text is known only in a single faulty MS. It is, however, something to be thankful for that the late MM. Ganapati Sastri should have published the MS. as it stands without silently introducing amendments of his own. Mlle. Lalou has extracted the passages dealing with magical pictures painted on cloth, which seem to be specially connected with the worship of Mañjuśrī, and gives us a translation of them with the Tibetan version. She has made an excellent job of a troublesome piece of work ; the inevitable slips are very few and trivial, but I would question her rendering occasionally. Thus she should not attribute improper behaviour to Maitreya (p. 32), "son regard n'est pas fixé," when the Sanskrit and Tibetan indicate the meaning as "with his gaze fixed on Him (i.e. the Tathāgata)". So also by a dubious interpretation of *śāsane* (p. 39) she makes Yamāntaka preach ; anyhow the Tibetan gives the better reading *sādhane*, which should be construed with *dvīṣṭa*° to mean "he is able to keep down those who are inimical to the rite". In an interesting final chapter she discusses

Mañjuśrī's epithet of *pañcacīraka* and demonstrates curious associations with the Gandharva Pañcaśikha of the Pali canon and with Sanatkumāra, Kārttikeya and Kāma. Her remarks throw some light on the early Bodhisattva statues which Professor Vogel dealt with in *La Sculpture de Mathurā*, and I would add the suggestion that *kumārabhūta*, applied here to Mañjuśrī but in other works to other Bodhisattvas, may have perhaps meant originally "being in the eighth of the ten Mahāyāna *bhūmis*", which was known as the *kumārabhūmi* (*Daśabhūmikasūtra*, p. 71).

It is much to be wished that Mlle. Lalou would use her studies of this text to give us an index of rare words occurring in it with their Tibetan equivalents. Thus I note the Tibetan's interesting explanation of *vrkodara* (p. 37) by *gsus-pa* (*gsum-pa* wrongly in text) *hphyañ-ba* "having a pendulous stomach", "pot-bellied". Again, it takes *paṭṭacalanānīvasta* and *paṭṭacalanikā°* to mean "vêtu de vêtements flottants" (pp. 33 and 34, cf. p. 14), but have we not here the rare word *calanī*, °*aka*, °*ika*, °*ikā*, a kind of short silk garment or petticoat (according to *Mem. of the A.S.B.*, iv, p. 199, the Tibetan equivalent is *dar-thun*)? Many such words would probably reward the inquirer.

423.

2. THE SONG OF THE LORD, BHAGAVADGĪTĀ. Translated, with introduction and notes, by EDWARD J. THOMAS, M.A., D.Litt. Wisdom of the East Series. 7 × 4, pp. 123. London: John Murray, 1931.
3. NAÑJARĀJAYAŚOBHŪṢAṆA OF ABHINAVA KĀLIDĀSA. Critically edited, with introduction and index, by EMBAR KRISHNAMACHARYA. Gaekwad's Oriental Series, No. xlvii. 10 × 7, pp. xlvii + 270. Baroda: Oriental Institute, 1930.

Of the many translations of the *Bhagavadgītā* into English none could be more safely recommended to the ordinary public than this one by Dr. Thomas. The wording is agreeable

and as clear as the original allows a close translation to be, while in matters of scholarship it is up to date. The introduction and occasional notes are judicious, and give all the information that could reasonably be demanded by the general reader.

The other book named above is an eighteenth-century imitation of the *Pratāparudrayaśobhūṣaṇa*, and is of no interest except for its date and for the subject of its panegyric, who played a considerable rôle in the early history of the H.E.I.C. in Madras. The claim to critical editing on the title-page is not borne out by the text, but the list of contents and indexes will be found adequate, should it be desired to look up any point in it.

E. H. JOHNSTON.

INNI DEL RIG-VEDA. RELIGIONI DELL'INDIA, VEDISMO E BRAHMANESIMO. TESTI E DOCUMENTI PER LA STORIA DELLA RELIGIONI: 2. Vol. II, Rig-Veda ii-x. Di Valentino Papesso. $7\frac{1}{2} \times 5$, pp. ix + 180. Bologna: Nicola Zanichelli, 1931.

The first part of Signor Papesso's work was reviewed in the *Journal* for April, 1930, p. 464, by a different hand. The second and final volume contains translations of some ninety hymns from books ii to x of the Rigveda. The selection, which in general is good and does not always follow the beaten track, is governed by the needs of students of the history of religions and this perhaps justifies the inclusion of hymns such as 4, 27, whose interpretation still remains so doubtful as to make their omission from a popular anthology desirable. The meaning of this particular hymn depends to a large extent on the view taken of the first verse, and, without accepting necessarily Sieg's exegesis, still I do not see how the ordinary translation, here followed, which involves taking *jāvasā* as if it were *jāvasā*, can possibly be right. In general, however, Signor Papesso, who properly eschews original renderings,

shows good judgement in deciding between the views of conflicting authorities in the major difficulties, and his translation has the great merit of combining literalness with intelligibility. But in minor details there are many more mistakes than there should be, after making full allowance for ordinary human frailty. To cite a few instances, this plea excuses slips such as *viṣita* "legato", 5, 83, 7, and "aperte", 5, 83, 8, the omission of 6, 58, lcd. or misprints such as "O nato fonte" (for "forte"), 2, 28, 8, and "tredici" (for 53), p. 131, n. 7. But *apāsah* "opera", 2, 28, 5, and *mahāvadhāt* "della grande arma (di lui)", 5, 83, 2, suggest a certain carelessness about accent, and his judgement seems at fault in *purvasānām* "delle antiche madri", 2, 35, 5, in declining to read the now generally accepted *kāre* for the Pp.'s *kārah* in 10, 53, 11, or in seeing narrative perfects in 10, 34, 11. Though such defects make the book unsuitable for elementary use, they do not seriously affect as a rule the general meaning of the translation or impair its value as a guide to the religion of the Rigveda.

E. H. JOHNSTON.

PANCAVIMŚA-BRĀHMAṆA. THE BRĀHMAṆA OF TWENTY-FIVE CHAPTERS. Translated by Dr. W. CALAND. Bibliotheca Indica Work No. 255. 10 × 6½, pp. xxxvi + 661, 1 illustration. Calcutta : Baptist Mission Press, 1931.

The Asiatic Society of Bengal has tardily but most successfully atoned for the unsatisfactory edition of the *Pañcaviṃśa Brāhmaṇa* issued in 1870-4, by publishing a translation of that forbidding text from the pen of Professor Caland, whose retirement has abated in no degree his devotion to his favourite study. When all allowances are made, it is certain that the edition fell far below what could have been accomplished at the time when it appeared, and its defects have hampered every worker on the Brāhmaṇa literature. The abstruse character of the ritual which is presupposed

by the Brāhmaṇa has been another source of difficulty, and it is invaluable to have the contents of the text made effectively available. Much, of course, must remain obscure, but such difficulties affect only minute details, and the student of religion may feel confident that the translation gives him all that he can ever want. A careful examination has revealed, indeed, a number of points on which it is possible to differ from Professor Caland, and with these I shall deal elsewhere, but such divergences of view are inevitable in the case of texts so difficult as the Brāhmaṇa.

In an introduction, brief but rich in matter, the author touches on some vital questions of relative chronology of the *Sāmaveda* texts. It is satisfactory to find that he has definitely accepted the arguments of Oldenberg in favour of the priority of the Pūrvārcaika of that Veda to the Uttarārcaika, and this point can be held to be definitely disposed of. Professor Caland is inclined to hold (p. xv) that the Uttarārcaika did not exist in the time of the author of the Brāhmaṇa, but that the chanters drew the verses they wanted directly from the *Rksamhitā*, the Uttarārcaika being composed in later times so that there might be available in the order of the sacrifices the verses required to be sung. This theory is supported by certain facts, especially by the use in three places of *sambhārya* (xi, 1, 5 ; xvi, 5, 11 ; xviii, 8, 8) denoting verses which have to be gathered together ; now in the Uttarārcaika the verses are already collected, so that the reference must be to the *Rgveda* as the source whence the verses are taken. Other passages are less decisive, but the Sūtras seem to recognize that in certain cases verses are to be drawn direct from the *Rgveda*. This evidence, however, does not carry us as far as is suggested. It shows that the *Rgveda* was well known to the Brāhmaṇa, and that direct use could be made of it. But it does not exclude the use of the Uttarārcaika, and there seems perfectly conclusive evidence that the Brāhmaṇa knew it. In several passages, e.g. xii, 1, 9. 10, we find used the terms pentastichs or tristichs without further specification. The Uttarārcaika

gives us at once the verses, and we must, therefore, assume that something like it was known to the author of the Brāhmaṇa. Dr. Caland can only suggest that the author of the Brāhmaṇa allowed a free choice, and that in later times the compiler of the Uttarārcika fixed the verses, probably in accordance with the indications of the *Jaiminīya Brāhmaṇa*, where the practice is to indicate what verses are to be used by giving their opening words. This, it must be confessed, is a most improbable hypothesis, and wholly contrary to the practice of the Brāhmaṇas. Moreover in xiii, 1, 1, we find from the opening words cited that the Brāhmaṇa uses verses 37-9 of *Rgveda*, ix, 86, in the reverse order, and this is the order we find in *Sāmaveda*, ii, 305-7. Again, in viii, 8, 26 it is perfectly clear that the Brāhmaṇa follows the version of *Sāmaveda*, ii, 62, as against *Rgveda* viii, 98, 9, and there are several other clear cases where the verses used differed in reading from the *Rgveda*. To explain these away by assuming that the author of the Brāhmaṇa used a different recension of the *Rgveda* from that we now have is much less plausible than to hold that he had before him a text virtually equivalent to our Uttarārcika. There is after all nothing unnatural that the author should have used both the *Rgveda* and the Uttarārcika, and this simple supposition saves us from conjectures which evade completely possibility of confirmation.

Dr. Caland has investigated the relations of the *Pañcaviṃśa* and the *Jaiminīya*, with the result that he is inclined to hold that the latter is the older text. But the evidence tells in the opposite sense. In the *Pañcaviṃśa*, xx, 3, 2, there is a myth of the securing of control over domestic animals, in which failure is ascribed among others to the All-Gods when using the *mārgīyava sāman*, and the *Jaiminīya*, ii, 112, ascribes a like myth to Tāṇḍya, who, of course, according to the tradition is the author of the *Pañcaviṃśa*. The almost conclusive force of this argument is countered by Dr. Caland with the argument that the *Pañcaviṃśa* mentions the All-Gods as the actors, while in the *Jaiminīya* it is Īśāna Deva, and the

Pañcavimśa itself in xiv, 9, 12, brings Rudra into connection with the *mārgīyava sāman*. Hence he suggests that the *Pañcavimśa* took over the passage from the *Jaiminīya*, replacing the god, of whom its author stood in awe, but inconsistently retaining the *sāman*. But it is obviously much easier to suppose that the *Jaiminīya* borrowed, and that it gave the *sāman* to *Īśāna* either because of its connection with Rudra in the *Pañcavimśa* or for some chance motive. It must be noted that *Īśāna* is properly not mentioned by the *Pañcavimśa*, for Rudra would normally be expected to be able to control cattle, and this may be the reason why the All-Gods appear in that text. It is, it may be added, too much of a *tour de force* to explain away Tāṇḍya's name, for we really cannot disregard the early tradition associating him with the *Pañcavimśa*. Nor is it an argument in favour of greater age that the *Jaiminīya* allows the performance of rude rites ignored in the *Pañcavimśa*. It is clear that tastes in these matters differed; some schools were willing to deck out in Brahmanical guise barbarous practices; others were more exclusive, and date has nothing in all likelihood to do with such questions. The linguistic evidence, on the whole, is not in favour of Dr. Caland's hypothesis, and it seems impossible to claim priority for the *Jaiminīya* as we know it over the *Pañcavimśa*. But difference of opinion, one is glad to note, is only possible because of the real knowledge of the two texts which we owe to the tireless energy and deep insight of the distinguished author.

A. BERRIEDALE KEITH.

BIBLIOGRAPHY OF SEX RITES AND CUSTOMS. By ROGER GOODLAND. 11 × 8½, pp. 752. London: George Routledge and Sons, Ltd., 1931. £3 3s.

The scientific study of savage life and of the problems which there, as in higher societies, arise from the facts of sex, is hampered by the feeling that it touches on the nasty and

the indecent. Often there is ample justification for this ; for the extravagances and perversions which have been recorded by, or have been attractive to, observers of very different capacity and purpose, obscure and hinder the acquisition of knowledge of an accurate and scientific nature. It is unfortunately common to give undue weight to the abnormal and the bizarre and the irregular which is tolerated only under exceptional conditions, and to forget the great part played in social life by the ordinary routine of human relations. Scientific anthropology thus suffers from the original taint of curiosity and morbidity and from the excessive emphasis laid upon the phenomena of special and decadent societies. There is ample evidence of the antiquity of religious ritual linked with sex which is not always, not necessarily, irreverent or indecent. Thus the connection of a prototype of modern Saivism with the cults in vogue in the Indus culture is affirmed by Sir John Marshall (see *Mohenjodaro*, i, pp. vii and 52 sqq.) and throughout history, as the literature shows, human societies have invested sex with power and with mystery and made its facts one source of religious activity. In this study the present work will be very valuable. It consists of an alphabetical and annotated list of authors who have contributed to this subject, with a subject index giving cross-references. It appears to be very thorough and accurate, and is admirably printed.

T. C. H.

BIBLIOGRAPHIE BOUDDHIQUE (Buddhica : Documents et Travaux pour l'Étude du Bouddhisme, publiés sous la direction de JEAN PRZYLUKI. Deuxième Série, Documents—Tome III). I, Janvier, 1928–Mai, 1929 ; II, Mai, 1929–Mai, 1930. pp. 64 and 97 respectively.

When Jean Przyluski told me at Oxford, 1928, of the project he had in mind, together with his aspirations for a more intensive, more historical trend in Buddhist studies, I told

him, doubtless in indifferent French, that he had brought me *un rayon de soleil dans un monde trop obscur*. The first fruits of this project are now with us, have in part been with us for nearly two years. Nor is the sifting of materials yet brought up to date. Had it not been for an act of piety, in which a fifth of Part II was devoted to a "Rétrospective" of the many writings of Léon Feer, the diary of current works on Buddhism might have been brought up to the end of 1930, if no further. And, much as I esteem the piety-cum-utility of Rétrospectives, I trust the editor will impiously refrain from publishing any more of them till we can read, in each annual issue, notice of works on Buddhist subjects published up to the end of the year just ended. This will much increase the usefulness of the Bibliography.

And how great that usefulness is they who are engaged in any work referring to Buddhism, be it at first or at second hand, should not need to be told. Yet told they need to be. And perhaps in France more than elsewhere. There in its centre are such known fountain-heads of knowledge on matters Buddhistic as Messrs. Finot and Foucher, Sylvain Lévi and Przyluski, yet within the last few months I have handled three or four French works, new or in revised shape, wherein all the old clichés about original Buddhism are trotted out, with all the decadent sins of Hīnayānism, piled on the shoulders of that most maligned man "le Bouddha", just as if (i) a world-religion had no history, but were a ready-made, reach-me-down article, with no frills, gussets, and tucks added to the first garment, and (ii) the study of original Buddhism were not, as it is, a very new line of research, but a well-trodden field like that of the classics of the Ægean Sea tradition. So far as I have seen, anything so crude as the statements in those French books, purporting, as they did, to be by disinterested students, would, in Germany and this country, only be put forward by "verts", propagandizing that which, with scanty knowledge, they hold to be the gospel of the Śākyamuni. Germany is as yet, in its scholars, holding

largely to the Oldenberg tradition, wherein the "church-made" formula still has too much uninvestigated validity. But Germany would at least be forward, as apparently France as a whole is not, to consult such a work as this Bibliography and watch in its pages the output of new research and criticism. They, and Buddhist students everywhere, will know that, in M. Przyluski's words, while *l'effectif* of the first seekers has grown, while "Oriental Asia" is getting ready for scientific output, and "specialization is getting accentuated", "the organization of studies remains embryonic". Students may be engaged on the same point yet ignorant of each other; immense fields may be lying *en friche*; for lack of co-ordination energy is being frittered, wasted (*se gaspille*). In this field Renan's ideal of collaborating scholars is hideously absent. We all sit like so many lone *śramaṇas*, and yet, unlike them, our professed aim is to benefit mankind.

M. Przyluski's reporting staff in different countries—in England it is Mr. G. L. M. Clauson—will by now be known to readers of this *Journal*, and the admirable methods adopted in the Bibliography will not be by now, in this belated notice, needing to be here set forth. Not least admirable among these is that of giving, beneath the notice, with résumé, of a new book, reference to any worthy criticism on it which has appeared. Our gratitude—I know I can use the "our"—is profound, and we rate the editor as, in Sutta discourse, *loke dullabho*, hard to find in the world, in that he is "foremost to work a benefit". Let us not be the complementary *dullabhā*: "hard to find are they who acknowledge it."

304.

C. A. F. RHYS DAVIDS.

BUDDHISTIC STUDIES. By BIMALA CHURN LAW, Ph.D., M.A., B.L. $9\frac{3}{4} \times 6\frac{1}{4}$, pp. x + 897, pls. 4. Calcutta and Simla: Thacker, Spink and Co., Ltd., 1931.

It is in a minor way regrettable that this over-massive collection should not have been published in three parts in

the course of the eight years (is it ?) taken for its production. To a greater degree is it commendable, that there should be found a man like Dr. Law, willing to take upon himself the financial burden of giving, not to his own "fliegende Blätter" only, but to those of many other workers in the same field, a more concordant and more permanent abiding-place than that of a quarterly journal, or other periodical. Of his own four contributions to this volume he has let me see three from other publications— I am not sure whether the fourth, "The Buddhist Conception of Māra," has previously appeared. This is, like much else from the same pen, the work of the useful secretary, reaching down from bookshelves materials (varying in date of composition over about a thousand years) needed for his projected work by the historian of such a "conception", and greatly is such a writer beholden to him. That there is no mention of Windisch's famous monograph is practically to say we have here no critical essay, but the critical essayist will be glad to have it by him.

Of other essays which I have not seen before in periodicals one by a Jain, K. Prasad Jain, on "Mahāvīra and Buddha", is written with a denominational desire that his "Jina" may be shown the better man of the two. It is 66 pages in length, and in its own way of no little interest. But it reveals not the faintest suspicion in the writer, that what the Jaina scriptures tell him, or what the Buddhist scriptures tell him *may not have really* been said by either Jina, Vardhamāna, or Gotama, respectively. Such a comparison as is given is useful, as showing what, when both scriptures took their final shapes, was then the orthodox doctrine of either cult; more than that it cannot show.

Another article which may here appear for the first time is one by my esteemed contributor (speaking for the Pali Text Society), Dr. M. Nagai, on "Buddhist Vinaya Discipline". Here we have another slap; that of the Mahāyānist at the Hīnayānist. This is at the need felt in the Pali scriptures to give sanction to every rule by proving the *Anuśāsana* as

bhikkhave of the Śākyamuni. "Such an idea is born of the narrow spirit of the so-called Hīnayāna school, and will ultimately lead to the death of the spirit of Buddhism." The attitude of the modern cultured Japanese Buddhist towards this ancient mass of "canon law" is of much interest, and no one would welcome more than the reviewer a critical history of the Buddhist Vinaya from Dr. Nagai, when once his edition of the Vinaya Commentary is completed.

Other articles I have not before seen are two from a member of the "so-called" Hīnayānist Sangha, the Bhikṣu Narada, whose excellent English almost suggests an English -vert under this name. These are on "Buddhist Philosophy of Birth and Death" and "Nibbāna". Here again, in the whole outlook, whether Indian philosophy (identified with "R̥sis"!) or "Christianity", or early or scholastic Buddhism be handled, the fact that *ideas have a history* might, for all the writer has to say, be non-existent. The first two cultures are swept aside; this is an easy task, when the whole history of them is boiled down to a phrase expressing something which the writer's own cult has, in the course of tremendous changes, come to see as of no value. That he finds heredity and environment insufficient to account for the individuality of the individual—the Suttas call it, he might have cited, the *purisassa indriyavemattatā*—is rightly said. A man's individuality is the growth of him in and from his past, a very long past; but it is the growth of him as "man", as *purisa*, *puruṣa*, not of the many bodily and mental complexes, which have merely been his instruments. "Not body, not mind," runs the early record of the Śākyamuni's word, "*is the 'man'*," as India called the self, the spirit. But his tradition has come (if I may judge his article is true to it) to see, in the *gandharva*, referred to in a Sutta as essential to conception, a *mere idea*: "exciting impulse," and not the *person* who is always meant by that word, the unseen person coming to quicken the embryo before birth, the "man" or individual. If he would abandon the study of late Abhidhamma mediaeval futilities about death. the work of men

who had turned from the things their Founder's world held in worth, and study the history of those earlier values, the true Indian heritage in Buddhism, he might find things opening up to him in a way undreamt of. He would find too, that there is a history in Nirvana values, which now he sees not.

One more article, refreshingly short, not apparently a reprint, is in a way the most suggestive of all: "Wanted: a Philosophy of Life . . . ? Buddhism" by C. E. Ball. Here is appreciation of Mahāyāna Buddhism as teaching the continuance of the "man" (not the mere complex or product), the man as of long spiritual being in becoming. He, as the Buddhist Jātaka words it, *Who sees, look you, himself, e'en as he wished, so has he come to be*, is by his "developing will, making his choice, reaching out in that spiritual life" which is that, not of body and mind, but of the man. And what he finds we are beginning to want, is not re-enthronement of a Buddha-cult—the last thing, I dare to say, the great Śākyamuni would wish to see—but a new spiritual leader, who could so influence men, even were it for but a day, as to "cause them to think and act like incarnate gods".

Space does not suffer that I do more than mention other articles: Dr. G. Grimm on "Christian Mysticism . . . and Buddha's Doctrine"; Dr. Bhandarkar's Asokan study and others, or I could say much more. When it is a case of external history, as in the contributions on Buddhist history in Ceylon by Drs. Geiger and De Silva, there is obviously no choice for the writers to be anything but historical; events are the visible and felt expressions of changing values. But when it comes to articles on the values themselves, as manifested mainly in recorded ideas, then it is, that we are shown up in our "Buddhist studies" as sluggish in imagination, then it is that all the picture is looked upon as flat and without perspective. And this volume will go down to posterity as containing, together with a great amount of interesting research, instances of such flat picture-making.

BUDDHISM IN INDIA, CEYLON, CHINA, AND JAPAN : A READING GUIDE. By CLARENCE H. HAMILTON, Ph.D. pp. 107. University of Chicago Press, 1931.

A handy and useful brochure, giving such outline as is possible of the history of Buddhism in these four countries, with bibliography, which makes no pretence to be exhaustive, by one who was Professor of Philosophy in the University of Nanking from 1914 to 1927. It follows almost inevitably from his location till four years ago, that the information for the reader on the last two countries should leave less to be desired than that on the first two. I say this with diffidence, mindful of the classic remark of a man of Japan after interviewing Gladstone. And I will only add a word of regret, that, in the interval of three years following on his release from duties in the Far East, he should, for his bibliography, have failed to bring himself abreast of works which had been coming out up to the present day. I note, for instance, one work only as published in 1930, one in 1928, and two in 1927. Nor with the sole exception of the S.B.E. is there light thrown for the reader on the great amount of serial research that has been turning out from the Press year by year, not only since 1927, but for half a century; no word about the *S. B. Buddhists*, nor the texts and translations of the Pali Text Society, save for two detached references of a decade ago, no word about dictionaries, no reference to the new Paris Buddhist Bibliography, begun a year before this book was issued. In the outlined history, too, of Indian Buddhism, certain old *gaffes* are repeated from pioneer works, such as the "pork" dish (*sūkara-maddava*) and the foreign "missions" (! ?) of Asoka. A new edition, cleansed of such and brought really up to date, will be a real desideratum.

LES PHILOSOPHIES INDIENNES ; LES SYSTÈMES. Bibliothèque française de Philosophie, nouvelle série. Par RENÉ GROUSSET, avant-propos d'OLIVIER LACOMBE. 8 x 5, Tome I, pp. xviii + 344 ; Tome II, pp. 416. Paris : Desclée de Brouwer et Cie, 1931. *Frs.* 36.

I venture to think that no one person should be called upon to write single-handed a critical review of a work claiming to give a purview of such a subject as this. This is because it needs a large portion of a lifetime to master at first hand and weigh historically each section of it. I am only fit to speak, more than by way of mere exposition, about one short section. Others should be called in to help ! But in saying this, I am venturing no less on another judgment about the whole of this and such works ; no man is competent to deal similarly, as author, with the whole of any of them. And for the same reason. Speaking with diffidence, I should say the present author is at home and expert in the last section only : Le Vedānta. Here only does he really " handle " his subject-matter as one who knows his way about. Next to this comes his treatment of the Upanishads, where is some attempt at historic method. True, it is a lean chapter on a great subject and, were I expert therein, I should have a bone here and there to pick with him ; but, after all, much has been written on it, and it was a wise choice to dwell at greater length on sections as yet comparatively lacking in scholarly syntheses.

But it is where he gets at the back of " Les Systèmes ", to the Vedas, to le Bouddhisme ancien, to early Jainism, to pre-system Sāṅkhya, that he reveals himself as away from home and dependent upon others. And here, of course, I fetch up where *I* am more or less at home. It is doubtful whether " ancient Buddhism " can be said to be presented with discernment by a few scraps of translation, borrowed from works by Foucher and Oldenberg, with no evidence of original grasp by the author. Oldenberg, fine scholar though he was, never, after his initial efforts, found time to give of his best in historical criticism to Buddhism. Hence, following him,

M. Grousset sees the whole of Pali Buddhism as a flat frontispiece, and cites a Milindapañho as giving us the "ancient" teaching equally with Suttas which were spoken, as Sayings, 500 years earlier, were formulated with revisions during the next 250 years, and were then strung into Sutta collections two centuries and more before they were written. The result is, that we get doctrines of later changed monastic values given out as the teaching of that most maligned of men, the Śākya-muni. Religious teacher to the Many, not maker, *Dieu merci*, of a "system", he, whose first public monition was to echo the Upanishadic call to "seek the Self", and whose second monition to his first helpers was a *caveat* lest they should, in mere body and mind, see the Self *who was valuing these*—he is written down, as before, so here once more, as a champion of the non-existence of the self and as the pedantic compiler of a one-sided view of causation, foisted later upon his real teaching. It is, after all, a very new subject in the history of religious values, this "ancient Buddhism"; the Pali materials are even now not yet fully to hand. And the immature ill-digested pronouncements of a few eminent pioneers required careful checking before being grafted on to a brand new review of Indian philosophies. Cinderella is still among the cinders!

Now should come the turn of a reviewer doing justice, as relief to this grumble, to the latter half of this work, to Madhyamika, Vijñānavāda, Vedānta. Yet might he too grouse a little at the absence of an index, and at the want of symmetry in the presentation, different in each volume, of the contents.

C. A. F. RHYS DAVIDS.

PARADISE QUEST: A NATURALIST'S EXPERIENCES IN NEW GUINEA. By LEE S. CRANDALL. $8\frac{1}{2} \times 6$, pp. xvii + 226, 52 illustrations. New York and London: Scribner and Sons, 1931. 10s. 6d.

In this interesting record of a search, under great difficulties in regard to food and transport, for birds of paradise in New

Guinea, the Curator of Birds from the New York Zoological Park has put together some valuable information for the general reader. Mr. Crandall returned to New York the proud possessor of some "forty birds of paradise, alive and happy, with two hundred lesser relatives". In the course of his expedition to remote parts of the island, the writer gleaned some interesting information regarding local customs. Here, as elsewhere, the *pouri-pouri* (magic) worker uses his powers through the nail-parings, hair, or other portions of his victim. Death may be caused to an enemy by sending a snake to visit him, and the penalty is certain, whether the snake be of a poisonous or entirely harmless variety.

The description of the birds of paradise and the methods adopted for catching them will be of interest to the student of natural history; and the book contains sufficient anthropological data to be attractive to a wider public. Interesting parallels with primitive practices in India will be noted, in connection with spirit worship, and the special importance of certain trees, such as the *Pandanus odoratissimus*.

The illustrations are excellent and numerous, but the writer has unfortunately omitted both an index and a map, which would have added much to the value of the work. These omissions might perhaps be made good in the next edition.

459. R. E. E.

AN ACCOUNT OF TIBET: THE TRAVELS OF IPPOLITO DESIDERI OF PISTOIA, S.J., 1712-1727. With an Introduction by C. WESSELS, S.J. Edited by FILIPPO DE FILIPPI. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xviii + 475, pls. 17, 1 map. London: Routledge and Sons, 1932. £1 5s. 2d.

The publication of this record left by the Italian Jesuit Father, Desideri, was long overdue. Puini and Wessels filled a part of the gap, but now we have a practically full account and an English translation. Italian writers, including the editor of this work, blame writers of other nationalities,

especially British, for failing to appreciate—and in some cases for misrepresenting—the Roman Catholic missionaries who visited Tibet during the seventeenth and first half of the eighteenth century. But the blame must to some extent rest with themselves for their delay in making the documents, left by these early travellers, known to the outside world. As long as manuscripts are hidden in Rome, Pistoia, or other places, and even when such excerpts as are published are available only in a limited edition in Italian, speculation remains active, and she is a dangerous busybody.

Desideri's record of Tibet is fuller than that left by any of his fellow missionaries. Well-educated, industrious, and resourceful, he amassed a large store of information during the six years that he spent in the country. To his own life and adventures his references are, on the whole, brief. In August, 1715, with Father Freyre he left Leh and travelled via the Tsang-po Valley route to Lhasa. A Mongol chief's widow was taking his troops from western Tibet to Lhasa, and permitted them to travel in her train, showing them much kindness. They arrived at the capital in March, 1716.

Freyre left, almost immediately, for India, but Desideri remained. He received kind treatment from La-tsang Khan—styled Cinghes-Khang in the record—who commanded the Oelöt forces in Tibet and ruled the country. Studying hard, he wrote a book in Tibetan controverting the Tibetan religion, and preaching Christianity. This venture he presented to his patron in public audience on the 6th January, 1717. The latter, after examining the book, proposed that, in accordance with Tibetan custom, a public disputation should, later on, be held between Desideri and the Tibetan lamas. He further arranged for the Jesuit to study in the monasteries of Ra-moche and Se-ra, that he might learn the other side of the case. But during the following December a revolution broke out, La-tsang Khan was killed, and Desideri fled to Tak-po, eight days' journey south-east of Lhasa. Except for a few months at a later period, he did not return to the capital until April,

1721, when he left Tibet for good, as the authorities in Rome decided that the Tibet mission field should be worked by the Capuchins.

The main part of the report is devoted to a general description of the country and people, and especially to the religion. Present-day statements of Sikkimese and other Tibetans receive confirmation in its pages. The former always claim that their jurisdiction, used to extend as far as Titaliya in the plains of India. Desideri, in effect, confirms this, writing of it as "bordering on the south-west with Nagrakata, Haldibari, and Purnea". Sikkim is described as a feudatory paying tribute at each New Year to Lhasa. Then, as now, the Abors, etc., prevented Tibetans from passing through their territories. And it is of interest to note that Kuti (Nya-nam), the Tibetan outpost that lies comparatively close to the Gurkha capital, had been, shortly before Desideri's time, "subject to the Raja of Kattmandū", but was subsequently brought under Lhasa.

In discussing Tibetan qualities our author notes that "their memory is good, and they are clever, kindly, and courteous by nature, good craftsmen, active, and extremely industrious". A good characterization as far as it goes, far nearer the truth than the depreciation of many later travellers.

But the chief concern of this intelligent priest was with the religion that he had come to conquer. Temples and chapels, *chö-tens* and prayer-wheels, and many features of monastic life come under his observant eye and his somewhat prolix pen. He describes many of the Hells, the hot, the cold, and the other varieties. On the Tibetan system of religious contemplation he has something to say, but much more on the doctrine of transmigration, regulated by the good and evil deeds of previous lives, the basis on which the Tibetan religion is built. Finding here a clear denial of the existence of a Supreme Being, he combats it with all the strength at his command. So vast and complex is the structure of what many Westerners call Lamaism—a term disliked by the

Tibetans themselves—that he cannot fight it all. But among other doctrines he does contest that of the Void (*tong-pa-nyi*).

Naturally enough there are cracks in the knowledge of two hundred years ago. He cannot say what is the place in India that Tibetans name Dor-je-ten. He opines that “it appears to be the town of Patna, or some other place not far from Benares”. Even Professor Puini and the editor of this work can do no more than guess at three places. One supposed it by now to be general knowledge that Dor-je-ten is Bodh Gaya.

To the Abors Desideri refers as *Lho-pa*, i.e. the Southerners. Nowadays this name is applied to the Bhutanese, while the Abors and cognate tribes are known as *Lo-pa*, the colloquial form of *gLen-pa*, which means “stupid and ignorant”.

But the most surprising gap of all appears when, as we read, we realize that Desideri, while aware that the Tibetan religion came from India, did not know that it was derived from Buddhism. Sa-kya Tup-pa, one of the Tibetan names for Buddha, is referred to as the “Legislator”, but neither Buddha nor Buddhism are mentioned anywhere in his pages.

The route map and the illustrations are good; there is a bibliographical index and a special bibliography for the Desideri manuscripts, a general index, and another for Tibetan words. A long and careful collection of notes explains and bring up to date many of the subjects raised in the record of this early pioneer.

CHARLES BELL.

TRAILS TO INMOST ASIA : Five years of Exploration with the Roerich Central Asian Expedition. By GEORGE N. ROERICH. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. xx + 504, 151 illustrations and 1 map. Newhaven : Yale University Press ; London : Oxford University Press, 1931. 34s.

The chief object of the Roerich Central Asian Expedition was to make a pictorial record of the lands and peoples of inner Asia, and to this end some 500 paintings by the leader of the expedition, Professor Nicholas Roerich, were brought

back. As illustrations to the present volume, several of these have been reproduced. A second object was to survey the possibilities of further archæological exploration ; and a third was to collect ethnological and linguistic material, work for which Mr. George Roerich's wide linguistic attainments well qualified him. The expedition reached Darjeeling in December, 1923. The whole of 1924 was spent in Sikkim in preparation and in mastering the spoken language. In 1925 the members proceeded to Kashmir, and in August of that year started on the long and arduous, and often perilous, journey that occupied nearly three years, ending with their entry into Sikkim in May, 1928, and of which the present volume contains a brief but interesting record.

The route followed was a circuitous one. From Gulmarg the party travelled by the Zoji pass to Dras and Leh, and thence northward over the Karakorum pass and down the Karakash valley to Khotan, where they were to experience the first obstruction raised by the Chinese authorities, involving more than two months' delay. They moved on via Kashgar and Aksu to Karashahr, thence intending to diverge northwards through the T'ien-shan to Urumchi, but they were held up at Khoton-sumbul and had to return to Karashahr and go round by Toksun. After spending a few weeks at Urumchi, where they had to deal with the despotic governor of Sin-kiang, Yang Tseng-hsin, they crossed Dzungaria on *telengas* to Zaisan, and sailed down the Irtysh to Omsk, whence they railed through southern Siberia to Verkhne-Udinsk, and then motored south to the capital of Mongolia, known to Europeans as Urga, but to the Mongolians as Ikhe-küren or Ikhe-kürä, the "Great Monastery". Here six or seven months were spent in organization for the more hazardous parts of the journey, across the Gobi and the highlands of Tibet. The halt was also utilized for collecting a mass of information, summarized in chapter vii. Here we have a valuable historical and descriptive account of this remarkable city, its buildings and

institutions, including the museum, the great treasure of which is a complete set of the Tānjūr printed in Mongolian, its religious and cultural life, embracing interesting comments on the spread of the *kalacakra* doctrine. We are introduced even to the packs of ravenous and ferocious dogs that infest the city, and not only devour the dead, but sometimes attack the living. From Urga to Yum-beise-küren on the northern fringe of the Gobi, the expedition struggled through on Dodge cars, the extrication of which from sands, gravel, and rocky ravines seems to have occupied the best part of twelve days. Motors had to be discarded for camels. Crossing the desert and lesser intervening ranges, where brigand bands kept them continually on the alert, they visited the deserted castle of Ja Lama on a ridge of the Baga Ma-tzu-shan; and the occasion is taken (chapter xi) to relate many details of the life of this extraordinary militant monk, who so long inspired terror throughout the land.

In May, 1927, they reached An-hsi, whence they proceeded through the Nan-shan mountains, via Shih-pao-ch'eng, on to the Tsaidam and across the high uplands of Tibet, known as *chang-thang*, to Chu-na-khe near Nag-chu. In this vicinity they were detained in the most unjustifiable manner, through the six winter months of 1927-8, under conditions of extreme hardship, losing nearly all their baggage-animals from want of food and the severe cold—the thermometer sinking at one time to -50° Centigrade, and at least two of the party becoming gravely ill. The calm fortitude with which they endured this treatment merits high praise, and we may well marvel that Mrs. Roerich should have been able to bear such trial. The enforced stay in these parts has enabled the author to give an important description of the Hor-pas, including an account of the primitive Bön religion, and of the sacred books, of which he made a complete collection comprising some 300 volumes. Interesting items of information have also been furnished about the Torgots, Khoshuts, Goloks, and other tribes. Among the collections made on these uplands were

objects in brass and other metals, the animalistic style of which is shown to be related to that of ancient Scythian and Siberian antiquities, thus attesting, in the author's view, the survival in northern and north-eastern Tibet of the old central Asian nomad art. The subject is one of some scientific interest, in that it opens up a vista of an ancient, pre-Buddhist, nomad culture that may have extended from Korea in the east to the Carpathians in the west. At Nag-chu they witnessed the burning of the *torma* two days before the Tibetan New Year's day, a ceremony which bears some striking analogies to the *holi* festival of northern India.

At last, in March, 1928, they were permitted to continue their journey, not by the route they had intended, but by a very roundabout way, leading westward through the region of the great lakes as far as Ting-ri-lam-tsho, then south and south-eastward to Saga-dzong and Kampa-dzong and over the Sepo-la into the Lachen valley of Sikkim. The enforcement of this route, however, led to one of the most striking discoveries of the expedition, namely, the megalithic monuments of Do-ring some thirty miles south of the Pang-gong-tsho-cha lake, consisting of alignments of eighteen rows, running east and west, of erect stone slabs, with a cromlech of menhirs arranged more or less in a circle at the western end of each. The menhirs are vertical, with a crude stone table or altar in front of them. At the eastern extremity of the alignment is the figure of an arrow laid out in stone slabs, with the point towards the alignment. The arrow is an important symbol in the ancient nature (sun or lightning) cult of Tibet, so that these monuments, the object of which is quite unknown to the modern inhabitants, were perhaps dedicated to the cult of the sun. It is an interesting and suggestive fact that most of these megaliths were found along the great pilgrim route leading towards Mānasarovar and Mount Kailāsa.

The illustrations have been well produced, and the index is useful; but the want of a map on a larger scale, showing

the position of every place mentioned in the book, will be felt by many readers; and strange spelling of names may be noticed.

C. E. A. W. O.

ANNUAL REPORT OF THE ARCHÆOLOGICAL SURVEY OF INDIA, 1926-27. Edited by Sir J. MARSHALL. $13\frac{1}{2} \times 10\frac{1}{2}$, pp. xiii + 250, pls. 48. Calcutta: Government of India Central Publication Branch, 1930. £2 0s. 6d.

ANNUAL REPORT, 1927-28. Edited by H. HARGREAVES. $13\frac{1}{2} \times 10\frac{1}{2}$, pp. xiii + 206, pls. 57. Same publishers, 1931. £1 6s. 6d.

The outstanding feature of the Director-General's Report for 1926-27 is his survey of the Indus culture at Mohenjodaro and Harappa. It is preliminary to what we may expect to learn this year from his monumental work on the subject, but most valuable in giving a summary of the general conclusions and in enumerating and emphasizing the many points on which archæologists and ethnologists are asking questions. It is no longer Indo-Sumerian but Indus culture. Its relation to Mesopotamia is that of commercial intercourse. This leaves its origin still a complete problem, but it has been found to extend far beyond India proper, and cannot be considered peculiarly Indian. There is already much evidence to be digested, the animals, pottery, writing, art, disposal of the dead, skeletal remains, and much more. Besides this there are detailed accounts of the excavations by several scholars.

Further excavations at Taxila are also described by the Director, whose place for the time (on account of his special work on the Indus culture) has been taken by Mr. H. Hargreaves. The temple at Paharpur in Eastern Bengal shows Buddhist work being superseded by Brahmanical, and in both volumes we learn of the laying bare of the monasteries of Nālandā. V. A. Smith's identifications of Buddhist sites

seem to be vanishing. Saheth is still Śrāvastī, and at Kasia the Nirvāṇa stūpa and the Matha Kuar chapel have been restored by two Burmese gentlemen. At Nāgārjunikoṇḍa in the Guntur District we seem to find the Buddhists of Ceylon combining with the followers of Nāgārjuna.

Important excavations at Pagan are recorded by M. Duroiselle, and the puzzling Pyū language is discussed. In some cases we should like more evidence. Two tablets are said to have Gotama Buddha with "no doubt" Maitreya on his right hand and Avalokiteśvara on his left. But is the statement that the latter's appearance "as an attendant of the Buddha in company with Maitreya or alone is not unknown" the only reason for this identification? The Bodhisattva Maitreya "in monastic garb with little or no distinction from Gotama" is said to be fairly common in Burma. Is this what the present Buddhists say? They are scarcely good authorities for the "Northern" Buddhism of Pagan. And does this really settle the identification of the present tablets?

250, 514.

E. J. THOMAS.

THE THIRTEEN PRINCIPAL UPANISHADS. Translated from the Sanskrit, with an outline of the philosophy of the Upanishads and an annotated bibliography, by R. E. HUME. Second edition, revised, with a list of recurrent and parallel passages by G. C. O. HAAS. 9 × 6, pp. xvi + 588. London: Humphrey Milford, Oxford University Press, 1931. 15s.

Dr. Hume's translation is well known for its excellence, and as standing almost alone in its soundness and faithful adherence to the text. In this edition the translation has undergone revision. The striking statement in the *Aitareya Upanishad* that "in the beginning" there was "no other blinking thing whatever" has disappeared, and now we find

“winking”. Even so, this close adherence to the Sanskrit idiom does not seem adequate in English.

Some of the rather dogmatic utterances of the first edition in the *Outline* are repeated, and would be all the better for some evidence. We are told that of a person after death “only his *karma*, or effect of work, remains over”. This is not only given as Upanishadic teaching, but it is said to be “out and out the Buddhist doctrine”. It is true that Rhys Davids once said that “the only link that they (the Buddhists) acknowledge between the two beings (in the one existence and in the next) who belong to the same series of Karma is the Karma itself”. Has Dr. Hume any better evidence for his statement than this? He also finds Buddhist influence in linguistic features, as if the Upanishadic authors could not have got them without reference to Buddhist texts. It is also curious that all the influence is assumed to be exercised by the Buddhists, and yet he gives the usual date assigned to the Upanishads as just prior to the rise of Buddhism.

The chief addition to this edition is Dr. Haas's valuable collection of recurrent and parallel passages, which include the *Bhagavadgītā*.

277.

E. J. THOMAS.

THE BILINGUAL FORMOSAN MANUSCRIPTS. By Dr. N. MURAKAMI, Professor at the Imperial University of Taihoku, Formosa. $7\frac{1}{4} \times 5$, pp. 49. 1930.

Dr. Murakami has done a useful piece of work in compiling this little collection of bilingual manuscripts obtained from native tribes in the island of Formosa. Their subject-matter, unfortunately, is of no particular interest. The documents are merely deeds relating to the transfer of property. They throw no light on the systems of land-tenure that may have existed among the aboriginal tribes, for it is obvious that the people who used these documentary forms had already

abandoned their old customs at least to the extent of accepting Chinese land-law. The deeds are practically identical in form and phraseology with those which are still in common use throughout China. Nevertheless the bilingual documents of which Dr. Murakami has given us a selection are decidedly interesting from a linguistic and ethnological point of view. The two languages in which they are written are Chinese and a language spoken up to a comparatively recent date by a tribe that did not altogether shun contact with the more civilized colonists or invaders, whether Chinese or European.

The Dutch came into friendly touch with these people during their occupation of the island from 1624 to 1661, and opened schools in which native youths were taught to write their own language phonetically in Roman script. Apparently they had no written language of their own, and Chinese was still to them either an unknown tongue or was much too difficult for them to acquire. It was about the year 1636 that the Dutch opened a school at Sinkan and began to teach the Western alphabet to seventy youths. Some of these or later pupils proceeded so far with their studies as to learn the Dutch language, and it appears that half a century after the Dutch had been turned out of Formosa by the famous pirate (or patriot) Chêng Ch'êng-kung (鄭成功), usually known as Koxinga, there were Formosan natives who could still speak the Dutch language and read Dutch books. (The authority for this is the Jesuit father De Mailla, who visited Formosa in 1714.) The latest of the extant bilingual documents is dated 1813. By far the greater number, however, belong to the Ch'ien-Lung reign (1736-95). After that time, Chinese influence seems to have finally crushed what remained of Dutch culture.

As Dr. Murakami is careful to point out, it has long been known to Western students that during the eighteenth and early nineteenth centuries the Roman alphabet was used by some of the Formosan natives for the purpose of writing their

own language phonetically, and he mentions by name the various British and other scholars who observed and reported this fact. During a short visit to Formosa about the year 1909 I was myself shown, by the Japanese Governor-General of the island, a small collection of documents so written.

Dr. Murakami quotes a passage from the Chinese *Topography of Formosa*, published in 1747, which shows that the Chinese had already observed, with considerable interest, that the natives used the script of the "red-haired barbarians". It describes how they wrote from left to right, not in vertical lines as the Chinese did, and it refers to their use of goose-quill pens. Extracts from one of the local Topographies are also to be found in the *T'u-shu-chi-ch'êng*, where similar information is given, together with a good deal more relating to the customs of the island barbarians (土番). We are there told, for example, that these barbarians had no surnames, no knowledge of the calendar or of their own ages, recognized no relatives except parents, did not observe the cult of ancestors, and thought more of their daughters than of their sons. This last characteristic was due to the fact that on marriage a son left the paternal home for good, and went to live in the house of his wife's family. Daughters, on the other hand, were a permanent asset. Needless to say, it is precisely the other way round in China, where boys are valued more than girls because it is only through boys that the family maintains its existence as such. Evidently in Formosa there were, and presumably still are, traces of matriarchy. Such facts as these suffice to show that the "aboriginal" tribes of Formosa had nothing in common with the Chinese. The weight of evidence seems to point to the probability that they came from the Philippines or some of the neighbouring parts of the South Seas, and probably their languages belonged to Malayan or Indonesian groups. The language of the bilingual documents, like the other languages now spoken by the untamed natives of the hills of Formosa, seems to have been polysyllabic and toneless.

Had it possessed tones, the Dutch alphabet would have been of very little use to the natives.

When the island passed under the rule of the Manchu emperors efforts were made, at first with only moderate success, to civilize the natives—that is to say, to convert them to an acceptance of Chinese culture; and schools were established with this end in view. There is a brief reference to this process in the *T'u-shu-chi-ch'êng*: 今向化者設塾師令番子弟從學漸沐於詩書禮樂之教云. It was during the period of Chinese ascendancy, from the reign of K'ang-Hsi onwards, that legal documents such as those collected in this little book began to be written in two languages, Chinese and tribal, the tribal being always written in the Western alphabet. Probably in most cases no one but the scribe himself (who was often, doubtless, a professional Chinese writer) could read the Chinese version.

The Formosan hill-tribes still, of course, possess languages of their own, but there seems to be no doubt that the language in which the bilingual documents is written is extinct. It disappeared because the tribes which spoke it gradually came to adopt the Chinese language as well as Chinese customs, and to abandon their own. In Dr. Murakami's words: "During long years of the Chinese rule the natives who stayed among them became civilized and adopted the language of their rulers, while those who took to the hills were merged in the savage tribes. Thus their language came to be entirely forgotten."

Dr. Murakami closes by expressing the hope, which the Royal Asiatic Society will share, that "a thorough study of all the known Formosan manuscripts, with the bilingual documents as a key, will enable us to understand this forgotten language".

CREATIVE ENERGY. Being an introduction to the study of the *Yih King*, or Book of Changes, with translations from the original text, by I. MEARS and L. E. MEARS. $7\frac{1}{4} \times 4\frac{3}{4}$, pp. xxiv + 239, 7 illustrations. London: John Murray, 1931. 6s.

There may be a public that will find pleasure in, and perhaps even derive some spiritual or other consolation from, a perusal of this book; and the frequent references to and parallels with Biblical literature may possibly be of some interest, if not of great value, to missionaries in the Far East. It is not, however, a book which is likely to find many readers among the members of the Royal Asiatic Society or among serious students of Chinese classical literature.

The authors seem to believe (see Foreword, p. xiii) that they "have been permitted to assist toward the discovery of some of its secrets" (i.e. the secrets of the *Yih King* or *I Ching*) and "partially to reveal them" in the pages of their book; but it is to be feared that Western students who seek illumination from Messrs. Mears on the subject of that venerable classic will be sadly disappointed.

The books to which the authors express special indebtedness for help in the translation and interpretation of the *I Ching* constitute a curious list. They are Williams's Chinese-English Dictionary, Wieger's *Dictionary of Ancient and Modern Chinese Written Characters*, Gaskell's *Dictionary of Sacred Language*, and the Bible! It seems almost incredible, but it is nevertheless the fact, that their pages contain no mention of, far less expressions of indebtedness to, any of their English and other European predecessors in the study of the *I Ching*. As there is no mention of James Legge (whose translation and elaborate discussion and interpretation of the classic are contained in *The Sacred Books of the East*, vol. xvi), it is hardly necessary to say that nothing whatever is said of the Latin translation of Père Regis and his collaborators a hundred years ago, or of the French translations of Philastre (1885 and later) and De Harlez (1895). McClatchie, whose

interpretation of the classic was severely handled by Legge, produced his translation, such as it was, as long ago as 1876 ; and Dr. Edkins (in this *Journal*, Vol. XVI, Part iii) and H. J. Allen (in his *Early Chinese History*, chapter viii) are only two of many English writers whom the authors of this book, whether through ignorance or through design, totally ignore. German students—such as Richard Wilhelm, to name one only—also seem to have had no existence for Messrs. Mears.

The voluminous works of Chinese commentators are briefly referred to, but their views are not discussed in such a way as to suggest that Messrs. Mears have studied them at first hand. Nothing whatever is said of the labours of Ou-yang Hsiu (歐陽修) of the Sung dynasty, whose book is described by a living Chinese scholar (Dr. Hu Shih) as “ perhaps the best and most courageous work of higher criticism on the *Book of Change* that historical scholarship has ever produced ”.

In view of Messrs. Mears' apparent failure to acquaint themselves with the work done by Chinese and European translators and commentators, it is not surprising to find that they also ignore the labours of Japanese scholars. They have nothing to say of the treatise by 宇野哲人 of which a translation from Japanese into Chinese was published by 陳彬龢 in 1925. Even the very accessible and useful little work published in English by the well-known Japanese scholar, D. T. Suzuki (*A Brief History of Early Chinese Philosophy*), which has some interesting paragraphs on the *I Ching*, finds no mention.

Perhaps Messrs. Mears would say that they refrained from mentioning any of their predecessors because they found nothing of any value in their translations or commentaries, and that in their opinion the painstaking work of such men as Legge was thrown away. Even if it is their sincere belief that they alone of all European, Japanese, and Chinese students of the *I Ching* have found the clue to its true interpretation, they should at least have devoted some space to a reasoned examination of their predecessors' work, and

to a statement of their reasons for dissenting from many learned European and other students of Chinese classical literature and some of the profoundest scholars that China herself has ever produced.

Phrases like "the sages of old" (p. 128) are lacking in scholarly precision, and when the said sages are quoted as teaching that "Creative Energy and the substances which it energises are unceasingly generated by the unfathomable Spirit of God" specific references to the books or passages in which these and similar teachings are preserved would be advantageous.

No uniform system of the transliteration of Chinese names seems to have been adopted, and this is one of many features of the book which suggest doubts as to whether Messrs. Mears have made their translations direct from the Chinese text or through the medium of other translations. As to their claim that their translations are literal, I think that if a new edition of their book is called for they would render a service to the cause of sound scholarship if they would give, as marginal notes to all the passages they have translated, exact references to the translations of the same passages by Legge, or—if they prefer it—precise indications as to where the passages can be found in the Chinese text.

I have referred above to Dr. Hu Shih. In his book, the English version of which is called *The Development of the Logical Method in Ancient China*, he emphasizes the importance of the *I Ching* as containing "most of the basic doctrines of the Confucian logic". He also declares his adherence to the well-known theory (not, apparently, considered worthy of mention by Messrs. Mears) that the famous diagrams of the *I Ching* "were originally the word-signs of a now-extinct language which was used in ancient China before the invention of the ideographic language".

Nor do Messrs. Mears discuss or refer to the discovery of Leibniz (who acquired his knowledge of the *I Ching* through a French missionary, Père Bouvet) that the Eight Diagrams

were the numbers 7 to 0, and the Sixty-four Diagrams the numbers 63 to 0, written in a binary notation. Mr. Arthur Waley, who had a valuable note on the subject in the *Bulletin of the School of Oriental Studies* (vol. ii, pt. 1, 1921, p. 165), remarks that "although this fact about the diagrams was known in the seventeenth century, no subsequent commentator, either Chinese or European, appears to have mentioned it". It must be assumed that Messrs. Mears were unacquainted with the discovery or did not think it worth discussing.

Confucius in a well-known story said that if an extension of life were granted to him he would devote himself to a prolonged study of the *I Ching* and "might then escape falling into great error". It seems regrettable that Messrs. Mears did not take the hint and devote a longer time than they did to the study of this difficult Chinese classic before undertaking the work of translation and interpretation. M. Mohl, who published Père Regis's translation, told Dr. Legge that he liked the *I Ching* because he came to it "out of a sea of mist" and found "solid ground". It may be doubted whether the authors of this book had succeeded in emerging from the "sea of mist" when they decided to put pen to paper.

476.

R. F. J.

THE DOCUMENTS OF IRIKI: ILLUSTRATIVE OF THE DEVELOPMENT OF THE FEUDAL INSTITUTIONS OF JAPAN. Translated and edited by K. ASAKAWA. (Yale Historical Publications.) 10 x 7, pp. xvi + 441 + 140. London: Oxford University Press, 1929. £1 15s.

This is the most valuable and representative collection of primary sources so far made available in English for the study of Japanese feudalism. It is the work of Dr. K. Asakawa, who is an Assistant Professor of History in Yale University, and combines a thorough scholarship in the history of his own country with a wide knowledge of the European feudal age. With keen discrimination he has selected from the vast mass of records available in Japanese for the study of Japanese

feudalism, a series eminently suited to the needs of the European reader whose interest in the subject is mainly for purposes of comparison. The collection is at once minute in detail and comprehensive in its range, for the documents all deal with a small and very secluded district in the south-west of the island of Kyūshū, but this district was held by a single baronial line almost throughout the feudal epoch, and the documents, which date from 1135 to 1870, form a body of sources justly claimed by the editor to be "coeval with the whole of the feudal history of the nation". And, as Dr. Asakawa further claims, "the evolution of local institutions revealed by this material is fairly typical of the development of feudal Japan as a whole."

There is a well-written introduction, and also a "summary of points", a syllabus in note form with references by number to particular documents, suitable for a seminar class, but rather too terse and bald for a published work, especially as it is in this "summary of points" and not in the introduction, that Dr. Asakawa develops those themes of general characterization and comparison with the West which are likely to be of most interest to the non-specialist reader. The summary of points reveals, in spite of its questionnaire style, deep thought on all the chief problems of feudalism, whether Japanese or not, and Dr. Asakawa excuses himself from fuller exposition of his own views by asserting that his intention is above all to present students with a source-book from which they can draw their own conclusions. Nevertheless, we may be permitted a certain disappointment at not hearing more of the conclusions of Dr. Asakawa.

The earliest of the documents together with the editor's commentary show us the great Shimadzu *shō* or tax-free private domain in southern Kyūshū, belonging to the Konoe family of the court nobility, and its *shiki* or "offices"—land agency, tenancy, local constabulary, and the like. It was on the possession of such *shiki* by the military families outside the ring of the privileged court nobility that Japanese feudalism was originally based. By 1197, as Dr. Asakawa

points out, "in all parts of the country, not excepting Shimadzu, a large part of the *shiki* relating to arable land had been either vested in or seized by private warriors, who had everywhere come to assume a dominant place in the local society; and, what was more, these warriors had allied themselves by ties of vassalage with the followers of the great military family, first of the Taira, latterly of the Minamoto."

Thus power gradually passed from the court nobility filling the posts of the imperial civil administration, copied from China, into the hands of the provincial military families which grouped themselves according to feudal ties. In 1247 a certain Shibuya Jō-shin was made *jito* (land steward) of the section of the Shimadzu *sho* in the Iriki district, and founded the house which continued there for over six centuries, in vassalage from the end of the fourteenth century to the Shimadzu family, the lords of Satsuma.

Out of the 253 documents comprised in this collection, eighty-eight date from the Kamakura epoch, and these are specially interesting as showing how much the feudalism of that period differed from the elaborate structure of Tokugawa times, more familiar to Europeans from its persistence into the nineteenth century. In the Kamakura period subinfeudation and promogeniture are not yet in evidence; the barons are nearly all direct vassals (*go-ke-nin*) of the shōgun, and divide their fiefs at will among their children, each son becoming likewise a direct vassal; women might hold fiefs, performing their military duties by proxy, and in the administration of justice the principle of judgment by peers emerges. But these features of Kamakura feudalism disappeared for the most part in the prolonged civil wars of the fifteenth and sixteenth centuries; it was then that the later type with its ranking and superimpositions of fiefs became normal, to be elaborated into a system of national administration by Iyeyasu, after the re-establishment of central control.

JOURNAL OF THE PANJAB UNIVERSITY HISTORICAL SOCIETY.

Vol. I, Part I. April, 1932.

We are glad to welcome the first number of this *Journal*. The Panjab University Historical Society incorporates the old Panjab Historical Society, founded in 1910, and the editorial preface to the new *Journal* gives a sketch of its twenty-one years' career, its decline, and its final merger last winter in the younger Society. The temporary weakening of the "lay" interest in history is probably due in the main to the absorbing appeal of politics at the present time. The first issue of the new *Journal* contains several articles of interest. Principal Garrett, to whom the school of history in the Punjab owes so much, has a graphic account of the trial of Bahadur Shah, the last of the Delhi Kings, in 1858. Mr. Sethi gives a most interesting narrative of Imam-ud-din's revolt in Kashmir in 1846, and Professor Sita Ram Kohli, the most distinguished of the younger Punjab historians, whose work on the Sikh records in Lahore is well-known, contributes an excellent article, the first of two, on "The Multan Outbreak and the trial of Diwan Mul Raj". Each of these articles is based on original documents. Among the other contributions is one by Dr. Hutchison, whose articles on the history of the States of the Punjab Hills were one of the notable features of the *Journal* of the Panjab Historical Society. In this article he discusses the position of the Sangala of Alexander's historians, and gives strong reasons for identifying it with Sialkot (Sākala). The quality of the articles promises well for the future.

J. P. THOMPSON.

OBITUARY NOTICES

The Reverend Canon Edward Sell, D.D.

By the death of the Reverend Canon Edward Sell at Bangalore on 15th February, 1932, our Society lost one of its most distinguished older members, one whose literary output was phenomenal, whose scholarship unquestioned, and whose knowledge of Islam unique.

He was born in 1839, educated at the Church Missionary College, Islington, became a Fellow of the Madras University in 1874, received the degree of B.D. in 1881, and D.D. from the Edinburgh University in 1902.

He arrived in India in 1867 and completed sixty-three years of service abroad. In addition to his work in education as Principal of the Harris High School (1865-81) he was secretary for the C.M.S. in the dioceses of Madras and Travancore for thirty-nine years, Examining Chaplain to the Bishop of Madras in 1889 and made a Canon of St. George's Cathedral. He possessed marked business ability and was one of the leading spirits in the development of the so-called "S.P.C.K." Press in Madras. His literary output was extraordinary both in its range and character. At the time of his death he was still at work on his fiftieth book. Twenty-three volumes consisted of commentaries on the Old Testament and Bible handbooks to the Wisdom literature. He was most widely known, however, through his works on Islam, especially *The Faith of Islam* and *The Historical Development of the Quran*, both of which passed through three editions. All of his books are marked by painstaking and accurate scholarship. His knowledge of Islam was first-hand and his passion for writing indefatigable. One of the outstanding characteristics in every one of his writings is fairness of judgment and sympathy. In the preface to his book, *The Faith of Islam*, he wrote : " Much that is written

on Islam is either with ignorant prejudice or from an ideal standpoint. To understand it aright we should know its literature and live amongst its people. I rest my case entirely upon Musalman authorities."

The meritorious character of his public services, especially in connection with the University at Madras, was acknowledged by the bestowal of the Kaisar-i-Hind gold medal, first class, in 1906. The *Madras Diocesan Magazine* pays this tribute to the Missionary scholar so greatly beloved by all his colleagues and by the wide circle of Christian workers in all Moslem lands: "His life is a monument of the true Christian principle of service. He was not one of those who look first at themselves and then try to find the job which they can do. He saw the work and the need first, and by arduous diligence he fitted himself for it and contributed to it every power he possessed. He never worked for a selfish aim. He might be rigid in his pursuit of the purpose he had set before himself, but there was never a personal object in it. Whatever he had to do, he did it with his might: and he used every talent in the service of his Master, and we may humbly voice on earth the Divine approval given to him who uses all his talents for God: 'Well done, good and faithful servant!'"

S. M. ZWEMER.

PRINCETON, NEW JERSEY.

Dr. Willem Caland

Our Society has lost by the death of Dr. Willem Caland one of its distinguished honorary members, and Indology one of its ablest representatives.

Willem Caland was born at Brielle on the 27th August, 1859, as the son of Pictor Caland, a hydraulic engineer of great merit, whose great achievement it was to provide Rotterdam with a waterway to the sea. At an early age he was unfortunate enough to have a violent attack of synovial

rheumatism resulting in a heart complaint which troubled him for the rest of his life, and finally became the cause of his death. By careful living and wonderful self-restraint, he succeeded in overcoming this evil as much as possible.

He studied classical philology at the University of Leiden, and it was a thesis belonging to the domain of Roman numismatics that brought him his doctor's degree in 1883. But the teaching of Kern had aroused his interest in the culture and literature of ancient India, and it was Kern's influence which was decisive in his scholarly career. For many years Caland was "Conrector" of the "gymnasium" at Breda, and only his leisure hours could be devoted to his favourite studies. In the year 1903 he was appointed to represent Indology at the University of Utrecht, first as lecturer, since 1906 as Professor. The subject of his inaugural address was : The study of Sanskrit in relation to Ethnology and Classical Philology. Besides Sanskrit he taught Avestan, Old-Persian, and Indo-Germanic comparative philology. The students who attended his lectures are unanimous in their praise of Professor Caland's didactic ability and of the great personal interest he used to take in the progress of each of them.

His exacting educational duties did not prevent him from producing an uninterrupted series of publications, some of considerable extent, embodying the results of his indefatigable researches. It was in particular one branch of Vedic lore to which he devoted his remarkable energies, the Brāhmaṇas and Sūtras : in this branch he attained an unparalleled mastery. Most of his writings relate to the religious customs, sacraments, sacrifices, etc., practised in ancient India and described in the ritualistic literature.

Among Caland's numerous books and articles dealing with this subject, the following may be mentioned : *Altindischer Ahnencult* (1893), *Die altindischen Todten- und Bestattungsgebräuche* (1896), *Altindisches Zaubermaterial* (1900), *L'agniṣṭoma. Description complète de la forme*

normale du Sacrifice de Soma dans le culte védique (1906-7), in co-operation with Victor Henry, and *Altindische Zauberei. Darstellung der altindischen "Wunschopfer"* (1908), besides a number of ritual texts he has made accessible by editions and translations (*Jaiminiya-brāhmaṇa*, *Kāthaka-gr̥hyasūtra*, *Baudhāyanaśrautasūtra*, *Vaikhānasa-smārtasūtra*, etc.).

Occasionally he explored other fields of Sanskrit literature, e.g. when editing an unknown Indian play, called *Gopāla-kehicandrikā* (1917). Of late years he paid much attention to the accounts of European writers of the seventeenth and eighteenth centuries regarding Indian customs and cults. He fully recognized the importance of those writings for our knowledge of Hinduism ; of several of them he produced excellent annotated editions (Abr. Rogerius, *Open deure tot het verborgen Heydendom*, W. Geleynssen de Jongh's *Remonstrantie*, Ziegenbalg's *Malabarisches Heidentum*).

Considering Professor Caland's delicate health, the amount of work he accomplished in these fields of research is truly amazing. When in 1929 he had reached the age of 70 years, i.e. the age limit prescribed for University Professors in the Netherlands, he was at last in a position to devote all his time to his favourite studies. But unfortunately his health very soon began to fail him. When the Eighteenth Congress of Orientalists was to be held at Leiden in September last year, Professor Caland, the veteran among Dutch Indologists, was naturally designated to be President of the Indian section. It was a bitter disappointment when ill-health prevented him from joining a gathering to which he had been looking forward with especial pleasure. Although confined to his room, he went on working with unabated zeal. It was some ten days before his death that a number of manuscripts of Sūtra texts were at his request sent him from Leiden. He passed away at Utrecht on the 23rd March last.

J. PH. VOGEL.

NOTES OF THE QUARTER

ANNIVERSARY MEETING

12th May, 1932

Sir Edward Maclagan, K.C.S.I., K.C.I.E., M.A., in the Chair.

The proceedings began with the reading and confirmation of the Minutes of the last Anniversary General Meeting, and the election of the following candidates proposed for membership :—

Mr. David N. Barbour.

Mr. T. M. Lowji.

Mr. Narayan Dutt.

Syed Masud Hasan.

Three nominations were approved for election at the next General Meeting.

REPORT OF THE COUNCIL FOR 1931-2

We greatly regret to have to mention that the Society has lost by death two of its eminent Honorary Members, Dr. William Caland and Mahamahopadhyaya Haraprasad Shastri, C.I.E., M.A., and a distinguished member of Council, Sir Arthur E. Cowley, Kt., M.A., D.Litt., Hon. Litt.D., F.B.A., Bodley's Librarian. Sir Arthur's lifelong devotion to the cause of learning and his thirty-five years' zealous service in the Bodleian are to be fitly commemorated in the foundation of a Lectureship in Rabbinic Hebrew at Oxford. The undermentioned members have also died during the year :—

Mr. A. Z. Alsagoff.

Rt. Rev. Mark N. Trollope,

Mr. Rakhaldas Banerji.

Bishop in Corea.

Nawab Sir Faridūn-Jang,

Rev. A. B. Sayce.

Bahadur, K.C.I.E., C.S.I.

The Rev. Canon E. Sell.

Rev. W. T. Pilfer.

The following members have resigned :—

Mr. V. S. N. Aiyer.	Miss G. E. Kemp.
Mr. C. A. V. Bowra.	Mr. K. G. Krishnan.
Mr. Bakshi Ram Bhandari.	Kazi Wali Mohamed.
Rev. J. P. Bruce.	Miss F. G. Newton.
Lord Chelmsford.	Mr. W. M. van Norden.
Mr. D. L. Chetty.	Mr. E. L. Norton.
Mr. G. A. S. Collins.	Mr. J. D. Prince.
Professor V. M. Daudpota.	Mr. G. W. Place.
Mr. R. A. Eden.	Mr. Jwala Prasad.
Mr. C. I. Fraser.	Lieut.-Colonel Osburn.
Paymaster Admiral H. Gyles.	Mr. N. M. Rehman.
Mr. A. H. Gardiner.	Mr. G. H. Thorne.
Mr. W. F. Gunawardhana.	Mr. F. W. Read.
Mr. R. L. Hobson.	Mr. T. R. C. Singh.
Mr. K. A. Narayana Iyer.	Mr. Hugh Thornton.

To fill the vacancies in the roll of Honorary Members caused by the death of Mahamahopadhyaya Haraprasad Shastri and Professor W. Caland, the Council selected the eminent student and patron of Iranian studies, Sir Jivanji Jamshedji Modi, of Bombay, and

The following have taken up their election :—

As Resident Members

Miss Glynn Bateson.	Mr. H. G. Quaritch Wales.
Miss A. D. Macfie.	

As Non-resident Members

Mr. Agha Md. Ajmal.	Professor P. Demiéville.
Dott. Alberto Albertini.	Kumar Bidyadhar Singh Deo.
Mr. A. H. Berman.	Professor W. L. Dyer.
Mr. N. K. Bhattasali.	Lieut.-Colonel P. G. Elgood.
Mr. Iman Singha Chemjong.	Dr. Giuseppe Furlani.
Mr. Ramkishan Das.	Professor Shang-Ling Fu.
Mr. Sukumar Das.	Dr. M. B. Ghose.
Professor Sukumar Ranjan Das.	Professor Hassan Ibrahim Hassan.
Mr. S. C. Datta.	Maulvi Matiur Rahman Khan.
Mr. T. N. Dave.	Dr. A. R. Khastgir.

Mr. Kumar Krishna Kumar.	Miss Lola Ridge.
Mr. M. H. Kurieshy.	Dr. R. C. Saxena.
Rai N. M. Lahiri.	Capt. Nazeer Ali Shah.
Mr. David Lawson.	Mr. C. S. Shrivastava.
Mr. H. Loewe.	Thakur Sobhan Singh Ji.
Dr. A. N. Mondal.	Mr. M. Abdus Subhan.
Mr. R. M. S. Morrison.	Mr. H. Swenson.
Mr. C. A. Naidu.	Mr. D. Tiwary.
Mr. M. D. Ratnasuriya.	Mr. K. Viswanathan.
Sayyid Manzoor Ahsan Razvi.	Mr. G. A. Yates.

As a Resident Compounder

Mr. H. Comyn Maitland.

As Non-resident Compounders

Mr. R. D. Dalal.	Mr. Y. R. Parpia.
Mr. J. P. Jain.	Mr. Parashu Ram.

As Student Members

Dr. Grant Champion.	Mr. W. B. D. Doxford.
Mr. J. K. Das-Gupta.	The Hon. H. A. Wyndham.

Under Rule 25a, persons have ceased to be members of the Society owing to non-payment of subscriptions.

Lectures.—The following lectures have been delivered during the year ; they were almost all illustrated by lantern slides :—

“Nepal,” by Brig.-Gen. the Hon. C. G. Bruce, C.B.

“In the Footsteps of Israel in Transjordan : the Exodus and Lawrence of Arabia,” by Group-Capt. L. W. Rees, V.C., etc., R.A.F.

“Burton and the Rub’ al Khali,” the triennial Burton Memorial Lecture, by Mr. Bertram S. Thomas, O.B.E.

“Nineveh and the excavations of 1930-1,” by Dr. R. Campbell Thompson.

“The Impressions of an Englishwoman in Lhasa,” by Mrs. Weir.

"Through Northern and Eastern Persia with a Ciné-Kodak," by Mr. C. P. Skrine.

"Angkor : A Royal Romance," by Miss Lucille Douglass.

"The Conquest of Kamet," by Mr. F. S. Smythe.

"Ancient Art in Siberia," by Dr. Alfred Salmony.

"The Language of the Mohammedan Traditions (Ḥadīth) as an indication of Source and Origin," by Dr. A. S. Yahuda.

"From Cairo to Mekka and El Medina," by Mr. Eldon Rutter.

"Recent Excavations at Erech," by Mr. Sidney Smith.

"Siamese Painting," by Mr. B. Quaritch Wales.

At the suggestion of the Director, the President and Council unanimously passed a resolution that the Ambassador or Minister of every Oriental Power accredited to St. James' should be invited to become a Foreign Extraordinary Member of the Society, under the terms of Rule 10 of our Charter. I am happy to announce that acceptances have been received from their Excellencies the Japanese and Turkish Ambassadors, and from the Afghan, Chinese, Egyptian, Iranian, Persian, Siamese, and Ethiopian Ministers.

As indicated in the last Annual Report of Council, a proposal to make an alteration in the Society's Foundation, hitherto known as the Public Schools' Gold Medal and Prize Trust, was referred to the Ministry of Education. The proposal has since received the sanction of the Minister and the Foundation will now be administered by the Society under the name of the Universities' Prize Essay Fund. The object of the fund is to encourage non-Asiatics in this country to take an interest in the history and civilizations of the East. For this purpose a diploma and a prize of £20 will be awarded annually to the writer of the best essay on an Oriental subject to be selected by the Society. Competition is open to the members of Universities in the United Kingdom and the Irish Free State who have not completed five years from matriculation. The subject for the first essay under the scheme will shortly be announced and essays from competitors

N. E. WATERHOUSE, Professional Auditor.
CL. C. HOPKINS Auditor for the Council.

will have to be submitted to the Society not later than the 1st October.

The Society's Triennial Gold Medal, which is given in recognition of distinguished services in Oriental Research has been awarded to Sir Marc Aurel Stein, K.C.I.E., and will be duly presented to him on the occurrence of a suitable opportunity. He will be the thirteenth recipient of the Medal.

As was mentioned in the last Report, the revision of the index cards for the Library Catalogue had very kindly been undertaken by Dr. Barnett, Mr. A. G. Ellis, Sir J. Stewart Lockhart, and Dr. H. N. Randle, who had been giving their services for some time in order to save the funds of the Society. They found, however, that the necessary work was too onerous, and made too great demands upon their time and energies, so that it became impracticable to carry out the task in addition to their own employments. The Council therefore decided, with their acquiescence, to employ a full-time scholar at a salary to scrutinize the cards and check comparison with the volumes concerned. This expenditure was not foreseen at the last annual Anniversary meeting, but has been quite unavoidable owing to the illness of two of our former voluntary workers, and an unexpected increase in the calls upon the time of a third. It was felt that the work should not be left to such vicissitudes and therefore the Council authorized the course which has been followed. This work is now drawing to a conclusion, and it is hoped that printing may be begun in the near future. The labour involved for everyone concerned will bring its reward with the conclusion of a great undertaking in the production of a result so much needed and so long expected.

The accounts of the Society have been audited as usual by a firm of professional auditors, and also examined by the Honorary Auditors of the Society. The Hon. Auditors are elected annually, one to represent the Council and one to represent the Members of the Society. They report as follows :
"We met the professional auditor this afternoon and went

through the accounts with him. They are in the same form as last year, and appear to meet the requirements of the Society. They are very clear and we have no suggestion to make regarding them.—(Sd.) E. A. Gait, L. C. Hopkins. 9.3.32.”

At the end of last session we lost the services of Lord Zetland as President of the Society, in accordance with the terms of Rule 29, which limits the tenure of the office to three years. Sir Edward Maclagan was elected in his stead. Under Rule 31, the Council recommend the re-election of the hon. officers—Mr. Ellis, Sir J. H. Stewart Lockhart, and Mr. Perowne, as Hon. Librarian, Hon. Secretary, and Hon. Treasurer respectively. Under Rule 32 the following members of Council retire and are not eligible for re-election, viz. Professor Gibb, Sir Wolseley Haig, and Sir Oliver Wardrop. The Council recommend for election in their places: Dr. Blackman, Mr. H. W. Bailey, and Mr. Dodwell, who have accepted nomination.

The Council also recommend for re-election Sir Reginald Johnston, who was elected to fill a vacancy under Rule 28.

Under Rule 81 the Council recommend the election of Mr. L. C. Hopkins (for the Council) and Sir E. A. Gait (for the Members), together with Messrs. Price, Waterhouse & Co., as auditors for the ensuing year.

The last of the possessions of the Society which had been left in packing-cases in the cellar have now been unpacked and sorted and placed in their proper places in the Library. Certain odd volumes which were not of use or interest to the Society have been handed by the Library Committee to other Societies and Libraries by whom they will be valued. The cellar in which they were stored is being gradually fitted up to provide further accommodation for the Library of the Society. Considerable relief has thus been effected but it is feared that it will be of a temporary character as the question of accommodation is becoming acute and will have to form the subject of earnest thought in the near future.

The Chairman : If we accept this Report, we are at the same time dealing with the appointments which have been mentioned before. Under our rules, which require retirement after three years, we have to part with three of our valued Members of Council—Professor Gibb, Sir Wolseley Haig, and Sir Oliver Wardrop. If we adopt the Report, we elect in their places : Dr. Blackman, Mr. W. H. Bailey, and Mr. Dodwell. We propose also that Sir Reginald Johnston, who has been holding a temporary vacancy, should be confirmed as a Member of Council. We have also at the same time to appoint our honorary officers : Mr. Perowne as Hon. Treasurer, Mr. Ellis as Hon. Librarian, and Sir J. H. Stewart Lockhart as Hon. Secretary are put forward for approval. We have two unofficial auditors, one from the Society and one from the Council, and it is proposed that as last year Mr. Hopkins and Sir Edward Gait should fill these posts. These gentlemen have intimated their willingness to serve, and we propose their adoption.

I will now ask the Hon. Treasurer to make the financial statement.

Mr. Perowne : The accounts are a little better than we expected. The total receipts are £2,966 2s. 9d., while the payments come to £3,255 12s. 3d. The receipts, however, do not include the usual grant of 300 guineas which we get from the India Office, which came in after the accounts were closed, so that, if we include this sum which we are entitled to do as last year's revenue, our total receipts are £3,281 2s. 9d., leaving a balance of £26 10s. 6d. on the right side. This, however, is against £112 surplus on the 1930 accounts, and £197 on the 1929 accounts, so that it is not so very grand ; still in these times we have got to be satisfied with the small mercies ; it is at least better than a deficit. Turning to some details on the receipt side, you will note that the total subscriptions come to £1,355. That happens to be the exact figure within a shilling or two of the receipts in 1929, and £39 more than 1930.

The Compounders are more than double what they were in 1929. This means that having compounded and so become life members, we get no more subscriptions from them during their lifetime, except what small dividends we may receive by the investment of their compounding fees.

The Resident Members are increasing again, I am glad to say, though slowly, but the non-resident members show a considerable fall during the last two years, though this need not create alarm.

Under this heading there is a sub-title "Students and Miscellaneous" which at first sight is curious. When analysed it means there are four student subscriptions of 10s. 6d. each, and "miscellaneous" means subscribers abroad who send foreign drafts which do not quite reach the subscription which they ought to pay; so that really it means a subscription less loss on exchange or something of that kind, and the auditors thought it better to put it under "Miscellaneous". But the subscribers are genuine members and not chance donors.

The *Journal* account is the most interesting. These subscriptions again show satisfactory figures. For 1929 they were £404; for 1930, £509, and now this last year £530, which shows the growing appreciation in which the *Journal* is held.

I do not think there is anything more on that side except that I may mention that there is no receipt during the past year on account of the Carnegie grant. There is a balance of £800 to come, but this will not be paid until our catalogue is ready for printing.

On the payment side I think the items are more or less of a normal character, and there is nothing very special to which I need call your attention beyond the fact that the *Journal* printing is down slightly—about £20—and sundry expenses down about 40 guineas. We are now having to retrench as much as possible as times are getting more and more difficult.

You will see that we had £600 on deposit account at the end of the year, but £250 of this represents a portion of the £1,200 already paid on account of the Carnegie grant, and specially reserved towards the catalogue, and a further £200 of it is a sum which the Society itself has specially earmarked out of its funds towards the catalogue.

The Society is to be congratulated on the careful and painstaking way in which Mrs. Davis has been keeping the books, thus making the accounts simple to prepare. To her I give my best thanks for the help she has been at all times and in particular in respect of items of information which I thought would be of interest to communicate to the members.

Sir Oliver Wardrop: I have the honour to propose the adoption of the Report in its entirety. The Report is before you, and I shall not detain you by examining it in detail. I think what will strike everyone is the remarkable list of lectures delivered during the past year. For variety and value I think it is quite an extraordinary list. I am happy to hear that the *Journal* is being more and more appreciated by people who are not members of the Society, and I might suggest that new members would possibly find it a good investment to take the *Journal* for a certain number of years. I would like to pay a tribute to the excellent work of the staff; and would associate myself in the expression of regret in the heavy losses we have sustained in the past year by the death of members, including Sir Arthur Cowley, to whom the Society and the learned world in general owes so much. I have the honour to propose that the Report be adopted by the Society.

Professor Rushbrook Williams: I have the honour to second the resolution before the meeting that the Report of the Council should be adopted by the Society. I think the Council is much to be congratulated on the work done by the Society, and the satisfactory state of the accounts. In the first place, the activities of the Society during this last very difficult twelve months, have been maintained

at more, if I may say so, than their usual pitch of intensity; and in the second place, that the finances of the Society should go down on the right side. I think it is due to us to congratulate the Council on the manner in which the officers have maintained the affairs of the Society during this very difficult period. I beg to second the adoption of the motion.

Mr. W. J. S. Sallaway objected that one too many councillors had been recommended for the ensuing year. The meeting expressed its satisfaction, however, that the numbers recommended were in accordance with the rules.

Sir Edward Maclagan: We have been favoured by our Honorary Treasurer with some remarks on the state of our finances, and this is a very important matter in these days. Like every self-respecting financial adviser, he has advised economy, and I may assure the Council we have followed his advice in this matter as far as we possibly could. If we look at our accounts, I think we can observe them with equanimity except for two points. One is the grant from the India Office to which he has referred. It is a grant of 300 guineas which we have received for the last ten years, and which they have suddenly reduced to 150 guineas. We have made our representations to the India Office about that, and we must just await the result. As they say in the Greek play, we must merely say "alas! alas!" and hope that the good will come right in the end.

The other point to which we must refer in connection with the accounts is the falling off in subscriptions. That was to be expected, and I am sorry to say that during the last four years our subscriptions have fallen off. Four years ago they were 744, and now they are 663. We are glad that the numbers are not even less than 663.

We have lost, as the Report shows, three very distinguished honorary members this year, all of them eminent scientists, Dr. Willem Caland, of Utrecht, Mahamahopadhyaya Haraprasad Shastri of Calcutta, and Professor Julius Jolly of

Würzburg—all three very eminent Sanskritists. Sir Arthur Cowley also, to whom Sir O. Wardrop has already referred, was, as you know, Bodley's Librarian at Oxford, and a member of our Council; we feel his loss very severely. He was a most assiduous colleague of ours, and a very valuable adviser in matters of difficulty, as well as an exceedingly courteous and considerate friend. We shall miss him very much.

I wish to make a further reference to what Sir Oliver Wardrop has already mentioned—the extreme variety of the fare which our energetic Secretary has provided for us in the shape of afternoon lectures. Of course, the *Journal* is the central activity of the Society, but the afternoon lectures are a very important part of the work which the Society does, and the object of the Secretary has been to provide us with both light and rich fare, and to provide us with information from as many of the countries in Asia as is practicable. We have under his guidance travelled this year in Persia, in Siam, in Nepal, and in Cambodia. We have penetrated to the mysterious cities of Lhasa and Mecca. Under the guidance of one explorer we have traversed the empty portion of the Arabian Desert, and under another explorer we have climbed to the top of one of the highest mountains in the Himalayas. We have at the same time been given news about the excavations at Erech and Ninevah. We have learnt about ancient art in Siberia, and we have even studied the philology of the Hadith, the ancient Mohammedan Traditions. And so we have covered a very wide field and received a very varied form of information in these lectures. Two of them were organized in conjunction with the Royal Central Asian Society and were held by the courtesy of the Royal Geographical Society, in the sumptuous lecture hall of the latter Institution.

Another matter to which I would like to refer again is the Library. As you know, we have been having a catalogue prepared for the Library for some years past, and in the

supervision of that catalogue we have received great assistance from Mr. Ellis and Dr. Barnett, and also for a time from Dr. Randle, and I should like on your behalf to express our obligations to these gentlemen for the great amount of time and trouble they have devoted to us. We are now, I hope, beginning to see daylight in the matter of this catalogue, which has taken such a long time, and I hope that by this time next year we shall be able to say that the catalogue is well on its way through the Press.

I will now formally ask you to pass the Report of Council for the past year.

The Report was then adopted by the meeting.

Presentation of the Triennial Gold Medal

The Society's Gold Medal for distinguished services in Oriental Research was presented by The Rt. Hon. Sir Samuel Hoare, Bt., G.B.E., C.M.G., etc., Secretary of State for India, on Thursday, 16th June, to Sir Aurel Stein, K.C.I.E., Ph.D., etc. at 74 Grosvenor Street, W. 1.

Sir Edward Maclagan : Sir Samuel Hoare, ladies and gentlemen, it may be of interest if I explain that this triennial gold medal which the Secretary of State has kindly agreed to present this afternoon was founded by this Society in commemoration of the Diamond Jubilee of Queen Victoria. In awarding it, we are governed by the provisions of a Trust, and according to that Trust at a certain time of the year a Committee has to be appointed and that Committee has to recommend the name of some person who is fitted for the medal on account of his distinguished services in Oriental research. It reports to the Council, and there are elaborate provisions as to what is to be done if the Council does not agree with the Committee. In the present case, these provisions were found to be entirely unnecessary, because the Committee unanimously put forward the name of Sir Aurel

Stein. The Council which received the Committee's representations unanimously accepted them, and the President, I need hardly say, also "unanimously" approved of them. The grant of the medal to Sir Aurel Stein is the very best thing that I could myself personally have wished, for I have myself, if Sir Aurel Stein will allow me to say so, been a personal friend of his for many years. I think it is now forty-six or forty-seven years ago since we met in New College, Oxford, in the rooms of Mr. D. S. Margoliouth, who is now a world-renowned Orientalist, and at the present time Director of this Society. I have also had opportunities of meeting Sir Aurel Stein at various times afterwards whenever he has condescended to come to live in countries which are accessible to civilized man. I am sorry we were unable to give longer notice of this meeting to-day. I need not go into the reasons which made it necessary to give such short notice, but the chief of them is the elusive character of Sir Aurel Stein himself. When we tried to get into communication with him he was imitating the habits of other Eastern sages who become what is termed "ghaib" or temporarily invisible. We were told by some experts we should find him in Baluchistan. Others told us we should find him in Persia; others said at this time of the year he would certainly be in his beloved Kashmir; and in the end we unearthed him some three weeks ago at Constantinople. In spite of the short notice given, you will see there is a very large number here present of Sir Aurel Stein's friends and admirers, and among them there is no one who has a more complete knowledge of the scope of Sir Aurel Stein's researches in Oriental work than our Vice-President, Sir Denison Ross, who is Principal of the School of Oriental Studies, and I will now ask Sir Denison Ross to address us.

Sir Denison Ross: Ladies and Gentlemen, it is a very great honour and privilege to the Society to welcome this elusive traveller into our midst. I can hardly believe that I see him sitting there. However, I have shaken hands with him and I know he is really there. It seems incredible, he hides so

well, so successfully, and to such good purpose. It is a still greater honour for me to be allowed to take an active part in the honour which is being done him by the Society. In the past, three distinguished Hungarians have rendered notable service to India. The first was Csoma de Koros, the great man who laid the foundations of Tibetan studies, and though he did not cover so much ground as Sir Aurel Stein, he endured immense hardships in his search for knowledge. I do not wish to speak of him here. His name is held in reverence in this Society, and more especially in the Asiatic Society of Bengal. The second, who is not so well known, was Duka, a distinguished member of the Indian Medical Service. And the third great Hungarian is Sir Aurel Stein, whose name is familiar to you all, while many of you are fully acquainted with his adventures and his great discoveries. I think it is always interesting to trace how explorers and orientalisists are made ; so I will carry you back into the less adventurous days, if there ever were such, in Sir Aurel Stein's life, and tell you how he began. Sir Aurel Stein was born in Budapest—a very honourable place to be born in, and one which has produced many great men. He studied Oriental languages in Vienna and Tübingen, and he devoted himself specially to Sanskrit. In 1888 he went to India as Principal of the Oriental College at Lahore and incidentally that post carried with it the position of Registrar to the Punjab University. You will all no doubt regret to think that even five minutes of his precious life was spent as registrar of a university, but his heart was elsewhere, although his pen and hand were devoted to his job. He held this post for eleven years, but do not imagine him as sitting in a chair all the time. I suspect that whenever vacation came along he would sneak away and hide himself in Kashmir or on the Afghan Frontier ; and at the same time he was preparing his memorable translation of Kalhana's "*Rajatarangini*", which is a model of scholarship and a very important contribution to Indian history. In this work Sir Aurel Stein

showed himself a first-class Sanskrit scholar which, of course, he has ever since remained. He was in 1899 transferred to Calcutta, and perhaps my only justification for speaking here is that I was his successor in that post which he, fortunately for himself, held only for a short time. When he was appointed Principal of the Calcutta Madrasah he became a member of the Indian Educational Department. His predecessors were all scholars of the armchair type. There were some very famous ones such as Sprenger, the biographer of the Arabian Prophet, and Blochmann, the founder of Indian Historical Studies of the Muslim period. With Stein it was quite otherwise, for although he yields to none as a profound Sanskrit scholar, adventure and discovery were his constant ambition, and it was sheer waste of his special gifts—not to mention his almost superhuman physique—to tie him down to administer a College. You must realize you are looking at a superman, for he had the strength to face such pain, misery, and want as would have killed half a dozen other men. Stein never failed to do well any task he set himself to do, because one big fact about him is that he is not merely a traveller and adventurer, but he is the most meticulous worker and he cannot put his hand to anything without finishing it off to perfection. He has written many voluminous works and I think few people have produced books with fewer misprints than Sir Aurel Stein, and that is not a foregone conclusion in the case of all great hill-climbers. It is not for me to tell you of the journeys he made, or to discuss how he made them, or under what conditions. The first journey into Chinese Turkestan was in 1900, and it was on that occasion that he discovered the marvellous walled-up library of Tun Huang, which perhaps has yielded more for the scholar and student of archæology than any other find ever made in Asia of the post-Christian period. Most of those treasures are now in the British Museum. They represent over 500 wonderful pictures of a period hitherto unrepresented in Chinese painting. The documents date from the fifth to

the twelfth or thirteenth century, and hitherto there were no documents preserved of such an early period. That is only one instance of what Sir Aurel Stein has done ; for countless are the treasures he has brought back with him. He has always preserved the instincts of a scholar side by side with those of the great surveyor, geographer, and mountain-climber. The result is that it has always been his desire to discover new finds, to unearth buried treasures, ruined cities, to excavate old sites, and nothing was more wonderful than the way in which he traced the whole of the Great Wall from end to end and discovered the records kept by the earliest garrisons in those wonderful frontier towers and outposts. Moreover, he always had in view other objects, and I may name as one of these that of settling the problems connected with the journeys of Hsuen Tsang and Marco Polo, and it is impossible to exaggerate the importance of the work of Sir Aurel Stein in clearing up the difficulties of their itineraries.

Recently he has followed out Alexander's Indian campaign. It is not for me to tell you about that. I have said enough to explain to you that he was always heart and soul a scholar. In addition to this medal now being presented to him he has gained the awards of many foreign geographical societies, as well as the Founders Medal of our own. We, as an Asiatic Society, engaged not in exploration but in the results of exploration, are very proud to welcome him here to-day. I will only add that if you wish to form some idea of what Sir Aurel Stein has done, you will find much in a little book which has lately appeared called *In the Footsteps of Buddha*, by M. Grousset, of Paris. It is a kind of commentary on the travels of Hsuen Tsang, and contains many references to Stein's identifications.

The Government have always been sympathetic to Sir Aurel Stein and it is not their fault that he was prevented from attaining two of his great ambitions. One was to explore Afghanistan, and I will tell you the story of why he did not

do that. The other was his last projected journey in China, which he could not carry out because the country was in such a disturbed state that he could find no authority to sanction it. The story of Afghanistan is no longer a secret. Sir Aurel Stein told Lord Curzon that he wished to excavate some of the wonderful remains in Afghanistan. Lord Curzon at once fell in with the idea and wrote to the Amir requesting his permission, and sending him Stein's great work on *The Ruins of Desert Cathay*. No reply was received, and after two years Lord Curzon wrote again, and this time the Amir replied: "I am having this book translated into Persian and as soon as it is completed and I have read it I will consider Your Excellency's request."

Sir Samuel Hoare: The President, ladies and gentlemen, since I have been at the India Office I have found very few, if any, subjects connected with India in which there has been unanimity of opinion. Indeed, looking back over a period of seven or eight very busy months I can think of many rather unpleasant tasks that I have had to carry out in connection with my duties. On that account, all the more do I welcome the chance this afternoon of taking part in a ceremony upon which there is unanimity of opinion, in India, I am sure, as well as in Great Britain, and to give myself the very pleasant duty of presenting on your behalf what I would describe as the *grand cordon* of your Society. No student and no traveller has deserved it better than Sir Aurel Stein. So far as my humble self is concerned, I will tell him that whenever I see an article over his name in *The Times* I rush to it at once and I read it long before I look at the reports of the debates of the House of Commons: long even before I read the betting news, and long even before I read the Stock Exchange quotations. Surely the fact that he is not only a great traveller, a great student, a great archæologist, but also one of the most attractive writers, one, I feel sure, of the best sellers of the day, shows how unique his career has been. I think the Government that I represent, viz., the Government of

India, should take great credit to itself for having discovered Sir Aurel Stein now nearly fifty years ago. I admit that the post they offered him was not the best, as we have heard just now, that of Registrar at Lahore University. When Sir Denison Ross reminded us of that fact I remembered that some of the other names connected with India had an almost similar experience. Warren Hastings, for instance, started life in India as an assistant warehouseman. Stamford Raffles was no more than a boy messenger. It was therefore quite in keeping with the best Indian tradition that the post Sir Aurel Stein first held should have been somewhat remote from the many distinguished activities that he has now fulfilled so well. It is not for me, particularly after Sir Denison Ross's interesting account of Sir Aurel Stein's career, to go into any further detail about his achievements. I would rather say in a sentence or two how they strike me. It seems to me that the most conspicuous feature connected with them is their completeness. We have just heard from Sir Denison Ross how Sir Aurel Stein is not only a great explorer and a great traveller: he takes into account all the minutiae connected with the kind of work upon which he is engaged. We see, therefore, a man who not only has a big part in a broad field, but a man who is able to do what you will remember Blake described as labouring the minute particulars as well—that is a combination that is rarely found in any single personality. Then again there is the completeness about Sir Aurel Stein's personality in that he seems to be just as physically strong as he is mentally alert. Fully has he needed his physical strength in carrying out this long series of remarkable journeys. It cannot often happen that such remarkable physical and mental qualities meet together in the same man, and to-day we congratulate Sir Aurel Stein upon that combination, and Sir Aurel, what better evidence could we have than the evidence you gave me just now as I came into the room? You told me that at the age, I think, of three score years and ten, in the course of a very few weeks you were

going to embark on another journey of exploration in southern Persia. I have once or twice been in southern Persia, and I remember it as the hottest and driest place into which I have ever penetrated. At one place where I had a forced landing in one of my flights they informed me that the cattle in the neighbourhood lived upon fish, but that when it was a really dry year, they had to fall back upon the tape from the cable office of the Indo-European telegraph. I looked very anxiously at the butter with which they provided me to see whether the marks of the telegrams still showed upon it. That takes me away from the object of my little speech which, is on your behalf and on behalf of the Government of India to offer our most sincere congratulations to Sir Aurel Stein, to hope that his career is far from finished, and that he has many interesting journeys still to perform, and on your behalf to present him with the gold medal of The Royal Asiatic Society.

Sir Aurel Stein: The honour which your Council has been pleased to bestow upon me in the shape of the Medal I have just received from the hands of His Majesty's Secretary of State for India is bound to evoke in me feelings of deep gratitude. They are prompted alike by the kind appreciation of my efforts in the past which this award implies, and by the recollection of all the help which, in the course of my life, scholar friends and others have given me, and which alone rendered those efforts possible. I am not able to express that gratitude adequately and yet with the brevity which regard for the time of others in this busy centre of affairs makes advisable. Most of my working life has been spent in the isolation, whether of congenial mountain retreats or else of equally cherished deserts, and such isolation, while it has favoured the written record of my labours, has ill-prepared me for speaking in public.

What on the present occasion is foremost in my mind is grateful appreciation of the encouragement which this award is bound to afford me. It comes from the learned Society

which for more than a century has gathered into its ranks the chief representatives of scholarly research in this country as applied to the past and present of the great civilizations of the East, and in particular of India. When I think of the work accomplished by all the great scholars ever since the days of Horace Hayman Wilson, Sir Henry Rawlinson, and others who have taken a leading part in guiding the activities of the Royal Asiatic Society, and through it have set the course for Orientalist studies in England and the Empire at large, my own direct share in furthering those researches seems indeed very modest. All the more I must value the recognition your Council has now been pleased to accord to the aims that prompted my labours.

These labours have owed so much from the start to the help and inspiration derived from scholars connected with this Society that gratitude and the prompting of historical sense as applied to the happenings of my own humble career, induce me to turn back here to the far off time, more than 47 years ago, when I was preparing in England to secure access to the ground where I thought I could best serve my chosen aims as a student. It was India—and India it was to which I owe the good fortune of having been brought early in life to England, which has given me my best friends and which I feel proud to have been able for many years past to call my country.

I shall not inflict upon you an account of the circumstances which directed my attention already in early boyhood to India, and in particular to its North-west Frontier and the Central Asian region beyond. But I may as well mention that I was only about eleven years old when a passage, still well remembered by me, in one of my school books made me eager to reach that ground where classical influences had once met Indian culture amidst a population largely Iranian in race and long under Persian rule. This early attraction decided my University studies, mainly carried on under the guidance of that great explorer of ancient Vedic and Avestic

religion, Professor Roth, and thus brought me for their continuation to London and Oxford. During those few years from 1885 to 1887 it was mainly at the Royal Asiatic Society that I had the good fortune to be brought into direct personal contact with such great savants as Sir Henry Rawlinson, Sir Henry Yule, Dr. Rost and others too numerous to mention. There, too, I realized to my great advantage how much of scholarly research had been carried on by distinguished officials in India who, in the midst of heavy responsible duties and often in high office, had found leisure and strength to advance Eastern studies by important contributions.

I had every reason to feel encouraged by their example when the friendly help of much respected scholar patrons secured to me, from a comparatively early age, the greatly desired chance of working in India. I must consider it a particularly kind disposition of Fate that this chance was first opened to me 45 years ago in the Punjab. Thus I was brought as close as general conditions would permit to that borderland of India and Iran towards which my eyes had been turned since my boyhood. The post I held at Lahore for eleven years as Principal of the Oriental College and Registrar of the Punjab University, burdened me, it is true with heavy administrative duties. But the example already referred to of distinguished members of that great Indian Civil Service showed me how to carry on cherished scholarly labours even with a minimum of leisure spared from official work. It is a source of very deep gratification to me to remember that from the very time of my arrival at Lahore I found in your President, Sir Edward Maclagan, my oldest friend in the Punjab, a friend who has ever since proved the kindest and most sympathetic of helpers. I cannot exaggerate the boons I derived during those years from the encouragement which the friendly interest shown by him and by other distinguished Punjab Civilians gave me. Nor can I ever forget that those years at Lahore gave me my closest friend in the army, General Dunsterville, and the most stimulating

of confrères in my lamented friend Sir Thomas Arnold, in Dr. Allen, now President of Corpus at Oxford, and Mr. Andrews.

Consideration shown for my scholarly aims allowed me to use rare intervals of freedom for attempts at archæological work in the field. Somehow I had always felt that geographical knowledge and personal experience on the ground afforded me the best inspiration for antiquarian and historical researches. Geography has, indeed, been particularly kind to me in as much as it led me to use what leisure University vacations left me during that period for work in that beautiful Alpine land of Kashmir. It would be hard for me to overestimate the benefit I derived mentally and physically from having been enabled to take up and complete during those vacations the tasks connected with the translation and elucidation of Kalhana's *Chronicle of the Kings of Kashmir*, the only truly historical record surviving in Sanskrit literature.

But the enjoyment which that work under such pleasant Alpine surroundings gave me, cannot obscure my grateful recollection of advantages in other directions which my long residence at the capital of the Punjab secured me. Teaching work, carried on at the Oriental College mainly through the medium of Sanskrit, still in a way a living language, afforded me opportunities for getting practically acquainted with Indian ways of thought, of doing what I may call experimental psychology among my Brahmin students. Contact with them taught me much of the differences between Indian and Western ways of thought. Equally instructive was it to learn by practical experience in the University office something of those aims and methods of the British Administration in India to which the great sub-continent owes most of the peace and order it has enjoyed for more than a century. It may seem doubtful whether the great services to Oriental research rendered by that administration from the days of the East India Company have always been adequately realized.

Personally I have enjoyed the great good fortune of benefiting directly by that enlightened policy of the Government of India from the very time when, in the last year of the last century, I had the good fortune of being admitted directly into its service in the Education Department. It was due to the very generous consideration of the Indian Government that, at the very start of that Service, and years before my official transfer to the Archæological Survey, the chance of exploratory work in Central Asia was opened to me. My attention had been called years before to the promising field which Chinese Turkestan held out for archæological exploration. The labours of my lamented old friend, Dr. Rudolf Hoernle, on chance acquisitions of ancient writings from ruined sites of the Tarim basin, had by then afforded definite proof how thoroughly Indian culture, largely through Buddhist propaganda, had penetrated that region of Innermost Asia.

But I might perhaps have never realized the eagerly cherished hope of there serving archæological and geographical interests combined, if the Government of India had not been prepared to support my endeavours in that direction from the very time when I entered its service. There again it was the friendly interest of Sir Edward Maclagan, then Deputy Secretary, if I remember rightly, in the Revenue Department of the Central Government, which helped to secure official sanction and the necessary means for my first Central Asian expedition.

It was no doubt a result of the aridity of climatic conditions throughout the Tarim basin that, in the course of that comparatively short period of freedom granted to me for exploratory work, I was able to bring to light so many relics of the powerful influences exercised in that region by Indian, Chinese and Hellenistic cultures, in the shape of ancient documents, art remains, etc., from sand-buried sites in the Taklamakan Desert. It would have been quite impossible to secure the full scientific value of these finds if I had not

been enabled from the start to obtain for their examination and study the help of most competent collaborators in different branches of Oriental research. I feel proud to refer here to the devoted labours of such distinguished confrères as the late Dr. Hoernle, Professor Rapson, Dr. Barnett and that lamented, great sinologue, M. Chavannes, who were prepared for years to give those finds the full benefit of their learning and critical acumen.

But it would probably have been equally impossible for me to organize effective collaboration on this and subsequent occasions if the Government of India had not been prepared to allow me necessary freedom for the working up of such manifold materials by the grant of adequate periods of Special Duty. I have not failed to record my gratitude for these and similar concessions after subsequent exploratory journeys, both in my official reports and in the personal narratives I was generously permitted to publish. But it afforded me no small gratification that the presence here of His Majesty's Secretary of State for India, the highest representative in this country of British rule in India, enables me to express to him in person my sincere gratitude for all the generous help received from his predecessors and in particular from Sir Austen Chamberlain.

To many of those who have honoured me by their presence on this occasion it will be unnecessary to relate in detail how that first Central Asian venture of mine was followed up by two much longer and still more fruitful expeditions into Eastern Turkestan and Westernmost China. It serves to relieve my conscience that the ample archæological and geographical results which attended those expeditions lasting from 1906 to 1908, and again from 1913 to 1916, have found their full record in publications brought out under the orders of the Government of India and the Secretary of State. But it is my pleasant obligation to emphasize on this occasion also how much I owed to the unfailing and ever effective support which arrangements with regard to these expeditions

received from my friend Sir John Marshall, then Director-General of Archaeology in India. Extensive have been my obligations to the large bands of distinguished scholars, including some of the foremost Orientalists of our times, who have unstintedly given their labours towards the publication and elucidation of those manifold materials brought back. I feel certain that without their expert help it would not have been possible to reap the full fruit of the work I had been enabled, by the support of the Government of India and with the aid also of the British Museum authorities, to accomplish in Innermost Asia. Nor ought I to omit grateful reference to the very valuable help which I received throughout from the Survey of India for the topographical tasks connected with my antiquarian labours.

Friends have often dilated upon such physical hardships and privations as prolonged explorations on desert ground or in high mountain regions have implied. But in reality I must confess that what remains most in my recollection is the pleasure which the interesting work on previously unexplored ground gave me. Whether excavating at ancient sites in the waterless desert during the bitter cold of Turkestan winters, or tracing ancient routes through the salt wastes of the dried-up ancient sea-bed of Lop, or doing survey work on the high snowy ranges of the Kun-lun and Nan-shan, I always felt at my ease. My conscience as a historical student obliges me to acknowledge in passing that there were a few occasions also when I had a somewhat uncomfortable time, as for example, when I lost my toes while surveying on the glacier-clad crest line of the great Tibetan range south of Khotan, or when leading my caravan across the crumpled-up salt crust of the Lop Desert, uncertain whether our supply of ice would suffice for the length of time that might be needed to track there the ancient Chinese trade route into Central Asia. But such incidents present themselves now only in the soft light of historical perspective.

I fully realize that the work I have been able to do in

those distant regions has been rendered practicable only by my good fortune of having inherited a fairly tough constitution, and for that I feel indeed very grateful. It also explains why I have endeavoured, since the period of Central Asian exploration has closed for me, to carry on similar labours on such semi-desert ground as most of British Baluchistan and Makranis, and recently to follow up these investigations of prehistoric sites in the even more desolate territory of Persian Baluchistan.

As long as physical fitness lasts I shall endeavour to continue my efforts in the field. I am encouraged in this aim by the continued friendly interest shown by fellow scholars. It has found its most striking expression in the great honour with which the Royal Asiatic Society has been pleased to recognize my endeavours; and for the encouragement it has thus afforded me on the present occasion I shall cherish a most grateful recollection as long as life lasts.

Sir Edward Maclagan : I wish just to emphasize how greatly the Royal Asiatic Society feels the honour of having had the opportunity of awarding this medal to a man of the calibre of Sir Aurel Stein. Perhaps it is natural for us, as Sir Denison Ross has suggested, to look mainly to such qualifications of Sir Aurel Stein as his wide erudition and his accurate scholarship; but at the same time I think that at the back of our minds what we all admire most in Sir Aurel Stein is the man himself and his indomitable courage, courage both physical and moral. I do not think that I have ever heard Sir Aurel Stein make any real complaint, but the nearest thing I have ever heard to it was a reference to the difficulty of obtaining funds from America and Europe for travel in Central Asia, as compared with say, Mesopotamia or Palestine or Egypt, and his expression of a wistful desire that some evidence could be brought forward to show that Moses or Abraham had travelled in Central Asia. Speaking of Sir Aurel Stein's courage, I am reminded of a story which is probably known to many here in some form or other. As I remember

it, the great Persian conqueror, Nādir Shāh, was sitting one day with the captains of his army examining a consignment of swords, and as the swords were brought up one of them received general approbation, until the criticism was made that it was too short; and then a young officer present was heard to give the word of command "one pace to the front". That is what has been the motto of Sir Aurel Stein's life when he is in difficulties, "one pace to the front." Wherever he has been, whatever difficulties he has had—and there have been many difficulties in all these travels—he has relied on his own resources, has not criticised the length of his sword, but has, as I say, said "one pace to the front" and so has conquered the difficulties that have been before him. It is an honour to us to have been able to award the medal to Sir Aurel Stein, and the honour has been greatly enhanced this afternoon by the fact that the medal has been actually presented to him by so high an authority as the Secretary of State for India. I wish on your behalf to express to Sir Samuel Hoare our great thankfulness for the sympathy which he has shown to research and scholarship by coming in this way to us this afternoon and helping us in recognizing the merits of a great scholar, and great explorer. It was an exceedingly kind thought of his to have come and helped us in this way, and although we have not been able to provide him with any economic or political pabulum, yet I trust he will not think this afternoon wasted. To us, it has been an immense satisfaction to have had him here, and I wish on your behalf to offer him our most sincere and grateful thanks.

The Excavations at Jericho

NECROPOLIS AND CITY

On the occasion of the Anniversary General Meeting of the Royal Asiatic Society, Professor John Garstang, D.Sc., Hon. LL.D., F.S.A., gave a deeply interesting lecture upon the results found during the excavation of the City, the Necropolis, and the Palace at Jericho, together with some

of the deductions made therefrom. They almost give the impression that the description of the capture of the fortress, in the Book of Joshua, must have been originally the work of eyewitnesses.

The lecturer said :—

Three years ago, when Sir Charles Marston first enabled me to re-examine the site of Jericho, several problems of peculiar importance to students of Bible history were still awaiting solution. The earlier excavations, while throwing new light upon the archæology of the ancient city, indeed upon the culture of Canaan as a whole, had left the dating of the several lines of defensive walls and ramparts in considerable doubt, and a subject for technical discussion. One expert frankly stated his opinion that during the late Bronze Age (c. 1600–1200 B.C.), the period which under any theory should cover the entry of the Israelites into Canaan, the city of Jericho already lay in ruins.

Our first season's work found the solution of this initial difficulty. A stout wall of brick that lay along the western brink of the mound was seen in various unexcavated places to be overlaid by the remains of a second wall, following the same line. With this was associated a thinner screen wall of the same material. The stratifications and details of evidence were examined, and enabled us at the time to state a definite and agreed conclusion :—

“The main defences of Jericho in the late Bronze Age (c. 1600–1200 B.C.) followed the upper brink of the city mound, and comprised two parallel walls, the outer 6 feet and the inner 12 feet thick. Investigations along the west side show continuous signs of destruction and conflagration. The outer wall suffered most, its remains falling down the slope. The inner wall is preserved only where it abuts upon the citadel or tower to a height of 18 feet ; elsewhere it is found largely to have fallen, together with the remains of buildings upon it, into the space between the walls which was filled with ruins and debris. Traces of intense fire are plainly to be seen,

including reddened masses of brick, cracked stones, charred timbers and ashes. Houses alongside the walls are found burned to the ground, their roofs fallen upon the domestic pottery within."

There remained the question of the date when the walls and city were destroyed. In my own opinion, based upon a detailed examination of the stratifications related to the outer wall, this had probably taken place about 1400 B.C., the culture being that of the late Bronze Age before the infiltration of the Mykenæan wares. Our second season was devoted largely to this problem, and led us to examine another unexcavated area overlooking the spring on the eastern side. There, also, came to light further traces of conflagration and destruction; several burnt-out store-rooms of an extensive building (subsequently recognized as the "palace") yielded a welcome series of pottery types, the date of which would help us materially to decide the matter. But at this stage, again, technical questions arose. Criteria for the precise dating of the pottery types were wanting, and to this end we determined to search for the necropolis in the hope of finding dated groups. In this quest we have not been disappointed. Late in the second season a burial place of Middle Bronze Age I (c. 2000-1800 B.C.) was located: it proved rich in deposits of pottery vases,¹ bone objects, beads, and amulets, and encouraged a further exploration of the area.

The third season's work at Jericho has been rewarded by results of unusual interest and value. Foremost may be placed the archaeological materials recovered from other Bronze Age tombs. These were located in unbroken ground some 400 yards westward from the city mound, not far from the tomb first discovered and, like it, they proved to be practically intact. In all twenty-five have been opened and cleared; and they yielded 1,800 registered objects, mostly

¹ For a full description with drawings of the pottery types and photographs see the current number of the *Annals of Archaeology* (published by the University Press of Liverpool), vol. xix, parts 1-2.

pottery vases, of which some 1,500 were in good condition, and several hundred without a flaw. Many of the specimens are new to the corpus of Palestinian types, while quite a number can claim a measure of artistic merit which throws new light upon the standard of Canaanitish culture.

The deposits cover the whole range of the Bronze Age down to 1400 B.C., the later groups being dated by royal Egyptian scarabs and they represent the various phases in the life of the city already recognized in our earlier exploration.

The Early Bronze Age, 2500-2000 B.C.

The deep levels of the early Bronze Age in the city mound are still largely beyond our reach, but here and there trenches or denuded spots have enabled us to trace the line of a protecting wall of this period, apparently the earliest of the site. It was constructed of large slabs of mud-brick bonded with thick layers of bituminous earth, suggesting a Babylonian influence.

Last year we were able to clear also some rooms of the period in a low-lying area near the spring; and this year, in the necropolis, the depths of a looted tomb yielded a group of small striped vases with miniature handles characteristic of the period, resembling those from the city, together with fragments of others with high shoulders and developed necks which seem to constitute new types. It is noteworthy that at Jericho the best worked flints, including arrow and lance heads, are found in the deposits of this age; though the layer overlies much deeper strata representing a long period of primitive Stone Age culture.

Middle Bronze Age I, 2000-1800 B.C.

In the early part of the Middle Bronze Age, estimated elsewhere from Egyptian analogies to fall about 2000 B.C., the site was enclosed by a stout wall of large unbaked bricks, which followed the brink of the mound, and enclosed an area of about seven acres. A well-built tower, 60 feet in

length, protected the gateway and the approaches to the spring on the eastern side, and it contained three deep chambers in which we found helpful stratified deposits. A room at the foot of the tower gave us a finely carved bull's head in darkened ivory (4.75 cm. in height), in which again may be detected a Babylonian feeling.

The known pottery types of this period, hitherto limited though distinctive, have been greatly augmented by the recovery of nearly 800 specimens from the first tomb discovered in the necropolis. This, as already stated, was located, and the work of clearing begun last year, reserving the bottom layer with some 200 further specimens for the opening task this season. The pottery is distinguished by its variety of forms, ranging from pointed juglets to standing vases with small side handles. Technically the favourite finish was by red slip, burnished; decoration by broad bands of paint was incipient, and there is trace of patterns by incision. Jugs are provided with single loop handles, while bowls frequently have the two ledge or wavy handles familiar in predynastic Egypt. Most suggestive are a number of vessels upon which are represented the human arms and breasts, recalling again a Babylonian prototype. A complete series of this period has been deposited in the Hunterian Museum of the University of Glasgow.

Middle Bronze Age II, 1800-1600 B.C.

In the second part of the Middle Bronze Age, which covers the Hyksos period in Egypt (c. 1800-1600 B.C.), the city underwent a notable expansion. Already, in the preceding phase, houses had been creeping outside the walls down the slopes of the mound, which was now surrounded by a massive rampart. This comprised a glacis of great rough-hewn stones, an upper defensive parapet of brick, and an outer fosse; the area enclosed was now about 10 acres in extent. Local prosperity now attained its zenith, a fact clearly seen in the furniture of the newly excavated tombs. Pottery became more elegant in form, more varied in design, more

perfect in technique and pains were taken to finish off the better vases with artistic pride. Decoration, though still linear, was attempted with more confidence, and the surfacing of vases with a white or creamy slip, for which the locality provides a favourable material, introduced a new feature to the ceramic art.

Plastic art, of which examples are rare in the Bronze Age, is represented by a unique rhyton. This is a pedestal vase of local ware and form, modelled externally to represent the head of a bearded man, and almost life size. So far as I am aware, no similar specimens are extant; the Phaistos rhyton, which alone belongs to the same age, differs *inter alia* in that the hairs are represented by points of paint, while in this case they are indicated by pin-holes. The back of the head, below the hair, is partly modelled and treated with red-brown paint. The nose is of the Armeno-Hittite type, grotesquely exaggerated, and the facial expression is faintly reminiscent of Etruscan art, an impression perhaps arising from the suggestion of a smile in the drawing of the lips. The "*barbiche*" also points towards northern or Hittite Syria. In the lack of information as to racial affinities of the local population it would be rash to draw a general inference from this interesting object. But the evident prosperity which Jericho enjoyed during the Hyksos period suggests that it benefited, like other cities of Canaan, from the political regime. If there is any truth in the theory that Hittite influence was behind the movement that overran Egypt at this time (as debated in *The Times* of 1902), we may see in this head, if not the features of a Hyksos leader, at any rate the reflection of Hittite infiltration which planted groups of settlers here and there, and stamped its peculiar racial impress upon the people of the land.

Late Bronze Age, c. 1500 B.C.

The transition from the Middle to the Late Bronze Age Culture is not well defined in the ceramic series, nor is it

marked by any sudden change. It is true that the defences of the city, after the partial destruction of its outer ramparts, retreated to the old lines upon the brink of the mound, while in the necropolis the grotto tombs gave way to simple graves from one to two yards deep. Otherwise the local arts were continuous, though bearing witness to a certain deterioration ; so we may assume that whatever punishment was inflicted on the city by the Pharaohs at the close of the Hyksos regime, the local population returned in part to the old site and resumed their former customs. Burial was still carried out by inhumation, for the most part in family or common graves, some of which were found filled with offerings and the debris of human remains, to within a few inches of the surface. One tomb dated in its fourth layer to the joint reigns of Hatshepsut and Thutmose III contained more than 500 vases, and the traces of more than fifty burials. The lowest levels show no traces of Egyptian influence, which thus makes itself felt in Jericho for the first time about 1500 B.C. The line of demarcation is quite clear in the deposits, and though a certain lag must be allowed for in a place relatively distant from the trade routes of Egypt, it was apparently only at this time that the Pharaohs' rule became effective in the lower valley of the Jordan.

Thereafter, the fifteenth century B.C. is well represented ; the "bil-bil" wares of Cyprus and their imitations made their appearance, as in Egypt, at this time ; but there is a conspicuous absence of Mykenæan products and the distinctive art of the Tell-el-Amarna period. The series of scarabs, of which ninety-four were recovered from the various layers of these tombs, end with the reign of Amenhetep III. They have been examined independently by Professor Newberry, who kindly travelled from Cairo for the purpose, and in his expert opinion they range through the Hyksos period into the early part of the XVIII Dynasty, but comprise no specimens of the period from Akhenaton (Amenhetep IV) to Ramses II, inclusive of the former reign. All the evidence

from the tombs thus points to an interruption in the life of Jericho in the age of Amenhetep III.

A detailed comparison of objects found in the burnt store-rooms of the Palace Area, and of fragments from the houses against the ruins of the city walls, with specimens from the dated tombs, leaves no doubt about the reality of this conclusion. The Bronze Age City of Jericho perished at some date after 1411 and before 1375 B.C.

Iron Age I, c. 1200 B.C.

It cannot be supposed that a site with so many advantages remained long uninhabited, but the next trace of occupation brings us to the Iron Age, about 1200 B.C., and in this respect the evidence from the city and the necropolis is also in agreement. Overlaying and by the side of the Palace Area of the Bronze Age lies a well-marked stratum of the early Iron Age; its remarkable features are a cobble-paved street ascending in steps to the top of the mound; and the foundations of a considerable building with stout stone walls. In the necropolis there was found one tomb of this period; it was isolated from the rest and differed entirely in character, being like a pit. The burials therein had been partially cremated. With them were associated a number of large armlets of bronze and some of iron. Most instructive, however, was a scarab showing a northern deity, a type of Hadad, standing upon the back of an animal, like the consort of the Mother-Goddess at *Hierapolis Syriae*. It appears probable from these indications that one of the Pharaohs, presumably Ramses III, established on the mound over the spring an outpost of northern mercenaries (Sherdens, or Philistines, or maybe Hittites) whose burial practices differed so radically from those of the old population; and if the scarab bearing the name of Thutmose III, found in the same pit, proves to belong to the King's reign (of which there may be a doubt), it would appear that such a garrison had been installed when the city was first annexed.

The outer fortifications of the city, however, remained in ruins, and so far as our investigations have proceeded they were not restored until the second phase of the Iron Age, about 900 B.C., after which there is abundant trace of renewed activity and occupation, lasting, though fitfully, to the Byzantine epoch.

The work this season, as in the past, was done entirely by voluntary helpers; the repairing and general supervision in the camp and store-rooms by my wife, surveys and photography by Mr. Harold Falconer, paintings by Mr. H. B. Gray, drawings by Boulos Eff. Araj and Miss Mabel Ratcliffe, field notes in the city by Dr. Aage Schmidt, registration and records by Mlle J. Krausse and the cataloguing by my daughter Meroë. Sir Charles Marston, the constant patron of these researches, was generously seconded on this occasion by Mr. Davies Bryan, in the interests of the University Museum, Aberystwyth. Other collaborating institutions were the Musées du Louvre (Paris), the University of Liverpool, which I represent, and the Leeds Philosophical and Literary Society. The series of antiquities accruing to the expedition will be deposited in these several institutions, the first selection remaining in the Palestine Museum, Jerusalem.

The substance of this lecture appeared in *The Times* of 12th May, 1932.

Siamese Painting

At a lecture delivered on 28th April before the members of the Royal Asiatic Society, Mr. Quaritch Wales, who was for some years the State Chamberlain at the Court of the King of Siam, described the first attempt to interpret the ideals of Siamese painting and its relation to the Indian style of Arjanta.

Siamese paintings are found as frescoes, banners hung in temples and illustrations in manuscripts, and the subjects are usually connected with the Buddhist religion and the Ramayana. No attempt has previously been made to throw light on the historical development of Siamese painting and the

difficulty is that no examples survive from a period anterior to the destruction of the old capital Ayudhya in A.D. 1767. But the earliest of the Bangkok paintings reproduce the old Ayudhya style and though this had been decadent for at least three centuries prior to the fall of Ayudhya, there is reason to suppose that about the thirteenth to the fourteenth century A.D. Siamese painting may have enjoyed a brief but bright period characterized by a comparatively vigorous and living style. The evidence in favour of this is supplied by a series of incised Jataka drawings on stone, dating from the thirteenth century, characterized by a grace and suppleness unknown to later Siamese art and the direct result of the reaction of the Siamese artistic temperament to the new and vital experiences provided by their attainment of freedom from Khmer domination, and their conversion to Sinhalese Buddhism. These Jataka drawings show a strong resemblance to certain contemporary frescoes found at Polonnaruwa in Ceylon.

It is also remarkable that certain late Siamese paintings, though decadent, show a definite relationship to the famous Sigiriya frescoes. It seems, therefore, that Siamese painting is in the main to be regarded as a decadent offshoot of the classical Ajanta school of Indian painting, but early Thai and Khmer influences have combined with this to produce a distinctly national style. There is a little Chinese influence but this is late, and is chiefly noticeable in the formal decorative motives and often also in backgrounds. A tendency to realism, as a result of western influence, is found in the most recent paintings.

Mr. Quaritch Wales exhibited numerous beautiful examples of the style of Siamese painting which he described.

The hearty congratulations of the Society are passed to Professor C. G. Seligman upon the presentation to him by the Bengal Asiatic Society of the Nelson Annandale Gold Medal for contributions to the study of Anthropology in Asia.

Gertrude Bell Memorial School of Archaeology

The subscribers to the Fund for establishing a British School of Archaeology in Iraq, as a memorial to Gertrude Bell, who died in Baghdad on 12th July, 1926, have now appointed a Council on which the Universities of Oxford, Cambridge, Edinburgh, Durham, London, the British Museum, the British Academy, Royal Geographical Society, Royal Asiatic Society, Society of Antiquaries, and other Societies are represented. The President is Sir Percy Cox (late High Commissioner for Iraq), the Chairman of the Executive Committee is Sir Edgar Bonham Carter, Mr. E. H. Keeling is Hon. Secretary, and Brigadier-General Sir Osborne Mance Hon. Treasurer. The funds raised up to the present total nearly £9,000. In addition, the income from sums of £6,000 and £4,000 bequeathed by Gertrude Bell and by her father, Sir Hugh Bell, to the British Museum on trust will, it is hoped, be payable to the School. The disposal of the income is under consideration. The office of the School is temporarily at 20 Wilton Street, S.W. 1.

Notice

Owing to the summer holidays it would be greatly appreciated if correspondence is reduced to a minimum during the months of August and September.

LIST OF MEMBERS.

JOURNAL OF THE ROYAL ASIATIC SOCIETY 1932

PART IV.—OCTOBER

Zum Alter der frühen Fachüberlieferungen der indischen Medizin, der *Samhitā* des *Caraka*, *Suśruta* und *Vāgbhaṭa*

VON REINHOLD F. G. MÜLLER

NICHT ganz unähnlich der allgemeinen Achtung vor der Vereinigung der drei Veden (*trayī vidyā*) genießt auf medizinischem Gebiet ein hohes Ansehen die alte Trias (*vrddha-trayī*), welche aus den Ärzten *Caraka*, *Suśruta* und *Vāgbhaṭa* zusammengesetzt ist. Nach der Überlieferung und in dem Gesichtswinkel der Inder erscheinen diese Medizinlehrer der Vorzeit durchaus als geschichtliche Persönlichkeiten, wie manche ihrer Vorläufer. Einer jener letzten, *Hārīta*, bezeichnet *Caraka*, *Suśruta* und schliesslich *Vāgbhaṭa* in ihren Sammellehren als Vertreter der drei Welt-Zeitalter (*carakāḥ suśrutaś caiva vāgbhaṭaś ca tathā 'paraḥ | mukhyaś ca saṃhitā vācyās tīṣṭa eva yuge yuge ||*). Die Sachlage, welche die apokryphe *Hārīta-Saṃhitā* in ihrem Anhang (*prasiṣṭa*) schildert, lässt sich kritisch unschwer überblicken. Das Zitat beleuchtet aber anderseits auch allgemein den Boden, welchem noch heut die geschichtliche Einstellung der Inder entspringt, in Bindungen zu ihren überkommenen Weltanschauungen und Religionen, und nicht so selten unter Anerkennung solcher Richtlinien seitens Beobachter eines westlichen Kulturkreises. In derartigen Materialien erscheint die Grenze zwischen Sage und Geschichte sachlich und

zeitlich verwaschen und eine kritische Betrachtung bald in mittelalterliche, bald in neuzeitliche Verhältnisse verworfen. Bei der fast sprichwörtlichen Unsicherheit des Zeitmasses indischer Belange wurde daher folgerichtig der entsprechende Schwerpunkt geschichtlicher Forschung der kritischen Beurteilung des Text-Inhaltes eingereiht. In dieser Richtung laufen die bahnbrechenden und grundlegenden Untersuchungen eines Cordier, Hoernle und Jolly.¹ Die stehengebliebenen Unstimmigkeiten weisen aber auch auf die verschiedenen Möglichkeiten in der Auswertung des Textmaterials und des wenig übersichtlichen Geflechtes seiner Kommentare hin. Bei einem Versuch zur Einebnung des sachlichen Zwiespaltes drängt sich aber immer wieder der Mangel zeitlicher Bestimmungen wie eine Sperre auf für einen Fortschritt und zwingt oft zu einem Verzicht, der für einen Erfolg keiner Erwähnung bedarf. Andererseits regt aber auch der Vorgang an, einige neue Gesichtspunkte zu finden, um das Problem einer zeitlichen Umgrenzung der

¹ Hier wird auf folgende hauptsächlichsten Arbeiten verwiesen, welche im weitem Verlauf in der Regel nicht besonders zitiert werden.

Cordier: *Nagarjuna et l'Uttaratantra de la Suçrutasamhitā*, Antananarivo, 1896. *Vāgbhaṭa et l'Aṣṭāṅghrdayasamhitā*, Besançon, 1896. *Quelques données nouvelles à propos des traités médicaux sanscrits antérieurs au XIII^e siècle*, Calcutta, 1899. „Vāgbhaṭa“: *JA*. 1901 (cf. Note bibliographique; *ibid.*). „Récentes découvertes de mss. médicaux sanscrits dans l'Inde“: *Muséon*, 1903. „Introduction à l'étude des traités médicaux sanscrits inclus dans le Tanjur tibétain“: *BEFEO*. 1903.

Hoernle: „Studies in Ancient Indian Medicine“: *JRAS*. 1906, 1908, 1909. „The Authorship of the Charaka Samhitā“: *Archiv f. Geschichte d. Medizin*, 1908. *Studies in the Medicine of Ancient India*, pt. i (cf. Introduction, Chronology), Oxford, 1907.

Jolly: „Zur Quellenkunde der indischen Medizin“: *ZDMG*. 1900, 1902, 1904, 1906. „The Bower Manuscript“: *ZDMG*. 1899, 1913. *Grundr. d. Ind.-Ar. Phil. u. Altrtkd.* III/10, *Medizin* (Zur Quellenkunde), Strassburg, 1901.

Als Textausgaben sind benutzt worden: *Caraka-Samhitā*, ed. Narendranātha Śāstrin (Lahore, 1929); abgekürzt: *CaS*. *Suśruta-Samhitā*, ed. Yādava Śarman (Bombay, 1931); abgekürzt: *SuS*. *Vāgbhaṭa-Aṣṭāṅgasamgraha*, ed. Rudra Pārasava (Trichur, 1924-6) = *VāS*. *Aṣṭāṅghrdayasamhitā*, ed. A. M. Kunte (Bombay, 1925) = *VāH*. *Bhāvamiśra*,

alten indischen Medizinüberlieferungen und ihrer Urheber einem erreichbaren Ziel näher zu bringen, wenn auch absolute Masszahlen nicht damit erhalten werden können.

Von den berühmten drei alten Ärzten gilt unbestritten als der jüngste *Vāgbhata*, sowohl nach der bodenständigen allgemeinen Tradition, als auch deshalb, weil er in der *Carakasamhitā* (CaS) und *Suśrutasaṃhitā* (SuS) nirgends erwähnt wird, während er selbst wenigstens in der *Aṣṭāṅgahṛdaya-Saṃhitā* (Uttara- 40, 88) diese beiden Vorgänger als Quellen nennt. Sein Name, welcher auch abgewandelt und etymologisiert überliefert ist,¹ beschränkt sich nicht auf seine Person, da auch andere (nichtärztliche) Inder so bezeichnet werden. Zu seiner Altersbestimmung ist vor allem ein Bericht des chinesischen Pilgers *I-tsing* herangezogen worden, welcher 673–95 Indien bereiste und sich vorübergehend mit seiner Medizin beschäftigte („I made a successful study in medical science, but as it is not my proper vocation I have finally given it up“).² *I-tsing* beschreibt kurz die 8 Teile des ältesten indischen Medizin-Systems (*āyurveda*) und gibt dann an: „These eight arts formerly existed in eight books, but lately a man epitomized them and made them into one bundle. All physicians in the five parts of India practise according to this book.“³

¹ Im *Traumschlüssel des Jagaddeva* (hersch., überstzt. u. komment. v. J. v. Negelein, Giessen, 1912) taucht der Name des Arztes, welcher durch seine Begleiter gesichert ist, als „Herr der Rede“ auf (*Svapnacintāmaṇi* 2, 160 : *suśruta-vācaspati-caraka*). Dabei handelt es sich wohl nicht um einen Hinweis auf die Entstehung des Namens, als vielmehr um eine etymologische Spielerei, wie nicht so selten in der indischen Literatur. Hierzu kann die Erklärung des Namens *Caraka* vorweg genommen werden. Im *Bhāva-prakāśa* (S. 6/7) findet sich der späte Niederschlag folgender Legende: Der heilkundige Schlangenfürst *Śeṣa* verkörpert sich im Sohn des vedischen Weisen *Viśuddha* (des „reinen“) und wird *Caraka* genannt, weil er als „Kundschafter“ gegen die Krankheiten gekommen war.

² Takakusu, *A Record of the Buddhist Religion*, by I-tsing, 126 ff. (Oxford, 1896).

³ Herr Prof. Wedemeyer hat mich auf meine Bitte dankenswert zu den chinesischen Texten hier und S. 806 beraten, so dass die einschlägigen Ausführungen auf seine Hilfe zurückgehen: *sse chi pah shuh sien wei pah pu*

Bei dieser Schilderung muss berücksichtigt werden, dass der chinesische Pilger für seine Landsleute schrieb und dass einzelne Unebenheiten bei einem Vergleich mit der indischen Medizin aus diesem Gesichtswinkel zu bewerten sind.¹

kin-jih yu jen lueh wei yih chia = Diese acht Techniken bildeten früher acht Abteilungen (Werke), neuerdings hat jemand sie verkürzt, sodass sie einen Band bilden (— sie in einen Band zusammengezogen).

¹ Die Länder von Wutien (*wu-t'ien chi ti*), das fünfgeteilte Indien, in welchem das „neuerdings“ vollendete Werk des Arztes [*Vāgbhaṭa*] so schnell Anklang fand, dürfte mehr oder weniger nur dem Gebiet entsprechen, an welchem der chinesische Pilger Anteil nahm. Auch unter der Buchform des Bandes (*chia*) ist wohl die chinesische zu verstehen, welche in den Holzdeckeln der indischen ähnelte. Wenn aber *I-tsing* den Teil indischer Chirurgie, welcher *śālākya* genannt wird, durch Akupunktur umschreibt, so hat er sicherlich seine heimische Medizin im Sinn. Vielleicht ist er durch die indische Wortbildung oder jenes nadelförmige spitze Instrument *śālākā*, dazu verleitet worden, welches zur Bezeichnung jener Chirurgie Anlass gab und hauptsächlich bei der Staroperation verwandt wurde. Sachlich muss hierzu betont werden, dass die Akupunktur auf den ostasiatischen Kulturkreis beschränkt geblieben ist, jedenfalls der indischen Medizin fremd war. *I-tsing* ist sich dieser Verhältnisse auch scheinbar etwas bewusst: „In the healing arts of acupuncture and cauterization [wegen dieser Anreihung = Moxibustion] and the skill of feeling the pulse China has never been superseded by any country of *Gambudvīpa* (India).“ Das Fühlen des Pulses, welches hier erwähnt wird, beansprucht gleichfalls Beachtung. Es ist der indischen Medizin ebenso im 7. Jahrhundert fremd und wird von *Vāgbhaṭa* nicht angegeben (Jolly, *Medizin*, 8). Nebenher bemerkt beweist diese Stelle, dass jene Diagnostik nicht aus dem Westen in die indische Medizin Eingang gefunden haben muss. Um 1300 dürfte sie schon allgemein bekannt gewesen sein, weil im *Prabandhacintāmaṇi* des *Merutunga* (ed. Rāmacandra Śāstrin, 135; Übers. Tawney, 81) ein Arzt *Līla* erwähnt wird, welcher den Puls sah oder beobachtete (*nāḍidarśana*).

Schwerwiegender sind die Unstimmigkeiten beurteilt worden, welche die Reihenfolge der Teile des *Āyurveda* im *VāS* und *VāH* betreffen gegenüber der Anordnung nach *I-tsing*, da letzte mit *SuS*, *Sūtra* 1, 7 ff. bis auf einen Wechsel unter zwei Gliedern übereinstimmt. [Das Ergebnis der laufenden Untersuchungen hier dürfte dies auffällige Verhältnis in einem anderen Lichte erscheinen lassen.] Die hierauf beruhenden Bedenken seitens Jolly (*JRAS.* 1907, 172–175), ob *I-tsing* auf *Vāgbhaṭa* tatsächlich anspielt, hat Hoernle (*JRAS.* 1907, 413–417) nicht gänzlich beheben können. Aber streng genommen, ist die obige Reihenfolge in der *SuS* erst durch die Kommentare um die Wende des 1. Jahrtausend gesichert. Dagegen weist die Anordnung der Teile des *Āyurveda* wieder neue Abwandlungen auf, mit welchen die *SuS* in der arabischen Literatur im Jahre 850 auftaucht (cf. Meyerhof, *Isis*, 1931, S. 43 d. Separats). Jede ein-

Immerhin ist es aber doch auffällig, dass der Arzt nicht namentlich genannt wird, welcher diese anerkannte Entwicklung auslöste. Somit bleibt für einen Ausgleich nur die sachliche Verbindung von „eight arts“ und „epitomized“ zum Titel *Aṣṭāṅga-Saṃgraha* (Zusammenfassung der 8 Glieder — sc. der Medizin — *VāS*) übrig. Diese Gleichung ruht zwar auf einem Gemeinplatz, welchen auch andere Überlieferungen für sich in Anspruch nehmen. Sie ist aber doch auf *Vāgbhaṭa* eingeengt, weil allein unter allen übrigen Lehrsammlungen die ihm zugeschriebenen beiden Werke, *VāS* und *VāH*, mit ihrem Beginn von der Achtgliederung ausgehen und diese im Text durchführen.

Eine weitere Bindung der Aufmerksamkeit des religiösen Pilgers kann wohl in den buddhistischen Anspielungen im *VāS* erblickt werden. Bei seiner vereinzelt und schlechten Text-Überlieferung könnten zwar nachträgliche Zusätze in Rechnung gezogen werden.¹ Die spätere und abhängige *VāH* weist jedoch die buddhistische Tendenz in noch stärkerem Grade auf.² Deshalb hat wohl auch *VāH* in den tibetischen Tanjur Aufnahme gefunden. Ihre Einverleibung vollzog sich nach Huth im 11. Jahrhundert, gemeinsam mit zwei kommentativen Werken.³ Ein Kommentator, *Candra-nandana*, lässt sich ins 8. Jahrhundert datieren unter der

Es nützt hierbei auch nicht eine bodenständige Tradition, in der die Reihe des *Ayurveda* in zwei Teile zerlegt werden, welche die fünf ersten *sthāna* (unter Vereinigung von *nīdāna*- und *śārīra*-) umfassen und das *Uttaratantra* in seine vier Hauptgruppen auflösen (cf. Mukhopādhyāya, *Hist. of Ind. Medicine*, 589).

¹ Die Handschriften des *VāS* sind selten, sein Textbestand wird nur durch einen Kommentar — mutmasslich jüngeren Alters — gesichert, durch *Indumatī* bzw. „Indu“ (Trichur, 1924-6). Ein unvollständiges Kommentar (*vyākhyā*) mit unsicherem Bezug birgt the Government Library Madras (Nr. 13071); ebendort ein homonymisches einschlägiges Wörterbuch (*nighaṇṭu*; Nr. 13256). Damit wären wohl Weiterungen zu den kurzen Ausführungen von Cordier (*Muséon*, 1903, 14/15) erschöpft.

² Eine gute Übersicht bietet Cordier, *J.A.* 1901, 167 ff. Nebenher bemerkt weicht der Beginn der Textausgabe Trichur von der Bombay 1888, welche sehr unzugänglich ist, nicht unerheblich ab.

³ *Catalogue of the Manuscripts of the Asiatic Museum*, Berlin. 1895, 270, 283; *ZDMG.* 1895, 280-281.

Voraussetzung, dass sein tibetischer Name *Zla-ba-la dga-ba* mit dem *Zla-ba[-la] mñon-dga*, identisch ist, einem Gefährten des *Vairocana*, welcher letzter während der Regierungszeit des Königs *Khri-sron-ldeu-btsan* die vier *Tantra* (*rgyud-bzhi*) der Medizin nach noch unbekannten Sanskritquellen übersetzte.¹ Wenn darnach die Zeit des *Candranandana* und seines Kommentars *Padārthacandrikā* richtig berechnet ist, so müssten die Daten für *VāH* und *VāS* nahe beieinander liegen, da *I-tsing* den letzten kurz vor seiner Reise im 7. Jahrhundert entstehen lässt.

Dieser zeitlichen Nachbarschaft der beiden Werke würde die Annahme nur eines einzigen Autors entsprechen; und so reflektieren die Kommentare der *VāH*, in deren Kolophon sich der Verfasser als *Vāgbhāṭa*, Sohn des *Siṃhagupta* bezeichnet. Gegen Ende des *VāS* wird auffällig eingehend gesagt: „Mein Vaters-Vater, dessen Namen ich trage, war der hervorragende Arzt *Vāgbhāṭa*; sein Sohn war *Siṃhagupta*, von diesem stamme ich ab; in den Indus-Landen bin ich geboren. Von dem würdigen *Avalokīta* und meinem würdigeren Vater lernte ich —“ (*Uttara* = Bd. 3, 480b: *bhiṣagvaro vāgbhāṭa ity abhūn me pitāmaho nāmadharo 'smi yasya | suto 'bhavat tasya ca siṃhaguptas tasyā 'py ahaṃ sindhuṣu labdhajanmā || samadhigamya guror avalokitāt gurutarāc ca pituḥ* —). Sachlich liegt demnach die Annahme der Werke einer Arztfamilie nahe. Da andere Überlieferungen von einem alten (*vrddha*) *Vāgbhāṭa* berichten, so werden jetzt im Allgemeinen zwei Verfasser mit dem selben Namen angenommen. Nur Jolly verhält sich gegenüber der Unterscheidung einer älteren und jüngeren Autor-Person zurückhaltend, weil die Bezeichnung *vrddha* sich nicht so selten nur auf den Lehrniederschlag bezieht. Für diese Ansicht würde der Umstand sprechen, dass *Arunadatta* in seinem Kommentar zu *VāS*, *Śārīra*- 1, 5 den Schluss des Textes von

¹ Csoma de Kőrös, *JASB.* 1835, 1 (cf. auch Sarat Chandra Das, *JASB.* 1881, 224 ff.). Über die Anwesenheit von Ärzten in jener Zeit: Laufer, *Die Bruža Sprache* (Sep.) 46.

VāS, *Śārīra*- 1 (Bd. 1, 286a) unter der Quellenangabe : *saṃgraha* zitiert und derselbe Beleg mit dem Verweis : *vṛddha-Vāgbhaṭa* von *Ḍallana* im Kommentar zu *SuS*, *Śārīra*- 2, 36 aufgeführt wird.¹

In der nichtärztlichen Überlieferung, dem *Prabandhacintā-maṇi* des *Merutunga* (1306), taucht das Werk wieder auf, *Vāgbhaṭa* genannt (*vāgbhaṭanāmā*), welches sein Verfasser nach seinen eigenen Erfahrungen (*nijānubhūta* bzw. *°anubhūta*) schuf. Auffälligerweise werden daran anschliessend die Verfasseramen in Prākṛitform aufgeführt : Der Schwiegersohn, der junge *Bāhaḍa*, kam mit seinem Schwiegervater, dem alten *Bāhaḍa*, an den Königshof des *Bhoja*.² Die Unstimmigkeit bei der Entstehung der Lehre und bei den verwandtschaftlichen Beziehungen gegenüber der ärztlichen Tradition haben aber nicht die Bedeutung, wie der Versuch einer zeitlichen Bestimmung. Denn diese scheinbare Geschichtsdarstellung stellt eine Sammlung von Erzählungen und Anekdoten dar, welche sich um die Gestalt des berühmten Königs von *Dhārā* (11. Jahrhundert) ranken, „wobei der Verfasser vor keinem Anachronismus zurückschreckt.“³ Darauf weist bereits das Vorwort der Übersetzung von Tawney verschiedentlich hin, von welcher Cordier bei seiner Datierung der *Vāgbhaṭa* ausging. Die Berechnung von Huth verdient daher eine Bevorzugung.

¹ *Ḍallana* verfasste seinen Kommentar zur *SuS* etwa im 12. Jahrhundert, *Aruṇadatta* den seinem zur *VāH* im Anfang des 13. Jahrhunderts. Die Zeitangaben entsprechen den Berechnungen von Hoernle, welcher die chronologische Seite der zahlreichen Kommentare der alten medizinischen Werke besonders eingehend bearbeitet hat. Seine Ergebnisse werden auch später benutzt, ohne auf Einzelheiten einzugehen.

² Edit. Rāmacandra Śāstrin, 314-5 : *tasya jāmātā 'pi laghubāhaḍaḥ svasurena bṛhad-bāhaḍena saha rājamaṇḍire prayātaḥ*.

³ Winternitz, *Gesch. Ind. Litt.*, II, 332. Soweit die Medizin in Betracht kommt, erscheint der Palast des *Bhoja* als ein legendäres Sammelbecken. Dem König selbst wird eine ärztlich-schriftstellerische Liebhaberei zu geschrieben. Nach einem ähnlichen Geschichtswerk des 16. Jahrhunderts, dem *Bhoja-Prabandha* des *Ballāla* (Calcutta, 1872, 105) trepanieren die beiden Götter-Ärzte *Aśvin* den Schädel des Königs wegen Kopfschmerzen ; das Motiv ist wohl der bekannten *Jivaka*-Legende entnommen.

Die Zeitfrage wird aber geklärt durch die Anhaltspunkte in der arabischen Literatur, in welcher mittelbare oder unmittelbare Übersetzungen indischer medizinischer Fachwerke auftauchen. Aber gerade die Bestimmung von *Vāgbhata* durch die arabische Bezeichnung *Asānkar*, *Asātkar* u.ä. bot Hindernisse bei der Sicherung der Bezeichnung selbst und der Wahl unter *VāS* oder *VāH*.¹ Erst die Beachtung des philosophisch-medizinischen Lehrbuches *Firdaus al-ḥikma* des 'Alī ibn Rabbān at-Ṭabarī (850) löste die Zeitfrage. Im Kapitel 333 nennt dieser persische Arzt die Quelle *Aṣṭāṅgahradī*,² deren Gleichheit mit der gebräuchlichen Abkürzung *Aṣṭāṅgahṛdaya* wohl keiner weiteren Begründung bedarf. Nach dem analytischen Überblick scheint sich der Übersetzer nur auf einen Teil des *Sūtra* im *VāH* zu beschränken und in den Abschluss des Sonderteils auch andere Quellen verarbeitet zu haben, deren Behandlung über das vorliegende Thema hinausgeht.³ Die älteste Erwähnung des Titels *Aṣṭāṅgahradī* (= *VāH*) um 850 beweist das Bestehen dieser Medizinlehre vor dem genannten Datum und unter Berücksichtigung der Angaben des *I-tsing* ist die Zeit des oder der *Vāgbhata* in das 7. Jahrhundert zu setzen. Diese Berechnung kann — wie im folgenden gezeigt wird — als die gesichertste Zahl unter allen Überlieferungen der altindischen Fachmedizin gelten.

Als zweiter in der Reihe der drei alten Ärzte gilt in der Überlieferung allgemein *Suśruta*, welcher als Sohn oder Nachkomme des vedischen Sängers *Viśvāmitra* angesprochen wird.⁴ Sein Name erscheint nach dem Wortsinn gedeutet

¹ August Müller, *ZDMG.* 34, 476 (das 12. Buch des *Ibn Abī Uṣeibi'a*). Flügel, *ZDMG.* 11, 151: *Asānkar*.

² Meyerhof, *ZDMG.* 1931, 64.

³ Meyerhof, *Isis*, 1931, Separat 44–45.

⁴ Der oft angeführte Beleg für die Abstammung des *Suśruta* von *Viśvāmitra* ist legendär im *Mahābhārata*, *Anuśāsana Parva*, 4, 55. Winternitz, *Gesch. d. ind. Litt.*, I, 364, beurteilt zudem das 13. Buch: „Es trägt alle Spuren eines recht modernen Machwerkes an sich“. Ähnlich ist im *Garuḍapurāṇa* (145, 43) der Abschluss der genealogischen Legenden zu bewerten, vor dem Beginn der sogenannten *Dhanvantari-Saṃhitā*. In

im *Bhāvaprakāśa* (S. 8/9), wo seine Lehre nach ihm *suśruta* = gut-gehört, d.h. berühmt genannt wird. In diesem Wortspiel liegt aber wohl doch ein engerer Bezug zur Entstehung des Namens. Denn in ähnlicher Form, als *suśrota* (etwa: gelehrt), erscheint sein Name zu Beginn des 25. *Sūtra*-Kapitels der *Bhēlasaṃhitā*.¹ Und Hoernle räumt seiner Bezeichnung im Bower-Manuskript (BM) wiederholt die Art eines Epithets ein.² Auch in ausserärztlicher Literatur, im *Daśakumāracarita*, wird unter den zahlreichen Namen mit Wortsinn ein Minister *Suśruta* mit seinem Sohne *Viśruta* erwähnt.³ Die Benennung des alten Arztes weist daher ein recht verwaschene Gepräge für einen bestimmten Eigennamen auf.⁴

Aus dem BM hat nun Hoernle zwei Rezeptgruppen in Verbindung mit Textstellen der *SuS* gebracht und darnach die Kenntnis der *SuS* bei dem Verfasser des BM vorausgesetzt; da diese alte Handschrift schriftkritisch für das 5. Jahrhundert einigermassen gesichert ist, so müsste der Bestand der *SuS* einige Zeit zuvor annehmbar sein. Die

der *SuS* selbst wird die angeführte Abstammung in *Cikitsā* 2, 3 erwähnt, wobei der Textlaut von *Dallana* dahin nicht belegt ist; mit dieser Sicherung im Nachtrag: *Uttara*- 18, 3 und 66, 4. Nach diesen Quellen kann die Genealogie nicht als geschichtlich und alt angesehen werden.

¹ *Suśrotā nāma medhāvī cāndrabhāgam uvāca ha* |.

² *JRAS.* 1909, 883 und *Bibl. Ind.* fasc. 911, 2 (Anm. 3).

³ Vgl. Register zu der Übersetzung: Hertel, *Die zehn Prinzen*, Leipzig, 1922.

In einer Inschrift aus *Kamboja*, auf einer Stele des Königs *Yaśovarman* (also in einer Zeit, als die *SuS* auch in arabischen Übersetzungen bekannt wurde) wird *Suśruta* erwähnt. Veröffentlichung in *Notices et extraits des manuscrits de la bibliothèque nationale*, etc., xxvii/1, 319 ff. und 391 ff. (Paris, 1885). Text (398) 49: „*suśrutoditayā vācā samudācārayā eko vaidīyaḥ paratrāpi prajāvyādhiṇ jāhāra yaḥ* ||“. Übers. Bergaigne (406/7) 49: „Avec une parole qui était l'expression d'une science excellente [qui avait été prononcé par Suśruta], et dont l'essence était la sagesse, médecin unique en son gendre, il guérissait les maladies de ses sujets, même pour l'autre monde.“ Auch hier besteht eine deutliche Betonung des Wortsinnes von dem Namen *Suśruta*.

⁴ Vielleicht kann in *Suśruta* ein ähnlicher Deckname angenommen werden, wie ihn *Mādhava* (als Abkürzung von *Mādhavakara*) darstellt; letzterer wird von Hoernle (*JRAS.* 1906, 288/9) dem *Vṛnda* gleichgesetzt.

Übereinstimmung der angeblich entlehnten Rezepte im BM mit den Belegen aus der *SuS* ist jedoch so gering, dass nicht schlechtweg von Zitaten gesprochen werden kann; und wenn Hoernle glaubt, dass in BM eine zuverlässigere Textüberlieferung vorläge gegenüber der heutigen Form der *SuS*, so ist diese Annahme doch eine Hypothese, welche bei der Gleichung die Voraussetzung zum Beweis benutzt.

Die eine Gruppe des BM ii, 407-8, 409-10, 411-12, wird auf *SuS*, *Uttara*- 40, 37b-38a, 37a und 47b bezogen, wobei die Angleichung sich auf einige Aufzählungen nicht gerade seltener Heilmittel beschränkt und zwar für die Erkrankung *āma-atīśāra*, dem „Durchfall des Rohen“ (*āma*; unverdaut). Die Krankheitsbezeichnung weist auf sehr alte physiologische Anschauungen¹ und bietet keine inhaltliche Einengung für die *SuS*. Die andere Gruppe, BM ii, 829-830a, 833b-84a, 834b-835a soll *SuS*, *Cikitsā*- 26, 30b-31a, 23 und 24 ungefähr wiedergeben; sie betrifft Aphrodisiaca, also einen alten Gemeinplatz indischer Fürsorge. In beiden Fällen kommt nicht die chirurgische Eigenart der *SuS* zum Ausdruck. Mit der selben oder sogar näher liegender Berechtigung kann gefolgert werden, dass in der *SuS* wie im BM in beiden Belegen altes Heilgut der Ärzte Aufnahme gefunden hat, dass sich aber aus einem Vergleich weder eine Abhängigkeit noch Priorität auf dieser oder jener Seite beweisen lässt.

Die erste der zuvor angeführten Gruppen soll auf den Teil der *SuS* anspielen, welche als *Uttaratantra*, d.h. als Supplement, dem ursprünglichen Teil nachträglich angegliedert wurde. Einer solchen Sachlage entsprechen mehrfach Textstellen.² Der Name des Arztes aber, welcher die alten

¹ Vgl. *Die Medizin im Rg-Veda*, 331, 334, 338 (Asia Major, 1930).

² In *SuS*, *Sūtra* 1, 39, 40, 3, 3, 29a, 4, 5 wird von den 120 *adhya* gesprochen, welche die 5 *sthāna* des ersten Anteiles ausmachen (3, 3), das *Uttaratantra* (1, 40, 3, 29) erscheint als Supplement abgesondert. Auch das (5.) *Kalpasthāna* schliesst den, ersten, hauptsächlichsten Anteil mit einem Hinweis auf die 120 Kapitel ab (8, 140a), worauf das *Uttaratantra* einleitend wieder anspielt (1, 3), jedoch entgegen dem bisherigen Bezug auf die Lehren des *Dhanvantari* einen neuen Quellenautor, *Nimi*, den König von *Videha* (1, 5a), wenigstens für die nächstfolgenden Kapitel (*sālākya-tantra*) anführt.

Anteile ergänzt und mutmasslich das ganze Werk dabei zum ersten Mal überarbeitet hätte, ist nicht bekannt. Er wird allgemein als *Suśruta*, der Zweite, normiert und in mehr oder weniger deutlichen Zusammenhang mit *Nāgārjuna* gebracht, welch letzten *Dallana* in seinem Kommentar zu *Sūtra*-1, 1-2 in diesem Sinne erwähnt.¹ Unter *Nāgārjuna* wurde der berühmte buddhistische Lehrer aus dem (mutmasslich) 2. nachchr. Jahrhundert verstanden. Ausser religiösen Abhandlungen werden ihm unter anderen zahlreiche medizinische Werke zugesprochen. Cordier weist bereits auf wenigstens zehn hin.² Ihr Charakter, welcher zum gut Teil eine Art von Alchemie widerspiegelt, lässt sich jedoch schlecht mit dem hauptsächlichen Inhalt der *SuS* verbinden. Ein Bericht des *al-Bīrūnī* (um 1030), nach welchen ein Vertreter (der *Rasāyana*-Kunst) gleichen Namens im 10. Jahrhundert zu Daihak bei Somnāth gelebt hätte, hat zu einer kritischen Spaltung hinsichtlich der Person geführt.³ Und in jüngster Zeit werden in Indien sogar vier Persönlichkeiten hierbei angenommen.⁴ Wird die Eigenart altindischer Geschichtsüberlieferung berücksichtigt, wie sie beispielsweise bei *Bhoja* zuvor (S. 795) gestreift wurde, so lässt sich wohl eine legendäre Vereinigung verschiedenen Materials um die Person des Lehrers des *Mādhyanika*-Systems verstehen. Diese zeitliche Übertragung kann durch eine Übereinstimmung von Autoren-Namen erleichtert worden sein, auch durch Aufnahme und Überlieferung medizinischer Belange durch den Buddhismus, welcher nach dieser Richtung lebhaften Anteil nahm.

Diese erste nachweisbare Überarbeitung und Ergänzung der *SuS* kann somit weder hinsichtlich ihres Verfassers

¹ Vgl. auch Cordier, *Muséon*, 1903, 12-13.

² Vgl. Cordier, *Nagarjuna*, etc., 2-3.

³ Sachau, *Alberuni's India*, i, 189 (London, 1888).

⁴ Sankara Menon, *Bhadanta Nagarjuna's Rasa Vaiseshika Sutra* (Trivandrum, 1929), Introduction 8: „It is also seen, that there were in ancient days three or four Nagarjunas who were, curiously enough, all of them physicians and Buddhist Sanyasins.“

noch hinsichtlich ihres Alters bestimmt werden. Als ihr imponierendes Moment, womit sie auch beginnt, erscheint die sogenannte kleine Chirurgie, hauptsächlich die der Augen, für welche gegenüber den vorlaufenden Lehren des *Dhanvantari* (bzw. des Königs von *Kāśī*) ein neuer Quellenautor angegeben wird, [*Nimi*], der König von *Videha*. Darnach kann — wenn auch nicht ohne einen gewissen äusseren Zwang — gefolgert werden, dass ursprünglich zwei Arten chirurgischer Überlieferungen vorgelegen haben. Nach der technischen Seite können beide Traditionen in der sehr ausgebildeten Instrumentenlehre der *SuS*, *Sūtra*- 7-8 vereinigt worden sein. Bei den getrennten Anteilen in der *SuS* lässt sich aber inhaltlich schwerlich annehmen, dass im Rahmen der hervorstechenden Eigenart der *SuS* ein angeblich älterer Teil, die „grosse“ Chirurgie (*śalyatantra*) in grauer Vorzeit (nach Hoernle um 600 v. Chr.) entstanden wäre und über ein halbes Jahrtausend auf seine Ergänzung durch das *śālākyaatantra* hätte warten müssen.¹

Die Chirurgie der Inder taucht in der *SuS*, ohne jeden wesentlichen Vorgang oder erkennbare stufenweise Entwicklung, in voller Ausbildung auf, zeigt in den weiteren Überarbeitungen in *VāS* und *VāS* keinen sachlichen Fortschritt und in späteren Zeiten sogar einen Verfall.² Diese Beobachtung darf wohl dahin gedeutet werden, dass hier

¹ Gegen die hohe Datierung Hoernles wendet sich Keith in *ZDMG.* 1908, 136.

² Im vorletzten Kapitel des *Bhāvaprakāśa* (*madhyakhaṇḍa*, S. 189: *mūḍhagarbhāśya cikitsā*) wird nicht mehr der Arzt als Geburtshelfer erwähnt, sondern die Frau (*nārī*), und zwar soll sie auch bei dem gefürchteten Absterben des Kindes mit dem Messer (*śastra*) eingreifen. — Die Berichte über chirurgische Belange in weitester Bedeutung tragen bei den nördlichen und östlichen Nachbarn der Inder einen sagenhaften Charakter, auch beispielsweise in der medizinischen Literatur der Chinesen, wie in der Lebensbeschreibung des chinesischen Arztes *Hoa T'ouo* (Übers. v. Hübotter, *Mittlg. d. Deutsch. Gesellsch. f. Ntr. u. Völkerkd. Ostasiens*, 32, Tokyo, 1926). Immerhin mag, vielleicht unter einer mittelbaren Abhängigkeit von Indien, einmal Anteilnahme für Chirurgie bestanden haben, welche aber nicht bodenständig wurde (vgl. *Die Krankheits- und Heilgottheiten des Lamaismus*, Anthropos, 1927, 978, Anm. 112).

Fremdgut in die indische Medizin Aufnahme gefunden hat. Einen Fingerzeig bietet vielleicht das *Awesta*, welches von Ärzten spricht, welche mit dem Messer heilen, die vermutlich Griechen am persischen Königshof gewesen sind.¹ Jedoch lassen die Texte der *SuS* und Folgen inhaltlich keine sicheren Nachweise einer Übertragung griechischer Chirurgie erkennen. Auch buddhistische Überlieferungen, welche verschiedentlich Berührungspunkte mit dem Westen durchschimmern lassen, helfen auf chirurgischen Gebiet nicht ausschlaggebend weiter. Mit dem Mangel eines gesicherten inhaltlichen Bezuges zu einer Umgebung versagt also auch nach dieser Richtung der Versuch zu einer zeitlichen Umgrenzung der alten *SuS*.

Der Mangel einer Bodenständigkeit der Chirurgie macht es erklärlich, dass sich an die *SuS* ungewöhnlich viele Ausführungen kommentierenden Charakters anschlossen.² *Dallana* baut gemäss seinen Eingangsworten seine Erläuterungen allein auf denen von fünf Vorgängern auf (*Jejjata*, *Gayadāsa*, *Bhāskara*, *Mādhava*, und *Brahmadeva*) und gibt diese Sachlage auch durch die Bezeichnung seines Kommentars (*Nibandha--Samgraha*) wieder.³ Nach Hoernle würde

¹ *Yast* 3, 6 und *Vendidād* 7, 44.

² *Dallana*, etwa 12. Jahrhundert, sichert bekanntlich den gesamten Textbestand der *SuS*, da die *Bhānumatī* aus der Mitte des 11. Jahrhunderts von *Cakrapānidatta* nur bis Ende *SuS*, *Sūtra* reicht; die Hoffnung, dass die vollständige Handschrift der *Bhānumatī* aus einer Sammlung in Benares (Cordier, *Muséon*, 1903, 12) noch gefunden wird, kann wohl begraben werden. Über andere Kommentare vgl. Jolly, *ZDMG.* 1904, 114–16, 1906, 413–68; Hoernle, *JRAS.* 1906, 283–302, 699–700.

³ In der *SuS* ist natürlich nicht ausschliesslich die Chirurgie abgehandelt; in ihr ist auch vieles andere Material enthalten, was sich auch in anderen *Sanhitās* findet und was sich zeitlich in ein hohes Alter zurück verfolgen lässt. Inhaltlich erscheint aber die Chirurgie in der *SuS* nicht nur vorherrschend, sondern sie wird auch zu Beginn (*Sūtra* 1, 7, 8) auffällig an erster Stelle genannt und anschliessend in ihrer Bedeutung betont. Andererseits beschränken sich die kommentierenden Erläuterungen nicht ausschliesslich oder überwiegend auf die chirurgischen Stellen, sondern erstrecken sich über den ganzen Textbestand. Man gewinnt aber doch den Eindruck, welcher oben wiedergegeben ist, dass die Besonderheit der *SuS* in ihrer chirurgischen Färbung die Häufigkeit der Erläuterungen hervorgerufen hat, welche bei keiner anderen Lehrsammlung der Medizin in diesem Ausmass nachweisbar ist.

durch den Bezug zu *Mādhava*, dem bekannten Verfasser des *Nidāna*, welcher höchstwahrscheinlich *Vṛnda* geheissen hat, und *Jejjāta* als obere Grenze etwa das 7. Jahrhundert n.Chr. erreicht werden. Und wenn anerkannt wird, dass die chirurgischen Belange zu jener Steigerung der kommentierenden Tätigkeit beigetragen haben, so ist es wenig glaubhaft, dass die *SuS* bereits viele Jahrhunderte vorher bestanden hätte. Die naheliegende Folgerung eines kurzfristigen Abstandes zu der Reihe der Kommentare würde aber anderseits wieder der Beobachtung entsprechen, dass im BM die Bezeichnung *suśruta* lediglich als ein Beiwort und nicht als Personennamen aufzufassen ist. Weniger Bedeutung hat der Hinweis auf einen inhaltlichen Mangel des BM hinsichtlich eines chirurgischen Bezuges, da die betreffenden Teile der Handschrift der rezeptuellen Heilkunde dienen. Der vorlaufende Überschlagn eines Versuches zeitlicher Berechnung vermeidet absichtlich Stützpunkte aus legendären Überlieferungsmaterial. Aber auch die Bemühung mit rationell-sachlicher Wertung führt in der schwierigen Bestimmung zeitlicher Umgrenzung der *SuS* zu keinen gesicherten Ergebnissen. Es ist aber doch immerhin wahrscheinlich, dass die chirurgische *Samhitā* vor dem 7. Jahrhundert und nach dem BM entstanden ist.¹

Die Darstellungsart der *SuS* ist kurz, die der *Caraka-Samhitā* (*CaS*) dagegen ausführlich, *SuS* führt selten abweichende Lehrmeinungen an und dann in der Regel eingeschränkt auf anscheinend gleichzeitige Unstimmigkeiten. *CaS* dagegen behandelt diese Vorgänge breiter, nicht selten unter einer Art entwicklungsgeschichtlicher Rückblicke. Diese Sachlage mag dazu beigetragen haben, die *CaS* als älter

¹ An sich kommt hierbei nicht die Zeit der Niederschrift des BM in Betracht, sondern jene der Gültigkeit ihres Inhaltes. Es ist aber kaum denkbar, dass im Randgebiet indischer Kultur und zu Heilzwecken die Nieder- oder Abschrift erfolgt wäre im Gegensatz zu einer Sachlage originaler Art, bei welcher in Mutterlande Indien *Suśruta* (bzw. die *SuS*) so allgemein bekannt und geachtet gewesen wäre, wie dies gegen Ende des ersten Jahrtausend nachweisbar ist.

zu betrachten, wie dies in der bodenständigen Überlieferung geschieht. Zur Bestimmung der Lebenszeit des *Caraka*, als Verfasser der *CaS*, ist eine Stelle der chinesischen Übersetzung (472 n.Chr.) des *Tripitaka* benutzt worden. Das indische Original dieses buddhistischen Werkes ist unbekannt. Hier kommt der berühmte Arzt *Tsche-le* (= *Cara*; *Tsche-lo-kia* = *Caraka*) an den Hof des Königs *Ki-ni-tsch'a* (= *Kaniṣka*), welcher letzter im Buddhismus eine Rolle spielte und mutmasslich im 2. nachchrstl. Jahrhundert gelebt hat. Der Höhepunkt der ärztlichen Leistung des *Tsche-le* wird nach der Übersetzung von Lévi¹ folgendermassen geschildert:—

„Peu de temps après, l'épouse favorite du roi s'aperçut, qu'elle était enceinte. Au bout de dix mois, elle mit au monde un enfant mâle, qui était mort-né. La mère était en danger de mort, car l'enfant se présentait renversé; comme il s'était retourné, la mère accouchait ainsi. Alors Tsche-le introduisit sa main dans la matrice, dégagea l'enfant de son enveloppe, et le tira dehors. La mère éprouva alors du repos et du bien-être.“ Der Arzt warnt den König vor neuer Cohabitation wegen Gefahr der gleichen Folgen,² welche dann auch eintreten: „elle mit au monde un fils avec les mêmes douleurs qu'auparavant,“ und anscheinend unter derselben Encheirese des Arztes beendet werden, wenn auch dies nicht ausdrücklich gesagt wird. *Tsche-le* verlässt darauf den König unter den sich ergebenden, buddhistisch gefärbten Beweggründen.

Bei der bisherigen Anerkennung des *Tsche-le* als Verfasser der *CaS* ist der Mangel jeglichen Bezuges zum Buddhismus im Text der *Samhitā* hinderlich. Zum wenigsten hätte doch eine Anspielung buddhistischer Färbung gerade im dem *sthāna*, welche die Geburt behandelt, erwartet werden dürfen.

¹ „Notes sur les Indo-Scythes“: J.A. 1896, 481.

² *Kauṭilya* zeigt in seinem *Arthaśāstra* 13 (edit. Shama Sastry: 33, 15; Übers. J. J. Meyer: 40, 20), dass der Arzt des Königs sich als „Kinderarzt“ (*kaumārabhṛtya*) bereits um die Schwangerschaft der Königin zu kümmern hat.

Auch hier besteht eine durchaus brahmanische Grundlage ; sie ist nachträglich in Richtung verschiedener philosophischer oder weltanschaulicher Systeme erweitert worden, bietet aber keinerlei Anhaltspunkte für eine Beachtung des Buddhismus seitens des (oder der) Verfasser.

Die medizinische Sachlage bedarf einiger Ausführungen. Zunächst muss nach dem Wortlaut der obigen Übersetzung angenommen werden, dass das Kind der Königin sich [selbst] dreht und darnach die Niederkunft [spontan] erfolgt. Der Arzt *Tsche-le* scheint nach Abschluss der Geburt erst einzugreifen. Diese sinnwidrige Störung dürfte vielleicht dadurch veranlasst sein, dass der chinesische Übersetzer nicht Arzt war und die Sachlage unrichtig schilderte. Es könnte angenommen werden, dass der Sanskrittext ordnungsgemäss den Geburtsakt durch Kunsthilfe des Arztes beendigen liess.

Die weitere Frage läuft auf einen entsprechenden Nachweis dieser Kunsthilfe in der *CaS* hinaus. Das *Śārīrasthāna*, sehr zusammengesetzt, behandelt in einem wesentlichen, alten Anteil den Vorgang der Geburt, diese selbst und Weiterungen. Es ist nun niemals bestritten worden, dass sich in den Texten der *CaS*, welche die eigentliche Niederkunft und ihre unmittelbaren Folgen betreffen, keinerlei Eingriffe erkennen lassen. Wohl aber hat Jolly (*WZKM.* 1897, 165) den Nachweis der Operation des *Tsche-le* in *CaS*, *Śārīra*- 8, 30 erblickt, wenn er auch trotzdem darnach die Identität des Leibarztes des Königs *Kaṇṣka* und des Verfassers der *CaS* für zweifelhaft hält, im Gegensatz zu Lévi. Wird dieser vereinzelte, berühmte Beleg für eine operative Geburtshilfe des *Caraka* näher untersucht, so kann es nicht zweifelhaft sein, dass diese Stelle — welche der Sachlage in allen übrigen alten Anteilen der *CaS* widerspricht — nachträglich eingeschoben worden ist.¹ Das kann durch *Dṛdhabala* geschehen

¹ Die eigentliche Embryologie beginnt in *CaS*, *Śārīra*- 4, 9 mit dem 1. Monat und schliesst unter Einschüben mit dem 10. Monat in 25. Nach der pathologischen Seite der Schwangerschaft wird das Thema in *Śārīra*- 8 wieder aufgenommen, zumal betr. Abort im 2.-4. Monat (24-25); daran werden Regelwidrigkeiten angegliedert, wie übertragene (*upacīṣṭaka*)

sein, welcher nach Hoernle im 8. oder 9. Jahrhundert eine Überarbeitung und Ergänzung vorgenommen hat und dabei nach seinen eigenen Angaben auch andere Quellen ausgenutzt hat (*Siddhi*- 12, 79). Zudem ist der Sachinhalt so zusammengesetzt aus Einzelheiten, dass er auch nach dieser Richtung hin nicht zum alleinigen Stützpunkt der Verbindung mit der chinesischen Übersetzung gemacht werden kann.¹

Schwangerschaft, der „Schlangenbauch“ (*nāga-udara*). Für den 8. Monat wird das Absterben des Embryo besprochen, dessen Diagnostik zusammengefasst wird 29 : *myta-garbhāṃ itī vidyāt*. Hier könnte nun eine Behandlung zum eingengten Vorgang erwartet werden. Diese erfolgt aber nicht, sondern der Einschub, welcher nachfolgend besprochen wird. Auch eine kurze Zusammenfassung für den 2.-7. Monat kann noch als nachträglicher Zusatz oder Vorsatz angesprochen werden zur Rückkehr zum Thema betr. 8. bzw. 9. Monat. Es folgen dann die Vorbereitungen beim Abschluss der Schwangerschaft (Wöchnerinhütte, 32 : *sūtikāgāra*, vgl. *Arch. Geschichte d. Medizin*, 1928, 233 ff.) und die Erörterungen über die Niederkunft selbst und ihre Folgen (ab : 34).

¹ Jolly lässt nach Absterben des Embryo folgende „drei verschiedenen Verfahrensarten anwenden : „1. ein Verfahren zur Loslösung des Fötus von dem Mutterkuchen (Abortivmittel); 2. Besprechungen und andere im Atharvaveda vorgeschriebene Ceremonien; 3. Herausziehen des Fötus durch einen erfahrenen Operateur“. Der Text lautet : *tasya garbhāśalyasya jarāyu - pātana - karma saṃsamanam ityeke | mantrādi-karma atharvaveda vihitam ityeke | paridṛṣṭa-karmaṇā śalyahartṛā haraṇam ityeke |*. Jolly übersetzt *jarāyu* durch Mutterkuchen und kann sich dabei auf die Bedeutung in den Veden und ihren Folgen stützen. In *CaS*, *Śārīra*- 8, 30 ist die „Eihaut“ als *pars pro toto* aufzufassen. Das ergibt sich aus der Satzkonstruktion : *jarāyu* ist Nominativ, *śalyasya* der von diesem Subjekt abhängige Genitiv. Auch der Textinhalt spricht in gleicher Richtung : Die alten Ärzte der *Samhitā* unterscheiden bereits Lebewesen (-ja) aus der Eihaut und eine solche aus dem Ei, im Sinn der Eischale (*aṇḍa*), wie dies aus *CaS*, *Śārīra*- 3, 12, 13, 24 hervorgeht (vgl. *SuS*, *Sūtra*- 1, 22 u. 30; bis zu einem gewissen Grade auch *Śārīra*- 2, 54). Wie z.B. beim Vogelei nicht nur die Schale sondern auch der Inhalt einbegriffen ist, so muss oben unter *garbhāśalyasya jarāyu* als Gesamtf Frucht — in unentwickeltem Stadium — aufgefasst werden, von welcher das Mittel zur Befreiung (Beruhigung : *saṃsamana*) eine Ausstossung (*pātana*) ist, sobald sie krank geworden ist oder Schmerzen macht (nach dieser Bedeutungsrichtung weist *śalya*-). Unter zwei werden Sprüche u.s.w. aus dem *Atharvaveda* angewandt, ein alterprobtes Heilmittel bei der Geburt selbst. Und schliesslich wird noch die Entfernung durch einen erfahrenen Chirurgen angeraten, welcher noch durch den alten Namen Pfeilzieher (*śalya-hartar*) umschrieben wird, ein Ausdruck, welcher im Gegensatz zu dem wissenschaftlich-gebildetem Arzt zu stehen scheint. Es kann nun wohl nicht zweifelhaft sein, dass der Vorgang des Absterbens des Embryo

Die Ausführung der Begründung ist der Übersicht wegen in die beiden vorlaufenden Anmerkungen verlegt worden. Dazu kommen noch Zweifel, ob die Sachlage nach Lévi überhaupt richtig wiedergegeben worden ist in Hinblick auf Schwierigkeiten der Übersetzung eines chinesischen Textes, welcher sich mutmasslich an den unbekannten originalen Sanskrittext eng anlehnt und ein Fachgebiet behandelt. Wedemeyer übersetzt: „Als (die) zehn Monate voll waren, gebar sie ein männliches Kind; es war schon vorher tot und kam verkehrt aus dem Mutterleibe. Seine Mutter litt bittere Schmerzen [und] ihr Leben war in Gefahr; als [sie] sich infolgedessen herumwälzte, erfolgte plötzlich die Geburt solchermassen. Darauf führte Cheloh seine Hand in den Mutterleib, er löste die Nachgeburt und danach kam [diese] dann heraus.“¹ Aus dieser kritischen Stellungnahme geht

den Einschub im *CaS* hier äusserlich ausgelöst hat. Es ist jedoch en bloc eine grössere Ausführung eingeschleppt worden. Denn die oben genannten drei Heilmassnahmen stehen in einer inhaltlichen Abhängigkeit zu den drei folgenden diagnostischen Bezügen für den Embryo: 1. *āmagarbhā* = rohe (ungekochte, unentwickelte) Frucht, 2. *paripakka-garbhā* = umkochte (ausgereifte) Frucht, 3. *vimukta-garbhā* = ausgelöste Frucht. Es ist darnach möglich, dass bei 3 die operative Massnahme sich garnicht auf das Kind, sondern auf die Nachgeburt erstreckt. Dafür besteht aber nicht mehr ein Fachausdruck *jarāyu* sondern *aparā* in *CaS*, *Śārīra*- 8, 41–42 (ebenso in *SuS*, *Śārīra*- 10, 21 und *Cikitsa*- 15, 17). Endlich kommt noch dazu, dass der Textbestand für *CaS* hier nicht durch die alte Kommentierung seitens *Cakrapāṇidatta* gesichert wird. Allgemein ist noch eine Eigenart der *CaS* zu berücksichtigen, dass bei mehrfachen Lehrmeinungen u.ä. in der Regel eine abschliessende und gültige Stellung eingenommen wird, welche einer Autorität, oft dem *Ātreya*, in den Mund gelegt wird. Wenn also nach Jolly hier drei verschiedene Verfahren angeführt werden, darunter ein chirurgisches, was sonst in der *CaS* unbekannt ist, so müsste auch hier eine deutliche Beurteilung erwartet werden. Das ist nicht der Fall. Im Gegenteil könnte eine allgemeine Ablehnung aus dem Munde des *Ātreya* konstruiert werden, wenn der unmittelbar folgende Text in denselben Einschub eingegriffen wird (was allerdings aus inhaltlichen Gründen unwahrscheinlich ist).

¹ Infolge einer Reihe von Hindernissen traf die erbetene sinologische Beratung erst nach Abschluss des Manuskriptes ein, wurde aber wegen ihrer Bedeutung nachträglich eingeschoben. Der transkribierte Text lautet: *man tsuh shi yüeh sheng yih nan erh sien i ming chung tsung t'ai ch'uh ch'i nu k'u tung sing ming wei cho tsung hoü chun chuan sheng ché*

(ausser anderem) hervor, dass der Arzt lediglich die Nachgeburt entfernte, nachdem das Kind spontan geboren war.¹ Wenn

ju shi erh shi che-loh ju shou t'ai chung kié ch'i erh i jan hoü nai ch'uh.
Bei der umfassenden Bezeichnung *t'ai* kann die Übersetzung „Uterus“ erst spät zugelassen werden, es müsste dann aber ein Kompositum, die Beifügung eines determinativen Schriftzeichens (wie etwa Fleisch), erwartet werden. Nach Ansicht d. Verf. liegt hier also eine begriffliche Parallele mit dem Sanskritwort *garbha* vor. — *Tao* (im 4. Ton) = umkehren, umgekehrt etc. heisst in der Belegstelle zweifellos: kommt „umgekehrt“ heraus. Hinter diesen Worten ist ein Gedankenabsatz anzunehmen; das folgende ist die nähere Schilderung des Ablaufes. — Schwierig ist die Erklärung der Bedeutung des Halbsatzes *tsung hou chan chuan*. Die nächstliegende Übersetzung für *tsung hou* wäre: „von hinten“; *hou* kann auch „Geschlechtsteil“ bedeuten, demnach „aus der Scheide“. Das Kompositum *chan-chuan* hat Bedeutungen wie „drehende Bewegung, immer wieder, hin und her, wälzen (z.B. Gedanken)“, was auf die Mutter zu beziehen wäre. Diese ist im vorhergehenden Halbsatz logisches, und in dem nochmals vorhergehenden Halbsatz das grammatisches Subjekt. In diesem Zusammenhang macht die Bedeutung von *tsung hou* Schwierigkeiten. Mit Rücksicht auf die temporal-konditionale Abhängigkeit des Halbsatzes wäre zu übersetzen: als sie sich „daraufhin“ wälzte, da erfolgte plötzlich die Geburt solchermassen. *Ju-shi* (solchermassen) bezieht sich wohl auf *tao ch'uh* (kommt verkehrt heraus), und kann ausdrücken: ehe das Kind in die normale Richtung zurückgekehrt war. Das *ch'uh* zum Schluss ist intransitiv zu verstehen. Zu der Stellung der Kreisenden trägt Verf. nach: die zugänglichen Schilderungen chinesischer Überlieferung (Hübotter, *Shou-shi-pien*; Rehmann, *Zwey chinesische Abhandlungen über die Geburtshilfe*) reichen nicht in jene alten Zeiten als sichere Quellen hinauf. In *CaS, Śārīra*- 8, 36–37 ist eine Bettlage bei der Niederkunft anzunehmen, *SuS, Śārīra*- 10, 8 und *Cikitsā*- 15, 9 schreibt deutlich eine Rückenlagerung vor. Die ursprüngliche und volkstümliche Stellung der Kreisenden wird aber wahrscheinlich eine hockende gewesen sein (vgl. *Arch. Gesch. d. Medizin*, 1928, 242 ff. u. 268, Anm. 2; *Asia Major*, 1930, 342). Auf den tibetischen Lebensrädern (*bhava-cakra*) findet sich zuweilen eine Geburtsdarstellung, bei welcher sich die Mutter in der Schmerzsteigerung beim Durchschneiden des Kindes von ihrem Bett erhebt und in einer Stellung wie ein werfendes Vieh entbindet; das Kind wird somit von hinten in dem üblichen Tuch (oder Netz) aufgefangen. An diesen Vorgang kann bei der obigen chinesischen Übersetzung gedacht werden, welche indische Verhältnisse schildert.

¹ Eine Gefahr bei der Geburt eines umgedrehten Kindes (modern: in Steiss- etc. Lage) besteht in der Regel nicht für die Mutter, sondern für ihre Leibesfrucht, weil letzte meist ohne Hilfe dabei abstirbt. Um dieser Gefährdung vorzubeugen, erfolgt zur geeigneten Zeit modern die Exstruktion. Davon ist aber in der chinesischen Übersetzung mit keinem Wort die Rede, auch nicht in den wahrscheinlich späteren Texten der *SuS*. Der Leibarzt des Königs löst nur die Nachgeburt. Bei der Kinds-Hülle (*erh-i*,

schon vorher ein Zusammenhang zwischen dem chinesischen Bericht und den Texten der *CaS* in hohen Grade unwahrscheinlich war, so ermangelt die Ausführung durch Wedemeyer im gleichem Masse eines Zusammenhanges, welcher für eine Gleichung *Tsche-le* mit *Caraka* zu verwenden wäre.

Der indische Grammatiker *Bharṭṛhari*, welcher nach den Angaben von *I-tsing* 651 oder 652 starb,¹ erwähnt dreimal *Caraka* wohl als Arzt.² Da jedoch *Caraka* als ein Familienname betrachtet werden muss, so lässt sich auf eine so unbestimmte Nennung hin nicht die Person des angeblichen Verfassers der *CaS* zeitlich sichern. In dieser Hinsicht ist erst recht nicht seine Nennung zu verwerten, die aus sprachwissenschaftlichen Gründen *Pāṇini* (iv, 1, 105 ; 3, 107) bietet ; es werden hier Ableitungen von Namen vorgebracht, welche dem vedischen Kreis entstammen, darunter auch die des *Agniveśa*, welcher letzter u. a. auch in anderen sprachlichen Erläuterungen der Veden (*Prātiśākhya*) erwähnt wird. Der Name *Caraka* vertritt bekanntlich auch eine Schule des schwarzen *Yajurveda*, deren Texte sich nicht erhalten haben. Derartige Verbindungen, welche sich noch erweitern liessen, legen nahe, dass Namen aus den vedischen Kreisen mit oder ohne besonderen Anlass in die Medizin ad majorem gloriam übertragen sein können, vielleicht auch vereinzelt rückläufig.³ Es wäre verständlich, dass derartige Ergebnisse von den

identisch mit *t'ai-i*) entspricht also *i* der Sanskrit-Bezeichnung *jarāyu*, dem ältesten Ausdruck, mit seinem Bezug zum Vieh. Es scheint, dass Störungen des Abganges der Eihäute (einschliesslich der Placenta) die frühesten Hilfsmassnahmen bedingt haben. Sie bestanden anfangs in den gebräuchlichen Heilliedern, wie dies beispielsweise der *Atharvaveda* i, 11 zeigt. Daneben, sicherlich später, hat aber der Heilende am Nabelstrang gezogen oder an diesem hinauf nach der mehr oder weniger gelösten Placenta gegriffen. Auf dieser empirischen Basis dürfte sich eine Entwicklung der entsprechenden Encheirese vollzogen haben, deren bewusste Technik in der chinesischen Übersetzung nicht gesichert erscheint.

¹ Takakusu, l. c., 180.

² Kielhorn, *IA*. 1883, 227 : „Bharṭṛhari also mentions and quotes three times from the *Vaidyaka* and Charaka.“

³ Vgl. hierzu Cordier, *Muséon*, 1905, 10.

bodenständigen Überlieferungen angenommen, erhärtet und darnach als Tatsachen weitergetragen wurden.

Wenn zur Stütze geschichtlicher Kritik wiederum das BM benutzt wird, so hat hierbei Hoernle eine Verbindung von 29 Rezepten zur *CaS* nachgewiesen, und zwar sämtlich zu dem alten Anteil des *Cikitsāsthāna*.¹ In der alten Handschrift fehlen nun leider Blätter (20 u. 21), welche mutmasslich in einem Kolophon über die Art und Autorschaft Auskunft geben könnten. Immerhin ist die Übereinstimmung zwischen BM und *CaS* eine bei weitem engere und häufigere, als dies zur *SuS* der Fall ist. Das muss aber nicht überraschen. Denn die *CaS* vertritt eine Richtung, welche nach moderner Nomenclatur als innere Medizin bezeichnet werden müsste, daher einen breiten Raum einer entsprechenden Heilkunde bietet und somit von vornherein viele Berührungspunkte mit der alten Handschrift gleicher Richtung. Die Beachtung einer allgemeinen Grundlage ist hier naheliegend, welche Hoernle selbst als „floating medical tradition“ wiederholt einräumt. Und ein Beispiel, welches Hoernle für die Übernahme aus der *CaS* in das BM anführt, beleuchtet diesen Gemeinplatz, der *Cyavana-prāśa*, welcher — wenn auch anfänglich anderer Form — unter verbreiteter Kenntnis, vom *Rgveda* bis in die moderne bodenständige Therapie erhalten geblieben ist. Die Übereinstimmung zwischen BM und *CaS* ist zahlenmässig gegenüber anderen Überlieferungen nach Hoernle zwar die höchste, nämlich in 29 Fällen. Jolly hat jedoch fast sechszigmal solche zwischen BM und dem *Siddhīyoga* nachgewiesen.

Die Frage der Abhängigkeit des BM von der *CaS* wäre anders zu beantworten, oder der Bestand der alten *SaS* wäre durch das BM gesicherter, wenn in der alten Handschrift

¹ Hoernle (*JASB.* 1897, 297, 279) sieht auch in Macartney-Manuskript 23a, 2 eine Entlehnung aus *CaS*, *Sūtra* 15, 19, welche sich trotz abweichenden Textes auf die Erwähnung des seltenen Wortes *rājamātra* allein stützt. Auch diese Stütze auf das Einzelwort hin ist von Cordier (*Muséon*, 1903, 22–23) erschüttert worden durch den Nachweis vieler weiterer Belege, auch ausserhalb der *CaS*.

auch nur einmal der Name *Caraka* erwähnt würde. Dieser Mangel wäre sehr auffällig, wenn die Annahme des Alters der alten *Samhitā* und ihr Ansehen zurecht besteht. Denn das BM nennt verschiedene alte Autoren, aber nicht einmal *Agniveśa*, welchen die *CaS* immerwieder als besonderen Quellenautor namhaft macht. *Ātreya* wird im BM aufgeführt. Der Sohn (oder Nachkomme) des *Atri* dient zwar als Ausgangspunkt verschiedener Überlieferungen, immerhin bildet die *CaS* die bekannteste Vermittlerin seines Systems. Im BM werden nun 6 Rezepte des *Ātreya* vorgebracht, und keines dieser findet sich in den überlieferten Texten der *CaS*.

Nach diesen Untersuchungen ist im BM weder der Form noch dem Inhalt nach eine gesicherte Kenntnis der *CaS* nachweisbar, und es ergibt sich zwanglos der Schluss, dass die *CaS* in ihrer grossen Bedeutung damals noch nicht bestanden hat. Die Zeit der Niederschrift des BM im 5. Jahrhundert kann als gesichert gelten, die seiner Abfassung ist unbestimmt, lässt sich aber nicht allgemein in ein graues Altertum verlegen. Denn gerade an den Verkehrsstrassen und bei dem gesteigerten Interesse der buddhistischen Klöster für medizinische Entwicklung dürfte der Inhalt des BM nicht allzusehr von den geltenden ärztlichen Ansichten am Ende der ersten Hälfte des 1. Jahrtausend abweichen. Die andere, eigene Frage nach der Entstehungszeit der *CaS* berührt die Überarbeitung des ursprünglichen Werkes durch *Dr̥ḍhabala*, etwa im 9. Jahrhundert. Es könnte angenommen werden, dass jener Arzt aus Kaschmir eine unbedeutende *Samhitā* als Grundlage benutzt hätte. Einer solchen Sachlage würde die immer wiederkehrende Erwähnung des *Caraka* als Quellenautor und die Benennung des Gesamtwerkes als *CaS* widersprechen. Es ist aber auch hier nicht wahrscheinlich, dass dieser *Caraka* im 2. Jahrhundert sein Werk verfasst hätte, und dass jenes in nicht unwesentlichen Anteilen über einhalb Jahrtausend auf seine Vollendung durch *Dr̥ḍhabala* hätte warten müssen.

Bisher ist zeitlich der Name des Autors der grossen

medizinischen Sammelwerke beurteilt worden, nicht die Bezeichnung *saṃhitā*. Dieser Ausdruck ist nicht auf medizinisches Gebiet eingeengt, bezeichnet vielmehr ein grösseres Sammelwerk verschiedener wissenschaftlicher u.s.w. Überlieferungen und Lehren. Nach bodenständiger Sprachauffassung (Hemacandra, *Anekārtha-saṃgraha*, cit.n.PW.) ist *saṃhitā* synonym mit *tantra*, *śāstra*, ähnlich dem *saṃgraha*. Die inhaltliche Bedeutung der letzten Bezeichnung (von Hoernle (*JRAS.* 1906, 284) bei dem *SuS*-Kommentar *Nibandha-saṃgraha* als „Summary of Compilations“ nachgewiesen) müsste formell in *VāS* eigentlich aus der Klasse der *Samhitā* ausscheiden. Hauptsächlich für die *SuS* hat ferner Hoernle nachgewiesen, dass unter *tantra* eine Vorstufe der *saṃhitā* in der Entwicklung der Lehrsammlungen zu verstehen ist, womit die beiden Anteile — das ältere, *Sauśruta-tantra* und *Uttara-tantra* — vor ihrer redaktionellen Vereinigung zur *SuS* bezeichnet wurden.

Zum Abschluss der *CaS* (*Siddhi*- 12, 76–90) wird der Ausdruck *tantra* in diesem Sinne immer wieder gebraucht. Ähnlich unterscheiden die Schlussworte der einzelnen Kapitel (*adhyāya*) in der ersten Hälfte der *CaS* den Ort der älteren Quelle des *Agniveśa* (*Agniveśa-kṛte tantre*) und die spätere Überarbeitung (*Caraka-pratisaṃskṛte*).¹ In der zweiten Hälfte der *CaS*, welche auch andere Quellen aufgenommen hat, wird die Ortsangabe des Vorganges regelmässig allein in *Caraka-saṃhitāyām* zusammengefasst.² Wie weit diese Anführungen inhaltlich im Einzelfall berechtigt sind, kann hier unerörtert bleiben, denn die Bezeichnungen sollen offensichtlich nicht eine sachliche Entwicklungsstufe ausdrücken. Das zeigt beispielsweise das *Uttara-tantra* der *SuS*, welches gewöhnlich als eine Abhandlung über die sogenannte kleine Chirurgie

¹ Die stereotype Abschlussformel findet sich im *Sūtra*-, *Nidāna*-, *Vimāna*-, *Śārīra*- und *Cikitsā*- 1, 2 (versprengt in 27–30), sowie im Kolophon des Gesamtwerkes.

² Im Rest des *Cikitsā*-, *Kalpa*- und *Siddhi*-. Die *SuS* braucht regelmässig als Angabe ihres Quellenortes: *Suśruta-saṃhitāyam*.

hingestellt wird. Tatsächlich besteht es seinerseits aus vier *tantra*, nämlich ausser dem *śālākya*- noch aus dem *kumāra*-, *kāya-cikitsā*- und *bhūta-vidyā-tantra*, also im Ganzen aus einer Hälfte des alten *Āyurveda*. (*SuS Sūtra*- 3, 44). Die Bedeutung der Bezeichnung *tantra* ist somit eine umfassende, welche sich aber auf die Bestimmung der Form beschränkt und mit dem *sūtra* zu vergleichen ist.¹

Den Inhalt ärztlicher Lehren bezeichnen die Überlieferungen oft durch *śāstra*. Zur Klärung des Begriffes dieses Ausdruckes wird die Textstelle in der *CaS* herangezogen, welche vom Studium der Medizin handelt und alte Verhältnisse wieder spiegelt.² Wer Arzt werden will, soll sich vor allem zuerst nach einem *śāstra* umsehen; denn es sind verschiedene *śāstra* von Ärzten in der Welt im Umlauf (*Vimāna*- 8, 3).³ Dieses *śāstra* erscheint im folgenden als Teil des Lehrers (*ācārya*), hat daher die ursprüngliche Bedeutung des Befehls

¹ In den Kolophonen des *Sūtra-sthāna* der *CaS* wird das *sūtra* regelmässig *śloka*, das eigentliche Versmass der epischen Dichtung, genannt. Das *Sūtrasthāna* wird gebräuchlich inhaltlich als Lehrsätze von prinzipielle Bedeutung — etwa im Sinne einer Propädeutik — aufgefasst. Die Benennung *śloka* weist zum mindesten auf die grundlegende Anschauung und Wertung. Das *Sūtrasthāna* der *CaS* umfasst 7 (bzw. rudimentär 8) Abhandlungen in je vier *adhyāya* sehr verschiedenartigen Materials, die einzeln und in ihrer Vereinigung wohl als *tantra* betrachtet werden können. Die oben beanstandete unrichtige Wertung für *sūtra* entspringt einem modernen Gesichtswinkel, aus welchem heraus auch die Anführung von Autorennamen nicht ganz in der alten Eigenart immer verstanden wurde. Es ist sehr beachtlich, wenn bei dem berühmten *Agniveśa*, welcher ausserordentlich häufig in der *CaS* genannt wird, zum Schluss (*Siddhi*- 12, 93) der Namensanteil *agni* durch das gleichbedeutende Wort *vahni* ausgetauscht wird, so dass der Name *Vahniveśa* entsteht. Und wenn der hauptsächlichste Medizinlehrer *Ātreya* in sieben Formen angeführt wird (Cordier, *Origines*, 81), so beweisen solche Beobachtungen, wie wenig festumrissene geschichtliche Personen hier in den alten Anschauungen bestehen, und dass manche Momente in den Namen mitschwangen, welche nur aus einem modernen Gesichtswinkel als nebensächlich erscheinen.

² Die Textstelle ist deshalb alt, weil sie in den anderen alten Überlieferungen nicht nur Parallelen besitzt, sondern auch darum, weil sie dem Autor — wahrscheinlich *Dr̥ḍhabala* — zum Sprungbrett dient, um seine sehr ausführlichen Lehren für den ärztlichen Redekampf anzubringen.

³ *bhīṣag bṛhūṣuḥ śāstram eva āditaḥ parikṣeta | vīvidhāni hi śāstrāṇi bhīṣajāṇ pracaranti loke.*

oder der Anordnung und kann daher nicht schlechtweg als Lehrbuch betrachtet werden. Bei den drei Arten von Schülern werden in *CaS* auch nicht die drei oberen Kasten genannt, sondern notwendige Eigenschaften für den mündlichen Verkehr hervorgehoben.¹ Wird endlich noch berücksichtigt, dass die Einführung des Schülers in allen Überlieferungen der des brahmanischen Religiösen nachgebildet ist, so geht darauf insgesamt hervor, dass unter *śāstra* hier die mündlichen Lehren zu verstehen sind (cf. *SuS*, *Sūtra*-3, 54).

Dieser Vorgang erklärt, warum auffälligerweise (zum wenigsten) von *Dr̥ḍhabala* zum Studium nicht die *CaS* selbst empfohlen wird, weil das Bewahren des *śāstra* Sache des Gedächtnisses war; nach dieser Richtung hätte die *CaS* auch für den Inder kaum erfüllbare Forderungen bei ihrem Umfang gestellt. Da aber in den Kolophonen stets hier das Überarbeiten (*pratisam̐skar*-) des ursprünglichen *tantra* erwähnt wird, so nötigt die Sachlage zur Annahme, dass der Ausdruck *saṃhitā* in dem ärztlichen Sprachgebrauch noch nicht ganz gebräuchlich war. In dieser Weise würde sich auch die Verwendung von *saṃgraha* in jener Zeit bei dem *VāS* beurteilen lassen. Gegen die Neige des ersten Jahrtausend entstanden noch Sonderabhandlungen der ärztlich wichtigsten Fächer — wie *Nidāna* und *Siddhayoga* des *Vṛnda* (etwa um 800, vor *Dr̥ḍhabala*) — welche grosses Ansehen erwarben und (wenn auch nicht ausdrücklich belegbar) die oben abgeleitete Form der *tantra* besitzen. Gegenüber diesen besonderen oder inhaltlich eingeeengten Gebieten stellt die *saṃhitā* eine umfassende Sammlung ärztlichen Wissens dar, welche sich auch auf Nebengebiete erstreckt oder diese berührt. Handschriftlich ist der Name *saṃhitā* zuerst etwa im 9. Jahrhundert

¹ Der Sonderabschnitt von den Eigenschaften des Schülers beginnt erst *Vimāna*- 8, 9, wobei auch hier Anforderungen an die Fähigkeiten des Gedächtnisses bzw. des Rezitierens vorangesetzt sind. Die Schüler der 3 Kasten werden *SuS*, *Sūtra*- 2, 5 angeführt, wo merkwürdigerweise — und zwar bereits in dem Kommentar *Nibandhasaṃgraha* — auch die 4. niederste Kaste (der *Sūdra*) unter gewissen Vorbedingungen als zugelassen gilt.

nachweisbar.¹ Über die stufenweise Entwicklung gibt am besten wohl die *CaS* Auskunft. Die erste Anfänge sind im *Sūtra* erkennbar, welches im Ganzen in das *tantra* des *Agniveśa* übernommen wurde, weil sachliche Wiederholungen bestehen. Die Überarbeitung durch *Caraka* hat zweifellos jenes *tantra* erweitert und in noch höherem Grade hat eine Sammlung aller einschlägigen Gebiete durch *Dyḍhabala* stattgehabt mit dem Ergebnis der *saṃhitā*. Die Zeit des Ablaufes dieser sachlichen Entwicklung lässt sich schwer schätzen, dazu bedürfte es vieler Einzeluntersuchungen; sie muss jedoch nicht viele Jahrhunderte betragen haben; sie dürfte auch bei hauptsächlichen, erhaltenen Beispielen, der *CaS* und *SuS*, nicht durch allzu grosse Zwischenzeiten getrennt sein, weil der Höhepunkt in der Vereinigung aller ärztlicher wissenschaftlichen Belange — wie er in den *saṃhitā* vorliegt — trotz inhaltlicher Unterschiede nicht zu verschiedenen Epochen annehmbar ist. Werden somit die Gesamtergebnisse der vorliegenden Untersuchung zusammengefasst, so folgt, dass die drei grossen alten Lehrsammlungen, welche unter den Namen *Caraka*, *Suśruta* (und *Vāgbhata*) überliefert wurden, gegen die Mitte des zweiten Halbjahrtausend n.Chr. entstanden sind (vor 700).

89.

¹ *Aus Indiens Kultur*, Festgabe Richard von Garbe, Lüders, *Medizinische Sanskrittexte aus Turkistan*, 151: „*bheḍasaṃghitāyān*“; es handelt sich in dieser Textstelle um den Kolophon des *Nīlānasthāna* der *Bheḍasaṃhitā*, welche sonst nur in einer Handschrift um 1650 erhalten und niemals von fachindologischer Seite als apokryph bewertet worden ist.

The *Ta'rikh al-islām* of adh-Dhahabī

By JOSEPH DE SOMOGYI

INTRODUCTION

IN Arabic literature there is hardly any separation between works on political history and historical biography. This is due to the two sources from which historical traditions are derived: the *sīra*-literature dealing with the life of the prophet Muḥammad and the rather legendary traditions on the tribal warfare of the *jāhiliyya* known as *ayyām al-‘arab*.¹ It was on this double basis that Arabic historiography had gradually been built up. On the one hand, parallel to the *sīra*-literature, there developed the so-called *ṭabaqāt*-literature containing biographies first on the companions of Muḥammad (*‘ilm ar-riḡāl*), then on all sorts of illustrious men arranged into classes (*ṭabaqāt*) according to the year of their death. The *Kitāb al-ṭabaqāt al-kabīr* of Ibn Sa‘d az-Zuhri (died in 230/845) was the first standard work of this kind of literature, which flourished especially in the post-classical period of Arabic literature in the increasing quantity of *ṭabaqāt*-works on rulers, theologians, jurisconsults, and poets.

But parallel to this biographical literature there developed a historical literature *stricto sensu* treating of the struggles of Islām and the history of the caliphate. Originated in the works on the *ayyām al-‘arab*, it dealt with the first wars of Islām: the *maghāzī* and the rapid conquests of the new faith. The prototype of this literature on political history is the *Kitāb al-maghāzī* of al-Wāqidī (died in 207/823), but its real standard work was created by aṭ-Ṭabarī (died in 310/923), whose *Ta'rikh ar-rusul wal-mulūk* has ever since been considered by all the later historians as a pattern and a reliable source as well.

¹ A good survey of the *ayyām al-‘arab* is given by Ibn al-Athīr in his *Kāmil*, vol. i, pp. 367-517, and by an-Nuwayrī in his *Nihāyat al-arab fī funūn al-adab*, fann V, qism IV, kitāb V.

But even in the post-classical period of Arabic historiography there had been no strict separation between political history and historical biography. The biographical element has pervaded the political history through all the stages of its development. This is clearly seen not only from the exterior arrangement of these works, which were divided into chapters relative to the rulers, whilst also retaining the annalistic form, but also from their subject-matter, which is hardly anything else but the history of rulers. This is conspicuous in works both on the history of cities or provinces and on dynastic or general history. Such works as the *Ta'rikh Baghdād* of al-Khaṭīb al-Baghdādī (died in 403/1071) or the *Ta'rikh madīna Dimashq* of Ibn 'Asākir (died in 571/1176) or the *Kitāb bugyat at-ṭalīb fī ta'rikh Ḥalab* of Ibn al-'Adīm (died in 660/1262) are in the strict sense of the word rather biographical collections than historical works. And one can hardly decide whether the *Bayān al-Maghrib* of Ibn al-'Adhārī (lived in the fourth century A.H.) and many other works on Spanish and Maghribian history would not be better ranked among the biographical works than among those on political history. Again, in the works dealing with the history of dynasties or single rulers written in a panegyric style the predominance of the biographical element is manifest, as in the *Al-kitāb al-Yamīnī* of al-'Utbī (died in 427/1036) or in the *Kitāb ar-rauḍatayn fī akhbār ad-daulatayn* of Abū Shāma (died in 665/1268).

From the beginning of the fifth century A.H. onwards, a compilatory activity can be perceived in all branches of Muslim science. A wellnigh endless variety of compendiums and concise text-books and lexica are written on philology, history, and religious and natural science as well. This activity manifests itself both in political history and in biography. In political history the necessity of both the continuation and the abbreviation of at-Ṭabarī's work called into existence a host of voluminous compilations, as the *Al-kāmil fī ta'rikh* of Ibn al-Athīr (died in 630/1233), the *Kitāb mukhtaṣar*

ad-duwal of Barhebræus (died in 688/1289), the *Mukhtaṣar ta'riḫ al-baṣhar* of Abul-Fidā (died in 732/1331), and the *Al-Kitāb al-Faḥrī fil-ādāb as-sultāniyya wad-duwal al-islāmiyya* of Ibn at-Ṭiqṭaqā (about 701/1301), which is one of the best compendiums of Muslim history written in Arabic.¹ The same activity is to be seen in biographical literature also. The former local or professional biographies had grown into the great collections of general biography, from which the companions of the prophet and the first four caliphs were excluded as being well known from the *ṭabaqāt*-works. The most famous work of this kind, the *Kitāb wafayāt al-a'yān* of Ibn Khallikān (died in 681/1282), with its continuation: the *Fawāt al-Wafayāt* of al-Kutubī (died in 764/1363), the *Ta'riḫ al-ḥukamā* of al-Qiftī (died in 646/1248), and the *Kitāb 'uyūn al-anbā fī ṭabaqāt al-aṭibbā* of Ibn abī Uṣaybiyya (died in 668/1270), serve as reliable guides in this vast biographical literature.

But, at the same time, the necessity arose of further compilations comprising both political history and biographies of the illustrious in the same work. As a matter of course, this style of historiography was chiefly cultivated by the encyclopædists, whose number rapidly increased from the sixth century A.H., and who embraced the whole range of human knowledge of their time. The first scholar who compiled a symposium of both general history and historical biography in one work was the celebrated Baghdād polyhistor Ibn al-Jauzī (died in 597/1200). With his *Kitāb al-muntaẓam* he initiated a new school of historiography in Arabic literature, because his work contains both general history in short annalistic form and also the obituary notices of all the persons of some consequence who died in the several years.² The *Kitāb al-muntaẓam* was considered as a standard work on general history by many illustrious later historians.

¹ See the remark of R. A. Nicholson in his *A Literary History of the Arabs*, London, 1907, p. 454.

² See my paper, "*The Kitāb al-muntaẓam of Ibn al-Jauzī*," in the *JRAS.*, 1932, pp. 49-76.

Especially the *Mir'āt az-zamān* of Sibṭ ibn al-Jauzī (grandson of the former, died in 654/1256) should be mentioned in this connection, because Sibṭ ibn al-Jauzī exactly followed the method of his famous ancestor, whose *Kitāb al-muntazam* he continued up to his own time and enlarged with additional matters often disregarded by Ibn al-Jauzī, as the local history of Syria, especially of Damascus. The system laid down by the *Kitāb al-muntazam* was adopted by numerous later authors, as by Muḥammad ibn Shākir al-Kutubī (died in 764/1363) in his general history '*Uyūn at-tawārīkh* and also by at-Taghribardī (died in 874/1469) in his history of Egypt, entitled *An-nujūm az-zāhira fī mulūk Miṣr wal-Qāhira*. The common feature of all these voluminous compilations is the predominance of the biographical matter over the historical narrative. With the possible exception of the period prior to their own time and some matters of predilection these works mostly contain shorter or longer *vitæ illustorum virorum*, preceded for the sake of completeness by short, hardly sufficient and often biased surveys of political narrative, so that but for the material contained in the biographical records the *res gestæ* of a given later period of Muslim history could not probably have been reconstructed. The general character of these historical works has been described excellently by R. P. A. Dozy in speaking of the Spanish Arab historians: "Hommes des lettres, ces chroniqueurs enregistrent en outre le décès des théologiens, des littérateurs, et donnent souvent des renseignements utiles pour l'histoire littéraire; mais ils passent à côté de certains événements politiques de la plus haute importance, et dans leurs écrits l'histoire proprement dite est travestie et mutilée; on n'y saisit le caractère général de l'époque qu'à travers une sorte de brouillard." ¹

With certain exceptions this characterization is generally good also for the authors of the school of Ibn al-Jauzī, thus

¹ See his *Histoire de l'Afrique et de l'Espagne* par Ibn 'Adhārī, Leiden, 1849-51, p. 19.

especially for a prominent disciple of the famous Baghdād polyhistor, adh-Dhahabī. His name has ever been famous for his lesser works, some of which are in general use both in the Orient and in the Occident, but his chief work, the *Ta'rikh al-islām*, has never yet been studied nor discussed as a whole, though it fully deserves our attention for its valuable data, which are in many cases nowhere else obtainable.

ADH-DHAHABĪ¹

Shamsaddīn abū 'Abdallāh Muḥammad ibn Aḥmad ibn 'Uthmān ibn Qāimāz ibn 'Abdallāh adh-Dhahabī at-Turkumānī al-Fāriqī ad-Dimashqī ash-Shāfi'ī was born at Damascus or at Mayyāfāriqīn² on the 1st or 3rd of the month of Rabī' ath-thānī,³ 673/5th or 7th of October, 1274. As his surname, at-Turkumānī, implies, his family was of Turkish descent. In 690/1291—according to others⁴ at the age of 18—he began his studies in *ḥadīth* in Damascus under the direction of 'Umar ibn Qawwās, Aḥmad ibn Hibatallāh

ibn 'Asākir and Yūsuf ibn Aḥmad al-Qamūlī. He continued his *ḥadīth* studies in several Islāmic centres, under the best authorities of his time. Thus he studied in Ba'albakk with 'Abdalkhālīq ibn 'Ulwān, Zaynab bint 'Umar ibn al-Kindī and others; in Egypt with al-Abarqūhī, 'Isā ibn 'Abdalmu'min ibn Shihāb, the *ḥāfiẓ*s abū Muḥammad ad-Dimyātī and abul-'Abbās aṣ-Ṣāhirī, and chiefly with Ibn Daqīq al-'Id; in Mecca with at-Tūzari; in Ḥalab with Sawqar az-Zaynī; in Nābulus with al-'Imād ibn Badrān; in Alexandria with Abul-Ḥasan 'Alī ibn Aḥmad al-'Irāqī, and Abul-Ḥasan Yaḥyā ibn Aḥmad aṣ-Ṣawwāf, and lastly in Cairo with Ibn Manṣūr al-Ifriqī.¹ He also studied *fiqh* with no less authorities than Kamāladdīn ibn az-Zamlikānī, Burhānaddīn al-Fazārī, and Kamāladdīn ibn Qāḍī Shuhba. He received *ijāza* from Abū Zakariyyā ibn aṣ-Ṣayrafi, Ibn abil-Khayr, al-Qāsim al-Irbilī, and others.² The number of his teachers is said to have surpassed thirteen hundred, the biographies of whom he collected in his *Mu'jam*.³

As a result of his studies he became Professor of *Ḥadīth* at the *madrasa* Umm Ṣāliḥ in Damascus, but could not succeed Yūsuf al-Mizzī (died in 742/1341) in a similar position at the Ashrafiyya, as the founder of the chair had made certain conditions regarding the *madhhab* of the professor, which he could not accept.

Adh-Dhahabī had the reputation of a scholar of the first rank in history, *ḥadīth* and *fiqh*; in this latter he belonged to the *madhhab* of ash-Shāfi'ī. He was at his studies day and night and had a great many excellent pupils, among whom his chief biographer is to be especially mentioned, 'Abdalwahhāb as-Subkī, author of the *Ṭabaqāt ash-Shāfi'iyya al-kubrā*. He was an intimate friend of the latter's father, Taqiaddīn as-Subkī, who was considered stronger than he in Shāfi'ite law. After a successful scientific and teaching career

² See Ibn Qāḍī Shuhba, *Ṭabaqāt ash-Shāfi'iyya*, loc. cit.

³ A MS. of it is in Cairo, see *Cat.*, vol. i, 2nd ed., p. 252.

he died at Damascus in the night of Sunday-Monday on the 3rd of the month of Dhul-qa'da 748/3-4 February, 1348,¹ or, according to others,² in 753/1353. He was buried at Damascus, at the Bāb aṣ-Ṣaghīr, in the burial-place of so many illustrious Damascenes.

His manifold capacities were acknowledged by his contemporaries and his later biographers as well. Al-Kutubī begins his biographical record on adh-Dhahabī with select poetical phrases in praise of his scientific achievements.³ He was commonly called by his biographers ⁴ *muḥaddith al-ʿaṣr* (traditionist of the age) and *khātām al-ḥuffāz* (seal of the ḥāfiẓs). According to Ṣalāḥaddīn aṣ-Ṣafādī, "he had nothing of the rigidity of the traditionists or of the stupidity of the historians; on the contrary, he was a *faqīh an-naḥs* (a lawyer of spirit), and was skilled in the sayings (opinions) of people."⁵ And Ibn Ḥajar al-ʿAsqalānī adds to this statement: "I drank from the water of Zamzam in order to reach the rank of adh-Dhahabī in *ḥifẓ*."⁶ He also composed a beautiful *qaṣīda* on the excellent qualities of adh-Dhahabī.⁷

But, on the other hand, we also find opinions which tend to detract from the reputation of adh-Dhahabī. Thus, his contemporaries, Abul-Fidā⁸ and ʿUmar ibn al-Wardī,⁹ while admitting that he was a traditionist and historian of a high order, say that being struck by blindness in 743/1342-43—according to others as early as in 741—and seeing his end approaching, he compiled biographies of some of his contemporaries while they were still alive from information obtained from enthusiastic young men who gathered round

him. Not being able to verify their statements himself, he tarnished the good reputation of certain persons, though quite unwittingly.

As an author, he was not so prolific as Ibn al-Jauzī or as-Suyūṭī, but some of his writings soon attained a high standard both in the Orient and in the Occident. His works—like those of so many post-classical Arab authors—are of compilatory character, and are distinguished by careful composition and constant references to his authorities. It is for these peculiarities that his works on *ḥadīth*, and especially on the *‘ilm ar-rijāl*, have become very popular. The following of his works of this kind have been edited in print:—

(1) *Al-mushtabih fī asmā ar-rijāl*: an alphabetical dictionary of proper names and *kunyas* appearing mainly in works on *ḥadīth*, and which might easily be confused. (Ed. de Jong, Leiden, 1881.)

(2) *Mīzān al-‘itidāl fī naqd ar-rijāl* (or *fī tarājim ar-rijāl*): an alphabetical dictionary of apocryphal traditionists or those suspected of being so and of unreliable (“weak”) traditionists. (Ed. at Lucknow, 1301 and at Cairo, 1325.)

(3) *Tajrīd (fī) asmā aṣ-ṣaḥāba*: a dictionary of the Prophet’s companions based mainly upon the *Uṣd al-ghāba* of Ibn al-Athīr. (Ed. at Hyderabad, 1315.)

The following works on *ḥadīth* are only extant in manuscript¹:—

(4) *Tadkhīb at-tadkhīb al-kamāl fī asmā ar-rijāl*: an improved edition of the *Tadkhīb al-kamāl fī asmā ar-rijāl* of Abū ‘Abdallāh Muḥammad ibn Maḥmūd ibn al-Ḥasan ibn an-Najjār Muḥibbaddīn ash-Shāfi‘ī: on the traditionists of the six canonical works.² An abridgment of it entitled *Khulāsa Tadkhīb at-tadkhīb fī asmā ar-rijāl* was made

¹ See Brockelmann, op. cit., pp. 47–8, and O. Spiesz, *Beiträge zur arabischen Literaturgeschichte*, Abhandl. f. d. Kunde des Mgl., Leipzig, 1932, pp. 110–13.

² Excerpts from the *Tadkhīb* were edited by A. Fischer in his *Biographien von Gewährsmännern des Ibn Ishāq, hauptsächlich aus ad-Dahabī*, Leiden, 1890.

by Aḥmad ibn 'Abdallāh al-Khazraǧī. (Ed. at Būlāq, 1301.)

(5) *Al-kāshif fī ma'rifat asmā ar-rijāl*: an extract of the former work.

(6) *Al-muqtanā fī sard al-kunā*: a dictionary of *kunyas*.

(7) *Al-mustarǧil fil-kunā*: a dictionary of names only used in *kunyas*.

(8) *Manzūma fī asmā al-ḥuffāz*: a collection of the names of *ḥāfiẓs*.

(9) *Al-mūǧiẓa*: a treatise on the different sciences of *ḥadīth*.

(10) *Al-muǧhnī fī ad-ḍu'afā wa ba'd ath-thiqāt*: a work on unreliable ("weak") authorities on the *ḥadīth*.

(11) *Tashbīh al-khasīs bi ahl al-khamīs*: a work on good authorities on *ḥadīth*.

Besides *ḥadīth*, it is in history that adh-Dhahabī excelled most. He abridged some historical works, such as the history of Baghdād of Ibn ad-Dubaythī (died in 637/1239) in his *Mukhtaṣar li Ta'riḫh Baghdād li Ibn ad-Dubaythī* (Cairo Cat., vol. v, p. 145), and prepared a synopsis of Ibn al-Qifṭī's (died in 646/1248) history of the grammarians in his *Mukhtaṣar Akhbār an-naḥwiyyīn li Ibn al-Qifṭī* (Leiden Cat., No. 876).

But adh-Dhahabī's principal and longest work is his great general history entitled *Ta'riḫh al-islām* (The History of Islām). This work, though well known and much referred to by both Oriental and Occidental scholars, has never yet been edited as a whole nor discussed at any length.¹

¹ The following parts of the *Ta'riḫh al-islām* have hitherto been edited:

(1) The biography of Ibn Rushd by J. E. Renan, *Averroës et l'Averroïsme*, Appendice iv, 2^e édition, Paris, 1861. (2) The biography of Abul-'Alā al-Ma'arri, which is more copious than that of Ibn Khallikān and also following different sources, has been edited from the MS. of the British Museum, No. 1637 as an appendix to *The Letters of Abul-'Alā of Ma'arrat an-Nu'mān*, by D. S. Margoliouth in the *Anecdota Oxoniensia*, Semitic Series, Oxford, 1898, pp. 129-37. (3) The biography of 'Umāra al-Yamanī is edited from the MS. of the British Museum, No. 1639, by H. Dérenbourg in his *'Oumāra du Yemen, sa vie et son œuvre*, tome ii, Paris, 1902, pp. 491-5. (4) Short excerpts are printed in the notes to the *Ḥayl ta'riḫh Dimashq* of Ibn al-Qalānisi, ed. H. F. Amedroz, Beyruth, 1908.

THE MANUSCRIPTS OF THE *TA'RIKH AL-ISLĀM*

The *Ta'rikh al-islām* consisted of twelve¹ or twenty volumes.² It contains a general history up to A.H. 700, and was finished by adh-Dhahabī by the year 741/1340,³ i.e. seven years before his death, which struck one of the later adh-Dhahabī specialists, Ibn Qāḍī Shuhba, who said: "It is strange that he (adh-Dhahabī) stopped in his *Ta'rikh al-islām* at the year 700 and did not continue it to the year 740, as he did in his *al-'Ibar* (see below), for it was continued in his presence by both al-Yūnīnī to his own time and al-Jazarī."⁴

The work was discovered part by part by Kamāladdīn ibn 'Abdalwāḥid ibn 'Abdalkarīm ibn az-Zamlikānī, who said: "It is an illustrious book!"⁵ His opinion was certainly not shared by one of the most prominent pupils of adh-Dhahabī, 'Abdalwāḥḥāb Tājaddīn as-Subkī according to whom: "It would be an excellent work, if it were free from a certain bias."⁶

The work exists in a number of manuscripts contained in different European and Oriental libraries. The hitherto known manuscripts containing parts of the work are as follows⁷ :—

(1) Cambridge (Browne), vol. i, No. 182: the beginning, down to the death of the Prophet.

(2) Faysullāh, No. 1480: vol. i, A.H. 1–11.

(3) Aya Sophia, No. 3005: vol. ii, A.H. 1–29.

(46) Aya Sophia, No. 3014: vol. xxi, A.H. 671-700.

(47) British Museum, No. 1641: vol. xxii, A.H. 681-90, it only contains biographies.

(48) Köprülüzâde, No. 1020: pt. xxxvi, A.H. 681-700, the biographies only from A.H. 686 onwards.

(49) British Museum, Supplement, No. 486: A.H. 681-700, the general narrative from A.H. 691.

(50) British Museum, Or. 7967 (not yet catalogued): four fragments containing biographies from A.H. 687-88, 690, 691-5, 691, corresponding to parts of British Museum, No. 1641 and British Museum, Supplement, No. 486.

(51) Seray, No. 2910: in twenty-three volumes.

(52) Dāmādzāde Qāḍī 'Askar Muḥammad Murād, No. 1433: an unidentified volume of the work.

Köprülüzâde, No. 1021, though denoted by a later hand as *Ta'riḫ al-islām li adh-Dhahabī*, which title is preceded by the word *dhayl* by a still later hand, is no part of our work, but—as seen from its concluding words—part of the *Mukhtaṣar fī ta'riḫ al-baṣhar* of Abul-Fidā.¹

From the MSS. quoted above Aya Sophia, Nos. 3005-16 comprise parts of two copies: Nos. 3005-14 being parts of one copy and Nos. 3015-16 those of another copy. Nos. 3005-14 are autographs of adh-Dhahabī himself and must therefore be considered in the first place for a possible edition of the *Ta'riḫ al-islām*.²

From the MSS. hitherto known we can fairly well reconstruct

¹ See Horovitz, op. cit., p. 11.

² See Spiesz, op. cit., p. 70.

the whole *Ta'riḥ al-islām*, except the decades A.H. 131-40, 231-60, 281-300. The decades A.H. 141-70 and 261-80 are extant only in part.

Like many other Arabic works on general history, adh-Dhahabī's work was also continued by different later hands. We know of the following continuations of the *Ta'riḥ al-islām* :—

(1) A continuation comprising the biographies of A.H. 701-40 by adh-Dhahabī himself ; it is in Leiden, No. 765.

(2) A continuation by al-Yunīnī (died in 726/1326) : non-existing.¹

(3) A continuation by al-Jazarī (died in 833/1429) ; non-existing.²

(4) A continuation by Abul-Fadhl 'Abdarrahīm al-'Irāqī (died in 806/1404) ; non-existing, it comprised A.H. 701-61.³

(5) A continuation of the work of 'Abdarrahīm al-'Irāqī by his son Aḥmad ibn 'Abdarrahīm al-'Irāqī (died in 826/1423), comprising A.H. 762-86 ; it is in Köprülüzāde, No. 1081.⁴

(6) A continuation by Ibn Qāḍī Shuhba (died in 851/1447) entitled *Al-i'lām bi Ta'riḥ al-islām*, which exists in the following MSS. : Bodleian Library (Ury), No. 721 : A.H. 691-740 ; Paris, Nos. 1598-1600 : A.H. 741-80 ; Köprülüzāde, No. 1027 ; A.H. 689-791 ; Faisullāh, No. 1403 : A.H. 600-90.⁵

Owing to the voluminous character of the *Ta'riḥ al-islām*, many abridged editions were made of it. As a matter of fact, there is hardly any other Arabic work on general history

¹ See Ḥājī Khalifa, No. 2220.

³ See Brockelmann, op. cit., vol. ii, p. 65 ; *Bankipore Cat.*, vol. v, part ii, No. 442 ; Horowitz, op. cit., p. 12.

⁴ See Brockelmann, op. cit., vol. ii, p. 67 ; *Bankipore Cat.*, vol. v, part ii, No. 318.

⁵ See Ḥājī Khalifa, Nos. 951 and 2098 ; Spiesz, op. cit., p. 71, Ammerkung 1.

⁶ Spiesz, op. cit., p. 71, also quotes Köprülüzāde, No. 1189, as a continuation of the *Ta'riḥ al-islām* by as-Sakhāwī (died in 902/1497), but, as its title shows (*Wajiz al-kalām fī dhayl Duwal al-islām*), it is a continuation of the *Duwal al-islām* of adh-Dhahabī. (See below.)

which has more *mukhtaṣars* than the *Ta'riḫ al-islām*. These abridged editions were known even earlier than the great work itself and have always been in general use as concise and reliable works of reference. Some of them were made by adh-Dhahabī himself and others by Ibn Qāḍī Shuhbā, Ibn ash-Shammā' and Ildukuz al-Ayyūbī. According to their subject-matter, these compendiums are to be divided into two classes: (1) those containing both general narrative and obituary records, such as the *Kitāb duwal-al-islām* or "little history" (*at-ta'riḫ aṣ-ṣaghīr*) and the *Kitāb al-'ibar fī akhbār man 'abar* or "medium history" (*at-ta'riḫ al-awsaṭ* or *al-mutarawassit* by the author himself, or (2) biographical compendiums, such as the *Ṭabaqāt al-ḥuffāz*, *Ṭabaqāt al-qurrā*, and *Siyar an-nubalā* by adh-Dhahabī himself.¹ The mere enumeration of these well-known works can testify the great literary value of their source, the *Ta'riḫ al-islām*.

We may suppose that such an important work was also translated into other Oriental languages. At least the existence of a Persian translation was proved by Pétis de la Croix, who at the end of his work, *Histoire du Grand Genghizcan* (Paris, 1710), enumerates his authorities on the history of the Mongols, among which he mentions a Persian translation of an extract entitled *Intikhāb as-salāṭīn* from the *Ta'riḫ al-islām* of adh-Dhahabī.² This extract treats of "the fourth class of the second order of the kings", i.e. of the Mongol kings, "the first of whom had been the great Jingiz-khān and the kings of Persia of the race, the first of whom had been Hūlākū, his grandson." According to Pétis de la Croix, this book was written in A.H. 757 corresponding to A.D. 1536. This date is evidently wrong, because

¹ For the compendiums of the *Ta'riḫ al-islām* see my paper in the *Islamica*, Leipzig, 1932, pp. 334-53. O. Spiesz (op. cit., p. 73) also mentions a *Muntakhab at-ta'riḫ al-kabīr*, a MS. of which is in Weli, No. 2449; it treats in three classes: (1) of the companions of Muḥammad and of the *tābi'ūn*; (2) of the *fuyahā* and *'ulamā*; (3) of the *ḥukamā* and *aṭibbā*, including also the Greek philosophers.

² See p. 550.

it is the year A.D. 1356 and not 1536 that corresponds to A.H. 757. Supposed that this *hijra*-date is correct, this Persian translation had been made at a very early date after the death of adh-Dhahabī. It must have comprised only that part of the *Ta'rikh al-islām* which included the history of the Mongols, i.e. roughly the seventh century A.H. Unfortunately we know nothing particular of this translation of the *Ta'rikh al-islām*, except the reference of Pétis de la Croix. But even this is significative of the great importance of adh-Dhahabī's work.¹

AN ANALYSIS OF THE *TA'RĪKH AL-ISLĀM*

As its title implies, the *Ta'rikh al-islām* treats of the history of *Islām* only: it begins with the genealogy of Muḥammad and does not deal with the earlier period of history. It, therefore, does not follow the scheme of Arabic works on general history which start with the Creation, then proceed to the history of Adam, of the prophets and of the ancient peoples (especially the Jews and the Persians), and then give the genealogy of Muḥammad and the history of *Islām*. This is the scheme adopted by aṭ-Ṭabarī and followed by Ibn al-Athīr, al-Mas'ūdī, and other historians, and also by Ibn al-Jauzī; this latter expressly indicates in the title of his *Kitāb al-muntaẓam* that it is a *general history* ("akhbār al-mulūk wal-umam") and not merely an *Islāmic history*.

Notwithstanding this, adh-Dhahabī adopted the general scheme of the *Kitāb al-muntaẓam* in his *Ta'rikh al-islām*. His work, like that of Ibn al-Jauzī, is also both a general history and a collection of biographies, with this essential difference, however, that he does not give the biographical records in the same chapter together with the general narrative as Ibn al-Jauzī does, but he entirely separates both parts from one another. Both the general narrative

¹ Brockelmann (loc. cit.) mentions also a Turkish translation of the *Ta'rikh al-islām* in Berlin (Türkischer Katalog, No. 192). This is, however, the Turkish translation of another work on general history, the *Al-bidāya wan-nihāya* of Ibn Kathīr ad-Dimashqī (died in 774/1372).

(*al-hawādith al-kā'ina*) and the biographies (*al-mutawaffūn*) are divided into "classes" (*tabaqāt*) of ten years so that the whole work consists of seventy classes beginning with A.H. 1 and ending with A.H. 700. The classes of the general narrative come first, subdivided into the years of each decade, and followed as separate parts of the work by the classes of the biographies.¹ These latter are equally subdivided into the years of each decade and completed generally by a separate chapter giving the biographies of those whose dates of death could not be stated exactly but can be approximately ranked into one decade (entitled *Dhikru man tuwaffiya ba'da sanatin . . . taqrīban wa ilā sanatin . . .*). The relation of the general narrative to the biographies is rather unequal, the former comprises one-sixth or one-seventh of the thick manuscript volumes and the remaining space is devoted to the biographies.

A. General Narrative (*hawādith*)

In the general narrative adh-Dhahabī follows the example of the former historians, subdividing his narrative of every year into shorter or longer sections beginning with the words "*wa fīhā*" ("and in this, sc. year"). There is, however, a substantial difference between the subject-matter of the general narrative of the first three centuries and that of the following four centuries. In the first three centuries A.H. the records are very short, not detailed, and only give the gist of the matter. They can be styled a concise compendium of the *Ta'rikh ar-rusul wal-mulūk* of at-Ṭabarī, the general use of which was so common and well known that adh-Dhahabī considered it superfluous to give a detailed narrative of the events in this period. Usually there is a short enumeration of the more notable persons who died in the year in question—they are always recorded in full among the biographies—then there follows, as a rule, the mention of the leaders of the annual pilgrimage, though sometimes this is

¹ In several manuscript volumes *all* the classes of the general narrative are grouped together and are followed by *all* the classes of the biographies.

put to the end of the general narrative. Last are recorded the political events well known from aṭ-Ṭabarī.

Of a different character is the general narrative of the last four centuries (A.H. 301-700). The records are of considerable length, with constant references to the authorities consulted by adh-Dhahabī, which clearly shows his intention of writing a continuation of aṭ-Ṭabarī's work. For this reason the scheme of the general narrative of this second, *post-Ṭabarī*, period of the *Ta'rikh al-islām* is different from that of the first period. First come the detailed records of political history, then follow, as a rule, those of local history and administrative affairs; those of Baghdād and Damascus are especially well recorded. Together with the latter are recorded the so-called '*ajā'ib* "strange things"): the curiosities and striking phenomena of the year and then the leaders of the pilgrimage from Baghdād and Damascus, followed by a short enumeration of the more notable persons who died in the year in question.

In drawing up this system adh-Dhahabī entirely adopted that of Ibn al-Jauzī in his *Kitāb al-muntaẓam*.¹ Like his illustrious master, he also makes a point of quoting his authorities, whereby we can reliably state what sources he consulted in compiling his general narrative.

In order to present a clear account of the literary value of the *Ta'rikh al-islām* we give a concise enumeration of the events which are either not recorded in Ibn al-Athīr's *Al-kāmil fī-ta'rikh* or are recorded also from different authorities. As a matter of course, our data only refer to the years A.H. 301-700, for which adh-Dhahabī's records are more elaborate than for the previous period A.H. 1-300, also recorded in aṭ-Ṭabarī. The additional authorities mentioned in the narrative of adh-Dhahabī are put in parentheses; where none are mentioned the possible authorities are likely to be either Ibn al-Jauzī or Sibṭ ibn al-Jauzī.²

¹ See my paper in the *JRAS.* 1932, pp. 58-62.

² The MSS. consulted are those of the British Museum and the Bodleian Library.

(a) *Political History*

A.H. 301: al-Khāqānī was taken prisoner by the Caliph al-Muqtadir. Ḥallāj was imprisoned (more detailed than at-Ṭabarī, iii, p. 2289). Abū Sa'īd al-Jannābī was murdered (Thābit ibn Sinān). Al-Mahdī's army was sent to Egypt (al-Musabbihī).

A.H. 302: Ibn al-Jaṣṣāṣ was captured (Ibn al-Jauzī, at-Tanūkhī).

A.H. 305: al-Muqtadir received the legate of the Romans (Abū Bakr aṣ-Ṣūlī).

A.H. 306: death of Abul-'Abbās ibn Sarīj ¹ (ad-Dāraqutnī).

A.H. 309: execution of Ḥallāj, his biography (Ibn Bākūya ash-Shirāzī, Abul-Ḥusayn ibn Muḥammad al-Minādī, Aḥmad ibn Yūsuf at-Tanūkhī, Abū Bakr aṣ-Ṣūlī, 'Alī ibn Aḥmad al-Ḥāsib, Ibn Ḥauqal, Ibn al-Jauzī, Thābit ibn Sinān, as-Sullamī: *Ta'riḥ*).

A.H. 311: removal of Ḥamid ibn al-'Abbās from the wazīrate. The vilāyat of Ibn al-Furāt (al-Mas'ūdī).

A.H. 314: the Qarmatians in 'Irāq (Thābit ibn Sinān).

A.H. 317: the Qarmatians in Baghdād (Thābit ibn Sinān) and in Mecca (Abū Bakr Muḥammad ibn 'Alī ibn al-Qāsim adh-Dhahabī, Maḥmūd al-Iṣfahānī, as-Simnānī: *Ta'riḥ*, al-Qilawī, Muḥammad ibn ar-Rabī' ibn Sulaymān al-Marāghī).

A.H. 320: rule of Mūnis in Maṣīl, assassination of al-Muqtadir (aṣ-Ṣūlī, Thābit ibn Sinān, Ishāq ibn Ismā'īl an-Naubakhtī).

A.H. 322: deposition of al-Qāhir billāh; caliphate of ar-Rāḍī billāh (Thābit ibn Sinān, al-Qāḍī abul-Ḥusayn, Maḥmūd al-Iṣfahānī, aṣ-Ṣūlī, Muḥammad ibn 'Alī al-Khurāsānī, al-Mas'ūdī). Death of al-Mahdī 'Ubaydallāh, lord of Egypt (al-Qāḍī 'Abdaljabbār ibn Aḥmad ibn 'Abdaljabbār al-Baṣrī, Ibn al-Bāqillānī: *Kashf al-asrār al-Bāṭiniyya*, Ibn Khallikān, an anonymous *Ta'riḥ al-Qayrawān*).

A.H. 324: arrest of Ibn Muqla (Thābit ibn Sinān).

¹ Ibn al-Athīr, vol. viii, p. 85, gives his name as Sarīj.

A.H. 326: the hands of Ibn Muqla were cut off (Thābit ibn Sinān).

A.H. 329: death of ar-Rādī billāh (aṣ-Ṣūlī), caliphate of al-Muqtafi billāh (aṣ-Ṣūlī, Thābit ibn Sinān).

A.H. 332: death of abū 'Abdallāh al-Buraydī (Ibn Ḥamdān at-Ṭabīb).

A.H. 333: al-Muttaqī's meeting with Tūzūn (al-Mas'ūdī).

A.H. 334: al-Qāsim ibn al-Qāsim lord of Maghrib (al-Qādī 'Iyād).

A.H. 335: Sayfaddaula's fight with Abul-Muẓaffar Ḥasan ibn Ṭughj (al-Musabbihī).

A.H. 339: the Black Stone was taken back to Mecca (al-Musabbihī).

A.H. 340: the Black Stone was put back to its old place in Mecca (Abul-Ḥasan Muḥammad ibn Nāfi' al-Khuzā'i).

A.H. 342: on Aḥmad ibn al-Hunād (Abū Ja'far Aḥmad ibn 'Aunallāh al-Qurtubī, Abū 'Umar az-Zalimnakī).

A.H. 343: fight between Anūjūr ibn al-Ikhshid and Kāfūr.

A.H. 350: death of 'Abdarrahmān an-Nāṣir lord of Andalus.

A.H. 351: the chronological work of aṣ-Ṣābī (Thābit ibn Sinān). Death of the wazīr al-Muhallabī ('Alī ibn Muḥammad ash-Shimshāṭī: *Ta'rīkh*).

A.H. 352: day of jubilee ordered by Mu'izzaddaula (Thābit ibn Sinān, at-Tanūkhī).

A.H. 355: Sayfaddaula's fights and truce with the Romans.

A.H. 356: death of Mu'izzaddaula (Abul-Qāsim at-Tanūkhī).

A.H. 357: death of Nāṣiraddaula. Revolt of Abul-Ḥasan Muḥammad ibn al-Mustakfi against al-Mu'taḍad.

A.H. 362: ad-Damastaq was taken prisoner.

A.H. 363: illness of al-Muṭī' billāh and caliphate of at-Ṭā'i li amr Allāh (Abū Manṣūr ibn 'Abdal'azīz al-'Ukbarī). Muḥammad ibn Ṣālih al-Hāshimī new chief qādī of Baghdād; the document of the caliph conferring on him this dignity.

A.H. 367: fight between Hafteghin (هفتکین) and the 'Ubaydis.

A.H. 368: by order of at-Ṭā'i li amr Allāh honours were given to 'Aḍudaddaula (Ibn al-Jauzī).

A.H. 369: the legate of 'Azīz billāh with 'Aḍudaddaula; closer relations between the latter and at-Ṭā'i li amr Allāh (*A qaṣīda* by abū Ishāq aṣ-Ṣābī).

A.H. 370: 'Aḍudaddaula's meeting with at-Ṭā'i li amr Allāh in Baghdād ('Alī ibn 'Abdal'azīz).

A.H. 372: on Abū 'Umar Aḥmad ibn Muḥammad ibn Sa'īd ibn al-Andalusī al-Faqīh (al-Ḥumaydī).

A.H. 379: flight of al-Qādir billāh from at-Ṭā'i li amr Allāh (more detailed than Ibn al-Athīr, vol. ix, pp. 45-6).

A.H. 381: caliphate of al-Qādir billāh (Hilāl aṣ-Ṣābī, Muḥammad ibn 'Abdalmalik al-Hamdānī, Abū Bakr al-Khaṭīb al-Baghdādī).

A.H. 388: some verses on the Būyides (Abū Manṣūr ath-Tha'alībī).

A.H. 392: Maḥmūd ibn Sebukteghin's campaign in India (Abul-Faṭḥ al-Bustī).

A.H. 395: a detailed account on the end of the Sāmānid dynasty from the time of the conquest of Bukhārā by İlek khān till their end which is put by adh-Dhahabī in this year (more detailed than Ibn al-Athīr, vol. ix, pp. 133-4, abū Tammām).

A.H. 398: the order of al-Ḥākim bi amr Allāh for the destruction of the church of the Holy Sepulchre (more detailed than Ibn al-Athīr, vol. ix, p. 147). Sedition in Andalusia.

A.H. 403: burial of the daughter of Abū Nūḥ at-Ṭayyib. The carriage of wooden crosses was ordered by al-Ḥākim bi amr Allāh for the Christians.

A.H. 404: Fakhr al-Malik's meeting with the caliph at Baghdād. Al-Ḥākim's new oppressive measures. The fight of the Turk Toghay with the Chinese.

A.H. 405: al-Ḥākim's measures against women.

A.H. 409: Maḥmūd ibn Sebukteghin's campaign in India (al-'Utbi: *Ta'rīkh*).

A.H. 410: Maḥmūd ibn Sebukteghin's campaign in India.

A.H. 411 : disappearance of al-Ḥākim bi amr Allāh (more detailed than Ibn al-Athīr, vol. ix, pp. 221-2). Death of 'Abdarrahīm, successor of al-Ḥākim (Abū Ya'lā Ḥamza).

A.H. 413 : damage to the Ka'ba done by some Egyptians (Hilāl aṣ-Ṣābī, Ibn at-Tursī).

A.H. 414 : Maḥmūd ibn Sebukteghin's campaign in India (more detailed than Ibn al-Athīr, vol. ix, p. 234).

A.H. 418 : Maḥmūd ibn Sebukteghin's campaign in India.

A.H. 420 : report on the Bāṭinites in Khurāsān. Quarrels between Mu'tazilites and Rāfiḍīs (Abul-Ḥasan az-Zaynabī).

A.H. 423 : revolt of the Turks against Jalāladdaula (more detailed than Ibn al-Athīr, vol. ix, p. 288).

A.H. 424 : expulsion of Jalāladdaula from Baghdād and his return there (more detailed than Ibn al-Athīr, vol. ix, pp. 293-4).

A.H. 427 : revolt of the army against Jalāladdaula (more detailed than Ibn al-Athīr, vol. ix, p. 303).

A.H. 429 : Jalāladdaula claimed for himself the title of *malik al-mulūk* (Ibn al-Jauzī, al-Imām Aḥmad).

A.H. 430 : Jalāladdaula assumed the title of *al-malik al-'azīz*.

A.H. 433 : promulgation of the so-called *i'tiqād al-Qādirī* in the *diwān*.

A.H. 445 : arrival of the Ghuzz at Ḥalwān. Excommunication of Abul-Ḥasan al-Ash'arī in Nisābūr (Abul-Qāsim al-Qushayrī).

A.H. 450 : return of al-Basāsīrī to Baghdād (al-Qilawī: *Ta'rikh*).

A.H. 451 : capture of Baghdād by al-Basāsīrī; flight of the Caliph al-Qā'im bi amr Allāh.

A.H. 464 : Nizām al-mulk's fight in Fāris.

A.H. 469 : campaign of Atsiz in Egypt (Hibatallāh ibn Aḥmad al-Akfānī, Ibn al-Qalānisī).

A.H. 478 : siege of Toledo by the Franks (more detailed than Ibn al-Athīr, vol. x, pp. 92-3).

A.H. 485 : fights of the Muslims with the Franks in

Andalusia (Alyasa ibn Khadm). The Sultān of Yaman in Baghdād (Sibt ibn al-Jauzī).

A.H. 491: capture of Antiochia (Sibt ibn al-Jauzī, Ibn al-Qalānisī). Discontent of the army against Barkiyārūq (Ibn al-Qalānisī).

A.H. 492: capture of Jerusalem by the crusaders (Sibt ibn al-Jauzī, Ibn al-Qalānisī).

A.H. 494: appearance of the Bāṭinites in 'Irāq (Ibn al-Jauzī, al-Ghazālī: *Sirr al-ālamayn*). Intervention of Qilij Arslān in the fight of the crusaders against the Turks (Usāma ibn Munqidh).

A.H. 495: fights of Sanjīl (St. Giles) (Sibt ibn al-Jauzī).

A.H. 498: death of Sanjīl.

A.H. 500: assassination of Ibn 'Aṭṭāsh (Abul-Ḥasan 'Alī ibn 'Abdarrahmān as-Sinjābī).

A.H. 552: Muḥammadshāh Maḥmūd in Baghdād. Nūraddīn's fight with the crusaders (Ibn al-Qalānisī).

A.H. 553: fights with the Ghuzz in Khurāsān (Ibn al-Jauzī).

A.H. 554: fights of Nūraddīn (Ibn al-Qalānisī). Death of Muḥammadshāh ibn as-Sultān Maḥmūdaddīn (Ibn Tūmart).

A.H. 563: Ṣalāḥaddīn's fights with the crusaders (Ibn ash-Shaddād). Death of Asadaddīn (Ibn Wāṣil). Campaign of the crusaders against Cairo (al-'Ammād).

A.H. 566: death of al-Mustanjid billāh (Ibn al-Jauzī). Battle with the crusaders at Dimyāt (al-'Ammād).

A.H. 567: fights of Nūraddīn and Ṣalāḥaddīn in Egypt (al-'Ammād).

A.H. 569: al-Muwaffaq ibn al-Faysarānī sent legates to Egypt (Ibn abī Ṭayy). Movement of the Shī'ites; execution of 'Umāra al-Yamanī (Ibn Wāṣil, al-'Ammād).

A.H. 571: fights round Mecca (Ibn al-Jauzī, al-Qīlawī: *Ta'rikh*). Fights of Ṣalāḥaddīn and Nūraddīn (Ibn abī Ṭayy).

A.H. 572: report on al-Malik al-'Ādil (Sibt ibn al-Jauzī). Report on Qaraqūsh (Ibn Wāṣil).

A.H. 573: the preaching of Ibn al-Jauzī in Baghdād (Ibn al-Jauzī).

A.H. 575: the Franks round Ramla. Tāshteghin was invested with the *khil'a*. Report on the Mamlūks (al-Buzūrī, at-Tamīmī).

A.H. 576: the Sultān in Alexandria (al-'Ammād).

A.H. 579: the victory of the Romans predicted from the Qur'ān by Majdaddīn ibn Jahbāl al-Ḥalabī (Abū Shāma).

A.H. 582: Tāghteghin, brother of Ṣalāḥaddīn at Mecca (al-Buzūrī). The assassination of Ibn Baysān by the Ismā'īlites ('Abdallaṭīf al-Baghdādī).

A.H. 583: fights of Ṣalāḥaddīn (Ibn ash-Shaddād, al-'Ammād, al-Jawānī, Sibṭ ibn al-Jauzī).

A.H. 584: Ṣalāḥaddīn's conquests in Syria (al-'Ammād, Sibṭ ibn al-Jauzī). Meeting of the Sultān Tughrulshāh and the wazīr Jalāladdīn ibn Yūnus (al-Buzūrī, Sibṭ ibn al-Jauzī). Fights with the crusaders (Ibn Shaddād, al-'Ammād, Ibn Wāṣil).

A.H. 586: fights with the crusaders ('Abdallaṭīf al-Baghdādī, Ḥaṭīm).

A.H. 587: fights with the crusaders (Ibn ash-Shaddād: *Sīrat Ṣalāḥaddīn*, al-Buzūrī).

A.H. 589: Ḥiṣn al-Jil redeemed by the crusaders (Abū Shāma, al-'Ammād). Report on al-Afdal (Ibn Wāṣil).

A.H. 591: rule of Mu'ayyadaddīn Muḥammad ibn al-Qasā'ib in Hamadhān (al-Buzūrī, Ibn Wāṣil). Arrival of al-Malik al-'Azīz at Damascus (Abū Shāma).

A.H. 592: al-Malik al-'Azīz at Damascus (Abū Shāma).

A.H. 593: victory of al-Malik al-'Ādil at Yāfā (Abū Shāma).

A.H. 594: Ibn al-Jauzī released from the prison of Wāṣit and pardoned. Meeting of Bahāaddīn and Ghiyāthaddīn (al-Buzūrī).

A.H. 596: clash of the armies of al-Malik al-'Ādil and al-Afdal (Ibn Wāṣil, al-Buzūrī).

A.H. 597: Ghiyāthaddīn and Shihābaddīn left Ghazna for Khurāsān (al-Buzūrī).

A.H. 600: Nūraddīn's victory at Tell 'Afar (Sibṭ ibn al-Jauzī). The Franks at Ḥalab (Ibn Wāṣil).

A.H. 601 : exclusion of the son of an-Nāsir li dīn Allāh from the succession (Abū Shāma). Fights with the crusaders in Syria (al-Fārisī: *Ta'rikh*).

A.H. 604 : Ayyūb ibn al-Malik al-'Ādil's reign in Khilāṭ (Ibn Wāṣil).

A.H. 605 : Shihābaddīn as-Suhrawardī in Rusaylā (Abū Shāma). Khwārizmshāh conquered Herāt, his fights with Jinghizkhān; the Tatars ('Abdallaṭif al-Baghdādī: *Khabar at-Tatār*, an-Nasawī).

A.H. 607 : reunion of the princes with al-Malik al-'Ādil. Nūraddīn's gift to his son. Report on Ibn ad-Duhayra. Al-Bāl al-Qubrasī's expedition from Acre to Dimyāṭ.

A.H. 608 : Muslim victory at Toledo.

A.H. 609 : revolt of Sāma in Egypt (Abū Shāma). Marriage of al-Malik az-Zāhir with the daughter of al-Malik al-'Ādil. Muslim victory in Andalusia.

A.H. 610 : Khwārizmshāh escaped from his captivity with the Tatars. Birth of a son to al-Malik al-'Azīz in Ḥalab (Ibn Wāṣil).

A.H. 611 : expedition of the Franks against the Ismā'ilites. Sarkhad occupied by al-Malik al-Mu'azzam.

A.H. 612 : expedition of the Franks against the Ismā'ilites (Abū Shāma). Reign of al-Malik al-Mas'ūd ibn al-Kāmil in Yaman. Expedition of the amīr of Madīna against Qatāda the lord of Mecca. Fights with the Tatars and the Assassins.

A.H. 614 : legation of the qādī Majdaddīn Muḥammad ibn Sa'd al-Khwārizmī in Baghdād (Abū Shāma).

A.H. 615 : al-Malik al-'Ādil's fights with the crusaders (Ibn Wāṣil). Al-Malik al-Ashraf's victory over the Romans (Abū Shāma). Reception by Khwārizmshāh of the legates of Jinghizkhān in Nisābūr (al-Mu'ayyad 'Imādaddīn: *Ta'rikh*).

A.H. 616 : evacuation of Khwārizm by Turkhān Khātun.¹ Devastation of Jerusalem by al-Mu'azzam (a poem by Majdaddīn Muḥammad ibn 'Abdallāh Qādī at-Ṭaur). The

¹ See the more copious record of an-Nasawī, ed. Houdas, pp. 38-42.

crusaders captured Dimyāt (Sa'daddīn Sa'īd ibn al-Hamawīyya, Abū Shāma, Ibn Wāṣil).

A.H. 617: Muẓaffaraddīn's victory over Badraddīn al-Lu'lu' at Arbīl. Appearance of the Tatars in Central Asia (an-Nasawī, 'Abdallaṭīf al-Baghdādī, Ibn Wāṣil).

A.H. 618: clash between the armies of Jinghizkhān and Jalāladdīn ibn Khwārizmshāh (Ibn Wāṣil). Meeting of al-Malik al-Mu'azzam with his brother (Abū Shāma).

A.H. 619: encounter of Jalāladdīn ibn Khwārizmshāh with Shamsaddīn Itmish.

A.H. 620: meeting of al-Malik al-Ashraf with al-Mu'azzam (Abū Shāma).

A.H. 622: the Tatars took Tiflis (Abū Shāma).

A.H. 623: death of aẓ-Zāhir billāh, caliphate of al-Mustanṣir billāh (Ibn ash-Shāri'i).

A.H. 624: the legate of the crusaders with al-Malik al-Mu'azzam.

A.H. 626: the crusaders took Jerusalem (Abū Shāma).

A.H. 627: the taking of Ba'albakk (Abū Shāma). Defeat of the Khwārizmites at Khilāt ('Abdallaṭīf al-Baghdādī).

A.H. 628: fights in Maghrib between the Banū 'Abdalmu'min and the Maghribīs.

A.H. 629: advance of the Tatars in Ādharbayjān.

A.H. 630: the taking of Āmid. Rājīh ibn Qatārim marched against Mecca. Fights round Arbīl.

A.H. 632: 'Umar ibn Rasūl's reign in Yaman. Introduction of the new coins of al-Mustanṣir billāh (al-Muwaffaq abul-Ma'ālī al-Qāsim ibn abil-Hudayd).

A.H. 633: advance of the Tatars from Arbīl to Mauṣil. Cordoba was taken by the Franks (Abū Ḥayyān, Ibn al-Abbār).

A.H. 634: pigeon-post from Ruknaddīn in Mauṣil to Sharafaddīn in Baghdād. Truce between al-Kāmil and the Romans.

A.H. 635: the Tatars in Daqūqā, their clash with Jalāladdīn. Al-'Ādil sultān of Egypt.

A.H. 639 : fights with the Tatars (Sa'dallāh).

A.H. 640 : the Tatars took Erzerum (Ibn al-Ḥamawiyya).

A.H. 641 : victory of the Tatars over the Saljūqs of Rūm.

A.H. 642 : advance of the Tatars in Transoxania (Sa'daddīn : *Ta'rikh*). The Tatars in Shahrazūr.

A.H. 643 : the Egyptian Mu'ayyadaddīn's campaign against Damascus (Sa'daddīn ibn al-Ḥamawiyya, abū Shāma). Advance of the Tatars to *بغزبا*.

A.H. 644 : hostility between al-Mu'azzam and al-Malik al-Muzaḥḥar (Sa'daddīn ibn al-Ḥamawiyya). al-Musta'ṣim billāh gave dowries to his sons (Ibn as-Sā'ī). Two legates of the Tatars with the Muslims. The crusaders took Xativa.

A.H. 645 : the Sultān Ṣāliḥ Ayyūb took the fortress of aṣ-Ṣabība (Sa'daddīn ibn al-Ḥamawiyya). The fortress of Shahīmas was taken from al-Ashraf by the Sultān Ṣāliḥ Ayyūb.

A.H. 647 : al-Amjad Ḥasan ibn an-Nāṣir in Egypt. The crusaders took Dimyāṭ (Ibn as-Sā'ī). 'Alī al-Arbilī marched against Baghdād.

A.H. 648 : battle of the crusaders at al-Manṣūra (Sa'daddīn : *Ta'rikh*, Jamāladdīn ibn Maṭrūḥ, Ibn Isrā'īl). Clash between 'Izzaddīn at-Turkumānī and the Yamrites ; death of Tāj al-mulūk (Sa'daddīn). Death of al-Mu'azzam (Ibn as-Sā'ī).

A.H. 651 : peace between al-Malik an-Nāṣir and the Egyptians. Hülākū khān, after crossing the Arghūn, marched to Khurāsān. Al-Malik an-Nāṣir occupied 'Akka and Saydā.

A.H. 652 : appearance of a Khārijite in Maghrib pretending to be al-Mustanṣir billāh. al-Malik an-Nāṣir married the daughter of Kayqubādh, sultān of Rūm. Plunderings of Oqtāy in aṣ-Ṣamīd (Shamsaddīn al-Jazarī). Victory of the lord of Maṣīl over the 'Adawīs.

A.H. 653 : clash between al-Malik an-Nāṣir and al-Malik al-Mu'izz. In a separate chapter : enumeration of the names of the Yamrites.

A.H. 654 : enumeration of the kings of that time. Hülākū marched against Rayy.

A.H. 655 : death of al-Malik al-Mu'izz. Tatar legates in Baghdād. Appearance of the Haydariyya in Syria. Campaign of al-Mughīth in Egypt (Ibn Wāṣil). The Tatars in Mauṣil. Sa'daddīn Khadhar ibn Ḥamawiyya's misfortune (from his own *Ta'rikh*). Hülākū marched from Hamadhān to Baghdād.

A.H. 656 : the Tatars took Baghdād (a *qaṣīda* by Taqīaddīn Ismā'il ibn abil-Yusr, Ibn al-Kāzarūnī).

A.H. 657 : advance of the Tatars to Āmid and Ḥarrān, their crossing of the Euphrates.

A.H. 658 : review of the *ṣāhibs* of the different provinces. Advance of Hülākū to Ḥalab (Qutbaddīn : *Ta'rikh*, abū Shāma). Taking of Damascus (Ibn al-Jauzī, abū Shāma, Qutbaddīn, 'Izzaddīn ibn ash-Shaddād).

A.H. 659 : review of the *ṣāhibs* of the year. Battle of Ḥims (al-Jazarī, abū Shāma, Qutbaddīn).

A.H. 660 : fights round Mauṣil (Ibn Khallikān).

A.H. 661 : clash between al-Malik aẓ-Ẓāhir and al-Mughīth. Encounter of Hülākū with the Berke.

A.H. 662 : Shihābaddīn abū Shāma's rule in Mashīkha.

A.H. 663 : Muslim victory in Andalusia (Abū Shāma). The Tatars attacked al-Bīra. Hülākū's death was reported, his son Abnā became king of the Tatars.

A.H. 664 : solemn exit of the Sultān from Egypt to Jerusalem (Sa'daddīn : *Ta'rikh*).

A.H. 665 : victory of Burāq son of Jaghatāy over Abaqa near Herāt.

A.H. 666 : the legate of al-Malik al-Muẓaffar Shamsaddīn in Egypt. Siege of Yāfā. The Sultān asked for truce (Ibn 'Abdazzāhir : *Sīrat aẓ-Ẓāhiriyya*). Redemption of the son of Bogha, lord of Sais, from the captivity of the Tatars.

A.H. 667 : the Sultān received the legates of Bogha.

A.H. 668 : campaign of the Sultān in Syria, his encounter with Ṣārimaddīn Mubārak and the Ismā'ilites. Fight with the crusaders in Tūnis.

A.H. 669: the Sultān's campaign against 'Asqalān and Ḥiṣn al-Akrād. Al-Malik al-'Azīz was captured in Cairo. Revolt of Idrīs in Mecca. The crusaders in Tūnis.

A.H. 670: campaign of the Sultān against the Kurks and the Tatars (Shamsaddīn Muḥammad ibn al-Fakhr). His expedition to al-Jiza. The Tatars in Ḥarrān.

A.H. 671: incursion of the *ṣāhib an-naṭba*. Fight with the Tatars on the Euphrates (ash-Shihāb Maḥmūd Ibqā Allāh).

A.H. 672: the Sultān entered 'Asqalān. Story of the king of the Georgians.

A.H. 673: the Sultān in Damascus and Sīs (al-'Ammād, Ibn 'Abdazzāhir).

A.H. 674: Tatar attack on Bīra. Campaign of an-Nūba and Raṅqala (Ibn 'Abdazzāhir).

A.H. 675: fights of Badraddīn al-Atābakī with the Tatars in Palestine. The Sultān, after going to Derbend, defeated the Tatars (Quṭbaddīn: *Ta'riḥ*).

A.H. 676: fights of the Sultān with Abnā (—).

A.H. 678: sultānate of al-Malik al-Manṣūr.

A.H. 679: fights of Sunqūr al-Ashghar with the Tatars.

A.H. 680: defeat of the Tatars at Ḥims.

A.H. 691: victory of the Sultān over the Romans.

A.H. 692: the Sultān demanded the fortress of Bahnā from the prince of Sīs.

A.H. 693: assassination of the Sultān al-Malik al-Ashraf.

A.H. 694: Ghāzān, the grandson of Hūlākū embraced Islām.

A.H. 698: movement of the Shāfi'ite *mutakallimūn*.

A.H. 699: the Tatars invaded Syria and took Damascus (Ibn Ṣabbāḥ az-Zubaydī).

A.H. 700: the Tatars in Syria.

As it may be seen, adh-Dhahabī's especial concerns are (1) the history of the Seljūqs, Ayyūbids and the Mongol invasion; (2) the internal development of Islām, especially the movement of the Bāṭinites and the Shī'ites; (3) the Western Islām, a territory which was neglected by aṭ-Ṭabarī

and also by Ibn al-Athīr to a certain extent. As a whole, the *Ta'rikh al-islām* shows the tendency of adh-Dhahabī to deal with the development of the whole of Islām, though, as a matter of course, his records are more detailed for Syria and Egypt than for other Muslim territories.

(b) *Local History*

Like his predecessors, Ibn al-Jauzī and Sibṭ ibn al-Jauzī, adh-Dhahabī also takes a special interest in the events of local importance. But whereas the main concern of Ibn al-Jauzī is directed to the history of Baghdād and that of Sibṭ ibn al-Jauzī to the local history of Damascus, adh-Dhahabī, by making use of both these works, records the local chronicle of both Muslim cities. Not considering the many accounts concerning these cities which are contained in his political narrative, it is peculiarly between A.H. 301-700 that he regularly records the changes in the administration of both Baghdād and Damascus and sometimes also of other cities, mentioning the names of the new *qāḍīs*, *wālīs*, and *ʿāmilīs* which are also found mostly in the works of Ibn al-Jauzī and Sibṭ ibn al-Jauzī, continuing them to his own time. These data are indispensable for the history of the administration of Baghdād and Damascus during the ʿAbbāsids, Ayyūbids, and Mongols. Similarly he is also interested in the changes in the external shape of these cities; the construction and enlargement of mosques, *sūqs*, schools, hospitals, and other public buildings are, as a rule, carefully recorded. He does not neglect the internal life of the Muslim centres either. The disputes between the different sects of Islām, between Sunnites, Shīʿites and Rāfiḍīs, as well as the seditions and robberies which were very frequent during the period of the ʿAbbāsids, are always remembered in the *Ta'rikh al-islām*. And finally, we can obtain some data on the economic life of both cities in the records on high prices in consequence of drought or other plagues; the prices per *raṭl* of the main commodities (bread, flour, meat) are usually indicated. Thus the *Ta'rikh al-islām* is an excellent

work of reference on the local history of Baghdād and Damascus, especially for the later period, to which the works of Ibn al-Athīr, Ibn al-Jauzī and Sibṭ ibn al-Jauzī do not extend.

(c) *'Ajā'ib* ("wonderful events")

One of the main characteristics of our work is its sometimes very detailed records on strange events and curiosities of the several years. In regard to these so-called *'ajā'ib*, adh-Dhahabī proves a good disciple of both Ibn al-Jauzī and Sibṭ ibn al-Jauzī, to whose works he constantly refers in his narrative. Firstly he always mentions the astronomical phenomena: the strange sidereal constellations or the appearance of comets. Then he records also meteorological phenomena like violent winds, heavy rains or droughts, and the famines which appeared as a consequence of the latter. He also makes it a point to describe earthquakes and the panic called forth by them. Thus he gives detailed records of the earthquakes of A.H. 460 with reference to Ibn al-Athīr, Ibn al-Qalānisi and aṣ-Ṣābūnī, of A.H. 551-2, with reference to Ibn al-Jauzī, and of A.H. 565 with reference to al-'Ammād al-Kātib and Sibṭ ibn al-Jauzī. His narrative is peculiarly detailed on the year A.H. 597, when great famines and elementary plagues occurred in both Egypt and Iraq, while Syria was laid waste by a terrible earthquake. Adh-Dhahabī records all these events in a narrative of seven folio-pages¹ on the authorities of 'Abdallaṭīf al-Baghdādī, Abū Shāma, Sibṭ ibn al-Jauzī, and al-Buzūrī, whereas Ibn al-Athīr devotes only some lines to the same events.²

And finally, adh-Dhahabī is fond of remembering all kinds of odd events which occurred in the several Muslim cities or provinces and which were "the fun of the fair" of those days. With the instinct of a modern journalist, adh-Dhahabī, after relating the political and local events of the several years, does not leave without mention such oddities as the

¹ See the MS. of the Bodleian Library (Ury), No. 649, fol. 179b-83.

² See vol. xii, p. 112.

appearance in Nihāwand of a man practising sorcery (A.H. 499), the appearance of an elephant in Damascus (A.H. 610), a man who had ten daughters (A.H. 643), a Baghdād woman who gave birth to double twins (A.H. 646), another woman who gave birth to twins (A.H. 647), the sinking of seven islands on the authority of the *Ta'rikh* of al-Mu'ayyad 'Imādaddīn (A.H. 660), or an elephant-shaped lamb which was brought to the Sultān (A.H. 663).

Thus the *Ta'rikh al-islām* is a repository of all sorts of curiosities and gives us an insight also into the events which interested "the man in the street" of Baghdād or Damascus.

B. *Biographies*

But it is chiefly for its biographical value that the *Ta'rikh al-islām* has always been referred to and appreciated. Following the example of the *Kitāb al-muntazam* of Ibn al-Jauzī, adh-Dhahabī also gives obituary notices on the persons of some consequence who died in the respective years. These biographical records are far more elaborate and comprise a far greater—on an average six or seven times as large a—part of *Ta'rikh al-islām* as the *hawādith*, which only appear to be prefixed to them for the sake of completeness and for the preservation of the *ta'rikh*-character of the work. The predominance of the biographical matter of his work can best be seen from its division into classes (*ṭabaqāt*) of ten years, which is carried through not only in the biographical parts, but also in the general narrative, though, as a rule, the technical term *ṭabaqāt* was only applied to biographical collections, like the *Ṭabaqāt al-ḥuffāz* or the *Ṭabaqāt al-qurrā* of the same author. Thus adh-Dhahabī adopted the system of the *ṭabaqāt*-works for his *Ta'rikh al-islām* and retained the chronological division of the subject-matter as a mere subdivision.

But, in contrast to the *ṭabaqāt*-works, the biographies of the *Ta'rikh al-islām* include not only illustrious men of one *madhhab* only, like the *Ṭabaqāt ash-Shāfi'iyya* or *Ṭabaqāt*

al-Hanbaliyya of different authors, nor prominent people of one vocation only like the biographical collections on poets or scholars, but *all* sorts of people belonging to *all* the four *madhhab*s of the Sunnite Islām or to the Shī'ites, though, as a matter of course, preference is given to the *madhhab* of adh-Dhahabī, the Shāfi'ites.

These biographical records include in alphabetical order all sorts of people, thus :—

(1) All the caliphs and minor rulers as well, whose succession to the throne or death are generally remembered briefly also in the general narrative. A particular advantage of the *Ta'rīkh al-islām* is that the caliphs of the Spanish and Maghribī Islām are as well recorded as those of the East, among whom the biographies of the Ayyūbid and Seljūq rulers especially deserve our attention.

(2) The wazīrs, generals, and high officials (*amīrs*, *'āmil*s, *wāṭis*).

(3) The theologists and jurisconsults (*qāḍis*, *faqīhs*) of all the *madhhab*s.

(4) The scholars other than theologists.

(5) The poets.

The biographies vary in length from the mere mention of names to the very detailed biographical records on the most celebrated people; these latter also narrate some episodes of their lives. The style of adh-Dhahabī's records is the same as that of Ibn al-Jauzī's. First comes the full name of the deceased person (*'ālam*, *kunya*, *laqab*), then follow the date and place of his birth, appearance, and short characterization (of the more important men only), the names of his masters and of those who studied with him and reported on him, his career, the opinions of the leading authorities concerning him, an enumeration of his literary works, the date and place of his death, and possibly also the place of his burial. In the biographies of poets many quotations, even poems in full length, are frequently included in the records.

Adh-Dhahabī, in compiling the biographies of the

celebrities of seven centuries, rendered an invaluable service to posterity and in the first place to the scholars of Arabic literature and the history of Islām who so often need data regarding prominent figures of Muslim past. There is no better evidence of the great biographical value of the *Ta'rikh al-islām* than the fact that some of the biographical abstracts made from it by adh-Dhahabī himself were known earlier than the original works. If it has been necessary to edit the short recensions of the work: the *Kitāb duwal al-islām*, the *Ṭabaqāt al-ḥuffāz*, or the *Tajrīd fī asmā aṣ-ṣahāba*, it would undoubtedly be important to publish the *Ta'rikh al-islām*, too, either as a whole or at least its latter half treating the years A.H. 301-700, for which period we have no other work of the same kind, comprising in itself both the political history and the biographies of these four eventful centuries of Muslim history.

THE SOURCES OF THE *TA'RIKH AL-ISLAM*

The *Ta'rikh al-islām*, like many other Arabic works on general history, is a compilation of all sorts of data excerpted by its author from a vast number of sources. In reading the manuscripts of the work one has to acknowledge adh-Dhahabī's great versatility in many branches of Arabic literature, especially in history, *ḥadīth*, *fiqh*, and poetry. There is hardly any important work in these branches which was not consulted by him. In addition, he was careful in collecting his data concerning one event from *all* the sources available for him, which he always quoted conscientiously. Though, as we have seen, he was reprimanded for a certain bias even by one of his most famous disciples, yet his reliability becomes evident by reading the *Ta'rikh al-islām* hand in hand with the sources referred to by him where this is feasible. Such a comparison proves his reliability in excerpting other works, which enables us to obtain trustworthy references to and extracts from works non-extant or data on authors unknown to us. Even if in reading the *Ta'rikh al-islām* we

come across such indefinite references as “*wa qāla ghayruhu*” (“and it was said by somebody else”), these are not disturbing either, because the sources can well be deduced even in these cases from the context of the passage in question.

Thus the *Ta'rikh al-islām* is an almost inexhaustible repository of earlier historical, biographical, and theological literature. In examining the authorities consulted by adh-Dhahabī we can fairly well see which authorities were in common use at this time. First there were four sources of primary importance on general history:—

(1) The *Ta'rikh ar-rusul wal-mulūk* of aṭ-Ṭabarī for the general narrative of the first three centuries A.H., the common use of which was so well-known that adh-Dhahabī did not trouble to refer to it, and could forego the detailed record of the events of this period.

(2) The *Al-kāmil fī-ta'rikh* of Ibn al-Athīr is his main source for the years A.H. 301–628 of the general narrative. His name is nearly always mentioned.

(3) The *Kitāb al-muntazam wa multaḡat al-multazam fī akhbār al-mulūk wal-umam* of Ibn al-Jauzī was doubtless the most important source of adh-Dhahabī, not so much on political history as on the local history of Baghdād, on the ‘*ajā'ib* and on the biographical matter generally, and on the obituary notices on prominent Baghdād people especially for the period A.H. 302–597. We may justly call adh-Dhahabī the most distinguished disciple of Ibn al-Jauzī, from whose work he borrowed the whole system of his *Ta'rikh al-islām*.¹

The importance attributed by him to the *Kitāb al-muntazam* can be seen also from his constant references for A.H. 575–631 to a hitherto unknown continuation of it by a certain Abū Bakr Maḥfūz ibn Ma'tūq ibn abī Bakr ibn 'Umar al-Baghdādī ibn al-Buzūrī, who according to him,² wrote a supplement to the *Kitāb al-muntazam*.

¹ He also remembers in the general narrative of A.H. 597 that it was in that year that the *Kitāb al-muntazam* ended (see the MS. of the Bodleian Library (Ury), No. 649, fol. 148b, l. 7).

² See *ibid.*, fol. 148b, ll. 9–10.

(4) The *Kitāb mir'āt az-zamān fī ta'rīkh al-a'yān* of Sibṭ ibn al-Jauzī was used (1) for the general narrative of the years A.H. 629-54, i.e. from the time on where Ibn al-Athīr's work ends; (2) for the local history of Syria and especially of Damascus regarding which Sibṭ ibn al-Jauzī is as reliable an authority as his grandfather is on the local history of Mesopotamia and of Baghdād especially; (3) for the 'ajā'ib, which occurred in Syria.

Concerning what may be styled the lesser authorities of adh-Dhahabī, for the history of the Ayyūbids he used most the *Kitāb ar-raḍdatayn fī akhbār ad-daulatayn* of Abū Shāma and the *Kitāb mufarrij al-kurūb fī akhbār Banī Ayyūb* of Ibn Wāsil. For the history of the Mongols he made use of the *Sīrat as-Sultān Jalāladdīn Manqūbirtī* of an-Nasawī, and a hitherto unknown report of the famous Baghdād physician and scientist 'Abdallaṭīf al-Baghdādī, whose history and geography of Egypt are well known to scholars.

On the following pages we give an enumeration of the sources used by adh-Dhahabī in the general narrative of his work, excluding aṭ-Ṭabarī, Ibn al-Athīr, Ibn al-Jauzī, and Sibṭ ibn al-Jauzī.¹ As for his biographies, it is almost impossible to give a short synopsis of adh-Dhahabī's authorities, so many are his references and quotations. Besides the works also used for his general narrative, it is chiefly the great biographical collections of Ibn Najjār, Ibn 'Asākir, al-Khaṭīb al-Baghdādī, Ibn Khallikān, and as-Sam'ānī that he mentions most frequently in his obituary notices.

Our list gives evidence of the scientific value of the *Ta'rīkh al-islām*, which has been considered an excellent symposium of Islāmic lore by all the famous later authors. Thus Muḥammad ibn Shākir al-Kutubī in his '*Uyūn at-tawārīkh*, al-Yāfi'ī in his *Mir'āt al-janān wa 'ibrat al-yaqẓān*, and

¹ The works of reference consulted are the *Ṭabaqāt al-huffāẓ* of the same adh-Dhahabī in the well-known recension of as-Suyūṭī, the works of Ibn Khallikān, as-Sam'ānī and Ḥājī Khalifa.

al-'Aynī in his *Iqd al-jumān fī ta'rikh az-zamān* all drew a great deal on adh-Dhahabī's work.

Ibn al-Abbār (died in 658/1260). A.H. 633 (Spain).

Al-imām *Aḥmad* (perhaps Aḥmad ibn Ḥanbal, died in 241/855). A.H. 429.

Al-Qādī abū Bakr ibn *al-Bāqillānī* (died in 403/1012). *Kitāb kashf al-asrār al-Bāṭiniyya*. (See *Ḥājī Khalīfa*, No. 10,655.) A.H. 322.

Ibn Bākūya ash-Shīrāzī (died in 442/1050). A.H. 309.

Ibn al-Buzūrī (according to the MS. of the Bodleian Library, vol. i, No. 649, fol. 148b, ll. 9-10, his name is abū Bakr Maḥfūz ibn Ma'tūq ibn abī Bakr ibn 'Umar al-Baghdādī ibn al-Buzūrī, "he supplemented the *Muntazam* in many volumes"). A.H. 575, 582-4, 586-8, 591, 593-4, 597, 599, 631. (Local events and 'ajā'ib of Baghdād.)

Abul-Faṭḥ *al-Bustī* (died in 401/1010). A.H. 392.

Al-Mukhtār *Buḷlān* (died in 455/1063). A.H. 446.

Ibn at-Tursī (at-Tūnisī? Perhaps identical with Hilāl aṣ-Ṣābī). A.H. 413.

Abū Tammām (died in 230/845). A.H. 395. (A poem.)

At-Tamīmī. A.H. 575.

At-Tanūkhī. (1) Al-Qāsim at-Tanūkhī. A.H. 302, 312, 352, 356 (Būyides). (2) Aḥmad ibn Yūsuf at-Tanūkhī. A.H. 309. (3) Ibn al-Muḥsin at-Tanūkhī (died in 384/994). A.H. 330.

Ibn Tūmart (died after 524/1130). A.H. 554.

Thābit ibn Sinān (died in 365/975, his history was continued by Hilāl aṣ-Ṣābī). A.H. 301, 309, 314, 317, 320, 322, 324, 326, 329, 333, 351-2.

Abū Manṣūr 'Abdallāh ibn Muḥammad *ath-Tha'ālibī* (died in 429/1038). A.H. 366, 388.

Shamsaddīn *al-Jazarī* (died in 710/1311). *Ta'rikh*. A.H. 652, 659. (Tatars.)

An-Nasāba Muḥammad ibn As'ad *al-Jawānī* (died in 588/1192). A.H. 583. (A poem.)

Ibn al-Jawzī (certainly a descendant or relative of Sibṭ ibn al-Jawzī). A.H. 658.

'Alī ibn Aḥmad *al-Ḥāsib*. A.H. 309.

Sa'daddīn ibn Mas'ūd *ibn al-Ḥamarwīyya al-Juwaynī* al-Kāzarūnī (died in 758/1357). A.H. 616, 640, 642-5, 647-8, 655-6, 664. (Ayyūbids, Tatars.)

Ḥaṭīm the poet. A.H. 586.

Al-Muwaffaq abul-Ma'ālī al-Qāsim *ibn abīl-Ḥudayd*, A.H. 632.

Al-Qādī *abul-Ḥusayn* (certainly abul-Ḥusayn ar-Rāzī al-Ḥāfiẓ al-Imām Muḥaddith ash-Shām Muḥammad ibn 'Abdallāh ibn Ja'far ibn 'Abdallāh ibn al-Junayd, see *Tab. Ḥuff.*, xii, 16, according to which he died in 348/959-60). A.H. 322.

Ibn Ḥamdān at-Ṭabīb (perhaps Ibn Ḥamdān al-Ḥāfiẓ al-Majūl abū Ṭāhir Muḥammad ibn Aḥmad ibn 'Alī ibn Ḥamdān al-Khurāsānī, see *Tab. Ḥuff.*, xiii, 69). A.H. 332.

Al-Ḥumaydī (certainly the Andalusian abū 'Abdallāh Muḥammad ibn abī Naṣr who died in 488/1095 and was the author of the *Kitāb jadhwat al-muqtabis fī dhikr wulāt al-Andalus*). A.H. 372. (Andalusia.)

Ibn Ḥaruqal (lived in the fourth century A.H.). A.H. 309.

Abū Ḥayyān Athiraddīn (died in 745/1345). A.H. 633. (Spain.)

Muḥammad ibn 'Alī *al-Khurāsānī*. A.H. 322.

Abul-Ḥasan Muḥammad ibn Nāfi' *al-Khuzā'ī*. A.H. 340.

Abū Bakr *al-Khaṭīb al-Baghdādī* (died in 403/1071). A.H. 309, 329, 381.

"The Combat of Death and the Most High"

A Proto-Hebrew Epic from Ras-Samra

Transcribed from the Cuneiform Original with Translation
and Notes

By THEODOR HERZL GASTER, B.A.

INTRODUCTION

THE text which is here presented is part of a long mythological poem inscribed in alphabetical cuneiform upon clay tablets found at Ras-Samra. This portion of the text was published by Virolleaud in *Syria*, October, 1931, together with a transliteration into Latin characters, a French translation, and brief notes. It is here transliterated into square Hebrew characters, translated into English, and furnished with a commentary. Needless to say, this fresh edition owes more than can be adequately expressed to the pioneer work of Virolleaud, whose philological interpretations have been largely adopted. It appeared, however, that there was still room for further interpretation of the text along purely mythological lines, and that several allusions could still be explained. Moreover, there were quite a few passages where philological treatment from a different angle would seem to throw light upon obscurity. In none of these matters can finality be claimed; one can but suggest. And it should especially be remembered that at the moment only one portion of a large text is to hand. One may hope that the great French scholar may see his way to letting us have the remainder without undue delay.

The text contains a mythological poem written in a language which Virolleaud calls "Phœnician". Certainly, it bears all the characteristic marks of this dialect, but it seems to me safer to give it the name "Proto-Hebrew", thus avoiding the assumption that these characteristic marks

were necessarily confined to Phœnician. The language represents, in fact, an anterior stage to Classical Hebrew. Words which in the latter have already acquired a tropic and metaphorical meaning here retain their original and primary signification; e.g. רפא means "repair", and not specifically "cure"; מרח means "smear", not "blot out". The morphology also is of archaic type, many of the inflectional forms still remaining, e.g. ארך "behold", with the demonstrative suffix *-k*; לתן with the original precativ prefix.

Nor is it any evidence for Phœnician origin that the deities mentioned in our text, e.g. Dagan, 'Anath, Asherah, figure in the Phœnician pantheon, because these deities were by no means confined to that pantheon; their cultus extended over a very wide area of pre-Israelitic Palestine and Syria. It is to be understood, however, that the term "Proto-Hebrew" is a philological and not a chronological one. It implies only that the language is in a stage of development anterior to that of classical usage. This is the case with many of the Semitic dialects, and does not mean that the text is necessarily anterior in date to the Biblical writings. Indeed, I am inclined after careful study, and in view of (a) the reference to the Scythians in vi, 17, and (b) the parallelism of vi, 28-9, with an idiom of the time of Ahiiram, king of Byblos, very much to question the high antiquity claimed for this epic by Virolleaud. More than this cannot safely be said at the moment.

The poem, so far as we can judge from this short extract, combines two myths, viz. (a) the Gigantomachia, or fight between rival gods; (b) the Death and Resurrection of the Saving-God. These two myths are very frequently combined in this manner, especially in the Assyrian Enmešarra-cycle and in the Hittite Telibinuš-legend, the reason being that the Saving-god is identified with one of the protagonists in the combat of the gods. In our own version of the story, Elyon Ba'al, deity of fertility, is assailed by Mōth (BH. מוֹת), deity

of blight and decay, and sent away. Elyon is later restored, through the intervention of other deities, and vanquishes Mōth and his allies, apparently imprisoning them and leaving them to entreat mercy.

I have endeavoured to point out in the notes the occurrence of regular motifs which typify these cycles of myths. Especially to be noticed are the following: (a) Elyon is called **בן נשם** (ii, 18), an exact rendering of DUMU.ZI = "Tammuz"; (b) Mōth has seven confederates (vi, 6), like Enmešarra, the Titans, etc.; (c) if my interpretation is right (ii, 9-11) Mōth is trampled underfoot and bound in a net, like Tiamat and Apsu.

I believe we may find a trace of this myth in O.T., for in Ezekiel xiv, 14, we read:—

ואשכ בחר מועד בירכתי צפון
אעלה על כמתי עב אדמה לעליון

which comports exactly with i, 29-30 of our text. Again, in Col. vi, there are a number of phrases reminiscent of the ancient poem in Deuteronomy xxxiii. These are pointed out in the notes. Lastly, it is significant that the rebellious Mōth is constantly styled **בן אלם**, for the rebel coterie of Genesis vi are similarly called **בני האלדים**. These vanquished gods are the *ilāni šabtuti* (or *kamuti*) of Assyrian, and the bound *Titāves* of Greek mythology. They are the "fallen angels" in contrast to the victorious hosts of 'Elyon. I believe that there is an allusion to this contrast in that baffling verse Ps. xcii, 6:—

אמרת אלדים אתם
ובני עליון כלכם
אכן כאדם תמותון
וכאחר השרים תפלו:

But the connection of our myth with legends alluded to in O.T. can hardly be determined until we have the complete text.

It is my intention to pursue this study further as soon as the remainder is published.

Here I will add only one remark, and that is to say how much all workers in this field must owe in gratitude not only to Virolleaud, but equally to Professor Hans Bauer, without whose brilliant and courageous decipherment of the alphabet little progress could have been made.

PROVISIONAL TRANSLATION

[COLUMN I]

. Elyon Baal ;
 his
 his . . . he . . . to the gods.
 Now turn thy face unto El,
 Who maketh the currents to flow
 Amid the streams of the deeps.
 Find out the mountain of El,
 And come in to the throne of the King,
 The Father of all men's years ;
 Then in the presence of El
 Slice thou the meats and roast them ;
 Bow down and render Him homage.
 Then lift up voice and speak ;
 Make glad Asherath and her son,
 Allath and the throng of her lions ! "

Whenas Elyon was dead,
 And Zebul, the Land's Baal, was gone ;
 Then did El take up word
 With the Queen Asherath of the Sea,
 Saying : " Hear, Asherath of the Sea,
 Render me one of thy sons,
 That I may appoint him king."
 But the Queen made answer to him,
 E'en Asherath of the Sea ;
 " Nay, we shall make none king
 Save one that knoweth . . . "
 Then LTPN ELDPD' replied :
 " Let now Duq-Anum prepare,
 Let him, with Baal, prepare unguent,
 Yea, even with Ben-Dagon,
 That thou mayest make the annealment ! "
 Then did the Queen make answer,

E'en Asherath of the Sea :
 "None shall we set as king
 Save Ishtar-'arif alone ;
 Ishtar-'arif shall be king !
 Behold, let now Ishtar-'arif
 Go up to the height (?) of the North,
 Sit on Elyon Baal's throne.
 His face shall ye smear with blood ;
 Yea, from the crown of his head
 To the sole of his foot be he smeared !"

Then Ishtar-'arif took up word :
 "Surely, I will be king,
 There in the height (?) of the North !"
 So Ishtar-'arif went forth,
 Went to Elyon Baal's throne,
 And reigned o'er the whole land of El.
 We caroused (?) in the open places,
 We caroused (?) in the closed chambers (?).

[COLUMN II]

(Some fragmentary lines)

So Anath set a prowling hound
 To assail the herds of calves,
 She set a raging hound
 To assail the flocks of sheep
 After the Wish of Anath
 The consort of Baal.

She laid her grasp upon MOTH,
 Trampled beneath her shoe ;
 She held him fast in a grip,
 Bounden within a net ;
 She lifted up voice and sp(ake) ;
 "Return thou my brother, O MOTH."
 But MOTH, the Son of the gods,

Took up answer to her,
 "What wouldst thou, Virgin Anath?
 I will wander and hunt for him
 In every hole of the earth
 And upon every hill
 To the uttermost part of the land;
 I will seek this Son of Life-breath
 Of life breath which now is failed
 Yea, the land's life breath which is vanished;
 Yet shall it be of my grace
 That the land which is now waste prairie
 A very desert place,
 As another Elyon Baal
 I, even I, will repair it.
 Myself shall be as the saying
 In the mouth of the vulgar (?):
 "With bruising, though guiltless, was he maimed (?)."
 And Sps (joined in the word),
 —Even that Light of the Gods:
 "The lands unbedew'd of the heavens
 Lie in the hand of Moth,
 Even the son of the gods;
 He shall yet cause them to thrive
 For days upon days upon days,
 Yea, and for months upon (m)onths!"

So 'Anath fetched a wandering hound
 To assail the herds of calves,
 She brought a ravening hound
 To assail the herds of sheep,
 According to the wish of 'Anath
 The consort of Ba'al.
 She seized that son of the gods,
 Even Moth,
 With a sword she ripped him up;
 In a sieve she scattered him;

With fire she burned him ;
 In a mill she ground him ;
 O'er the field she scattered his flesh
 To be as food for the birds,
 Yea, a meed of food for the sparrows ;
 . . . Flesh everywhere met flesh.

[COLUMN III]

(Lacuna ualde deflenda)

. . . seeing that now he is gone.
 And shall Elyon Baal yet live ?
 Shall Zebul, the land's lord, come to life ? ”

A dream there was, and one spake
 To LTPN ELDPD' and said :
 “ Mark thou well my good tidings ;
 The heavens shall yet rain fatness,
 Produce shall flow in streams ;
 Know thus Elyon Baal yet lives,
 Zebul, the land's lord, comes to life ! ” ¹

Then LTPN ELDPD' rejoiced ;
 His countenance flushed (?) ;
 He brake [all] restraint and he laughed ;
 He lifted up voice and he spake :
 “ I shall yet sit and have rest,
 Life-breath shall yet lie in my stall,
 For that Elyon Baal lives,
 Zebul, the land's lord, is alive ! ”

EL also took up a word
 And spake to the Virgin ‘Anath :
 “ Hearken, O Virgin Anath,
 Tell this forth to Sps,
 E'en to that Light of the Gods :

¹ The text here repeats ll. 4-7. I think this is an error.

[COLUMN IV]

The streams that flow from the fountains
 Now are anointing the fields,
 The streams that flow from the fountains
 Are preparing the fields of EL.
 That Lord of the founts, of the plough-lands,
 Where then is Elyon Baal,
 Where is Zebul, the land's lord ?
 O Virgin, Anath, do thou hasten,
 Straightway do thou turn thy face
 To Sps, the Light of the Gods ;
 Lift up thy voice and say :
 Thy sovran father EL
 Hath determined, yea LTPN hath precised [an] indica-
 tion (?)

That the streams which flow from the fountains
 Now are anointing the fields,
 That the streams which flow from the fountains
 Are pr(epar)ing the fields of EL.
 That lord of the founts, of the plough-lands,
 Where now is he—Elyon Baal ?
 Where now is Zebul, the land's lord ?”

Then did Sps make answer,
 Even that Light of the Gods ;
 “ Pour sparkling wine in thy ch(amber ?);
 Hang garland(s) upon thy threshold,
 And I will seek Elyon-Baal.”

Then the Virgin Anath made answer :

“ Whither is he taken himself
 Who is now anointing (the fields) ?
 Whither has he taken himself
 (? ?)
 Thou

 whenas (? ? ?)

[COLUMN V]

BA'AL, the son of Asherah
 Took them in his grasp ;
 Mighty ones he smote on the shoulder ;
 [Resp]lendent ones he smote on the collar.
 MOTH, the effulgent one,
 He brought to earth.
 (? He went up) to the throne of the king
 On his platformed seat (?) he sat
 For days, and for months upon months,
 For years (upon years)—
 —Seven years.

Thereafter, behold MOTH,
 The son of the Gods, took up word
 And spake with Elyon Ba'al :
 "In thy hand lies ;
 Thy province it is to assail ;
 Thy province to hew by the sword ;
 Thy province to burn with fire ;
 Thy province to grind in the mill ;
 Thy province (to shake in a sieve) ;
 Thy province to strew o'er the field,
 Thy province to strew o'er the sea.
 Turn back the (blast of thy spirit),
 And let the wrath of our judgment be turned ;
 He(reafter I will ?) to (?) ;
 Behold, I will
 (?? ? Cast not our bones forth as carrion
 for the fowl of the heavens to eat,
 and the beasts to devour ?? ?)
 And on
 . . . (?)
 Let not (?)

The rendering in the last lines is based on a purely conjectural restoration of the text. The source of it is a combination of the ductus litterarum with the end of Column II. I presume that Moth here entreats mercy from his captor.

[COLUMN VI]

(Ll. 1-9 are fragmentary)

Verily, brotherhood is a gift of Baal;
 Sooth, all the peoples
 Are but as sibs in a clan (?)”

He sat with Baal on the height (?)
 of the North;
 He lifted up voice and spake:
 “Brotherhood is a gift of Baal;
 Sooth, all the peoples
 Are but as sibs in a clan (?).
 Now doth he smite us like the Scythians, O MOTH;
 Yea, the might of Baal
 Is a might which gores us like wild oxen, O MOTH;
 The might of Baal is a might
 Which bites us like beasts of Bashan, O MOTH;
 The might of Baal is a might
 Which assails us like springing beasts, O MOTH;
 The voice of Baal is a voice
 Which issueth forth against us.”

Then SHAPASH spake to MOTH:
 “Hearken, O MOTH, son of the gods,
 Why didst thou assail Elyon Baal?
 Lo, now he heedeth thee not
 My lord, thy father EL?
 Lo, he now doth uproot
 The foundation of thine abiding,
 He annulleth the throne of thy kingship,
 He breaketh thy sceptre of judgment . . .

(Reliqua fragmentula)

NOTES TO THE TEXT

¹ Fragmentary and unintelligible.

² אַדך is an adverb. Virolleaud compares Ar. ܐܕܝ "behold". We may go further, and see in the final letter the same suffix as in Aram. ܕܕ (from אַדך); אַדך. Cf. Wright, *Comp. Grammar*, 110. This suffix is demonstrative and related to the words בּוֹה, בּוֹ, etc. It may be seen again in Phœn. אַנך "ego" and in BH. אַנְכִי beside אֲנִי. Vide אַפְנֵך *infra*, i, 28. Cf. also Heb. כָּךְ = כֵּן + ך; אֵךְ = אֵי + ך; Aram. ܕܝܚ = ܕܝܗ + ܝܚ.

For the form אַך cf. Aramaic ܒܐܕܝܢ "at that time, then". The suffix -k also appears in Assyrian; cf. especially *anna-ka* "in that place, there". Just as כָּךְ and ܕܕ, etc., represent אַך and ܕܝܗ, etc. + suffix -k, so the cognates בֵּן, ܕܝܢ, etc., represent the demonstratives אַך, ܕܝܗ, etc. + the suffix -n. This disposes of the common derivation of בֵּן "thus" from the root בּוֹן. Indeed, the NH. form אַכּ is alone sufficient to invalidate this, although I would not deny that there is *also* in BH. an adverb בֵּן (from בּוֹן) meaning "surely". אַכּ stands in the same relationship to אַך as does אַדך here to אַך.

The demonstrative occurs in the form אַך on South Arabian inscriptions. It is, of course, simply ך with *aleph prostheticum*, and answers to Phœnician אַך which is ܐ with *aleph prostheticum*. BH. אַך then was originally a locative = "illo (tempore)"; cf. אַכּ and its correlative עַד-אַכּ = "ab illo usque ad hoc".

³ לַתֵּן. The ל is the precative and affirmative particle = Arabic ۞, Assyrian ܠܐ, and BH. לֵך. Broekelmann, *V.Gr.*, ii, 110; König, iii, § 271. Haupt sees this emphatic prefix in BH. in Num. ix, 15; xxxii, 15; Ezek. xiv, 15; Prov. xiv, 35.

For ל as a precative prefix cf. לֵיחַכָּה Zenjirli, i, 23; 24 למֵנֶע; 30 לַתֵּנְמֵר; Sabeian לֵיעֵתֹרֹר; Hommel, *Südar. Chrest.* 25; Cooke, *NSI.*, p. 169.

פנס נתן = "address oneself"; cf. Dan. ix, 3; ואתנה את פני אל אדני אלהים. Here construed with עם quasi-proleptically = "address thyself and speak with".

⁴ מִבֵּךְ Hiph'il participle of בכה used in the primitive sense, as in Arabic بَكَى "trickle, flow". The word is akin to BH. פכה, NH. פכפך; cf. especially Job xxviii, 11, מִבְּכֵי נְדָרוֹת, חֲבֵשׁ. BH. שפך is nothing but a primitive *Šaf'el*. Virolleaud takes = מִדְּפֵךְ (fait se deverser (?)).

⁵ תִּדְמָתָם Archaic fem. sing. + mimimation. Cf. Assyrian *tāmtum* and cf. נִבְתָּם, iii, 7, where the syntax requires a sing.

⁶ שָׂדֶה. Virolleaud takes = BH. שדה "field", and certainly Phœn. שר "field" occurs (Lidzbarski, 373), but our text prefers the form שָׂדֶם (iv, i, 12; v, 18). Hence שָׂדֶה is better taken = Assyrian *šadu* "mount" when שָׂדֶה אֵל will be the Semitic Olympus. Sargon, *Annals*, 436, *Prunkinsc.* 175, mentions the deity Bēl as living "on the holy hill of the gods" and his consort was anciently called Nin-har-sag "Lady of the great mountain", each of his temples being called "house of the mountain". Cf. הַר הָאֱלֹהִים in Ezekiel xxviii, 14, and especially in xiv, 14: וַאֲשֶׁב בְּהָרַי מוֹעֵד בִּירְכָתִי צִפּוֹן אֶעֱלֶה עַל בְּמִתִּי עַב אֲדַמָּה לְעֵלְיוֹן (= לְאֵלֵאֵין). The mountain was identified with the haven of departed spirits. Cf. my note on this subject in the *Jewish Guardian*.

⁷ קָרַשׁ. Phœn. כָּרַם. For this interchange cf. Wright, 50.

⁸ Sacrificial termini technici; חָבַר = Arabic حَبَّرَ "cut into gobbets". So also (si. v.l.) BH. Is. xlvii, 13. The usual expression in BH. is נָתַח (Ex. xxix, 17; Lev. i, 6, 12; 1 Kings xviii, 23, 33). In the "Hittite" texts the same operation is often mentioned under the term *marka-* = Gk. μέγω (Somner, *BoSt.* 10, 20). חָבַר is akin to Arabic بَنَرَ "cut", and by interchange of labials and liquids to BH. פָּלַח, פָּלַח, פָּרַר in their primitive meanings. מָלַח = BH. id. "roast". Cf. Lev. ii, 14 for the technical sense. *Kalu* "roaster" was

the name of a special priest in Assyrian cultus. Cf. Aram. צִלִי "roast", which developed into "prayer".

⁹ נָה "voice". The derivation is obscure; the word is exclusive to our text, recurring at ii, 11; iii, 16; v, 11.

¹⁰ אֵת = הָת. So וָהם = וָאם, iii, 2, 3. Other possible examples are הָוֶת = אָוֶת, iv, 11, and בָּהָת = פָּהָת, v, 12, 14, 15, 16, 17, 18. For interchange of ה and א *vide* Gesenius-Buhl ¹⁷, s.v. ה.

For the dialectical interchange of א and ה cf. הָלִי in CIS. ii, 137A, 1. (Elephantine, 4th cent. B.C.)

¹¹ אִשְׁתֶּר וּבְנָה. Regular figures of the Semitic pantheon, the Mother-Goddess and her son. They appear variously as Ishtar and Tammuz, Hōbal and Dušarra, etc. Under the name אִשְׁתֶּר the goddess appears in the theophorous name Abd-ashirti of the Tell-el-Amarna letters, and elsewhere. *Vide* Lagrange, pp. 120-3; Robertson-Smith, *Rel. of Semites* ³ (ed. Cook), p. 561; Garstang, *Syrian Goddess*, p. 43.

וּבְנָה. The very name Tammuz (Dumuzi) means simply "faithful, or legitimate son". (*aplu kēnu*; cf. *εἶλος γνήσιος*, of Attis, in *Schol. in Lucian, Jup. Trag.*, c. 8, ii, p. 783.)

¹² אֵלֶּה. The name is frequent in the inscr., e.g. CIS. 182, 183; 170. Cf. Robertson-Smith, *Rel. of Sem.* ³ (ed. Cook), p. 520. Allath is the al-Lat of the Arabs, another type of the mother-goddess. She is a deity of life and fertility and, like other such deities, has also ethonic attributes. In Herodotus, iii, 8, she appears as Ἀλλὰτ, mother of the *tammuz*, called Orotal. In the Assyro-Babylonian pantheon Allatu is wife of Bel (Jastrow, i, 99).

¹³ וַעֲבַרַת אֲרִיָּה. One is tempted to find in אֲרִיָּה the word for "lion" because chthonic goddesses very often have a lion as their sacred animal. *Vide* the mother-goddess riding on a lion, or seated on a throne ornamented with lions (Ward, *Cylinders of Western Asia*, 155; Langdon, *Tammuz and Ishtar*, p. 104; Garstang, *Syrian Goddess*, pp. 22, 70). Lucian, *De dea Syria*, 15, says lions drew Atargatis. Kybele,

especially, is associated with lions (Grüppe, 569). Cf. Lucretius, ii, 600: "hanc veteres Graium docti cecinere poetae . . . sedibus in curru bijugos agitare leones." Mên is throned upon lions on coins from Gordos and Prostanna; the Cretan "dea Mater" similarly (Karo, *ARW.*, 1904, p. 105); Artemis and Rheia are also accompanied by lions. **צברת** is from rt. **צבר** and has the same development as in NH. **צבור** meaning "throng, group".

The poet pictures the "mountain of God" as peopled by the typical figures of religious art, and selects as examples the Mother and Child—a type known from many Palestinian figurines—and the Mother and her lions.

¹⁴ For **חלק** in this sense cf. Assyrian, "Ritual of Bel Marduk," 13 (Langdon, *EOC.*, p. 37), *ihlik ina libbi ZI.MEŠ* "he perished from among the living".

אשרת ים. The Mother-goddess, as being the source of fertility, is invariably associated with the seas and rivers. Cf. Langdon, *Tammuz and Ishtar*, p. 45. So the Greek Aphrodite is variously described as *εὐαλὴ, θαλασσαίη, πελαγία, ποντία*, etc.

For **רבת** as a title of goddesses cf. Cooke, *NSI.*, 45, 47, 48, 50, 60, 77b.

¹⁵ Cf. how Tammuz is frequently described as *Dumuzi-abzu* "faithful son of the flowing ocean".

¹⁶ The reading is doubtful; Virolleaud reads ✠ (**ח**), but this yields no sense. My own reading **ח** (**ט**) is little better, and I do not pretend to know what this means. A connection with Ethiopic **ሀረጐ** "reconcile" is possible, i.e. "one versed in the spirit of concord (?)".

¹⁷ I cannot explain this name; it has a definitely non-Semitic appearance, but more it would be unsafe to say. The same applies to the name **דן אנה** in the next line. The occurrence of both names in this Semitic epic ought to throw considerable light upon the original sources of it. It is worthy of note that at iv, 11 the name **לשמן** occurs without the complementary **אלדפאד**.

¹⁸ דק אנם. This sounds like a Sumerian name Dug-anum (cf. Dug-azag, a king of Lagash, c. 2300 B.C.); the Semitic value would be Damki-ilišu, a name which actually occurs.

¹⁹ לרר. Optative from רפא in the primitive sense "repair" as in Arabic رَفَّ. The word then comes to mean "prepare", as does ערב in the next line. Note the apocopated precativè as in BH.

The verb is here regarded as לר, i.e. רפה. This may be paralleled from CIS. i, 143² (Santuiaci, 2nd cent. B.C.): שמע | קלא רפא = "he heard his voice; he cured him."

For the original sense of רפא, viz. "mend", cf. English "mend" in the sense "heal", and note the antithesis of רפא and שבר in Psalm cxlvii, 3: הרופא לשבורי לב = lit. "who mendeth the broken at heart".

²⁰ ליערב. Optative from ערב "repair" = BH. עזב in Neh. iii, 8. Cf. Assyrian *ušeziḫ*, and cf. עזב in Deut. xxxii, 26 = "rescued". Sabeian ערב also means "restore". The word then comes to mean "make anew, prepare" as in Sab. ישערב, and this is its meaning here.

²¹ בן דגן. Cf. analogously Bitti-Dagan ("marriage-contract", *PSBA.* xxix, 180) and Turi-Dagan (*LC.*, 237, 33; *Syria*, '24, 274) = "child (Sum. TUR) of Dagan"? But בן may equally well represent the element Bunu- which appears in many East Canaanite names, e.g. Bunu-ammu, Buni-ilu, Bunu-anati, etc.

²² The reading is doubtful; Virolleaud prefers כתמסס and explains from As. *kitmusu* (rt. *kamašu*) "genuflections", but surely ערב כתמס is a very odd way of expressing this! I have therefore ventured an emendation: for (מ) read (ח), whence we obtain the very apposite כתמסח where the כ = *ut*, as in i, 18, כאמלכנ. For the masc. form cf. תתבע, *infra*, iv, 6.

²³ עשתרערה "Ištar is sagacious (?)." Ištar is very probably masculine in this place.

²⁴ אפנך is an adverb, with suffix -k as in ארך, *supra*, i, 4.

The radical element is **פנ** which is akin to BH. **פנים**, whence the prepositions **לפני**, **מפני**; cf. Assy. *lāpan*, *ina pan*. The suffix is demonstrative (*v. supra*, ad i, 4). Thus, **אפנך** = NH. **מפני זאת**, **לפיכך** = "therefore". Alternatively, cf. Assyrian *appuna*; *vide infra*, n. 109.

²⁵ **בצורת צפן**. Virolleaud links this up with the title **בעל צפון** and thinks that **צפן** (North) might be a comprehensive name for the entire district over which Ishtar-'rf is to reign. Another explanation is possible, as follows: **צורת צפן** may = **ירכתי צפון** of Hebrew folklore, where was situated the famous "mountain of the Gods". Cf. Isaiah xiv, 13: **ואשב בהר מועד בירכתי צפון** ("And I shall sit enthroned on the Hill of Assembly, in the deep recesses of the North"). In Ps. xlviii, 3 the poet lyrically compares Mt. Zion with this divine hill:—

יפה נוף משוש כל הארץ
הר ציון-ירכתי צפון
קרית מלך רב!

("Fair in her height, the joy of all the earth, O Mount Zion, thou very 'recess of the North'—citadel of an emperor" (cf. As. *šarru rabu*).)

בצורת. The word is connected with **צור** and **צורר**, As. *šēru* "roof", Ar. **ظَمَعَر**, and means "high place".

²⁵ [A note anent the word **צפון** may perhaps not be amiss in this place. In Job xxvi, 7, we read **נטה צפון על תהו**, where the meaning "north" scarcely fits. I believe the passage can at last be explained from K. 8664, Obv. 2, which says of the god Ašur: *tameiḥ šipi šamiê*. Sidersky (*JRAS.* 1929, p. 767, n. 2) derives *šipu* from *šapû*, BH. **צפה** "overlay", and takes it to mean "canopy". We may cf. BH. **צִפִּית**, Syriac **ܨܦܝܬܐ** of a carpet which is laid out. The rt. connects with **צפה** = Ethiopic **ሰፍሐ**, Arabic **صَفَح** "stretch out", and BH. **טפח**, Syr. **ܬܦܚ**. Thus **צפון** means the stretched-out curtain of heaven and comports excellently with **נטה**.

Cf. Psalm civ, 2, נִטָּה שָׁמַיִם כִּירִיעָה, and Isaiah xl, 22, הַנִּטָּה כְּדֶק שָׁמַיִם.

²⁶ כַּחַשׁ. The word recurs at v. 6, לַכַּחַשׁ דְּרוֹכֹתָהּ, and is there כַּסֵּאִי. The derivation is obscure and probably non-Semitic. Possibly an Hittite or Anatolian loan-word with the nom. ending -*as* as in פָּרַשׁ "charger", which is an Hittite word. חַשׁ may even be the Hittite *hassis* "king" and the word would be composite = "seat of a king, throne", but this is quite speculative.

²⁷ לְתַמְחִיךְ. Optative from תַּחַי in the primitive sense "wipe, smear" (cf. Prov. xxx, 20; 2 Kings, xxi, 13). Thus, the word comes to mean "anoint" on the analogy of מָשַׁח.

²⁸ הָדָם = אָדָם; cf. הָת = אָת, *supra*, i, 10, and note in loc. אָדָם as in Samaritan; cf. Aram. אִדְמָ and the Phoenician *edom* quoted by Augustine ad Ps. cxxxvi. For the custom of anointing new kings with blood in order to impart vigour and "vertue" *vide* Frazer.

הָדָם may also = אָדָם and denote some kind of red ochre or similar daub. Kings and warriors are frequently so anointed, and it is possible that the characteristic *purpura regum* is connected with this. Cf. in the Bel-Marduk ritual 15: . . . *ša ina šaplišu iktarribu ša labbušuni mihši ša mahušunišunu, ina damešu (surpu)*. Sayce has pointed out that *admu* occurs in Assyrian as the name of a royal garment.

²⁹ לִימְחִי = BH. יִמְחָה לִי, optative 3rd sing. masc. imperf. Niph'al of rt. מַחַי "Let him be smeared".

³⁰ אַפְסִי אֶרֶץ = BH. אָפֶס "extremity". Cf. אֶפְסִי אֶרֶץ (which, *pace* GB.¹⁷ s.v. and Clay, has nothing to do with As. *apsû* or Gk. *ἄβυσσος*). The word here comports with רֹאשׁ of the preceding line, a preposition *sensu* BH. מֵעַד being understood. "From top to toe."

³¹ כִּנְתָּ must have a meaning opposed to רַחֲבַת, the juxtaposition having the same meaning as מַחֲרִים . . . מַחֲוִין in Deut. xxxii, 5. The word may thus = As. *gigunu* "bower", which derives from Sumerian GI.GUN "secret place".

The word is especially used of the bridal bower in temples where the *ἱερός γάμος* took place. Its Semitic names were (a) *bit irši* "bedchamber"; (b) *bit hilsī* "place of joy" (cf. *עלם* in a sexual sense, Prov. vii, 18); (c) *ganunu* "*thalamus*" = Ar. *جَنُنُون*. Cf. the *θάλαμοι* in the Rhea-cult. Vide Smith, *JRAS.* 1929, pp. 849 ff.

שָׂאב = "we drink?". Cf. Arabic *سَابَ*. Cognate is the Assyrian *sābu*, BH. *סבא*. A description of the revelry attendant upon Ištar-r-f's ascension to the throne: "We carouse in the streets; we carouse in the chambers."

³² *תננשה* in a hostile sense, as in BH. 2 Samuel, xi, 20. Cf. *למלחמה* and analogously *קרב* and *למלחמה*.

³³ From ii, 28, *infra*, supply [אָרַח]. For the picture cf. Ps. xxii, 17, 21; 1 Kings, xiv, 11; xvi, 4; Jer. xv, 3.

כלב ארץ. The word *אָרַח*, lit. "wandering", has a specific sense when applied to animals and means "prowling, roaming abroad". We may recognize this sense, I think, in BH. Psalm cxxxix, 3, *אָרַחִי וְרַבְעִי*, where the picture is drawn from the animal world: *רַבְעִי* = *רַבְעִי* "my crouching in my lair", whilst *אָרַחִי* gives the contrast "my prowling abroad". Trs. "my roaming and my homing Thou hast compassed". So again, I believe, we may explain the famous crux in Isaiah xli, 3: *יִדְרָם יַעֲבֵר שְׁלוֹם אֲרֶחַ* (l. *אֲרֶחַ*) "He shall put them to flight; he shall travel safe and sound; no prowling beast shall set at his feet."

³⁴ From ii, 29 *infra*, supply [שָׂאֵת]. The word is a noun, connected with BH. *שָׂאֵן* and *שָׂאָה* in the primitive sense "rage". Cf. Ethiopic *ḥaḥa* "evil" and Assyrian *šutu* "stormwind". Cf. also Num. xxiv, 17, *בְּנֵי שֹׂט* (with pun on Šuti = Beduins) = *בְּנֵי שָׂאֵן* in the parallel passage Jer. xlvi, 45.

³⁵ *עַנַת*. A celebrated goddess of the Hebrew pantheon; cf. Anati, *Amarna*, clxx, 43; *עַנַת בִּיתְאֵל*, *APO.* 19; vii, 6;

עֲנַתִּירוּ, *APO.* xxxiii, 3 (so for עֲנַתִּירָה, 1 Chron. viii, 24 ?). In O.T. cf. בֶּן עֵנָת, Judges iii, 31 ; v, 6. Cf. Lagrange, p. 413. According to Bertholet (*Hist. Hebrew Civilization*, p. 65, n. 4) she is not to be identified with Assyro-Bab. Antu, wife of Anu.

³⁶ אֲשֶׁר. Meaning doubtful ; Virolleaud points out that in an unedited text from Ras Samra we read : אֲשֶׁר בַּתֶּלָּה, “Sanctuary of Virgin ‘Anath and Ba‘al,” showing that they were σύνεδροι. אֲשֶׁר is = Assy. *ašru*, Aram. אַתַּר “place”, then “sanctuary” (cf. מְקוֹם in BH.), and here is employed by metonymy to mean “sharer of a sanctuary”. I believe that we may find an exact parallel in the famous puzzle *CIS.* ii, 198, דְּוִישְׂרָא וּמִתְבָּה, of Nabatean cultus. Cf. also Sumerian *bara*, primarily “throne” then “lord”, e.g. vR. 46, 7, *umu bara = belu šarru*.

³⁷ בַּסֶּאן “with a boot” = BH. סֶאֶן. The rt. is סָאן “trample”, whence NH. סָן mire (on the analogy of רָפֵשׁ from רָפַשׁ). I see this meaning in O.T. in Ps. xl, 3, וַיַּעֲלֵנִי מִבוֹר יִסְאֹן מִטֵּיט דָּוִן.

³⁸ לָפֵשׁ ἁπαξ λεγόμενον. By interchange of liquids = רָפֵשׁ ; cf. Arabic رَفَس “trample” ; Assy. *rapasu*. We should vocalize *lafš* = BH. לָפֵשׁ (רָפֵשׁ), part. pass. of Qal conjugation. This is exactly the manner in which the god vanquishes Tiamat in the analogous Assyrian myth. Cf. *Epic of Creation*, iv, 103-4 : *ikmiš-ma, napšataš uballi, | šalamtaš iddaa, eliša izziza* “He bound her, he extinguished her breath, | her carcase he cast down, stood upon it”.

לָפֵשׁ may be a metathesis of פָּלַשׁ. As. *palāšu* “tread”. The word פָּלַם “road” derives therefrom on the analogy of NH. כָּבַשׁ from כָּבַשׁ “tread”, and of דָּרַךְ from דָּרַךְ. Cf. Gk. *τρίβος*.

Trampling on the victim is a regular *motif* in dragon-combats, and has been duly noted by Jeremias. Cf. *EOC.*, iv, 103 (as quoted), and cf. *ibid.*, iv, 118 ; ii, 113, 115 ; iv, 129. So David stands on Goliath (1 Sam. xviii, 51, where אֵל = עַל).

³⁹ תַּשְׁנֵק *šaf'el* of צִוֵּק in its primitive sense = "hold tight, constringere". So Virolleaud. But I am not sure that תַּשְׁנֵק is not better explained here as = תַּשְׁנֹנֶק; cf. BH. צִינוֹק (Jer. xxix, 26); Syr. ܙܢܩ "bond"; Ar. زنق "bind, ensnare" on the pattern of זָקִים = זָנָקִים.

⁴⁰ בַּקִּין = בַּקִּינִין on the pattern of אָף = אָנָּה; בַּת = בָּנָה; אָתָּה = אָנָּה, etc. Cf. BH. קָנִין "trap" (Job xviii, 2); Assyr. *kinṣu*; Ar. قنص "ensnare".

The "net" is a regular motif also. Cf. capture of Tiamat and followers, *EoC.* iv, 95; iii, 124; vii, 113, etc. So, too, when Ea captures Apsû, *ibid.*, i, 69-70. Jeremias sees an unconscious trace in the שְׂמִיכָה wherewith Deborah covers Sisera (Judges iv, 18).

[³⁹⁻⁴¹ Rabbi Dr. M. Wald suggests to me a different rendering of this obscure phrase: "she stabbed him with a vehement cut." שַׁצֵּק, Šafel of a verb צִוֵּק = Ar. ضل "stab"; קָצִין from קָצַץ "cut"; אָלָל from vb. rt. of אָלַל "strong". I do not think this is likely, (a) because אָלָל can hardly be used of inanimate objects, and (b) because nowhere else in this text does an adjective occur.]

⁴¹ אָלָל "bound"; akin to rt. of Arabic آل "tribe" (cf. יָם from עָמַם, etc.); also of אָלָה "conspiracy" (*Panammu Inscr.*, 3); cf. אָל "agreement". Vocalize 'alöl = אָלָל, part. passive of Qal conjugation. Lines 9-11 thus mean: "She seizeth Moth, trampled by her shoe; she holds him fast, bound in a trap." Cf. note 38 *supra* for Assyr. parallel.

⁴² אַתְּלֶךְ = אַתְּלֶךְ.

For the absorption of ה (in אַתְּלֶךְ) cf. יַתְּלֹכֶן in the Panammu Inscription, rev. 9 (Lidzbarski).

⁴³ חַר, which puzzles Virolleaud, is nothing other than BH. חֹר "hole" || גָּבַע. Cf. in the analogous Hittite Telibinuš myth, ii, 25-6 (Sayce, *JRAS.*, 1930, p. 304): "Go, the high mountains explore; search the deep valleys!"

Virolleaud compares a word חַר which occurs in RS. and

which denotes some kind of hollow vessel. This is probably akin to the Assyrian (*karpāt*) *ḥariu* (v. Smith, *JRAS.* 1929, 855, n. 2, for this word), but does not belong here. Cf. *ḥarū* "mixing bowl", Howardy, 280¹⁷⁵.

⁴⁴ לִכְנֶבֶר. Virolleaud aptly compares Arabic كَنْد used in the sense "midmost"; cf. Assy. *ina libbi*; Hb. כְּלֶבֶת.

⁴⁵ חִסְרָה. 3rd sing. fem. perfect of Qal from rt. חָסַר = BH. חָסַר, here used like Arabic خَسِرَ in the sense "vanish" || מַחֲתָה.

⁴⁶ הַמֶּלֶת. *Heh* again stands for *Aleph* as in i, 10; iii, 2. The root is BH. אָמַל; cf. Assy. *umullu* (Jensen, *KB.* 6, 1, 399). As used of a land, cf. Is. xxiv, 4; xxxiii, 9. The phrase אֶרֶץ הַמֶּלֶת = BH. אֶמְלָלָהּ, but הַמֶּלֶת is used quasi-proleptically.

בֶּן נֶפֶשׁ. The most striking phrase in the whole text, for it is an exact rendering of Sumerian DUMU.ZI = *Tammuz*—the ritual title (not a proper name!) of dying and resurrected deities. Cf. the seven DUMU.MEŠ.ZI (= *marê napišti*, Langdon) in *KAV.* 42, i, 14.

⁴⁷ מַחֲתָה. 3rd sing. fem. perfect Qal of rt. מָחַה in tropical sense "effaced".

⁴⁸ דָּבָר = BH. מִדְבָּר "desert".

⁴⁹ יִסְמַת. Akin to BH. יִשְׁמֹן, just as שָׂאת = שאון, ii, 7.

⁵⁰ נֶגֶשׁ. Virolleaud quotes a yet unpublished verse of the poem תִּצְדֹן פֶּאֶת מִדְבָּר וּנְגֶשֶׁם, which illustrates the meaning "desert". What is the derivation? Tentatively, I propose rt. נֶגֶשׁ = Sabeian נֶגֶשׁ, Arabic نجس "sully", the conception being that of the desert as מְקוֹם טִמְאָה. Cf. the euphemistic מְקוֹם טָהוֹר in the scapegoat ritual and elsewhere (Lev. iv, 12; Num. xix, 9), and the similar As. *ašru ellu*. Cf. Haupt in *JBL.* xix, 55, 62. The desert was always regarded as a place of impurity; full references in *Jeremias, Old Testament in Light of Ancient East*, ii, 117, n. 3.

⁵¹ = "as another Elyon Ba'al".

⁵² Obscure; אָמַר may = Ar. אִמְר, As. *imneru* "lamb"; on the other hand, אָמַר כְּפִי כִלְלָא may mean "a saying in the popular mouth", i.e. a proverb. *Non liquet*.

⁵³ Again obscure; I take חֲתָא from חֲתָה akin to חֲתָה, As. *hātu*, and even Egypt. *h.t* "break". This comports well with בִּשְׁכַּר, and the reference is to a *phármakos*-rite in which an innocent man, by his death, brings goodweal to the community. Cf. Frazer, *GB*. vi, "The Scapegoat." This rite is the real background of Isaiah liii, as I hope to show in a special study. The sense is thus: "I shall be as in the popular saying: 'With breaking, tho' guiltless, he was broken.'"

The connection of Isaiah liii with a *phármakos*-rite has been perceived, along general lines, by Drews, *The Christ Myth*, but in my forthcoming paper I have worked out fully the parallelism between Isaiah's description of the martyr and the accounts of the *phármakos* given by Ister, Hipponax, and other Greek authors.

⁵⁴ נִרְתָּ אֱלֹם. Cf. *nūr ilāni* as a title of the Sun-god in Mesopotamia (Virolleaud). In K. 2097 Nur-ilani is conjoined with Nabu and Šamaš as a Semitic equivalent of Šenailana. Cf. proper name *Luš-ana-nur-ilani* in Kassite text published by Ball, *PSBA.*, xv, 273 f.

⁵⁵ שֶׁשֶׁשׁ = Sun-god. So often in *RS.*, as quoted by Virolleaud. He misses the obvious comparison with Arabic سَيِّسَة and BH. שְׁבִים (Is. iii, 18), which thus means "sun-disks" as Schröder suggested.

⁵⁶ צַהֲרַת "prairie"; cf. As. *šêru* and the name Sahara.

⁵⁷ לֹא שָׁמֵם. Virolleaud saw that this meant virtually "unbedewed by heaven", but missed the exact parallel of سَمَو in the sense "rain"; As. *šamutu* (Schwally, *Tlz.*, 1899, p. 357). According to Haupt שָׁמִים "heavens" = שָׁמִים + מִים (*SBOT*, Isaiah lviii, 11), but this is incorrect.

⁵⁸ Restored from v. 7 *infra*.

⁵⁹ For this usage cf. Amos i, 13.

The ending **ננ**- represents the emphatic suffix **נ** + the suffix of 3rd sing. masc. The emphatic suffix occurs also in *Ešmunazar*, 6, **ידברנך**; 19, **יספננ**; in O.T., Ps. 1, 23, **יכברנני**; Gen. xxvii, 19, 31, **תברכני**. It appears also in Arabic imperfects. *Vide* Cooke, *NSI.*, p. 40. It is akin, I think, to the Assyrian "energetic" suffix **נ** *ni* (*vide* Pinches, *Grammar*, p. 37), and to the Hebrew final *nūn* in forms like **ימותנן**. It is demonstrative in character, and links up with the *-n* of **יָן** (from **יָא**), **כֵּן** (from **כָּא**), etc., on which *vide supra*, note 2.

⁶⁰ **דושר**. Virolleaud rightly compares NH. **דושר**, Ar. **خشر** "winnowing-fan".

⁶¹ **תדרננ** rt. **דרי**. Cf. BH. **זרה** "scatter, winnow".

⁶² **באשת**. Cf. Assy. *išatu*, and cf. BH. **מֵאִשְׁתָּם**, Jer. vi, 29 (where the *Kēṣ* **תָּם** **מֵאִש** is unnecessary). Note that **אִש** in BH. is feminine.

⁶³ So exactly in the Samaritan-Arabic Book of Joshua (ed. M. Gaster, *JRAS.* July, 1930, l. 88) if my emendation of **תטהנו** for MS. **תטחו** be accepted.

⁶⁴ **תדרעננ**. The root is **רע** = BH. **זרע** in the primitive sense "strew".

⁶⁵ **נפר**. Two letters are obliterated, of which the second was certainly **ש** (**ש**). The first was probably **נ** (**נ**). The word is **נפרם** || **עצרם** (= As. *iššuru* "bird": Virolleaud, Dhorme). I connect it with Arabic = "sparrow".

⁶⁶ An idiom like BH. **תהום אל תהום קרא**, but in a developed sense; lit. "flesh calleth out (to) flesh".

⁶⁷ **והם** = **והם** interrogative. Cf. **הת** = **את**, i, 10, and note 10 *supra*.

⁶⁸ **אש** = BH. **יש**. Cf. **אש** in 2 Samuel xiv, 9; *vide* König, ii, 102. (Micah vi, 10, usually cited, I would read: **הֲאֵשׁ בַּת רָשָׁע וְאִיפֹת רוֹזֵן זְעוּמָה** "Shall I brook the *bāth* of wickedness or the execrable *ēphāh* of scantiness?")

⁶⁹ Imperat. and infin. Qal of **בני**, a bye-form of **בין** = "mark well".

⁷⁰ נָבַתָּם. The word occurs again in *RS.* 5. Virolleaud and Bauer cf. BH. נָבַתָּ. But may not the word be here an archaic fem. + mimimation (cf. תַּרְמַתָּם, i, 6) from the rt. נָוַב, giving BH. נָיַב, and תְּנוּבָה and Assy. *nūptum* "produce" ? (Arabic نَبَا "be high", cited in *GB.*¹⁷ s.v., is rather = נוּרָה, Ps. xlviii, 3.) For the picture, cf. Amos, ix, 13.

⁷¹ וְאִדַּע. Imperative, with elative א, as in Samaritan. (*Vide* Petermann, *Grammar*, p. 22.)

⁷² כִּי חַי = כִּי אֵשׁ = כִּי אֵשׁ. Similarly

⁷³ Ll. 10-13 are repeated, by dittography, from ll. 5-9.

⁷⁴ The meaning of יִשְׁפַּד is unknown; יָדָם may = BH. אָדָם "red", and the sense would be something like "his face turned to red, i.e. flushed with gladness".

וַיִּפְרַק לִצַּב. וַיִּפְרַק is from rt. צָבַי as in Arabic and Assyrian *ṣabû* = "bind"; פָּרַק provides the antithesis; the phrase is metaphorical = "he brake all restraint". For ל of accusative cf. As. *ana*, and cf. Wright, 2, § 29; König, iii, § 289.

Breaking out into laughter is a *motif* in stories of the incoming of the "new age" of fertility and goodweal. Cf. Jeremias, *Old Testament in Light of Ancient East*, ii, 317.

⁷⁵ בְּאִרְתִּי = BH. בְּאִרְתִּי. Cf. Assy. *uru* "stall". Produce comes to household and livestock alike.

⁷⁶ נֶפֶשׁ "Life-breath". Cf. perhaps Samaritan נֶפֶשׁ "salvation".

⁷⁷ רָגַם. Virolleaud compares As. *ragāmu* "cry out" = BH. רָעַם (cf. *raggu* = רָעַע). I would rather associate רָגַם with the rt. behind As. *turgamānu* (Hittite "loan-word" *tarkumis*), NH. תִּרְגָּם, etc. Cf. Arabic وَجَّح "carry across" (cf. *trans-late*), i.e. "Act as turgeman; carry the word". Cf. connection of Nur-ilāni with Nabu, the courier κατ' ἐξόχην in K. 2097.

⁷⁸ יִשְׁפַּשׁ "irrigate". The root שִׁפַּשׁ is a primitive Šafiel of a bilit. פֶּשׁ which recurs in Assy. *pašašu* "anoint".

⁷⁹ פל "stream". If Semitic, the word is to be referred to בל as in Arabic بَلَّ "rainy-wind"; Assy. *šar-balu*; Heb. יבל and בלל. But it may be a non-Semitic (Hurrite?) loan-word, for in the trilingual glossary from RS. (Thureau-Dangin, *Syria*, 1931, pp. 225-66) *pala* of the "unknown language" = As. *palgu* and Sumerian *PA₅* (col. iii, 18).

⁸⁰ ענת = BH. עִנּוֹת, pl. of עֵין "spring" (Virolleaud).

⁸¹ = Ithpa'el of שכן in the primitive sense "prepare". For הבין in this sense cf. Jer. x, 12; Ps. lxx, 10.

⁸² מחרשת. Cf. BH. חָרַשׁ, As. *huršū*; Aram. ܚܪܫܐ, and Ar. حَرْش "wood". The word "and" must be understood.

⁸³ תתבע from rt. תבע "search out, inquire for" as in Arabic. [The root = Taph'el formation of bilit. בע (cf. Arabic *nigrificare*), which recurs in Ar. בעה and in בעש and בעת. By interchange of ע and ק (cf. ארעה beside ארקא, etc.) we get BH. בקש.]

⁸⁴ Very obscure; I take תהם (which recurs in RS. 18³, 21¹) figuratively = "determine"; cf. תְּהוֹם, etc. [The word may be regarded as a Taph'el of bilit. הם recurring in As. *hamamu* "cut". Semasiologically parallel to *tahūmu* "district" is then *pulukku* from rt. פלך.]

⁸⁵ שר אל. The father of Šapaš is El.

⁸⁶ הות I take = BH. הוֹת. Cf. note 10 *supra*. Virolleaud quotes a word הוֹת "seat" (?) from RS., but I do not think it has any place here. הוֹת here means "a verbal indication" — a sense Kahana detects also in Job xxi, 29.

⁸⁷ לטפן. Note absence of complementary אלהפאר and *vide supra*, n. 17.

⁸⁸ חתך I regard as a verb, primarily = "cut," then tropically "determine, precise". Cf. BH. נרתך, Dan. ix, 24, and Talmudic חתך דין, חתך דבור, etc. Semasiologically parallel is נחרץ from rt. חרץ and NH. נגזר from rt. גזר. Thus, חתך is || תהם.

⁸⁹ שר ין I read ין שר "pour out wine". The spelling ין

recurs in RS., and שד is connected with Syr. אשד, etc., as imperative. Cf. זל, imper. of אול on ostraca. Cf. Jerome's "ministros vini et ministras" = שדה ושדות, Eccl. ii, 8, and cf. also Targum in loc.

יין = "wine", as again in Ras Shamra texts. The spelling may be compared with מין = מן "water" in the late Palmyrene inscription, Cooke, *NSI*. 145, 7, ולחם ומן, thus invalidating Winckler's suggestion that מן there = מן in the sense of ambrosia. We may also cf. שמם beside שמים, and ירושלים beside ירושלם. The pronunciation was *yên*, as in the BH. status constructus.

⁹⁰ = עין, used as in Prov. xxiii, 31, and as in NH. poetry. Thus ין ען = "sparkling wine".

⁹¹ Virolleaud ingeniously conjectures בקבתך "in thy parlour", when על אמתך means "on thy lintel (?)". Cf. BH. אמה. The reading בקבך "in thy cruse" has occurred to me.

⁹² בללית. Read with Virolleaud בל לית "bring a garland". בל is imperat. Qal of rt. ובל on the analogy of הב from ובה, דע from ודע, etc. לית = BH. לנה "garland". Cf. the Greek custom of wreathing lintels at carousals and the modern Christmas "chains" and "streamers" at parties.

בל לית "bring wreaths". A sign of carousal. Wreaths were hung on the door as in classical usage. Cf. Catullus, 63, 66: ". . . mihi floridis corollis redimita domus erat." Ovid, *Metam.*, 14, 708: "Interdum madidas lacrimarum rore coronas Postibus intendit." Propertius, I, xvi, 7: "et mihi non desunt turpes pendere corollae" (loquitur janua). Augustus, *Res Gestae*, 6, 16: "laureis postes aedium mearum vincti sunt publice coronaque civica super januam meam fixa est." Theocritus, 2, 153: καὶ φάτο οἱ στέφανοισι τὰ δώματα τῆνα πνικᾶσδew. *Anthol. Pal.*, 5, 280: . . . φιλακρήτους μέτα κύμους Στέμμασιν αὐλέας ἀμφιπλέκοντι θύρας.

⁹³ = "thy lintel (?)". Cf. BH. אמה (Is. vi, 4). So Virolleaud.

⁹⁴ דְּכִים || רַבִּים; hence = "mighty ones", not "many".

⁹⁵ Cf. Numbers xxxiv, 11, וַמָּחָה עַל כְּתָף.

⁹⁶ מִי would seem to conceal מִי (ד), when דְּכִים would be pl. of דָּכָה and mean "shining, resplendent ones".

⁹⁷ צַמֵּד "collar"; cf. As. *šimittu* (Virolleaud).

⁹⁸ צָהַר מֵת. A periphrasis "the brightness of Mōth" = "effulgent Mōth". Cf. *Enmešarra zimu* (= BH. זִי) in the text published by Pinches, *PSBA.* 1908, 83. A, 10, and vide Muss-Arnolt, s.v. *zimu*. Cf. also *Tiamat ellitu*, *EOC.* i, 36.

⁹⁹ = "brought to earth". Cf. Aram. מָטָה.

¹⁰⁰ Supply (וַיֵּשֶׁב) from i, 30.

¹⁰¹ דִּרְכָתָהּ. It is difficult to find a suitable meaning. My father has suggested that דֶּרֶךְ might here = BH. דֶּרֶךְ when דִּרְכָתָהּ would refer to a throne with steps leading up to it. Cf. the O.T. expression עֲלֵה לְכֶסֶם which presumes this. Supply (וַיַּעַל) at the beginning of the line.

¹⁰² Restored from ii, 26.

¹⁰³ Notice the seven years of 'Elyon Ba'al's reign. This goes back to an ancient Semitic idea that seven years constitute a single life-lease. The idea lies back of the Israelitic *šemîṭah*. A relic survives in the *Talmūd* in the custom whereby at every eighth Succōth-feast the king publicly reads a portion of the Law. This is a survival of the recoronation of the king for the new lease. The idea of a seven years' lease is found also in Greek custom; e.g. the octennial *Θεοξενία* at Abdera (Pindar, *Paeans*, i, 2).

¹⁰⁴ פֶּדֶת is perhaps פֶּתַח = BH. פֶּתַח, As. *pātu* "boundary", here used tropically = "province". *Non liquet*.

¹⁰⁵ קָלַת. Cf. Assyrian *kalalu* "harm, hurt". *iaḫillini*, *Amarna*, 245, 38.

¹⁰⁶ A word meaning "scatter" must be supplied.

¹⁰⁷ The fragmentary  at the end of line 19 is  = 7. We thus have 7 בְּאַחֵר אִסַּף in conjunction with וַיֵּשֶׁב אֶף דָּגָן, whence it is surely not too hazardous to

restore the word $\text{רִיחַ} = \text{רִיחַ}$, in the metaphorical sense of "Divine Displeasure", conceived as a gust of ill-wind (cf. Isaiah, xxx, 28; lix, 19). The word אֶסֶף (for restore here $\text{אֶסֶף} = \text{אֶסֶף}$) preserves the wind-image (cf. Ps. civ, 29; Job xxxiv, 14). בְּאֶחָד virtually amounts to לְאֶחָד , the picture being that of a wind-gust turning back. Cf. Proverbs xxix, 11, $\text{כָּסִיל וְחֵם בְּאֶחָד}$, יִשְׁכַּחנָה , where the full image is: "A fool vents forth the full blast of his temper, but a wise man lulls it and turns it back."

The various dispositions of God were imaged by the Semites as the venting of ill-wind, or the wafting of gentle breezes (As. *šarku tabu*). For this latter see K. 3515, Rev. 11 (= Sidersky, *JRAS.* 1929, 781), [*šarka*] *tabu liziḱamma*. The same in King, *Magic*, 18, Rev. 3, *šarka tabu liziḱamma, napīštum lirik*. Klauber, *PRT.* 112, Rev. 4 (Ašurbanipal) *ša ana šarka ṭabi upaḱḱu*; *BA.* v, 312, 21, *luḫluṭ ina šarika*. Cf. Langdon ad *Epic of Creation*, vii, 15. I would cf. especially Psalm civ, 29-30:

תַּסְתִּיר פִּנֵּךְ יִבְהֹלֶן תּוֹסֵף רוּחַם (רוּחַךְ) יִגְעֹץ
וְאֵל עִפְרָם יִשׁוּבוּן;
תִּשְׁלַח רוּחַךְ יִכְרֹאֶן וְגו'

Also Ps. cxliii, 10, where we have an exact parallel to the Assyrian *šarku tabu* in $\text{רוּחַךְ טוֹבָה תִּנְחַנִּי}$ (the division in MT. is wrong, as is clear from Is. xxxvi, 14, $\text{רוּחַךְ' תִּנְחַנִּי}$). Cf. Isaiah, xlv, 3, for "spirit" || "blessing". The idea grows into that of "inspiration", as in Is. xlii, 1, Ezekiel xxxvii, 6, and *passim*, Job xxxii, 8.

= "and may the wrath of our judge be turned aside." For the idiom cf. Psalm lxxviii, 38; Job ix, 13, etc.

I do not attempt to make sense of the disjointed letters which follow.

¹⁰⁸ The seven associates (cf. Arabic *ḥalīm* "socius, amicus") constitute a persistent *motif*. Enmešarra, another bounden *tammuz*, has seven sons associated with him (Langdon,

SBH. 146, 42; BE. 31, 35; CT. xvii, 37, 1; Langdon, *EoC.*, p. 143 n.). Similarly, Ešmun—another *tammuz*—has seven brothers variously given as Kabeiroi, Kouretes, Samothrakes, etc. Tammuz has seven companions who act as the bridesmen (*ligirsi*) at his *ιερός γάμος* (Langdon, *Tammuz and Ishtar*, p. 29, n. 1). In the Phœnician Kronos-myth, according to Sanchuniathon, the god had seven sons (Roscher, 1499). Dionysos is reared by seven nymphs, variously given as Pleiades, Hyades, etc. Osiris had seven companions. Finally, cf. in Revelation i, 4, the seven attendants before the Throne of God!

¹⁰⁹ פ. From the parallel v. 14, where the word is omitted without affecting the sense, it is apparent that it is some sort of affirmative particle. Is it too hazardous to restore <[>] ↔ פין on the analogy of the Targūmic enclitic פין = *certe* and the Assyrian *appuna*? Trs. "Verily". The word is related to אפנך.

¹¹⁰ לפני "unto tribes" (Virolleaud); cf. Arabic فنة and cf. Yahuda, *ZA.* xvi, 271. I am very doubtful as to whether בנם אמי really means "uterine brothers", as Virolleaud thinks. May not אמי כלי mean "all peoples", in which case the thought is that all mankind are really brothers and that Ba'al so disposes things as to weld us all together into one human family: "Verily, brethren are the gift (i.e. brotherhood is the natural dispensation) of Ba'al; all the peoples (may be resolved) into the (various) families of (different) sons," i.e. they are as septs in the one world-sib. Ba'al-Elyon is thus rejoicing that he has brothers to help him.

¹¹¹ נתן "gift of". The rt. in Phœnician is יתן, not נתן. Cf. the same variation in BH. ידה beside נדה (As. *nadu*); יכה beside נכה, יצב beside נצב, etc. נתק = *eteḳu*. It originates in alternative methods of trilateralizing biliteral bases. For rt. יתן cf. יתניאל, 1 Chron. xxvi, 2, and hypocor. יתנא, APO. xlii, 1. For the sentiment cf. אסרחך = Aššur-aḥē-iddin, and סנחרב = *Sin-aḥē-erriba*.

Cf. also *Aḥa-iddina-Addu* (Clay, *Bab. Exp.*, xv, 160, 20), and especially, *Bel-aḥe-iddina*, Pinches, *PSBA.* xv (1893), 417.

¹¹² יתען כגמרם. The גמרם are the Kimmerians, later the Scythians. The reference is, I think, to the Scythian custom of scalping slain enemies. Cf. Herod. iv, 64; Athenæus, 524 f. The Greeks coined the words σκυθίζω and ἀποσκυθίζω to denote this operation. Cf. Euripides, *Electra*, 241, καὶ κράτα πλόκαμόν τ' ἐσκυθίσμενον ξυρῶ. Eur., *Troades*, 1026, κράτ' ἀπεσκυθισμένην.

For the cruelty of the Scythians in popular belief, cf. at a much later age, 2 Maccabees, 4, 47, and 3 Maccabees, 6, 5, νόμου Σκυθῶν ἀγριωτέραν ἐμπεπορημένοι ὡμότητα.

יתען. The root is נתע = BH. נתין “smite, break”, here used in the developed sense “assail” as in Assyrian *natû*. In *RA.* xi, 70, *natû* is used of an housebreaker, and in K. 8664, Obv. 7 (= Sidersky, *JRAS.* 1929, 769) the noun *nittu* means “assault”. In *rv*² R. 26, 3, 7 (= Jastrow, i, 487), however, it retains the primitive sense “smite, split”, and is used of the fire-god's action on mountain-peaks; an exact parallel is Nahum, i, 6, חמתו נתכה באש ודפצרים נתצו מפניו. Cf. on *natû* Meissner, *Berl. Phil. Woch.*, 1905, 11th Nov.

¹¹³ Cf. in the ancient Hebrew poem, Deut. xxxiii, 17: וקרני ראמים קרניו בהם עמים יגה.

So already in a Sumerian hymn to Ishtar, published by Langdon, *JRAS.* 1931, p. 373, line 10: *nam-ur-sag-bi am-sum-gim dib-bi á-dú-dú* = “Her valour like a wild-ox gores”.

¹¹⁴ The picture is that of the carnivorous beasts preying on unprotected flocks. Cf. Deut. xxxii, 14, בני בשן; Ps. xxii, 13, בני אבירי בשן (bulls of Bashan).

¹¹⁵ Cf. Arabic عَضَّ “chew” (Castell, 2121) || נשך.

¹¹⁶ לסמם. Cf. As. *lasamu* “dart, spring forth”. The word is general in sense and denotes all such animals as may dart forth upon their prey. Virolleaud goes beyond

the evidence when he renders "galoper" and adds "surtout en parlant des chevaux", because the word may be used of any animal. In a text which he has himself edited (*Etudes sur la Divination chaldéenne*, pp. 15-16) it occurs (written ideographically *MAŠ.MAŠ*) of dogs; in Bezold Cat. 1378 = Sm. 67 it is used of foxes, and in RM. 83 (= Boissier, *Choix de textes relatifs à la Divination Assyro-babylonéenne*, pp. 12-14) of sheep! Cf. for the picture Deut. xxxiii, 22:

גור אריה יִנָּק מִן הַבֶּשֶׂן.

¹¹⁷ = "against us". Virolleaud: "sur nous."

¹¹⁸ Dittogr. from שמע.

¹¹⁹ תתמחין = תמתחין. Cf. Arabic محض (= נה' BH.).

Trs. "set thyself against".

¹²⁰ From rt. נסע = primarily "uproot".

¹²¹ אלה = BH. אֵל, 1 Kings vi, 31; Ezekiel xl, 9, 16, 21.

¹²² Cf. Psalm lxxxix, 45: מְגִרָתָהּ לְאָרֶץ מִגְרָתָהּ.

¹²³ Cf. Psalm lxxxix, 45, where read with Chajes: הַשְׁבֵּרָה

מִטְדֹּו (although Hiph'il is unusual!).

¹²³ לִדְבֹךְ כֶּסֶף מִלֶּכֶךְ
לִישְׁבֵּר הַט מִשְׁפָּט

A very striking parallel occurs on the tombstone of Ahiram, king of Byblos (Dussaud, *Syria*, 1924), where the following curse is invoked upon any invading monarch who may ransack the tomb:—

תִּתְחַסֵּף הַטֵּר מִשְׁפָּטָה תִּתְחַפֵּךְ כֶּסֶף מִלֶּכָה:

The overturning of a chair and the breaking of an official staff are both well-known methods of symbolizing evacuated power, or "vertue". The former appears frequently in funeral customs, the idea being to show that the former occupant is now "defunct". The breaking of a staff still takes place upon the death of the British sovereign. Similarly, a dismissed army officer has his sword broken. In prehistoric graves weapons are deposited broken. In the annual ceremony of "humiliating the king" at Erech and Babylon, a vessel was ritually broken. When the Pope dies his signet-ring is broken.

¹²⁴ A mistake : בן אֵלִים מֵת.

¹²⁵ = *šuttu* "ditch" (Virolleaud), but most doubtful.

I append a note upon another Ras Samra text, Virolleaud No. 4, which is written in an unrecognized language. Sayce has shown (*JRAS.* 1932, 43 ff.) that this language has affinities with Etruscan, and suggests that it is a "sister-language of old Etruscan" (p. 45). Proto-Etruscan may well be Philistine, there being much evidence to connect these latter with the Tyrsenoi. The tongue of the inscription may thus be Philistine.

A recurring phrase is *el k-m-r*, which is also found in the declined forms *k-m-r-bn* and *k-m-r-b*. Sayce detects in the former word the Semitic *el* meaning "god". The latter word he connects with the Hebrew *komer* meaning "priest", and thinks that the group may mean "priest of (the) god". Is it not more probable that *K-m-r* is a divine name? I would compare the divine name (*d*) Kumarbini in BO. 2033, 19; (*d*) Kumarbis in BO. 2549, ii, 27; (*d*) Kumarwee in the "Hurrite" text KBo. v, No. 2, ii, 60, where the same inflectional forms may be seen. Possibly the Hittite hero's name Kamru-sipas contains the same divine name, and the element Camer in early Etruscan and Latin names may perhaps be connected.

An Old Moorish Lute Tutor (*cont.*)

By HENRY GEORGE FARMER

§ 1. THE MODES

SINCE my article on the above appeared, additional information has come to hand which appears to be of sufficient merit to be recorded, more especially because this old music of the Moors is gradually disappearing. At the invitation of the Egyptian Government, I attended a Congress of Arabian Music which was held in Cairo during March and April, 1932, where I had the honour to preside over the Commission of History and Manuscripts. During this congress I had the opportunity of studying, at first hand, the practical as well as the theoretical art. The best native orchestras from Arabic speaking lands were in attendance, and among them were three from Morocco, Algeria, and Tunisia. These latter included in their répertoires the old Maghriban melodies from the *ṭubūʿ*, *naubāt*, or *ṣanʿāt*. At these auditions, and from conversations with the musicians, but more especially through information obtained from Sidī Ḥasan ʿAbd al-Wahhāb the Governor of Mahdia,¹ and Sidī Muḥammad al-Manūbī al-Sanūsī of Tūnis,² I had confirmation by eye and ear of that which hitherto had only been known to me by script.

Concerning the melodies and verses of the *ṭubūʿ*, *naubāt*, or *ṣanʿāt* that have come down to us, as mentioned,³ I would take this opportunity of placing on record the names of the *ṭubūʿ*, etc. in which melodies were performed at Cairo by these bands from the Maghrib. These should be compared with the earlier lists given by me.⁴

¹ The author of a small book on the music of the Maghrib.

§ 2. THE FURŪ'

Reference to the *Ma'rifat al-naghamāt al-thamān* treatise¹ will show that the author, at the end of the work, gave a "picture of a tree, in which appears every principal mode (*al-aṣl*), and what branches out from it (*al-furū'*)". Unfortunately this "tree" was omitted by the copyist of this solitary exemplar of the treatise in question. Whilst in Cairo, Sidī Ḥasan 'Abd al-Wahhāb of Tūnis lent me a Maghribī manuscript which contained a "tree" of this sort. The classification of the *ṭubū'* in this manuscript, however, does not correspond with that of the three Maghribī treatises which I have dealt with, and for this reason I give the system as contained in the former. The treatise, which is of modern Moroccan origin, is a collection of verses sung to eleven of the twenty-four *ṭubū'* of the Moors of Spain. This would appear to have been all that were known when this collection was made. Here is the classification of the *ṭubū'* according

¹ See p. 357, *JRAS.* (1931).

to this manuscript, together with an indication (*asterisk*) of those of which verses are given :—

DİL	MAZMŪM
*Ramal [al-dīl] ¹	* <u>G</u> harībat al-ḥusain
Mujannab al-dīl	Ḥamdān
Mashriqī	
*Raṣd al-dīl	ZAIDĀN
*Istihlāl al-dīl	*Iṣbahān
‘Irāq al-‘arab	*‘Ushshāq
*‘Irāq al-‘ajam	*Hijāz al-kabīr
	Hisār
*MĀYA	Zaurakand
*Ramal al-māya	
Inqilāb al-ramal	<u>G</u> HARĪBAT AL-MUḤARRAR
Ḥusain	
*Hijāz al-mashriqī	
Raṣd or Madanī	

In this manuscript we again have the mode *dhīl* written with a *ḍ* and not a *ḏ*. It is certainly very curious how this doubly corrupt word *dīl* has persisted in modern manuscripts as well as viva voce, in spite of the fact that the proper word, *dhail* ("extremity"), like the old term *bamm*, conveys so precise a meaning as the lowest or extreme note or string of the lute. The vulgar speech has doubtless been a partial cause of this, just as the modes *zaidān* and *ḥusain* have become *zīdān* and *ḥusīn* or *ḥasīn*.²

§ 3. THE SYLLABLES OF SOLFEGGIO

In my *Historical Facts for the Arabian Musical Influence* (1930) I dealt at considerable length with the question of the

¹ This is omitted from the "tree", but since *Ramal* and *Ramal al-māya* are included in the verses, it is obvious that the omission of *Ramal al-dīl* is due to the copyist's slip.

² Yafil and Rouanet, *Répertoire de musique arabe et maure*, Algiers, 1904, Fasc. 11 and 25.

reputed Arabian origin of the syllables of solfeggio or solmization.¹ I had already pointed out in my *Arabian Influence on Musical Theory* (1925)² that, in spite of this long standing claim for the Arabian origin, I had not seen any example of the Arabic alphabet used in this particular sequence, i.e. *do* (د), *re* (ر), *mi* (م), *fa* (ف), *sol* (ص), *la* (ل), *si* (س). Indeed, I traced the claim back to Laborde³ and Meninski.⁴

Since then I have found the system given in a Turkish musical manuscript in the British Museum, written by a certain 'Alī Beg al-Sanṭūrī in the year 1649-50.⁵ His table is practically identical with that of Meninski, and does not throw any further light on the problem. One can, therefore, only repeat what has already been expressed elsewhere,⁶ that it "cannot be said with any degree of certainty that the Arabs influenced Europe in the question of solfeggio".

§ 4. IBN SAB'ĪN

In dealing with the few works on music from the Maghrib that have been spared us, I mentioned a *Kitāb al-adwār al-mansūb* by Ibn Sab'īn. This was given on the authority of a writer in the *Hilāl* (xxviii, 214) on certain rare manuscripts on music. Indeed, it was on the strength of this that I included Ibn Sab'īn among the writers on music in my *History of Arabian Music*. This manuscript was in the library of Aḥmad Taimūr Pāshā, which has now become the property of the National Library at Cairo. During my recent visit to Cairo I tried to get access to this and other rare manuscripts on music in this collection, but found that they were still

⁵ *Sloane MS.*, 3114, fol. 184.

⁶ *The Legacy of Islām*, ed. by Arnold and Guillaume (1931), p. 372.

under an official seal, and could not be consulted. There is, however, a modern copy of the work attributed to Ibn Sab'in in the library of the *Ma'had al-mūsīqā al-sharqī* (Institute of Oriental Music), and this turns out to be the *Kitāb al-adwār* of Ṣafī al-Dīn 'Abd al-Mu'min ! It is not improbable, therefore, that the treatise referred to above is also by Ṣafī al-Dīn.

A similar disappointment was experienced over another work. Amongst the Cairene *literati* and musicians it had long been claimed that the two books on music by Al-Khalīl ibn Aḥmad (d. 791), the *Kitāb al-naḡham* and the *Kitāb al-īqā'*, were possessed by the well-known musician and composer in Cairo, Maṣṣūr Efendī 'Awaḍ. The Commission of History and Manuscripts of the Congress of Arabian Music approached the latter, asking that they might be permitted to examine these treasures. After much delay the Commission was informed that Maṣṣūr Efendī 'Awaḍ "had not been able to find the book[s] among his collection as he had previously believed that he could".¹

§ 5. IBN AL-KHAṬĪB AL-SALMĀNĪ

My view that this poem is by Ibn al-Khaṭīb rather than by Ibn al-Wanṣharīsī, is not shared by Professor Dr. F. Krenkow of Bonn, to whom I am indebted for many courtesies. He writes to me as follows : "As regards the poem, I am almost inclined to attribute it to the Faqīh Ibn al-Wanṣharīsī. I think that Ibn al-Khaṭīb al-Salamānī, who was a poet, would not have used the adjunct pronouns ^أ as being short. In good poetry it always forms a long syllable."

As for the spelling of the *nisbas* of these two writers, I may say that whilst most authorities write al-Wanṣharīsī, I adopted al-Wanṣharīsī because I found it vocalized in this way in *The Shaikhs of Morocco* of my old teacher, the late

¹ Vide Minutes (16th and 23rd March) of the Commission of History and Manuscripts : Congress of Arabian Music, Cairo, 1932.

Dr. T. H. Weir. As for Salmānī in preference to Salamānī, the former is given on the strength of the manuscript itself. See also the *Encyclopædia of Islam* (s.v.). Strange to say, in the *Nashra bi asmā' kutub al-mūsīqā . . . bi dār al-kutub*, just published by the National Library at Cairo (*Dār al-kutub al-miṣriyya*), where my articles on "An Old Moorish Lute Tutor", in the *JRAS.*, are indexed, the editor suggests (p. 1.) that the *nisba* is al-Tilimsānī rather than al-Salmānī. It is true that Ibn al-Khaṭīb lived at Tlemcen for a short time between 1371 and 1374, but he possessed the other *nisba* long before this date.

§ 6. THE DOCTRINE OF THE ETHOS

That music had its place in the cosmic scheme naturally gave rise to the belief in its occult influence on man and the animal world. It is an oriental fancy of hoary antiquity.¹ In Arabic literature this theme is to be found as early as the Pseudo-Aristotelian *Kitāb al-siyāsa*, the translation of which is attributed to Yuhannā ibn al-Baṭrīq (d. 815). It is developed at considerable length by Al-Kindī (d. c. 874),² and the Ikhwān al-Ṣafā' (tenth cent.).³ In Muslim Spain, Ziryāb, the court musician of 'Abd al-Raḥmān II (822-52), also advocated this notion.⁴ In these writers we find the strings of the 'ūd (lute) connected with the elements, natures, seasons, winds, natural faculties, colours, etc. The four strings of the lute—the *bamm*, *mathlath*, *mathnā*, and *zār*—were linked up respectively with earth and black bile, water and phlegm, air and blood, and fire and yellow bile. Ziryāb claimed to have added a fifth string to the lute. This he placed between the *mathlath* and *mathnā* string. Naturally he had to connect

¹ See my brochure, *The Influence of Music : From Arabic Sources* (1926).

² *Berlin MSS.* (Ahlwardt), 5503 and 5530.

³ *Rasā'il*, Bombay ed., i, 101, 116.

⁴ Al-Maqqarī, *Analectes*, ii, 86.

it with the cosmic scheme, and he associated it with a fifth nature—the *soul*. What could have prompted this association? In the Pseudo-Aristotelian *De Mundo* (393a) we find a fifth element—*ether*, and it occurs in the *De musica* of Aristides Quintillian.¹ In the Maghribi treatises which have recently been presented we find a system entirely different from that which was accepted in the East. Here is the Maghriban system.

ELEMENTS (<i>Tubū'</i>)	NATURES (<i>Ṭabā'i'</i>)	PRINCIPAL MODES (<i>Uṣūl</i>)
Earth (Cold and Dry)	Black Bile	<i>Dhīl</i> and its Branch Modes (<i>furū'</i>)
Air (Hot and Moist)	Blood	<i>Māya</i> and its Branch Modes
Water (Cold and Moist)	Phlegm	<i>Zaidān</i> and its Branch Modes
Fire (Hot and Dry)	Yellow Bile	<i>Mazmūm</i> and its Branch Modes

These conceits led to music being admitted into therapeutics and to be actually used in hospitals. That particular modes should be used at specific times of the day and night is stressed by Al-Kindī, the *Ikhwān al-Ṣafā'*, Ibn Sīnā,² and later musical theorists. Even to-day in the Maghrib the custom still prevails. In Morocco and Algeria the following order of

¹ Meibom, *Ant. Mus. Auct.*, lib. iii.

² Ibn Sīnā's account of the appropriate times for performing particular modes is not given in either the *Shifā* or the *Najāt*, but is quoted in an anonymous work on music dedicated to the Turkish sultān Murād II (*Brit. Museum MS.*, Or. 2361, fol. 201 v). It may have been derived from another work by Ibn Sīnā, a *Maḍkhal ilā ṣinā'at al-mūsīqī* (Introduction to the Art of Music), which has not come down to us.

In my *History of Arabian Music* (p. 128) I mentioned a book by Al-Kindī which is not found in the lists drawn up in the *Fihrist*, Ibn al-Qiftī or Ibn Abī Uṣaibi'a. Recently the head of the manuscript department of the National Library at Cairo called my attention to another book by Al-Kindī on music, which is quoted in the *Ṭabaqāt al-umām* by Abū'l-Qāsim ibn Sa'īd al-Andalusī (p. 52). One suspects, however, that this is the *Kitāb mu'nis fī'l-mūsīqī*, written about the theories of Al-Kindī by Ma'nṣūr ibn Ṭalḥa ibn Ṭāhīr mentioned in the *Fihrist* (p. 117).

performance is observed in the various *tubū'*, *naubāt*, or *ṣan'āt*.¹

A Persian Manuscript Attributed to Rhazes

By C. ELGOOD, M.A., M.D. (Oxon), M.R.C.P. (London)

WITHIN the last few years, a period which may well be said to have been initiated by the publication of the late Professor Browne's *Arabian Medicine* in 1921, there has sprung up a new interest in the scientific accomplishments of Islamic Persia. The foundations of this study were laid in the last century by the German publication of certain Arabic texts and historical works and by Leclerc's *Histoire de la Médecine arabe*. In this first period must be included a short note by Professor Nicholson on the Ḥifẓ-ul-Ṣiḥḥat (or Ḥifẓ-ul-Badan) of Fakhr-ul-Dīn Rāzī, which was published in the Society's *Journal* for January, 1899.

The big *Systems of Medicine*, with certain notable exceptions, have been lithographed or printed. But scarcely anything has been done to render accessible to students of Arab medicine the smaller monographs on scientific subjects which lie buried in public or private libraries. Professor Nicholson, in a letter to the Society a few months after his publication of Rāzī's manuscript, wrote: "The private owner of MSS. may not improperly be likened to the innocent receiver of stolen goods, whose best apology is straightway to publish what has befallen him."

Both because I am such a receiver of stolen goods and because the author has a fame which demands that anything from his pen be treasured and studied, I have here summarized a manuscript which I picked up when I was in Teheran three years ago. It is entitled the *Barri'-ul-Sā'at* (or *Cure within the Hour*), and is the work of Abū Bakr Muḥammad ibn Zakariyyā Al-Rāzī—the Rhazes of medieval Europe, and an earlier and more famous citizen of Ray than that Fakhr-ul-Dīn whose work Professor Nicholson has described. That this is one of his later works is clear, because in section 19 he quotes by name his own masterpiece, the *Kifāyā-i-Manṣūrī*.

My manuscript is modern, being dated A.H. 1266 (= A.D. 1849), and is one of ten treatises on medical subjects that are bound together, though there is no continuity of matter between them. All are by the same hand, though not by the same author.

Of the authenticity of the work there is no doubt; for Ibn Abī Uṣaybi'a mentions it in his *Classes of Physicians*, in the section that deals with Rhazes. He writes thus:—

“He also wrote . . . a book entitled *Burun Sā'atin*. It is dedicated to the minister Abū Ul-Qāsim bin 'Abd Ullah. It contains a section on hæmorrhoids and anal fissures, and a discussion on differential diagnosis. Another section is on scalding pains in the urethra and bladder.” (Cairo edition, vol. i, p. 321.)

Up till now it has received no mention in European books on the history of medicine, as far as I can discover, with the exception of the *Geschichte der Arabischen Aerzte* of Wüstenfeld. It is there described as a work entitled “*Fundamenta Medicinæ de Morbis qui intra horam sanari possunt*” (page 43). But this is clearly only a translation of Ibn Abī Uṣaybi'a's list. Yet in Persia the work is very popular. Other translations out of Arabic into Persian have been made, notably the *Tuhfa-i-Shāhī* of Sheikh Ḥussein Jābirī Al-Anṣārī about A.D. 1700 (*vide* the Bodleian MS. 1610 (Fraser 194)) and the *Dastūr-ul-Ṭibb* of Muḥammad Ḥussein ibn Karam 'Alī (*vide* the British Museum MS. Add. 7722 iv). Neither of these versions are the same as mine. Recently yet another Persian translation has been lithographed and published in Ṭeheran, where it can still be bought for a few shillings in the bazaar.

The treatise begins abruptly without any introductory remarks:—

“Thus saith Muḥammad ibn Zakariyyā the Physician: ‘At a certain period of my life I was in the assemblage of Abū Ul-Qāsim ibn 'Abd Ullah. In his presence were several qualified practitioners and there were others who were still seeking graduation. Each of these joined in the discussion

according to the depth of his knowledge. At length, some one made the remark that disease is produced by the collection of waste products during the passage of time and that it is impossible that all this should be set aside in a single hour; nay, rather, that just as it had taken several days to assemble, so several days would pass before it could be cured. All present agreed with this remark, and were well pleased that the making of many visits should bring in high fees.

“‘But I said: “There are some cases which take many days to mature, but can be dispersed in a single hour.” Some of the physicians present expressed astonishment at this. Appealing to him, they bade me write a book which should describe all those diseases which can be cured within the space of one hour. So I went to my house and began to compose this work. When I had finished it I called it the Barri’-ul-Sā’at. This is my Book, and these are the Laws of Treatment. Although it is my habit in writing and composing to enumerate diseases from head to foot, still, since every disease does not admit of cure in a single hour, I have described some organs and later on have mentioned the diseases of that organ which are secondary and do admit of dispersion within the hour. And may God grant the reward.

“‘Section 1—Headache (صداع).

2—Pain in the Eyes (هيجان العين).

3—Nasal Catarrh (زكام), “the most difficult of diseases.”

4—Toothache (وجع الأسنان).

5—Halitosis (بخس).

6—Epilepsy (صرع).

7—Hemicrania (شَقِيْقَةٌ).

8—Tinnitus aurium (طَنِين) and Vertigo (دَوِي).

9—Epistaxis (رُعَاف).

10—Quinsy (خَوَانِيْق), "by which is meant an inability to breathe or an inability to swallow."

11—Leeches in the Throat (عَلَقُ الثَّابِتِ فِي الْحَلَق).

12—Piles (بَوَاسِيْر).

13—Anal Fissures (نَوَاصِيْر).

14—Bleeding Wounds (جِرَاحَاتُ الطَّرِيَّة).

15—Injuries from Blows or Falls (صُرْبَةٌ وَسَقَطُهُ).

16—Burns (حَرَّاقُ النَّار).

17—Prolapsus Ani (خُرُوجُ الْمَقْعَد).

18—Colic (قَوْلَسِيْج).

19—Gastric Fermentation (خَلْفُهُ). "This is a disease in which the food is not retained for long in the stomach. Its ejection varies: sometimes it is rapid and sometimes slow; sometimes it is in large quantities and sometimes in small; sometimes it is digested and sometimes undigested."

20—Tenesmus (زحير).

21—Gastritis of Infants (خَلْفَةُ الصُّبْيَانِ).

22—Sciatica (عَرَقُ النِّسَا). "Treatment :—Take of

Socotran aloes one drachm, yellow myrobolan one drachm, and Egyptian colchicum one drachm. Grind up the ingredients, put them through a sieve, and make into a pill. Take five or six of these pills and natural health will be at once restored. I tried this remedy upon a man who had suffered from this disease for a year, and who, when sitting or standing, was unable to move in any direction. In a very short time he experienced relief."

23—Muscular Stiffness (أَعْبَا وَتَعَب).

24—Itching of the Extremities (حَاكَّةُ الْأَطْرَاف).

"This sometimes occurs as a result of walking in the rain or from the falling of cold water. The irritation is very great. Treatment :—Take some very hot water, throw a handful of salt into it, soak the hand and foot in this water for an hour ; and within the hour a cure will be effected."

"Farewell. The Treatise is finished."

The Sumerian Epic of Gilgamesh

By S. LANGDON

LAST season M. Watelin discovered a number of Sumerian tablets at Hursagkalamma in the spur of the great mound north of the temple of Ninlil. These were found in trench C 15, 1 metre below the surface, 3 metres above plain level, and in the Hammurabi stratum. Several fragments have been joined at Oxford, so that the lower half of a large two-column tablet has been completed. The tablet is 5 inches wide (125 mm.) and 5 inches long, originally 10 inches long. This tablet contains that part of the Sumerian Epic of Gilgamesh which relates to the Humbaba episode. Now it is clear that the lower half of a large tablet published by Zimmern, *Sumerische Kulthieder* (all from the same period as the Kish tablet) belongs to the same series. This tablet, No. 196, VAT. 6281, has also two columns, and is obviously the first tablet of the series. Zimmern wrote that a dealer sold VAT. 6281, claiming that it came from Dilbat. That tablet is only 105 mm. wide, or $\frac{3}{4}$ in. narrower than the Kish tablet. The two tablets, therefore, represent local peculiarities observable in local editions of other series.

It was evident from the large single column tablet from Nippur, which I published in *Publications of the Babylonian Section* (PBS.), vol. x, part ii, No. 5, that an edition of the epic on long single column tablets existed at Nippur. Chiera found a small duplicate of this text in the Nippur collection at Constantinople, *Sumerian Religious Texts*, No. 38. I am unable to do much with the interpretation of that tablet, but from line 2 of the reverse, *arad-da-ni* ^a *En-ki-du(g)-ra* ¹ *gù-mu-na-dùg-e* "His servant Enkidu said to him", it is clear (by its style) that it belongs to the epic and probably to some part after the Kish tablet.

For reasons stated below, I do not believe that Chiera's No. 39 + Radan, *Miscellaneous Texts*, 12, belongs to the

¹ On this *ra*, see note on the Kish tablet II, 20.

Sumerian epic. With the single column tablet published by me in BE. xxxi, 43, those tablets belong to a lost poem concerning Gilgamish and the dragon Zû, corresponding to the Lugalbanda-Zû poem, of which I first published a large four-sided prism, OECT. i, 1-10, pls. 5-9. An unpublished six-column tablet in Philadelphia carries this entire poem, of which my text corresponds to the second half. Chiera published three small fragments from this poem, *ibid.*, Nos. 33-5, and cites several more published by Poebel, Legrain, and myself, together with thirteen unpublished fragments, *ibid.*, p. 34. It is clear that several tablets assigned to the Sumerian epic of Gilgamish by Chiera do not belong to it.¹

The original Sumerian epic was, therefore, edited in a series of about four or five double-column tablets of about 200 lines each. The contents differed widely from the later old Babylonian version, edited on three-column tablets and the Assyrian edition, on three-column tablets, was also a new composition, differing greatly in diction from its Babylonian predecessor. Apparently the Sumerian poets had already created this great literary work in which the order of the episodes was fixed ; this order was adopted by the Babylonian and Assyrian poets ; but each of these Semitic editions is much more than a translation of the Sumerian original. They are the works of great literary masters, who wrote the argument and the narrative in a new style.

If progress is made in the recovery of the Sumerian epic an attempt must be made to establish the text, vocabulary, and style of the existing fragments. I make this first attempt here, editing the two fragments of the two-column edition. The style is unusually phonetic ; words usually written with ideograms occur in phonetic forms. Until the Sumerian phonetic pronunciation of all the words is established there must be a margin of error in any essay of this kind. A phonetic lexicon of Sumerian can be made possible only by numerous

¹ See Chiera, *Crozer*, p. 35.

editions of texts of this kind. I have depended largely on the manuscript of my own Sumerian lexicon in this endeavour to supply a basis for the future interpretation of the Sumerian epic of Gilgamesh.

I

A two-column tablet from Nippur (?), lower half published by Zimmern, *Sumerische Kultlieder*, 196. Said to come from Dilbat. In form it corresponds to Kish, 1932, 155. Duplicate, Poebel, PBS. 27.

Rev. II (IV)

[illegible]

17. *lugal-a-ni-ir* ^a*Gibil-ga-mes* ¹ *gù-mu-un-du*
To his king Gilgamish he cried.
18. *nà* ² *gig* *igeš* ³ *luġ-ġa bu-bu*
In (his) bed by night a dream, terrifying, caused (him) to
tremble.
19. *dumugu* ⁴ *kîr-dû dingir-ri-ne*
" O princely son, who bows down to the gods,
20. *ga-šem* ⁵ *ni* *ag-a gub-bi*,
who stands constantly to make his prayers (?),
21. *en-gal* ⁶ ^a*Gibil-ga-mes* *Urug(ki) ne-in-dûg-ga*
great lord, Gilgamish, who cares for Erech,
22. *ama-zu* ⁷ *ù-tu-da maġ-bi in-gal-zu*
thy mother, the extremely wise creatress,
23. *um-me-ga-zu mu-tûr-ra-ga-zu* ⁸ *maġ-bi in-gal-zu*
thy bearer, thy great mother womb (?), the extremely
wise,
24. SAL + ME ⁹ *nî-îla sag-gà-á-? nu ? tuk-nî-te-a-nî*
the *nadîtu*, pre-eminent, whose awfulness
25. *ki-a-du gi-na*
where she walks

It is clear from the reference in I, 9, " she bore him two-thirds a god ", or " Holy Ishtar bore him ", that this was the first tablet of the series. Ninsun is the mother of Gilgamish in

¹ Enkidu seems to be the subject, but the syntax is difficult, noun in apposition *after* the postposition *ra(ir)*. Syntactically Gilgamish must be the subject.

² *nà* for *na(d)* = *maġalu*.

³ REC. 249. Value *i-gi-eš* = *idu*, *šittum*, *ittum*, omen, sleep, CT. 11, 33, K. 8298; also perhaps " dream " as omen.

⁴ See *Kish*, 1932, 155, iv, 10.

⁵ Has Br. 8892, the value *šen* also? The sign in *Kish*, iv, 11, is clearly *lipiš-ma*, showing a confusion of the signs *šem* and *lipiš*. See Thureau-Dangin, RA. 17, 100.

⁶ But *Kish*, iv, 12, *banda*.

⁷ Traces of a sign [*sic*!] in copy.

⁸ I cannot explain the variant *mu-tûr-ga-la-zu* unless *ga* stands for *gal* here; see *Kish*, iv, 14.

⁹ Landsberger, ZDMG. 69, 507, gives a reading *lu-kur* = *nadîtu*, *šagîtu*, *lalîtu*; as title of a goddess I do not know any parallel.

the Assyrian and old Babylonian versions,¹ and in the Kish tablet. ^{ist}*Aruru* is said to have created both Gilgamish and Enkidu,² and *a-ru-ru* occurs here IV, 5, but without the determinative for deity and may be some other word. But the Sumerian epic states that it was *ga-an-na*³ who bore or created Gilgamish, II, 14, 20; III, 1. It also seems clear from II, 6-9, that Innini speaks of Gilgamish as the "man my son".

Col. I of this text represents, then, the lower half of the first column of the epic, and is entirely confined to the glorification of Gilgamish. After a break Innini seems to be lamenting the fate of Gilgamish before her father (Anu). He is only two-thirds a god, and must die. Now if II, 9-16, are addressed to Anu by Innini, then line 17 surely has for subject *dingir-gal-e* = Anu⁴; *gi-gi* (= *apālu*) must stand for *gi-gi*, used with *ra*, *Gudea*, Cyl. A 5, 11, but with direct object, IV Raw. 7 A 24; CT. 4, 4, 23. But in Anu's reply (II, 18-20) he uses the words *lū dumu-mu* "the man, my son". Anu speaks of Gilgamish as "my son" also.

If in lines II, 14-18-20, III, 1, the text be read *gū-an-na* "bull of heaven", then this part of the myth would correspond to tablet VI of the Assyrian version. But Col. IV describes the meeting of Enkidu and Gilgamish, corresponding to tablet II (Philadelphia) of the old Babylonian version and tablets I (end) and II (beginning) of the Assyrian version. It is, therefore, clear that the dialogue between Anu and Ishtar in Cols. II-III refers to some early part of the epic, and contains material not represented in the Accadian versions. *ga-an-na* for *gašan-an-na* is the reading imposed by III, 3-16, and *ga* surely stands for *gašan* in III, 4-17 (*ga Urug(ki)*). In II, 10-11, the sign as copied by Zimmern is

¹ See *Semitic Mythology*, 397, n. 73.

² Assy. Ver. i, Col. II, 20-35.

³ *ga-an-na* = *gašan an-na* is a regular title of Innini (Ishtar).

⁴ *dingir-gal* means Anu in BA. ii, 481 = Ebeling, *Era*, 24, 20 (at Erech), and cf. *dingir gu-la* = Anu, BL. 136. In SBP. 120, 4; CT. 36. 28, 16; BE. 17, 89, 1, it means Enlil; also TC. vi, 56, 3 = AJSL. 39, 286.

the same¹ as in *ga-an-na*, but there it is certainly *gud*, *gū* "bull". It is impossible to read *ga-gal* "great queen" in these lines.

It seems, then, that Anu uses *lù dumu-mu* of Gilgamish as a *citation* from Ishtar's speech, where the text should have *lù-dumu-zu* "the man, thy son".

After this dialogue, in which Anu also admits that Gilgamish, although two-thirds god, must die, Ishtar fled and ascended to heaven. Here there is a long break, and Col. IV begins with a dialogue between Ishtar and some deity, possibly Aruru, concerning "this man", that is obviously Enkidu. The situation seems to be this. Ishtar, mother of Gilgamish, had appealed to Anu to deliver her son from the mortality that threatens him, and failed. She now appeals to Aruru to create a companion who will protect him in his adventurous career.

Now (IV, 15-17) Enkidu arrives at Erech and the citizens of that city see him. He stands at the outer gate and called to Gilgamish "his lord". Gilgamish lay on his bed and dreamed that he had seen Enkidu. Sumerian literary compositions are so abrupt in passing from one situation to another that lines 19-25 are difficult to fit into the situation. They seem to be an address by Enkidu to Gilgamish, the protector and lord of Erech, and lay stress upon the fact that a goddess was his mother.

The contents, though fragmentary and based upon a badly preserved text, show that the Sumerian epic differed widely from the Accadian version. There is obviously no place here for the long episode of Enkidu and the harlot. But seals of great antiquity prove that Enkidu was a bovine monster, precisely as the Accadian versions describe him, half-bull and half-man. Col. IV, 6-9, seem to describe his appearance, but the text is sadly damaged. Line 7 refers to his *šamahhu* "great stomach", intestines.

¹ See also *Kish*, ii, 10.

The difficulty with my analysis is the interpretation of *ga-an-na* and ^a*Innini* as the mother of Gilgamish, whereas the Kish tablet, which I take to be tablet II of the Sumerian series, repeatedly names *Ninsun* as his mother, in agreement with the Assyrian version, where her name occurs as mother of Gilgamish in tablets I, II, III, after which her name disappears in the remaining nine tablets. The old version, *Philadelphia*, Rev. III, 30, also names *Nin-sun-na*, the *rimtum* "wild cow", as mother of Gilgamish. Now *Ninsun* is by origin one of the titles of *Innini* (*Ishtar*); cf. *ga-ša-an-sun-na*, title of *Innini* (KL. 123, Rev. II, 7; PBS. x, 295, 37), with ^a*Gašan-sun* = ^a*Nin-sun*, wife of ^a*Lugalbanda* (father of Gilgamish), II Raw. 59, B 25. For *Ninsun* allied to *Innini*, see BE. 31, 14, n. 1. Unless through the defectiveness of the text I have interpreted it wrongly, there seems to be no doubt but that *Innini* of the Berlin tablet is *Ninsun* of the Kish tablet.

II

The Kish tablet has precisely the same form as the Berlin tablet (KL. 196), and also represents the lower half of a large tablet, being broken precisely across the middle. Only the lower half of the Obv. and upper half of the Rev. are preserved. If KL. 196 is tablet I of the Sumerian series, this is tablet II; for it is entirely concerned with the Humbaba episode, corresponding to the latter part of tablet III, and probably most of tablet IV (not recovered) of the old Babylonian version, and to the Assyrian version, II-III-IV-V.

The lower half of Col. I, 12-20, describes seven monsters of the domain of *Huwawa*. This corresponds to Yale 137 and Assyrian Vers. ii, Col. V, 2. Gilgamish is terrified by the giant and the seven monsters, and appeals to his mother. After a long break the narrative is resumed at the middle of Col. II, where *Shamash* appears to be conversing with *Ninsun*, mother of Gilgamish (II, 2-10). *Shamash* first appears in

the old version, III, 215 ff., consequently the order of events seems to be the same in the Sumerian original. Then follows an address by Gilgamesh to his mother, Ninsun, and his father, Lugalbanda (II, 12-18). This corresponds to Assyrian Ver. iii, Col. I, 23 ff. He tells them that he is determined to slay the monster and the meaning has been reproduced precisely in the late Semitic version.

We now come to material almost entirely lost in the present text of the Assyrian Ver. iii, Cols. III-IV-V.¹ The reply of Ninsun is omitted, and Enkidu abruptly begins an address to Gilgamesh.² Enkidu describes the monster Huwawa. He promises to assist Gilgamesh (II, 21-III, 12). Gilgamesh takes up his weapons and Enkidu again encourages him (III, 13-19). Now Huwawa sees the two heroes approaching and breaks into great fury. The battle is joined and here the text breaks away (III, 20-25). This material stood at the beginning of tablet IV, according to my reconstruction of the fragments, in a long lacuna.³ There is no mention of the three dreams of Gilgamesh mentioned in the Hittite fragment and the fragments of tablet IV.⁴

According to the Assyrian version, Enkidu feared the battle, and was encouraged by Gilgamesh.⁵ But if my rendering of Col. IV is correct, it was Gilgamesh who was not the man for this conflict. Enkidu accuses him of being only a trapper of birds, a conqueror of ordinary men; city bred is he and fit only to be a shepherd, although born by a goddess.

Huwawa cried out to Enkidu; he is astonished at the might of Enkidu (?) and complains that Enki had become hostile to himself. Now follows an episode referred to in tablet VII of the Assyrian version,⁶ but which was certainly

¹ See *Thompson*, pp. 31-2; *Semitic Mythology*, 249.

² This failure to connect leading ideas by transitional passages is characteristic of Sumerian poetry.

³ See *Semitic Mythology*, 249 f.

⁴ *Ibid.*, 250-1.

⁵ Last fragment of tablet IV, Col. VI, K. 8591. See *ibid.*, 251-2.

⁶ Enlil's condemnation of Enkidu was certainly given at the beginning of tablet VII. The account is preserved in the Hittite version only. See *Semitic Mythology*, 257; Friedrich, *ZA.* 39, 16-21.

fully described in tablet V. The text of this tablet is so defective at present that almost nothing can be made of the narrative. According to the Sumerian version, Enlil sent his messenger to inquire why they had attacked Huwawa and orders them to depart. Here the fragment ends. But in tablet VII and the Hittite texts Enlil condemned Enkidu to die, because they had slain Huwawa. It is clear that this refers to the earlier episode of a lost part of tablet V, where Enlil and Ninlil interfered and endeavoured to save Huwawa. This Gilgamish and Enkidu had evidently refused to do, but encouraged by Shamash they again attacked Huwawa and slew him.¹

TRANSLATION

Obv. I

11. A fierce giant
 12. Firstly a
 13. Secondly a viper, that crushes
 14. Thirdly a serpent monster, that
 15. Fourthly a flaming monster, that
 16. Fifthly a mighty serpent, that
 17. Sixthly a devastating deluge that smites the breast of
 the mountains.
 18. Seventhly a *swift* that *prepares*
 hostility.
 19. Seven are they
 20. Chieftains who are born on the mountain range of their
 woods are they.⁴
 21. Cedars and cane-break wickedly he terrifies like
 a hurricane.
 22. The lord Gilgamish wickedly he terrified like a hurricane.
 23. As one he *crushed* them.
 24. he bound.
 25. he the offspring of the (royal) house⁵
 to his mother ;
 26. " my might he has turned back (?)."
 (Break of over twenty lines)

¹ Cf. *di-zu*, "knower of decision," the just, OECT. i, 13, 33.

² See OECT. i, 5, 22.

³ A meaning "go away" is required here; various values are possible, *ku*, *gu*, *tuš*, *duru*; but I can suggest no reading.

⁴ I.e. the seven aspects of Huwawa? This passage is obviously connected with Yale 137, *pul-ḫi-a-tim* 7, "seven terrors."

⁵ *ama-tu(k)*, probably for *amaedu*, *emedu* = *ilitti biti*. On this title of Tammuz, see *Semitic Mythology*, 347; R.A. 14, 86, 9; CT. 37, 24 B 6; V Raw. 29, 69; SBP. 334, 5.

Obv. II

2. Shamash *with* (his) mother, the queen Ninsun (took counsel ?).
3. Gilgamish
4. The "sons of his city" cried
5. A hurricane of the mountains
6. The mother, the bearer, in thy city
7. True understanding oh heavenly mother, thou hast given
8. A word of heroic power like a garment
.
9. in their hands
10. Like a bull¹ in the "great chamber"² thou hast born.
11. Humbly he plead; he made entreaty.
12. "My faithful mother, my bearer, Ninsun, my father, Lugalbanda, the holy.
13. My faithful mother, my bearer, Ninsun, an obedient king
14. my city
15. My faithful mother, my bearer, Ninsun, my father Lugalbanda, the holy,³
16. As long as this man exterminates men, yea exterminates them
17. (my foot ?) in the city may I not set,
18. (not) enter."
19. The vigorous servant. . . .
20. His servant Enkidu⁴ called to him.
21. "My king thou art. This man before me has enraged my heart.
22. As for me, this man before me has enraged my heart.

¹ But the sign is made like *ga*. Also BE. 31, 31, 7, *ga* !

² *ki-gal* corresponds to *gè-é-pâr* of KL. 196, i, 6-9.

³ See note on BE. 31, 31, 7.

⁴ *gù-gi* "to cry out to" is construed with *ra* (see PBS. v, 25, i, 37; ii, 2). But *ra* must be either an emphatic pronoun here or the reading is *Enkišarra* !

23. He is a hero that slaughters, a voice of the monster
ušumgal.
24. His face is the face of a lion.
25. His breast is a deluge of onslaught.
26. His front¹ is flame, the mouth of a
27.
28. My king thou art. To the mountain ride

Rev. I (III)

1. To thy mother, that understands to give life, I will
speak ; I will prostrate myself before her.²
2. And then I will tell of thy defeat ; I will weep.
3. For man Enkidu has not
4. A club that *annihilates* furious hostility,
5. A *weapon*³ that mangles the foe,
6. A unique man,⁴ that crushes the enemy,
7. A bulwark ? , that quenches the
8. Oh thou Gilgamesh be my helper and
I will be thy helper.
9. this man what is he ?
10. Thy equal⁵ who is there ? Thy equal who ?
11. Be it that he is a lion , who is thy equal ?
12. Be it that he is a , who is thy equal ? ”
13. The club which destroys the soul of life *he placed at
his side*.
14. “ Lo ! I will⁶ and may they also
.

¹ Or sag-ki-na = *ina pūti-šu* “before him” ; see MAG. v², 69, 22, *ina pūti-šu šarāpa ikbū* “they ordered (his seal) to be buried in his presence”.

² The text has *TI-ZU* not *EN-BA*, and *ab-du*, not *DU-DU*.

³ *ešdabba*, perhaps full form of *ešda* = *kakku*, RA. 17, 168, K. 10013, 8.

⁴ *ne-da-diš* for *nita(g)-diš* ; cf. l. 19, and *Phil.*, Rev. iii, 27.

⁵ *ba* = *māšilu*, cf. *ma-šil ili*, IV Raw. 33*, iv, 8.

⁶ *ne* after the unidentified sign cannot be the future 3rd plural since *meš* is used for the 3rd future plur. in the next verb. *gab-ba-meš* should be 3rd plur. pret., and *e-meš*, future. I take *ši-mu-un* as a precativ as in *ši-im-da-nag ši-im-da-kū*, verily I will drink, verily I will eat, TC. 15, 11, 102. *ši* has the force of “also” in most passages. If *gabba-meš* is a future

15. Quickly will I
16. . . . turn back.
17. . . turn back.¹
18. In thy purpose surely I will help thee.
19. O thou created a unique man
20. Huwawa in the house of cedars roared.
21. He beheld them, he gazed at them
22. He shook his head, his head trembled.
23. He cried out, he moaned.
24. The heroes like did not
.
25. Gilgamish in his might
.

Rev. II (IV)

Break of more than twenty lines

1. In the mountain
2. Gilgamesh returned,
3.
4. *He took him by the hand.* "Like what
is it?"
5. Then Gilgamish depressed, whose heart,
caused him to enter.
6. His servant Enkidu cried to him
7. "He that traps birds hastening let him turn to his
place; he that captures men let him return to his
home."
8. His servant Enkidu replied to him;
9. "A 'twice' man (?),² terrible, a capturer of men
.
10. Oh princely son, who bows down to the gods,
11. who stands constantly to make his prayers (?),

it must stand for *gab-ba-e-meš*, *Sum. Gr.*, § 224 end. The verb may be *igi-tāḡ* > *igi-tāb*, where GAB (*tāḡ*) is read *tab*, *dab*, and hence it would mean "they have seen" which makes no sense here.

¹ What are *nimgal* and *denigal*? Surely phonetic spellings.

² Cf. III, 3.

12. fierce lord, Gilgamish, who cares for Erech,
13. thy mother is the extremely wise creatress,
14. (thy) bearer, thy great mother womb (?), the extremely wise,
15. thy mother goddess, is she that knows the fate of orphan and *chieftain*.¹
16. He that traps birds returns to his place, he that captures men returns to his *home*.
17. Born in the city art thou, an ox herd, a shepherd."
18. Huwawa cried out to Enkidu.
19. "Enki has made hostile his speech toward me.
20. A leader, whose heart rages mightily, treads the cane break behind (his) fellow.
21. Like the wrath of heaven and earth is his rage.
22. His he; wearing skin and linen he" ²
23. Before Enlil and Ninlil they stood.
24. Enlil brought up his watchman from the sea.
25. and Ninlil brought up him that sits in judgment.
26. When he returned to Enlil and Ninlil,
27. "Why is it like this ?" he said.³
28. let him depart, let him

ADDENDA

Other texts which mention Gilgamish are edited in this supplement to my article. Poebel, PBS. v, 27, has already been utilized as a duplicate of Zimmern, KL. 196. I regard the texts edited under III and V as parts of an epic or poem concerning Gilgamish and Zû.

¹ *gù-e* perhaps for *gud* = *ašaridu*.

² *KU-gar*. Clay, YOS. i, 53, 113-26, gives no value meaning to clothe, garment for *KU*, REC. 467. See also CT. 35, 3, 13-26. The reading *tuš-gar* = *ašābu* is excluded by the context. So far as my vocabulary extends *gù-gar* = *raḡāmu* is the only choice, i.e. *KU(gu-u)*, Clay, *ibid.*, 116. Read *gù-mu-un-da-gar* ?

³ *eš* is the particle of direct discourse. See Thureau-Dangin, RA. 11, 154; cf. 13, 94, 15; PBS. v, 152; vii, 7-9 (*e-še*). *ge-en* probably emphatic particle, *Sum. Gram.*, § 155.

III

Chiera, *Crozer*, 39, and Radau, *Miscellaneous Texts*, 12, are duplicates. Before *Crozer*, 39, 23, is to be placed Radau, 12, 17-23. The Constantinople text was apparently a shorter tablet and hence the Obv. of *Crozer*, 39, stood in the break between Radau 12, 16, end of Obv. and l. 17, beginning of Reverse. Although neither tablet mentions Gilgamish, the quotation in *Crozer*, 39, 2-3, from BE. 31, 55, 6-7, seems to prove that the two tablets do represent one of the Gilgamish myths. Not much can be deduced from the two texts. "Like a lion he smote," Radau, 12, 3, refers to some combat and probably to a myth in which Gilgamish, and not his father Lugalbanda, smote Zû in the mountains and recovered the tablets of fate for Enlil.¹ There is then reference to the shore of the Euphrates, and the might of the south wind (l. 7) which blew behind him and before him the Then the woman (*nununu*) feared the word of Enlil (9-10), which must refer to Ishtar.

Crozer, 39, Obv., has a reference to the nest of the serpent and the storm bird Zû, in a passage similar to BE. 31, 55, 6-7, where it is clear that Gilgamish smote the serpent and seized the young of Zû. The context does not admit a rendering to convey the meaning that Zû seized the young of the serpent as in the Etana myth.² In the similar texts, Poebel, PBS. v, 16 and 17, there is repeated reference³ to *amar* ^aZû "the young of Zu"; 16, 13, *amar* ^a*Imi-dugud*(*ĝu*) *û-ki-sig-ga-ba*

¹ See *Semitic Mythology*, 101; Chiera, *Crozer*, 34-5.

² See Langdon, *Etana*, 21, 42.

³ According to Chiera, *Crozer*, p. 34, these texts are duplicates of CBS. 14151, a large tablet containing the Sumerian legend of Zû and Lugalbanda. Late bilingual copies of this legend are K. 4628 = CT. 15, 41, and K. 5187 = CT. 15, 43. The catchline of K. 4628 is line 1 of K. 5187. Is it certain that the Accadian fragment K. 3454 (BA. ii, 465-75) really belongs to the Lugalbanda Sumerian epic represented by OECT. i, 1-10. CBS. 14151 and other fragments (Chiera, *ibid*, 34)? Were scholars right in assigning K. 3454 to the same epic as that to which the bilingual tablets K. 4628 and 5187 belong? In any case two Sumerian epics existed; one incorporated a myth of Lugalbanda (father of Gilamish) and Zû, and one (not the Gilgamish epic) a myth of Gilgamish and Zu.

mi-ni-in-ku "The young of the Zū in their nest sat"; also
 l. 16. *amar-e-su*¹ "thy young", 16, 14. *amar ú-ki-sig-[ga-

IV

BE. xxxi, 43, fragment from top of the obverse of a single-column tablet. Mentions Gilgamesh.

1. *mí-ūr-ra* ⁴
 2. *egír mu-tin-an-na-ge* ⁵ *i-lu*
 The lady, Geshtinanna, wailing
 3. *egír-e nu-mu-un-e guda gú-en* ⁶
 The lady, for the child, the healer, the *gú-en* (wails).

¹ *ùr* in BE. 31, 55, 6; *ùr-bi-a* is clearly a preposition, corresponding to *pa*, front, *egír*, rear.

² Var. *ra*, Crozer, 39, 23.

³ Crozer, 39, 24.

⁴ *niširtu* "mystery"? Or *SAL + KU šeš-ra*? "The sister for the brother."

⁵ For *geština*.

⁶ *gu-en* is a title of Tammuz; cf. ^a*Dumu-zi-gú-en-na*, Genouillac, TSAI. viii, 6. The *gú-en-na* = *guennaku* is a syn. of *ašib Nippuri*, and probably means "aristocrat of Nippur", the ancient Nippurian; Meissner, *Beitr.* 81, 61-2.

4. *guda mi-?-ra guda gú-en*,
For the healer, the, for the healer, the
gú-en (wails).
5. *ga-ša-an gi-úg ga-ša-an ki-gal-la-ka*
The queen of the land of the dead, the queen of the vast
land (lower world)
6. *ù-mu-un-ta áš-bi ta-áš-[dúg ?]* ¹
For the lord in loneliness wails.
7. *en-ad-mu* ² *nà-gi-li nu-tíl-la* ³
"O lord of my lamentation"
8. *guda ù-mu-un é-da* ⁴? -ta.
"O healer, O lord, in the river"
9. *ù-mu-un nun-na lál (?) bi-šù ga*
O lord, prince
10. *a-šub-šub* ⁵ *ra-ra-?-ni dumu-gim*
O cast away, who like
11. *ù-mu-un* ⁶ *Gibil-ga-mes Kiš[-(ki)-a*]
Lord Gilgamish, in Kish ⁶
12. *a-šub-šub*
O cast away
13. *kalag-ga-ni ki*
14. *en-gal mi-rin* ⁷ (!)

It is clear from the contents of this fragment that it does not belong to the Epic of Gilgamish, but to the Tammuz liturgies. Here Gilgamish is identified with Tammuz precisely as in my *Babylonian Liturgies*, p. 20, Rev. 3. The Kish fragment establishes the parentage of Gilgamish. His father was Lugalbanda. The dynastic list, OECT. ii, 12, 12-19,

¹ *tašdug*; cf. *tešdugga* = *ikkilu*, RA. 18, 39, 11.

² *ad-mu* in a Tammuz liturgy, SBH. 75, 7 = 78, 37 = No. 77, 1.

³ Cf. SBH. 101, 50; IV Raw. 18,* A 1. See OECT. i, 5, 15.

⁴ *é-da*, Vars. *ì-da*, *id-da* = *ina nàri*, SBP. 334, 23, Rev. 3. See also Genouillac, TC. xv, 12, 118 ff., *id-ta*; 17, 232.

⁵ *nadú*; cf. PBS. v, 144, i, 9, and *a-im-šub-šub* = *uštaddi-ši*, JRAS. 1920, 508, § 18 = *Ham. Code*, § 213. But see KL. 196, Rev. II, 5.

⁶ Cf. PBS. x², No. 5, obv. 8 + 14.

⁷ Also KL. 196, i, 9. Or *mi-é*?

gives the order of kings of Erech, Lugalbanda, Tammuz, and Gilgamish, hence Tammuz and Gilgamish were brothers, as the liturgy in BL. *ibid.*, l. 7, states. For Gilgamish as Tammuz, see *Semitic Mythology* 235.

V

BE. xxxi, 55, a complete single-column tablet from Nippur.

1. *šeš-a-ni ur-sag* ^a*Gibil-ga-meš gù* *ne-du*
His brother,¹ the heroic Gilgamish, called.
2. *ib-ba-ru šáb-ba ninnū-áni ib-ba-ni ba-an-dū*
In wrath (?) he raged in his heart
3. *ninnū-ám eš-ib-ba-ši-in-ag*
. he counselled with himself.
4. *urud ga-zi-in-na-ni* ²*gar-ra-an-na ? ni*
His axe which breaks (?) the way,
5. *7 gùn 7 ma-na KA-ni šu-ni-a ba-an-dīb*
Seven talents and seven manas its, he seized
in his hand.
6. *ur-bi-a* ³*muš sub-nu-zu-e sag-giš-ba-an-ra*
Within the disobedient serpent he smote.
7. *pa-bi-a* ³*mušen* ^a*Im-dugud(gu)-dē amar-bi šu-ba-an-ti* ⁴
Before him of the Zu-bird he seized the young.
8. *gur-sag-gà ba-an-tu*
and to the mountains he entered.

¹ "Brother" in sense of companion. Gilgamish is called the "elder brother" of Enkidu, *Epic* vii, Col. III, 40, and Enkidu calls him "my brother". Hittite version, ZA. 39, 18, 19-22. See line 23.

² *haššinu* occurs also in the Epic, Yale tablet, 166; it weighs 3 talents; made in preparation for the battle with Humbaba; also 124. In the Philadelphia tablet 1, 29-31, in dream of Gilgamish before meeting Enkidu; Assyrian version, i, Col. VI, 9. In the wailing of Gilgamish for Enkidu, viii, Col. II, 4, where Enkidu is called the "axe of my side". In Hittite version ZA. 39, 6, 6 (below) in battle with Humbaba. Of all these passages, the text of BE. 31, 55, suits the context of the Hittite version best, but it seems clear that the text belongs to the Lugalbanda-Zu myth.

³ See p. 939, note 7.

⁴ See p. 933, 7.

9. *šab-bi-a kiskil-lil-lá-ge (!) é im-ma-ni-in-dū (!)*
Therein Lilith had *built* her house.
10. *a-ri a-ri-eš e ba-an-kár-kár-ri-eš*
Hostilely they plundered the house.
11. *š^{is}ur-ba mi-ni-in-sir giš ba-ši-ni-in-dar*
Its foundation he overthrew and utterly devastated
for her.¹
12. *dumu eri-na mu-un-ne-lāg-eš-a*
(When) they had despoiled the sons of her city,
13. *giš-bi ni-tar-ru-ne gù-ba-an-sir-ri-ne*
They cut down their wood, they assembled it.
14. *kug ^aInnini-ra š^{is}gu-za-ni-šú mu-na-ab-sum-mu*
He gave it to holy Ishtar for her throne.
15. *š^{is}nad-da-ni-šú mu-na-ab-sum-mu*
For her bed he gave it.
16. *?-dé ur-ba giš ?-ni-šú ba-ab-dim-e*
. therein for her he fashions it.
17. *. bi-giš-e é-duš-ni-šú ba-ab-dim-e*
. for the house of her dwelling he fashions it.
18. *. al dúg-dúg-gi TAR úr-ra ?? mu-sur-e*
19. *. dúg-dúg-gi-dū úr-ra ni-di na-mu-un-e*
20. *. UD dumu nu-mu-un ?-a-ge-ne i*
21. *gú numun ENZU ?-mu a-dag IM-MAL-MAL-dé*
22. *. tuk dumu-ni-ir ninda mu-na-ab-tum*
. for his son bread he brought.
23. *. tuk šeš-a-ni-ir a-mu-na-ab-de-e*
. for his brother water he poured out.²
24. *. dingir-dingir-e um-ma-te-a-ta*
25. *. giš giš-gar-ra ka-zal š^{is}gar (?) in-gur-ra*

This text appears to have no connection with the Gilgamesh epic. The only certain information which I can obtain from it is that Gilgamesh seized the young of the Zû bird, which is

¹ Infix *š* has here the force of a dative of disadvantage.

² This phrase ordinarily refers to the pouring of water for the souls of the dead.

identical with the eagle of the Etana myth,¹ and Zû which stole the tablets of fate and was conquered by Lugalbanda, father of Gilgamish. He then went to the mountains where *ardat lilî* or Lilith had had built her house. Here, in the account of the destruction of the house of Lilith, the verbs are plural. The subject must be Gilgamish and his brother, referred to in lines 1 and 23. Is this "brother" really Enkidu here? They utterly destroyed the house of Lilith. Gilgamish makes a throne and a bed for Ishtar. After line 17 the text is obscure. Who is the "son" for whom Gilgamish brings bread? *Ur-Nungal* was the son of Gilgamish in the dynastic list.²

Line 23 refers to his brother as though he were dead, but no reference to his death occurs in the text. Without more material on these myths it is impossible to place this text and the similar texts, *Crozer* 39 and *Radau* 12, in their proper connection.

BE. XXI, 31

Duplicate of Kish tablet II, 4-III, 10

1. *dumu eri-ki-za mu-un-[de]*
The "sons of thy city" cried
(Kish, ii, 4.)
2. *urû ġur-sag-gà-ka nam-ma [. BU-ne]*
A hurricane of the mountains (Kish, ii, 5.)
3. *ama ug-ga-na-áš na-ra*
To the mother, his bearer, (Kish, ii, 6.)
4. *ġiš-tug ġištug zi(d) ama-na ba-[e-sġ]*
True understanding, Oh heavenly mother, thou hast
given (Kish, ii, 7.)
5. *inim nam-ur-sag-gà túg-ġim³ im*
A word of heroic power like a garment . . . (Kish, ii, 8.)
6. *eš ib-ni . . . mu-un-ġūr-ġūr ġab⁴*

¹ See *The Legend of Etana*, 23, 13.

² OECT. ii, 12, 21.

³ Cf. SBP. 280, 12; Zimmern, KL. 78, Rev. 12.

⁴ Text does not correspond to Kish, ii, 9.

7. *gud-gim uru-gal-la*¹ *ba-e-du*
Like a bull in the "vast city" thou hast born (him).
(Kish, ii, 10.)
8. *gú sag-be-in-gar*² *inim-ba-an-da-sig*³
He bowed to the earth (?); he made entreaty.
9. *zi-ba*⁴ *ugu-mu* *a-Nin-sun(a)-ka*
"O bestower of the breath of life, Ninsun (Kish, ii, 12.)
10. *a-a-mu kug* *a-Lugal-bán-da*,
O my father, Lugalbanda, the holy, (Kish, ii, 12.)
11. *dug-ga ama* (?) *ugu-mu* *a-Nin-sun(a)-ka-kam*⁵
By (?) the goodness (?) of the mother (?) my bearer
Ninsun (Kish, ii, 13.)
12. *ù-ki* (?) NE *ma dim-e*⁶
13. *en-na galu-bi lili*⁷⁸
As long as this man exterminates men . . . (Kish, ii, 16.)
14.
15. *gír kur šu* *mu urú-šú ba-ra-gub-bi*

¹ Kish, ii, 10, has *kigalla*. Both words mean "under-world", but it is certain that they designate the "house of the dark chamber", a room in the temple, i.e. *gigpar* (*giparu*) corresponding to KL. 196, i, 6 + 9.

² *gar* not *sur* after Kish, ii, 11. For var. *inim-gar* "to plead", v. Chiera, Crozer 36, 44, *da-eri-šú inim-inim-gar* "forever plead". For *gú*, Kish, ii, 11, has an adverb, *gú(?)-ki-ám* = *šapliš*.

³ Var. *inim-pa-an-da-sig*; for *inim-sig* (*sum*) = *emēku*, *šutēmēku*, to implore, cf. *inim-sig-sig-ta* = *ina temēk*, Th. Dangun, *Rituel*s, 71, 11, and the verb in AJSL. 39, 176, 16. My copy *sag- . . . -sig* "to hasten", is probably incorrect.

⁴ Sic! where Var. has *ama*. The only known meaning of *zi-ba* is *napišta kášu* "to bestow life". *zi-ba nam-ti-la-ge* = *kā'isat napišti balaṭi*, title of Gula, OECT. vi, 57, 15; see the name of Gula's temple at Barsippa, *é-zi-ba-ti-la*, *bit ka'isat napišti balaṭi*, VAB. iv, 303; CT. 37, 15, 68.

⁵ The construct inflection *Nin-suna-ka* proves that *Ninsun* means "Queen of battle"; double construct *ka-kam*. See on *ka-ka*, *Sum. Gram.* § 139 and *ka-kam*, OECT. i, 46, 26. The construct before *Nin* must be *dug-ga*.

⁶ Line 12 takes the place of Kish, ii, 14-15.

⁷ Written Br. 6408 without final *lu*.

⁸ I can make no reading from my copy, *ga-ám a-ba-áš*! Kish, ii, 16, *ge-im-ma-ab-za-ám*. A reading *ZA* (*zag-ga*) = *šabāru* "to seize" is possible, VAT. 10172, i, 18 = YOS. i, 53, 15 = CT. 35, 1, 2. Also *ZA(sa-a)* = *ka-ka-ši-ga*, VAT. 10171, i, 17, where *ZA* with value *sā* follows *A + HA* (*za-aḡ*) = *ḫalāku*; cf. *Bab.* vii, 87.

- My foot which in the city may I not
set. (Kish, ii, 17.)
16. *arad zi nam-ti! tu-tu*” (Kish,
ii, 18.)
17. *lugal-a-ni-ir gu-mu-ne-ib-[gi]*
To his king he called ; (Kish, ii, 20.)
18. *lugal-mu za-e galu-bi igi-nu-mu-ni-du-e*
19. *šag-nu-mu-ni-ib-dib-bi*
“ My king thou art. This man thou hast not seen.
He has not enraged (thy) heart.
20. *mà-e galu-bi igi-mu-ni-du-a-ni (?)*
But as for me, this man whom I have seen,
21. *šag-mu-ni-ib-dib-bi*
has enraged (my) heart (Kish, ii, 22.)
22. *ur-sag gu-g-gu-g-du¹ gu ušumgal-la*
He is a hero that slaughters, a voice of the monster
ušumgal. (Kish, ii, 23.)
23. *igi-ni igi Ug-gà-kam* (Kish, ii, 24.)
24. *giš-gab-a-ni a-gè-a du-du-dam* (Kish, ii, 25.)
25. *sag-ki-ni ^{vis}gi-bil ka-a*
26. *galu nu-mu-un-gi-gi*
His front is flame, the mouth of Man
cannot turn him back.
27. *lugal-mu za-e kur-šú ū*
My king thou art. To the mountain ride
(Kish, ii, 28.)
28. *ama-zu ururin-ni² ti-zu ga-na-ab-dug*
29. *dug-dug ge-be-dé*
To thy mother, that in her secret chamber understands
to give life, I will speak, I will cry.

¹ Var. Kish, ii, 23, *dé*.

² On *ururin*, *ururin*, underworld, see OECT. vii, p. 53, No. 380. After analogy of *kigal* and *urugalla*, this word also means “ dark chamber ”, a room in a temple corresponding to Arallu. So in SBH. 64, 7 = SBP. 144, 15, *ururim-ma-mu* “ my dark chamber ”.

30. *egir-ra ba-bad-zu*¹ *ga-na-ab-dug*
 31. *er-gig ma-mal*
 And then I will tell of thy defeat ; bitterly will I weep.
 (Kish, iii, 2.)
32. *galu-ra En-ki-du(g) GALU + MIN nu BE-e*
 For man Enkidu (Kish, iii, 3.)
33. *ma-da-la kur su-su*
 A club that annihilates the foe,
34. *tukul Eš-tab-ba galu-kur kud-de*
35. *ne-da-tiš*² *galu-kur*³ *šù-šù*
 A weapon that mangles the foe,
 A unique man, that crushes the enemy, (Kish, iii, 5-6)
36. *é-gi-sig-ga* (Kish, iii, 7.)
37. *za-e-ge*⁴ *tag-ba*⁵ *ab*
 Be thou my helper
38. *a-na-me [galu-ba an-nam]*
 this man, what is he ? (Kish, iii, 9.)
39. *ba-zu a-ba ba-zu a-ba*
 Thy equal, who is there ? Thy equal who ? (Kish,
 iii, 10.)

ADDENDUM

Zimmern, *Sumerische Kultlieder*, 196, has also been edited by P. Maurus Witzel, OLZ. 1931, pp. 402-10. He has read *gū-an-na* and *gū passim*, not *ga-an-na* and *ga* for *gašan*, and consequently assigns this tablet to that part of the Epic which corresponds to Tab. VI of the Assyrian edition. I cannot accept his interpretation of this tablet: to avoid overloading my edition with obviously unnecessary and lengthy notes I must content myself by referring the reader to Witzel's edition. He was the first to discover that PBS. 27 is a duplicate of Zimmern's tablet.

Kalawān Copper-plate Inscription of the Year 134

By STEN KONOW

SIR JOHN MARSHALL'S excavations have again brought important results. A new Kharoṣṭhī inscription has been found, which throws new light on the difficult question of the eras used in a series of Indian Kharoṣṭhī inscriptions belonging to the Pahlava and Kuṣāṇa periods. In May last Sir John was good enough to let me have excellent photographs of the new epigraph, for the purpose of editing it in the *Epigraphia Indica*. In consideration of its great importance, he has, moreover, kindly allowed me to publish a preliminary account in this JOURNAL.

The find-place is Kalawān, a site about 3 miles south-east of Sirkap, in Taxila, on one of the many flat-topped eminences jutting out on the north side of the Margalla hills, the southern and western part of the girdle of hills which encircle the valley where the remains of ancient Taxila have been traced.

The site contains remnants of a monastery, comprising a chapel, which was originally roofed over like the apsidal chapels at the Dharmarājikā stūpa and in Sirkap.

The chapel contained good specimens of Gandhāra sculpture, belonging to an eight-sided stūpa, which stood in the eight-sided apse of the chapel.

Under the foundation of the stūpa was found a copper plate, bearing a Kharoṣṭhī inscription in five lines, which Sir John has succeeded with his usual skill in cleaning, so that every one of the akṣaras has become perfectly clear, all the punctured dots of which the letters consist being distinctly visible in the excellent photographs. The reading is, therefore, absolutely certain.

TRANSLATION

In the year 134 of Azes, on the twenty-third—23—day of the month Śrāvaṇa, at this term Candrābhī, the female worshipper (*upāsikā*), daughter of Dharma, the householder (*gṛhapati*), wife of Bhadrapāla, establishes relics in Chaḍaśilā, in the house-stūpa, together with her brother Nandivardhana, the householder, together with her sons Śama and Sacitta and her daughter Dharmā, together with her daughters-in-law Rajā and Indrā, together with Jivanandin, the son of Śama, and her teacher, in acceptance of the Sarvāstivādas, having venerated the country-town, for the veneration of all beings; may it be for the obtainment of Nirvāṇa.

I shall not, in this place, discuss the shape of the letters or the phonetical and grammatical features presented by the inscription. That will be done in the *Epigraphia Indica*, where I shall also consider the possibility that *ayariṇeṇa*, l. 4, may be miswritten for *ayariṇa*. I shall restrict my remarks to such details which are of importance for the wider questions about chronology and history.

To judge from the palæography of the record, there cannot be the slightest doubt that it is about contemporary with the Taxila silver scroll inscription of the year 136, found and published by Sir John Marshall.² There is also one significant

¹ Read *-satvaṇa*.

² *JRAS.*, 1914, pp. 973 ff.

feature which is common to the two records, and to them alone: the word *ajasa* before *śravaṇasa* in l. 1 is clearly identical with the much-discussed *ayasa* preceding *aśaḍasa* in the silver scroll.

It is not necessary to recapitulate the various attempts at explaining the word. I shall restrict myself to the two interpretations proposed by Sir John Marshall and myself.

Sir John translated the word *ayasa* "of Azes", and took it to characterize the era used in the record as founded by Azes. "The absence of any titles attached to the name of Azes is exceptional, but will hardly occasion surprise when it is borne in mind that his era had been in use for more than a century, and that his dynasty had been supplanted by that of the Kushans." Professor Rapson¹ endorsed this view, and added that "Azes could scarcely have been furnished with his wonted title, 'Great King of Kings,' in this inscription, without prejudice to the house then actually ruling".

The late Dr. Fleet² disagreed and said: "From the vast mass of inscriptional material which is now available I cannot quote a single record in which the name of a real king,³ whether living or dead at the time of the record—or even of any official—is mentioned in such a connection without some title or another. And for this reason, if for no other, I am of opinion that the word *ayasa* does not give a proper name." And in the same paper⁴ he objects against Sir John's explanation, that if the translation "of Azes" were possible, it would "on the analogy of every known early Indian record" place Azes in the year 136 of some era not founded by him.

Dr. Fleet's objections have seemed to me to be decisive, and in my edition of the silver scroll inscription in the *Corpus Inscriptionum Indicarum* I therefore proposed to

¹ *The Cambridge History of England*, i, p. 582.

² *JRAS.*, 1914, p. 997.

³ "I mean, of course, excluding the fictitious Vikramāditya and Śalivāhana."

⁴ p. 995.

explain *ayasa* as corresponding to Sanskrit *ādyasya*, though I was aware of the phonetical difficulty connected with this identification. I proposed to interpret the term as indicating that there was, in that particular year, a second intercalated Āṣāḍha, and since this would be the only indication in the older series of Kharoṣṭhī records which might furnish a clue to an astronomical calculation of the epoch of the era, I asked Dr. van Wijk to investigate the matter. And I made his calculations the starting point of the chronological system proposed as a working hypothesis in the *Corpus*.

The importance of the new Kharoṣṭhī record is accordingly evident. If it shows that my explanation of the word *ayasa* was wrong, my dating of all the Kharoṣṭhī inscriptions of the old series falls to pieces, and we shall probably have to return to the old explanation that they are dated in an era which to all practical purposes is identical with the Vikrama era, and then we must, besides, assume another, older reckoning, which is used in the Patika copper plate, and, I may add, in some other old records.

My first impression when I received the photographs from Sir John was that I had made a mistake, and that impression has since been so much strengthened that I now feel convinced that my old explanation is untenable.

In the first place it seems hardly likely that Sanskrit *ādyā* can appear both as *aya* and as *aja* in two records, which are almost contemporary, even if we assume the existence of the doublets *ādiya* and *ādyā*.

Further, if *aya aṣaḍa* means "the first Āṣāḍha", *aja śravana* must mean "the first Śrāvaṇa", and we should have to assume an intercalated *Śrāvaṇa* in the year 134 and an intercalated *Āṣāḍha* two years later, in 136. Now Dr. van Wijk has been good enough to inform me that this is impossible unless one of the years was reckoned as current, the other as elapsed. And I do not think that anybody would be prepared to maintain that such was the case.

If we now return to Sir John's explanation it might be

objected that the only Indian form of the name Azes which is hitherto known to us is *Aya*, and that there is some difficulty in assuming a doublet *Aja*. But this objection hardly carries any weight.

Aya is certainly an attempt to render *Aza*, there being no proper Kharoṣṭhī sign for the voiced *z*. In the introduction to my edition of Indian Kharoṣṭhī inscriptions I have shown that *z* is rendered in various ways, as *y*, as *j*, as *jh*, as *s*, as *sy*, and perhaps as *sr*.¹

The two forms *aya* and *aja* are, accordingly, parallel to the doublets *kuyula* and *kujula*, and from the viewpoint of phonology Sir John's explanation is unobjectionable.

If it is accepted, as I believe it must be, the addition *ayasa*, *ajasa* need not, however, be taken to characterize the era as founded by Azes. If such were the case, we might be inclined to raise the question why the word is never met with in older records, found further west than Taxila, and evidently dated in the same era. A priori there is a certain presumption in favour of the assumption that the addition was not felt to be necessary there, because there was no other era in currency, but that it was deemed advisable to add such a designation in Taxila, because there people were accustomed to use a different reckoning. And now after it has proved impossible to refer the Patika date to the same era as the bulk of old Kharoṣṭhī records, we must necessarily assume an earlier reckoning which was known and used in Taxila.

Now there is another Taxila record which seems to help us to characterize that older era. In the Sirkap silver vase

¹ Corpus, pp. cviii f. The word *jaūva* mentioned as a doublet of *yavuga* should be cancelled. As proposed by Professor Thomas, *Göttingische gelehrte Anzeigen*, 1931, p. 6, the final clause of the Patika inscription must be read as *mahadanapati Patika saja uvajhae[na*] Rohinimīreṇa ya ima[mī] saṅgharame navakamika*, the great gift-lord Patika together with the *upādhyāya* Rohinimītra, who is overseer of works in this Saṅghārāma. Professor Thomas explains *saja* as *sadya*, and translates "at present *upādhyāya*", but it seems more probable that *saja* is Vedic *sacā*, which Professor Rapson has traced in the Kharoṣṭhī documents from Turkestan. Cf. his remark in the *Index Verborum*, s.v. *gaca*.

inscription of the time of Jihonika-Zeionises the year, 191, is preceded by a distinct *ka*, and before this *ka* Professor Thomas¹ thinks that he can see traces of a *sa*. Mr. Hargreaves has kindly informed me that a careful examination of the original has not led to the detection of these traces, but they are clearly visible in a cast which I owe to his courtesy, and it is not the first time that mechanical reproductions reveal things that are not visible to our eye. Since the Jihonika inscription has been found at Sirkap, it is presumably older than the Kuṣāṇa conquest.

Jihonika was probably a Pahlava and not a Saka, if we can judge from the name of his father *Manigula*, where *gula* seems to be old **varda*, cf. the Persian name *Artavardiya*, for *v* does not seem to become *g* in Saka. But the era used in the silver vase inscription seems to be characterized as a Saka reckoning, and to point to the existence of an old Saka era in Taxila. And it is possible that the same era is mentioned in the Shahdaur inscription of Damijada.²

In such circumstances it is understandable that it was felt to be convenient to make an addition where another era was used, in order to distinguish it from the older one, and the word *Ayasa* was chosen, because this new reckoning was used by Azes and his successors, and the name Azes was familiar from the numerous Azes coins in common use. The addition need not imply a reference to a definite person, King Azes. It is perhaps more probable that it was used much in the same way as *Saka* in the Jihonika record, or as we might say "Julian" or "Gregorian".

The oldest instance of the use of the new era would seem to be the Āmohinī tablet of the year 72, and if we bear in mind the facts that we have an Indian tradition to the effect that the so-called Vikrama era was an Indian institution, being founded by Vikramāditya, and that there is no instance of the mention of Macedonian months in the Kharoṣṭhī inscriptions

¹ l.c., p. 4, see Plate XVI*d* of the Corpus.

² Corpus, No. ix.

which seem to belong to the Parthian epoch, the most probable theory seems to me to be that the era was of Indian origin, and not founded by Azes.

The older era evidently came to Taxila in connection with the Saka conquest. I think that Professor Rapson has made it as certain as certain can be that the Saka invasion started from Seistan to Sindh, and thence extended southwards, finally reaching Ujjayinī, and northwards, through Western Panjāb up to Taxila. It is apparently possible to follow the Saka progress in the inscriptions from Maira, Taxila, and probably also from Shahdaur and Mānsehrā. On the other hand, we have no certain trace of it to the west of the Indus.

I have not been able to find any valid reason for rejecting the Indian tradition according to which the Saka advance received a severe check in Ujjayinī, through an Indian king, who became known by his biruda Vikramāditya, and who founded the first national Indian era. From the Indian viewpoint such an event must have seemed to be of the utmost importance, and it is very likely that the new era gradually spread over large parts of Northern India, to Mathurā, where there are no traces of an older era, and even westwards to the Saka stronghold in Taxila and farther.

In the north-west we soon find another foreign dynasty, that of the Pahlavas, and I am unable to accept the current theory that the Pahlavas and Sakas were so closely associated that they cannot be distinguished. We know that they had been constantly at war in former times, that the Sakas had been hardly pressed by Mithradates I, but reasserted themselves under his successors, till they were reduced by Mithradates II. And we seem to know that the Kushānas, who later on conquered and replaced the Parthians in North-Western India, either were Sakas or at least acted as the successors of the Sakas.

It seems to me that there was always an antagonism between the two peoples. And if such was the case, it would be intelligible that the Pahlavas used a neutral Indian era in

preference to that of the Sakas, the more so because the former seems to have been more widely distributed. But the Jihonika inscription seems to show that the old Saka era was occasionally still used, side by side with the new one, and we shall have to ask ourselves whether there are other inscriptions which must be referred to it. And here we have almost no indications to guide us.

The Maira well inscription seems to be dated in the year 58 and may contain the name *Moasa*.¹ In that case it must be referred to the Saka era, and it would show that Moga had been ruling for at least twenty years at the time when the Patika plate was engraved. The Mānsehrā inscription² is apparently dated in the year 68, and mentions a certain Lia, who may have something to do with the Kṣatrapa Liaka of the Patika inscription. Further, the Shahdaur inscription of Damijada³ is perhaps referred to a Saka era.

These records, and perhaps also the Fatehjang epigraph, would therefore probably belong to the old series, and it is a plausible surmise that the same is the case with the Loriyān Tangai, Jamālgaṛhī, Hashtnagar, and Skārah Dherī inscriptions of the years 318, 359, 384, and 399 respectively.

The question about the starting point of the old Saka era has often been discussed, and various dates have been suggested. Sir John Marshall⁴ once thought of 95 B.C., but is now inclined to go back to an earlier date; Mr. Banerji⁵ suggested 100 B.C.; Mr. Jayaswal⁶ 123 B.C.; and Professor Rapson⁷ 150 B.C., all approximately, and other possibilities have also been mentioned. The fact is that we can only base our conclusions on general considerations, which can be viewed in different ways.

⁷ *The Cambridge History of India*, i, p. 570.

What we must do is to start from dates which can be derived from records dated in the later era, and from the results of numismatic or archæological research, and then try to find out whether some of the persons and events connected with the older reckoning can be brought into relation with the facts thus ascertained. And it is perhaps possible to arrive at some approximative results in this way.

If the dates of the Āmohinī tablet of the year 72, the Takht-i-Bāhī inscription of the year 103, the Panjtār record of 122, the Kalawān plate of 134, and the Taxila scroll of 136 are referred to elapsed Kārttikādi Vikrama years, they roughly correspond to A.D. 14, 46, 65, 77, and 79 respectively. We should accordingly have to infer that Gondophernes was on the throne in A.D. 46, having perhaps come to power in A.D. 20. In A.D. 65 the Kuṣāṇas had reached Panjtār and probably also Takṣaśilā, and in 79, and presumably already in A.D. 77, the Kuṣāṇas had already been established in the previous Pahlava realm for some time. It seems to follow that the latest date for the sack of Sirkap was in A.D. 65. It can hardly have taken place much earlier, because Gondophernes seems to have had successors.

The silver vase with an inscription of the [Sa]ka year 191, during the reign of Jihonika, was found in Sirkap, and consequently belongs to the pre-Kuṣāṇa period. It is much worn, and may have been about twenty-five years old when it was buried, at the sack of Sirkap. If such were the case, the approximate epoch of the Saka era would be $191 - 40 =$ about 150 B.C. This is, of course, nothing more than a mere estimate, but it seems to be supported by another line of argument.

The Āmohinī tablet seems to show that Ṣoḍāsa was a Mahākṣatrapa in A.D. 14. He was a Kṣatrapa when the Mathurā Lion Capital was set up. At that time his father Rājula was Mahākṣatrapa, and the same was the case with Patika, who, in his turn, was not even a Kṣatrapa in the Saka year 78. We cannot, of course, say how long time would be likely to pass between Ṣoḍāsa's rule as Kṣatrapa and his

promotion to the rank of Mahākṣatrapa, or how long it would take for Patika, who was apparently a young man in the Saka year 78, to become Mahākṣatrapa. A few years might be sufficient. But if we suppose, for the sake of argument, that Śoḍāsa was 65 years old in A.D. 14 and 25 at the time of the setting up of the Lion Capital, that event would approximately belong to 25 B.C. If the Mahākṣatrapa Patika were about 65 years old at that time, and about 20 at the date of the Taxila copper plate, the latter would roughly belong to 70 B.C., and its epoch would be $c. 79 + 78 = 148$ B.C.

If we assume an epoch of the old Saka era about 150 B.C., we should like to find out how it was established, and here again we are reduced to mere guesses.

It is evident that the idea of an era came to the Sakas from outside, through their dealings with peoples who were accustomed to the use of eras. They may have taken it over from the Greeks, whom they replaced in Baktria, or from the Parthians, against whom they were continuously at war from shortly before the middle of the second century B.C. Now, since the epoch of the era can hardly be much earlier than 150 B.C., the latter alternative seems to be the most likely one.

We learn from Chinese sources¹ that the Sakas were driven out from their old strongholds by the Yüe-chī in or about 165 B.C. We are further told how the Great Yüe-chī went towards the west and made themselves masters of Ta-hia, while the Sai-wang went southwards and made themselves masters of Ki-pin, and we get the impression that these two events happened at the same time. The Yüe-chī conquest of Ta-hia is said to have coincided with the death of Shan-yü (174–160 B.C.), and 160 B.C. therefore seems to have been the time when the Sakas occupied Ki-pin.

Here they soon came into contact with the Parthians. According to Justin, Mithradates I (c. 171–138) enlarged

¹ See the references *Corpus Inscriptionum Indicarum*, II, i, pp. liii ff.

the boundaries of the Parthian empire until it reached from the Hindukush to the Euphrates, and according to Orosius he conquered all the peoples between the Hydaspes (i.e. the Medus Hydaspes) and the Indus.¹ Strabo distinctly tells us that the Parthians brought force to bear on the Skythians, and if the Saka era was founded about 150 B.C., that must have happened during these fights with the Parthians.

Under Mithradates' successors Phraates II (138-128) and Artabanus I (128-123) the Sakas repeatedly defeated the Parthians, and probably consolidated their power, especially in Seistan. But Mithradates II (123-88) was more successful, and established Parthian suzerainty over the Sakas.

The Saka invasion of the Indus country seems to have been the result of the pressure of the Parthian power, and not of the decline of Parthian strength after the demise of Mithradates II.² In the Saka year 58, i.e. perhaps about 92 B.C., we seem to find Moga in the Panjāb, and shortly afterwards a Saka ruler appears at Shahdaur, and in the year 68, i.e. about 82 B.C., a chief Lia seems to be mentioned in the Mānsehrā inscription, who may, or may not, be identical with the Kṣatrapa Liaka of the Patika plate of Saka 78, i.e. perhaps about 72 B.C.

Even if Moga was the first Saka ruler who entered India, which is by no means certain, the Saka invasion must accordingly have begun during the reign of Mithradates II. At the time of the Patika plate, Moga must, moreover, have been reigning for at least twenty years, if his name was actually found in the Maira well inscription of the year 58.

In such circumstances it is perhaps not probable that the accession of Azes should have taken place so late as 58 B.C., another indication that he cannot have been the founder of the "Vikrama" era.

Professor Thomas³ has shown that it was the Parthians

¹ Cf. Rapson, *The Cambridge History of India*, i, pp. 458 and 568.

² Otherwise Rapson, l.c., p. 568.

³ *JRAS.*, 1906, pp. 193 f., cf. Rapson, l.c., p. 561.

who made an end to the Greek dominion in Ariana, and the Azes dynasty played an active rôle in that development. It remained in power till it was overthrown by the Kuṣāṇas, to whose time the new Kalawān copperplate as well as the Taxila silver scroll belong.

There has been considerable dissension about the identity of the Kuṣāṇa ruler mentioned in the latter record, though Professor Rapson¹ declares that he is almost certainly to be identified with Wima Kadphises. The question is not merely academic. If Wima Kadphises was ruling at the time of the silver scroll, i.e. probably in A.D. 79, it might be possible to ascribe the foundation of the historical Śaka era to his successor Kanīṣka, but not so if the Kuṣāṇa sovereign of the scroll was Kujūla Kadphises. And there seem to be rather strong reasons in favour of the latter alternative.

The most important ones have been summarized by Sir John Marshall²: The monogram on the scroll is no doubt characteristic of coins of Wima Kadphises, but it is also found on coins of his predecessor. The title *mahārāja rājātirāja* is used by both Kadphises kings. Kujūla Kadphises' coins are found in Taxila in larger numbers than those of any other kings except Azes I and Azes II. "It would be natural for the first emperor of the dynasty to be styled 'the Kushan Emperor' without any further appellation, while it would be equally natural for his successors to be distinguished from him by the addition of their individual names." And "the stratification of coins at Taxila shows that Kujūla-Kadphises succeeded the Pahlava kings there, and consequently he can hardly have conquered the country before *circa* A.D. 50; and, inasmuch as his coins betoken a fairly long reign there, and he is known from other sources to have lived to a great age, he may well have been ruling in the 122nd and 136th years of the era of Azes, i.e. approximately in A.D. 65 and 79".

¹ l.c., p. 582.

² *JRAS.*, 1914, pp. 977 f.

It seems to me as if this view is the only one which can be brought into accordance with the information that can be derived from Chinese sources.

The account of the events which led to the Kuṣāṇa empire are narrated in the Hou Han-shu, written by Fan Ye (died A.D. 445), and has been translated by M. Chavannes¹ and others. Fan Ye states that "the notes which Pan Ku has written on the configuration and the manner of the various (Western) countries, are detailed in the book of the older (Han); now I have chosen what in the events of the period Kien-wu (A.D. 25-55) or later was different from what has already been said formerly, and I have compared the chapters on the Western countries on that; all the facts have been related by Pan Yung at the end of the reign of the emperor Ngan (A.D. 107-25)".

It seems to me that we must necessarily draw the conclusions, which have been drawn by leading sinologists, that Kujūla Kadphises did not start on his career of conquest before A.D. 25, and that the whole development, including Wima Kadphises' achievements, had been completed in A.D. 125.

We are told about K'iu-tsiu-k'iu, i.e. Kujūla Kadphises, that he was originally the *hi-hou* (*yavuga*) of Kuei-shuang, that he attacked four other *hi-hous*, and styled himself king, the name of his kingdom being Kuei-shuang.

The titles occurring on the silver scroll, *maharajasa rajatirajara devaputrasa Khuṣaṇasa*, and on some Sirkap coins *maharajasa rajatirajasa Khuṣaṇasa yavugasa* look like illustrations of the narrative of the Hou Han-shu.

We further hear about K'iu-tsiu-k'io that he invaded An-si and seized the territory of Kao-fu, that he triumphed over P'u-ta and Ki-pin and entirely possessed those kingdoms, and that he died more than eighty years old.

An-si is, as has long been recognized, the Chinese rendering of an old *ar-sak*, and can be translated "Parthian". Since the

¹ *T'oung Pao*, II, viii, pp. 149 ff.

immediate result of the invasion of An-si was that K'iu-tsiu-k'io seized the territory of Kao-fu, An-si can only signify the Parthians who had made an end to the Greek power in Ariana. The coins on which Kujūla Kadphises' name is coupled with that of Hermaeus have usually been considered to prove that Kujūla Kadphises was for some time associated with the last Greek ruler of Kabul. Sir John Marshall has, however, pointed out to me that such an inference is by no means warranted. It is quite possible that Hermaeus coins were struck after he had been replaced by the Parthians, and in that case the joint coins would only show that Kujūla Kadphises during or before his forward move against the Parthians sought and found the support of the adherents of the old Greek rulers.

After having made himself master of the Kābul country, K'iu-tsiu-k'io extended his territory eastwards to P'u-ta (old pronunciation *P'uk-d'ât* or *Buk-d'ât*), which has not been identified, and Ki-pin, which cannot in this connection mean Kashmir, but probably the Gandhāra country.

It seems to me that it is necessary to draw the inference that the Kuṣāṇa ruler mentioned in the Panjtār and silver scroll inscriptions of A.D. 65 and 79 respectively, must be identified with Kujūla Kadphises.

The reduction of An-si and Ki-pin cannot have been completed at the date of the Takht-i-Bāhī inscription, i.e. in A.D. 45, and probably not for some time after that date, for Gondophernes had successors who preceded the Kuṣāṇa conquest. And in spite of Professor Rapson's remarks in this JOURNAL, 1930, p. 189, I think that Kujūla Kadphises is mentioned as a prince, *erjhuṇa*, on the Takht-i-Bāhī stone. When I examined the original in Lahore I could not detect any traces of lettering after *Boyaṇasa*, l. 4, or between *Kapa* and *sa* in l. 5, no more than between *Gudu* and *vharasa* in l. 1, where all reproductions show such traces. Even if my interpretation of the words *erjhuṇa Kapasa* is wrong, we must not forget that the Hou Han-shu seems to describe Kujūla

Kadphises' conquests as effected during a comparatively short period, and if his eightieth year falls earlier than A.D. 65, he must have been an old man when he began his vigorous career.

Moreover, we must not forget that Wima Kadphises is never designated as a Kuṣāṇa on the coins which bear his name, and that the Hou Han-shu attributes to him the re-conquest of T'ien-chu or Shen-tu, which cannot well mean the country about Taxila.

Wima Kadphises seems to have had a long reign, and was perhaps succeeded by other Kuṣāṇa rulers, older than Kaniṣka. One of them may have been the Vamataḥṣama of the Mathurā inscription published by Professor Vogel¹ and Mr. Jayaswal.²

We may, however, abstract from those possible successors. But if Wima Kadphises were the ruler mentioned in the silver scroll, he was on the throne in A.D. 79, or, if we reckon with current years, in A.D. 78. And if the Śaka era was founded by Kaniṣka, he must have succeeded him in that very year, and we should not understand why he founded a new era. Moreover, Kaniṣka would be the Yüe-chi whose forces were defeated by Pan-ch'ao towards A.D. 90, whereafter "the king of the Yüe-chi did not fail to send every year the tribute imposed upon him". I agree with Professor Sylvain Lévi,³ that "it was not Kaniṣka, at the apogee of his reign and power, who consented to such a humiliation".

It seems to me that the attribution of the historical Śaka era to Kaniṣka leads to impossible results. It has no traditional account in its favour, and as emphasized by the late Dr. Fleet,⁴ the era is emphatically marked as a southern reckoning. The only Indian tradition about its origin is that it is a Śaka-kāla, and was founded by a ruler who re-established

¹ *Annual Report Arch. Surv.*, 1911-12, pp. 120 ff.

² *JBORS.*, vi, pp. 12 ff.

³ *JA.*, ix, i, 1897, p. 26; cf. Boyer, *JA.*, ix, xv, 1900, p. 549.

⁴ *JRAS.*, 1913, p. 987.

Saka power in Ujjayinī. And, as I have stated elsewhere,¹ this account of a re-conquest strikingly reminds us of the unexplained remark in the Hou Han-shu that Yen-kao-chen *again* conquered T'ien-chu. I can hardly think that this coincidence can be explained otherwise than through the assumption that we have to do with two layers of one and the same genuine tradition. We know nothing about any connection between Kaniṣka and Ujjayinī, but we know that Wima Kadphises reconquered Sindh, which had been the starting point of the old Saka conquest of Ujjayinī. And if the Kuṣāṇa ruler of the silver scroll is Kujūla Kadphises, Wima Kadphises' reconquest was apparently effected while his octogenarian father was still alive.

The era founded by him was calculated to commemorate the Saka reconquest of Mālava, where it was subsequently used by the Saka rulers. But it was not introduced in the northern provinces, where the Kuṣāṇas had already been in power for some time, and where the dated records of this period are, besides, all private documents.

It seems to me that the Kalawān inscription, in showing that the word *ayasa* in the silver scroll cannot be used for an astronomical calculation of the era, has made it as good as certain that we have to do with an epoch practically identical with the Vikrama era, and that it will therefore be necessary to assume the existence of an older reckoning, which the Jihonika silver plate and perhaps the Shahdaur inscription show was a Saka reckoning. And it seems likely that Professor Rapson was right in proposing approximately 150 B.C. as its epoch.

We must, I think, further draw the conclusion that the Kaniṣka era has its epoch in the second century A.D., and if the Khalatse inscription of the year 187 belongs to the time of Wima Kadphises, as I believe it does, it cannot be earlier than about A.D. 139. Professor Lüders has long ago ² main-

¹ e.g., Corpus, p. lxxvii.

² *SBAW.*, 1912, p. 830.

tained that one indication points to a date between A.D. 130 and 168.

There cannot be any doubt about the importance of the new record, and it is to be hoped that this preliminary account will induce other scholars to give their comments so that they can be utilized for the edition in the *Epigraphia*.

There are, besides, other interesting details in the record. We learn to know the name of a village or township just outside Taxila, *Chadaśila*, where the last component, *śila*, is evidently the same as in *Takṣaśilā*. And our vocabulary is enriched with the word *gahathuba* (*gṛhastūpa*), which evidently means a *stūpa* in a building which is roofed over. Also the instrumental plural fem. *ṣṇuṣaehi* is of interest, and shows that Pischel's remarks in his *Prakrit Grammar*, para. 376, must be modified. But the discussion of such features has not the same general interest as the chronological questions mentioned in the preceding pages.

The importance of the new Kharoṣṭhī inscription for the history of Gandhāra art is evident. The sculptures found in the Kalawān *stūpa* are said to be of good old style, and since the copper plate was deposited under the foundations of the *stūpa*, it makes it possible to date them approximately. On the other hand, the late image inscriptions of the years 318, 384, and 399 would, if they are dated in the old Saka era, show that these sculptures approximately belong to the years A.D. 168, 234, and 249, while the Mamāne Dherī pedestal inscription of the Kaniṣka year 89 would be only a little earlier than the Hashtnagar pedestal.

Human Remains from Jemdet Nasr, Mesopotamia

By HENRY FIELD, Assistant Curator, Field Museum of Natural
History, Chicago

DURING the past ten winter seasons the Field Museum-Oxford University Joint Expedition has been conducting archæological excavations on the site of the ancient city of Kish, which according to the texts, was "the first city founded after the Flood".

Kish is located between the present beds of the rivers Euphrates and Tigris, and lies 8 miles due east of the ruins of Babylon.

Jemdet Nasr is a low mound 18 miles north-east of Kish, where the Expedition has found painted monochrome and polychrome pottery (Geometric II of Susa), pictographic tablets in linear script, and other important archæological material. These specimens have thrown a flood of light on the cultural attainments of the inhabitants of Mesopotamia during the fourth millennium before the Christian era.

Since Jemdet Nasr was destroyed by fire approximately 6,000 years ago, it was most desirable to discover if possible human skeletal remains, so that some knowledge of the physical characters of the ancient inhabitants might be acquired. In March, 1928, Mr. L. C. Watelin, field director of the Expedition, decided to close the excavations at Kish for the season, and to employ 120 workmen at Jemdet Nasr for a period of two weeks.

Six human skeletons were discovered during the progress of the excavations, but owing to the poor condition of the bones, only fragmentary parts of each skeleton could be preserved. At Jemdet Nasr the floors of the small rooms were reached at an average depth of from 50 centimetres to 2 metres. The following notes were recorded with each specimen :—

No. J.N. 1. Fairly complete skeleton found at a depth of $\frac{3}{4}$ metre at the eastern end of the mound. The skull and long bones were badly crushed. The grave furniture consisted of one unpainted pottery vessel.

No. J.N. 2. A fragmentary skull found at a depth of 50 centimetres. The skull was badly crushed and no observations were possible. Grave furniture consisted of two badly broken painted pots and a number of individual beads.

No. J.N. 3. A flattened skull found at a depth of $\frac{3}{4}$ metre slightly east of J.N. 1. Grave furniture consisted of a painted kettle and two unpainted pottery jars.

No. J.N. 4. A complete skull found at the western side of the Tell at a depth of $1\frac{1}{4}$ metres. The skull was slightly crushed, but the following observations were possible before removal from the surrounding earth.

The sutures appeared to have been closed during life, which suggests that the individual was of middle age. The inion was markedly prominent, but there were no parietal eminences. This latter observation is of particular interest, since the majority of Kish crania show the development of these bosses to a marked degree. The supraorbital ridges were not very pronounced, and from the general lack of roughness due to muscular attachments, and from the sharpness of the ridges in the orbital sockets, I was inclined to believe that this individual was a female. The pelvis, however, was lacking and the long bones were beyond the power of preservation, so that accurate determination of sex was impossible.

The most important observations were on the length and breadth of the skull, which was measured with standard head callipers. It was impossible to obtain accurate measurements, but the greatest occipital length was approximately 195-8 millimetres. There was apparently little distortion in the actual length of the skull, but lateral pressure had undoubtedly caused some slight changes in the original width, which I estimated to have been about 100-15 millimetres.

It will readily be seen that the cephalic index based on these figures must have been between 60 and 65. This index is extremely low even for a hyper-dolicocephalic individual, and from personal observation during excavation I am confident that this individual belonged to a dolicocephalic group. Furthermore, there was no possibility of this having been an intrusive burial, since the archaeological objects found in the immediate neighbourhood belonged to the early period, and there was no evidence of disturbance in the superimposed strata.

No grave furniture was found with this skull, but fragments of broken painted and unpainted jars were closely associated with these human remains.

J.N. 5. A fragmentary skull found near J.N. 4 at a depth of $1\frac{1}{4}$ metres. There was no grave furniture.

J.N. 6. A very fragmentary skeleton found in the centre of the Tell at a depth of $\frac{3}{4}$ metre. There was no grave furniture.

Since one skull (J.N. 4) is the only complete specimen yet found associated with this particular culture, it is of considerable importance to be able to assert that it was extremely dolicocephalic in form. I suggest tentatively that this individual belonged to a Proto-Mediterranean¹ group, who migrated eastwards from the North Arabian or Syrian Desert when this area, once inhabited by palæolithic and neolithic man² became inhospitable owing to climatic changes.

Umm Jeraz, a newly discovered site near Jemdet Nasr, is believed to contain similar archaeological material, and future excavations may throw additional light on these interesting problems.

MISCELLANEOUS COMMUNICATIONS

TIME TAKEN BY THE STRIKE OF CEREBRAL *r*

In the JOURNAL for July, 1924, p. 436, I stated that the strike of a cerebral *r* lasted not more than one 120th of a second. I was speaking of the commoner cerebrals *t*, *d*, *n*, *r*, especially the last, and was taking exception to the use of the words "firmly pressed" in describing the movement of the tongue in making them. It seemed to me that it was a misuse of terms to say that there was "firm pressure" in an action taking so short a time. There is no more pressure in a cerebral than in a dental.

I do not now remember on what I based my estimate of the time taken by the strike of a cerebral *r*, but no doubt the grounds for it were adequate. Recently, however, a very interesting article in *Zeitschrift für Experimental-Phonetik*, Band 1, Heft 1, Okt. 1930, has furnished evidence that the statement was well on the safe side. In this article there is an analysis of a sentence spoken by Dr. Babu Ram Saksena, who some years ago was a student in the School of Oriental Studies. He repeated the words *ek bare rājā rahte hāi* at a rather slow conversational rate, taking two seconds to the five words. The diagrams accompanying the article enable one to calculate the length of each sound.

There are seven consonants (counting *h* as a vowel), viz. *k*, *b*, *r*, *r*, *j*, *r*, *t*. Of these *k*, *b*, and *t* take the longest time, one-tenth of a second each; *j* and the second *r* take seven-hundredths of a second each; the first *r* takes six-hundredths of a second, while *r*, the only cerebral in the seven, takes two-hundredths of a second. This includes the time taken by the on-glide, the strike, and the off-glide. The strike is probably shorter than either the on-glide or the off-glide, so we may say with confidence that it takes less than one 150th of a second.

The statement in *JRAS.*, loc. cit., was thus comfortably within the mark.

Putting the matter in mathematical language we may say that $k, b, t : j$, 2nd $r : 1st\ r : r = 10 : 7 : 6 : 2$. Particularly noteworthy is the proportion $t : r = 5 : 1$. The dental t in that sentence took five times as long as the cerebral r .

T. GRAHAME BAILEY.

NOTICES OF BOOKS

ŠĀYAST-NĒ-ŠĀYAST. A Pahlavi Text on Religious Customs, edited, transliterated, and translated, with Introduction and Notes, by JEHANGIR C. TAVADIA. Alt- und Neu-Indische Studien, herausgegeben von Seminar für Kultur und Geschichte Indiens an der Hamburgischen Universität: No. 3. $11\frac{1}{4} \times 7\frac{1}{2}$, pp. xi + 174. Hamburg: Friederichsen, de Gruyter & Co., 1930.

In this excellent piece of work, Dr. Tavadia has performed a great service to Iranian studies, and in particular to that of mediaeval Zoroastrian customs. West's translation of the *Šāyast nē Šāyast* in the Sacred Books of the East, meritorious in its time, had been long out of date and suffered, as did all West's translations, from a lack of linguistic control. This control has been assured far beyond expectation by the discovery since West's time of Middle Iranian texts of the western dialects. The language of the seventh century has no longer to be interpreted from the Pahlavi script alone, which, although adequate for the period when the language was still spoken, proved to be seriously inadequate for a later period. In minor points of transcription from the Pahlavi script, differences are likely to continue. The choice between the historical orthography (e.g. *d't* transcribed as *dāt*) and the attempt to give a phonetic rendering (e.g. *d't* read as *dād*) is not of much importance. The reader can give the words the Sasanian pronunciation without difficulty. Dr. Tavadia has kept the historical orthography.

The numerous notes are of great importance and testify to the author's wide reading in this type of Pahlavi literature. Some details which awaken doubt may be noted. On p. 58 *zahāk* is given the meaning "the last", by what is evidently an invalid deduction from a Pahlavi gloss to Av. *yazu-*. The word is more probably the same as the common *zhyad*

(cf. Ryberg, *Glossary*, s.v., *zahyād*), which assumes various forms: *zha*, Y. 19, 15, beside *zhak* for Av. *bāzu-*; *zhya*, Dd. 36, 100, with variant *zhyak*; DkM. 755⁸, *zahyād i parkān* "depth of the wall"; Pahl. Riv. Dd., p. 129, *zhya*. On p. 35 (to 9, note 4) the verbs are *āhuftan* "to uncover" and *nihuftan* "to cover", where *-h-* can only be explained from *-g-*, since Indo-Iranian *-s-* after *ni-* is Iranian *-š-*, cf. *nišastan*.

A valuable glossary is added containing the more important Pahlavi words. Happily, we now have the facsimile of K. 20 in the excellent publication of the University of Copenhagen.

A remark may perhaps be added on the problem of *HVHt*, treated on pp. 7-8. If we start from *ēt* < **aita* O.Pers. *aita*, Av. *aēta*, MPT. 'yd "this", with the collateral form *ē* (cf. *pat* and *pa*, which is written *p* in the early Persian fragment of the Psalms in the Syriac alphabet), this word could be represented in Pahlavi by *HNA* = *ēt*, 𐭥𐭮𐭥𐭥 = *ē*, 𐭥𐭮𐭥𐭥 = *ē*, but also by *HVHyt* = *ēt*, a variant to *HNA* in AVM. 18 (*Pahl. Texts*, p. 11), and hence probably by *HVHt*, DkM. 669¹⁸ has *HVHyt* after *gōβēt*. To introduce an explanation it would seem that the following phrases could be employed: *ēt kū HNA AYK* (DkM. 674⁶, Vid. 1, 2); *ē kū 'y AYK* (DkM. 667¹), which appears in the early Persian Qur'ān Commentary as 𐭥𐭮𐭥𐭥 (JRAS., 1894, p. 439); *ēt* or *ē* alone, and *kū* alone.

The author has successfully edited a difficult text, for which Iranian scholars will be very grateful.

DIE RELIGIONSGESCHICHTLICHE BEDEUTUNG DES YASNA HAPTAHĀTI. Von O. G. VON WESENDONK. Untersuchungen zur allgemeinen Religionsgeschichte, herausgegeben von Carl Clemen. Heft 3. 9¼ × 6, pp. v + 64. Bonn u. Köln: Ludwig Röhrscherd, 1931.

It is no doubt to be attributed to the obscurity which hangs over the older parts of the Avesta that each student attains

to a different result. The religious terms, such as *vohu manō*, have been interpreted in nuances varying from purely abstract nouns to highly anthropomorphic divine beings. The authors of Avestan texts unhappily did not think to anticipate these difficulties, and the context does not decide. To this uncertainty is added the small compass of the material which entices the student to use the dangerous *e silentio* argument, as is noticeably the case in the present book. Hence the reader will find on most pages assumptions or assertions which do not convince. As, for instance, that *yazata-*, *fravaši-*, and other words were introduced by the composer of the Yasna Haptahāti, or that *baga-* was deliberately rejected by Zoroaster. *Yazata-* at least has its counterpart in the Indian *yajata-* and by the method which traces *rita-* to the Indo-Iranian period, *yazata* belongs there too. As to the etymology of *fra-vrti-*, so much has been proposed that it is hardly worth while to point out a further possibility, that of a connection with *vrti-* in Av. *həm-varəti-* and Pahl. *gurt*.

The present study stresses the importance of the Yasna Haptahāti as a stage in the development of Mazdeism. Its difference from the Gathas is clear, but it is hard to believe that Zoroaster would have found much to object to in it. Too much is urged from the view that Zoroaster does not use certain words or phrases in the Gathas. Surely we should remember that a large number of words occur only once there (*myazda*, *zaotar-*, *Yima*, and the like); the Gathas hardly contain systematic theology. The matter becomes still worse when it is proposed to cut out passages from the Gathas as being not from Zoroaster. At once there arises the confusion of unified and dissected Gathas and additional uncertainty. The etymological method to secure meanings is obviously dangerous, as when on p. 3 *haxəman-* is said to emphasize "die innere Haltung" of friendship. It is admittedly hard, however, to be satisfied with a *non liquet*.

The author has made a courageous attempt to bring light into this dark matter, and there are deductions of value to

be found here. As to the date of Zoroaster, still in dispute, it is perhaps of interest to call attention to the name *parśuas* "Persia" in the Nineveh inscription, the name of the country over which Kuraš was ruling in 630 B.C. "on the far side of Elam", *JRAS.*, 1932, p. 239 (cf. Weidner, *Archiv. für Orientforschung*, 1931). The same phonetic form is found in the ninth century for a district in the north-west of Persia. The word may therefore have retained its ninth century form in the Assyrian documents, but may equally well represent the phonetic form of 630 B.C. In any case with *-su-* and *-s* it represents archaic Persian compared to the Achæmenid inscriptions, and suggests the need of caution in pushing back the Gathas (compared to which *parśuas* is equally archaic) to an early date.

248.

H. W. BAILEY.

ESQUISSE D'UNE HISTOIRE DE LA LANGUE SANSKRITE. Par JOSEPH MANSION, avec une préface de L. de La Vallée Poussin. $3\frac{1}{2} \times 5\frac{1}{2}$, pp. viii + 188. Paris: Paul Geuthner, 1931. 50 Frs.

In this sketch of the Sanskrit language M. Mansion has addressed himself to beginners in Indian studies, and has therefore attempted to compress much into small compass. Details are therefore not to be expected, but examples are nevertheless happily frequent. A general view is given in the first chapters of the history and chronological data of India. The discovery of Sanskrit by Europe forms an interesting chapter. From chapters iv to xiii the linguistic history of Aryan India is traced from the Indo-Europeans to the modern dialects, and here the usual material is copiously quoted. The triumph of Sanskrit as a literary language even among sects opposed to Brahmanic teachings, latest among the Jains, receives a separate chapter. The difficult Problems of prakritisms in the Rgveda, of the language of the Epic, of the extent to which Sanskrit was a spoken language, and of

the invention of Indian writing, receive special treatment in four appendices.

It is a pleasant book to read and makes few provocative assertions, the author being rather inclined to criticize earlier hypotheses with a view to defining where knowledge fails.

It would be well if the non-existent Avestan "Yimeh", p. 44, were now forgotten.

295.

H. W. BAILEY.

ANDARJ-I AOSHNAH-I DĀNĀK. Pahlavi Text Series, No. 7.

Edited by ERVAD BAMANJI NASARVANJI DHABHAR.

9 $\frac{3}{4}$ × 6 $\frac{1}{2}$, pp. xv + 24. Bombay: The Trustees of the Parsee Panchayet Funds and Properties, 1930.

This edition of the short didactic treatise *Handarz i Ōšnar* is the seventh in the excellent series of publications of the Trustees of the Funds and Properties of the Parsi Panchayet. Almost at the same time the original MS. has been made available in facsimile by the University of Copenhagen. Since the other MSS. are copies of K 20, they are useful only to illustrate the scribes' treatment of the text.

The author has prefixed an introduction in which the passages in Pahlavi mentioning *Ōšnar the Wise* are collected. Here, as elsewhere in the world's literature, compilations of wise sayings are attributed to former sages. It is a favourite type of Pahlavi literature, and a comparative study of these *Pandnāmak* would be of interest.

The Pahlavi text occupies pp. 1-11, and is followed by an English translation. Notes are appended in justification of many of the interpretations. The translations are at times somewhat lax. Why should § 2 *fratom hunar pat martōmān xrat vēh* be rendered by "The first good quality for men is wisdom"? A weakness in the comparison of words is illustrated by *društ*, NPers. درشت, compared here with Av. *darš-*. The type is good and approaches more nearly the

MS. forms than any other type used. But it is well known that Pahlavi is far easier to read as written in the MSS.

It is to be sincerely hoped that this valuable series will be continued.

472.

H. W. BAILEY.

DENÂ VÂJAK I AÎCHAND I ATROPÂT MÂRESPANDÂN, or Some of the Sayings of Adarbad Marespand. Transliteration and translations into English and Gujarati of the original Pahlavi Text, with an introduction by SOHRAB KAVASJI DASTUR MEHERJI RANA, B.A. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. 25. Bombay : The Trustees of the Parsee Panchayet Funds and Properties, 1930.

This little book offers a short Pahlavi text (the original is in Pahlavi Texts, ii, 13 fol.) with a translation. It is regrettable to find Pahlavi still treated as an unknown language, for which any sounds were possible, after so much has been learned from documents of the Western Middle Iranian dialects. Feeling for the language seems here to be absent. All Pahlavi texts present difficulties, although the Pandnâmak should be among the easier owing to the large amount of this literary type which has been preserved. Unhappily the English translation here offered is at times not above paraphrase, and it is clear that the translator is not always familiar with common words, as in the case of *dêr-pattāy*. This word is on p. 13 transliterated *dêrpataê*, rightly understood to be "enduring long", but with the remark "lit. you will be protector of long time". It would seem that the well-known verb *pattūtan* "to last" were here confounded with *pātan* "guard".

It must be confessed that Āturpāt i Mahrspandân hardly receives justice in this book.

471.

H. W. BAILEY.

DIE SOGHDISCHEN HANDSCHRIFTRESTE DES BRITISCHEN MUSEUMS in Umschrift und mit Übersetzung herausgegeben von HANS REICHELT. I. Teil DIE BUDDHISTISCHEN TEXTE, pp. viii + 72, 1928. M. 10. II. Teil DIE NICHT-BUDDHISTISCHEN TEXTE, pp. viii + 80, 9 plates, 1931. M. 12. $10\frac{1}{2} \times 7\frac{3}{4}$. Heidelberg: Carl Winters Universitätsbuchhandlung.

In these two parts we have an edition of the only substantial collection of Soghdian documents in the world, and the only collection of texts of the earlier period, that is probably of the second century A.D. The work is therefore one of outstanding importance for Iranian studies, the more so since there is little or no further material left to publish, unless and until further texts are recovered from Central Asia.

It is satisfactory to find that the texts are so admirably published. Those in the first volume are probably, so far as the transcription is concerned, in a final state. The translation too, is more or less complete, though there are still some obscure passages for scholars to exercise their ingenuity upon.

The texts in the second volume are much more difficult, but in this case the author has provided admirable facsimiles which are as clear as the originals. The early letters still contain a number of obscure passages. On looking through the copies which I made of these letters four years ago, I find certain variations, but the only one in which I feel satisfied that I have the better reading is the third word in line 6 of Document I, which seems to me to be clearly 'zw, not čmw, as read by Professor Reichelt. In line 5 of the same document, the proper name is clearly 'rt . . . n as in the transcription of the text, not 'rw . . . n as in the translation.

The two later letters, Documents X and XI, are easily the most obscure in the whole collection, and I find my transcription varies at several points from Professor Reichelt's.

Document X bears an address, which Professor Reichelt has overlooked. It is at the bottom of the reverse in faint ink, and reads as follows:—

'kw čwny δ'rwn.

'ltwn yk'ny γ'ny čyk.

(The word *čwny* is indistinct and uncertain.) On the strength of this we can read the beginning of line 8 of the document 'ltwn yk'ny γ'ny; a Turkish phrase "*Altun . . . xan*" "the Golden . . . Khan" seems indicated, but the second word is still a puzzle.

I am inclined to see two other Turkish tags in the letter. Line 2, fourth word, I read γδ'sm, Turkish *qadašım* "my comrade", and line 4, second and third words, γγšy kšy, Turkish *yaχšī kiši* "good man"; but without complete confidence in either case.

G. L. M. CLAUSON.

LES LIGURES COMME SUBSTRATUM ETHNIQUE DANS L'EUROPE ILLYRIENNE ET OURALO-HYPERBORÉENNE. By JOSEPH KARST, Docteur-ès-lettres. Prolegomena Pelasgica. 10 $\frac{1}{4}$ × 6 $\frac{1}{2}$, pp. xx + 144. Strasbourg: Heitz & Co., 1930 RM. 20.

This is a most disappointing book. Its subject, the pre-Indo-European population of Europe, is full of interest and the material for its study yearly increases. There is every hope that a combination of specialists in the sciences of philology, archæology, and ethnology (in their various branches) would reach reasonably certain conclusions on some, at any rate, of the principal questions involved. But in such work there are two essential principles: scientific methods should be most rigorously employed: no greater certitude should be claimed than the facts warrant. Unfortunately to neither of these principles does Dr. Karst adhere. The approach to the problem is purely philological; the author starts from the assumption that Basque is a descendant of the language spoken by the pre-Indo-Europeans, and he endeavours to discover in various modern

European languages words which are not Indo-European but are survivors from the "Baskoid" substratum.

This is obviously a promising line of attack, provided that due regard is paid to the recognized rules of etymology and phonetics. But the author is not only non-scientific in his methods, he is perversely anti-scientific. Consider, for instance, his theory that the English word "esquire" has nothing whatever to do with the low-Latin *scutarius* or the French *écuyer*, but is simply the Basque word *escuera*, *escuera* "gentilis, nationalis"; or his theory that to derive *hyperboræus* from the Greek phrase *ὑπὲρ βορέαν* "beyond the North wind", is "absurd from the geographical-ethnographic point of view", and that it must be derived from the Basque *hipar-gorri*, which he alleges to mean "the North wind". Even the self-styled philologists of the "British Israelite" movement have hardly succeeded in producing more richly clotted nonsense than this!

These and other philological excesses so completely undermine the foundations on which the whole structure is reared that in the author's conclusions no confidence whatever can be placed.

457.

G. L. M. CLAUSON.

CATALOGUE DU FONDS TIBÉTAIN DE LA BIBLIOTHÈQUE NATIONALE. Quatrième Partie I: Les Mdo-Maṅ. By MARCELLE LALOU. (Buddhica, Deuxième Série: Documents, Tome IV.) 11 × 7 $\frac{1}{4}$, pp. 111. Paris: Geuthner, 1931.

The Bibliothèque Nationale is fortunate in being able to call upon scholars not upon its staff to catalogue its manuscripts in less-known languages, and no less fortunate in finding means to publish the catalogues when completed.

Mlle. Lalou, who has already earned the gratitude of Buddhist scholars by undertaking the editorship of the *Bibliographie des Études Bouddhiques* and by her previous published works on Tibetan, has made an excellent job of

her catalogue of the contents of the four Tibetan xylographs and one manuscript in the Bibliothèque Nationale and other Paris collections which answer to the description of *Mdo-man* or "Collections", *videlicet* of Buddhist texts of miscellaneous character. The titles, translators, and other details of each text are carefully set out with cross-references to the Kanjur, Tanjur, and the individual *mdo-man* and elaborate indices are provided.

N. R. 7.

G. L. M. CLAUSON.

THE TEMPLE OF THE TOOTH IN KANDY. By A. M. HOCART.
Memoirs of the Archæological Survey of Ceylon. Vol. IV.
 $12\frac{1}{4} \times 9\frac{3}{4}$, pp. viii + 42, pls. 46, 26 plans. London :
Luzac and Co. : published for the Government of Ceylon,
1931. £1 1s.

Mr. Hocart furnishes an account of the ritual of the worship in this temple which fills a gap ; such an account has not been previously published, and it is well that it has now been completed with such careful attention to detail to form a complete survey of the whole. Even those who would disagree with the English translation for "Tathāgatha" will find pleasure and profit in the study of the chapter describing the ritual as observed on many occasions, and explained by the principal monks concerned. The accounts of the personnel and the utensils are very complete ; the introductory summary of the history of the Tooth, though much condensed, is adequate for comprehension of its importance to the Buddhists and to the Government. One cannot lightly accept the conjecture given as a postscript, a conjecture of anthropological fascination and only that. The ample description of the structure in the central shrine and in the accessory buildings is well supported by the photographs and the plans ; credit is due to the draughtsman, D. A. L. Perera, for such thorough delineation in the plans. The "conventional lion's head" (p. 7, line 10) is shown in

plan 12 facing page 11. It is the local form of the widespread architectural device found wherever Indian temple-architecture was the basis; in Java, Cambodia, and Ceylon it is easily recognized as the Shaivite essential to every temple-entrance, the Kirti-mukha which has evolved into an architectural device in Vaishnavite and Buddhist shrine doorways and entrance-porticoes. The plans and plates in this publication will serve for study of the contributing elements, early Sinhalese, mediæval Sinhalese, and Pallava which made up the *rococo*, varied, and characteristic style now known as Kandyan, because it grew during a century of isolation from the European influences which dominated the maritime Sinhalese districts owing to European rule over them. There is a valuable exposition of the lay-out of early Anurādhapura shrines and the relation of the Temple of the Tooth to the originals, however much it may be overlaid by mediæval changes. The investigation does not extend to any analysis of the sculpture and carvings from an archæological-art point of view, but it is adequately reinforced by the plans, photographs, and description of shrines at Nikavāratiya and Daṁbadeṇiya, which are of great interest in structure, and the few carvings which have survived spoliation. This feature of the publication, these plans and photographs, will prove a stimulus to students of Ceylon archæology to seek for the early symbolism of many of the decorative devices, and to trace the history of the evolution of the various elements. The material for beginning such a study has been provided, and will repay attention.

ANDREAS NELL.

EL ISLAM CRISTIANIZADO. Estudio del "Sufismo" a través de las Obras de Abenarabi de Murcia. By MIGUEL ASIN PALACIOS. Primera edición, 10½ × 7, pp. 543, pls. 2, map 1. Madrid: Plutarco (S.A.), 1931.

It would not be easy to deduce from the title of this work the nature of its contents—a biography of Ibn 'Arabi,

the well-known author of the brilliant and audacious *Fuṣūṣ al-Ḥikam* and the ponderous and dreary *Futūḥāt Makkiyyah*, with an analysis and translation of some of his opuscula. Yet in crediting Ibn 'Arabi with attempting to Christianize Islam Professor Asin has at least one predecessor, Ibn Taimiyyah, who in his attack on the *Fuṣūṣ*¹ observes that "he says about all Being the like of what the Melchite Christians say about Christ"—thus nearly anticipating a remark which comes near the end of Professor Asin's second part. It may be said at the start that the learning, industry, and charm of style for which the Madrid professor is famous are all conspicuous in this volume, which those who start reading are likely to peruse to the end of the second part—the third consists of translations.

The biography is largely an autobiography, since it is industriously pieced together out of statements made by Ibn 'Arabi himself chiefly in the *Futūḥāt* and the *Muḥāḍarah*. Some further details are contributed by al-Maqqari and others. Probably Ibn 'Arabi's assertions are trustworthy so far as they furnish the dates at which he was in particular places; otherwise one of three views (all recorded by his biographers) about them seems to be right. Some thought he was an unscrupulous liar, as when he explained a wound in his head as having been administered by a Jinnī matron whom he had married and who had borne him three children; some supposed him to be the victim of hallucinations; and some held that his words had some hidden meaning. Two observations may help us to decide between these conflicting theories. One is that his anecdotes ordinarily tend *ad maiorem suam gloriam*; the other, that when he adduces witnesses to his marvellous experiences he takes pains to mention that those witnesses are dead (and so incapable of being cross-questioned). Thus having recorded that when a beardless lad he had been sent to see Ibn Rushd (Averroes), and having conversed with him in monosyllabic cipher had caused the

¹ *Bughyat al-Murtād*, p. 86.

philosopher to thank God that he had lived to see so marvellous a personage, he adds that he was present at Ibn Rushd's funeral, where also something unusual happened, witnessed by the traveller, Ibn Jubair, who was also dead. The story in which he surpasses himself is of an experience at Konia. Here he gave some hints to a painter, who, in order to test Ibn 'Arabi's knowledge, painted a partridge with an insignificant flaw. The painting was so life-like that a hawk mistook it for a real partridge and pounced on it ; but Ibn 'Arabi knew more about partridges than the hawk, and pointed out the flaw.

Unfortunately, the statements of his admirers seem to be of the same quality as his own. They assert that whenever money was given him he bestowed it all in charity. Some verses which he claimed to have composed in a dream suggest that this requires modification. Asked in a vision by a jurist how he got on with his family, he replied :—

My family beams with affection, nay glows,
Whenever with coin my purse overflows ;
But when it is empty, they frown and retreat,
And sometimes use language I dare not repeat.

The jurist observed that the same was the case with all of us.

In the second part of the volume Professor Asin collects Ibn 'Arabi's precepts for the training and conduct of those who aspired to sainthood, and finds parallels to this mystic's ideas in the practices and utterances of Christian theologians, which he supposes to be the source of the former, though at times he finds the sources in the methods of Yogis or Buddhists. His arrangement of the matter is admirable, and some of the parallels which he cites are striking ; yet the results which he obtains seem insufficient to justify the title which he has given his work. If Christianity be identified with monasticism, which might seem to be his view, the celibate monk is surely separated by a wide gulf from the Sufi who may be, and often is, polygamous. Ibn 'Arabi

himself, apart from his Jinnī spouse, appears to have had a considerable number of human spouses. If, on the other hand, Christianity be regarded as a system of doctrines and rites, it does not appear that Sufism took over from Christianity anything of either sort which the earliest Islam had not inherited. Hence the innovations, so far as they coincide with Christian theory or practice, seem scarcely sufficient to constitute a Christianization of Islam. But there seems no reason to dispute Professor Asin's opinion that some of them were the result of association between Muslim and Christian devotees, which indeed is otherwise attested.

It may seem to some that Professor Asin has overrated both the eminence attained by Ibn 'Arabi in his lifetime and the influence exercised by his works after his death. The former rests mainly on his own statements, which have to be accepted with caution; one surprising assertion which Professor Asin reproduces must be laid to the charge of the editor of the *Muḥādarah*. This is that on the faith of a dream he foretold the success of the Seljuq Sultan 'Izz al-dīn Kaikaus I in his expedition against Antioch in the year 612. The storming of Antioch (which was not recovered from the Crusaders till 666) would surely have been mentioned by the historians. The name Antioch (انطاكية) is a corruption for *Antakiah* (انطاكية), in the neighbourhood of Istanus, the storming of which by this Seljuq of Asia Minor is duly recorded in the chronicles of that Dynasty.¹ Ibn 'Arabi's story is not above suspicion, for he saw (he says) in his dream how the Sultan used artillery against the place, stormed it, and slew its commander. In the verses which he sent he interprets the artillery as the Sultan's plans. Now the Sultan did in fact use artillery, but ultimately stormed the place with scaling-ladders. The signs of a *vaticinium ex eventu* in the verses seem fairly clear.

The order called after him is regarded as a ramification of that founded by 'Abd al-Qādir al-Gīlānī, to whom, if Ibn

¹ Houtsma's collection, iv, 51-3; iii, 124-8.

Taimiyyah is right, Ibn 'Arabi traced the pedigree of his *khirqah*, and of whom he speaks as "the ruler in this path".¹ Still Le Châtelier's assertion that in parts of India Ibn 'Arabi's name is more highly venerated than 'Abd al-Qādir's is in accordance with the importance which Professor Asin attributes to him. Orthodox Islam is on the whole indisposed to forgive him for his *Fuṣūṣ*.

It should be added that Professor Asin's admiration for his compatriot has not prevented him from faithfully recording matters which are likely to prejudice the reader against this Islamic saint. For one anecdote which shocks beyond measure he resorts to the Latin tongue. Further, though the *Fuṣūṣ* advocates a degree of religious toleration at which even our age has scarcely arrived, the fact is not concealed that in giving practical advice concerning the treatment of Christians in an Islamic state Ibn 'Arabi adopts a tone of the fiercest intolerance permitted by the code. There is something after all to be said for von Kremer's judgment of Ibn 'Arabi in his *Herrschende Ideen*.

D. S. M.

LES SOURCES INÉDITES DE L'HISTOIRE DU MAROC. Publiées par PIERRE DE CENIVAL. 2me Série. Dynastie Filalienne : Archives et Bibliothèques de France. Tome IV, Mai 1693 - Novembre 1698. 11 x 8. Paris : P. Geuthner, 1931.

This volume consists of the reports sent to the Government of Louis XIV by P. Estelle, Consul at Tetouan, and his son J. B. Estelle, Consul at Salé, with various other documents bearing on the relations between Morocco and France, and in a lesser degree Morocco and other powers, during the years mentioned in the title. The most important affair with which they deal is the embassy of Pidou de Saint-Olon, sent at the request of Moulay Isma'il to negotiate a peace between France

¹ *Futūkhāt*, ii, 24.

and Morocco ; the story of this is told by Saint-Olon himself, by the consuls, and by the Sultan and one of his agents. Morocco was at that time busily engaged in piracy, and the purpose of the embassy from the French point of view was to secure an exchange of prisoners and safety for French shipping ; the Sultan of Morocco wanted the use of the French navy and army for the expulsion of the Spaniards from Africa and the conquest of Spain ; the mission was naturally a failure. Sismondi in his voluminous *Histoire des Français* makes no mention of this embassy ; but the account which he gives of Saint-Olon's conduct at Genoa suggests that the envoy did not fail for want of unscrupulousness : *Il s'entoura de gens repris de justice ; il accorda sa protection aux contrebandiers, il encouragea ses valets à prendre querelle dans les rues avec les habitans, et à les traiter avec insolence* (vol. xxv, p. 464).

None of the nations and few of the individuals who figure in these documents leave without a stain on their character. Though the corsairs were a scourge to the maritime nations of Europe, those nations supplied them with the means of carrying on their nefarious trade. The Sultan is represented as treacherous, cruel, and fanatical ; among his officials the worthiest is clearly the Jew Maimoran. The treatment of the Christians captured by the corsairs and enslaved is described as barbarous in the extreme. Possibly that of the Moors employed in European fleets as galley-slaves was little better.

England figures only occasionally in these documents ; the most interesting paper connected with this country is an Arabic letter from Moulay Isma'il to James II, then an exile at the French court, advising him to embrace Islam, or failing that to return to the religion of the English, and resume his throne ; in any case, to quit France and take refuge in Spain. He pleads his want of warships as his excuse for not restoring James II himself.

The editors have taken pains to explain obscure allusions

and difficult phrases. The orthography of all the writers seems arbitrary, but is usually intelligible. *Quand* for *qu'en*, *cinifié* for *signifié*, *issi* for *ici*, and the like are not very puzzling.

D. S. M.

THE CALIPHS AND THEIR NON-MUSLIM SUBJECTS : A CRITICAL STUDY OF THE COVENANT OF 'UMAR. By A. S. TRITTON, Muslim University, Aligarh. 9 x 5½. Humphrey Milford, Oxford University Press 1930.

The subject of Mr. Tritton's monograph is vast and difficult, because the treatment of the *dhimmīs* varied in the different states which constituted the Caliphate, and indeed with the caprice of individual rulers, and laws which dealt with the matter were frequently disregarded or evaded. Hence those who attempt to generalize often produce amazing propositions. Thus the well-informed M. Augustin Bernard in his *Maroc* (seventh edition, p. 277) says : "Les Almohades semblent avoir été, de toutes les dynasties africaines, la plus tolérante et la mieux disposée pour les chrétiens." But Mr. Tritton records (p. 133) : "'Abd ul Mumin, the Almohade sovereign, gave to his Jewish and Christian subjects the choice between Islam and exile." The other African dynasties cannot well have been worse disposed.

Mr. Tritton's method is similar to that of Mez in his *Renaissance des Islams*, and is doubtless the best available. He has divided his subject into a number of sections, which indeed occasionally overlap, and collected material bearing on them with conspicuous industry and erudition. The result indicated by his title, viz. that "the Covenant of 'Umar" bore little relation to anything ever enacted by the second Caliph, is likely to be generally accepted. He has further done good service in utilizing Christian sources of information, Arabic, Syriac, and Ethiopic, and some Jewish. Moreover, his statements are absolutely free from partisanship, such as colours those of several authors who have dealt with parts of this theme.

Mr. Tritton's narratives are not free from horrors, but it would seem clear that normally the rulers were in favour of giving protection to the *dhimmīs*, who supplied so many of them with secretaries and confidential advisers, trusty physicians, and bankers. Outrages were generally the work of fanatical mobs, and restraint of these must have been difficult when in the fourth century A.H. the Byzantines were recovering lost territory in Asia, and when in the succeeding centuries the Crusades constituted a grave menace to Islam.

Those who have read the "best-selling" novel *Jud Süß* will find the situations frequently illustrated by Mr. Tritton's anecdotes. The position of a tolerated cult was much the same in Christian Europe as in Muslim Asia and Africa.

P. 33.

D. S. M.

MANUEL D'ARCHÉOLOGIE ORIENTALE. By DR. G. CONTENAU.

8 $\frac{1}{2}$ × 5 $\frac{1}{2}$, Vol. II, pp. 547–1121, 382 illustrations; Vol. III, pp. 1122–1685, 233 illustrations, 4 maps. Paris: Auguste Picarde, 1931.

The second volume of Dr. Contenau's history of ancient Oriental art is a princely book. With the completion of the work in the third volume it will supersede all previous works on the subject and become the standard work upon it for many years to come. The multitude of photographs and other illustrations which enrich the pages would of themselves secure a long future for the book; they are all excellent, well-chosen, and at once illustrative themselves and well illustrated in the text. Dr. Contenau is not only a student of art, but also a sound Assyriological scholar and a good copyist of cuneiform inscriptions. The book is brought thoroughly up to date, and in other matters besides art is distinguished by sobriety of judgment. Perhaps, indeed, in some cases the author is even too cautious.

The second volume comprises the history of art and all connected with it in western Asia during the third and second millennia before our era. We begin with the archaic art of

Sumer and Elam and its relations with what we find in Syria, Palestine, and Assyria. The third chapter introduces us to the Semitic age of Sargon of Akkad with a new form of art and artistic development. The art and culture of Akkad, in fact, presuppose a long preceding period of development which personally I feel has yet to be discovered; it is only among the Sumerians of Tello, it seems to me, that we can find an unbroken tradition. Elsewhere it is the sudden appearance of an art which is highly developed and yet without a background.

From the age of Akkad onwards we have a more or less continuous cultural history. In the time of the third dynasty of Ur Babylonian art and civilization reached a higher point than was the case for many centuries later. A head recently discovered by Mr. Woolley is almost modern in its character. Compare also the head in the Louvre, fig. 473. And this civilization was reflected in other directions; good roads connected the different parts of the Babylonian Empire with one another, and a Babylonian colony was established in Asia Minor where the mines of silver and copper were worked by Babylonian firms. For a time Babylonian culture was interrupted by the invasion of the semi-barbarous Gutians of Kurdistan, but it was again restored under the Kings of Isin and Larsa, followed by the dynasty of Khammurabi at Babylon. Phœnicia, which formed part of the Babylonian Empire and its commercial activities, shared its civilization, and the chapter devoted by Dr. Contenau to the discoveries at Byblos will be read with special interest.

His fifth chapter deals with the period from the fall of the Khammurabi dynasty and the capture of Babylon by the Hittites to 1500 B.C. It was a period when the Hittites became the dominant power and leading figure in western Asia and the larger part of the chapter is accordingly devoted to them and their immediate neighbours. Nothing has been neglected by Dr. Contenau; Asia Minor and Elam, Syria and Mitanni, Assyria and Palestine are all alike laid under contribution

and the discoveries of excavation during the past few years are duly noted and appraised. There are, in fact, no omissions, and the volume concludes with an account of the cuneiform alphabet which has been found at Ras Shamra on the Phœnician coast.

It need not be said that throughout the volume especial attention has been paid to the designs on seals about which Dr. Contenau is our chief authority. I may note that the curious rod with a ring attached to the upper part of it, which we see depicted on so many of them, sometimes standing alone, sometimes in the hand of a god or a hero like Gilgames, he is inclined to regard as representing a sort of curtain-rod which bound together the wooden posts of a primitive hut. It was, at all events, a symbol of divinity, but whether we can get beyond this is a question. The more we know about early art, the more problems there are for us to solve.

Dr. Contenau's wide scholarship and power of work are amazing. He finds time not only for exploration and excavation in eastern lands, but also for the production of numerous volumes on the ancient oriental world, which are always brought up to date. The year 1931 has seen the publication of the third and last volume of his *Manual of Oriental Archaeology*, enriched as usual with abundant photographic illustrations, and replete with exact and systematically arranged facts. Nothing necessary to a full knowledge of the subject has been omitted; the index is a model of what a scientific index ought to be, and the appendices followed by a copious bibliography contain the latest information relating to the prehistoric pottery of Elam and western Asia, the discoveries of Mr. Woolley at Ur, and of M. Watelin at Kish, the recent finds at Astrabad, Kuban, and elsewhere in the Caucasus and the neighbourhood of the Caspian, as well as an account of the bronzes and pottery of Luristan and Nihawand in Persia, which are now being revealed to us. The discoveries made last spring at Ras Shamra are not yet available, but a note at the end of the volume indicates that they

too will find a place in a later edition of the work. Some useful maps have been printed at the end of the book.

The third volume recounts the story of art and archæology in western Asia from the beginning of the first millennium B.C. down to the age of Darius and his immediate successors. The opening chapter commences with a description of Moscho-Hittite art and passes on to a description of that of Babylonia and Assyria, more especially in the Sargonic age. The chapter concludes with a brief review of the art of Armenia during the same period, and a discussion of Egyptian and Ægean influence upon the ivories of Assyria, in which due note is made of the recently discovered ivory ornaments of the couch of Hazael, King of Damascus, lately exhibited in the Louvre.

Chapter VII deals with the Neo-Babylonian period and discoveries at Neirab and Jerusalem. Then follows an account of Persian and Phœnician art in the Persian epoch, and the story as brought down to the age of the Oxus Treasure, and the exquisitely beautiful Greek sculptures of the Sidonian sarcophagi. The three volumes constitute a work of which the author may be justly proud.

A. H. SAYCE.

HETHITISCHE STAATSVERTRÄGE. Leipziger rechtswissenschaftliche Studien 60. By VIKTOR KOROŠEC. pp. viii + 118. Leipzig: Th. Weicher, 1931. Mks. 6.

This latest contribution to the new science of Hittitology is an important work. Professor Korošec is a high authority on the subject of comparative law, and his book shows that he also has a remarkable knowledge of the Hittite texts in so far as they bear upon his subject. The book is written with a clarity which not only bears witness to his own knowledge and intuition but also makes it intelligible and interesting to the layman. Neither the lawyer nor the historian can afford to neglect it.

The work is mainly devoted to determining the relation of the Hittite king to his subjects and vassals, as well as to foreign countries. We now possess portions of both an earlier and a later Hittite legal code, as well as the historical texts and references to law in other documents including what we should call law reports. Decipherment has advanced sufficiently to make the translation of the larger part of these fairly complete and certain; in fact, most of the translator's difficulties now arise from the fragmentary condition of so many of the tablets.

The first point which will strike the reader is the resemblance between the social and political constitution of the Hittite Empire and that of feudal Europe. In each case we have the overlord with his barons and their retainers below him together with a body of "freemen", partly traders and professionals, partly agriculturists, holding their lands as it were from the King to whom they owe service, and together constituting a *pankus* or "parliament". In certain matters the King was supreme, as, for example, in his relations with foreign powers; but there were other matters upon which the advice of the parliament had to be taken. All this implied the same interaction of individualism and collectivism that we find in mediæval Europe; on the one hand the individual alone was made responsible for his actions, while on the other hand in certain cases the whole family was held responsible for his misdeeds. Professor Korošec inclines to the belief that these two conceptions of society were respectively "sacral" and "civil"; my own view is that their origin was racial, the "collective" conception being that of the primitive inhabitants of the country while the individualistic conception had been introduced, like the military caste, by foreign conquerors. The constitution of the Hittite state was essentially of what we should call the Nordic type.

The larger part of the volume is occupied with a discussion of the foreign relations of the Hittite king and more especially

of his relations to the vassal princes. But from time to time we find remarks which might provide matter for fresh studies. Let us hope that the Professor will follow some of them up. Thus (on p. 42) he notices the "practical mildness and humanity" of Hittite law in which the death-penalty was strikingly rare, and (on p. 45) points to the fact that "in the Hittite monarchy we have a feudal state and not a bureaucracy". So again he remarks (p. 56) upon the anxiety of the Hittite government to recover Hittite subjects, whether captives or refugees, from foreign countries, and at the same time to retain foreigners who had settled in the Hittite territory, where they would be useful as soldiers. He further notes that the land of Khayasa is stigmatized as a "barbarous" (*dambubi*) country". The volume is provided with an excellent index.

N.R. 8.

A. H. SAYCE.

A STUDY OF ANCIENT INDIAN NUMISMATICS (INDIGENOUS SYSTEM) FROM THE EARLIEST TIMES TO THE RISE OF THE IMPERIAL GUPTAS (THIRD CENTURY A.D.), WITH SPECIAL REFERENCE TO NORTHERN INDIA. By S. K. CHAKRABORTTY, M.A. 7 × 5, pp. ix + 243. Mymensingh, Bengal: Author, 1931. 8s.

Professor Chakrabortty has produced a very useful and readable resumé of our present knowledge of the evolution and nature of the coinage system of Ancient India. For anyone seeking information on that particular period of Indian numismatics this little book supplies a serviceable introduction. After a general account of the origins of coinage in antiquity (Chapter I) and its particular characteristics in ancient times in India (Chapter II) the author proceeds to discuss in turn such matters as weights and coin denominations; metrology; mode of fabrication; the State in relation to coinage; the coins with symbols; provenance and coin-types. The arrangement is both systematic and critical, and shows an adequate knowledge

of the literature on the subject, and the theories of Cunningham, Vincent Smith, Rapson, and Bhandarkar (the Carmichael Lectures). Although the author's treatment is in the nature of a general survey of the evidence, he also records certain results of personal research, e.g. the determination of the *Śatamāna* unit (in opposition to the views of Professor Keith and others), the indebtedness of the Indian coinage to the Greek, the consequent difficulty of the adoption of a bimetallic system in antiquity, and the elucidation of certain obscurities in the names of Indian princes and principalities and their historical perspective. Although this work was published before Sir John Marshall's *Mohenjo-daro* appeared, it takes into account certain of the latter's statements to the Press on the recent archæological discoveries in India. The last word has not been said on the subject, however, and we can anticipate in the near future a considerable alteration in our outlook on the origins and development of coinage in Northern India. The elucidation of the symbols on the "Punch-marked coins", for instance, is likely to yield intriguing evidence, but the decipherer has not yet arisen to furnish us with that aid.

The value of the present work would, we feel, have been considerably enhanced by the addition of illustrations of the various coin-types mentioned in the text. It is nevertheless well constructed and documented, with a serviceable index and a general bibliography. We observed very few slips, e.g. *delichocephalic* (p. 17), Macdonald (p. 230) for Macdonell, *Nummorum* (p. 14) and *Numorum* (p. 229) impartially in the title of Barclay Head's *Historia*, while the index reference under *Śatamāna* (166) is wrong. Such minute inaccuracies do not detract from the general interest and reliability of the present work as an introduction to a very fascinating section of the vast field of Indian numismatics.

AL ḤASAN B. AḤMAD B. YA'QŪB IBN AL-ḤĀ'IK AL-HAMDĀNĪ ;
 KITĀB AL-İKLİL. Vol. VIII, edited by PÈRE ANASTASE
 MARIE DE ST. ELIE. 8vo, pp. 488. Baghdād, 1931.

The author has long been known as the chief authority on Southern Arabia, and the late Professor D. H. Müller published, in addition to his *Geography of the Arabian Peninsula*, some extracts of the present work (with German translation and notes) under the title of *Burgen und Schlösser Süd-Arabiens*. The whole work, or rather the eighth volume of the ten of which the original work consisted, remained long unedited, though several copies of this volume had been brought to Europe. The chief reason was the terribly bad state in which the text has come down to us, owing to the ignorance of Yamanite scribes. I had commenced a copy of the manuscript preserved in the British Museum, which I sent to Père Anastase as soon as I knew his intention of preparing an edition. He had been fortunate in acquiring a copy, some years ago, which, though faulty, surpassed all others in being comparatively good. Even the best copies make the work of an editor hazardous, on account of the style of the author and the number of words which have not found their way into the dictionaries, and which were no doubt peculiar to the language of South Arabia in his time. With endless trouble the editor has been able to construct a readable text, and has furnished it with a running commentary, elucidating as far as possible, all difficulties. In addition he has added fourteen indices to assist quick reference.

Like many other Yamanites, Hamdānī was filled with pride in his native country, the existing ruins and monuments of which spoke plainly of a glorious past, the truth of which had long been forgotten and which he hoped once more to reveal. This volume above all was to reconstruct it, and hence we find descriptions of castles in the various parts of the Yaman, the remains of which he himself had seen, or, in some cases, about which he had received information from

others. This is also the most valuable portion of the volume.

There were rumours of treasures found in the graves of the ancient kings who were buried, so it is stated, with all pomp, sitting on thrones and surrounded by their armour and weapons. This legend is dependent upon an older work, the *Kitāb at-Tijān*, written originally by Wahb ibn Munabbih and re-edited with additional matter from Muḥammad ibn Ishāq, by 'Abd al-Malik ibn Hishām. Lack of critical knowledge prevented Hamdānī from recognizing that most of these accounts are only poor forgeries which have no foundation in truth. Perhaps the graves were found, but the men who pretended to read the Minæan or Sabæan inscriptions did but deceive themselves and their followers. There is no doubt that Hamdānī could read the South Arabian alphabet, but I seriously doubt his ability to understand the language. The editor has given on p. 142 a facsimile of a table of the so-called Himyaritic letters. This table varies in the manuscripts in proportion to the copyists' opportunities of changing the text before them. Some letters are still recognizable like the Alif in the beginning, but most of them are entirely wrong, and we do not know what Hamdānī really did write.

As the author sometimes refers to contemporary historical events or to those occurring shortly before his own time, we must express deep regret that he did not relate for our edification more of these, instead of describing the utterances of kings upon their death-beds, when history knows nothing of such fabulous heroes of the past.

While the work was in the Press, I was able to collate the sheets, *after* they were printed, with the Berlin MS., which belongs to the worst class of those used by the editor. The scribe, who may have written from dictation, persistently writes such simple words like هذا as pronounced in South Arabia, هَذِهِ.

I mention this only to demonstrate with what difficulties

the editor had to contend to obtain a readable text, at times even to get any sense at all into prose or verse. A peep into the readings of the poem rhyming in Tā', on pages 43-6, as found in the manuscripts will give some idea of the editor's trials.

As Père Anastase intends to publish a supplement containing the variants and corrections communicated to him by Professor Levi della Vida, who has compared the Vatican MS. of the work, and by myself, I need not here enumerate such emendations as I have supplied to the editor, since they probably will be in print before this article appears.

We must be grateful to Père Anastase for all the trouble he has taken in making this important volume accessible, as there are few scholars equally competent to undertake such an exacting task.

In Oriental Journals, especially, there have appeared notices stating that other volumes of the work exist, but as far as my knowledge goes, we possess copies of only the tenth volume, containing the genealogies of the tribes of Hamdān and Bakīl, and of the two copies I have inspected, the one in the Berlin Library is much better and older than the one in the British Museum.

F. KRENKOW.

-
1. DIE AWESTISCHEN HERRSCHAFTS- UND SIEGESFEUER. Von JOHANNES HERTEL. Des XLI. Bandes der Abhandl. der philologisch-historischen Klasse der sächsischen Akademie der Wissenschaften Nr. VI. $11\frac{1}{2} \times 7\frac{3}{4}$. pp. xvi + 206. Leipzig, 1931.
 2. YAŠT 14, 16, 17. Text, Übersetzung und Erläuterung. MITHRA UND FRAXŠA. Von JOHANNES HERTEL. (Sächsische Forschungsinstitute in Leipzig. Indo-iranische Quellen und Forschungen, Heft VII.) $8\frac{1}{2} \times 5\frac{3}{4}$. pp. xxvi + 258. Leipzig, 1931.

These two volumes properly form one whole, as the cost of printing prevented the materials in the second from being

included in the first, and their common theme is the "fire of lordship and victory", the *x^varənah-*, "that part of the all-embracing celestial fire (*aša-*) which bestows victory over both the immortal and the mortal powers of darkness." This conception of *x^varənah-* (in Dr. Hertel's reformed spelling *hvarənah-*) played a most important part in the ancient Indo-Iranian cult of Light and Fire, which the studies of Dr. Hertel in recent years have enabled us to view from a new and juster standpoint.¹ The fundamental truth of his theory is gradually winning recognition among scholars, and the present works contain much valuable material in further exposition and confirmation of it.

The first work (*AHSF.*) opens with an introduction briefly setting forth Dr. Hertel's views (very probable in the main) on the history of early Iranian religion and its hymns, now partly preserved in the Avesta, and discussing the conception of *x^varənah-* as it appears in other literatures, viz. in the story of Xenophon's *Cyropædia* iv, ii, 15 (with which he compares Livy I, xxxiv, 1 ff.) and in the Vedic religion, a fire-cult almost exactly analogous to that of the older Avesta.² After this we come to the backbone of the book, Yašts XIX and XVIII, critically edited in transliteration so as to show their metrical form and divisions, and translated with notes and prefaces. Y. XIX (*Zamyād Y.*, so-called because it is a text for the sacrifice designed to win empire over the whole earth) is shown by Dr. Hertel to be a patchwork made up of three pieces, *A* (§§ 9-44, 70-96); *B* (§§ 45-69), and *C* (§§ 0, 1-8). *A* narrates the exploits of the possessors of *x^varənah-*, which

¹ I may call attention to my reviews of previous works by him in *JRAS.*, 1928, p. 180 ff., and 1930, p. 440 ff.

² Dr. Hertel points out that in the older R.V. *x^varənah-* is termed *bráhma* (φλέγμα) and *śávas*, later also *téjas*; in R.V. this *bráhma* is claimed not only for poet-priests but also for warriors, and later, in the period of the older Upaniṣads, when the struggle for pre-eminence between these two classes was settled, the former claimed *bráhma* for themselves, styling themselves *bráhmanas*, possessors of the heavenly fire, while the warriors termed the *x^varənah-* characteristic of their class *téjas*.

was at first *visible*, until Yima by his sin lost it, and it thereupon became *invisible* (*ax^varəta-*, in Dr. Hertel's reformed spelling *ahūrəta-*) and less potent. *B* treats of the invisible *x^varənah-*, relating that when Spənta-Mainyu- and Agra-Mainyu- struggled for its possession it escaped to the *zrayō vourukašəm* (the Heavenly Ocean, according to Dr. Hertel) and was there appropriated by Apām Napā—identified with the lightning—who dwells in its depths. Apām Napā in this text *B* is the deity who has created mankind, bestows dominion and, as resident in the depths of the Heavenly Ocean, is nearest to man and so most accessible to his prayers; the invisible *x^varənah-* is represented as not created by *Mazdāh* and not obtained by him, but as having come into the possession of Apām Napā, who alone dispenses it. The matter of *B* is thus derived from a daevic, i.e. Vedic cult on the borders of Eastern Iran. Finally *C*, by its mention of many mountains, shows that, unlike *A* and *B*, it was composed outside Eastern Iran and that its author's purview embraced the whole Persian Empire. Yašt XVIII, the Āštād Y. or Yašt of Arštāt, is a text (very incorrect in language, and probably composed in the Middle Persian period) for the sacrifice to the *x^varənah-* of the Aryans in order to ensure the *arštāt* or permanent state in which the Celestial Light shall prevail among the Aryans by overcoming hostile influences of all sorts. These Yašts are followed by illuminating studies on the term *x^varənah-* and its congeners in Avesta (chap. III) and on *Apām Nāpāt* in RV. and Avesta, together with *nardm šamsa-*, *nārūšamsa-*, *nairya-o sanha-*, *xšaθra-naptar-*, *tānū-nāpāt*, etc (chap. iv).

The second book forms a continuation of Heft vi of the IIQF., "Die Arische Feuerlehre." In the introduction Dr. Hertel summarises the results won by the researches made by Professor H. Junker and himself into the history of the Avestan alphabet. Among his own contributions to this is a fruitful theory of *Buchstabenglossen*, glosses by ancient scribes giving in *scriptura plena* the supposed values of ligatures

and antiquated characters, which apparently have often been ignorantly incorporated into the text. Skilful use of these data, together with other criteria, has enabled him to cleanse the texts of a rank swarm of corruptions. In the following pages are given three Yašts, XVII (Ard Y.), XVI (Dēn Y.), and XIV (Bahirām Y.), duly emended and printed in roman script with annotated translations. To these are prefixed full introductions. XVII is the text for sacrifice to the goddess Aši-, and the introduction discusses her character as embodying the emanation of light from the upper Heaven into the world. Apparently XVII was redacted in more or less its present form in Achæmenid times, not very long after Vištāspa, whose character and sacrifices are represented in it as exemplary, because he, guided by *Zarathuštra*, put an end to the raids begun by his predecessors and took no part in the slaughter of the Magians by his son Darius. XVI is the text for sacrifice to Cistā, and the introduction shows that *cistā* (from \sqrt{cit} . "shine") practically = *daēnā māzdayasniš*: *cistā* seems to be abbreviated from *cistiš cistā* "the illumination that has shone forth", hence "light of understanding" (obtained through the eyes) in mortals possessed of *aša-*, the Celestial Light, while *daēnā* = "light of understanding" in general which becomes *cistā* when it reaches the world. The introduction to XIV (the text for the sacrifice still surviving in the Bahrām-fire of the Parsis) treats of the character of *Vərəθraγna-*, to whom it is addressed. *Vərəθraγna-* (properly neut., but sometimes masc.), whence *Bahirām* is derived, means "foe-slaughter", and was one of the names of the sacred fires maintained by Aryan chieftains as incarnations of their power. Chapters III, V, and VI deal with the meanings of *citti-*, *cisti-*, $\sqrt{rā}$, \sqrt{sap} - \sqrt{hap} (properly "kindle, inflame", and in a sexual sense "impregnate"), with their derivatives, and *rtā-aša*; and in chapter VII we have a fascinating study of the myth underlying Yt. VIII, 6 f. (expanded by a later author in 37 ff.), showing that the Aryan tribes originally represented the winning of rain in time of drought variously

as the work of the mortal Aryan archer *Ṛṛṣṣā*, who shot an arrow through the vault of the sky, or of *Índra*, who burst it open with his club, or of *Mitrá*, the spirit of the starry sky (the stars being to the early Aryans holes in the vault of the sky over-arching the earth), and in course of time *Ṛṛṣṣā* and *Mitrá* were connected in legend. The iconography of the later Mithras-cult, as demonstrated by Dr. Hertel, shows curious traces of this association and of the primitive Aryan conception of *Mitrá*.

The cumulative effect of these studies in confirming generally Dr. Hertel's view of the primitive Aryan *Weltanschauung* is, I think, very great. On some details there is still room for differences of opinion,¹ but the general foundations of his scheme seem to me to be well laid and to stand firm. He has liberated Avestan studies from the fetters of a singularly stupid tradition, and led us forth into the spacious campaign of free scholarship: *gātūm prathamó vivēda, náīṣṣā gdevyūtīr āpabhartavā u.*

L. D. BARNETT.

MEGASTHENES EN DE INDISCHE MAATSCHAPPIJ. Door
BARBARA CATHARINA JACOBA TIMMER. 9 $\frac{3}{4}$ × 6 $\frac{1}{2}$,
pp. ii + 323, 1 folding table. Amsterdam: H. J.
Paris, 1930.

Written as a Ph.D. thesis in the University of Amsterdam, this book embodies a careful and critical consideration of the

¹ Among such are perhaps some features in his restoration of the Avestan texts, in which we could wish to see definitely formulated a general standard for transliteration and correction of later spellings: while he restores some early spellings, e.g. the ending *-ām*, he leaves untouched many forms of vocalism which, as he seems to suggest (IIQF. VII, p. xxv), may perhaps be late. Sometimes, too, the adjustment of words to the metrical scheme may provoke some doubt: possibly there may have been *pluta* vowels in early Avestan poetry, which would resolve some difficulties in scansion. The word *daēnā*, I think, ought to be written when trisyllabic, *dayinā* (cf. *srayiṣṣta*- from *sraēṣṣta*-), and not *dayanā*. The etymological connection of "Harrūt" (*AHSF.*, p. 16) may be doubted; so perhaps may be the force of the argument *ibid.*, p. 82, line 1.

reports of Megasthenes on the structure of Indian society. As the original work of Megasthenes is no longer available, the secondary sources are discussed in some detail, the most important being Diodorus, Arrian, and Strabo. The relevant passages are then set out, with translations and commentaries, and a comparison is made with Indian authorities, especially Kauṭilya's Arthaśāstra, the dharmasāstras, the epics, and certain Buddhist works, viz. the Jātakas and portions of the Vinaya and Sutta collections.

From this comparative treatment it appears that Megasthenes got his information partly from his own observations, but also to a great extent from Indian reports and theories, which did not always correspond with the facts and which he sometimes misunderstood. When founded on his own observations, the author concludes that his statements are trustworthy.

The work is well arranged ; a summary in German will be of help to scholars who find a difficulty in reading Dutch ; there is a table of contents, a bibliography of works cited, a list of the passages discussed, an index of persons and subjects, and a table giving a synopsis of the relevant passages in Diodorus, Arrian, and Strabo. The book should prove very useful to students of the subject.

C. O. BLAGDEN.

THE LIFE AND WORKS OF MOSES HAYYIM LUZZATTO, FOUNDER OF MODERN HEBREW LITERATURE. By SIMON GINZBURG, Ph.D. 9 x 6, pp. viii + 189. Philadelphia : The Dropsie College for Hebrew and Cognate Learning, 1931. \$2.50.

Much has been written on that baffling genius Moses Hayyim Luzzatto, but the recent discovery of many of his letters in the library of the Jewish Theological Seminary of New York which shed new light on his life and on the controversies in which he was engaged has necessitated a re-examination of the material gathered hitherto from various

sources. This Dr. Ginzburg has essayed to do in the present volume which is to be considered as a prelude to the edition of Luzzatto's works on which he is now engaged. After a brief introduction (pp. 1-10) on the Pre-Luzzatto Period, designed to show that its characteristics are reflected in the dual nature of Luzzatto in whom the mediæval and the modern spirit met, our author deals in the first part of his thesis with the life of his subject and particularly with the controversy over his cabbalistic leanings and his aspirations to Messiahship in which he was engaged with the Venetian Rabbis. The newly-discovered correspondence between him and his religious teacher, Rabbi Isaiah Bassan, is analysed and shown to solve some problems which previous writers had been at a loss to explain from lack of the data herein contained. We gather that unfortunately the discoveries throw no further light on Luzzatto's last days in Palestine, where he succumbed to the plague in 1746. The second part of the thesis gives an account of Luzzatto's cabbalistic system, his philosophical works and his poems. This is followed by a critical estimate of his place in Hebrew literature, destined to show that he is the real founder of modern Hebrew literature—"his mission was to create an exact, concise, and simple style as the medium of expression of the modern Jew. Luzzatto never was conscious of it himself; he did it unwillingly, as if 'by the way', and thus prepared the ground for the revival of Hebrew as a spoken language by Ben-Yehudah at the end of the nineteenth century." A bibliography of Luzzatto's published and unpublished works is given by Dr. Ginzburg by way of appendix to his essay; and its value is enhanced to the student by his having had access to Almanzi's annotated edition of the biography in *הזרם החדש* (iii, 112-69), of which full use has been made. The selection of illustrative documents appertaining to Luzzatto's life and cabbalistic activities is of special interest to the historical reader; some of the letters establish beyond a doubt that the *herem* against him was a grim reality and not, as alleged by one of his biographers,

a mere legend. We congratulate Dr. Ginzburg on this careful piece of work, and look forward to the early publication of the new material which promises to reveal Luzzatto and his period in fuller light.

A. W. GREENUP.

SANTAL FOLK TALES. Edited by P. O. BODDING. Vol. III. Instituttet for Sammenligende Kulturforskning. Santal Text with English Translation. $4\frac{1}{4} \times 7$, pp. ii + 411. Oslo: H. Aschehoug & Co. (W. Nygaard); London: Williams & Norgate, Ltd., 1929. £1 3s.

This third volume of Santal Folk Tales is further evidence, if such were needed, of the untiring zeal of Mr. Bodding in seeking to give to the world everything that can be known of his beloved Santals. Already in two volumes he had given us the main body of Santal Folk Tales, but this volume is even bigger than the previous ones, and the author shows the same thoroughness in tracking down each story to its source.

This latest volume has four sections. The first deals with stories concerning Jugis, those ascetics and religious mendicants supposed to be possessed of supernatural powers; stories concerning the souls in human bodies follow; then two stories about animals borne by women; finally a number of miscellaneous stories.

Even more interesting than the folk tales, which have a way of repeating the same features, are the footnotes, in which Mr. Bodding explains the origin of the innumerable interesting and quaint customs of the Santals. This book is a mine of information in this respect. One such custom mentioned is that of the Santal women carrying their children invariably on the left hip. But it seems a fairly general custom that the left arm is used to tend, so that the right arm may be left free to fight or to protect. We came across these words recently in England, "There is nothing so beautiful as a mother's left arm."

Another custom mentioned is that of the way in which the sexes are distinguished. When a Santal child is born, inquirers do not ask as we do in English ungrammatically, "Is *it* a boy or a girl?" The Santals use the picturesque expression invariably, "Does the new relative who has arrived carry on the head or on the shoulder?" If on the head, the child is known to be female; if on the shoulder a male. Women carry waterpots on the head, while men sling a bamboo pole across their shoulder, and carry two equal weights, one suspended from each end of the pole.

The Santal loves a riddle, and favours the indirect approach on any subject. Kings and poverty, animals and agriculture, marriage and evil spirits, hunting and herding, these are some of the stock themes. The late Dr. Andrew Campbell, of Pokhuria, once collected a series of folk tales of the Santals and forwarded a copy of his book to Andrew Lang. In acknowledging the book, Lang said that after reading some of the Santal tales, he seriously doubted if there was such a thing as a new story in the world.

This volume is beautifully printed, and the book is a pleasure to handle. The stories are given in Santali on the left hand page, the English translation on the right. We have not come across a mistake in the Santali, but in the English translation the mistakes in spelling and in idiom are frequent. "People say," as the translation throughout of "kathæ", gets painfully monotonous, while the use of "awful", e.g. "an awful noise", "an awful amount of money" is unfortunate. The stories as told in Santali are written down with the utmost simplicity and ease and are a pleasure to read. We suspect that Mr. Bodding finds it easier to think and speak in Santali than in English. But the mention of these flaws does not blind us to the fresh stores of wealth Mr. Bodding has unearthed for us in these tales, and his researches and erudition put all who have to do with the Santals more deeply in his debt than ever.

BRITISH ARTISTS IN INDIA, 1760-1820. By Sir WILLIAM FOSTER, C.I.E. (pp. 88:pls. 12). The Nineteenth Volume of the Walpole Society, 1930-1. $12\frac{1}{2} \times 10\frac{1}{4}$, pp. viii + 164, pls. 24. Oxford: John Johnson, University Press, 1931.

Sir William Foster has once more found a good subject, worthy of so accomplished a researcher. About sixty professional British artists—he is not concerned with foreigners—visited India between 1760 and 1820, and the list includes some distinguished names, especially of the miniaturists, Ozias Humphry, John Smart, Chinnery, and others being among the number. A few made fortunes, many returned disappointed, but in any case their adventures make attractive reading, comparable to *Echoes of Old Calcutta*. Besides telling us about the artists' Indian careers, the author has been at pains to trace the pictures which they painted and to locate them wherever possible. The study has special value, too, from Sir William Foster's utilization of sources hitherto hardly drawn upon, such as the records of the East India Company and the files of contemporary Indian newspapers.

The artistic results of the contact of so much talent with India were curiously disappointing on the whole, though there were some notable exceptions. The case of Zoffany, little of whose Indian work is worthy to be included among his best, is typical of many others. Probably one of the explanations of this phenomenon may lie in the difficulty of procuring materials, while their patrons were fewer and money went less far than they had been led to expect. Even more surprising is the fact that the Indian artists seem to have learnt nothing from the visitors, though 200 years earlier the Mughal painters had taken intense interest in European work, and allowed it to influence their technique very considerably.

Sir William Foster does not mention whether he has inquired into the truth of the well-known story of Zoffany

having painted the Begam Somru. It may, however, not be well authenticated, and, as he says, he has found it impossible in the case of this prolific artist to discuss all the pictures which have been ascribed to him.

The twelve plates of reproductions are admirable.

609.

J. V. S. W.

THE CENTRAL AUTHORITY IN BRITISH INDIA, 1774-84. By A. P. DASGUPTA, M.A., Ph.D. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. x + 368, map 1. Calcutta University Press, 1931.

The Regulating Act of 1773 was an honest but unfortunate attempt to improve the existing system of administration in the Company's Indian possessions. One of its chief defects was the loophole provided by the ninth clause which, although definitely declaring the supremacy of Bengal over the other presidencies, made two disastrous exceptions. In cases of imminent necessity, or where the subordinate council had received special orders from the Company itself, it was not considered necessary for the Bombay and Madras authorities to obtain the consent of the Governor-General and Council for the commencement of hostilities or for the concluding of treaties.

The principal object of Mr. Dasgupta is to illustrate from the relations of the Supreme Council with the Madras Government under Rumbold, Whitehill, and Macartney the difficulties with which Warren Hastings had to contend until the Act of 1784 enlarged the control of the Governor-General over the other presidencies.

It would, however, be unfair to lay all the blame upon the framers of the Regulating Act. As one reads the pages of Mr. Dasgupta's well-documented book one becomes convinced that the system proved unworkable because the supreme authority was not really supreme. Nevertheless he is careful to point out that this was not the only factor militating against success. The chief actors on the stage were men

who did not agree, men who were brooding in a sultry climate ; and if friction was possible and actually did take place under honest governors like Macartney, it was inevitable under corrupt governors like Rumbold and Whitehill.

542.

C. COLLIN DAVIES.

THE LAKHERS. By N. E. PARRY, I.C.S., with introduction by Dr. J. H. Hutton, C.I.E., I.C.S. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xx + 640, 30 ills., 29 pls., 1 map. London: Macmillan & Co., 1932. 36s.

This book is a very full account of a hill tribe living in a corner of Assam on the border of Burma. The people's own name for themselves is Māra, and in Burma they are called Shendu, but Lakher is the name by which they are best known in Assam. There are several references, in quotations from books, to a neighbouring people in Burma called the Khyengs. This name is merely an attempt by former writers to transliterate the spelling in Burmese characters of Chin, the term applied by the Burmese to all the hill-tribes on the border of Assam and Bengal south of the Hukawng valley. Burmese spelling generally has little relation to the present sounds.

From Dr. Hutton's learned introduction it appears that the people are Nagas, who have not long ago adopted Kuki customs without altogether losing their own. This makes them, perhaps, less worthy than some of their neighbours of choice for such an exhaustive study. On the other hand they have but recently come under a civilized administration, though by no means free from missionary influence.

Much of the book is too detailed for the ordinary reader. His appetite for information might fail before he discovered such titbits as the cure for consumption which consists in eating a part of one's enemy's ear, or the presentation of an egg by a woman who has borne children easily to one who is having a difficult delivery. As a guide to administrators, however, and a mine for anthropologists, the work is of great

value, especially the chapters on laws and customs and religion.

The Lakherers explain the custom of serving women first at a feast by saying that they are inferior beings and must therefore be treated kindly. One is inclined to suspect missionary prompting. But doubtless Mr. Parry has good reasons for not suggesting (as one is naturally tempted to do) that the custom is more likely to be a survival of matriarchy, like that mentioned on p. 411.

The chapter on the language, though (as judged by one ignorant of Lakher) at least up to the standard of most treatises on these languages, is less satisfactory. Lakher cannot be forced into an Aryan mould, with cases and moods and tenses, without misleading the learner and adding to his troubles. It appears from a remark on p. 504 that it is a tone-language, but the tones are not marked. Indian civilians now receive a training in phonetics, and will not have Mr. Parry's difficulty in recording an unwritten language. Whether the younger generation will have the energy, ability, and industry to produce such a book as this is another matter. But the reproach once made against British officials in tropical dependencies, that they left to others the labour of collecting information about the peoples in their charge, is now no longer justified.

The book includes a glossary and bibliography, a map, numerous photographs, and some coloured plates showing costumes.

550.

R. G. B.

GRAMMAIRE DU VIEUX-PERSE. Deuxième édition entièrement corrigée et augmentée par E. BENVENISTE. Paris : Librairie ancienne Honoré Champion.

This valuable work, published by La Société de Linguistique de Paris, is an enlarged and improved edition of M. Meillet's *Old Persian Grammar*, which was published in 1915. It is

impossible to overestimate its value to all students of Old Persian, and the Persian Cuneiform Inscriptions, which are all that remains of that language. This literature is so small that it is surprising that it should yield such a mass of information as Mess. Meillet and Benveniste have worked out. The useful part of it is, indeed, even smaller than appears at first sight, for some of the later inscriptions are so corrupt, or incorrect, that they must be used with great caution, and in the rest formulæ and repetitions constantly recur.

The first two chapters deal with the script and its peculiarities and the phonetic system. How, when, or by whom cuneiform was adapted to Persian is unknown. Nor has it yet been explained why certain consonants have only one form whatever vowel follows, and why some have two, and some three. It has been long realized that *n* followed by a consonant is generally omitted, but Meillet has pointed out that *hu* and *xu* (*khū*) are represented only by *u*. Thus we should read "Hufrasta", "Ahura", and "Xuvārazmiya" (Chorasmia, Khwārazm). $\overline{\text{f}}$ has usually been represented by *θr*; Meillet transliterates *ç*, and Benveniste now prefers *ss*—"une siffante forte, distincte de *θ* et de *s*." Thus we get the curious forms *xšassam* instead of *xšathram* or *khshathram* and *pussa* instead of *puθra* or *puθra*. The discussion of the value of this sign and the variation in its pronunciation in Persian dialects is interesting.

The rest of the book is not a grammar in the form adopted by the usual books of instruction, but rather a discussion of all that can be gathered from the sources available, set forth in a manner suitable for scholars who understand the principles of Sanskrit and Avestan grammar. A slight suspicion occasionally arises that the examples cited are pressed a little too far. This may be noticed in the paragraphs dealing with the position of the adjective as regards the substantive it qualifies (p. 218), and the order of words in the phrase (pp. 238-42). The author seems to feel this himself, for on p. 241, he confesses: "Toutefois il ne faut pas chercher

des raisons d'expression partout . . . on ne voit rien, sinon l'équilibre de la phrase, pour avoir entraîné l'ordre dans B. iv, 31."

We naturally turn to see what M. Benveniste has to say regarding some of the words in the Darius inscriptions which have been the subject of controversy. We may briefly consider three such words.

(1) What is the word for "tongue" in B, ii, 74? King and Thompson read *harbānam*, and state that *harbāna* is "from a root *srbh*, cf. *sorbeo* . . . Of the signs Ξ Ξ and Ξ traces are preserved upon the rock; the remaining signs are clear". M. Benveniste considers that instead of Ξ (*r*) we should read $\langle \Xi$ (*d*"), and that the word should thus be transliterated *hidubānam*, corresponding to Av. *hizva*, Sk. *jihva*. It would appear that the point can hardly be cleared up without a further inspection of the rock, or of some reproduction of the inscription, to see whether before the sign Ξ there is, or is not, room for the mark \langle .

(2) Darius says: "We have been kings *duvitāparanam*" (B, i, 10). K.T. translate "in two lines". Meillet in the first edition of this work doubtfully preferred this interpretation—"en deux branches." Tolman gives "long aforetime"—*duvitā* "long" and *paranam* "before". Benveniste now translates "à la suite, successivement"—*duvitā* "deuxième" and *paranam* "en avant". It appears therefore that the balance of opinion is against the old translation "in two lines".

(3) Where a date is given as such and such a day of the month we have the phrase . . . *māhyā* . . . *raučabiš* *Ōakatā āha*, with a number greater than one before *raučabiš*; if it is the first day of the month we read *I rauča* *Ōakatam*, or *I raučā* *Ōakatā*. The old idea was that *raučabiš* (an instrumental) was used as a general plural form, as sometimes in Avestan. Benveniste considers that the construction is something like the Latin ablative absolute, but that *Ōakatā* has incorrectly remained in the instrumental singular. The suggestion is

ingenious and interesting, but it does not quite carry conviction.

The work has a good index of words and a table of contents. It is well and clearly printed, and there are practically no misprints—on p. 19 we find a reference to § 447 which is a mistake for § 417; the same slip occurred in M. Meillet's first edition.

518.

C. N. S.

A MIDDLE PERSIAN GRAMMAR, by C. SALEMANN. Translated from the German by Mr. L. BOGDANOV. $10\frac{1}{2} \times 7\frac{1}{4}$, pp. xii + vii + 133. Bombay: Published by the Parsee Punchayet, and printed by the British India Press, 1930.

Salemann's Grammar was written in German in 1900, and published in the *Grundriss der Iranischen Philologie* in 1901. Since then it has been recognized as the best philological grammar of the language yet produced. That, if it was to be translated into English, it should have taken thirty years to do it is surprising. Indeed, the Parsee Punchayet has rendered English speaking students a service; but why its performance of this service has been so dilatory is not clear. Mr. Bogdanov's introduction is dated 1922; if the translation took so long to do, the further serious delay before it was made available might perhaps have been avoided. That no English scholar has been found to forestall the Punchayet by bringing out an up-to-date English grammar is not very creditable to English scholarship.

In one respect Mr. Bogdanov's English version is an improvement on the German original, which was printed by a press possessing no Pahlavī type; Pahlavī words were therefore printed in Hebrew. Mr. Bogdanov has turned this Hebrew into the original Pahlavī script; this he did first for the Russian version which he made under Salemann's own instructions. In the present volume there is a long list of corrigenda, and a few misprints which have not been noticed;

occasionally the English is not as clear as a native English writer would have made it. But these are minor faults which detract but little from the value of the book.

"Middle Persian" means the language, or group of languages, used in Īrān during the Sassanian period, and generally known as Pahlavī, mainly represented, apart from certain inscriptions, by such works as the *Ardā Vīrāf Nāmak*, and written in the confusing Pahlavī script. In this script many Persian words are represented by characters which spell Semitic words. The written signs are ideograms; they are all to be read as Persian words. It is in the realization of this fact that Salemann differs from the earlier authorities, such as West and Harlez. These earlier authorities, of course, understood the truth, but they do not seem to have pushed it to its logical conclusion. For example, we may compare West's transliteration of the *Ardā Vīrāf Nāmak* with that of Salemann. Transliterating chapter ii, verses 1 and 2, West writes: "Va valman Vīrāf rāi VII akhtman yehevūnd va valmanshān kolā VII akhtmanān Vīrāf chīgūn nēshman yehevūnd ḥōmand." Salemann's version is: "U ōy Vīrāf rāy VII xvah būδ u ōšān har VII xvahān Vīrāf cegōn zan būδ hand." Or, again, West, writing of verbs, says: "Compound tenses are formed by the addition of the auxiliary Huz. verbs  *hōman*  *yehevūntanō* 'to be'." Salemann writes: "√*ah* . . . always expressed in script by means of the ideogram  or .bū . . . for which there is written preferably .

These examples are sufficient to show the development of understanding between 1872 when West wrote and 1900 when Salemann produced his grammar. This "Middle Persian"—how very like it is, to be sure, to modern Persian, when it has its proper clothes on.

L'ESCLAVAGE PRIVÉ DANS LE VIEUX DROIT SIAMOIS (Avec une traduction des anciennes lois siamoises sur l'esclavage). Par R. LINGAT, Conseiller près les Tribunaux Siamois, Docteur en Droit. 10 × 6½, pp. xi + 395. Paris : Les Éditions Domat-Montchrestien ; F. Loviton et Cie, 1931. Prix 60 fr.

Despite the fact that an edition of the main corpus of Siamese law texts was first printed as long ago as 1849, little progress has until recently been made with the systematic study of ancient Siamese jurisprudence. Now, however, a most satisfactory beginning has been made by the publication of Monsieur J. Burnay's excellent bibliography of legal MSS. in the *Journal of the Siam Society* (1930-1), and the present scholarly monograph by Dr. Lingat.

The Siamese have never shown much inventive genius, but have from early times evinced a marked power of assimilating the culture of their neighbours. It is to this characteristic that Siamese slavery owes its chief interest, for it throws much light on the institution as formerly established among other peoples of the Far East, but of which little is known from other sources. In this connection one of the most important of Dr. Lingat's generalizations is to the effect that while Siamese law is ultimately derived from the codes of the ancient Indian law-givers, little reached Siam directly from that source ; it came rather through the medium of the Môn-Burmese systems. There seems to have been less Khmer influence than might have been expected, although it must be admitted that we know little of ancient Khmer law and the later Cambodians have sought to imitate the Siamese in this as in other branches of culture. Nothing is known as to the period when slavery originated in Siam, but the author effectively disposes of the common Siamese belief that slavery was unknown to the early Thai peoples and the first independent Siamese kingdom of Sukhodaya (thirteenth-fourteenth century A.D.).

After a valuable introduction the author devotes a chapter

to the distinctions between the various classes of slaves, of which there were seven as with Manu, but, so far as concerns the private slavery to which the present work is confined, they may be regarded as belonging to two main classes, the redeemable debt slaves and those for whom there was usually no release. The next two chapters are concerned with the various aspects of the contract of slavery, and these are followed by a most interesting chapter on the condition of the slaves. As elsewhere in the Far East, slavery was of a mild type, and lacked the worst features which characterized the institution in Africa and America. By the middle of the nineteenth century the harsher treatment accorded to those prisoners of war in private service had been so far mitigated that they had been assimilated to the main mass of bought slaves, while the debt slaves enjoyed rights and privileges which in many cases made them hardly distinguishable from members of the family. The various means by which the slaves could obtain their freedom are next discussed, and this leads up to the final chapter which deals with the abolition of slavery in Siam. This task, which was seriously begun in 1874, was of necessity a gradual process and was not completed until some thirty years later.

In elaborating his subject under the above heads, and in completing his study with a translation of the Siamese laws of slavery and a useful bibliography, Dr. Lingat has produced a comprehensive work which is a model of careful and critical research and an achievement of great value for the furtherance of our knowledge of Siamese institutions.

SIDE-LIGHTS ON EARLY ARMENIA. By S. M. GREGORY.

8½ × 5½, pp. 15. London: Luzac & Co., 1932. 1s. 6d.

Investigations into the origin of the names "Ararat" (i.e. Upper Armenia) and "Armenia", with numerous references to objects in the British Museum. The author,

an Armenian, finds the earliest record of the name " Armenia " in the Hebrew Bible, as : " Harmonah, after the mountains of ' Monah ' or ' Minni ' (i.e. Anti-Taurus), and applied, in particular, to Lower Armenia " (Amos iv, 3, mistranslated " palace " in A.V.).

THE BODHISATTVA DOCTRINE IN BUDDHIST SANSKRIT LITERATURE. By Har Dayal, M.A., Ph.D. $3\frac{1}{2} \times 5\frac{1}{2}$. pp. xx + 392. London : Kegan Paul, Trench, Trübner & Co., Ltd., 1932. 18s.

Dr. Dayal's work has brought him the success at London University, which his unflagging industry and exploitation of a hitherto unmapped field so richly deserved. The book should supply a long-felt desideratum, namely a volume of reference for such writings as are of interest to the historical philologist, with no claim, however, to a place in the forefront of Sanskrit literature. Though these authors were devoted to the cult of Buddha, they wrote in a manner at once tedious and turgid. Through the springtide of their labours, of which much is still untranslated, our author has waded, often supplying the renderings of various translators (where such exist), and fearlessly criticising the work of older hands. This is as it should be, and it is what pioneers rightly expect ; theirs has been pioneer work, and such work has yet to be completed.

Where the book is immature, there the pioneers have themselves almost of necessity revealed immaturity. A conspicuous example is the failure to treat the causes, the sources, whence sprang this Mahāyānist doctrine, in a duly historical way.

I will explain by reference to such sources as are least unfamiliar to myself. More time should have been spent in evaluating the truer historical perspective of the Śākyan (pre-Hīnayāna) tenets which have been selected, since they throw light on the emergence of a Bodhisattva " Communion

of Saints", which supersedes the individualistic waning out from sentient existence of Arahans, i.e. men who were looked upon as "having done what was to be done". I am not referring to the opening study, contrasting arahān and bodhisattva: this is done well and historically. I refer, for example to such discussion as that on "Buddhist *viññāṇa*" (p. 74), and the oft-repeated charge of anomaly in a teaching, which tries to combine a transient "momentary man" with the man persisting after this bit of life and becoming bodhisattva, nay, buddha. Dr. Dayal pleads rightly that *viññāṇa* actually meant "the man" (*puruṣa*) as consciously persisting. But while he quotes the two little Māra Suttas, where, with the body lying dead, the clairvoyant goes on seeking the *viññāṇa*, that once made that body *saviññāṇakam kāyaṃ*, he ignores the very trenchant and insistent Sutta 38 of the Majjhima-Nikāya, where we see the later monastic teaching about *viññāṇa* beginning to emerge. For, actually, Buddhist *viññāṇa* has its history. Once it was "man persisting" and as such, shown inquiring about his destiny from religious messengers. This we see in the parable appended to the Kimsukā Sutta (*Samyutta*, iv, p. 194; xxxv, p. 204), *viññāṇa*, lord of the body, hearing messengers. But before we come to the date when the Commentaries were recast into Pali, *viññāṇa* had become merely synonymous with *citta*, "awareness," as merely meaning "minding". Either term is affixed to *paṭisandhi* "reconception", "rebirth", and a modern Buddhist will tell you "for us *viññāṇa* and *citta* are synonymous" (*Compendium of Philosophy*, Appendix).

Such historical awareness does not play its due part in this otherwise very valuable work, and I hope that the author will not stop here, but will proceed to study the evolution in Hinayāna monastic teaching, as revealed in the Pali Commentaries. It is perhaps only there that we can realize how utterly the "man", as *any sort of entity whatever*, came to be denied, "was only a bunch of dhammas": "Way is there but no wayfarer," etc., and we learn how impossible

it is to treat rightly the early sources of Mahāyānism, as a flat picture, with its whole "life" in the foreground. This lack of historical sensibility is the only fault in a work that I am glad to have on a near shelf.

C. A. F. RHYS DAVIDS.

ANNUAL REPORT ON SOUTH INDIAN EPIGRAPHY FOR THE
YEAR ENDING 31ST MARCH, 1929. 13 × 8½. pp. iii + 63.
Madras: Government Press, 1931. 6s. 9d.

This report has been submitted by Mr. S. V. Viswanatha, who succeeded Mr. G. Venkoba Rao, whose death, early in 1929, was a loss to the department he had for so many years served. It contains a record of 22 copper-plate inscriptions and 542 stone inscriptions pertaining to the Madras districts, examined and copied during the year, as well as of 248 stone inscriptions copied in the Bombay Karnatak districts of Bijāpur and Dhārwar. In addition to the serial lists arranged by district, taluk, and village, the principal inscriptions containing dates have been re-arranged chronologically, with astronomical details and English equivalents of the dates according to the dynasties under which they were issued.

Though no inscriptions of outstanding importance find a place in this record, there are several of interest and of historical value. Those issued under Vijayanagara kings are numerous, ranging from the time of Vira-Sāyaṇa-Uḍaiyar, son of Kamparāja (A.D. 1350) to that of Venkaṭapatideva Mahārāya (A.D. 1797). This last inscription is interesting, as showing how the idea of the overlordship of Vijayanagara persisted down to comparatively modern times (cf. Sewell's *Lists*, ii, p. 7, No. 46). Inscription No. 287 of the Sāluva dynasty (A.D. 1470) contains the interesting record that, as a result of the invasion of the Vijayanagara kingdom by the Gajapati king of Orissa, the Śiva temple at Iḍaiyāru in the South Arcot district had fallen into decay and remained deserted for about ten years, which would indicate that this

Gajapati invasion, to which references are also found in inscriptions at Jambai and Tirukoilur in the same district, occurred about A.D. 1460-1. Inscription No. 416, found at the Ādinātha (Jaina) temple at Poṇṇūr in the North Arcot district, is also important in view of its reference to the worship by the Jainas of Suvarṇapura-Kanakagiri (? Poṇṇūr) of Helācārya (or Elācārya), who would appear to have inculcated the Jvālāmālīnī cult of the goddess of fire.

These annual reports testify to the great wealth of epigraphical material in southern India, and to the vast amount of work which its editing and publication will undoubtedly entail.

ACROSS THE GOBI DESERT. By SVEN HEDIN. (Translated from the German by H. J. Cant.) $9 \times 5\frac{1}{2}$. pp. xxi + 402; 114 ills.; 3 maps. London: George Routledge & Sons, 1931. 25s.

The "Sino-Swedish Expedition" to the north-western provinces of China under the leadership of the veteran explorer, Dr. Sven Hedin, left Pekin in May, 1927, and reached Urumchi at the end of February, 1928. The staff comprised eighteen Europeans, including, besides Swedes, three Germans, one Dane and one Russian, and ten Chinese, accompanied by thirty-four servants; the transport of supplies, tents, and baggage required some 250 camels. An expedition of this magnitude setting forth to cross the inhospitable wastes and deserts between railhead at Paotow and Urumchi—a distance of over 1,300 miles—necessarily involved elaborate preparation and organization, and Dr. Hedin is to be congratulated on securing the cordial co-operation of all members of his staff in overcoming the difficulties and dangers of the journey. He was specially fortunate in having the calm, yet energetic and resourceful Mr. Larson, with his intimate acquaintance with Mongolia and with camels, as a caravan leader.

The present volume treats chiefly of the personal experiences and occupations of Dr. Hedin and his staff on the journey, describing the vicissitudes incidental to such travel, the daily routine of the march, the enforced, irksome delays, the "revolt" of camels, thieving and brigandage, shortage of food supply for camels and men, and other mishaps, and finally the unexpected obstruction met with at first from the authorities in Sin-kiang. Incidentally we are given an interesting account of the history of the Torgots and of the personality of the autocratic ruler of Sin-kiang, Marshal Yang Tsêng-hsin, who was assassinated a few months later.

But as to the scientific results of the exploration and research carried out, the information is comparatively small. The wide scope and scientific importance of the work done by the several members of this expedition will, however, be understood from the brief summary given in the preface written for this English edition. We are given to understand that the geologist, Dr. Erik Norin, has made most important contributions to the knowledge of the geology and orography of Chinese Turkestan; that Professor Yuan has discovered at the northern foot of the T'ien-shan fossil dinosaurs in great numbers, probably belonging to a species hitherto unknown; that upwards of 100,000 specimens of artefacts of the stone age have been collected; that there have been found more than 10,000 pieces of MSS. on wooden slips dating from the first century B.C. and perhaps earlier, besides paper MSS. in Uigur, Chinese, Mongolian, Hsi-hsia, Irānian, and a language probably yet unknown; that important discoveries of carboniferous-age fossils have been made, valuable botanical, entomological and ethnological collections secured, anthropological measurements conducted, and important meteorological observations carried out. The publication of the details of all this research will be eagerly awaited by scholars.

There are, however, two matters of outstanding interest dealt with at some length in this volume that may be noticed.

Dr. Hedin describes how, during his exploration of the Lop area in the years 1900-01 he had been led from the series of levels taken, and other indications, to the conclusion that the Tarim with its tributary the Konche-daryā had in ancient times followed the course of what was afterwards known as the Kuruk-daryā ('dry river'), and flowing eastward past Lou-lan (on its north side) had emptied its waters into a lake to the north-east of the then Lop-nor or Kara-koshun. He definitely predicted, moreover, that the river would revert to its former course, and the old northern lake be re-formed. This view as to the periodical swing of the lower Tarim channel and the consequent shifting of its terminal lake bore out the opinion that had been expressed by von Richthofen. His feelings may well be imagined when, at Turfan in February, 1928, he received information that the Konche-daryā had, in fact, shifted its course, some seven years back, into the Karuk-daryā bed. Steps were taken to have the position investigated on the spot, resulting in the establishment of the truth of his prediction.

As regards the old inland sea, Dr. Norin, it is stated, has come to the conclusion that in late glacial times the whole Tarim basin was filled by an enormous lake. At the southern foot of the Kuruk-tagh he found the northern shore of this lake sharply and clearly defined. Further west this northern shore-line is often interrupted owing to the action of rivers coming down from the T'ien-shan. To the east of Kashgar, along the Masar-tagh, the shore-line disappears in a south-south-east direction under the sand of the Takla-makan. He has also determined that the earth's crust has undergone changes of level since the great lake disappeared, the northern shore-line showing a pronounced fall from west to east, it being 300 metres higher at Aksu, and farther west 250 metres higher, than to the north of Lou-lan. Owing to this crust movement the water flowed towards the east, forming a lake which Dr. Norin calls Great Lop-nor. Here and there he was able to trace the outlines of this latter,

freshwater, lake. Men had lived apparently on its shores—perhaps in the palæolithic age, as on its northern and western shores he found roughly fashioned arrow-heads of jasper. Few more fascinating subjects can be conceived than that of the changes which have occurred in this area of Central Asia, and we shall look forward to reading Dr. Norin's presentation of the story.

C. E. A. W. O.

AN ACCOUNT OF THE TAMIL ACADEMIES. By T. G. ARAVAMUTHAN, M.A., B.L. 10 × 7, pp. 49. Madras : Madras Law Journal Press.

This essay, which the author explains is one of a series of studies preliminary to a larger work which he has in hand on the history of the Sangam Age, is not an account of the Tamil Sangams, but a critical analysis of the famous treatise on Love known as *Iraiyanâr Ahapporul*, and the commentary thereon, ascribed to one Nak-Kîrar, the subject of much scholastic controversy.

In the treatise itself Mr. Aravamuthan is not much interested, but the Commentary contains quasi-historical matter, the value of which it is his purpose to determine.

The Commentary comprises *inter alia* a lengthy introduction (which includes the only extant traditional account of the Tamil Sangams) and upwards of 350 illustrative stanzas, of which fifty are citations from classics of the Sangam period, and the remainder, written in more modern Tamil, celebrate some royal hero or heroes referred to by different names.

In this complex Mr. Aravamuthan discerns three strata. *Iraiyanâr*, the traditional author of the treatise, was, he believes, not a god, as some suppose, but a real person, a grammarian of note who wrote in the fourth or fifth century A.D. Nak-Kîrar, the commentator, he proves, cannot possibly be the Sangam poet of that name. Accepting the "modern" stanzas as his, he identifies the hero they honour with an

historical Pāndyan King who reigned about A.D. 700 and assigns that date to Nak-Kîrar. The account of the Sangams and other passages he regards definitely as interpolations, inserted in the Commentary in about A.D. 850.

Mr. Aravamuthan writes in an attractive style, and makes his points well. Whether his conclusions gain general acceptance or not, his critique throws a useful light on a very intricate problem.

F. J. R.

THE POLITICAL PHILOSOPHY OF CONFUCIANISM. An interpretation of the Social and Political Ideas of Confucius, his Forerunners, and his Early Disciples. By LEONARD SHIH LIEN HSÜ, M.A., LL.B., Professor at Yenching University, etc.

The author of this monograph is Professor Leonard Shihlien Hsü, who is the Political Secretary to the Ministry of Foreign Affairs at Nanking. It gives a clear and scholarly exposition of the Confucian system, and it is gratifying to find at a time when the teaching of Confucius in China is supposed to be at a discount that a writer of the standing and in the position of Professor Hsü has come forward as a champion of that teaching and maintains that the Confucian philosophy is not only desirable in the country of its origin but also in the West. He says: "If the West desires to realize the highest ideals of Christianity, it must practise something like unto the Confucian teachings of political morality, and be restored to consciousness from the chloroform of Machiavellian politics. Otherwise, this world-wide social, political, and moral paralysis will continue until the final disappearance of art and learning." The author hopes that his study may help "students both in the Orient and Occident to understand the social and political psychology of the Chinese people in relation to their social and political development". It is certain that this hope will be fulfilled, for as Professor Corbin of Princetown

University in his *Foreword* states, "to the average reader's exiguous portrait of one of the three or four greatest teachers of the human race, Professor Hsü's exposition of the Confucian system will come as a revelation and a most instructive one."

The author being fully alive to the difficulties in historical research of the choice of source-matter and to the caution required to avoid interpreting one's ideas on the basis of false books, has been careful to use only original materials and to omit all spurious passages. Destructive criticism of spurious literature in general and of the Chinese Classics in particular has been rife in China of recent years, as those who have studied the works of Professor Ku Chieh-Kang and Dr. Hu Shih are aware. Such criticism is without doubt of great value, but as the author points out, "spurious literature has had its influence and its place in the development of Chinese thinking . . . No one will doubt that the *Hsiao Ching* or the *Book of Filial Piety* was not written by Confucius: yet this book has been read by every Chinese literate at childhood . . . Likewise *Kuan Tzŭ*, *Lieh Tzŭ*, *Han Fei Tzŭ*, and numerous other writers of philosophy are rare beauties of the ancient, and may be interpreted as the thinking of the time when the books were written, though not of the persons in whose names they appear." The author's monograph is a valuable addition to the Broadway Oriental Library, edited by Clement Egerton and the work can be confidently recommended for perusal by all who are interested in China and its philosophy.

A reproduction of the picture of the Sage attributed to the famous artist Wu Tao-tzŭ forms the frontispiece, and there is a Selected Bibliography of the most important books for studying the social and political ideas of Confucius and his disciples.

CHURCHES AT JERASH. A Preliminary Report of the Joint Yale-British School Expeditions to Jerash, 1928-30. By J. W. CROWFOOT, C.B.E., M.A., British School of Archæology in Jerusalem Supplementary Paper, No. 3. 9½ × 11½, pp. 48. London : British School of Archæology in Jerusalem, 1931.

Jerash, the classical Gerasa, between Mizpeh and Ramoth-Gilead, has practically no history.

Probably of Hellenistic foundation, it was, according to Josephus, taken by Lucius Annus on behalf of Vespasian, and was also the birth-place of Simon of Gerasa, the free-lance who in the last days of Jerusalem divided control of the city with John of Gischala.

It was so greatly embellished in the Age of the Antonines as to become in Conder's view a ruin second only to Palmyra, and in Canon Tristram's probably the most perfect Roman city above ground.

It is not, however, with its naumachia, magnificent *via principalis*, oval forum and temple of Artemis that this report deals, but with the buildings of its decline, the Christian period from the fourth to the seventh centuries.

The thirteen churches referred to fall into five geographical groupings, those namely in the centre, north-west, west, and south-west quarters of the city and that on the east bank of the Karawan which flows through it, the finest being the Fountain complex in the centre, built round a miraculous fountain, probably originally sacred to the Infant Dionysus, and the western group (the contiguous churches of S. John, S. George, and SS. Cosmas and Damianus).

All the churches drew largely and one entirely on the materials of the older pagan buildings.

It is worthy of note that the Fountain court complex is similar in plan to the lay-out of the buildings round the Holy Sepulchre at Jerusalem.

Rather small, the churches stood in crowded precincts, and except for shell niches and small glazed and larger,

probably unglazed, windows in the upper parts, ornamentation was practically confined to the interiors which were faced with bronze-clamped slabs of local pink and yellow limestone or, rarely, marble, or gold and glass mosaics, or were plastered and painted.

Externally they were surrounded by lean-to roofs, and had a pillared atrium.

The larger spans were roofed with timber, the apses and exedrae usually with tufa.

Illumination was by means of glass lamps of the type still used at Jerusalem.

Of great interest are the dedications, especially one in hexameters celebrating the discontinuance of heathen sacrifices (there is an English hexameter translation of this in Conder's *Palestine*), and one which includes a tribune Dagis-theus whom the author suggests may be identified with an officer mentioned in Procopius' *On the Persian War*.

The volume contains a technical account of the mosaics, which are indeed practically the sole decorative survivals.

The designs varied from the most simple geometric patterns to the rich complexity of an oriental rug.

The tesserae were mostly of local limestone, creamy white, yellow, brown, pink, red, grey, and black.

Interesting are the scenes from the Flood in the Synagogue Church and the pictures of Egyptian cities, Alexandria (with the Pharos, the Gates of the Sun and Moon, and the colonnades), Memphis, Canopus, etc.

The plates give bird's-eye views of the chief buildings and the mosaics (two coloured), and inset are plans and cuts illustrating the development of mosaic design. There is a large plan of the Fountain court complex at the end.

The volume is very well done, concise but sufficient.

THE RELIGION OF TIBET. By Sir CHARLES BELL. 9 × 5½.
pp. 235, 69 illustrations, 3 maps. Oxford: The
Clarendon Press; and London: Humphrey Milford,
1931. 18s.

Sir Charles Bell's *The Religion of Tibet* and his two other recent volumes on Tibetan history and people form a valuable trilogy for the cultured general reader desirous of reliable information on "an exceptional country and people" with a remarkable religion. The author's official experience and intimacy with Tibetans from Dalai Lama to peasant gives him unrivalled qualifications for his undertaking.

The present work is for the most part an easily read history of the rise and spread of Buddhism in its later Mahāyāna form in Tibet, also in Mongolia, and it includes chapters on early Buddhism in India, on the old Shamanistic Pön (Bon) faith, and on Roman Catholic missions in Lhasa. The second part (in three chapters) provides a vivid picture of the unique combination of spiritual and secular power so shrewdly exercised by His Holiness, the present Dalai Lama, and describes the relative positions of the Council of Ministers, the National Assembly, and the almost autonomous corporations of reactionary and often turbulent monks in the Tibetan body politic of the present day.

The writer's apt and frequent quotations from native historians, his familiarity with the scene, and still more with Tibetan mentality, endow the narrative with unusual colour and vigour.

At the end of the book there is a valuable excursus, entitled "Sources". Some, like the reviewer, will turn to it first. But a bibliography of European works on Tibetan religion might have been included here with advantage. Surely Waddell, Grünwedel, Getty, and other serious writers deserve mention? Further, the passing references (on pp. 202-3) to Csoma and (on p. 201) to Sarat Chandra Das, will not indicate to the non-specialist the enormous value of these scholars' contributions to our knowledge of the Tibetan language and religion.

We learn that Lhasa record-rooms contain a wealth of historical and statistical material. Ecclesiastical histories and biographies of saints, we know, abound. The author has freely used his own collection of vernacular histories, and, in particular, the *Blue Treasury* or *Tep-ter Ngön-po*, completed by the translator *Gö* in 1476.

This historian *Gö*, as Sir Charles demonstrates, is most trustworthy; almost to the same degree, perhaps, as his other main authority, the highly esteemed *Pu-tön* (*Bu-ston*), c. 1290–1364. Recently E. Obermiller has recorded “the overwhelmingly scientific value” of a part of *Bu-ston*’s history of Buddhism, in that it contains “a systematic review of the whole of Buddhist literature so far as preserved in Tibet . . .”. Now that Obermiller is giving us *Bu-ston*’s history in English, is it too much to hope that Sir Charles will do the same for *Gö*? His full knowledge qualifies him to render to the history of Central Tibet a service similar to that which A. H. Francke’s vol. ii of *Antiquities of Indian Tibet*, has so admirably rendered to the Western Empire.

Here Sir Charles is not addressing specialists, so it would, perhaps, be ungracious to expect mention of the large but as yet hardly explored Bon literature, now known to exist, some of which is in European hands. The same criticism would apply to recent research in Sanskrit Buddhist treatises, so important to an understanding of the Mādhyamika school, which originated with that perplexing figure Nāgārjuna.

On p. 58 the initial cycle of the Tibetan calendar is rightly said to commence from A.D. 1027. This is what M. Pelliot established (p. 663, *JA.*, Paris, 1913). But, though Tsong-kapa’s death is placed correctly in 1419, it is unfortunate that his birth-year (1357 according to Pelliot) has been put a year too late, perhaps by a slip? This birth-date deserved care, since Sarat Chandra Das went wrong over it in two different ways.

But few readers will wish to become engulfed in Tibetan chronology or metaphysics. The majority will be gratified

to discover how easy and safe a path has been constructed for them among the intricacies of Lamaism. It is, indeed, a notable achievement to have given so lucid and fair an exposition of this complex religious system and the many diverse elements contained in it. In the carefully ordered wealth of informative detail in this book, all placed in correct perspective, there is not a suspicion of pedantic dryness or popular exaggeration. Finally we are grateful, not only for three maps, but for the many striking and well-reproduced photographs, which prove the author to be as adept with his camera as he is with his pen.

509.

H. L. S.

AQUILA AND ONKELOS. By A. E. SILVERSTONE, M.A., Ph.D.
Semitic Languages Series : No. 1. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. 172.
Manchester : Manchester University Press, 1931. 12s. 6d.

The author of this book endeavours in the first place to prove not only that Aquilas and Onkelos are one and the same person, the difference being due merely to dialectical pronunciation, but also that Aquilas is none other than the well-known Aquila, the translator of the Bible into Greek and also the author of the Aramaic translation of the Pentateuch known as the Targum of Onkelos. The problem of the latter has exercised the mind of a large number of scholars, and the author has not failed to avail himself of the rich literature which has been accumulated especially during the last century. He is thoroughly acquainted with the books and pamphlets written on the subject and his work, therefore, deserves attention. In the first place he has collected all the stories and legends told about both of those men in the rabbinical literature, and he shows that there exists a very close parallelism, so much so that they are often indistinguishable. Then he proceeds to discuss the character of the Greek translation and the character of the Aramaic Targum. He lays special stress on the similarity of surmounting difficulties in the Hebrew text,

e.g. both avoid anthropomorphical expressions and both endeavour to be as literal as possible. From those arguments the author comes to the conclusion that the man who translated the Bible into Greek, who was a proselyte from the Pontus and had studied under Gamaliel II and the contemporaries of Rabbi Akiba, also translated the Hebrew text of the Pentateuch into the vernacular. Aramaic was the popular language of the time. He also shows that in the Targum a number of Greek words have been preserved. But the general opinion among scholars is that the Targum in its actual form belongs to the fourth or fifth century, and is more or less the product of the schools in Babylon. In older literature it is always quoted as the Babylonian Targum in contradistinction to another Targum known as the Palestinian, which has been preserved in a complete form as well as in a fragmentary one. The author argues that the Targum is also of Palestinian origin, and belongs, like the Greek, to the first half of the second century. But it is with regret one must say that he has failed to prove his case. In the first place one cannot deny that the language of the Targum is anything but Palestinian. On the other hand, as mentioned above, an old Targum existed already in Palestine. It is an extended paraphrase of the text and is full of legendary matter. It contains, however, legal interpretations and important passages of the Pentateuch. Like the T. Onkelos, it also contains a few Greek words and avoids anthropomorphisms. But in the time of Akiba the necessity arose for the compilation of a more literal Targum. This has a history of its own, and no doubt was made under the influence of R. Akiba. It may have been the starting point for the present Targum worked over in Babylon. But an investigation into the history of this Targum cannot be undertaken without a minute comparison of the existing Palestinian Targum, both the complete and the fragmentary forms and those small portions which have still come to light from the Geniza and which show a steady evolution in the history of the Targum.

One must also compare the Samaritan Targum. This latter shows a surprising similarity to that of Onkelos. The author should not have limited himself to the Peshitta. To the Jews the Greek translation by Aquila remains practically unknown. It was of no importance to them, and so there is little wonder that the name of the author of such a translation approved of by R. Akiba should have been transferred to the Aramaic Targum, the language of which they understood and which had been produced under the same auspices as those under which Aquila's Greek translation was created. It was a mere transfer of names. It is out of the question that the author of the Greek translation, who followed, more or less, the tendency of the time, common also to the Targumim, should have had anything to do with the Aramaic translation, which in many ways was fundamentally different from the Greek. But leaving the final conclusion aside, the book is the work of a man who has spent much time and care in the production. He has been able to present the problem in a scholarly manner.

M. GASTER.

TĀRĪKH-I MUBĀRAK SHĀHĪ, by YAḤYĀ BIN AḤMAD BIN 'ABDULLĀH AS-SĪHRINDĪ. Edited by SHAMSU-'L-'ULAMĀ M. HĪDĀYAT HOSAIN, Ph.D., F.A.S.B., Khān Bahādur. A History of the Sultans of Delhi from the time of Mu'izz Ad-Dīn Muḥammad bin Sām to A.H. 838. 10 $\frac{1}{4}$ \times 6 $\frac{1}{2}$, pp. vi + 278. Printed at the Baptist Mission Press and published by the Asiatic Society of Bengal (Bibliotheca Indica series). Calcutta, 1931.

This work is a valuable contribution to the authorities at our disposal for the history of Muslim rule in India, and is the only original authority for the reigns of the first two kings of the Sayyid Dynasty in Delhi. MSS. of the work are extremely rare, but the learned editor has had the use of three, one supplied by a friend and rotograph copies of two others, one in the British Museum and the other in the Bodleian

Library. Extracts from the work, translated into English, have already been published in vol. iv of Elliot and Dowson's *History of India, as told by its own Historians*, but the MS. there used was so defective and full of errors that the editor found it necessary to supplement it with extracts from Nizāmu-'d-dīn Aḥmad, who, as well as Firishta, was a shameless plagiarist. The publication of the complete text of the work is a boon, for there is much that neither plagiarist has copied, and the work is of value not only as a contemporary history of the reigns of the later Tughluqs and the first two Sayyid king but as a record of earlier dynasties, for the author undoubtedly had access to early authorities no longer known to us. For instance, our contemporary authorities for the reign of Muḥammad bin Tughluq are Baranī and Ibn Baṭṭūta, of whom the former pays very little attention to chronology, while the latter remained in India for only part of the reign, and is not very precise regarding the dates of the events which he records during that period, and the chronology of the reign has therefore been hitherto rather vague, though some attempt was made to determine it in the Society's *Journal* for 1922 (pp. 361-5). Yaḥyā bin Aḥmad gives a chronological record of the reign, which supports the conclusion arrived at in vol. iii of the *Cambridge History of India* (pp. 141-4) that there were two migrations from Delhi to Daulatābād, the first in A.D. 1327-8, which was voluntary except in the case of courtiers and officials, and the second in 1329, when all the people of Delhi were driven to Daulatābād. Professor Dowson's refusal to admit the author's claim to rank as an historian is hardly just, for he is not inferior to other historians of his own age and country, and in his records of the earlier Muslim dynasties gives us information not to be found elsewhere. For instance, he gives a more definite reason than any other author for the disregard of Balban's will that his successor should be Khusrav Khān, the son of the "Martyr Prince". It seems that it

was on account of his violent temper that the courtiers feared to raise him to the throne.

The account of the early days of the Khaljī dynasty is interesting, and contains some details, among them a reason for the closing of the wine-shops by 'Alā'u'd-dīn Khaljī, which I do not remember to have read elsewhere. The word *جہو*, used for the small gold coins of the Deccan, is not familiar to me.

The author's style is Indian. He omits the *izāfa* where a Persian would use it, and he misuses the *hamza*. This we might have expected from his *nasab*, but it is unfortunate that we know hardly anything else of him.

His record of his own time, the reigns of Firūz Shāh, the later Tughluqs and the first two Sayyids, appears to be honest, though it is necessarily so worded as to be acceptable to the monarch to whom the work was presented. This is the only portion of the work which is used by Elliot and Dowson. There are a few misprints in the text, one for which the editor and the printers are perhaps not responsible, as it may have been a misspelling by the author, but the work has been carefully edited, and the learned editor has rendered a signal service to students of Indian history, for the *Tārīkh-i Mubārak Shāhī* is a more valuable authority than those acquainted only with the extracts in the *Tabaqāt-i Akbarī*, the *Gulshan-i Ibrāhīmī*, and Elliot and Dowson would have suspected.

WOLSELEY HAIG.

KĀMARŪPAŚĀSANĀBALĪ BHŪMIKĀ KĀMARŪPARĀJĀBALĪ SAMANBITA. By P. BHATṬĀCHĀRJYA. $9\frac{1}{2} \times 7\frac{1}{4}$, pp. viii + 48 + 216, pls. 13. Calcutta : Gurudas Chatterpādhyāya and Sons, 1931.

Our information regarding the dynasties that ruled in ancient Kāmarūpa, which corresponds very roughly to the modern province of Assam, is derived mainly from a number

of inscriptions on copper plates recording grants of land. There are usually three plates strung together on a ring, the inscription being incised on the reverse of the first plate, on both sides of the centre one, and on the obverse of the third. Apart from particulars of the grant, the inscriptions contain a good deal of information regarding the ruler's ancestry, his personal qualities and achievements, his capital, and the extent of his dominions.

Two of these ancient title deeds were already known in 1894 when historical inquiries in Assam were first taken up in earnest. Four more were discovered in the course of the search which was then made and were deciphered by the late Dr. A. F. R. Hoernle.¹ Five others have since come to light: these were all deciphered by Professor Padmanāth Bhattachārjya, who throughout his service in Assam took a great interest in the antiquities of the province.

The earliest of this series of inscriptions refers to a grant by Bhāskara Varma, a contemporary of the Chinese pilgrim Huiyen Tsang, who visited him and wrote an account of him and his kingdom. The next (only one leaf has been found) is of Harjara, whose rock inscription at Tezpur bears a date equivalent to A.D. 829. The remaining seven inscriptions record grants by four subsequent kings, the last of whom was ruling about A.D. 1133. The genealogies in these plates provide a fairly complete list of the kings who reigned in Kāmarūpa from about the fifth century.

In the volume under review Professor Bhattachārjya has given a revised reading of the text of all these plates, together with a translation into Bengali and a photographic reproduction of one or two pages of each set of plates. The volume will be of great use to scholars, the more so as the readings of most of the plates found since 1894 have hitherto been available only in local Bengali publications, which are not easily obtainable.

¹ The readings were published in the *Journal of the Asiatic Society of Bengal*.

In an introductory chapter the author has collected a number of references to ancient Assam in the *Mahābhārata* and other old writings. Most of these had already been mentioned in the Report on the Progress of Historical Research submitted to the Assam Government in 1897, which, however, has long been out of print. In estimating the dates of the eleven rulers who are mentioned in Bhāskara Varmma's land-grant as having preceded that monarch, the author allows an average of twenty-five years to each reign, as compared with a known average of about sixteen years in the case of some subsequent dynasties.

Professor Bhaṭṭāchārjya is to be congratulated on his enterprise in publishing at his own cost this very useful contribution to the cause of historical research in Assam. Its circulation would have been wider if it had been written in English instead of Bengali.

E. A. G.

ARSLAN-TASH. Par F. THUREAU-DANGIN, A. BARROIS, G. DOSSIN, et M. DUNAND. Haut-Commissariat de la République Française en Syrie et au Liban : Service des Antiquités et des Beaux-Arts : Bibliothèque archéologique et historique. Tome XVI. 11 × 9, pp. 142, figs. 50, 2 plans, 48 plates (separate). Paris : P. Geuthner, 1931. Frs. 300.

Two short spells of excavation, in the spring and autumn of 1928, on the site occupied by the Kurdish village of Arslan-Tash in the plain of Saruj, served to reveal the principal structures of an Assyrian provincial capital, and some part at least of its decorations. This work was directed with great ability by M. Thureau-Dangin and his collaborators, and to them, but principally to the leader, is due the present full but admirably concise and plain account of the discoveries, which appears with a promptitude that their importance demanded.

The mutilated inscription upon one of the stone bulls

which flanked the entrance to a temple shows for the first time that the Assyrian name of this place was *Hadatu*, and that it owed a rather transitory importance, as well as the whole of its public monuments, to the policy of Tiglath-pileser III. Hardly anything more is known about this town, which marked a stage on the military route leading to the Assyrian crossing of the Euphrates at Til-Barsib (Tell Ahmar), and after this one reign it seems to have relapsed into its former obscurity. The energy which Tiglath-pileser exerted to re-establish the Assyrian hold upon the West may be judged by the scale of the buildings with which he enriched *Hadatu*, while having at the same time another, and apparently even more elaborate, residence made for himself at the next stage, Til-Barsib.

Among the remains of buildings found, the largest and best preserved is the palace, built of crude brick, with the general arrangement of outer and inner courts having surrounding chambers, the principal of which are two suites of apartments, with elaborate bathrooms, which the excavators assign to the king himself and to his ladies. These rooms open towards the south, in order to avoid the dust-laden north wind which prevails in those parts. There are certain peculiarities in the plan, which the excavators have noted, and an interesting feature is the whitewashing of the walls and the decoration of the royal chambers with a broad band of geometric patterns in blue and red with outlines of black. To the north of the eastern wing of the palace lay a subsidiary building "Z", and to the east of the palace lay the remains of the older *bâtiment aux ivoires* in which were found the splendid ornaments which gave it the name. A temple was also discovered and partly excavated; it had entrances guarded by pairs of bulls and lions in the regular Assyrian style, but it is noticeable that here, being sculptured in the hard basalt of the country, they were made to bear more of the weight of the door-jambs than was ever imposed upon the fragile limestone *colossi* of Assyria proper.

The walls of the town were also traced. They proved to be roughly circular, a plan of which the best known example is Sinjirli (Sam'al). Of the three gates the western seems to have been the most elaborate, for it was decorated with sculptured slabs, mostly depicting the Assyrian army. Several of these slabs have long been in the Ottoman Museum at Constantinople, having been accidentally found in 1886. These, and others found in the excavation, are fully described, and illustrated in the plates, as are also a group of statues and a fine stele in relief (Adad upon the bull) which stood in the temple.

The highest interest of all is reserved for a remarkable find of ivory decorations, in relief and in open work, most of which were obviously the ornamentation of one or more beds of state. Among them was found a fragmentary inscription with the name of "our lord Hazael", and M. Thureau-Dangin holds with much probability that the richly-ornamented beds had belonged to the palace at Damascus in the time of the king of that name, whose successor was obliged to render to the Assyrian king Adad-nirari III a great treasure, among which beds and stools with decorations of ivory are specifically mentioned. Such a date (ninth century B.C.) agrees perfectly, of course, with that of the long-celebrated Nimrûd ivories found by Layard, and the style of the two finds is remarkably similar. Both are products of a Syrian art which drew almost the whole of its elements from outside sources, among which the Egyptian is, at least superficially, the most copious. Various subjects are represented, many being already familiar from the Nimrûd ivories: the birth of Horus, the "union of the two lands" (of Egypt), divers forms of sphinxes, and the woman at the window, but Arslan-Tash is particularly rich in very fine examples of the simple but highly decorative group of the cow giving suck to her calf, towards which she turns back her head; the Egyptian and Ægean origins of this pattern are traced in detail by the authors.

The forty-eight plates, carried in a separate "atlas", and

the plans attached to the text-volume are all excellent, and the disposition of the work is so perspicuous that an index is not very seriously missed.

C. J. G.

LES BRONZES DU LURISTAN. PAR ANDRÉ GODARD. *Ars Asiatica* XVII. 14 × 10½, pp. 116, pls. 68. Paris : G. Van Oest, 1931.

For the first time M. Godard gives in this book some at least of the particulars concerning the origin of the bronze arms, implements, and ornaments which began to appear in the antiquity markets of Europe two or three years ago, and coincided so fortunately with the Persian Art Exhibition of 1931, where there was a notable display of them. They were not entirely novel at their first appearance, for there were already a few specimens in museums, but these had never been attributed with any confidence to any place or time. The fresh discoveries, soon growing to a multitude, did very little at first to elucidate the question, but it was at least fairly certain that they were found by native diggers in the territory of the Lurs. As to their makers and their date the most divergent opinions were expressed. Meanwhile, the accomplishment of their workmanship, the occasional attractiveness of their designs, and the *bizarrerie* of their style caused them to be eagerly collected.

M. Godard, whose official position in Persia has given him unequalled opportunities, now reveals that these objects are found in cemeteries, chiefly in the district called Dasht-i-Kawa, an upland tract not many miles from the town of Harsîn, though the area of the bronzes is not strictly confined to Luristan but seems to extend somewhat northward into the Kurdish country. The number of these objects recovered is explained by the remarkable uniformity of the conditions in which cemeteries were found, which made it perfectly simple for the natives to divine their position, and to locate

the graves by means of an instrument no more elaborate than an iron probe. The settlements were those of a people in a state of half-nomadism (as the inhabitants still are to-day), who spent only the hot weather in these upland tracts, where they dwelt of necessity in the vicinity of a spring beside which the visible mark of their places is an artificial mound, and generally a pool to receive the water of the spring. The graves themselves are generally of stone, the lining either of large or small stones with slabs across the top. Another type of burial is in large pottery jars ; these are of a poorer kind, and mostly used where stone is not at hand. M. Godard scouts the persistent story of the natives and dealers that man and horse were buried together. On the other hand, it seems to be true that the head of the dead man was often found resting on the bar of one of the elaborate horse-bits.

After describing the cemeteries and tombs, the author devotes the rest of his introduction to a consideration of the types of bronzes found, arms, personal ornaments, horse and chariot furniture, vessels, and the few seals and pots which the tombs have yielded. The most important point which he makes is the comparison of these objects with the discoveries of de Morgan in the district of Tâlish, at the south-western corner of the Caspian Sea ; in one instance after another he is able to show not only resemblance but identity between the products of the two regions, and thus to prove that the influences which shaped the art of Luristan were predominantly northern as distinct from Mesopotamian. The latter do, indeed, appear, but only here and there, and they are confined mostly to the bronze bowls and other vessels. This part of M. Godard's introduction contains just observations, but all that he advances cannot be accepted. Throughout he speaks of the makers of these bronzes as Kassites. But there is no evidence that any of these antiquities belong to the only period in which something is known of that people, namely that part of the second millennium during which they ruled in Babylonia. Had they belonged to the

Kassites of that time, examples would have been found on Babylonian sites, whereas there can be no doubt that the great bulk of them are of the first millennium. And even to ascribe them to the Kassites in the subsequent centuries would be no more than a guess, the less reasonable since the district in which they are found pertained rather to the Lullubu than to the Kassites, and the two nations, though no doubt closely related are not to be confused. Of the very curious composite ornaments, with a bell-like base surmounted by a grotesque animal group, a central tube, and a pin with ornamental head, M. Godard is not able to give a satisfactory explanation, and the purpose of these must remain problematical. His notions about the human figure which he calls *Gilgamesh*, *protecteur des troupes*, have little justification; even if it were *Gilgamesh*, which there is no reason to believe, that hero was not in any obvious manner a *protecteur des troupes*. It is, however, true that this figure is apotropaic, and no doubt was borrowed in that function from Babylonia.

The introduction is written throughout as a commentary upon the wide range of subjects illustrated in the sixty-eight plates which form the main substance of the book; the first few of them are interesting photographs of certain sites of these discoveries. The rest show the bronzes themselves, and include many very fine examples of nearly all the types as yet known. Produced with all the technical excellence that distinguishes the Van Oest books, they give splendid illustration to a novel and deeply interesting material about which we have still a good deal to learn.

545.

C. J. G.

LA PÂLEUR D'ENKIDU. By GEORGES DOSSIN. Louvain : Imprimerie Orientaliste. pp. 1-30.

Dossin in this brochure has attempted a fresh examination of the second tablet of the old version of the Epic of Gilgamesh, first published by the reviewer, PBS. x, part ii, collation and

notes JRAS. 1929, 343-6. He discusses the astonishment and fright inspired in the savage Enkidu by his discourse with a civilized man.

Dossin has presented some observations on the text, and offers a transcription of Obv. iii, 35-Rev. ii, 3. The author is extremely daring and ingenious both in his treatment of the text and in his philological conjectures, hardly any of which are convincing. It would be hazardous to incorporate his views in a standard edition of the text. For example, he makes out a case for a word *anu* "water-machine", "shadouf", and thinks that *anam uzakkir* means "he raised the shadouf". *a-na-[am]* is his restoration of Obv. iii, 3. There is no evidence at all that *ulšu* means "abundance" in the sense of agricultural produce, but he confidently renders *i-ip-pu-uš ul-ša-am* by "he produced abundance", Rev. i, 1. *a-na gu-up-ri šá ri-i-im* "to the home of the shepherd", is the rendering at which I arrived in *Semitic Mythology*, 242, for Obv. ii, 33. Also Ebeling and Thompson accepted my reading *šá ri-i-im*, Ungnad *ša-ri-i-im* "üppig", thriving, but Dossin introduces a word *šarû* "abundance", for which there is no evidence.

The only suggestion in this brochure which seems likely to add anything to Assyriology is the combination of *zurikāti* with *isuziriku*; both words seem to mean "water wheel". Dr. Dossin is an earnest scholar who has endeavoured *sans ira et studio* and not *ex parte* to interpret this text but he assumes the wildest suggestions to be proved, and soberly states them as facts.

402.

S. LANGDON.

ÉTUDES SUR LE DROIT BABYLONIEN, LES LOIS ASSYRIENNES
ET LES LOIS HITTITES. By ÉDOUARD CUQ. 9 × 7½,
pp. vii + 522. Paris: Paul Geuthner, 1929. Fcs. 150.

This large volume by the distinguished authority on the history of ancient laws of the Institut de France contains his conclusions upon the entire systems of Babylonian, Assyrian,

and Hittite laws (so far as known up to the year 1928). Cuq had previously published numerous special and penetrating articles upon Babylonian laws and contracts. In these studies he has always based his work largely upon the editions of his colleague in the Institut, Professor Vincent Scheil; in the present volume the great learning of Scheil was again placed at his disposal.

Pages 1-431 are devoted to the *Code of Hammurabi* and contracts of that period. Brief reference to the earlier fragments of the Sumerian code is made, but the author omits to give the complete literature on the editions of this code, JRAS. 1920, 489-514; *Savigny Zeitschrift*, vol. xli. There is an analysis of the Hammurabi Code and a discussion of the term *šimdat šarri*, rendered "law of the king", and a summary review of contracts which illustrate the Code. Cuq's first chapter is devoted to the laws on *marriage* and definitions of the terms *tirhātu*, *biblu*, *šeriktu*, *nudunnu*. Comparisons are made with Graeco-Roman laws, a subject on which the author is a recognized authority.

Chapter ii is devoted to *adoption*. *tul-ta pad-da* "found in a ditch", the meaning of which was discovered by Koschaker and elaborated by David,¹ has now been treated again by the writer in AJSL. 48, 51-3. Chapter ii on the *freeing of slaves* is condensed and does not discuss the philological terms²; but the author seems to agree with the consensus of opinion on the meanings of the technical terms used in the Code and contracts. There are chapters on *rights of heritage*, *bequests*, and *landed property*. In the discussion of the last subject (chapter vi) the author treats the difficult subject of *boundary stones* which are confined largely to the Cassite and succeeding Babylonian dynasties.

Chapter vii on the management of *royal estates* is not very well documented. Here Ungnad's edition of *Babylonian Letters*, VAB. vi (1914), and Driver's *Letters of the First*

¹ See p. 46.

² See Landsberger, *Der Kultische Kalender*, 115, n. 8 (with literature).

Babylonian Dynasty, OECT. iii (1924) contain very considerable information similar to that utilized by Cuq. The *Obelisk of Manistusu* might have been utilized for the earlier Accadian period. There is a long and detailed chapter (viii) on *contracts*, divided into six sections; (1) *economic conditions*, in which there is an interesting paragraph on the relative value of wheat¹ to other commodities (wool, copper, oil, etc.); (2) *contracts by correspondence*, often carried out by a third person called the "attorney" (mandataire), or intermediary; (3) *sale and exchange*, in which there is scant discussion on the sale of slaves and the ritual of the *bukānu* (RA. 24, 91, n. 14, and 94-6); (4) *renting* of lands, houses, persons, workmen; (5) *storage* for safe-keeping; (6) *loans*.

Chapter ix contains a discussion of the new fragments of the Code, Susa fragments,² Scheil, *Dél. Per.*, x, pl. ix, and pp. 81-6, reproduced by Ungnad, *Keilschrifttexte der Gesetze Hammurapis*, 36-7. Scheil's translation of § 66 of the Code is reproduced and discussed. § 71, reproduced from Scheil, contains the word *ilku*, on which Cuq discourses at length and gives all the possible meanings in various periods. § 72 is given precisely as Scheil understood it, and Ungnad's restorations are apparently regarded as erroneous.

Then Cuq discusses Poebel's new tablet from Nippur, which he had previously described (pp. 6-7). Here no mention is made of the large Nippur tablet in Constantinople, BE. xxxi, 49-51.

Chapter x is devoted to *commercial firms* or companies and chapter xi discusses the question of guarantee by a third party for a debt, and chapter xii *security* in property held by a creditor for a debt. Here the author cites Neo-Babylonian contracts extensively. Chapter xiii is a study of the Babylonian judicial system, in which there is a section on the

¹ *Blé*, by which the author means "grain" in general.

² A discussion of the legal aspects by Kohler, based on Ungnad's translation in Kohler-Ungnad, *Hammurabi's Gesetze*, iii, 268-70.

Neo-Babylonian period. The analysis of the legal aspects of the new tablets from Kerkuk in chapter xiv is based entirely on Gadd's admirable pioneer work in RA. 23, 49-161, and a preliminary article by Chiera and Spieser, and Koschaker's important study, *Neue Keilschriftliche Rechtsurkunden aus der El-Amarna Zeit*. Since 1929 two more volumes of these texts have been published by Chiera, so that this chapter can only be regarded as a preliminary study.

Chapter xv is a rapid but lucid survey of the Assyrian law code, but it is up to date and utilizes the contracts published by Johns and Ebeling. There is, however, no mention of the immense material provided by the Cappadocian contracts, a problem which Georg Eisser has now undertaken in conjunction with the Assyriologist, Julius Levy.¹

Hittite laws are the subject of the last chapter, which contains a succinct historical introduction, and a paragraph on the Indo-Europeans in Anatolia concludes the volume. There is an index of the subject matter and glossary of the principal Accadian words discussed.

This is undoubtedly a valuable survey of the whole subject by a scholar of wide learning and experience, though many of his views will be challenged; some have already been criticized by various scholars. But Cuq, having at his command an encyclopædic knowledge of ancient laws and institutions, has brought to bear upon the Babylonian legal system an immense critical apparatus and has made endless illuminating comparisons. There are, it is true, omissions in the literature, which often clarify the subject under discussion.

37.

S. LANGDON.

¹ See Martin David's penetrating review of Eisser-Levy in *Zeitschrift der Savigny-Stiftung*, lii (1932), 496-503.

CLAY FIGURINES OF BABYLONIA AND ASSYRIA. By E. DOUGLAS VAN BUREN. Yale Oriental Series : Researches ; Vol. XVI. $9\frac{1}{2} \times 7\frac{1}{4}$, pp. lxxix + 287. pls. 68. Yale : University Press ; London : Humphrey Milford, 1930. £1 7s.

Mrs. Van Buren has catalogued all the Sumerian, Babylonian, and Assyrian figurines which she could find in the principal museums of the world. There is firstly a long description of the sites and expeditions which excavated them, a study of the *types* of figurines throughout the long period of Sumerian, Babylonian and Assyrian history, *dress and coiffure* and of what the authoress calls the "*shorthand system*", or method of suggesting a complete *motif* by means of a single figure. The catalogue of figurines in the various public and private collections runs to 1,334 numbers. To accomplish a compilation of this magnitude the authoress travelled widely and read a voluminous literature. The plates contain illustrations of 320 figures and are extremely well executed. With each figure of the plates the corresponding number in the catalogue, where the description and literature occur, is given on pp. xi-xvii ; this facilitates the use of the book ; other works of this kind have been published without reference to the descriptions of the figures in the text.

This is a valuable and useful corpus of the figurines of Babylonia ; it is much more than a compilation, for some of the entries are new and hitherto unpublished. Scholars who make use of the figurines to discuss various aspects of Sumerian and Babylonian civilization should not fail to consult this book. Material of this kind is so prolific that even Mrs. Van Buren's book is far from exhaustive. In the same year Professor Leon Legrain published *Terra-Cottas from Nippur*, PBS. vol. xvi, a large book with 76 plates, 443 figures, with some material from the University Museum not utilized by Mrs. Van Buren. The figurines from Ishārah on the Euphrates, published by Herzfeld, RA. xi, 131-9, seem to have been overlooked. Julius Jordan's *Uruk Warka*, 1930,

also contains some strikingly new and valuable material from Warka. It would be impossible in view of the intensive excavations now in progress to write a book on this subject which is exhaustive. This book is a valuable groundwork for all future compilations and special studies on the subject, is carefully and ably written, and conscientiously executed. It should be in the field library of every excavator in Mesopotamia.

110.

S. LANGDON.

JASAHARACARIN OF PUṢPADANTA. An Apabhraṃśa work of the tenth century. Critically edited with an introduction, glossary, and notes by P. L. VAIDYA. The Ambādās Chaware Digambara Jain Granthamālā, or Karanja Jain Series. Edited by Hiralal Jain. Vol. I. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 32 + 188. Karanja, Berar, India: Karanja Jain Publication Society, 1931.

The present work forms the first of a new series of Jain works founded by Seth Gopal Ambadas Chaware of Karanja, Berar, in memory of his father. Professor P. L. Vaidya, of Fergusson College, Poona, has now edited the *Jasaharacarīn*, the life of Yaśodhara, by Pushpadanta. It is a tale in rhymed verse of about 2,300 lines, and of much interest for some aspects of the Jain religion, but also important to the philologist. It is in Western Apabhraṃśa, the study of which has suffered from lack of texts, but which has been much furthered by Jacobi's work, especially his edition of Dhanapāla's *Bhavisattakahā*, and C. D. Dalal's and P. D. Gune's edition of the same work in the Gaekwad's Series. The *Jasaharacarīn* is of exactly the same type of literature. Professor Vaidya has confined himself chiefly to giving a critical text, and he has done the work excellently. He gives a glossary and notes, but apart from that and the general editor's valuable introduction there is no discussion of the dialect. For this he doubtless has good reasons, as he has

already been studying other works which will throw light on the history of Marathi and other vernaculars, and the high scholarship of the present work is a good omen for his further study of Prakrit and Apabhramśa literature.

E. J. THOMAS.

THE SUVARNAPRABHĀSA SŪTRA. A Mahāyāna Text called "The Golden Splendour". First prepared for publication by the late Professor BUNYIU NANJIO, and after his death revised and edited by HOKEI IDZUMI. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. xxviii + 222. Kyoto: The Eastern Buddhist Society, 1931. £1 2s.

DEUX LEXIQUES SANSKRIT-CHINOIS. *Fan yu tsa ming* de LI YEN et *Fan yu ts'ien tseu wen* de YI-TSING. (Ed. by) P. C. BAGCHI. Tome 1^{er}. Sino-indica: Publications de l'Université de Calcutta, Tome 2. $10\frac{1}{2} \times 8$, pp. 336. Paris: P. Geuthner, 1929. Frs. 200.

This edition of the *Suvarṇaprabhāsa-sūtra*, which was long ago undertaken by the late Bunyiu Nanjio, has now been completed by Mr. Idzumi from six MSS. and with comparison of the Chinese and Tibetan versions. Apart from the fact that it is the first complete edition of the Sanskrit text, it is the editor's familiarity with the Chinese sources that gives the edition its special value. He discusses the various additions that it has received, and gives a useful table of correspondences with the three extant forms in Chinese.

It is exactly a century ago that I. J. Schmidt gave an analysis of the sūtra as it appears in the Mongolian and Tibetan, and translated several chapters. There is now an edition of the Mongolian text, not noted here, but it is clear that the form known to Schmidt corresponded with the text of I-tsing. Mr. Idzumi puts the sūtra late, "at the time when Mahāyāna was about to be finally formulated." It certainly has peculiar features. The usual introductory words of Ānanda are turned into a śloka. The list of auditors is remarkably short, the only personages specified by name

being the four goddesses, Sarasvatī, Śrī, Dṛdhā, and Haritī. The metaphysical teaching is rather perfunctory, as the chapter entitled *Śūnyatā* consists of verses merely claiming to express summarily what other sūtras have declared at length. There is no clear reference to the *Trikāya*, though a chapter on the subject has been added in the Chinese and Mongolian. The teaching about an eternal Buddha, as Mr. Idzumi shows, corresponds closely with that of the *Saddharmapūṇḍarīka*. But the author of the sūtra seems rather to be interested in the glorification of its merits and in declaring its power of dispelling bad dreams and evil planetary influences. Two of the chapters are jātakas, remarkably interesting in their circumstantial details, and one of them is retold in verse.

The state of the text, the editor admits, cannot be said to be satisfactory, and as other scholars are working at it, doubtless further work will soon be seen. The editor promises an index to the present volume and translations in Japanese and English.

Dr. Bagchi's undertaking helps to show the way in which the Chinese translators went to work. This portion gives the text of the two Chinese lexica in facsimile. The Chinese words with the accompanying Sanskrit have been transliterated by Dr. Bagchi, and the obscurities and errors in the Sanskrit discussed and elucidated. This is all that lies before us in the present volume, but it is excellent and illuminating work, and the whole should lead to results of great value.

INDEX TO THE ANNUAL REPORTS OF THE MYSORE ARCHÆOLOGICAL DEPARTMENT FOR THE YEARS 1906-22. By Dr. M. H. K. IYENGAR. 11 × 8½, pp. 211. Bangalore : Government Press, 1929. Rs. 2.

ANNUAL REPORT OF THE MYSORE ARCHÆOLOGICAL DEPARTMENT FOR THE YEAR 1929. With the Government Review thereon. University of Mysore. 11 × 9, pp. 2 + viii + 2 + 318, pls. 20. Bangalore : Government Press, 1931.

EXCAVATION AT CHANDRAVALLI (MYSORE STATE). Issued as a Supplement to the Annual Report of the Mysore Archæological Department for the year 1929. Archæological Survey of Mysore. 11 × 9, pp. 32, pls. 17. Bangalore : Government Press, 1931.

ANNUAL REPORT OF THE ARCHÆOLOGICAL DEPARTMENT OF HIS EXALTED HIGHNESS THE NIZAM'S DOMINIONS. 1337 F., 1927-8 A.C. 13 × 10, pp. x + 56, 20 pl. Calcutta : Baptist Mission Press, 1930.

INSCRIPTIONS (Texts) OF THE PUDUKKOTTAI STATE. Arranged according to Dynasties. 13 × 8, pp. iv + 654 + ii, 1 pl.

CHRONOLOGICAL LIST OF INSCRIPTIONS OF THE PUDUKKOTTAI STATE. 13 × 8, pp. iv + 154 + ii.

Dr. M. H. Krishna Iyengar, the Director of Archæological Researches in Mysore, announces that a new series of reports begins with this volume. It is the first published under his directorship, and the most important information about archæological research in Mysore is contained in the accompanying Supplement. We learn that Dr. Sir Brajendranath Seal, the Vice-Chancellor of the University, wisely decided in 1922 to introduce the most up-to-date methods of research into the Department, and Dr. Krishna Iyengar was sent to study the latest research methods at the University of London and in the excavation camps of Egypt and elsewhere. This Supplement, one-third of which is now published, gives the first results of the scheme of exploration at Chandravalli in the north of Mysore State. The remains date from neolithic times. The most important inscription (described in the Report) is one of Mayūrasarman of the third century A.D. and, though only of three lines of Prakrit, mentions no less than eight neighbouring peoples. The Report itself includes numismatics, manuscripts, and epigraphy. The inscriptions, more than 100 in number, are recorded in Canarese (most are in this language), and are transliterated and translated. The Director has also brought out a useful Index to the Reports for the years 1906-20, with a supplement for 1921-2.

The report of the archæological work in the Nizam's Dominions is edited by the Director, Mr. G. Yazdani. Besides the surveying of a number of villages with Hindu, Jain, and Muslim antiquities, a large number of stone circles are described. Mr. L. Munn contributes several letters on the antiquities of the Raichur District. The Director's paper on the fresco paintings of Ellora, which he gave at the Oriental Congress in Oxford in 1928, is here printed with six beautiful plates.

The first of the two volumes of inscriptions in the Pudukkottai State contains the texts with descriptions in Tamil. The inscriptions are mostly in Tamil, but a few in Sanskrit are given in the Grantha character, and one (the treatise on music, given in *Ep. Ind.*, xii) in Devanagari. The second volume gives the list of the inscriptions in English, with short descriptions, dates, and dynasties.

THE BOOK OF THE GRADUAL SAYINGS (ANGUTTARA-NIKĀYA), or MORE-NUMBERED SUTTAS. Vol. I. Translated by F. L. WOODWARD, with an introduction by Mrs. RHYS DAVIDS. Translation series, No. 22. 9 × 6, pp. xxii + 285. London: Published for the Pali Text Society by the Oxford University Press, 1932.

THE MINOR ANTHOLOGIES OF THE PALI CANON. Part I. Dhammapada: Verses on Dhamma and Khuddakapāṭha: The text of the Minor Sayings. Re-edited and translated by Mrs. RHYS DAVIDS. Sacred Books of the Buddhists. Vol. VII. 9 × 6, pp. lxx + 166. London: Humphrey Milford, 1931.

Mr. Woodward's translation of the first three nipāṭas of the *Anguttara* is a worthy continuation of his work on the *Samyutta*. There is the same clear language, the careful following of the sense, and the valuable notes, which discuss the interpretations offered, and bring forward the evidence

in the Pāli commentary. Mrs. Rhys Davids has an introduction on the translation of important religious and other terms. She rightly protests against the monstrous idea that there ought to be a "classical tradition" in the rendering of such terms. Not only were the early translators groping for the meaning, but the meanings they put in were often dogmas of their own. One of these was the atheism of Buddhism, but here we have another, shall we say dogma, that "the first Sakyan teachers bring God from heaven to dwell in man as man". This is what *attā* implies, "the Divine Man within." The grammarians think that they know what *sa-* as a prefix means. They will be surprised to find that it includes not only *sa-ppaṇṇō*, but also such words as *sa-kkāya* and *sa-dhamma*.

Mrs. Rhys Davids' translation of the *Dhammapada* and *Khuddakapāṭha* illustrate still more the revision of technical terms. *Nibbāna* becomes "Waning", and (with its early meaning) equivalent to "bliss". *Brahmacariya* is "God-life", *saddhamma* "their own dhamma", but also "very Dharma". *Tathāgata* is "Man-waygone", but this may be partly due to the fact that the translation is in various kinds of blank verse. In verse you have to say what you can, so it comes about that the present tense *wot* has to be used as a past participle.

But the importance of the edition lies in its undertaking to carry a stage forward the interpretation of these two works. The text is given, and it has been dissected on the theory that there have been large interpolations. These in accordance with the method of Garbe for the *Gūṭa* are distinguished by smaller type. It is a more elaborate undertaking than Garbe's, and sixteen grounds are given for the identification of later passages. Such "undesirable growths" extend not merely to whole sections (the whole of the *Buddhavagga* has to go), but down to quarter verses and single words. Perhaps the most surprising result is that the *Metta-sutta*, a poem in *āryā* metre, is made one of the

earliest, indeed it was perhaps taken over by the earlier Sakyans from a brahmin who taught teleolution, though the editor would not be surprised to learn that the poem was by a woman.

FATH AL 'ARAB LISH-SHÁM (Conquest of Syria by the Arabs).

By G. M. HADDAD. $9\frac{1}{2} \times 6\frac{3}{4}$, pp. 113. Ramallah (Palestine): Adabiyah Press, 1931. 2s.

Mr. Haddad won a history prize at the American University at Beyrout, and has now published an Arabic translation of the successful essay, the Arab conquest of Damascus. As a prize essay it is a very creditable performance for the writer has read the Arabic sources for himself and has studied the works of European orientalists. He knows Caetani only from quotations. We hope that this translation will achieve his object, that of encouraging the study of history among his countrymen.

A. S. T.

THE DAMASCUS CHRONICLE OF THE CRUSADES. Extracted and translated from the chronicle of Ibn al-Qalánisí.

H. A. R. Gibb. $7\frac{3}{4} \times 5\frac{1}{4}$, pp. 368. London: Luzac & Co., 1932, 15s.

Hamza son of Asad was a clerk in the chancellery at Damascus, rose to be head of the department, was also for a time civil head of the city, and wrote a chronicle of his own time, which was that of the first crusade and the early years of the kingdom of Jerusalem. That part of his book which tells of the doings of the Franks is here given in English. As later historians used his book, there is not much of importance in it that is quite new, but they omitted many picturesque details and anything they did not understand, so there is plenty of interest in Hamza's full story. Who were the "infidel Turks?" Were they really not Muslims or only heretics who shocked his orthodox soul? Who were the gourmands

for whose delectation Núr ud Dín slaughtered horses among other delicacies ? The accounts of the Assassins are striking. They were favoured by great men in Syria, acted independently of their head in Alamut, won over a great following among the common people, and were at one time able to hold Bányás. Retribution fell on them in the shape of a general massacre. Hamza does not know the story that Bohemund of Antioch was captured while on his way to find a bride ; nor the other, that a pigeon with a letter from Damascus to Tyre bidding the garrison hold on as help was coming, fell into the camp of the Franks who substituted a letter of the opposite sense and released the bird, so that the town lost heart and surrendered.

The introduction is valuable ; it shows the disorganized state of Syria at that time, broken up between powers of different sorts, whose hatred of each other was only less, if less, than their hatred of the Franks. The importance of the Armenians as states, as soldiers, and as a section of the population is stressed. The paragraphs on the army are new. Each prince had a standing army of slaves or mercenaries, who were mounted archers. The biggest in Syria was probably not more than five thousand strong ; Shaizar had only a few hundred. The officers were expected to keep slave troops of their own, which were enrolled in the state army on their master's death. To maintain these slaves the officers were given grants of land. The Turkmen tribes, who joined in the fighting as allies or hirelings, were on the same footing as these household troops. The second line, the *jund*, were a kind of militia and were also mounted. The infantry were of little use in actual fighting. The townsmen were organized in some form of train-bands. Professor Gibb thinks that in the art of war the Franks were the teachers rather than the taught. They brought improved methods of siege warfare, introduced winter campaigns, and the use of more body armour. Their famous charge was feared. The chronicle is seldom verbose, the translator has been very successful in his work, so the

story is quite readable, though it deals with little but the squabbles of minute states. Professor Gibb has taken much trouble in identifying places and persons and in solving textual problems. It is unfortunate that there is no map.

There are a number of minor misprints, such as a soft breathing in place of a hard. One very common one is that a space is left in the middle of a word where the rough breathing is used for an Arabic consonant. Thus Mas'úd becomes Mas 'úd.

The translation "underpinning" for *ta'liq* (p. 123) seems hardly satisfactory. In a wall, built or repaired in haste, wooden beams may well have been used as ties, "headers" a bricklayer would call them. If these were burnt the outer face of the wall might easily fall. If underpinning is the right word it is not easy to see how the garrison could set fire to that under the outer face of the wall, and also why the besiegers did not do so.

A. S. T.

DIE DOGMATISCHEN LEHREN DER ANHÄNGER DES ISLAM.

By AL ASH'ARI. Parts I and II. Ed. by H. RITTER.

9 $\frac{3}{4}$ × 6 $\frac{3}{4}$, pp. (Pt. I, 37 + 300) (Pt. II, 4 + 314).

Constantinople: Devlet Matbaasi. Pt. I, 1929, Pt. II, 1930. Mks. 30.

We are told that al Ash'ari was a good debater but a poor writer. This book lends colour to the second part of this dictum, for it is badly arranged, almost formless, though far from void. It could be cut down by a third without loss. On the other hand, it does not lie under the ban of the tradition that Islam contains seventy sects. It is divided into the following sections: Shí'a, Khawárij, Murjia, Mu'tazila, theologians, attributes of God, Koran. The Shí'a is subdivided into extremists, recusants, and Zaidis. The beliefs of the extremists are arranged according to sects, those of the recusants, Zaidis, Khawárij, and Murjia first under sects and then under doctrines, those of the Mu'tazila and

theologians under doctrines, as are also the opinions about the Koran. There are a few appendices on men like Jahm, al Najjār, and Ibn Kullāb. There is even more repetition than would be expected from the above summary as men of all shades of opinion are quoted under the heading theologians.

The author did not take a narrow view of his task, for the section on the theologians begins with philosophical problems such as "substance". The author's sense of humour must have failed at times for two consecutive paragraphs are "The legality of making enemy's womenfolk captive", and "The nature of the atom". The book is fine confused feeding. Doctrines are sometimes attached to the name of a teacher, as often as not they are anonymous. It is not uncommon for several different opinions to be given without a hint as to who held them. Occasionally a doctrine is attributed to a man with the caution "but I do not think this can be so". Perhaps a disproportionate space is given to al Jubbái, though this can be explained by the author's respect for his master and father-in-law: but it is odd that no mention is made of Abú Hášim. Very little is said of al Jáhiz also. The book therefore is not a history of Muslim theology, nor an exposition of the schools of thought current at the date of writing, but a jumble of all that had ever been taught in the name of Islam. To find the teaching of any one man you must work through the whole book (there is no index), and even then much of his thought may be hidden in anonymity. The author keeps himself in the background. Some writers are quoted as sources: Sulaimán b. Jarír, Muḥammad b. Shabíb, Zarkán, Abú 'uthmán al Ádami, al Jáhiz, and Abú 'ísá, but for the most part the author gives no authority for his statements. The book is fuller than that of Shahrastáni, but will not displace it even for the early period. The reading of it strengthens the conviction that the theologians' knowledge of philosophy has been exaggerated.

The editor has done his work well: paper and type are good: the matter is well spaced, and misprints are few. One

quotation from the Koran has a wrong reference. The editor had five manuscripts to work on. In addition to variants the notes contain references to relevant passages in other books. There is a bibliography of thirty-two oriental works. On p. 96 a longer quotation should have been given from *al Fark* (the words actually quoted are not exact), so that the paragraph would run after filling the lacuna :—

Friendship and hostility are attributes of God in his essence ; he shows friendship to his servants for the faith to which they will attain, though they were unbelievers for the greater part of their lives ; and he regards only the unbelief to which they will come at the end of their lives, though they were believers for the major part of their lives.

This is the doctrine of *muwáfát*, that it was a man's state at the end of his life which determined his lot in the hereafter ; the Muslims had not advanced beyond Ezekiel. On p. 68, l. 9, something seems to have dropped out ; one would expect the passage to run : " He counted (someone) of higher rank than 'uthmán ". Unfortunately the section dealing with the peculiar doctrine of Ma'mar is corrupt. " The wiping of the shoes " is not omitted but one is left with the impression that the questions which busied the Muslims were religious and philosophical and much ingenuity was devoted to solving them.

555.

A. S. TRITTON.

DIE BABYLONISCHE GEBETSBESCHWÖRUNG. Von WALTER G. KUNSTMANN. Leipziger Semitistische Studien, Neue Folge, Band II. 9 × 5 $\frac{3}{4}$, pp. iii + 114. Leipzig : J. C. Hinrichs'sche Buchhandlung, 1932. Mks. 10.

The argument of this book of Herr Kunstmann is to examine from the formal and purely literary point of view that kind of conjuratory prayers of Babylonian and Assyrian origin which is easily recognizable by its subscription written in the

Sumerian language *inim-inim-ma šu-il-la-kam*. Those prayers are, as is well known, addressed to different gods, have strong conjuratory character, and are very often accompanied by some action of magical character and purport as well as by a sacrifice. The most ample edition of such kind of prayers has been made by L. W. King under the title *Babylonian Magic and Sorcery, being "The Prayers of the Lifting of the Hand"*, London, 1896.

After some general considerations on such prayers the author goes on to examine their content. He divides it into three principal parts, which are the allocution, the prayer proper, and the thanksgiving. In the third chapter Herr Kunstmann tries to define the *inim-inim-ma šu-ila* from other cognate kinds of prayers, as are, for instance, the Sumerian *šu-ila*, the lamentation called *šigū*, the prayer *ikribu*, the *dingir-šag-dibba* and the *ki-Utu-kam*.

The fourth chapter is dedicated to the different series and sequences of *šu-ila*, general as well as special.

In the last chapter the author gives us three lists : of the *šu-ila*, according to the gods invoked, according to the stars, and according to other deities which, in reality, are different cultural objects, as the fire, the grain, the light, the salt, etc.

The analysis by the author in the second chapter illumines and throws light on all the different aspects of this interesting kind of prayers. Herr Kunstmann quotes always extensively every element of the prayer examined, gives a German translation of it, and quotes all the passages in which it occurs. The allocution consists in most cases of the invocation of the god together with its honorific titles, great in number and of different natures. At p. 12 the author remarks rightly that the many praises raised by the orant to his god were not mere compliments made by the Babylonian to divinity, but a genuine expression of his confidence and trust. The author is no doubt right : the Babylonian was absolutely sure that the gods had all those qualities which he attributed to them in his prayers and hymns, and therefore we cannot say that his

only purpose was to make compliments to his god to obtain more easily the favours required. The praises to the god comprise his ability to solve from sin, they refer to the gracious look of the god, to the help which he can tender, to the creation by him of mankind, to his quality of a father, respectively of a mother, to the protection he concedes to mankind in distress. Herr Kunstmann analyses attentively also the prayer itself, which is the nucleus of the *šu-ila*, and is often introduced by some lamentation referring to the estrangement of the god or comprises penitential formulæ or simple laments of various nature on maladies and diseases, persecutions from the demons, etc. A kind of lamentation very common is that referring to the eclipse, *attalû*, of the moon, which brings in its trail all kinds of evil. The prayer proper is preceded by some introductory phrases, and with it the orant asks his god to accept in general his prayer or wants from him good luck or the reconciliation of the angry deity or of his own god which protects him or to stop the evil or to free him from his sins. The Babylonians did not like to allude directly and crudely to requirements of material character. The prayers end as a rule with some formulæ of thanksgiving or benediction.

The analysis of Herr Kunstmann is accurate, penetrating in the literary investigation of the often complicated prayers *šu-ila*, and his book is precious also owing to the pages dedicated to the series of the prayers and the lists classified according to the divinities to which they are directed.

GIUSEPPE FURLANI.

INDIA AND JAMBU ISLAND. By AMARNATH DAS. $8\frac{1}{2} \times 5\frac{1}{4}$. pp. vii + 343, 1 ill., 7 maps. Calcutta: The Book Company, Ltd., 1931. Rs. 12.8.

In a short introduction the writer of this work describes as his object the tracing, as far as possible, of the remarkable changes that have taken place in the configuration of India during the course of the last twenty centuries.

The main contentions of the author of this very remarkable book are that the Taprobane Island of Ptolemy was not Ceylon, but an island co-extensive with a large part of southern India, and that the Mahābhārata incidents occurred in Upper Burma, where he locates Indraprastha. It also seems that the scene of the Rāmāyana is to be sought in western Siam.

In the early centuries of the Christian era Poona is alleged to have been a seaport, the traditional Hippokoura. It is not explained how the presence of the sea level near Poona affected the low-lying portions of India, though we are seriously asked to accept the theory that the summits of the Western Ghats were islands in historical times. It does not seem to have occurred to the writer of this work that many statements made by ancient geographers on the basis of information furnished to them by travellers were highly inaccurate, and that the coastline which he designs, from this evidence, for the island of Taprobane would submerge most of India below 1,500 feet of water.

Much labour has been devoted to the preparation of this work ; but the results cannot fairly be held to justify the effort.

516.

R. E. E.

THE ELEPHANT LORE OF THE HINDUS. The Elephant Sport (Mātāṅga Lila) of Nilakantha, translated from the original Sanskrit, with Introduction, Notes, and Glossary, by FRANKLIN EDGERTON. 8 × 5½, pp. xix + 129. New Haven : Yale University Press ; London : Oxford University Press, 1931. 9s.

In this little book the writer offers a translation of the *Mātāṅga-Lila* of Nilakantha, with a preface and some introductory reflections upon elephant lore in India. As the writer remarks, it would have been strange if the Hindus had failed to deal in their literature with a beast which has always played such a prominent part in the lives of their rulers.

The Aryan invaders, brought face to face with a novel

animal using a trunk as a hand, found for it the name of the *mrga-hastin*, the beast with a hand. Nilakantha, in the *Mātāṅga-Līla*, pursues the subject in greater detail. We are instructed about their origin, favourable and unfavourable marks, the stages of life, measurements, price, the strange affection known as *must*, and the way in which elephants can be caught and driven. With the Hindu genius for refinement in classification, elephants are divided into four castes with colours recalling the Brahman, Kshatriya, Vaishya, and Shudra, and twelve classes, according to age. For each of the first five decades a special name is provided.

In his introductory note the author fairly evaluates the substance of this interesting Sanskrit work, and draws on well-known works (e.g. Sanderson's) for further information about these magnificent quadrupeds. Among Sanskrit works the best known is the *Hastyayurveda*, a lengthy treatise dealing mainly, as the title suggests, with the medicinal treatment of elephantine ailments.

To Sanskritists the author's glossary will be of special interest. We find *āsana* given as the equivalent of withers. The word is, of course, in common use for a seat, especially the special seat prepared for the image of the gods at the time of worship (e.g. *padmāsana*), and would very naturally designate the place where the *mahaut* sits.

We are grateful to the author for the care he has devoted to this little-known study.

448.

R. E. E.

A HISTORY OF THE MARATHA PEOPLE. By C. A. KINCAID and D. B. PARASNIS. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xi + 503, 17 ills., 3 maps. London: Oxford University Press, 1931. 16s.

This new edition of a work that originally appeared in three volumes published in 1918, 1922, and 1925, respectively, will be well received by students of Marāṭha history. Interest in the rise and fall of Marāṭha power in western India has been stimulated in recent years by the publication of

Jadunath Sarkar's *Shivaji and his Times*, the late S. M. Edwardes' revised edition of Grant Duff's well-known volume, and latterly by Mr. Govind Sardesai's selections from the vernacular records at Poona, known as the Peshwa's Daftar.

It may be remarked, at the outset, that there are certain omissions in this work, which is ~~dedicated~~ dedicated to the Marātha people. We are told very little about the Marāthas themselves, though recent research has thrown much light on the origin of the great Marātha families. The essential identity of Marāthas with Marātha Kunbis and Dhangars has recently been established. Marātha historians have shown much ingenuity in obscuring the true facts; and more critical writers wholly distrust the tradition of the Bhosle family's Rajput origin, which seems to be accepted by the authors of the present work.

Jadunath Sarkar, in his history of Shivaji, when faced with the conflicting versions of English, Persian, and Marāthi records, is disposed to discount very greatly the element of truth in many of the Marāthi *Shakavalis*, such as the *Shivadiqvijaya*. There have been two versions of the murder of Afzal Khan, not equally favourable to the Marātha hero; and we are faced with accounts of the first sack of Surat which cannot both be accurate. Thus we read, p. 66, referring to the events of 10th January, 1664, that Shivaji, "after he had gathered property worth several thousand pounds . . . vanished as swiftly as he had appeared." Sarkar, p. 99, dealing with the same events, relates that the plunder of Surat yielded above a *Kror* of rupees, "the city not having been as rich as then in many years before." The looting was unresisted, and extended over four days and nights, and he (Shivaji) scorned to carry away anything but gold, silver, pearls, diamonds, and such precious ware.

The account given on p. 66, moreover, is curiously silent regarding the cruel methods adopted to extort money from the unfortunate inhabitants of the city; whereas Sarkar writes, on the authority of an English chaplain's statements

that Shivaji's "desire of money is so great that he spares no barbarous cruelty . . . at least cuts off one hand, sometimes both".

Grant Duff gives a similar account of this affair, taken from reliable English sources.

In a further edition we should welcome a plan of the Deccan and Konkan, showing the natural fortresses that played so large a part in the warfare of these times. The two maps given on pp. 67, 143, are somewhat inadequate from this point of view. The legend quoted on p. 407 of King Raghu and the *Shami* tree (not the *Mimosa suma* as stated in the footnote, but the well-known *Prosopis spicigera*) might also be amplified by a reference to the important part that this tree plays in Marātha social organization. It is clear, from the highly eulogistic account of Shivaji's character given on pp. 113-14, that the joint authors have drawn their inspiration largely from well-known Hindu panegyrics of the sturdy Marātha hero, and rejected the less favourable European and Muslim versions. Enthusiasm, however, if apt to lead compilers of history astray, is a useful stimulant for writers who would reproduce the past. We may be grateful to Mr. Kincaid for much valuable literature bearing on the great Hindu revival in the Deccan. Those who have seen the rocky slopes of Bhimshankar Hill a swarming mass of stalwart Marātha pilgrims, and heard the hillsides resound to the cries of "Gyanoba-Tukarām" on the occasion of the great festival of *Mahāshivarātri* can appreciate the genuine feeling which lies behind this writer's numerous works on these sturdy peasants, their tales, their history, and the sacred shrines in the Deccan round which their legends cluster. In a brief introduction a suitable tribute is paid to the late D. B. Parasnis, co-author of the history, a genial and enthusiastic scholar, whose recent death came as a blow to those acquainted with his valuable collection at "Happy Vale" Satara, and with the learned owner who rejoiced in displaying it to any interested visitor.

THE HISTORY AND STATUS OF LANDLORDS AND TENANTS IN THE UNITED PROVINCES (INDIA). By S. N. A. JAFRI. With a foreword by Sir R. OAKDEN $7\frac{1}{4} \times 5$, pp. xv + 438, 1 map. Allahabad : Pioneer Press, 1931. Rs. 7-8.

It is impossible to discuss Mr. Jafri's book adequately in these pages, because the greater part of it deals with the present conditions and possible amelioration of rural life, and now that the peasant is "in politics" and likely to remain so, the whole subject falls outside the scope of this JOURNAL. It must suffice to say that Mr. Jafri writes with knowledge and insight on these topics, and the book contains some first-hand matter of interest to the rural economist. The historical portion is unequal. The short chapter devoted to the Hindu period is necessarily sketchy and gives nothing new. The Moslem period is treated more fully, but this chapter shows ignorance of much that has been written in recent years; to take only a single instance, the statement (p. 56) that under Sher Shāh "one-fourth of the expected produce was assessed as the Government revenue" ignores the examination of that question in this JOURNAL for July, 1926. The chapters dealing with the nineteenth century are much better, and form a useful introduction to the main portion of the work. In technique the book leaves much to be desired. There is no index, misprints are frequent, the transliteration in the very full glossary is not precise, the titles in the bibliography are not always correctly given, while the departures from strict alphabetical arrangement in both glossary and bibliography are very inconvenient to the reader. (Since this review was written, an errata list covering nine pages has been received from the author.)

EGYPTO-SEMITIC STUDIES. By AARON EMBER. Aus den Überresten des Originalmanuskripts hergestellt und nach älteren Arbeiten des Verfassers ergänzt von Frida Behnk, mit einem Vorwort von Kurt Sethe. Leipzig: The Alexander Kohut Memorial Foundation, 1930. Mk. 10.

Aaron Ember lost his life in 1926 in saving from his burning house the manuscript of a work on the relation of Ancient Egyptian to the Semitic languages. Of the comprehensive work which he had in prospect the rescued manuscript, damaged and incomplete, was found to deal with only one section, and that a section—unfortunately, perhaps—which had already been largely covered by his earlier publications and those of his pupil Albright, for it treats of the establishment of equations between Egyptian and Semitic words. Fräulein Behnk, to whom the publication of the manuscript was entrusted, has adopted the plan of filling in its lacunæ from Ember's and Albright's previous works on the same subject. Thus the book forms as it were an index to the identifications of Egyptian and Semitic roots which have been made, without, however, giving the justification for them, which must be sought in the fuller works to which reference is in each case made. To the old identifications are added a large number of new ones, not covering, however, the Egyptian letters from *n* to *z*, the section dealing with which had disappeared.

The service rendered to Egyptian philology by Ember is a very great and a very real one. Erman and Sethe long ago pointed out the Semitic elements in Egyptian grammar and syntax, and were roundly abused for doing so by some of the more superficial philologists. Yet they were right; and nothing has done more to prove this than Ember's researches on the lexicographical side. The establishment of phonetic equations between the words of one language and those of another looks an easy game at which the fool is only too ready to play, all unwitting of the fact that there are rules which must be adhered to if disaster is to be avoided. It is to

Ember's credit that he seldom went outside the rules. He rightly saw, for instance, that his examples must be drawn as far as possible from Early Egyptian, and that everything after the XVIIIth Dynasty, when fresh Semitic loanwords began to appear in Egyptian, must be ruled out.

Some of the chief rules are of a very peculiar kind, for they are themselves arrived at by induction from examples, and then used to establish further examples by deduction. Thus a number of equations between words of the same meaning suggests that Egyptian ʕ (the glottal stop) represents Semitic *r* or *l* as well as Semitic *aleph*. This is a direct induction from the material—if we leave out of account some slight confirmation which it receives from the fact that ʕ and *r* (the latter standing perhaps in some cases for *l*) once or twice alternate in the same word in Early Egyptian. Once this induction has been made it gives the searcher a remarkable freedom in looking for new equations, for Egyptian ʕ can be equated with either ʕ, *r*, or *l* in Semitic. The dangers of this in unskilled hands are obvious.

Metathesis is an established fact of phonetics, but one which makes the discovery of equations fatally easy, for any root in Egyptian may be identified with any root of similar meaning in Semitic which contains the same three consonants, whatever the order in which these occur.

Even meaning is a dangerous guide, for, on Ember's own theory, Egyptian broke off from the Semitic stem thousands of years before the beginning of history, and consequently considerable changes of meaning are to be expected, so that we cannot here demand the same measure of semasiological correspondence between the words compared as in the case of two more recently separated languages.

Yet among these pitfalls Ember moved with commendable caution. Many of his equations must remain the merest guesses—he himself was the first to admit this. Some are definitely unconvincing. Such, for example, are ʕʕt (more correctly ʕʕty) “vizier” = Arabic *wakil*; “my “know”

(in reality "swallow") = Arabic *'alima* "know"; *'h* "stand" = Arabic *raḥala* "depart, journey, ride"; *brt* "milk" = Arabic *laka'a* "strike the breast of a mother in milking or sucking"; *ʾfdw* "four" = Arabic *arba'a*. Yet when all that is doubtful is cast out there still remains a mass imposing enough to show that Egyptian has very strong Semitic affinities.

Like all enthusiasts Ember probably went too far. It cannot be regarded as demonstrated that "85 per cent of the words in Old Egyptian are Semitic". What is more, the study of the African languages may show that he has underrated the part played by these in the formation of Egyptian.

Meanwhile a rather disconcerting thought cannot be held in check. Is there much more that is worth doing in this field which Ember made his own? Has he not practically exhausted it? Doubtless more equations will be set up, but these are likely to become less and less convincing, for the obvious ones, those which carry conviction with them, have already been made. That Ember himself had he lived would have continued to pour out valuable work on his subject is certain; but we may hazard the guess that it would have been on the African rather than on the Semitic side.

T. ERIC PEET.

THE PAKKHTO IDIOM: A DICTIONARY. By Major GEORGE WATERS GILBERTSON, assisted by ĀRIF ULLAH, Yūsufzai, MAḤMÚD, Afrídí, and ALÍ AKBAR KHÁN, Qandahárí. Vol. I, A-L. Published by the Author. Hertford: printed by Stephen Austin and Sons, Ltd., 1932. Two vols. £4 4s.

This is the latest of a series of books published by the author in which he has made solid contributions to our knowledge of Pashtu (Pakkhto) and Balochi, and which are calculated to smooth the path of the student of those languages. His aims are essentially practical, and it is the interests of the learner that he has primarily had in view.

The scheme of the present work, of which this is the first half, is to give a series of Pashtu sentences rendered freely into idiomatic English and arranged according to the alphabetic order of the English key-words. The Pashtu is given first in the Arabic script and then in a form of transliteration, and the idiomatic English rendering is followed by a word for word translation. This does not result in an English-Pashtu Dictionary, for naturally many common English words are quite inadequately dealt with, whilst others are to be found in sentences occurring under other key-words. The literal word for "Ambush" is thus found not under "ambush" but under "come out". "Bucket" is to be found under "down". "Been" occurs as a key-word, followed by the solitary sentence : "How long have you been in his service ?"

The incompleteness of the work as a dictionary is recognized by the author, who says in his preface : "Comfort yourself ; in the new *English-Pakkhto Conversational Dictionary* you will find all that you require, انشاءالله *insha'allah*. It will be available shortly." With regard to the present work, he says that it is "chiefly intended for those who have already made some progress in the language. It is simple enough, however, to be used by the beginner. The better to effect this double object literal renderings of most of the sentences have been given within brackets". He then recommends that the sentences should be studied but not memorized, and that their material should be used for improvising other sentences. To encourage this practice he gives an alternative English sentence under each heading, but it is questionable whether this adds to the merit of the work.

The book is therefore intended to be read through and studied in detail, and there are very few persons, I imagine, who would not benefit by such a course, for the sentences, as far as I am a judge, present excellent, straightforward, idiomatic Pashtu, free from the sophistication of borrowed and unnaturalized Persian. But the task would demand both energy and determination, for in this first volume alone

there are close on 4,000 sentences. Short of this, however, even the experienced expert by merely turning over the pages, is likely to harvest new ideas and expressions, and revive many half-forgotten memories. The book is full of meat.

No book of this nature can be expected to satisfy every one in every detail. I shall raise a few points, if only to show how slight in this case are the grounds for serious criticism.

s.v. "Afghanistan", should *da bar waṭan* "from the upper country", i.e. Afghanistan, not have *waṭana* or *waṭan nah*? In the Khaibar the phrase is cut down to *da bara* contrasted with *da k^kshē.a* "from the inside", i.e. "from the side of India".

s.v. "Bee", *wṛukai* "small". The vowel is usually long *wṛūkai*, *wurūkai*, but Afridi *wurkai* "child".

s.v. "Burglary", would *parúna'i shpa* not mean "the night before last" rather than "last night"? The night belongs to the day which follows it, the point of division between days being sunset.

s.v. "Centre", *ghaṭ mandz* "the exact centre". *Ghaṭ* = "big". In my recollection the expression in the Khaibar was *ghuṭ* (or *ghwut*) *mandz* (*myanz*) and this is paralleled by Waziri Pashtu *ghwut manz* "exact centre" given by J. G. Lorimer. But in some of its meanings Waz. Pšt. *ghwut* corresponds to *ghaṭ*.

s.v. "Erstwhile" *lá pakhwá*. I do not know the Pashtu expression (and am not very familiar with the English one). *Pakhwā* alone means "formerly", *lā pakhwā* one would expect to mean something like "in still earlier days".

s.v. "Favour". The Pashtu sentence seems to require a negative.

Pronunciation varies with locality, so that dogmatism is out of court, but I have never myself heard *núr* (s.v. "Fat") for *nōr* "other, more". "For a whole hour" *púrah yawe gínṭe*. This recent borrowing of Hindustani *ghantā* (it is not known to Raverty or Bellew) I have heard as *ganṭa* and *gēnta*.

Shwalé (p. 186), *kawam* (p. 187) I should give as *shwulé* and *kawum*. *W* usually affects the quality of a following *a*, but this would not be noted in the vernacular script.

Tswayama (p. 150) I have heard as *tsōyama*. Here again the Arabic script would not help.

It would be easy to raise more questions like the above, but enough has been done to show that such defects as exist are trivial.

In matters of idiom one may always go on learning, even when the language is one's own. I never thought of saying "I will beat you to a mummy" when I proposed to give some inoffensive person a hammering, nor did I ever tell a clerk or assistant that he was "a very Hector at accounts", but I shall certainly not miss an opportunity of using these idioms in future. The Pashtu equivalents unfortunately are quite commonplace.

In championing the Arabic script as "*entirely suitable* for the writing of the Kurdish, Balochi, and Pakkhto languages", the author surely uses a false argument to support a perfectly good cause. Whoever sets out to learn a language should certainly learn the script in which it is written by those who speak it and know how to write, and in which any literature it possesses has been written. Whether the script is, or is not, an efficient one does not enter into the question. That the Arabic script is not wholly satisfactory for Pashtu is surely admitted by the author when he supports each of his sentences by a version in transliteration. If he does not admit this, let him take a list of words in any language with which he is imperfectly acquainted, written down in unpointed Arabic script, and try to decide how they are to be pronounced. Let the vowel points be added, and if he is unacquainted with the vowel system of the language he will still be unable to pronounce them at all correctly.

The second volume of this Dictionary has now appeared and has been received.

TELL SIFR. Textes cunéiformes conservés au British Museum.

Réédites par CHARLES F. JEAN. $11\frac{1}{4} \times 7\frac{3}{4}$, pp. 24, pls. 198. Paris : Paul Geuthner, 1931. Frs. 300.

Fifty years ago Pater Strassmaier published a collection of 109 tablets of the old Babylonian period, which through some error he believed came from Warka, though they were actually found at Tall Sifr, the ancient Kutalla, by Sir Kenneth Loftus. When he copied them, the script and the language of the tablets were new and strange to the still young science of Assyriology. Some ten years later the position was very different; the material available was then ten-fold greater, and Professor Meissner was able to select some 111 texts, including some from Tall Sifr, clearly written and complete, from the thousand, from various sites, placed at his disposal. Even so it has long been evident that the text of the tablets from Tall Sifr needed emendation in many places, and conjectures have been rife. Professor Jean, however, has been the first to undertake the task of a thorough and scientific study of the original texts, and has thereby done honour to the precepts and practice of Strassmaier, who believed that Assyriology must depend on the publication and constant revision of texts, and that conjecture without autopsy was an evil—a self-evident truth too often neglected.

The corrections which Professor Jean has been able to make are important and interesting in detail, but nowhere affect the general sense of these business documents. The advance of Sumerian studies in particular has enabled him to read correctly passages where Strassmaier was, from the nature of the circumstances, at fault, and also some slips due to tiredness in the earlier work.

The texts are introduced by a catalogue in which the new readings are for the most part carefully noted. Among the omissions in these is an important name, in No. 31, l. 7, where Ungnad read *Ubaatum* from Strassmaier; Jean has *Ubaia*, which can only mean "the man of Opis" (not of *Ube*, in Syria), which seems a sound reason for believing that Tall

'Umar, the site of Seleucia, was already known as Opis and not as Akshak, in the time of Rim-Sin and Hammurabi. There is also a table enabling the reader to find the texts in Strassmaier's publication. The only complaint of the reviewer might be that further comparative tables would have saved labour in turning up the texts in such well-known editions as Ungnad's *Hammurabi's Gesetz* iii, and Schorr's *Urkunden*, and that is inspired by laziness.

S. S.

MUHAMMADAN LAW. An Abridgement according to its various schools. By SEYMOUR VESEY-FITZGERALD. $8\frac{3}{4} \times 5\frac{1}{2}$, pp. xvi + 252. London: Oxford University Press; Humphrey Milford, 1931. 15s.

This is a practical treatise dealing with the *shar'* according to the various schools and intended primarily for the purely legal part of a course of instruction on the law, history, and institutions of Islam for probationers entering the Civil Service of the tropical African dependencies. Except for one very obvious defect the author has on the whole succeeded in his purpose, for the work gives in a very small compass the salient features of Muhammadan personal law, including not only that of the orthodox *madhhabs* (with the exception of the Hanbalis), but also of Shi'ites, Ibādīs, and other minorities living in most of the lands of Islam under British rule; Cyprus and East Africa being included as well as India. The book will be especially valuable as a work of ready reference, for the main points are well and adequately stated; there is an index of modern judicial decisions, and also a useful bibliography chiefly of the translations of original authorities.

In his brief and generally excellent historical introductions to the various sections of his book the author has occasionally made a statement which he might find it difficult to prove, such as that "in the Days of the Ignorance free women were in law chattels" (p. 34), and that "the word *mahr* was borrowed from the Hebrew" (p. 63). As to the first point, which is

coupled with the statement that there is a marked improvement in the status of womanhood under Islam, it must be observed that there is much evidence to show that women had great freedom in the *Jāhiliya*, being able to dispose of their own property and even to choose their own husbands. On the other hand, Ghazālī expressly gave it as his opinion that marriage in Islam is a form of *riqq* or bondage. Moreover, local custom has very largely remained unaffected by the *sharʿ*, so that in the important question of inheritance by daughters the Muḥammadan law is seldom followed. Indeed, in most of Muslim India, in Palestine, and Africa generally it is rarely that daughters are not disinherited, so that when the author declares that they, with widows and fathers, "can never fail to partake in the inheritance" he is speaking of an idealized and non-existent community in which the *sharʿ* is carried out to the letter. Actually the *sharʿ* never completely rules the life of the Muslim. It is probably true that as the converts from a primitive civilization advance in the scale, the *sharʿ* exerts an increasing influence, but local custom remains strong and sometimes scepticism enters, with the result, as in Turkey, of a complete secularization of the law.

The great defect of the work, and one which must to some extent militate against its success as a text-book for students, is the author's failure to cope with the transliteration of the numerous and indispensable Arabic technical terms. Thus the word which, by the system of the Royal Asiatic Society, would be transcribed as *ʿiwāḍ*, is written *ewaz* on p. 173 and *ewad* on pp. 201 ff. On one page (173) are to be found *waqf alal arlad*, *mard-ul-maut*, and *hiba bi'ewaz*, with *talaq ul mariz* a few pages further on (p. 179). Definitely wrong are *sadd u'l bab u'l ijtihad* on p. 8, *ijr mihl* on p. 242, and *maruṣi* ("a testator") on p. 243. These latter occur in the glossary, which usually gives an adequate transliteration of the words used, though it is not free from erroneous renderings. The use of an Arabic dictionary would have prevented an entry such as the following (p. 245): "Wālī (wa'l a refuge), a person of

refuge, so a governor (cf. the Mughal title 'alam panāh (Persian) refuge of the world." There are other mistakes in the bibliography. Thus a well-known work is (p. 234) called *Multaqa al Abhūr*. This should be corrected.

Apart from such blemishes as these, the work is worthy of recommendation.

THE KHĀTIMA (SUPPLEMENT) OF THE MIRĀT-I AHMADĪ
BY KHĀN ṢĀḤIB 'ALĪ MUḤAMMAD KHĀN BAHADUR.
Edited by SYED NAWAB ALI, M.A. (Gaekwad's Oriental
Series, No. 50). 9½ × 6, pp. iv + 254. Baroda : Oriental
Institute, 1930.

The present work contains the Persian text of the topographical and biographical supplement to the *Mirāt-i Ahmadī* (completed in A.H. 1176), and is concerned with the province of Gujrat during the Mughal period. Much of the work deals with the territorial divisions of the province, but there is a great deal, such as, for example, the accounts of the chief Ṣūfis of the period, which will have a wider appeal. There is also a description of the Bohra community together with a history of their conversion to Islam which will be found not only interesting but even important in connection with the subject.

The editor has done his work well, though his habit of joining words which have separate entities is likely to arouse prejudice in the minds of readers accustomed to the native Persian method of orthography. There are to be found also occasional lapses in spelling and misprint, e.g. p. 129, l. 7, *ab^{an} jan jadd^{an}* for *ab^{an} 'an jadd*, and p. 129, l. 4 from below, *tudhūrāt* for *nudhūrāt*.

PALLAVA GENEALOGY. An attempt to unify the Pallava Pedigrees of the Inscriptions. By Rev. H. Heras, S.J. No. 7 of "Studies in Indian History" of the Indian Historical Research Institute, St. Xavier's College, Bombay. $13\frac{1}{2} \times 10\frac{3}{4}$, pp. 27, charts 3. Indian Historical Research Institute, 1931. Rs. 4.

This careful study of Pallava genealogy brings together, in tabular form, all the available material (no less than forty-five inscriptions), and arrives at some interesting conclusions. The author maintains that there was one unbroken line of Pallava kings, twenty-four in number, and says that it is "totally improper" to divide the Pallava pedigree into at least three portions in the manner common among South Indian historians. Identifying Bappa with Kalabhartri ("the head jewel of the family"), he makes him the founder of the dynasty, detecting in the references to him in the Hirahadagalli and Uruvapalli plates "the flavour of antiquity and veneration which always surround the memory of the founder of a dynasty". He believes that the Pallavas originally ruled at some city of the Telugu country, possibly at Daśanapura, which the Darsi plates state was the *adhithāna* or residence of the kings.

The capture (as recorded in the Vēlūrpālaiyam plates) of Kāñchīpura (Conjeevaram) from the Chōlas did not take place till the reign of the fifth king of the line, Kumāravishṇu I, and thereafter figures in the inscriptions as the capital of the Pallavas. Two important changes in the inscriptions signalize the event: (1) the assumption of the title of Mahārājādhirāja by the ruling king, and (2) the use of Sanskrit instead of Prakrit as the official language, Kumāravishṇu I having been the last king to use Prakrit in his documents. Kāñchīpura having been one of the "seven cities of Sanskrit lore", it was but natural that Prakrit should not have given place to Sanskrit as the official language.

The Pallavas ruled at Kāñchīpura till they were driven out by the Chōlas somewhere about the middle of the fourth century, following the invasion of South India by Samudra

Gupta about that time. The Pallava king at the time was the great Vishnugōpa, the tenth king of the line. The Chōlas held Kāñchīpura from the middle of the fourth to the middle of the sixth century, when the Pallavas retook the city. Who was its captor this time the inscriptions do not explicitly state, but from the fact that the Kaśakudi plates state that Simhavishṇu, "the lion of the earth," vanquished the Chōlas, it is believed that it was he who captured the city. He is given as the fourteenth king of the line. Till the ninth century the Pallavas continued to rule at Kāñchīpura, the last king having been Vijaya-Nripatungavarman. The reason why it has always been stated that there were many branches of the Pallava family ruling at the same time in different places of the Tamil and perhaps also of the Telugu country is that the Prakrit and Sanskrit inscriptions have been thought to refer to two different lines of kings.

Fr. Heras has endeavoured to show: (1) that the multiplicity of names by which some of the kings were known need not deter one from the study of Pallava genealogy, and (2) that some of the so-called rulers, though enjoying the title of Mahārāja, were not kings, but relatives of the ruling king who were permitted to style themselves as Mahārāja. The fifteenth king of the dynasty, Mahēndravarman I, Fr. Heras shows, had no less than eight different names; but sometimes this was because the king wished to show from his name that he was tolerant of all forms of religion, and so would assume a Śaiva, a Vaishnava, and a Buddhist name, as in the two names Kumāravishṇu and Sivaskāndavarman of the fifth king.

Altogether a valuable piece of work ably executed.

M. S. H. T.

To the Editor JRAS.

SIR,—In my review of *Buddhist Studies*, JRAS., July, 1932, p. 704, I wrote "no mention" when I should have written "no discussion"—namely of Windisch's *Māra and Buddha*. My apologies both to Dr. Law and yourself.—
Yours faithfully,

C. A. F. RHYS DAVIDS.

NOTES OF THE QUARTER

Excavations at Erech

On 14th April, 1932, a lecture, illustrated by lantern slides, was delivered before the Society by Mr. Sidney Smith, Keeper of the Egyptian and Assyrian Antiquities at the British Museum.

The lecturer said that the city of Erech was famous in antiquity as the city of Gilgamesh, the tyrant who turned hero, subdued demons, and after long search across western seas won the plant that makes old men young again only to lose it. According to tradition, he was the fifth king of the First Dynasty of Erech, and all his predecessors were god-heroes like himself. The undoubted antiquity of the site and its continued importance down to the Hellenistic period, not only as the capital of powerful ruling dynasties but as the centre of trade and the intellectual life of southern Babylonia, gives the place an attraction much lessened by its natural surroundings and the local tribes. The Englishman, Sir W. K. Loftus, alone had done any considerable work at the site until the expedition of the Deutsche Orient Gesellschaft started work there under the direction of Dr. Julius Jordan about 1912 and uncovered the remains of the Hellenistic temple of Anu, the sky-god, and his consort, Antum. Since the winter of 1928 the expedition under the same leadership has worked at the site of the Eanna temple of the famous local Ishtar, and the important finds of very early buildings have been largely due to what at first seemed a most unfortunate circumstance ; owing to the action of water the later buildings on one side of the temple tower had been completely washed away, so that immediately below the surface buildings of the archaic Sumerian period were found. In four strata below these were building remains marked by the presence of a red polished ware, and in the upper two of a polychrome pottery

like that found at Jamdat Nasr and Ur. Below these again were the foundations of buildings of considerable extent in huge limestone blocks and in a species of cement brick. Pursuing the excavation to a very great depth the excavators found, as they were convinced they ought to find, remains of a yet earlier settlement, marked by the use of monochrome pottery with geometrical decoration in a lustrous black paint of the type now called "al-'Ubaid" ware. In the stratum above the stone foundations, clay tablets with pictographic signs, which probably are the earliest yet known, and seal impressions of the Sumerian type, are good evidence that this people were already the dominant inhabitants of the place in the age of red-polished pottery. The combined evidence from Erech, Ur and the Kish area has established a long sequence of civilizations prior to the archaic period, which excavators in 'Iraq have agreed to call: (1) the al-'Ubaid ware period, (2) the Erech ware period, (3) the Jamdat Nasr ware period.

Points from a New Collection of Oriental Manuscripts

On Thursday, 9th June, Dr. A. Mingana, of Birmingham, read a paper before the Royal Asiatic Society at 74 Grosvenor Street, W. 1, upon the items of interest which he had gathered from a large number of Syriac, Garshūni, Arabic, Ethiopic, Persian, and Turkish manuscripts, which he had been able to collect in the near East owing to the beneficence of Mr. and Mrs. Edward Cadbury.

Since the War so many of the villages, churches, and monasteries in the old Turkish territory and in North Persia have been destroyed, the Syrian communities have been decimated or scattered with the result that, in the lecturer's opinion, the possibility of obtaining similar manuscripts in the future has been stopped and nothing will ever revive it. For instance, the monastery of St. James the Recluse in Seert, containing priceless manuscripts of the fifth, sixth, and

seventh centuries A.D., has been totally destroyed by fire with all its contents.

The number of Syriac MSS. collected and with which the lecturer exclusively dealt, is about six hundred, and some of them date back to the sixth century, though the majority belong to periods later than the twelfth.

The *Book of Centuries* of Elijah of Anbar contains some of the oldest texts in existence. It embodies the four uncanonical Psalms lately published by Professor Dr. Noth.

The *Grammar of John bar Zu'bi*, possibly the best classical grammar in existence, if not an autograph volume is at least contemporary with the author.

The collection contains many precious autographs, amongst them that of the famous Maphrian Basil Yalda who went to India in 1684 and died there in the following year.

The *Harklean Passion Harmony*, hitherto ascribed to Tatian of the second century, is mentioned in the colophon of MS. No. 105 as having been composed by a monk called Daniel, who lived at the end of the seventh century near Harrân.

The Colophon of MS. No. 540 states that the Gospel of St. John was composed in Bithynia by a John the Younger who may or may not be John the son of Zebedee, to whom the authorship of the fourth Gospel is ascribed.

In MS. No. 63 the authorship of the Book of Wisdom is ascribed, not to Solomon, but to a man named Joel.

MS. No. 275 contains the commentary of Cyril of Alexandria on Leviticus.

MS. No. 553 contains the complete repertory of the East Syrian exegesis on the Pentateuch.

Some give us a rather imperfect but accurate glimpse of the Arabic language spoken in north-east Arabia and the Syrian Desert before the appearance of Islam.

Others are attributed to Gamaliel and Nicodemus. The first of these is a strange apochryphon in which the story of the trial and Crucifixion of Christ is given in a totally different form from that found in the Gospels. Pilate is

shown in the light of a great saint and martyr who is finally crucified in the very spot where Christ had been crucified and buried in the very tomb in which Christ had been buried. The second gives a strange story of the Resurrection with the purpose, apparently, of removing all doubts of the miraculous happenings connected with it. Roman soldiers, Jewish priests, early Christian believers and Pilate himself appear in a succession of scenes of the most romantic kind. A pronounced anti-Judaic tone is the keynote of all these apocrypha, which are undoubtedly of Coptic origin.

MSS. Nos. 22 and 183 contain a curious life of John the Baptist, of which the details are similar to those contained in a Coptic palimpsest in the Library of the Royal Palace of Naples. .

MSS. Nos. 4 and 47 give not only the correspondence between Herod and Pilate which is already known, but also the much less known correspondence between Publius, Governor of Judea, and the Senate of Rome concerning Jesus of Nazareth and the letter of Pilate to the Emperor Claudius on the same subject. Also an interesting exchange of letters between Pilate and an otherwise unknown friend named Theodore.

The so-called "Acta of Jesus" are found in MS. No. 4 and throw an interesting light on the mentality of the Christian communities of the third (or possibly even the second) century A.D.

MS. No. 481 gives an extract from Archaeus, disciple of the Apostles and bishop of Lepatia or Leptitana in N. Africa, the Labdah of the Arabs. This is the only known extract from this Father, who flourished towards the middle of the second century.

The *Book of the Genealogies* of the Persian Christian scholar Moses Karkhāya (Karkha of Firūz) has two quotations from Africanus.

MS. No. 544, of about A.D. 1050, contains the hitherto unrecorded work of another Persian Christian called "Simon the Persecuted", *Shim'un Redhīpa*. There is no question

that it is genuine. The author gives us details concerning the state of Christianity in his day in North and North-east Persia. He speaks of Persian heretics such as Washnāyans and Kazūdāyans of whom nothing is known.

The *Book of Treasures* by the Syrian physician and philosopher Job, of Edessa, is a complete repertory of the philosophical and natural sciences just at the beginning of the 'Abbasid dynasty.

MS. No. 271 was the official Canonical textbook of the West Syrian Church. The colophon expressly states that it was copied for the Patriarchate and for official use of Church dignitaries. It belonged to the monastery of Za'farān near Mardin, the residence of the West Syrian Patriarchs of Antioch.

There are also many works dealing with the extensive Roman propaganda carried on in all the branches of the Syrian Church. These works are generally written by men who had reacted against the doctrines preached to them. Also some works by Christians who had joined the Roman Church, and who endeavoured to justify their position before their old co-religionists, against whom they hurl the traditional epithet of heretics.

MS. No. 561 contains the most important theological work of Theodore of Mopsuestia (A.D. 350-428). It is his lost commentary on the Nicene Creed, the Lord's Prayer, and the Liturgy used in the Greek Church of his day.

The lecturer gave an admirable comparison of a number of Sasanian, Persian, and pre-Islamic Arabic words with the same meaning and finally remarked that the more important and unique texts were being made available for scholars by the serial publication known as the *Woodbrooke Studies*.

British Museum

In consequence of structural alterations the Trustees of the British Museum have ordered that the Fourth, Fifth, and Sixth Egyptian Rooms and the Babylonian Room be closed for a period. The objects from these rooms are now for the

most part packed away and are not available for inspection until further notice. An exhibition of Egyptian papyri, paintings, cloth stuffs, and painted wooden objects is being arranged in the Third Egyptian Room, and will shortly be open to the public. To prevent disappointment, scholars are asked to take note of these arrangements and are warned that they should enquire whether any object or class of objects, described in the guide to these galleries, is available before visiting the British Museum to prosecute special studies.

Archæological Atlas of Greater India

The Kern Institute has undertaken the publication of an Archæological Atlas of Greater India (India proper, Ceylon, Further India, and Indonesia). A preliminary list of the maps which the proposed Atlas is to contain will be found subjoined to this notice, but the editors wish it to be understood that this list is by no means final but can be enlarged or modified. Any suggestion made with regard to the proposed scheme will receive careful consideration.

It is the intention of the editors to restrict themselves to ancient, i.e. pre-Muhammadan India. The information embodied in the maps will be chiefly topographical, the ancient names (Sanskrit or Sanskritized) of towns, villages, districts, rivers, etc., being printed in red letters under the modern names.

It will be the endeavour of the editors to collect and utilize all available data regarding the ancient topography found in Sanskrit, Pali, and Prakrit literature and inscriptions. There can be little doubt that there are still many passages hidden away in that huge literature which will throw light on the position of a certain locality and which hitherto have escaped notice. The task of collecting such passages cannot, however, be accomplished without the co-operation of many scholars.

The editors, therefore, appeal to the scholars of Great Britain and India to lend them their valuable assistance in this matter. This assistance can best be rendered by the communication of

any passage of geographical interest which will be the more valuable if taken from some little-known or unpublished text. It goes without saying that information derived from other sources (Greek, Chinese, Tibetan, etc.) will be equally welcome.

The Editors :

N. J. KROM, Ph.D.

J. PH. VOGEL, Ph.D.

F. C. WIEDER, Ph.D.

CAP. J. J. MULDER, *Cartographer*.

A. ZIESENISS, Ph.D., *Secretary*.

(Address : Kern Institute,
Leiden, Holland.)

LIST OF MAPS

- I. Asia (spread of Buddhism and Hinduism ; routes of the most important Chinese pilgrims).
- II-IV. India proper.
- V. India proper according to Ptolemy.
- VI. Special maps of India proper (the campaign of Alexander the Great ; the empire of Aśoka ; the empire of the Guptas).
- VII. Kashmir.
- VIII. The Western Himalaya.
- IX. Gandhara (and Afghanistan).
- X. Ceylon.
- XI. Ceylon according to Ptolemy.
- XII. Further India.
- XIII. Further India according to Ptolemy.
- XIV. Kambodia.
- XV. Champa.
- XVI. Indonesia.
- XVII-XIX. Java.
- XX. Sumatra : (a) West coast of Sumatra incl. Tapanoeli ; (b) Palembang and Djambi.
- XXI. Bali.

Notice

Members and Subscribers are reminded that, by Rule 24, all Annual Subscriptions for the coming year are due on 1st January without application from the Society. A great saving would be effected if all members would kindly comply with this rule.

Will any member give or sell to the Society *Bengal Past and Present*, vol. 2, pts. 1 and 2, 1908, complete with the coloured plate to pt. 1, also title pages to both parts and the index which were issued in a supplement.

The Librarian would be grateful for the presentation of any of the following works of which the Library is in need. Information as to the existence of copies for sale would also be welcomed :—

Bibliotheca Indica, Sanskrit, etc.: No. 4: Niti-Sāra fasc. 1, 1849. No. 11: Taittiriya, etc., Upaniṣads, 1851-5. No. 27: Sāṃkhya-pravacana-bhāṣya, fasc. 1, 1854.

China Branch R.A.S., *Transactions*, pts. v-vii, 1855-9.

Cuneiform Texts from Babylonian Tablets, etc., in the British Museum, parts 1, 3, 5-11, and 26; 10 parts.
